EXECUTIVE COMMITTEE

On the completion of the third volume of the new edition of the Encyclopaedia of Islam, the Editorial Committee pays homage to the memory of J. SCHACHT, member of the Executive and of the Editorial Committees, deceased in 1969.

The articles in this volumes were published in double fascicles of 128 pages from 1965 onwards, the dates of publication being:

1965: fascs. 41-42, pp. 1-128
1966: fascs. 43-46, pp. 129-384
1967: fascs. 47-50, pp. 385-640
1968: fascs. 51-54, pp. 641-896
1969: fascs. 55-56, pp. 897-1024
1970: fascs. 57-58, pp. 1025-1152
1971: fascs. 59-60, pp. 1153-1270

First published 1971
Reprinted 1979

ISBN 90 04 08118 6

PRINTED IN THE NETHERLANDS

AUTHORS OF ARTICLES IN VOLUME III

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the numbers of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.

A. ABDESSELEM, University of Tunis. 684.
A. M. ABU-HAKIMA, Columbia University, New York. 773.
AZIZ AHMAD, University of Toronto. 94, 119, 249, 359, 376, 440.

ADDENDA AND CORRIGENDA

VOLUME I

P. 19^{b}, **ʿABBĀSIDS**, l. 3, *for* 344/945 *read* 334/945.
P. 187^{b}, **ʿADHĀB al-ḲABR**, *add to Bibliography*: J. Macdonald, *The twilight of the dead*, in *Islamic Studies*, iv (1965), 55-102; idem, *The preliminaries to the resurrection and judgment*, *ibid.*, iv (1965), 137-79.
P. 277^{a}, **AḤMAD b. ḤANBAL**, l. 7 *of Bibliography*, *for* 234-43 *read* 324-43.
P. 394^{b}, **ʿALĪ PASHA ČORLULU**, l. 22 *of the article*, *for* May 1710 *read* May 1706.
P. 433^{a}, **AMBĀLA**, *add to Bibliography*: Yaḥyā b. Aḥmad b. ʿAbd Allāh Sirhindī, *Taʾrīkh-i Mubārak-Shāhī*, Eng. tr. K. K. Basu, Baroda 1932, 141, 130 n. 8; *Memoirs of Bābur*, Eng. tr. A. S. Beveridge, London 1922, ii, 465.
P. 451^{b}, **ʿAMR b. al-ʿĀṢ**, l. 1 *of Bibliography*, *for* ii. 1 *read* iii. 1.
P. 856^{a}, **BADĀʾŪN**, *add to Bibliography*: Yaḥyā b. Aḥmad Sirhindī, *Taʾrīkh-i Mubārak-Shāhī*, Baroda 1932, index under Badaon (Badayun).
P. 952^{a}, **BĀḲARGANDJ**, *add to Bibliography*: *Geographical and Statistical Report of the Districts of Jessore, Fureedpore and Backergunge*, Calcutta 1888.
P. 1022^{b}, **BANŪR**, *add to Bibliography*: *Memoirs of Bābur*, Eng. tr. A. S. Beveridge, London 1922, ii, 464.
P. 1046^{b}, **al-BARĪDĪ**, l. 5 *of the article*, *for* al-Manṣūr *read* al-Muḳtadir.
P. 1047^{b}, **BARĪD SHĀHĪS**, ll. 9-10, *for* Bīdar annexed Bīdjāpur *read* Bīdjāpur annexed Bīdar.
P. 1053^{a}, **BARŌDA**, *add to Bibliography*: Yaḥyā b. Aḥmad Sirhindī, *Taʾrīkh-i Mubārak-Shāhī*, Eng. tr., Baroda 1932, 114-5.
P. 1194^{b}, **BHATTINDA**, *add to Bibliography*: Yaḥyā b. Aḥmad Sirhindī, *Taʾrīkh-i Mubārak-Shāhī*, Eng. tr., Baroda 1932, 222 n. 9, and index under Tabarhinda.
P. 1250^{b}, *delete* **BOBASTRO** [see barbashturu].
P. 1300^{b}, **BULANDSHAHR**, *add to Bibliography*: Yaḥyā b. Aḥmad Sirhindī, *Taʾrīkh-i Mubārak-Shāhī*, Eng. tr., Baroda 1932, index.

VOLUME II

P. 12^{b}, **ČANDERĪ**, ll. 21-2, *read* in the Mālwā internal struggles by Maḥmūd Shāh Khaldjī I.
P. 59^{a}, **CONGO**, ll. 22-3, *for* a Zanzibar Shaykh called Ḥasan b. Amīr al-Shīrāzī *read* the late Chief *Ḳāḍī* of Kenya, Shaykh al-Amīn b. ʿAlī; l. 30, *after* sūrat Yāsīn in Swahili, *add* by ʿAbd Allāh Ṣāliḥ al-Fārsī; l. 33, *after* Manrisho Yake", *add* also by ʿAbd Allāh Ṣāliḥ al-Fārsī.
P. 308^{b}, **DIPLOMATIC**, ii — maghrib, *add to Bibliography*: Abu 'l-Walīd Ibn al-Aḥmar, *Mustawdaʿ al-ʿalāma*, Tiṭwān 1964.
P. 347^{b}, **DIYĀR MUḌAR**, l. 43, *for* (485/1082) *read* (485/1092); lines 53-4, *for* In 553/1158 Zangī granted it in fief, *read* In 553/1158 the Zangid granted it in fief.
P. 372^{a}, Mīr **DJAʿFAR**, *add to Bibliography*: Raḥmān ʿAlī Ṭaysh, *Tawārīkh-i Dhāka*, Ārrah 1910, 79-111; Awlād Ḥaydar Fawḳ, *Tawārīkh-i djadīd Ṣūba Bihār-o Urīsa*, Patna 1915, 285-381.
P. 402^{a}, **DJALĪLĪ**. The present members of the Djalīlī family of Mosul have asked the editors to make known that the second sentence of this article does not accord with their family tradition, according to which ʿAbd al-Djalīl b. ʿAbd al-Malik was born a Muslim in Diyārbakr in about 1030/1621 (cf. ʿAlī Amīrī, *Tadhkirat shuʿarāʾ Āmid*, Istanbul 1328, i, 258) and had extensive business connexions with Mosul and Baghdād; he later settled in Mosul, and died in 1090/1679.
P. 558^{b}, **DJĪWAN**, *add at end of Bibliography*: For his views on *samāʿ* see Muḥammad Djaʿfar Nadwī, *Islām awr Mūsīḳī* (in Urdu), Lahore 1956, 119-20, 168-75.
P. 778^{b}, after **FĀRĀB**, *insert*: **al-FĀRĀBĪ**, Abū Ibrāhīm Isḥāḳ [see Supplement].
P. 809^{a}, **FARRUKHĀBĀD**, *add to Bibliography*: Dēbī Prashād, *Taʾrīkh-i Ḍilʿ Farrukhābād*, Allāhābād 1859.
P. 879^{a}, **FEHMĪ**, *add to Bibliography*: see also Ali Kemali, *Erzincan*, n.p. (Resimli Ay Matbaası) 1932, 260 f.
P. 1004^{b}, **GHANĪ**, *add to Bibliography*: Ḥusayn-Dōst Sanbhalī, *Tadhkira-i Ḥusaynī*, Lucknow 1875, s.v.; Abū Muḥammad Muḥyī 'l-Dīn Miskīn, *Taḥāʾif al-abrār fī dhikr awliyāʾ al-akhyār*, Amritsar 1321-2/1905, *tuḥfa* 6; Muḥammad Aṣlaḥ Kashmīrī, *Tadhkira-i shuʿarāʾ-i Kashmīr* (MS in Persian).
P. 1036^{b}, **GHAZAL**, iv, l. 22, *for* Gondwāna *read* Gonda.
P. 1093^{a}, **GHULĀM ḲĀDIR ROHILLA**, *add to Bibliography*: Alṭāf ʿAlī Barēlvī, *Ghulām Ḳādir Rōhilla* (in Urdu), Aligarh n.d.
P. 1130^{a}, **GUDJARĀT**, l. 8 *of Bibliography*, *for* al-Mirmānī *read* al-Kirmānī *and after* Bodl. Elliot 237 *add* (and further Pertsch 511, now at Tübingen, and King's College Cambridge MS 67; see the note by Hameed ud Din in *History and Culture of the Indian people*, vi, Bombay 1960, 752-3, and idem, in *Journal of Indian History*, xl/3 (1962), 749-50 and 767-77).
P. 1134^{b}, **GULBADAN BĒGAM**, l. 5, for *Zinda-Pīl* read *Zhanda-Pīl*.

VOLUME III

P. 24^{b}, **ḤADĪTH**, l. 38, *for* al-Bābūya *read* Ibn Bābūya; l. 41, for *al-Ibtiṣār* read *al-Istibṣār*.
P. 29^{a}, **ḤADĪTH ḲUDSĪ**, *add to Bibliography*: Muḥammad b. al-Ḥasan al-Ḥurr al-ʿĀmilī (d. 1104/1692-3), *al-Djawāhir al-saniyya fi 'l-aḥādīth al-ḳudsiyya*, Baghdād 1384/1964 (a Shīʿī collection of *Ḳudsī* traditions).
P. 53^{a}, **al-ḤAḌR**, *add to Bibliography*: A. Caquot, *Nouvelles inscriptions araméennes de Hatra*, in *Syria*, xxix (1952-5).

P. 62ª, **ḤĀFIẒ RAḤMAT KHĀN**, *add to Bibliography*: Niyāz Aḥmad Khān 'Hūsh', *Ta'rīkh-i Rōhīlkhand* (in Urdū), Bareilly n.d.; Muḥammad Sulaymān Khān 'Asad', *Nakṣh-i Sulaymānī*, Tonk 1323/1904; Ḥusām al-Dīn Gwāliyārī, *Ta'rīkh-i Muḥammad Khānī* (MS inPersian, in the Library of the All-Pakistan Educational Conference, Karachi).

P. 90ᵇ, **AL-ḤALABĪ**, Nūr al-Dīn, l. 14 of the art., *for* Ibn Sayyid al-Nāsh *read* Ibn Sayyid al-Nās.

P. 123ª, **ḤAMDALA**, l. 14, *for* usually *read* regularly.

P. 231ª, **ḤARṬĀNĪ**, *Bibliography, delete* M. Ould Daddah, in *GLECS* (26/5/1965).

P. 246ª, *before* **AL-ḤASAN AL-AʿṢAM** *insert* **AL-ḤASAN ʿALĀ DHIKRIHI 'L-SALĀM** [see Supplement].

P. 285ª, **ḤAWĀRĪ**, l. 3 of art., *for Beiträge read Neue Beiträge.*

P. 333ª, **ḤAYY B. YAKẒĀN**, lines 21-23. The edition and translation, Oxford 1671, were by the younger Edward Pocock (1648-1727). A fragment of an English translation by his father, the elder Edward Pocock (1604-91), dated 10 July 1645, survives in manuscript in the Bodleian Library (MS. Poc. 429, ff. 1-2, 16-17). *Add to the bibliography*: G. Vajda, *D'une attestation peu connue du thème du 'philosophe autodidacte'* ", in *al-Andalus*, xxxi (1966), 379-83.

P. 381ª, **HILĀL**, i, *add to Bibliography*: R. Brunschvig, in *Mélanges Georges Marçais*, ii, 1957, 15, 19.

P. 456ª, **HINDAL**, l. 10, *for* 21 Dhu 'l-Ḥidjdja 952 *read* 21 Dhu 'l-Kaʿda 958.

P. 497ᵇ, **HISHĀM B. AL-ḤAKAM**, lines 11-12, *for* descriptive attributes (*ṣifāt*), rather than accidents (*aʿrāḍ*), *read* merely descriptive attributes, *and* l. 17, *for* accidents *read* attributes.

P. 511ª, **ḤIYAL**, l. 34, *add* See also MŪRISṬUS. l. 39, *for* 111, *read* 111).

P. 512ᵇ, l. 44, *after* valid *add* (cf. Shāṭibī, *Muwāfakāt*, ed. ʿAbd Allāh Darrāz, iv, 210 f. [*K. al-Idjtihād*, i, § 10]). l. 51, *read* confirm.

P. 535ª, **ḤIZKIL**, l. 11 *of the article, for* כהי *read* כלי.

P. 570ᵇ, **AL-ḤULAL AL-MAWSHIYYA**, *add to Bibliography*: See the article (in Arabic) by al-ʿAbbādī in *Tiṭwān*, no. 5 (1960); and especially R. Brunschvig, *al-Ḥulal al-Maushiyya, Grenade et le Maroc marīnide*, in *Studies . . . H. A. R. Gibb*, Leiden 1965, 147-65, in which the compilation of the *Ḥulal* is situated in its historical context so that its true significance is made apparent.

P. 585ᵇ, **HURMUZ**, l. 11 *of Bibliography*, for *Comentarios* read *Commentarios*; l. 19, for *perdue* read *perdeu*; l. 20, *for* Scillinger *read* Schillinger; *and add*: J. Aubin, *Les princes d'Ormuz du XIIIᵉ au XVᵉ siècle*, in *JA*, ccxli (1933), 77-138.

P. 673ª, **IBN ʿABBĀD**, *add to Bibliography*: Aḥmad Bahmanyār, *Sharḥ-i ḥāl-i Ṣāḥib Ibn-i ʿAbbād*, Tehran 1965.

P. 751ª, **IBN AL-DJAṢṢĀṢ**, *add to the Bibliography an important article by* G. Wiet, *Un homme d'affaires mésopotamien au Xᵉ siècle*, in *Mélanges Eugène Tisserant*, Città del Vaticano 1964, iii, 475-93.

P. 775ᵇ, **IBN AL-ḤADDĀD**, l. 3, *for* Cadix *read* Guadix.

P. 780ª, **IBN AL-ḤĀDJDJ**, l. 20, *for* AL-BALĀFIKĪ *read* AL-BALAFĪKĪ.

P. 799ª, **IBN ḤAZM**, *add to Bibliography*: J. Bosch-Vilá, *Ibn Ḥazm, généalogista*, Cordova 1963, 15 pp. (off-print from *IX Centenario de Aben Hazam*).

P. 802ᵇ, **IBN HUBAYRA**. *Throughout the article, for* Yūsuf b. ʿUmar *read* Yazīd b. ʿUmar.

P. 803ᵇ, **IBN ḤUBAYSH**, l. 15, *for* Djazīrat Shakr *read* Djazīrat Shukr.

P. 806ª, **IBN ʿIDHĀRĪ**, *add to Bibliography*: *al-Bayān al-Mugrib*, iv, *Histoire de l'Espagne musulmane aux XIIᵉ-XIIIᵉ siècles*, Arabic text ed. by Dr Iḥsān ʿAbbās, Beirut 1967 (fragments on the Almoravids).

P. 825ᵇ, **IBN KHALDŪN**, l. 2, *for* (732-84/1332-82) *read* (732-808/1332-1406).

P. 833ª, **IBN KHALLIKĀN**, lines 8-9, *for* Bahāʾ al-Dīn Zubayr *read* Bahāʾ al-Dīn Zuhayr.

P. 835ª, **IBN AL-KHAṢĪB**, l. 1, *for* AḤMAD B. AL-KHĀṢĪB *read* AḤMAD B. AL-KHAṢĪB.

P. 836ᵇ, **IBN AL-KHAṬĪB**, l. 6, *for Miʿyār al-ikhtibār read Miʿyār al-ikhtiyār.*

P. 863ª, *before* **IBN MANDA** *insert* **IBN AL-MAʾMŪN** [see AL-BAṬĀʾIḤĪ].

P. 865ª, **IBN MARDANĪSH**, l. 32, *for* Cadix *read* Guadix.

P. 865ᵇ, **IBN MARYAM**, l. 37, for *ḥizr* read *ḥirz.*

P. 866ª, **IBN MARZŪK**, l. 12, *for* Lamṭūna *read* Lamtūna.

P. 898ᵇ, **IBN AL-NAFĪS**, *add to Bibliography*: On Andrea Alpago, see Francesca Lucchetta, *Il medico e filosofo bellunese Andrea Alpago*, Padua 1964.

P. 939ᵇ, **IBN SHUHAYD**, *add, at end of the article*: A second attempt has been made by Yaʿkūb Zakī (James Dickie), *Dīwān Ibn Shuhayd al-Andalusī*, Cairo 1969.

H

HĀʾ, 26th letter of the Arabic alphabet, transcribed *h*; numerical value: 5, as in the Syriac (and Canaanite) alphabet [see ABDJAD]. It continues *h* from common Semitic.

Definition: *unvoiced glottal spirant*; according to the Arab grammatical tradition: *rikhwa mahmūsa*; as regards the *makhradj*: *akṣā ʾl-ḥalk* "the farthest part of the throat" (al-Zamakhsharī, *Mufaṣṣal*², § 732). A voiced *h* can be found after a voiced phoneme but it is not a distinctive characteristic (see J. Cantineau, *Cours*, 75). Pause can develop a *h* to support the short final vowel of a word when it is not a vowel of inflexion (*iʿrāb*): this is the *hāʾ al-sakt* or *hāʾ al-waḳf* or *hāʾ al-istirāḥa* (see H. Fleisch, *Traité*, § 36 ee to ii). For the phonological oppositions of the phoneme *h*, see J. Cantineau, *Esquisse*, 177; for the incompatibilities, *ibid.*, 201.

Modifications: the conditioned modifications of *h* are limited to its possible assimilation to a *ḥ* preceding or following, and this between the final letter of one word and the initial of the next; or to reciprocal partial assimilation after an *ʿayn*, thus: *-ʿh-* > *-ḥḥ-*, as *maḥḥum* for *maʿhum* "with them" (using the ancient dialectal form *maʿ*), a particularly frequent phenomenon among the Banū Tamīm (see H. Fleisch, *Traité*, § 12 r and 11 e; J. Cantineau, *Cours*, 75). This latter assimilation is also found in Maghribī and eastern dialects (W. Marçais, *Ūlād Brāhīm* 11 and n. 1; C. Bergsträsser, *Sprachatlas*, Map 5, in *ZDPV*, xxxviii (1915).

h disappears, in modern dialects, from the 3rd pers. masc. sing. of the pronominal suffix, in those dialects where the suffix is *-o*, *-u* and derives from **-ahū* with loss of *-h*. The same is also true of the *h* of the 3rd person feminine singular and 3rd person plural pronominal suffixes in certain dialects of North African and Oriental sedentary groups (notably Aleppo, Lebanese dialects). For assimilations: to a preceding *ʿayn*, see Bergsträsser's Map 5 referred to above; to other preceding consonants, see J. Cantineau, *ibid.*, 76.

h as a demonstrative element appears in three forms: with a short vowel: *ha-*, the definite article in Hebrew; with a long vowel: *hā*, which, in Classical Arabic, did not go so far as to constitute a demonstrative in itself but which appears in compounds; with a diphthong: *hay*, also in compounds, like *hayta* (= *hay* + *ta*) of *hayta laka* in Ḳurʾān, XII, 23 "[come] here" (see H. Fleisch, *Esquisse*, 108-13), but *hey* "here" (L. Bauer, *Palästinische Ar.*³, § 55, 6).

Bibliography: see in text and under ḤURŪF AL-HIDJĀʾ. For a general discussion of the phonetics of Arabic as seen by the classical grammarians, see ḤURŪF AL-HIDJĀʾ; for modern studies, see PHONETICS and LINGUISTICS.

(H. FLEISCH)

ii. — IRANIAN AND TURKIC LANGUAGES

In addition to its consonantal value (as in Persian *ham*, *pahn*, *bih*, Turkish *hep*, *daha*, Urdū *hem*, *bahut*, *vəh*, etc.) the letter *h* early acquired in Persian the rôle of *mater lectionis* for the final vowel *-a*. Whether this was due to analogy with the writing of the Arabic ending of the feminine singular, *-at*ᵘⁿ ~ *-a*(*h*), or to a phonetic development within Persian, *-ag* > **-aγ* (> **-ah*?) > *-a* (NPers. *-e*), it is impossible to decide. It was plainly from the spelling of final *-a* with *-h*, however, that the spelling of the much rarer final *-i* developed, as in *kh* (earlier *k*, *ky*) = *ki*. In other languages practice differed: in Khʷārizmian final short vowels were not expressed other than by the Arabic *ḥarakāt* and the same was true of early Pashto spelling, but in the course of the last two centuries writings with *-h* have increased in Pashto for *-a*, *-ə*, as in پہ *pa*, تہ *tə*, *ta*. In certain cases a morphological difference is expressed by a variant spelling, *e.g.*, ده دَ *da də* 'of him'. From final position the letter ہ later passed into use as *mater lectionis* for the short vowels *-a*, *-e* in medial position in some Turkish usage and is still so used (for *-a-*) in the written Kurdish of ʿIrāḳ.

In Persian and Turkish there is no visible distinction between final consonantal and 'mute' *h*, *e.g.*, *nh* may represent Pers. *na*, *nih*, *nuh*, and Turk. *ne*. In the North Indian languages, however, the occurrence of aspirated consonants has led to further conventions; see below.

(D. N. MACKENZIE)

iii. — INDIAN LANGUAGES

Generally in Indo-Aryan languages *h* is voiced in all positions (see W. S. Allen, *Phonetics in Ancient India*, Oxford 1953, 33 ff. with full references), and frequently a contiguous syllable can carry the breathy quality of the *h*; in some languages (Pandjābī, some East Bengali dialects) *h* is replaced by a syllabic tonal distinction; in others (some dialects of Rādjasthānī and East Bengali) there may be a phonetic differentiation between voiced *h* and voiceless *h* < *s*. In Urdū, Hindī and some dialects of Pandjābī *ah* in tonic syllables when followed by short *i*, *e*, or a consonant, or *in pausa*, is fronted to [ɛh].

Besides this free *h*, there is also the characteristic aspiration of consonants: *kh čh ṭh th ph*; *gh djh ḍh ṛh dh bh*. In the former series the aspiration is voiceless, in the latter series voiced; there is also the possible juncture of voiceless consonant and voiced

h arising from morphological processes, distinguished from both series. There is no phonetic distinction in Indian speech between *h* and *ḥ*. In Urdū and Hindī phonology contiguous final consonants do not occur, except in pedantic educated speech, and are separated by an anaptyctic vowel, usually *a*; thus *fatḥ* is usually realized as *fataḥ* and pronounced as [fatɛh].

In the Perso-Arabic script as applied to Indian languages *hāʾ* is generally called *hē* (sometimes *čhoṭī hē* 'little h' to distinguish it from *baṛī hē* 'big h', *i.e.*, *ḥāʾ*). The existence of the aspirated consonants has brought about a useful, but not always applied, writing convention, whereby intervocalic ('free') *h* is written with the 'hook' form of *hē*, post-consonantal *h* (aspiration) with the 'butterfly' (*dōčas͟hmī*) form. Thus بھائی *bhāʾī* 'brother', بہائی *bahāʾī* 'Bahāʾī'. In Sindhī the script has been further modified to indicate the aspirated consonants: ڀ *bh*, ڦ *ph*, ٿ *th*, ٺ *ṭh*, ڇ *čh* (but جھ *d̲j̲h*), ڌ *dh*, ڍ *ḍh*, ک *kh* (contra ڪ *k* (but گھ *gh*).

Hē is used as in Persian, etc. (see above) as *mater lectionis* for final *-a*, and thus coincides graphically with etymological final *-h* (*e.g.*, نه *na*, but چوده *čawdah* < Skt. *čaturdaśa*, Mid. Ind. *čaurasa*, *čauraha*, *čaudaha*). Nouns with this ending do not change in written form in declension in oblique sing. and direct pl., although the inflexions are shown in speech: thus *b.č.h* represents *bačča* dir. sing. and *bačče* obl. sing. and dir. pl. By extension this ending may sometimes be used for an etymologically long vowel: thus frequently *r.ʾ.d̲j̲.h* for *rād̲j̲a* (*recte rād̲j̲ā*).

Bibliography: in addition to reference above and bibliography given for DĀL ii, see Mohiuddin Qadri, *Hindustani phonetics*, Hyderabad n.d. [1931 ?], 35, 63-9, 72-9, 81, 84, 86, 99.

(J. BURTON-PAGE)

ḤĀʾ, 6th letter of the Arabic alphabet, is transcribed *ḥ*; numerical value: 8, as in the Syriac (and Canaanite) alphabet [see ABD̲J̲AD].

Definition: *unvoiced pharyngeal spirant*; according to Arabic grammatical tradition: *rik̲h̲wa mahmūsa*, as regards the *mak̲h̲rad̲j̲*: *awsaṭ al-ḥalḳ*, "the middle part of the throat" (al-Zamak̲h̲s̲h̲arī, *Mufaṣṣal*², § 732). *ḥ* is a very much stronger and harsher spirant than *h*. It is produced by the friction of the expressed air against the strongly contracted walls of the pharynx (a breath sound without velar vibration), from which an elevation of the larynx ensues. It is pronounced "with the glottis almost closed", according to M. Cohen (*Essai comparatif*, 98); with the passage of air through the cartilaginous glottis, according to the teaching of P. Fouché. The sound is voiceless. The corresponding voiced sound is *ʿayn*. For phonological oppositions of the phoneme *ḥ*, see J. Cantineau, *Esquisse*, 176; for the incompatibilities, *ibid.*, 201.

Arabic *ḥ* continues a common Semitic *ḥ*. This *ḥ* has become *hamza* or has become mute in Akkadian, it replaces *k̲h̲* in Hebrew, Aramaic, Tigre, Tigrigna and Soḳoṭri (modern South Arabian). It has become mute in most of the other modern Ethiopian languages. In the latest period of Geez there is confusion between the different pharyngeal and glottal sounds (see W. Leslau, in *Manual of Phonetics*, 329).

Modifications in Arabic: as an unconditioned change, several examples are quoted of development from *ḥ* to *h*, thus: *madaḥa* and *madaha* "to praise" and development from *ḥ* to *ʿ*, the *faḥfaḥa* of the Hud̲h̲aylites (see H. Fleisch, *Traité*, § 9 l). As regards conditioned changes: in a juxtaposition of *ḥ* and *ʿ* at the end of one word and the beginning of the next, *ḥ* may assimilate *ʿ* to itself in either position, thus: *-ʿḥ-* > *-ḥḥ-* and *-ḥʿ-* > *-ḥḥ-*, except in one reading of Abū ʿAmr ibn al-ʿAlāʾ (see *ibid.*, § 12 q). In the modern dialects, *ḥ* undergoes only a small number of conditioned changes (see J. Cantineau, *Cours*, 74); note (*ibid.*) the question of the *tafk̲h̲īm* and *tarḳīḳ* of *ḥ*, which, in consequence, prevents or permits the production of *imāla*.

ḥ as a demonstrative element appears with a vowel of the 1st and 4th orders in *kaḥa* and *kaḥā* "there" in Geez (A. Dillmann, *Lexicon*, col. 823, *Eth. Gr.*², § 160 b) and with diphthong in Arabic *ḥayt̲h̲u* (= *ḥay* + *t̲h̲u*) "where, there where" (see H. Fleisch, *Esquisse*, 112). According to Ch. D. Matthews *Akten des XXIV. int. Or.-Kongresses, München 1957* 260-1), *ḥa* is used as a definite article in modern South Arabian; but the question is broader: see W. Leslau, *A prefix ḥ in Egyptian, modern South Arabian and Hausa*, in *Africa*, xxxii (1962), 65-8.

For the general discussion of the phonetics of Arabic as seen by the classical grammarians, see ḤURŪF AL-HID̲J̲Āʾ; for modern studies, see PHONETICS and LINGUISTICS. See also HĀʾ—iii, above.

(H. FLEISCH)

ḤABĀBA, name of a singing slave-girl (*ḳayna* [*q.v.*]) of Medina who had learnt music and singing from the great singers of the 1st/7th century: Ibn Surayd̲j̲, Mālik, Ibn Muḥriz, Maʿbad, D̲j̲amīla, ʿAzza [*qq.v.*]. Her talent, beauty and charm conquered Yazīd b. ʿAbd al-Malik, who finally became her owner in circumstances which the sources describe very variously, but at a date after his accession (S̲h̲aʿbān 101/February 720); she was originally called al-ʿĀliya and it is he who is said to have given her the name by which she has remained famous. Ḥabāba is often associated with another *ḳayna* of Medina, Sallāma [*q.v.*], but the latter, also purchased by the caliph, seems to have played mainly the part of a singer (though see al-Masʿūdī, whose account is not convincing), while Ḥabāba exerted complete control over Yazīd, who was infatuated with her. Neglecting his duties, he shared all his pleasures with her and even granted her authority, which she knew how to exert, to such a degree that he attracted bitter complaints from those about him, particularly his brother Maslama. When the opportunity arose to pursue her policies, she was supplied with the verses she required by the poet al-Aḥwaṣ [*q.v.*]. According to tradition, she died of choking on a pomegranate seed, and her decease inspired such violent sorrow in the caliph that he kept her corpse by him for several days and even had it exhumed later on in order to see her face one last time; shortly thereafter he died himself, of consumption, on 24 S̲h̲aʿbān 105/26 January 724, and was buried beside her. The enemies of the Umayyads did not fail to draw arguments from the debauched conduct of Yazīd and his absolute subservience to Ḥabāba (see the speech of Abū Ḥamza *apud* al-D̲j̲āḥiẓ, *Bayān*, ii, 123).

Bibliography: Ibn Ḳutayba, *Maʿārif*, ed. ʿUkās̲h̲a, 364, 408; Ṭabarī, ii, 1464-6; *Aghānī*, xiii, 148-59 (Beirut ed., xv, 95-113); Masʿūdī, *Murūd̲j̲*, v, 446-53; Nuwayrī, *Nihāya*, v, 58; F. ʿAmrūsī, *al-D̲j̲awārī al-mughanniyāt*, Cairo n.d., 96-107.

(CH. PELLAT)

ḤABAS̲H̲, ḤABAS̲H̲A, a name said to be of S. Arabian origin [See ḤABAS̲H̲AT], applied in Arabic usage to the land and peoples of Ethiopia, and at times to the adjoining areas in the Horn of Africa. Although it has remained a predominantly Christian

country, Ethiopia has an important Muslim population, and has moreover had relations with the world of Islam since the days of the Prophet. These will be examined under the following headings: (1) history, (2) the spread of Islam, (3) Ḥaba<u>sh</u> in Muslim geographical writings, (4) Ethiopian languages spoken by Muslims. A final section will deal with the *Aḥābi<u>sh</u>* in ancient Arabia. Reference may also be made to ERITREA, <u>D</u>JABART (on Ethiopian Muslims) and ḤABE<u>SH</u> (on the Ottoman province of that name). (ED.)

i.—Historical Background

Though Muslim traditions mention friendly relations between Muḥammad and the Negus, the principal expansion of Islam occurred at a time when the Aksumite state was in a period of decline. The Persians had disrupted the sea and trade routes in the Red Sea, and the Muslim conquests soon enveloped the whole of Arabia and North Africa. Ethiopia was thus severed, at least temporarily, from its spiritual source, the Patriarchate of Alexandria. In fact, Islam had knocked on the very gates of the Christian kingdom: it had occupied the Dahlak islands [*q.v.*]. The isolation of Abyssinia, which was to last for many centuries, had now begun. Trade and conquest were a thing of the past, and in the face of the great Islamic expansion there was nothing left to the people but to retire within their impregnable mountain fastnesses.

While the internal upheavals in the heart of Ethiopia were at their height (towards the close of the first millennium A.D.), Islamic encroachment along the fringes of the kingdom became bolder and more dangerous. The internal troubles were eventually checked, and ground lost, both territorially and in the propagation of Christianity, was regained, but the effects of the disturbances on the periphery could not be mitigated in the same manner. Here the losses along the coastal plains proved irremediable; the Islamization of the lowlands continued at an accelerated pace, and Muslim powers succeeded one another in establishing their sovereignty, with varying degrees of effectiveness, over the African Red Sea littoral. But Islam threatened not only the coastal areas from which the Abyssinian Kingdom had been cut off; it spread its militant faith also among the nomadic groups who lived and moved between the sea and the eastern slopes of the escarpment until, finally, it began to encroach even upon eastern Shoa and the Sidama country. The period from the 4th/10th to the 6th/12th century, the time of greatest internal weakness, saw the systematic penetration of Islam on a wide front: in the Dahlak archipelago, the Dankali and Somali coasts, among the Be<u>dj</u>a [*q.v.*] in the north and the Sidama in the south, in the Ifat sultanate of eastern Shoa, at Harar [*q.v.*] in the east and near Lake Zway in the west, where Arabic inscriptions and Islamic tombs attest the radius of Muslim expansion.

The slave-trade proved to be a powerful agent in the Islamization of the coastal plains, for it maintained the link with the Arab world and established or supported such centres as Zeila [see ZAYLAʿ] or Mogadishu [see MAḲDI<u>SH</u>Ū] with their Dankali and Somali hinterland. Moreover, the slave-raids undoubtedly accelerated the diffusion of Islam among the pagan peoples of East Africa, as conversion was the easiest way of escaping this recruitment. The organization of this lucrative trade was enormous: it set up bridgeheads deep in the interior of the country, and what had begun as a raiding expedition developed into permanent control of entire areas and the establishment of a series of petty states and sultanates. Setting out from the Dankali and Somali regions and the coastal towns, the slave-traders enveloped the Harar area, Arussi, and the lake district in the south-west.

It is impossible to say with any degree of certainty whether the origin of the Muslim state in eastern Shoa is due to slaving expeditions. Its beginnings are shrouded in impenetrable darkness, but it must have existed for a considerable period and have been under the rule of the Ma<u>kh</u>zūmī sultans, probably since the late 3rd/9th century. The overthrow of this Shoan sultanate, in 1285, and its absorption within that of Ifat, the predominant Muslim state in Ethiopia, is described in a document published by Enrico Cerulli (*RSE*, 1941, 5-42). The sultanate of Ifat under the Walasma dynasty had become the focus of Islamic expansion in Ethiopia and of all those southern nuclei of resistance to Abyssinian and Christian encroachment who saw in the spread of Islam the lesser evil. Ifat was firmly established on the south-eastern fringes of the Shoan plateau and has impinged on many points and at several stages in the subsequent course of Ethiopian history.

The war of attrition between the central Christian highlands and the Muslim sultanates, entrenched all along the eastern and southern fringes of the Abyssinian plateau, is the principal feature of Ethiopian history during the period from the 8th/14th to the 10th/16th century. Proceeding from east to west we first encounter the sultanate of Adal (Muslim writers such as Maḳrīzī refer to it as Zeila, but Adal and Zeila are largely synonymous and their histories closely connected) on the Dankali and Somali coast. At times Adal formed part of the state of Ifat; its ruler was styled *Amīr* or *Imām* (*Negus* in the Ethiopian chronicles), and one of them who opposed the Ethiopian King Amda Sion's march against Zeila, in 1332, was defeated and slain. Harar became a Muslim city-state and a great centre of Islamic commerce and cultural propagation. Ifat held the south-eastern part of the Shoan plateau and the slopes of the Awash rift-valley; it was the most important of the sultanates. To the west of Ifat, in what is now the Arussi region, the Dawaro kingdom controlled large tracts of southern Ethiopia. It bordered upon the Bāli sultanate, while the small principalities of Sharkha and Arababni lay between Dawaro and the most westerly Muslim state, Hadya, which comprised the territory of the Sidama and Gurage.

Those were the Muslim sultanates ranged against the Emperor Amda Sion (1314-44). They covered a far greater area than that controlled by the Christian Emperor, but the latter had the advantage of a geographically compact state, while the Islamic peoples were spread in a vast semicircle without proper communications or political cohesion. Amda Sion seized the initiative, attacked Ifat and Hadya, and defeated both. He had thus gained the entire plateau down to the Awash River. And though these Muslim principalities displayed great powers of recovery, for the time being Amda Sion had relieved the pressure of Islamic encroachment. Victory brought mass conversions to Christianity in its wake; many monasteries and churches were founded at that time, and the name of Amda Sion himself was registered among the saints in the *senkessar* (Synaxarium).

Amda Sion's son and successor, Saifa Arʾad (1344-72), is principally renowned for his reprisals

against Egyptian merchants in Abyssinia to show his disapproval of the persecutions to which Christians in Egypt had been subjected, culminating in the imprisonment of the Coptic Patriarch. Saifa Arʾad's son, Dawit I (1382-1411), brought about a temporary reconciliation with the Egyptian ruler, marked by an exchange of gifts. He also received an embassy from the Coptic Church in Egypt. But under his son Yesḥaḳ (1414-29) relations deteriorated once more, and the Ethiopian Emperor endeavoured to enlist the help of the "Franks" (possibly Aragon) in support of the Copts of Egypt (this episode has been investigated by Hasan Habashi in an unpublished Ph. D. thesis, S.O.A.S., University of London, esp. chapter III). Ethiopian Emperors from time to time threatened to divert the course of the Nile in an attempt to mitigate the lot of their co-religionists in Egypt by so dramatic a gesture.

Meanwhile, the Ethiopians realized that the tense but "peaceful co-existence" with the Muslim strongholds in their immediate neighbourhood, on the Red Sea coast, could not last for ever. They therefore acted upon a suggestion, first advanced by Pedro de Covilham, to enlist the aid of Portuguese naval forces in the dislodgement of Muslims from the Red Sea littoral. The arrival of a Portuguese exploratory mission was, however, much delayed, and it did not, in fact, reach the country till 1520, by which time the general situation had undergone profound changes.

In the meantime the sultanate of Adal was convulsed by internal struggles. The recent defeat had done grave harm to the prestige of the Walasma dynasty, whose authority was now constantly challenged by the *amīr*s and military commanders. The Sultan Abū Bakr had transferred the capital to Harar, possibly to extricate himself from the persistent pressure exerted by the generals who drew their principal support from the Dankali and Somali peoples. Chief among those forceful military commanders was Aḥmad b. Ibrāhīm (nicknamed Grañ, 'the left-handed') [see AḤMAD GRĀÑ] who soon became the effective master of the Muslim possessions in Ethiopia and assumed the title of *Imām*. We are fortunate in possessing a detailed eye-witness account of the Muslim conquests of the 10th/16th century, with the Imām Aḥmad as the central figure, written by S̲h̲ihāb al-Dīn (*Futūḥ al-Ḥabas̲h̲a*, ed. R. Basset).

Grañ had first made sure of the strength of his position in Adal and had then welded the Danakil and Somalis into a formidable striking force, inspired by the old ideal of the *d̲j̲ihād* and lust of conquest and plunder. He initially concentrated on limited objectives, raids and incursions into the plains and foothills, before venturing upon the distant and difficult highlands. But in 1529, three years after the departure of the abortive Portuguese Mission, he struck and inflicted a major defeat on Lebna Dengel, the Ethiopian Emperor. He was, however, unable to drive home this advantage, as his armies disintegrated, drunk with victory and booty. It was only two years later that he was finally ready to begin the great conquest and invasion which inundated nearly the entire territory of traditional Abyssinia, burning churches and monasteries and forcibly converting large numbers of Christians. Dawaro and the Shoa province were conquered in 1531, and Amhara and Lasta followed two years later. At the same time Bali and Hadya as well as the Gurage and Sidama regions fell into Grañ's hands.

The accession to the throne of the Emperor Claudius (1540-1559) thus occurred at a most critical moment in the history of Ethiopia—yet within less than two years the situation had radically changed, thanks mainly to the help given by the Portuguese. The 400 men under Christopher da Gama had disembarked at Massawa in 1541 and, aided by the Governor of the maritime province, who had held out at Debaroa, set out on their epic march into the interior. When the Portuguese contingent met the Imām Aḥmad, they were successful in two encounters, but could not press their victory home. Meanwhile, Grañ asked for and obtained reinforcements from the Turkish commander Özdemir [*q.v.*], with which he prevailed over the Portuguese and their leader, who was put to death. But the remaining 200 Europeans had not been demoralized; they managed to join forces with the remnants of Claudius' armies and, near Lake Tana, fought what was probably—at least until recent days—the most decisive battle in the history of Ethiopia. They smote the Muslim troops and slew Grañ himself (1543).

Though there still followed some skirmishes, with the death of Grañ the serious Muslim threat to Ethiopia had been effectively removed. Assisted by the soldiers of a Christian country from Europe, the Ethiopians had finally saved their ancient Christian kingdom and heritage. But the salvation had come at a very late hour: Ethiopia lay prostrate and exhausted; many of its churches and monasteries existed no longer; its clergy was weakened, and its people were either Islamized—however superficially—or terrorized and in urgent need of moral and material succour.

Adal, though greatly enfeebled, continued with harassing operations against the Ethiopians. A nephew of Aḥmad Grañ moved against the plateau, but he was beaten by Claudius, who subsequently advanced on Adal and wrought much devastation. Harar was now the main Muslim stronghold in Ethiopia, and it was from there that another attack was launched which, in 1559, led to the death of the Emperor Claudius.

But despite such isolated successes the Muslims no longer constituted a serious danger to the Abyssinian Empire. By the middle of the 10th/16th century the prospect of an Islamized Ethiopia had become very remote. The next serious encounter with Islam did not occur until the last decades of the 19th century, when the reign of the Emperor John (1868-89) was characterized by constant wars against the Muslim powers encroaching upon his dominion.

Egypt, under the Khedive Ismāʿīl [*q.v.*], had conceived plans for the conquest of Abyssinia. In these designs she was encouraged by the quick success of the British Expedition in 1868 and by the hope of Ethiopian disunity. In 1875 Egypt directed a three-pronged attack against the Christian Empire; earlier already her agent, the Swiss adventurer Werner Munzinger, had placed himself in charge of the Keren area and also assumed the governorship of Massawa. He now led the assault from Tajura, but was overwhelmed and killed by Dankali forces. The second prong set out from Zeila under the command of Raʾuf Pas̲h̲a and succeeded in occupying Harar. The Egyptians stayed there until they were dislodged, ten years later, by the Emperor Menelik. The third and largest column proceeded from Massawa, crossed Eritrea, and during their descent into the Mareb Valley, near Gundet, were attacked by John's Tigrean army and virtually annihilated.

The shock of this disaster was immense, and the Egyptians at once prepared another expedition, this

time of nearly 20,000 men under the command of the Khedive's son. The Emperor now organized a veritable crusade, and the whole country down to Menelik's Shoan hills reverberated with excitement and the call to deal a final blow to the Muslim foe. When the two armies met in 1876 near Gura, the Egyptian *débâcle* was so colossal that it quenched their thirst for Imperial aggrandizement in Ethiopia.

The last violent encounter with Islam occurred in 1888 when hostilities between the Sudan and Abyssinia flared up shortly after the establishment of the Mahdist state. A large contingent of Mahdists entered western Ethiopia, burnt parts of Gondar, and then retired across the frontier (see P. M. Holt in *BSOAS*, xxi (1958), 287-8). The Emperor John met the Mahdists in a great battle at Metemma (1889) and appeared to defeat them, but in the last moments of the engagement the Emperor was mortally wounded, and his army retreated when its leader had fallen.

The Emperor John's religious fanaticism and his forcible conversions, both in the service of his beliefs and as an instrument of political unification, had no lasting or beneficial effect. They disturbed the atmosphere of religious toleration which is usually a mark of modern Ethiopian life. After John's death the Emperor Menelik allowed a return to religious tolerance and amity, a policy which was continued with a considerable measure of success under the Emperor Hayla Sellasie.

Although nearly half of the population of the Horn of Africa are Muslims, their impact on the character and substance of Ethiopia is as peripheral as is their geographical distribution all around the central highland plateau. The identification of Abyssinian Christianity with the political and cultural life of the country is so complete that no numerical increase in Islam has been able to touch the intrinsic nature of this phenomenon. Yet, any map of the distribution of religions in North East Africa demonstrates most strikingly the Muslim encirclement of Abyssinia—everywhere except for the predominantly pagan South West.

The most notable group of Muslims in Ethiopia are unquestionably the D̲j̲abart [*q.v.*], for they alone enter into the life of the country. D̲j̲abart was originally the name of a region in the territories of Zeila and Ifat but was later applied to all the Muslim principalities of Southern Ethiopia and, ultimately, to all Muslims living in the Ethiopian Empire.

Islam is still making steady progress among the Cushitic and Nilotic peoples in the lowland areas, but none among the highland population of Semitic speech. Perhaps its clear-cut theology makes a special appeal to the less sophisticated peoples in the hot and arid regions with little civilization of their own. The universal call of Islam must have a great attraction in all those quarters where the particularistic and national message of Abyssinian Monophysite Christianity can scarcely be expected to penetrate.

ii.—The Spread of Islam

A summary account of the spread of Islam will also cover its present distribution in the modern state of Ethiopia. The settlement of Muslims in the trading stations existing along the Red Sea coast led eventually to the diffusion of Islam among the nomads of the coastal plains known as ʿAfar or Danḳalī [*q.v.*]. The northernmost nomads, the Bed̲j̲a [*q.v.*], were influenced both from the Nilotic region and from coastal settlements of which ʿAyd̲h̲āb [*q.v.*] was one of the most important. Zaylaʿ [*q.v.*] became an important diffusion centre and through trading relations the ruling classes of the developed southern Sidama kingdoms, as far west as Hadya around the river Gibē, adopted Islam. The religious culture penetrated northwards into Shoa and along the eastern highlands there were Muslim states, the most famous being Awfāt [*q.v.*] and its successor Adal with Zaylaʿ as capital. Much of the region of the Muslim Sidama states of Bali and Dawaro was overwhelmed by the first movements of the great Galla invasion which began early in the 10th/16th century. In consequence Islam disappeared except among trading groups and in the unique city of Harar [*q.v.*]. Farther south, Maḳdis̲h̲ū [*q.v.*], Marka and Brava were Islamic points in territory inhabited by both Bantu Nyika and Somali tribes. Islam spread only among the Somali [*q.v.*] and its diffusion is bound up with legends of tribal origins.

The central point throughout the history of this north-eastern region of Africa has been the Christian state of Ethiopia against which waves of nomad aggression tended to waste themselves. Muslim trading communities were present on the plateaux but these waves also left behind small groups of Muslim agriculturalists. These Ethiopian Muslims living in plateau regions are known as D̲j̲abart ([*q.v.*] and see also eritrea) and are indistinguishable from the Christians among whom they live except in customs which derive from religion. Those in the north (Eritrea and Tigrai) speak Tigrinya and the others Amharic.

Before the 19th century, therefore, the only Muslims in the region apart from immigrant traders were the scattered groups of D̲j̲abart and the nomadic tribes of ʿAfar and Somali in the plains. Islam made its greatest gains during this century, not merely among pagans (mainly Galla), but also among northern Christian tribes in what is now called Eritrea. Many of the Galla [*q.v.*] tribes which had penetrated into the highlands and were making a great if une coordinated bid to gain control of the Christian stat-

adopted Islam in contradistinction to Ethiopian Christianity as a means to that end. A people known as Dobʿa occupied a section of the eastern buttresses of the highlands, originally part of Awfāt which came under Ethiopian sovereignty, against which they were continually in opposition. The Dobʿa disappeared as an ethnic unit, but it was probably through them that those Galla who occupied the same region (Yedju and Raya or Azebo) and mingled with the preceding population adopted Islam as well as their hostility to Christian Amhara. Similarly, Islam spread among the Wallo Galla in the heart of the highlands (centre Dessié) to reinforce their attempt to remain distinct from Amhara. Many Wallo changed to Christianity during the reign of the Emperor John.

The 19th century was a period of anarchy in northern Ethiopia and the Christian state had no real control. The Egyptian conquest of the Sudan affected Eritrea (occupation of the Keren highlands 1860-76). Most of the Tigrē-speaking tribes became Muslim between 1840 and 1880. These included the ruling classes of the nomadic Bait Asgedē (Ḥabāb, Ād Taklēs and Ād Tamāryām), many of whose serfs were already Muslim; the cultivating tribes of the Bilen or Bogos (Christian elements remain among the Bait Tarke section); the Marya living north-west of the Bilen; the Mensa; and Bait Juk. Muslim holy tribes formed themselves, one of the more important being the Ād Shaykh. Also the pagan negroid Baria, inhabiting the country around the Takkazē and Gash, became Muslim during the Turko-Egyptian occupation. The Mīrghānī family [see MĪRGHĀNIYYA] gained great influence among Eritrean tribes during this period, deepening the religion of the southernmost Bedja, the Banū ʿĀmir [*q.v.*], who had been influenced by Islamic diffusion from the *fuḳarāʾ* of the Nilotic Fundj [*q.v.*] state.

The northernmost ʿAfar tribes, mixing with other groups, gave rise to the Saho tribes who occupy the eastern mountain slopes of Akele-Guzai, Shimezana and Agame. Long exposed to Islamic influence, a movement into Islam began in the 8th/14th century. They were still predominantly Christian at the beginning of the 19th century, but during this period of change they became predominantly Muslim. They comprise the Asaorta, Hazo or Hazu, Mini-Fere, and Debri-Mela, though they contain groups which have remained Christian, *e.g.* the whole of the Irōb tribe and sections of the Mini-Fere and Debri-Mela.

In the south, it has already been shown (*e.g.*, al-ʿUmarī's account) that although Islam had entered the Sidama states by the 8th/14th century it had made no lasting mark upon the bulk of the population of these states and what little there was disappeared before the waves of Galla and subsequent upheaval and dislocation. The Galla first invaded the Muslim kingdom of Bālī [*q.v.*], where was situated the sanctuary of Shaykh Ḥusayn which they assimilated, and the eastern part of Sidama territory became Galla whilst the unmodified Sidama became confined to the valley of the river Omo. Only in the second half of the 19th century did the Galla of the Harar region adopt Islam; since then many of the Arusi have also come to call themselves Muslim.

The Galla who invaded the region beyond the Gibē formed a number of states (Guma, Gomma, Gēra, Limmu Enarya, and Djimma Abba Djifar) into which Islam spread in the middle of the 19th century, chiefly through commercial currents from the east, though there was also some Nilotic Sudan influence. It also spread among some Sidama (Gāro or Bosha, Tambaro, Alaba, Hadiya or Gudēla, and part of the Walamo) and Guragē groups (Walanē, Akelil-Kabena, Gogot and Siltē), though it should be pointed out that in many of these southern regions no clear-cut religious classification is possible. From the Nilotic Sudan Islam spread among certain Negro tribes (*e.g.* the Berta) of the western Ethiopian borderland known to the Amhara as Shanqela.

An aspect which distinguishes the Islam of the region from other parts of Africa is in the number of *madhhabs* which are recognized, owing to historical circumstances. The Ḥanafī (through Turkish or Egyptian influence) is found at Maṣawwaʿ and elsewhere on the Eritrean coast, in parts of the interior of the Ethiopian state, and in a quarter of Harar city; the Mālikī (from the Nilotic Sudan) in the extreme west and in the interior of Eritrea; and the Shāfiʿī (from Arabia) in other parts of Eritrea, among the Sidama, the Galla of Gibē region, and the Somali. The spread of Islam was nowhere accompanied by Arabization and in consequence the peoples, especially the nomads, preserved their own social institutions as the basic feature of communal life, modified but not radically changed by Islamic institutions. For further information the articles on individual peoples or regions should be consulted.

(J. S. TRIMINGHAM)

iii. — AL-ḤABASH IN MUSLIM GEOGRAPHICAL WORKS

Arabic writers often use the word *Ḥabasha* as vaguely as some classical and mediaeval Europeans use Ethiopia, *i.e.*, as approximately equivalent to the habitable part of sub-Saharan Africa, though the Arabs, unlike some European geographers, do not confuse it with India. Its eastern boundary was considered to be the Baḥr Ḳulzum and Baḥr al-Zandj, its northern the desert separating it from Egypt; Idrīsī extends it to the southern limit of cultivation in Africa. In the west Ibn Khurradādhbih gives it a common frontier with the Ṣufrī state of Sidjilmāsa, and al-ʿUmarī states that it is bounded by the country of the Takrūr; there is no reason to suppose he does not refer to the Sudanese Takrūrīs. The Arabs derived their information partly from Ptolemy, especially from the recension of al-Khwārizmī in the *Ṣūrat al-arḍ*, the handbook he wrote to accompany the map compiled by order of al-Maʾmūn. In time this information became more rather than less confused as names became more corrupt. Muslim penetration was at this time practically confined to the lowlands on the western shore of the Red Sea. This is why so many Arab descriptions emphasize the extreme heat and aridity of Abyssinia. Their acquaintance with the plateau was very slight, though later accounts become more detailed and more accurate. The disorders that ensued after the collapse of the Aksumite kingdom, the prevalence of Christianity in the highlands, and the formidable physical obstacles to communication contributed to this ignorance. In general the early Arab geographers mention only the capital, Djarma, or Djarmī, properly Djarama (*Ḥudūd*, 473), really Garama, capital of the Garamantes of Fazzān [*q.v.*], where Yāḳūt places it. In the *Ḥudūd*, for example, only three place names in Ḥabasha are given, Djaramī, corrupted into Rāsun, and two others, equally corrupt, but tentatively identified by Minorsky as ʿAydhāb and Zaylaʿ. Masʿūdī (*Murūdj*, iii, 34) gives the capital as Kuʿbar. This cannot be Ankober as stated by the editors, nor can it be the same as Idrīsī's Kaldjūn. It is Yaʿḳūbī's Kaʿban or Kaʿbar, capital of the Nadjāshī. Its iden-

tification is problematical; Conti Rossini proposed Aksum, but several alternatives are equally plausible; it cannot have been very distant from the Dahlak islands. Idrīsī's description is hopelessly confused and his names, probably derived from Ptolemy, are extremely corrupt. His capital is Dj.nbayta, a populous city in a desert (*sic*). Ibn Saʿīd, followed by Abu'l-Fidāʾ, also mentions this place. Idrīsī's other names include K.ldjūn and N.djāgha or Nadjāʿa, perhaps merely a corruption of Nadjāshī. These have not been satisfactorily identified, but the first is al-ʿUmarī's Kuldjūrā, a town in Awfāt. Ibn Saʿīd, though repeating much that occurs in Idrīsī, gives some new information. He mentions the country of Saḥarta (Eth. Saḥart), Wafāt (*i.e.* Awfāt), and the Danākil. Yaʿḳūbī gives a list of Bedja kingdoms and refers to the Ḥadārib. Al-Dimashḳī records six races of the Ḥabasha, which include the Amḥara, the Dāmūt (Eth. Damot), and the Saḥart. By far the best Arabic account of Abyssinia is that given by al-ʿUmarī in the *Masālik al-abṣār*; his source was Shaykh ʿAbd Allāh al-Zaylaʿī, an envoy from his countrymen to Egypt. He provides a list of seven Muslim states in Ḥabasha, Awfāt [*q.v.*], Dawāru [*q.v.*], Arābabnī, Hadya, Sharkhā, and Dāra. He describes them as all subject to the *ḥaṭi* (Eth. ḥaṣe) the Ethiopian ruler. He mentions Tigray as the old name of Saḥart, Aksum (Akhshūm), Shoa, Hamasen, Ganz, and even Enarya. Maḳrīzī reproduces the list of Muslim kingdoms, along with much else from al-ʿUmarī, in his *Kitāb al-ilmām*; his supplementary information may come from oral sources.

Although on several occasions during the 10th/16th century Ottoman power extended to parts of the Eritrean plateau, Ottoman geographical literature, to the very limited extent to which it has been examined, contains little information about Ḥabasha that is not derived from Arabic, or at a later date, from European sources. The Turkish map in the Vatican library showing the source of the Nile and even Ewliyā Čelebī's general conception of Africa merely reflect Arab geographical tradition. Ewliyā's short account of Ḥabasha has been studied by Bombaci. It appears to owe nothing to written sources and is probably derived from oral accounts rather than from his own alleged journey. He uses Ḥabasha to denote only the Ottoman *eyālet*; independent Ethiopia he calls Dembiye, *i.e.*, Dembiya, the province north and north-west of Lake Tana, which included Gondar, then the capital. Ewliyā mentions several places on the coast from Sawākin to Mogadishu and gives some details about Maṣawwaʿ. The few places he names in the interior cannot be identified with any confidence.

Beckingham)

iv. — Ethiopian Languages spoken by Muslims

While Amharic and Tigrinya are spoken predominantly by Christians (apart from scattered pockets of Djabart), Tigre-speakers are almost all Muslims. This language (referred to as *al-Khāṣṣiya* in the Kassala province of the Sudan) extends over the eastern lowlands of Eritrea, the northern and western plains, and the large Banū ʿĀmir tribal group. The Tigre-speakers constitute the pastoral and nomadic sector of the Eritrean population. Their number has been estimated at some 250,000.

Harari (its indigenous name is Adare) is the language spoken in the town of Harar in eastern Ethiopia. It is surrounded on all sides by Galla and Somali, which have left their imprint on Harari, but a greater influence, especially in the sphere of the vocabulary, has been exerted by Arabic—owing to the long Muslim conquest and Harar's position as the premier Muslim city in Ethiopia. Since the town came under effective Ethiopian authority, towards the end of the last century, the influence of Amharic has grown, and it seems likely that the latter will slowly displace Harari altogether. The number of those still capable of speaking Harari has been estimated by Cerulli at 35,000.

Harari has generally been written in Arabic, and not Ethiopian, characters. Its literature is limited to some songs and some popular works of Islamic religious law.

Among non-Semitic languages spoken by at least a certain number of Muslims are Galla, Somali, the Sidama languages including Kaffa, as well as Beja and Bilen.

(E. Ullendorff)

Aḥābīsh

Aḥābīsh is a plural form which may mean either (a) "Abyssinians" as derived from Ḥabash, or (b) "companies or bodies of men, not all of one tribe" (Lane), from *uḥbūsh* or *uḥbūsha*; in a poem ʿUthmān is said to have been murdered by "*aḥābīsh* from Egypt" (Nöldeke, *Delectus*, 79, 7; from Ibn al-Athīr, iii, 152). It is also said that the word is applied to men who formed a confederacy either at a mountain called al-Ḥubshī or at a wadi called Aḥbash.

The Aḥābīsh who are mentioned several times in the *sīra* of Muḥammad were a confederacy of small tribes or clans, at first allied with Banū Bakr b. ʿAbd Manāt b. Kināna against Ḳuraysh (al-Azraḳī, *ap.* Wüstenfeld, *Mekka*, i, 71. 14), but subsequently allied with Ḳuraysh. The leading group was Banu 'l-Ḥārith b. ʿAbd Manāt b. Kināna, and the others usually named are: al-Muṣṭaliḳ (of Khuzāʿa), and al-Hūn (of Khuzayma) with its subdivisions ʿAḍal and al-Ḳāra (for references in Ibn Hishām, al-Wāḳidī and al-Ṭabarī see Watt, *Muhammad at*

Mecca, Oxford 1953, 153-6; cf. also Ibn Ḳutayba, *Maʿārif*, 302; in Ibn Saʿd, i/2, 29. 15 it is said that al-Ḳāra formed a *djummāʿ* with men of Kināna, Muzayna and al-Ḥakam).

While the above facts are clearly stated in several passages, there has been much dispute about the identity of the Aḥābīsh who supported Ḳuraysh since the appearance of the article by H. Lammens, *Les 'Ahabis' et l'organisation militaire de la Mecque, au siècle de l'hégire* (*JA*, 1916, 425-82; reprinted in *L'Arabe occidentale avant l'hégire*, Beirut 1928, 237-94). Lammens put forward the view that the Aḥābīsh consisted of Abyssinian and other negro slaves attached to a core of nomadic Arabs; and further held that the power of Mecca in the early 7th century A.D. rested on these mercenaries. Lammens was correct in rejecting the older view that the Aḥābīsh were simply "die politischen Verbündeten" (J. Wellhausen), but his hypothesis as a whole is unjustified for the following reasons: (a) he sets too much weight on the meaning "Abyssinians" and neglects the second possible meaning; (b) there is nothing in the sources to suggest that the tribes or clans of the Aḥābīsh are not Arab; (c) they are stated to be confederates (*ḥulafāʾ*) of Ḳuraysh, not slaves, and at their first mention they were confederates of enemies of Ḳuraysh; (d) they were organized under a chief (*sayyid*), usually of Banu 'l-Ḥārith b. ʿAbd Manāt b. Kināna, who spoke to Ḳuraysh as an equal (*e.g.*, Ibn Hishām, 582, 743); (e) in the Meccan campaigns the Aḥābīsh did not have the importance alleged by Lammens. The Meccans certainly had some Abyssinian slaves who fought for them; of the eleven slaves or freedmen who fought for Muḥammad among the Emigrants at Badr, two were clearly of Abyssinian origin (Ibn Saʿd, iii/1; Watt, *Muhammad at Medina*, Oxford 1956, 344); but this is a small proportion, and there is nothing to show that such slaves were called Aḥābīsh. The word is used, however, of Abyssinians in the Yemen (S. Smith in *BSOAS*, xvi (1954), 455, 458, 465).

Bibliography: (further to that in the text): M. Hamidullah, *Les 'Aḥābīsh' de la Mecque*, in *Studi orientalistici in onore di Giorgio Levi Della Vida*, Rome 1956, i, 434-7; Ṭabarī, i, 2495.9; Ibn Durayd, 119; ʿAbd al-Masīḥ al-Kindī, *Risāla*, 213 foot. (W. MONTGOMERY WATT)

ḤABASH AL-ḤĀSIB AL-MARWAZĪ, AḤMAD B. ʿABD ALLĀH, one of the most important and interesting figures in early Islamic astronomy, hailing from Marw, but living in Baghdād. The sobriquet "Ḥabash" ("the Abyssinian") is nowhere explained; it may refer to the dark colour of his skin. While the *Fihrist* (p. 275) mentions only that he reached the age of 100, Ibn al-Ḳifṭī (*Taʾrīkh*, 170) gives more detailed information on his life and the various stages of his scientific activity. According to him, he lived in the reigns of al-Maʾmūn and al-Muʿtaṣim, which is confirmed by Ibn Yūnus (in his "Great Ḥākimitic Tables", see Kennedy, *Tables*, 126), who reports observations made by Ḥabash in Baghdād in 214/829 and 250/864. The limits for the year of his death (250/864-260/874) as given in Suter, No. 22, p. 13, and Sarton, *Introduction*, i, 565, are pure conjecture. Nallino (*al-Battānī*, i, p. lxvi, and *Raccolta*, v, 55) states that Ḥabash completed the *zīdj*, a copy of which is preserved in Berlin (Ahlwardt, 5750), in 300/912. If this is true, we would have to assume that he made his first observations as a young boy of no more than 15, which is not very probable. For this reason, Nallino (*Bull. du XIIᵉ congr. int. d. orientalistes*, no. 15, 11-2) excludes the possibility of his having collaborated in the Maʾmūnic observations; see Vernet, 505, note 31. Vernet's surmise that there were two different individuals bearing the name Ḥabash al-Ḥāsib is extremely unlikely. The titles of his works listed in the *Fihrist* and by Ibn al-Ḳifṭī (differing with one exception only slightly) are the following: *The Damascus tables*; *The Maʾmūnic tables*; *On the distances* [of the planets] *and* [their] *bodies*; *On the construction of the astrolabe*; *On sundials and gnomons*; *On the three tangent circles and the properties of their junctions* (*kayfiyyat al-awṣāl*); *On the construction of horizontal, vertical, inclined* (*māʾila*) *and turned* (*munḥarifa* = "deviating from the main directions") *planes*. In Ibn al-Ḳifṭī the last two titles are combined into one: *On the tangent circles and the mode of their application* (*kayfiyyat al-ittiṣāl* [better read *istiʿmāl*]) *to the construction of .... planes*. If this is correct, the title would refer not to the construction of sundials but to stereographic projection and its practical application, the terms *māʾil* and *munḥarif* bearing on the ecliptic and on the horizon with the *muḳanṭarāt* respectively.

Contrary to this list, which contains only two *zīdj*es, Ibn al-Ḳifṭī in the *vita* preceding it mentions three *zīdj*es, and under different titles: one according to the methods of the *Sindhind*, "composed in his early days, when he still relied on the computations of the *Sindhind*", in which he refuted entirely al-Fazārī's and al-Khʷārizmī's procedures and their application to the motion of trepidation according to Theon of Alexandria; another one, called *al-zīdj al-mumtaḥan* ("verified tables", *tabulae probatae*, for the meaning of the title see Vernet, 506), which was the most famous of his works composed after he had had recourse to his own observations; finally a third one, the "small *zīdj*" called also the *zīdj al-shāh*.

It is hardly possible to decide whether the two extant *zīdj*es bearing Ḥabash's name (Berlin 5750 and Istanbul, Yeni Cami 784, 2°), both described in detail by Kennedy (nos. 15 and 16, and §§ 7 and 8, pp. 151-4) are at least in part identical with one or the other of the two great *zīdj*es listed (the *zīdj al-shāh* is lost). The former, in which references to the *al-zīdj al-mumtaḥan* of Yaḥyā b. Abī Manṣūr (Ms. Escorial 1927 (formerly 922), Kennedy, no. 51 and § 5, 145 ff., and Vernet, 507 ff.) are found, is obviously modified by some later author. The latter is "much more homogeneous than the other purported copies of early zīdjes" (Kennedy). It contains among others a "Table for the correct positions" (*Djadwal al-taḳwīm*), of which Abū Naṣr Manṣūr (*Risāla ... ila 'l-Bīrūnī ... fi barāhīn aʿmāl djadwal al-taḳwīm fī zīdj Ḥabash al-Ḥāsib*, in *Rasāʾil Abī Naṣr ila 'l-Bīrūnī*, Hyderabad-Deccan, 1948) has given an elaborate description. There the following four functions are listed for the argument λ (ecliptical longitude) = 1, 2, ... 90°: 1. the latitude b ("*al-mayl al-thānī*") of a point on the *equator* with longitude λ; 2. $\cos b_{90-\lambda}$; 3. $\frac{\cos \lambda}{\cos b_{90-\lambda}}$; 4. $\sin \varepsilon \operatorname{tg} \lambda$. With the aid of these functions many computations can be considerably abbreviated.

As for the *zīdj al-shāh*, the title seems to indicate that it was composed on the basis of parameters (*e.g.*, longitude of the solar apogee) or even methods employed in the Pahlavi tables *Zīk-i-shatroayār*, known and in use already at the time of the astrologers of al-Manṣūr, such as Mā shāʾa 'llāh, which in turn, as Nallino (*Raccolta*, v, 233) has shown, must have been based mainly on Hindu models (*Sūrya-siddhānta*).

There is no doubt that Ḥabash possessed a perfect mastery of trigonometrical functions (sine, cosine, versine, tangent, cotangent) and their application to the problems of spherical astronomy. Curiously enough, however, Abū Naṣr in his *risāla* on Ḥabash's *djadwal al-taḳwīm* (see above) avoids the term *ẓill* and consistently replaces it by the ratio of sine and cosine (thus the above fourth function is actually defined as "sin $\lambda \cdot$ sin ε/cos λ").

Al-Bīrūnī, who cites Ḥabash on many occasions, himself wrote an improvement and correction to the tables of Ḥabash (*Takmīl zīdj Ḥabash bi 'l-ʿilal wa-tahdhīb aʿmālihi min al-zalal*, Boilot, no. 4, p. 177). Ibn Yūnus, in his *Ḥākimitic tables*, on one occasion at least makes the depreciatory statement that "Ḥabash's remarks concerning the latitudes of Venus and Mercury sound like those of one who does not understand what he is saying" (Kennedy, 126). Contrary to this, the unanimous opinion of all later writers seems to have been that Ḥabash was one of the great astronomers of early ʿAbbāsid times.

Ḥabash's son Abū Djaʿfar b. Aḥmad b. ʿAbd Allāh (Ibn al-Ḳifṭī, 396) was a renowned astronomer and instrument maker. He wrote a book on the planispheric astrolabe.

ḤABASHAT, a term found in several Sabaean inscriptions with apparent reference to Aksumite Abyssinia. Despite the absence of explicit evidence, it has generally been assumed to apply not only to the territory and people of the Aksumite empire but also to a South Arabian tribe related to the former and in close contact with them. To E. Glaser the term in its widest and most ancient usage signified no more than "incense-collectors" (Arabic *ḥabasha* "to gather") and was applicable to all the peoples of the incense regions, that is, of the Mahra and Somali coasts and Abyssinia proper. He equated it with the Greek *Aithiopes* for which he posited an original **Aṭyūb* with the same sense. In Ḥabashat of the inscriptions, however, Glaser preferred to see a region and tribe of South Arabia which he further recognized in the Abasēnoi of Uranius (*apud* Stephanus of Byzantium) who inhabited an incense-bearing land beyond the Sabaioi. He concluded that Ḥabashat was a part of the Mahra country and that the people, after succumbing to the neighbouring Ḥaḍramawt during the wars between Sabaʾ and Ḥimyar, emigrated round about the turn of the era to Africa, where they laid the foundations of the later Aksumite empire. C. Conti Rossini rightly stressed the improbability of a people from Mahra colonizing across the Red Sea and also raised the linguistic objection that Geʿez, the language of Aksum, shows closer affinities with Sabaean than with Ḥaḍramī. Consequently, if the Abasēnoi were really Ḥabashat they might more reasonably be seen as colonists *from* Abyssinia. For his part he took Ḥabashat as a South Arabian tribe, part of which had emigrated to Eritrea at a very early date, and sought their provenance in Western Yemen, which had obvious geographical advantages. A number of middle Sabaean texts attest their presence in the ancient district of Sahartān, roughly the region between Wādī Baysh and Wādī Surdūd, and they were clearly in close relations with Aksum. This location, which he specified to the vicinity of Luḥayya, was felt all the more convincing since many Yemenī place names, ancient and modern, were found to recur in Eritrea, a clear indication of early cultural contacts. However, it is pertinent to observe with A. J. Drewes that such theories on the South Arabian origins of a tribe Ḥabashat have tended to become confused with and to develop on the strength of a quite separate issue, that of the South Arabian origins of Abyssinian civilization generally, and of the latter there is little doubt. In fact there is no known mention of Ḥabashat before the earliest references to Aksum, that is, at least 400 years later than the oldest Abyssinian texts. Even by the traditional chronology of A. Jamme, the Sabaean inscriptions citing the name are not earlier than the first century B.C. and other schemes would up-date them by three centuries. Ḥabashat is attested in only one Aksumite text (*DAE*, 6/1 = 7/2) where it is the rendering of *Aithiopes* in the Greek version (*DAE*, 4/2-3). In the Sabaean texts there is no suggestion that Ḥabashat was anything other than a designation for the region comprising the nucleus of the Aksumite empire. Where the reference is to the *people* of Ḥabashat, the term employed is Aḥbāsh (*ʾḥbš*). Consequently it is probable that in Sabaean and Aksumite Geʿez the name simply represented the later Arabic al-Ḥabasha, Abyssinia.

Fortunately Abyssinian history may be considered in isolation from the foregoing problem. Although the epigraphic and other evidence from Eritrea is scant compared with that from Arabia, the texts so far published permit certain general conclusions. The earliest date back to the fifth century B.C. and are written in South Arabian characters. They may be subdivided into those in Sabaean and those in a language resembling Sabaean but with divergences in vocabulary, syntax, and proper names. The latter show that a civilization was developing in the Aksum region which closely resembled that of Sabaʾ but whose roots, undoubtedly transmitted from Sabaʾ, must go much further back in time. Since some of the texts of the first category actually mention Sabaʾ and Mārib (*mryb*), the possibility of a later wave of Sabaean colonists in the fifth century is very likely. Thereafter, till the emergence of Aksum, the only inscriptions consist of a few uninformative graffiti, and it is possible that in this period the development of the local civilization was largely inhibited by the Ptolemaic presence in the Red Sea. The first mention of Aksum itself occurs in roughly contemporary South Arabian and Greek sources. The *Periplus Maris Erythraei* (traditionally about 70 A.D., more recently brought forward to about 230 A.D.) knew it as a flourishing trade centre under a king Zōskalēs and with links with Arabia and Egypt through its port Adulis. Ptolemy (160 A.D.) also mentions the city, and its people, but gives little indication of its status. The silence of earlier authors would suggest that, if not of recent foundation, it rose to prominence only after the eclipse of the Ptolemies. As a trading nation the Aksumites inevitably came into sharp conflict with the interests of Sabaʾ, and it is probably in this context that we should understand the part played by them in the struggle which developed between the rising state of Ḥimyar and the traditional Hamdānid dynasty in Sabaʾ. One Sabaean text (*CIH*, 308) tells how Gadarat, king of Ḥabashatān, concluded an alliance with ʿAlhān

Nahfān of Saba'. In the reign of his son Sha'ir[m] Awtar, Gadarat appears on the side of the Ḥimyarites in campaigns in Ẓafār, Sahartān and Nagrān (Jamme, 631, 635). Similarly during the co-regency of Īlsharaḥ Yaḥḍub and Ya'zil Bayyin, the Nadjāshī 'Adhbah sided with the Ḥimyarite ruler Shammar of Raydān during campaigns in Western Yemen which resulted in the defeat and surrender of the Ḥimyarite faction (*CIH*, 314 + 954; Jamme, 574-7, 585). Jamme places all these events in a period of about three generations in the first century B.C., a date difficult to reconcile with the Abyssinian evidence. J. Pirenne however, in identifying Shammar with the famous Shammar Yuhar'ish, brings the date of the troubles forward to about 250 A.D. and thereby introduces an attractive degree of cohesion into the early history of Aksum.

The greatest Aksumite ruler was unquestionably Ēzānā (mid fourth century), whose inscriptions, composed in Greek, Ge'ez and pseudo-South Arabian, tell of campaigns extending from the confines of Egypt to Somaliland. His titles include kingship of Ḥamēr (Ḥimyar) and Raydān, and Saba' and Salḥēn. It is difficult to assess the validity of this claim—the theory of an Aksumite occupation of the Yemen after the reign of Shammar Yuhar'ish has been abandoned in the light of new inscriptions—but E. Littmann supposes that a successful campaign in South Arabia may have lain behind it. It is worth observing too that a predecessor, the unknown author of the *Monumentum Adulitanum*, in the course of similarly wide-ranging conquests, had subdued the Arrhabitai and Kinaidokolpitai, who inhabited the coastal regions of Ḥidjāz and 'Asīr down to the northern borders of Saba'. If this operation may be seen as an attempt to curb piracy in the Red Sea, it is possible that Ēzānā, too, may have had commercial motives for interfering in South Arabian affairs. Drewes, who attributes the *Monumentum Adulitanum* to one Sembrouthēs, known from a fragmentary Greek inscription from Daqqī Maḥarī (*DAE*, 3), goes so far as to suggest the latter's identity with Shammar Yuhar'ish and would thus explain the titulature. Apart from his statecraft, Ēzānā's most notable achievement was to make Christianity the state religion. It had been introduced to Aksum by Frumentius about 330 A.D. After Ēzānā reliable information on Aksum is scant till about 525 A.D. when the Emperor Justin called upon the Nadjāshī Kālēb to intervene in South Arabia on behalf of the persecuted Christians there [see DHŪ NUWĀS] but in this case an attempt to gain control of Saba' by appointing a puppet ruler Sumyafa' failed when the latter was deposed by Abraha [*q.v.*]. Later history is virtually unknown, for with the spread of Islam the land became isolated from its traditional contacts and went into decline. It is known, however, that 'Abd Shams b. 'Abd Manāf established a commercial treaty with the Nadjāshī so that a caravan went from Mecca to Abyssinia every winter. Apparently Muḥammad looked upon it as a friendly country. The members of the first Hidjra, whatever their motives in going there, were accorded a favourable reception by the Nadjāshī and in the year 6 the Prophet allegedly sent an embassy to him. Al-Ṭabarī records that on the latter occasion the ruler's name was al-Aṣḥam b. Abdjar, that he had a son Arhā, and that he died in A.H. 9. Abdjar seems certainly to be an error for Ella Gabaz, of whom coins are known, and in Arhā one may see Armāḥ, of whom also there are coins. But of al-Aṣḥam, probably Ella Ṣaḥam, nothing seems to be recorded.

ḤABAṬ, South Arabian name for a sacred area which is under the protection of a saint and which is a place of refuge; see ḤAWṬA.

ḤABBA, literally grain or kernel, a fraction in the Troy weight system of the Arabs, of undefined weight. Most Arab authors describe the *ḥabba* as $^1/_{60}$ of the unit of weight adopted, as a $^1/_{10}$ of the *dānaḳ* (which in Arab metrology is a sixth part of the unit [see SIKKA]), but there are other estimates which vary from $^1/_{48}$ to $^1/_{72}$. The *ḥabba* thus means someting very different according to the unit of weight; there is a *ḥabba* of the silver measure, a *ḥabba* of the gold measure, a *ḥabba* of the *mithḳāl*, later of the *dirham* etc. On the supposition that the oldest Arab unit of Troy weight was the *mithḳāl* [*q.v.*] of 4.25 grammes ($65^1/_2$ grains Troy), we get as the most probable weight of the *ḥabba* in the early days of Islam about 70-71 milligrammes (1.1 grains), which approximately agrees with the European apothecary's weight of the *granum* (grain, $\frac{1}{5760}$ of the pound) as it was used throughout Europe down to the most recent times (cf. the English Troy grain of 64.8 milligrammes). The statements regarding the subdivisions and multiples of the *ḥabba* also vary; the *ḥabba* is usually divided into 2 grains of barley (*sha'ir*) or 4 grains of rice (*aruzz*) or about 100 mustard-seeds (*khardal*); sometimes 3 and sometimes 4 *ḥabba* on the other hand make a *ḳirāṭ* [*q.v.*].

(E. v. Zambaur)

ḤABBĀN, a town in the Wāḥidī Sultanate of the former Aden Protectorate, situated in the *wādī* of the same name. It is very old and may be referred to as early as 400 B.C. in the inscription *RES* 3945. Many ancient graffiti have been copied in the vicinity and a subterranean water-conduit leading to a cistern within the city may be pre-Islamic. The population figure is not known but was estimated at 4,000 in the mid-nineteenth century. The town is dominated by the walled fortress of Maṣnaʿa Ḥāḳir which stands on an isolated hill in the middle of the town and is the residence of the Sultan. As is usual in the Wāḥidī region the houses are strongly built like fortresses and up to five storeys high. There are nine mosques and an important library. The town is divided into four quarters: 1. that of the Ḥaḍārim and Raʿiyya; 2. that of the Jews, who have now either emigrated to Palestine or embraced Islam; 3. that of the prominent family of Faḳīh Muḥammad b. Ḥasan al-Shiblī; and 4. that of the carpenters, who form a caste and are descended from the ancient carpenter family of al-ʿAwd, originally from Yashbum but now scattered all over South Arabia. It has been plausibly suggested that the Jews here may have been descendants of Ḥimyarite proselytes. They numbered about 200 in 1947 and, though subject to the usual taxes and restrictions, were well treated so that relations with the Arab population were good. They were divided into five sections (*ḳaṣabāt*) and came under the protection of the Sultan. They spoke Hebrew amongst themselves and had their own cemetery outside the town. By trade they were itinerant silversmiths. Ḥabbān is also known as a centre for the cultivation of incense but the chief crops are *dhura* and barley. The land is very fertile and can support up to four harvests in one year. Indigo provides the Ḥaḍārim with employment as dyers, and rubber has also been noted. The road from Bāl Ḥāf to Markha passes through the town and a caravan trade was conducted with Niṣāb and Mārib, principally in tobacco, cotton and cloth against coffee and salt.

ḤABESH, Ottoman name of a province covering the African coastlands of the Red Sea south of Egypt as far as the Gulf of Aden, and including also the *sandjaḳ* of Djidda; the principal *sandjaḳ*s were Ibrīm, Sawākin, Arkiko, Maṣawwaʿ, Zaylaʿ and Djidda, so that its area corresponded approximately to the coastal districts of the present-day Sudan, Ethiopia, French Somaliland and the Zaylaʿ district of the Somali Republic.

The province was founded with the intention of expelling the Portuguese, who, since the last years of the Mamlūk sultanate, had been endeavouring to obstruct the Pilgrimage and the spice trade from their bases along the Red Sea coast. These Portuguese attacks caused a reduction in the customs revenues of such ports as Djidda, Suez and Ṭūr; they also had unfavourable repercussions throughout the Muslim world, since word of them was spread by pilgrims (see H. Inalcık, in *Belleten*, xxi/83 (1957), 503-5). As protector of the Holy Places [see khādim al-ḥaramayn], the Ottoman Sultan was forced to action; but after the failure of five expeditions against the Portuguese (between 930/1524 and 961/1554), it was decided that these regions should be permanently occupied and constituted a province.

In 962/1555, therefore, Özdemir Pasha [*q.v.*] was appointed *beglerbegi* (Istanbul, Basvekâlet Arşivi, Kepeci tasnifi, Divan-i Hümayun ru'us kalemi, no. 213, 212); with an army gathered in Egypt, he launched an offensive up the Nile, but the operation failed, owing to the obstacles which this route entailed (see C. Orhonlu. in *Altıncı Türk Tarih Kurumu kongresi tebliğleri*, Ankara 1961). In a second expedition Özdemir Pasha embarked his forces at Suez and landed at Sawākin. Using both land and naval forces, he conquered the whole region from Maṣawwaʿ to Zaylaʿ, the province being finally constituted in 964/1557 (C. Orhonlu, *XVI. asrın ilk yarısında Kızıldeniz sahillerinde Osmanlılar*, in *Tarih Dergisi*, xii/16, 1-24). In order to consolidate their position, the Ottomans extended their conquests inland until 966/1559, when Özdemir Pasha died. After his death, Ottoman power declined rapidly. The remoter districts were abandoned or separately administered [see barābra]. In 1789 Bruce found Maṣawwaʿ under the rule, not of an Ottoman governor, but of a tribal chief entitled *nāʾib*. The *kāshiflik* in Lower Nubia had become hereditary, and the descendants of the Ottoman garrison, intermarried with the local population, became a hereditary military caste.

Since one of the primary duties of the *beglerbegi* was to maintain order in the Holy Cities and the Yemen, the headquarters of the province was, from the last quarter of the 10th/16th century until the beginning of the 19th century, located in Djidda (Başvekâlet Arşivi, Mühimme def., xxi, 311, xxvii, 235, 6, 92). Owing to the disturbances in this region, Medina was temporarily made the headquarters in the 12th/18th century.

By 1814, when Burckhardt visited Sawākin, Ottoman authority was reduced to the granting by the governor of Djidda of recognition to the local *amīr*, and the appointment of a customs officer in the port. The Ottoman sultan finally transferred all claims on the African parts of the province to the pasha of Egypt in 1830.

ḤABĪB b. ʿABD al-MALIK al-Ḳurashī al-Marwānī, great grandson of the Umayyad caliph of Damascus al-Walīd I. After the

fall of the Umayyad dynasty, Ḥabīb b. ʿAbd al-Malik fled from Syria and arrived in Spain in advance of his cousin, ʿAbd al-Raḥmān b. Muʿāwiya, the future ʿAbd al-Raḥmān I of Cordova; when this Umayyad claimant arrived, Ḥabīb gave him his support and encouraged him in his aspirations. On the eve of the battle of al-Muṣāra (138/756), which was to decide the fate of the throne of Cordova, ʿAbd al-Raḥmān appointed Ḥabīb commander in chief of the cavalry.

After victory had been achieved, ʿAbd al-Raḥmān I *al-Dākhil* retained his cousin Ḥabīb b. ʿAbd al-Malik permanently in his service, and he became his intimate confidant. The ruler entrusted to him the government of Toledo, a key point in the centre of the Iberian peninsula, which until then had been under the domination of the Fihrīs, supporters of Yūsuf, the *wālī* dismissed by ʿAbd al-Raḥmān. While Ḥabīb b. ʿAbd al-Malik was at Toledo, this eastern town showed no sign of rebellion; this calm must be attributed to the energetic attitude of its governor, who also made use of this place as a centre of operations against the revolt which was taking place at this time in the adjacent territories—the rebellion of the Berber Shaḳyā which broke out in 151/768 and which was the most serious of all the many uprisings which took place during ʿAbd al-Raḥmān's reign. The detachments sent by the governor of Toledo succeeded in penetrating into the main stronghold of the chief rebel, the castle of Sopetrán, in what is now the province of Guadalajara. In 162/778 Ḥabīb was once again in action in his territory, against another rebellion—by the *ḳāʾid* al-Sulamī.

In reward for his services, the *amīr* granted great favours and benefits and many estates to Ḥabīb b. ʿAbd al-Malik, who in addition did not hesitate to appropriate to himself, with the ruler's connivance, any land which he coveted; on one occasion, confronted by the vigorous support of the judge of Cordova for those who had been dispossessed, ʿAbd al-Raḥmān went so far as to repay from his own money the value of the properties which Ḥabīb had seized. On Ḥabīb's death (date unknown), the ruler showed profound grief, which is described in graphic terms by the historians.

Ḥabīb b. ʿAbd al-Malik was the founder of the line of Ḥabībīs, which provided al-Andalus with some notable men of learning and of letters, among whom there stands out the branch of the Banū Daḥḥūn. Among the most noteworthy Ḥabibīs may be mentioned: Ḥabīb Daḥḥūn and Bishr b. Ḥabīb Daḥḥūn, both poets of the reign of ʿAbd al-Raḥmān II; the *ḳāḍī* of Cordova, Ibrāhīm al-Ḳurashī, also contemporary with ʿAbd al-Raḥmān II; ʿAbd Allāh b. Yaḥyā b. Daḥḥūn, a venerable *faḳīh* who lived to see the fall of the caliphate of Cordova and was the religious counsellor of Ibn Ḥazm [*q.v.*]; Saʿīd b. Hishām b. Daḥḥūn, a poet who lived at Porcuna and was the contemporary of Ibn Ḥamdīn (6th/12th century).

ḤABĪB b. AWS [see abū tammām].

ḤABĪB b. MASLAMA, a military commander of Muʿāwiya. He was born at Mecca c. 617 A.D. in a family belonging to the Ḳurayshī clan Fihr. He took part in the conquest of Syria and distinguished himself in the fights against the Byzantines. By order of Muʿāwiya he conquered Armenia in 21/642 and the following years (for details vide supra i, 635); then he was given the governorship of Northern Syria and fought against the Mardaites (Djarādjima [*q.v.*]) and the Byzantines. After ʿUthmān's death he supported the cause of Muʿāwiya against ʿAlī. At Ṣiffīn (37/657) he commanded the left wing of the Syrian army and served as a representative of Muʿāwiya in the negotiations with ʿAlī, which finally led to the arbitration. He died c. 42/662 not yet 50 years old. According to others (*Aghānī*[1], xiv, 9; Ṭabarī, ii, 139) he was still alive in 51/671. Later writers sometimes wrongly reckon him amongst the "companions" of the Prophet (see Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, ii, 190).

Bibliography: Ibn Saʿd, vii/2, 130; the Indices to Balādhurī, Ṭabarī, Dīnawarī, Yaʿḳūbī; H. Lammens, *Études sur le règne du calife omaiyade Moʿawiya Ier*, in *MFOB*, i, 42-57. (J. W. Fück)

ḤABĪB al-NADJDJĀR (the carpenter), legendary character who gave his name to the sanctuary below mount Silpius at Anṭākiya [*q.v.*] where his tomb is reputed to be. He is not mentioned in the Ḳurʾān; nevertheless Muslim tradition finds him there, in *sūra* XXXVI, 12 ff., under the description of the man who was put to death in a city (*ḳarya*) not otherwise specified, having urged its inhabitants not to reject the three apostles who had come to proclaim the divine message to them. According to Muslim tradition the "city" was Antioch and the anonymous believer was called Ḥabīb. According to al-Ṭabarī he was not a carpenter but a silk-worker, yet the epithet of *nadjdjār* is applied to him by all the other ancient sources (al-Masʿūdī, Muṭahhar [ps.-Balkhī], Balʿamī, al-Thaʿlabī) and by more recent authors. He was stoned or trampled to death by his executioners. More recent legends, such as the one preserved by al-Dimashḳī (*Cosmographie*, ed. Mehren, 206), embroider the story of his martyrdom with strange new details (walking about with his severed head in his hand). There is nothing to prove that Ḥabīb was the Agabus of *Acts*, xi, 28 and xxi, 10-11, for although the latter suffered martyrdom according to several hagiographic texts (*Synaxaire de Constantinople*, in H. Delehaye, *Propylaeum ad Acta sanctorum Nouembris*, col. 591, cf. 783 f. and *Synaxaire arabe jacobite*, ed. R. Basset, *PO*, xi/5, 788 f.), it is not stated that this was at Antioch, but either at Jerusalem or in some place not specified. The prehistory of the Muslim legend is not therefore entirely clear.

(G. Vajda)

ḤABĪB ALLĀH (Ḥabībullāh) **K̲H̲ĀN** (1872-1919), son of the *amīr* ʿAbd al-Raḥmān [*q.v.*] and of the concubine Gulrīz, who came from the Wak̲h̲ān; ruler of Afg̲h̲ānistān in succession to his father, from 1 October 1901 to 20 February 1919, when he was assassinated at Kalla-gūs̲h̲ in the valley of Alingār not far from the residence of Ḳalʿat al-Sirād̲j̲ (Lag̲h̲mān). In foreign affairs he adopted a pro-British policy, reinforced by frequent visits to India, by requests for British arbitration on the question of the frontier with Iran (MacMahon Mission, 1902-3, whose findings were accepted by both countries so far as the delimitation of the frontier was concerned, though the related question of the division of the waters of the Hilmand was to drag on at greater length), and by the signing, on 21 March 1905, of an agreement with Sir Louis Dane which confirmed the ʿAbd al-Raḥmān-Durand agreement of 1893. Great Britain pledged itself to guarantee Afghan independence so long as the *amīr*'s actions, in his relations with other powers, conformed with the advice given by the British government; to pay an anuual subsidy of £ 160,000 sterling; to place no limitations on Afg̲h̲ānistān's importing of war materials; and accepted the presence, for an unlimited period, of a political agent at the court of the Viceroy of India and of Afg̲h̲ān commercial agents in India and in Great Britain itself. The *amīr* pledged himself to friendship with Great Britain, and always to consult Britain in any consultations with a third power; accepted the presence at Kābul, for a period of three to five years, of an Anglo-Indian political agent chosen by the *amīr* from among Muslims proposed by the Indian Foreign Office; he did not, however, accept the British request to construct fortifications on the Hilmand. This was the situation which was to form the subject of the Anglo-Russian convention of 31 August 1907 (not, however, formally accepted by the *amīr*), which left Afg̲h̲ānistān under the British sphere of influence, recognizing Russia's interests as equal with those of Great Britain only in the field of commerce. In this field and in that of the local matters concerning frontiers there was also to be possible some direct contact between Russia and Afg̲h̲ānistān, but all political relations were to be left to the British Agent. During the First World War, however, Afg̲h̲ānistān's proclamation of neutrality (*farmān* of 24 August 1914) made it possible to accept a Turco-German mission and also the presence in Kābul of a "provisional Indian revolutionary government". In internal policy, the *amīr*, who was rather less energetic than his father, embarked on a programme of pacification based on acts of generosity such as recalling exiles and the remission of tribute, but always within the framework of a process of irreversible state centralization, even though it was being carried on under the aegis of the *mullā*s and of the military, and under the menace of the palace intrigues conducted by the *Sardār* Muḥammad ʿUmar (b. 1889), the son of ʿAbd al-Raḥmān, and his mother Bībī Ḥalīma, but above all by Naṣr Allāh (b. 1874), the *amīr*'s brother, commander-in-chief of the army and a claimant to the throne. The slackening of discipline in the army (whose strength in peace time was 150,000 men) was offset by new military supplies and by general material improvements. The *amīr* took measures against the serious economic situation of the country by means of a fiscal policy which permitted the increase of trade with India (and also with Russia, but without going so far as the establishment of the regular relations desired by the governor of Turkestan, Ivanov), and with Treasury loans to merchants. He carried out some public works, but it was in the field of education that most progress was made. With a military school supplementing it, there began to function from 1903 the high school called Ḥabībiyya, based on the type of the Anglo-Indian colleges and intended to train an administrative cadre: in its 12 classes, with local and Indian teachers, there were taught, together with literature and the religious sciences, geography, chemistry, physics, history, mathematics; while among the languages, together with Persian, were English, Hindustani and, more sporadically, Pashtu. A suitable *Dār al-taʾlīf* attached to the school attended to the preparation of textbooks, most of which were lithographed in India. In Kābul a lithographical and printing works (the ʿInāyat press) was set up. For eight consecutive years from 1911, there appeared the 16-page fortnightly scientific, literary and political periodical *Sirād̲j̲ al-ak̲h̲bār-i afg̲h̲āniyya*, with engraved illustrations and edited by the "father of modern prose", Maḥmūd b. G̲h̲ulām Muḥammad Ṭarzī (b. Kābul, 1285/1868-9, d. Istanbul 1353/1934-5). Thus schools and periodicals were the first two really modern manifestations of Afg̲h̲ān cultural life. The assassination of the *amīr*, however, brought to an abrupt end this interim period of apparent tranquillity and of imposed friendship with Great Britain, and opened the way to new and more definite national claims by the country.

(G. Scarcia)

HĀBĪL wa **ḲĀBĪL**, names of the two sons of Adam [*q.v.*] in Muslim tradition: Hebel and Ḳāyin in the Hebrew Bible (for the distortion and assimilation through assonance of the two words, compare the pairs of words D̲j̲ālūt - Ṭālūt, Hārūt - Mārūt, Yād̲j̲ūd̲j̲ - Mād̲j̲ūd̲j̲; Ḳāyin is, however, attested sporadically). Although the Ḳurʾān does not give these names, it tells however (CV, 27-32/30-5, Medinan period) the story of the two sons of Adam, one of whom killed the other because his own sacrifice was refused when his brother's was accepted. Unlike the Bible, the Ḳurʾān also tells how the murderer learned from the example of a crow how to dispose of his victim's body. From this episode the Ḳurʾān argues for the prohibition of murder, underlined by a consideration inspired, no doubt indirectly, from the *Mis̲h̲na*, *Sanhedrin*, iv, 5: to take the life of an innocent being is as serious a crime as to cause the death of the whole of humanity; to save the life of a single person is as meritorious as to do so for all men. If an exegetical tradition is to be believed, Ḳurʾān, XXXIII, 72, is also referring to the first murderer: Ḳābil, having offered the trust (*amāna*) to Adam, broke his word and killed the brother entrusted to his care, but this interpretation, foreign to the context, does not rest on any serious basis. Several later authors certainly know the biblical story: Ibn Ḳutayba, *Maʿārif*, ed. S. ʿUkās̲h̲a, 17 f.,

quotes an abridged form of Genesis, IV, 1-8; al-Ṭabarī adduces Genesis, IV, 9-16, following Ibn Isḥāķ; and they lay stress, in accordance with the Bible and the Ķur'ān, on the rejection of the sacrifice as a reason for the fratricide, this rejection being due to the poor quality of the fruits of the earth offered up by Ķābīl. In general, however, Muslim sources show a preference for legendary versions derived from the Jewish *aggada* and the "Treasure Cave", rather than the slightly paraphrased scriptural data. And so they try to find a motive for the drama in distant antecedents which claim to fill a gap in the biblical narrative. Indeed, according to the latter, Adam had only daughters after the fratricide and after the birth of Seth who was to replace Abel (Genesis, V, 4). The legend readily repeated by Muslim authors (following Wahb b. Munabbih) has it, in short, that each of the two brothers had a twin sister (Aķlīmā and Labūdā), each destined to be the bride of the other brother; displeased with this arrangement, Ķābīl had agreed to having a trial sacrifice which should decide the question, but when God's judgment went against him, he murdered his brother and took possession of his own sister (it is to be remarked that a version attributed to the *imām* Dja'far al-Ṣādiķ by al-Tha'labī, 28, refashions the legend, eliminating the motive of consanguineous marriage; the polemical anti-Zoroastrian point is obvious). Tradition also offers a number of variants as to the means of murder: Hābīl was beheaded by a carpenter's axe, his head was crushed by a huge stone while he slept, etc. Lastly, the Muslim legend has received the fable already mentioned by Jerome, *Ep. 36 ad Damasium* and attested in more recent *midrashim* about Ķābīl being killed by his blind descendant (Lemekh). —As is often the case with similar material, Jewish texts of a later period show some traces of the Muslim legend.

ḤĀBIṬIYYA, followers of Aḥmad b. Ḥābiṭ [*q.v.*].

HABOUS [see WAĶF].

ḤABSHĪ, term used in India for those African communities whose ancestors originally came to the country as slaves, in most cases from the Horn of Africa, although some doubtless sprang from the slave troops of the neighbouring Muslim countries. The majority, at least in the earlier periods, may well have been Abyssinian, but certainly the name was applied indiscriminately to all Africans, and in the days of the Portuguese slave-trade with India many such 'Ḥabshīs' were in fact of the Nilotic and Bantu races.

There is little detailed information concerning the numbers, the status and the functions of the Ḥabshīs in the earliest Muslim period, although the favour shown to the Ḥabshī slave Djamāl al-Dīn Yāķūt by the Khaldjī queen Raḍiyya [*q.v.*] in the early 7th/13th century indicates that even then Ḥabshīs were able to rise to positions of power and eminence (but the story that Djamāl al-Dīn was the queen's lover has no support in the contemporary historians). The Ḥabshīs were certainly well distributed over India by the Tughluķ period, for Ibn Baṭṭūṭa, who travelled widely in the sub-continent between 734/1333 and 743/1342, notices them from north India to Ceylon, employed especially as guards and men-at-arms by sea as well as by land (Ibn Baṭṭūṭa, iv, 31, 59-60, 93, 185; tr. Gibb, London 1929, 224, 229, 236, 260). Their presence in large numbers in Gudjarāt is nowhere directly recorded, but may be presumed from a reference at the end of the 8th/14th century to the promise of revenue and tribute payments, including 400 Hindū and Abyssinian slaves, to Dihlī by the Gudjarāt *nā'ib* Shams al-Dīn Dāmghānī (777/1375? Accounts vary).

Towards the end of the 8th/14th century the slave Malik Sarwar, who was most probably a Ḥabshī eunuch, became prominent under sultan Muḥammad b. Fīrūz and the later Tughluķs, having in 791/1389 been appointed *wazīr* with the title Khwādja Djahān. In 796/1394 he was appointed governor of the eastern provinces of the empire and sent to Djawnpur as *Malik al-sharķ* to suppress the wave of Hindū rebellion which was threatening the province. Malik Sarwar extended the bounds of the districts for which he was responsible and pacified the province, but never assumed the royal title in spite of his virtual independence. His adopted son nicknamed Ķaranful, also an African slave, did however cause the *khuṭba* to be read in his name, and struck coin, after succeeding Malik Sarwar in the government in 802/1399 as Mubārak Shāh; his younger brother succeeded him on his death the following year and, as Ibrāhīm Shāh, ruled Djawnpur for nearly forty years, a great patron of art and literature. For his reign and that of his successors see IBRĀHĪM SHĀH SHARĶĪ and SHARĶIDS.

In Bengal, where Ḥabshī slaves arrived directly by sea, it is recorded that the Ilyās Shāhī sultan Rukn al-Dīn Bārbak Shāh, 863-79/1459-74, maintained some 8000 African slaves mainly for military purposes, many of whom were raised to high rank. They became dangerously powerful under the rule of Djalāl al-Dīn Fatḥ Shāh (886-91/1481-6), who on taking measures against them was assassinated by the Ḥabshī commander of the palace guards, the eunuch Sulṭān Shāhzāda; the latter usurped the throne as Bārbak Shāh, the first of a succession of Ḥabshīs who ruled Bengal from 892/1486 to 899/1493. Bārbak Shāh was killed after a rule of about six months by the Ḥabshī army commander Amīr al-Umarā' Malik Andīl to avenge his master's murder; he was persuaded to ascend the throne himself as Sayf al-Dīn Fīrūz, and ruled with ability and generosity. He in turn was assassinated in a palace plot and succeeded by an infant king of dubious ancestry; the real power was in the hands of the Ḥabshī regent Ḥabash Khān, who was soon murdered by another Abyssinian, Sidī Badr called Dīwāna, who succeeded as Shams al-Dīn Muẓaffar Shāh; he subjected Bengal to a reign of terror and extortion, and at first only the wisdom of his Arab *wazīr* 'Alā' al-Dīn Ḥusayn enabled him to continue. Eventually the extremes of Ḥabshī mismanagement drove the *wazīr* to join the popular revolt against Muẓaffar, who was secretly assassinated during a siege; this brought an end to the Ḥabshī interregnum, which was beginning to threaten not only Bengal's progress and military power but also the institution of the

monarchy itself. The *wazīr* was elected king, as ʿAlāʾ al-Dīn Ḥusayn Shāh, in 900/1493, and shortly thereafter expelled all Africans from Bengal; most of them eventually made their way to Gudjarāt and the Deccan.

It was perhaps in the Deccan that the Ḥabshīs were most conspicuous over a considerable period. Here again records of their presence in the early period are scanty, although Rafīʿ al-Dīn Shīrāzī states in the *Tadhkirat al-mulūk* that the Bahmanī sultan Fīrūz, 800-25/1397-1422, had many in his *ḥaram* and as his personal attendants; some of the bodyguard were, he says, subverted by his brother Aḥmad, who eventually encompassed Fīrūz's death at the hands of his Ḥabshī *djāmadār*. Foreigners, especially Persians and Turks, had earlier been attracted to the Bahmanī court, and Aḥmad on his accession increased their number. This led to rivalry between the local Dakhnī Muslims and the foreigners, not least on religious grounds since most of the influential foreigners were Shīʿī. The Ḥabshīs, who were Sunnīs, lost favour at the court, and came to support the local Sunnī Deccan Muslim faction in their opposition. The Dakhnī party managed to regain some favour in the later years of Aḥmad Shāh Walī's reign and, coming also to some power, commenced a persecution campaign against the foreigners, not excluding the Persian Maḥmūd Gāwān [*q.v.*] in spite of his reforms whereby offices were divided between the foreigners and the Dakhnī party; in this division two of the four Bahmanī provinces, Māhūr and Gulbargā, were governed by Ḥabshīs. The persecution culminated in the plot, in which a Ḥabshī leader was the instigator, to discredit Maḥmūd Gāwān, whom the sultan put to death. The hill outside Bīdar town where the Ḥabshī community had their stronghold is still known as the Ḥabshī Koṭ; the tombs of many Abyssinian nobles and soldiers are scattered over the hill (see G. Yazdani, *Bīdar: its history and monuments*, Oxford 1947, 82 ff.). The next sultan, Maḥmūd Shāh, 887/1482-924/1518, who had succeeded to the throne with the help of an extreme Turkish faction, nevertheless appointed a Ḥabshī *dīwān* of finance, Dilāwar Khān. This officer failed to carry out a plan to assassinate the unpopular *wazīr*, a converted Hindū, at the king's command, and fled the country. Meanwhile a popular Dakhnī revolt had in 892/1487 attempted an unsuccessful coup to dethrone Maḥmūd; he was saved by his foreigners, and gave orders for a general massacre of Dakhnīs and Ḥabshīs. The differences were settled, but the Sunnī Turk Ḳāsim Barīd [see BARĪD SHĀHĪS] as *wazīr* seized much of the government, and Dilāwar Khān returned from exile to assist the king against him; but Dilāwar Khān was defeated and the Barīd family gained a greater ascendancy over the Bahmanī lands. In 901/1495 the Ḥabshī governor of western Telingāna, Dastūr Dīnār, rose in revolt on being replaced by Sulṭān Ḳulī Ḳuṭb al-Mulk, and was defeated by the Barīdī minister with the aid of Yūsuf ʿĀdil Khān; he was however restored to the fief of Gulbargā in an attempt by Ḳāsim Barīd to curb the ambition of Yūsuf in Bīdjāpur. On the death of Ḳāsim Barīd in 910/1504. Yūsuf marched on Dastūr Dīnār, killed him, and annexed Gulbargā to his dominions. Yūsuf then took vigorous measures to establish the Shīʿī faith, which led to renewed hostilities between the foreign and Dakhnī factions in which the Ḥabshīs again took a leading part.

In Bīdjāpur continuing conflict between Sunnīs and Shīʿa caused first (916/1510) a decree precluding Dakhnīs and Ḥakshīs from holding office in the state; the Sunnī revival under Ibrāhīm (941/1534-965/1558) restored the Dakhnī-Ḥabshī faction to power in 943/1537, but the next sultan reversed his father's religious policy and reinstated the foreigners. Later, in the time of Ibrāhīm II (988/1580-1037/1627), it was a number of influential Ḥabshī officials who restored the dowager queen Čand Bībī; but now factions arose within the Ḥabshīs, and another Dilāwar Khān rose to supreme power in the Bīdjāpur kingdom. On his eventual defeat in 999/1591 he took service with Burhān II in Aḥmadnagar, where the Ḥabshīs had long been influential.

In Aḥmadnagar, in the troubles following the accession of Ibrāhīm Niẓām Shāh — whose mother had been a Ḥabshī—there were at least two Ḥabshī factions independent of the Dakhnī party. They provided the ministers of state and army commanders, and seem to have been for a time the effective king-makers of Aḥmadnagar (for details of the succession struggles see NIẒĀM SHĀHĪS). The most prominent of the Ḥabshīs in Aḥmadnagar in the 11th/17th century was unquestionably the *wazīr* Malik ʿAnbar [*q.v.*], a slave who had originally been purchased in Baghdād, who rose to power when he defeated the Mughal forces in Berar in 1010/1601, and in 1012/1603 established Murtaḍā Niẓām Shāh II as the Aḥmadnagar ruler in spite of the presence of Mughal troops in the capital. He reorganized the revenue system of the kingdom, sets its finances on a sound basis, and organized the training of troops, mostly Marāṭhās, as guerillas to fight against the imperial Mughals. On Malik ʿAnbar's death in 1035/1626 the king came completely under the influence of another Ḥabshī, Ḥamīd Khān, and his wife, the latter becoming the recognized means of communication between the sultan and his subjects. On Ḥamīd Khān's decline from power Malik ʿAnbar's son Fatḥ Khān attained the same control over Aḥmadnagar as his father had done, until his defeat, on honourable terms, at Mughal hands.

Besides the important posts held on land by the Ḥabshīs, they were also prominent in the navies of Gudjarāt and the Deccan powers. At the beginning of the 10th/16th century Aḥmad Niẓām al-Mulk, the founder of the Niẓām Shāhī dynasty, conquered the region of Dandā Rādjpurī on the southern Konkan coast from Gudjarāt, giving the command of its island fort, Djandjīra (corruption of Ar. *djazīra*?), to his Ḥabshī noble Sīdī Yāḳūt; it seems to have remained entirely under Ḥabshī governorship thereafter. On the Mughal conquest of Aḥmadnagar in 1046/1636 Djandjīra passed to Bīdjāpur, who continued the Ḥabshī tradition, command of the island passing not from father to son but from one commander of the fleet to another. Djandjīra's importance increased at this period, as it came to protect all the trade of Bīdjāpur and also the pilgrim traffic. The Marāṭhās under Shivādjī tried repeatedly (ca. 1070-80/1660-70) to gain possession of Djandjīra: on their last and severest attack the governor appealed for help from both Bīdjāpur and the Mughals. It became apparent that only the Mughals, who saw in this maritime power an ally against the Marāṭhās, were prepared and able to assist the governor, who thereupon transferred his allegiance from Bīdjāpur to the Mughals. The governor was given the title of Yāḳūt Khān and command of the Mughal navy at Djandjīra and Sūrat. The power of the Ḥabshī naval commanders continued until the end of the 11th/17th century, and they were victorious against the English forces as well as against the Marāṭhās; but by about 1730 their sea power had

declined as that of the Marāṭhās had risen, and they were no longer able to protect the Sūrat shipping. The Marāṭhās were however unable to establish any influence over Djandjīra by land, and when in the 19th century control of the Konkan coast passed to the British the internal affairs of the Ḥabshī colony were left undisturbed.

In Gudjarāt there seems to have been a continuous supply of Ḥabshīs by sea through the ports of Bharōč, Sūrat-Randēr and Khambāyat. The sultan Bahādur (933/1526-943/1537) especially welcomed foreigners to his service, and there were said to have been as many as 5000 Ḥabshīs in Aḥmadābād alone (Ḥādjdjī al-Dabīr, *Ẓafar al-wālih* . . ., ed. Ross, i, 97, 407, 447); many of these appear to have been prisoners taken in the Muslim invasion of Abyssinia in 934/1527. The abler Ḥabshīs rapidly obtained positions of importance: thus Sayf al-Mulk Miftāḥ was governor of the fort of Dāmān, with a force of 4000 Ḥabshīs, at the time of the Portuguese conquest; Shaykh Saʿīd al-Ḥabshī, a cultured and wealthy soldier, who had performed the Ḥadjdj and who maintained a fine library and a public kitchen (Ḥādjdjī al-Dabīr, ii, 640-3), is remembered as the builder of the exquisite 'Sīdī Saʿīd's' mosque (980/1572-3) in Aḥmadābād; the titles Djudjhār Khān and Ulugh Khān were borne by several Ḥabshī nobles, one Ulugh Khān being the patron of the historian Ḥādjdjī al-Dabīr, in the 10th/16th century, especially after the disorders which began with the accession of Maḥmūd Shāh III in 943/1537. They formed a prominent faction opposed to the local Gudjarātī nobility and the dissension of these rival nobles in the sultanate made possible the almost bloodless conquest of Gudjarāt by Akbar in 980-1/1572-3. See further GUDJARĀT, also IKHTIYĀR AL-MULK, ULUGH KHĀN.

The Ḥabshīs were similarly prominent in the neighbouring sultanate of Khāndēsh [*q.v.*; see also FĀRŪḲIDS], where the practice of the Ḥabshī Malik Yāḳūt Sulṭānī in keeping the male members of the royal house in restraint in the mountain fortress of Āsīrgaṛh has led C. F. Beckingham, in *Amba Gešen and Āsīrgarh*, in *JSS*, ii (1957), 182-8, to suppose that this custom was imported from Abyssinia, the Ethiopian royalty having been detained in a similar way on mount Amba Gešen; but this may be no more than a coincidence, as there are many instances of similar practices in India where no Ḥabshī influence is suspected.

The Ḥabshīs were dominant in the Gudjarāt navies both as commanders and as men-at-arms, and their numbers in Gudjarāt and on the Konkan coast seem to have been greatly augmented through the extensive Portuguese slave-trade (see *inter alia* K. G. Jayne, *Vasco da Gama and his successors*, 1910, 22 ff.; Jean Mocquet, *Voyages en Afrique, Asie, Indes* . . ., Paris 1830, 259-63), which certainly brought 'Ḥabshīs' who were not Ethiopians. Their descendants are still recognized as a separate Muslim community in Gudjarāt (S. C. Misra, *Muslim communities in Gujarat*, New York [1964], 77, s.v. *Sidi*), and in 1899 the *Bombay Gazetteer*, ix/2, 11 ff., describes them as building round mud huts with circular grass roofs —an African rather than an Indian feature. Their chief object of worship then was Bābā Ghor, an Abyssinian saint, whose shrine stands on a hill near the cornelian mines in Ratanpur near Rādjpīpla (where there was once a colony of Ḥabshī miners; *Trans. Bombay Geog. Soc.*, ii, 76); they are described as begging in small bands playing, besides drums and rattles, a fiddle ornamented with peacock feathers and sounded by a bow one end of which is equipped with a coconut shell in which stones rattle.

The flow of Ḥabshī slaves into India continued through the Mughal period, and the names of individual Ḥabshīs occur frequently throughout the Mughal histories. They do not, however, seem to have been allowed to acquire enough power ever to have formed Ḥabshī factions of any importance; but they are certainly known as provincial governors, e.g. Ātish Ḥabshī, governor first of Bihār and later of the Deccan (d. 1061/1651); Ḥabash Khān Sīdī Miftāḥ and his son Aḥmad Khān, both of whom attained high rank under Awrangzīb; Dilāwar Khān, (d. 1114/1703), also a governor of the Deccan. Biographies of these and many others are given in the register of Mughal nobility, the *Maʾāthir al-umarāʾ*, cf. index.

In modern India the word *ḥabshī* is often heard applied in a pejorative sense to an Indian of dark skin, and also frequently to a man of Gargantuan appetite.

Bibliography: in addition to the references in the article, see the bibliographies to the articles on the major regions of India. No systematic study of the Indian Ḥabshīs has yet been attempted, and much field-work, particularly anthropological and linguistic, is needed. R. Pankhurst, *An introduction to the economic history of Ethiopia*, London 1961, includes as Appendix E 'The Habshis of India', 409-22, incomplete and with dates unreliable. (J. BURTON-PAGE)

ḤABŪS [see ZĪRIDS].

ḤAČ OVASİ [see MEZÖ-KERESZTES].

ḤAḌĀNA, (A.), *ḥiḍāna*, in the technical language of the *fuḳahāʾ*, is the right to custody of the child, a ramification of guardianship of the person which though exercised as a rule by the mother or a female relative in the maternal line may in certain circumstances devolve upon the father or other male relative. This institution is of very great importance in judicial practice because of the numerous conflicts to which the subject gives rise, particularly where the spouses are "separated" and above all where the cause of separation is repudiation of the wife.

A.—In theory this right of custody begins with the birth of the child, whether boy or girl, the parents living together (al-Zaylaʿī, *Tabyīn*, iii, 46). However most authors, of whatever school, recognizing that difficulties on this point do not normally arise till dissolution of the marriage, confine their explanations to this hypothesis alone.

When the spouses are not separated there are only two sets of circumstances in which the right of custody sets husband over against wife. The wife has a domicile distinct from that of her husband, either because he permits this to her (Ḥanafī law), or because she has reserved this right to herself by a clause in the marriage contract (Mālikī and Ḥanbalī law); or else the husband decides to take his small child on a journey, unaccompanied by his wife. In these two cases it is only the Ḥanafīs who have drawn the logical conclusions from the principle that *ḥaḍāna* is a prerogative conferred upon the mother, even before dissolution of the marriage. Thus the husband is not entitled to travel with his child, still in custody of the mother, against the wishes of the latter (al-Kāsānī, iv, 44). Authors of the other schools pay less attention to this *ḥaḍāna* during the subsistence of the marriage and their doctrine on the subject is very unstable.

B.—In the majority of the schools *ḥaḍāna* ends at the age of seven for a boy, who can then "feed and clothe himself without the aid of a third party", and at pre-puberty for a girl (about the age of nine). In

Mālikī law it lasts until puberty for boys and until the consummation of marriage for girls.

In the three schools which terminate very early the privilege of the mother and others entitled to *ḥaḍāna* (Ḥanafī, Shāfiʿī and Ḥanbalī), the question arises as to what becomes of the minor when no longer in the care of the mother. We must not forget that this concerns a child who has barely attained the age of reason. In Ḥanafī law he or she is then obligatorily given over (*ḍamm*) to the father, or in default of the father through death or unworthiness, to the male relative on whom devolves the *wilāya* of the child's person, with the condition, in the case of a girl, that the *walī* must be a relative "within the forbidden degrees". In other words the boy of seven and the girl of nine are not consulted, since the Ḥanafīs consider them still too young to be able to make a reasoned decision.

The Shāfiʿīs (*Muhadhdhab*, ii, 171) and Ḥanbalīs (*Mughnī*, vii, 614) allow the boy of seven to choose between continuing to live with his mother and moving to his father's house. The same option is given to the girl who has reached the age of nine, but in Shāfiʿī law only.

At puberty (towards the age of fifteen—see BĀLIGH) the boy is accorded the right, by all schools, of having a dwelling independent of that of his father, or that of his mother if he had opted for her at the age of seven as permitted by the Shāfiʿī and Ḥanbalī schools. However, he is "recommended" to stay with his parents. As for the girl who has reached puberty, it is surprising to find the Shāfiʿī school the most liberal towards her. For the doctors of this school do not forbid her to have a separate abode, although they hold it to be morally "reprehensible" (*makrūh*) (*Muhadhdhab*, ii, 169). In the other schools puberty does not release a virgin girl from the custody of her parents. We have seen that in Mālikī law she remains under her mother's control until consummation of marriage. Much the same solution is reached in Ḥanafī and Ḥanbalī law, where the virgin girl (*bikr*) cannot leave her father at puberty, "since she is ignorant of men and their wiles". On the other hand, the girl over the age of puberty who is no longer virgin (*thayyib*), being widowed or repudiated, has freedom of movement. Even here the Ḥanafīs make certain reservations concerning a girl whose conduct is not "sure"; although *thayyib*, she must still live with her father.

C.—The devolution of the right of custody follows differing rules in the various schools, which can be split, from this point of view, into two groups. On the one side we have the Ḥanafīs and Mālikīs, who make the right of custody, if not an exclusively feminine prerogative, at least a function in which women always take precedence, so much so that of two female relatives of equal degree the uterine will be preferred to the consanguine; and on the other side the Shāfiʿī and Ḥanbalī schools which, while according an indisputable priority to some women (mother and maternal grandmother, great grandmother, etc.), do not hesitate in certain contingencies to prefer men to women even though the latter be quite closely related to the child.

According to the scholars of the first two schools *ḥaḍāna* belongs in the first instance to the mother; in default of the mother, or if she is unworthy or has forfeited her right, custody passes to the female ascendants of the mother, the nearer excluding the more remote, then to the female ascendants of the father (in Mālikī law maternal aunts come before ascendants of the father); these are followed by the full sister (because of the double link) and the uterine sister, before the consanguine; then nieces (except the consanguine, who is related to the child through the father only); maternal aunts are preferred to paternal aunts.

In these two schools men are invested with *ḥaḍāna* proper only in default of all female relatives within the "forbidden degrees" (for marriage). The two qualities must be united in one and the same woman if she is to bar the devolution of the right of custody upon a man. Thus no account is taken of the female cousin, even if full, since there is no obstacle to marriage between full cousins in Islamic law. Moreover, the presence of a wet-nurse or the daughter of a wet-nurse, despite the existence of a bar to marriage, does not keep men from *ḥaḍāna* since these women are not blood-relatives of the child.

The men in question are, first of all, the *ʿaṣabāt* (males related through males) who come in the same order as in the law of succession: first, therefore, the father; then, in the absence of any *ʿāṣib*, Ḥanafī law calls upon males related through females, but only those with whom marriage would have been impossible if the child had been a girl. Last of all come relatives, men and women, who are not within the forbidden degrees for marriage (full cousins, their issue, etc.)—men exercising *ḥaḍāna* over boys, women over girls. Only in default of all relatives does the *ḳāḍī* designate a person of trust.

In the other two schools (Shāfiʿī and Ḥanbalī), the priority of women is less absolute than in Ḥanafī and Malikī law, and men may assume *ḥaḍāna* even where there exist fairly close female relatives. Thus in default of the mother and female ascendants of the mother, or if the latter are prevented, or are unworthy or have forfeited their right, *ḥaḍāna* is conferred on the father, then on female ascendants of the father. Another peculiarity of these two schools is that the consanguine sister is preferred to the uterine and the paternal aunt to the maternal (*Muhadhdhab*, ii, 170 and 171; *Mughnī*, vii, 623), both solutions being directly contrary to those of the Ḥanafī and Mālikī schools.

D.—The Ḥanafī scholars never fail to ponder the nature of *ḥaḍāna*. Is it a "right" (*ḥaḳḳ*) of the custodian or a "right" of the child? They generally conclude by saying that although it is a "right" of the custodian (man or woman)—which explains how the latter may renounce it by refusing the burden—it is above all and first and foremost a "right" of the child, in whose interest all the conditions of aptitude for the function have been established. It is because the child's interest governs all the solutions of *fiḳh* in this matter that the woman custodian (for it is in respect of women that the exigencies of the law are most numerous) is required to be adult, sane, and capable of assuring the safe-keeping of the child: thus a woman would be deprived of *ḥaḍāna* where her occupations kept her too long away from home during the day. It is also necessary that she should not be *fāsiḳa*, *i.e.*, of bad morals, and that her customary residence should not be a place of debauchery, which could prove injurious to the child. Illnesses and infirmities are likewise causes of exclusion from *ḥaḍāna*; this is quite comprehensible since a sick or infirm *ḥāḍina* could not pay the necessary attention to the small child. Slave-girls, at the time when they existed, were deprived of this right.

The teaching of the other schools on all these points hardly varies from the Ḥanafī doctrine.

In two sets of circumstances considerable practical importance attaches to the opinions of the jurists

concerning capacity to exercise the right of custody: first, where the *ḥāḍina* (especially the mother) remarries; second, where the father is a Muslim but the woman called to assume custody is non-Muslim.

On the first point the schools are unanimous. The remarriage of a repudiated or widowed mother is normally a cause of forfeiture of *ḥaḍāna*, unless she marries a man related to the child within the "forbidden degrees". How do the scholars explain the rule and the exception, reconciling them with the principle that *ḥaḍāna* is established in the interest of the child? Their explanation is simple if not pertinent. The mother who remarries after widowhood or repudiation (for in practice it is only she who is concerned) must devote all her time to her new husband—law, morality and religion require it; how could she, under these conditions, give to the child in her custody the care its tender years demand? It is another matter if the new husband is a close relative of the child (uncle for example) because it is supposed that his natural affection will prevent him from taking offence at his wife's attention to the child.

In order of frequency, the second problem connected with the conditions of capacity to exercise *ḥaḍāna* is that of disparity of religion. Suppose the mother, widowed or repudiated by a Muslim husband, is not herself a Muslim. Should the *ḥaḍāna* be left to her? No, reply the S̲h̲āfiʿīs (*Muhad̲h̲d̲h̲ab*, ii, 169) and the Ḥanbalīs (*Mug̲h̲nī*, vii, 613), and their arguments on this point are not without good sense. Is not misbelief (*kufr*) more serious than mere misconduct? Now we have seen that this latter causes forfeiture of *ḥaḍāna*, in the case of women as well as men. Besides, if it is true that this institution was created in the interest of the child, how can it be maintained that this interest is safeguarded when the child's most precious possession (its belonging to Islam) is threatened by possible proselytising on the part of the mother, exerting herself in favour of her own religion?

The Mālikīs, not without a certain hesitation, and the Ḥanafīs much more firmly, decide that the *d̲h̲immiyya* (Christian woman or Jewess) has the right of *ḥaḍāna*. Still, the Ḥanafīs add certain qualifications to the rule (al-Zaylaʿī, *Tabyīn*, iii, 49). Thus a non-Muslim woman loses the custody of the child if she has tried to turn it from its father's religion, provided the child has reached the age when it is able to understand its religious duties. Since this age corresponds more or less to that when *ḥaḍāna* normally finishes, at least for boys, the Ḥanafī qualification is of minor importance. More significant is the rule which demands parity of religion where it is an *ʿāṣib* who, in default of women, assumes the *ḥaḍāna*, since the devolution of the right of custody exercised by men follows the same rules as for succession and, as we know, disparity of religion is a bar to succession in Islamic law.

It goes without saying that, whatever school we take, the renegade is excluded from *ḥaḍāna*. Apart from anything else, how could she look after the child when (according to the scholars) she must be immediately imprisoned and held until she reverts to Islam? When for any reason (incapacity, unworthiness, remarriage with someone outside the family, illness) a woman is deprived of her right of custody, she can recover it afterwards when the obstacle has disappeared, except in Mālikī law. This doctrine is explicitly formulated in relation to remarriage, but it is agreed that it extends to the other causes of impediment or forfeiture.

E.—The works of *fiḳh* dwell at length on a question of great practical interest, although its rules are now largely outmoded owing to progress in the speed of communications. It is forbidden for the person in whom custody of the child is confided to settle the child in a place remote from the abode of the father. Ignoring the distinctions and sub-distinctions drawn by the authors, the main point is that the woman (and, when relevant, the man) who has custody of the child is forbidden to remove it to a place so far distant that the father could not easily oversee its education and conduct and supervise its welfare. Defiance of this prohibition would cause forfeiture in favour of another, be it the father or the next woman in line.

The Ḥanafīs, envisaging only the most frequent case, that of a mother, repudiated and so free in her movements, who has custody of her child, add to the general prohibition of causing the child to live remote from the father an important qualification—a qualification recommended, be it said, by common sense and equity. Of all the women who may be entitled to exercise *ḥaḍāna*, the repudiated mother alone can take her child with her if she decides to go back to the land where she herself was born and where the marriage during which she had the child was concluded (both conditions must be met), however remote this land may be. It would indeed have been cruel to take away the young child of a repudiated wife returning to the land where her whole family resided and which her former husband had made her leave by marrying her.

It should be noted that in Ḥanafī law the custodian who breaks the rule forbidding her to remove a child from its father does not thereby automatically forfeit *ḥaḍāna*. The judge will simply order her to return to the place where the father is.

In the three other schools, custody of the child devolves on the father when the repudiated mother settles in a distant land; and the ruling is the same when it is the father who settles far away (which seems hardly fair).

F.—From the double character of *ḥaḍāna*, whereby it is at one and the same time a prerogative of the mother (and others entitled) and also a measure of protection in respect of the small child, derive, respectively, the following consequences:

The woman entitled to custody of the child is not bound to accept it, except where the mother is concerned, and even in her case the Ḥanafīs make it obligatory only when it is impossible to find another custodian, for the interest of the child overrides the "right" of the mother. This explains why any *ḥāḍina* may normally (Ḥanafī law) claim a wage distinct from the cost of maintaining the child, which naturally falls on the father, unless the child has a personal fortune. This presupposes that the parents are "separated" and that the *ʿidda* [*q.v.*] period has expired. Outside the Ḥanafī school, the mother cannot claim a wage distinct from the *nafaḳa* due to the child; and the Mālikīs go so far as to refuse a wage to all those entitled to *ḥaḍāna*; if, in their doctrine, it sometimes happens that a needy mother may draw a *nafaḳa* on the goods of her child, or part of the child's allowance, she does so not in the capacity of custodian but as any mother in need (Dardīr-Dasūḳī, ii, 534).

Although a "right" of women, *ḥaḍāna* is nevertheless established in the interest of children; it is not therefore permissible to modify the imperative rule fixed on this point by *fiḳh*. These rules belong to the public order, in as much as disregard of them would be injurious to the child. It is on the occasion of a

negotiated divorce (*khul*ʿ) that the parties may attempt to circumvent this principle. Although it is permissible for the spouses to agree that the mother should undertake the full cost of maintaining the child, as consideration for the repudiation pronounced by her husband, it is not possible, on the other hand, for the husband to make it a condition of the repudiation that his wife should give up the *ḥaḍāna* (except perhaps in Mālikī law); in such a case the *khul*ʿ would be valid and the purported condition void. Nor could the wife, by agreeing to compensate her husband, obtain a prolongation of the period of *ḥaḍāna*, at least where boys are concerned, for such agreement is admitted in the case of girls (Ibn Nudjaym, *Baḥr*, ii, 98).

G.—Contemporary legislation inspired by Islamic law (codes of personal status and laws relating to the family) has introduced but few changes into the system of classical *fiḳh*.

In countries of Ḥanafī allegiance, the main preoccupation has been to prolong the duration of *ḥaḍāna*, which the classical law of the school restricts unduly.

The Egyptian law of 10 March 1929 (art. 20) authorizes the judge, when "the interest of the children requires this measure", to extend this period to nine years for the boy, and to eleven years for the girl. This disposition was taken up by the Jordanian code of 1951 (art. 123), and the Syrian code of 1953 (art. 147). The Sudanese circular no. 34 of 1932 (art. 1) squarely adopts the Mālikī doctrine (Sudanese Muslims are governed by Ḥanafī law, though ritually Mālikīs); thus the boy is in the custody of females until puberty, and the girl till consummation of marriage. As for the Iraqi code of 1959 (art. 57, al. 5), it permits the judge to prolong the *ḥaḍāna* without fixing a maximum.

The two North African codes of personal status (Tunisia 1956 and Morocco 1958), while reproducing broadly the principles of Mālikī law on the question, add a few modifications inspired by Ḥanafī law, which are not always very felicitous. Thus it is hard to see why the Tunisian code (art. 67) should limit the duration of custody by women to seven years for boys and nine years for girls, when the majority of actual Ḥanafī countries have abandoned this rule of their own school. Due to Ḥanafī influence again is the possibility for the woman entitled to *ḥaḍāna*, even the mother herself when "separated" from her husband, to claim a remuneration distinct from the *nafaḳa* due from the father to his child (art. 103 and 104 of the Morrocan code). The Tunisian code (art. 65) modestly accords her a wage "for laundry and the preparation of food". The two codes adopt a fairly similar solution to that of the Ḥanafī school concerning disparity of religion between child and custodian. In Moroccan law (art. 108) this adoption is heavy with consequences in view of the long duration of *ḥaḍāna* which the code has borrowed from the Mālikī system.

Every non-Muslim *ḥāḍina* (the only case revealed by practice) is deprived of the custody of a Muslim child when it reaches the age of five, the mother being excepted from the rule unless she tries to turn the child from the Muslim religion, in which case she likewise forfeits her right of custody.

Bibliography: All works of *fiḳh* treat the question at length, often in the chapter on *nafaḳāt*. See especially Sarakhsī, *Mabsūṭ*, Cairo 1324, v, 207 ff.; Kāsānī, *Badāʾiʿ al-ṣanāʾiʿ*, Cairo 1313, iii, 46 ff.; Zaylaʿī, *Tabyīn al-ḥaḳāʾiḳ*, Cairo 1313, iii, 46 ff. (all Ḥanafī); Ramlī, *Nihāyat al-muḥtādj*, Cairo 1357, vii, 214 ff.; Shīrāzī, *Muhadhdhab*, Cairo n.d., ii, 169 ff. (Shāfiʿī); Ḥaṭṭāb, *Mawāhib al-Djalīl*, 1929, iv, 214 ff.; Dardīr-Dasūḳī, *Sharḥ al-kabīr*, ii, 526 ff. (Mālikī); Ibn Ḳudāma, *Mughnī*, 3rd. ed. Cairo 1367, vii, 612 ff. (Ḥanbalī). See also Bousquet, *Précis de droit musulman*[3], i, no. 95; Syed Ameer Ali, *Mahommedan Law*[6], Calcutta 1928, ii, 248 ff., for the liberties taken with the classical law by the courts in Algeria and India.

(Y. Linant de Bellefonds)

ḤADATH, minor ritual impurity which, in *fiḳh*, is distinguished from major impurity (*djanāba* [*q.v.*]). *Ḥadath* is incurred: 1. — by contact with an unclean substance (*khabath*, *nadjas*) which soils the person or clothing, etc.: sperm, pus, urine, fermented liquor, and some other kinds. There is some controversy about corpses or the bodies of animals. It is only in the view of the Mālikī school that the pig and dog, when alive, do not soil. Except with the Shīʿīs, contact with a human being never soils according to Muslim law, unlike the prescriptions of Jewish law; 2. — by certain facts; by the emission of any substance whether solid, liquid or gaseous from the anus, urethra or vagina (further to those which bring about major impurity); by loss of consciousness—sleep, syncope, madness; by apostasy, and in certain other circumstances. The Khāridjī minority alone has elaborated a moral theory of *ḥadath* (slander, false swearing, perjury, obscene proposals, evil thoughts, etc.).

The *muḥdith* regains his ritual purity, which the *ḥadath* has dispelled, by means of the simple ablution (*wuḍūʾ*) which can be replaced, if it is impossible to use water, by the *tayammum* [*q.v.*]; as for the part of the body soiled by *khabath*, this must be washed, likewise in water that is ritually pure, to restore its purity. The same applies to the clothing of the man at prayer, and the place in which he intends to make his *ṣalāt*. Anyone who is in a state of *ḥadath* cannot therefore: a) perform the prayer; b) make the ritual circumambulation of the Kaʿba (*ṭawāf*); c) touch a copy of the Ḳurʾān, but he can carry fragments of it (for example, on a medal or a piece of paper), and can also recite from it. For casuistical details, see the works quoted in the bibliography and also the articles djanāba and ḥayḍ. In general, practising Muslims are very familiar with these rules. As for the requirement, in case of *djanāba*, to make a *ghusl*, this partially explains the existence of *ḥammām*s in urban centres.

Bibliography: The collections of *ḥadīth*s (cf. the *Handbook* of Wensinck), and texts of *fiḳh*, all of which start with the study of ritual purity; reference should be made, in particular, to the works of *ikhtilāf*, such as the *Bidāyat al-mudjtahid* of Ibn Rushd and others. Even a mystic like Ghazālī (*Iḥyāʾ*, I, Book III, § 21 ff. in the *Analyse* of Bousquet) deals with these questions in a way similar to that of the *fuḳahāʾ*, though in a slightly different spirit. G.-H. Bousquet, *La pureté rituelle en Islam*, in *RHR*, cxxxviii (1950), 53-71.

(G. H. Bousquet)

al-ḤADATH, town, which today has disappeared, in the province of the ʿAwāṣim [*q.v.*], situated in a plain at an altitude of 1000 metres at the foot of the Taurus, near to the three lakes on the upper course of the Ak Su, one of the principal tributaries of the Djayḥān. Known as al-Ḥadath al-Ḥamrāʾ (probably to avoid confusion with Ḥadath al-Zuḳāḳ in the Palmyra desert), it owed its importance to its situation on the Arabo-Byzantine frontier, between Marʿash and Malaṭiya, at the entry of the saddle

which guarded the route to Albistān. Its protection was assured by a fortress built on a hill called al-Uḥaydab, "the Little Hunchback". To the north-west of al-Ḥadath, in the massif of the Nuruhak Dagh, was the *darb al-Ḥadath*, a narrow pass which was the scene of many battles and whose name the Arabs changed to *darb al-salāma* in an attempt to exorcise the evil fate which seemed to be attached to it.

Conquered under the caliph ʿUmar by Ḥabīb b. Maslama, who had been sent by the general ʿIyāḍ b. Ghanam, al-Ḥadath was used by Muʿāwiya as a starting point for his incursions into Byzantine territory. The upheavals at the end of the Umayyad dynasty enabled the Byzantines to re-occupy the region, without, however, succeeding in changing very much the course of the frontier. In 161/778, the Byzantine general Michael Lachanodrakon sacked al-Ḥadath. The caliph al-Mahdī rebuilt it in 163/778 and the town was then called al-Mahdiyya or al-Muḥammadiyya. His successor, Mūsā al-Hādī, re-populated it with inhabitants from neighbouring towns. But these buildings of sun-dried brick could not long withstand the severe winter climate. Furthermore, the Byzantines overran it once again and burned it completely, whence its name Göynük, "burnt", used both in Turkish and Armenian. Hārūn al-Rashīd rebuilt and fortified it and maintained a large garrison there, as in the other frontier-stations of this region. Thus under the ʿAbbāsid caliphs al-Ḥadath became a strategic point which served as a base for their expeditions into Byzantine territory. But in 336/950, Leo, the son of Bardas Phocas, seized al-Ḥadath and left none of its fortifications standing. The town became Muslim again as the result of a victory by the Ḥamdānid Sayf al-Dawla, who rebuilt the walls in 343/954, but the Byzantines re-took it in 346/957. After this, al-Ḥadath no longer played an important part in the military history of the region. However it fell again into Muslim hands in 545/1150 under the Saldjūḳ sultan of Ḳonya Masʿūd b. Ḳilïdj Arslān; then the Armenians seized it in their turn and made it a base for expeditions against the Muslims. In 671/1272, the Mamlūk sultan Baybars seized al-Ḥadath from the Armenians. The fortress was burned and all that remained was the town, which the Kurds then called Alhan and where they grazed their flocks. In 839/1436, the Mamlūk sultan Barsbāy used it as a base for his expedition against the Dhu 'l-Ḳadr.

In 1950 various ruins at Seray-Köy, to the south of the lake of al-Ḥadath, were described and identified by R. Hartmann as being the remains of al-Ḥadath. This identification contradicts earlier opinions, which had situated al-Ḥadath on the site of the present-day Inekli to the north of the lake.

(S. Ory)

ḤADD (A.), plural *ḥudūd*, hindrance, impediment, limit, boundary, frontier [see ʿAWĀṢIM, GHĀZĪ, THUGHŪR], hence numerous technical meanings, first and foremost the restrictive ordinances or statutes of Allāh (always in the plural), often referred to in the Ḳurʾān (sūra ii, 187, 229, 230; iv, 13, 14; ix, 97, 112; lviii, 4; lxv, 1).

In a narrower meaning, *ḥadd* has become the technical term for the punishments of certain acts which have been forbidden or sanctioned by punishments in the Ḳurʾān and have thereby become crimes against religion. These are: unlawful intercourse (*zinā* [*q.v.*]); its counterpart, false accusation of unlawful intercourse (*ḳadhf* [*q.v.*]); drinking wine [see KHAMR]; theft [see SĀRIḲ]; and highway robbery (*ḳaṭʿ al-ṭarīḳ* [*q.v.*]). The punishments are: the death penalty, either by stoning (the more severe punishment for unlawful intercourse) or by crucifixion or with the sword (for highway robbery with homicide); cutting off hand and/or foot (for highway robbery without homicide and for theft); and in the other cases, flogging with various numbers of lashes. The number of lashes in the less-severe *ḥadd* for unlawful intercourse is 100, in the punishments for false accusation of unlawful intercourse and for drinking wine 80; the prescribed intensity of the lashes is different, too, generally speaking in the opposite order.

The *ḥadd* is a right or a claim of Allāh (*ḥaḳḳ Allāh*), therefore no pardon or amicable settlement is possible once the case has been brought before the *ḳāḍī*, although it is recognized that *ḳadhf* and theft include infringing a right of humans (*ḥaḳḳ ādamī*). On the other hand, active repentance (*tawba*) is taken into account in cases of theft and highway robbery. There is a strong tendency, expressed in a tradition attributed to the Prophet, to restrict the applicability of *ḥadd* punishments as much as possible, except the *ḥadd* for *ḳadhf*, but this in its turn serves to restrict the applicability of the *ḥadd* for *zinā* itself. The most important means of restricting *ḥadd* punishments are narrow definitions. Important, too, is the part assigned to *shubha* [*q.v.*], the 'resemblance' of the act which has been committed to another, lawful one, and therefore, subjectively speaking, the presumption of bona fides in the accused. There are short periods of limitation, in general one month. Finally, proof is made difficult; in contrast with the acknowledgment concerning other matters, the confession of an offence involving a *ḥadd* can be withdrawn [see IḲRĀR]; it is even recommended that the *ḳāḍī* should suggest this possibility to the person who has confessed, except in the case of *ḳadhf*; it is considered more meritorious to cover up offences punishable by *ḥadd* than to give evidence on them; and particularly high demands are made of the witnesses as regards their number, their qualifications, and the content of their statements. These demands are most severe with regard to evidence on *zinā*; a further safeguard lies in the fact that an accusation of *zinā* which is dismissed constitutes *ḳadhf* which itself is punishable by *ḥadd*. The liability of the slave (but not of the woman) to *ḥadd* punishments is less than that of the free man [see ʿABD]. On the liability of the *Dhimmī* see A. Fattal, *Le statut légal des non-Musulmans en pays d'Islam*, Beyrouth 1958, 119 ff. (needs considerable elaboration); on that of the *Mustaʾmin*, see W. Heffening, *Das islamische Fremdenrecht*, Hanover 1925, 65 ff. See also TAʿZĪR and ʿUḲŪBA.

In theology, *ḥadd* in the meaning of limit, limitation, is an indication of the finiteness which is a necessary attribute of all created beings but incompatible with Allāh.

In *kalām* and in philosophy, *ḥadd* is a technical term for definition of which several kinds are distinguished: *ḥadd ḥaḳīḳī* which defines the essence of a thing, *ḥadd lafẓī* which defines the meaning of a word, etc. Opposed to the definition is the description (*rasm*), but the distinction is not very sharp, so that it is possible to speak of a *ḥadd rasmī*. A perfect or complete definition (*ḥadd kāmil*) must be *d̲j̲āmiʿ māniʿ*, "universal and proper"; this is achieved by giving the *genus proximum* and the *differentia specifica*.

In logic, *ḥadd* means the term of a syllogism; the minor term is called *ḥadd aṣg̲h̲ar*, the major term *ḥadd akbar*, and the middle term *ḥadd awsaṭ*.

In astrology, the degrees of each sign of the zodiac are divided into five unequal portions each of which belongs to one of the five planets; this portion or term of a planet is called *ḥadd*.

In the terminology of the Druzes, the main officers of their religious hierarchy are called *ḥudūd*; this usage is based on an allegorical interpretation of the Ḳurʾānic passages.

(B. CARRA DE VAUX-[J. SCHACHT])

Before assuming its philosophical meanings, the word *ḥadd* follows a semantic evolution comparable to that of the Greek words that it translates, ὁρισμός and ὅρος. From its meaning of "limit" it passes to that of "delimitation" or "definition", and from that of "furthest limit" or "extremity" to that of "extreme" or "term" in logic. In order to avoid any ambiguity between the two meanings, modern Arab authors who study mediaeval philosophy often follow *ḥadd*, in the sense of "definition", with the word *taʿrīf* in parenthesis, since one of the uses of *taʿrīf* is in fact "definition", although its meaning includes both description and name.

In metaphysics *ḥadd* means "definition", in so far as it is a statement referring to the thing whose essential elements it sets out. It indicates the thing's quiddity, its *māhiyya* (secondary substance or predicated substance). In its strict sense "definition" can refer only to a substance, but in a wider sense we speak also of definitions of accidents, although these cannot be defined without the mention of an element that is foreign to them, *i.e.*, the substance that receives them. *Ḥadd* is used also in a derived sense, to mean a commentary on the name of the thing; it is then a "nominal definition", which is not composed of direct references to the thing's essence, but explains the name that does refer to the essence. In entities composed of matter and form, "definition" does not refer to form alone, but to everything that goes to make up the entity, *i.e.*, to matter and to form. In entities that have no material element, it obviously refers to form alone; nevertheless, there can be no definition of the entity that is absolutely simple, since different essential elements cannot be distinguished in it. Definition applies to individuals, but there is no definition of the particular as such. The individual can be indicated only by combining various attributes that apply to it alone, for example by pointing out its filiation.

In logic *ḥadd* is used with different meanings according to the three mental processes, which are forming the concept, judging and reasoning. In the logic of the concept *ḥadd* has the meaning of "definition" as in metaphysics, and has also to give the essential elements of the thing defined, but in this case with reference to the concept, *i.e.*, by uniting the essential meanings so as to produce in the mind an intelligible exactly equivalent to the essence of the thing. This statement is more explicit than the name, of which it gives an analysis; it is the name that expresses the meaning in one word only.

Perfect definition, *ḥadd tāmm*, is a statement of *proximum genus* and specific difference: "Man is a rational animal". It cannot be arrived at by demonstration, but only by the methods that make it possible to determine this genus and this difference. The definition is obtained *bi-ṭarīḳ al-tarkīb*, by means of combination, *i.e.*, by taking the essential attribute whose extension is just greater than that of the thing to be defined and combining with it the essential attribute peculiar to the thing. This is obtained by looking for all the attributes that belong to the essence of the genus that has just been defined, by making a kind of division, *ḳisma*, and finally by selecting that one which is predicable only of the thing to be defined.

In this perfect definition are included, on the one hand, all the *summa genera*, and, on the other, all the consequents of the essence. It is, however, often very difficult to find these two attributes. If they cannot be determined, we have to be content with giving a correct but less precise notion, for example by stating one or more of the thing's essential characteristics that are peculiar to it. The statement is thus equivalent in extension, but not in comprehension; it is a description, *rasm*, or an imperfect definition. When the cause of the existence of the thing defined gives the meaning of the thing, a causal definition is obtained, and when cause and effect are united in the same proposition, the definition is complete, *ḥadd tāmm*, and resembles the conclusion of a syllogism. An example is: "Thunder is the noise that is produced in the cloud because of the fire that is quenched there". (For details of the reasoning, see *S̲h̲ifāʾ*, *Manṭiḳ*, v, book 4, ch. 4, 290-1). Definition in no way refers to existence.

While *ḥadd* means "definition" in the logic of the concept, the same word means "term" in the logic of the proposition and in that of syllogistic reasoning. *Ḥadd* is, in that case, the word or statement used as subject or as predicate, major, minor or middle term.

The whole Islamic theory of definition, and that of terms of reasoning, follows Aristotle, sometimes reproducing what he says almost word for word. The brief mention of definitions made by the *Ik̲h̲wān al-ṣafāʾ* is already in conformity with this; they apply the method outlined above to the definition of

species and genera, omitting "Substance", which can be the object only of a "description", *rasm*; it is "the entity that is self-subsistent and receives contrary attributes"—this is in accordance with Aristotelian teaching. Al-Kindī uses the word in its accepted sense. Avicenna is the Hellenizing philosopher who most develops the study of *ḥadd*; it is a theme to which he returns again and again in his works. Al-Ghazālī scarcely mentions it in the first part of the *Maḳāṣid*. Averroes comments on the relevant chapters of Aristotle's *Metaphysics*. Al-Djurdjānī, in his *Taʿrīfāt*, gives the ordinary meaning, the various philosophical meanings, including that of "defective (*nāḳiṣ*) definition", obtained "by nearest (*i.e.*, specific) difference alone, or by that and *summum genus*". In Ṣūfism, he adds, *ḥadd*, which has then the sense of "limit", "indicates the separation between you and your Lord".

HADENDOA [see BEDJA].

ḤADHF [see NAḤW].

AL-**HĀDĪ ILA 'L-ḤAḲḲ**, regnal name of the fourth ʿAbbāsid caliph Mūsā, son of al-Mahdī, who had been proclaimed heir in 159/775-6. His accession took place in Muḥarram 169/August 785, but it did not pass off smoothly. Al-Mahdī died when he was actually on the way to Djurdjān intending to force Mūsā, resident in that province, to renounce his rights in favour of his brother Hārūn, who had been appointed second heir in 166/782-3. Although the chamberlain al-Rabīʿ procured that the oath of allegiance to Mūsā was sworn in Baghdād, a revolt broke out in the capital almost immediately afterwards; it was swiftly put down, before even al-Hādī arrived, but contemporaries saw in it the hand of adversaries of the new ruler.

On returning to Baghdād, al-Hādī first made al-Rabīʿ his vizier, but dismissed him soon afterwards and entrusted the central administration to various persons, none of whom seems to have made any mark. Once in power, al-Hādī continued the persecution of the *zindīḳs* which his father had begun, but abandoned the latter's moderate policy towards the Shīʿīs, adopting an attitude of frank hostility to the ʿAlids; hence he was led to repress brutally an ʿAlid revolt which had broken out in Medina and which ended in the massacre of Fakhkh [*q.v.*]. Other revolts had to be put down, both in Egypt and in ʿIrāḳ. Throughout his reign, the most important question was that of the succession. Al-Hādī wished to annul the right of his brother Hārūn, who then had as his tutor and adviser Yaḥyā the Barmakid. Hārūn, vigorously rejecting his brother's proposals, was finally thrown into prison and threatened with a still worse fate. At this juncture, in Rabīʿ I 170/September 786, there occurred the sudden death of al-Hādī, an event in which, according to some chroniclers, Hārūn's mother al-Khayzurān had some share. Thus ended the short reign of a caliph who left the reputation of being a ruler energetic to the point of brutality as well as addicted to pleasure; through the massacre of Fakhkh he widened the gulf between the ʿAbbāsids and the ʿAlids; his only lasting achievement was perhaps an improvement in the financial departments of the central administration.

AL-**HĀDĪ ILA 'L-ḤAḲḲ, YAḤYĀ**, founder of the Zaydī dynasty of the Yemen [see ZAYDĪS].

HĀDĪ SABZAWĀRĪ [see SABZAWĀRĪ].

AL-**ḤADĪD**, iron. According to the *Sūrat al-Ḥadīd* (LVII, 25) God sent iron down to earth for the detriment and advantage of man, for weapons and tools are alike made from it. According to the belief of the Ṣābians, it is allotted to Mars. It is the hardest and strongest of metals and the most capable of resisting the effects of fire, but it is the quickest to rust. It is corroded by acids; for example, with the fresh rind of a pomegranate it forms a black fluid, with vinegar a red fluid and with salt a yellow. Collyrium (*al-kuḥl*) burns it and arsenic makes it smooth and white. Ḳazwīnī distinguishes three kinds of iron, natural iron, *al-sābūrḳān*—which can only mean dark iron ores such as micaceous ore, magnetic ironstone etc.—and that which is made artificially, which is of two kinds, the weak (Pers. *narm-āhan*) or female, *i.e.*, malleable iron, and hard or male, *i.e.*, steel (*fūlādh*). According to al-Kindī, however, the kind of iron called *sābūrḳān* is identical with male iron; both kinds are called natural iron, while steel on the other hand is not natural. These contradictory statements cannot be reconciled here. Chinese and Indian iron are particularly esteemed. The applications of iron and iron-rust in medicine and magic are fairly numerous and varied. See further MAʿDIN.

ḤADĪḌ [see NUDJŪM].

ḤADĪDĪ, *makhlaṣ* of a minor Ottoman poet who flourished in the first decades of the 10th/16th century, the author of a verse-chronicle. According to his near-contemporay Sehī, his home was Feredjik (near Enos), where he was *khaṭīb*; he adopted the *makhlaṣ* Ḥadīdī because he was a blacksmith by trade.

His unpublished history of the Ottoman dynasty, completed in 930/1523-4, consists of some 7000 very pedestrian couplets in the *hazadj* metre; the last incident recorded is the appointment of Ibrāhīm

Pas͟ha as Grand Vizier (in 929/1523). In an introduction Ḥadīdī states that his account, as far as the first years of the reign of Bāyezīd II, is a verse-paraphrase of the prose history by 'the S͟heyk͟h ʿĀs͟hiḳ Pas͟ha-og͟hlī', *i.e.*, ʿĀs͟hiḳ-Pas͟ha-zāde [*q.v.*]; but this section, the first two-thirds of the work, contains also some episodes characteristic of the Urud͟j texts, *e.g.*, the passage on Bāyezīd I's suicide, quoted disparagingly by Saʿd al-Dīn (i, 217; cf. Hammer-Purgstall, *GOR*, i, 627; for another example see A. S. Levend, *Ġazavāt-nāmeler* ..., Ankara 1956, 182). The rest of the work is, he claims, original. According to Laṭīfī, he failed to procure the presentation of his work to the Sultan, Süleymān I. Although Pečewī names it among his sources (i, 3), it is probably of minor importance and only a few manuscripts survive, in Istanbul: Esad Efendi (Süleymaniye) 2081, much damaged by fire towards the end; Ali Emiri manzum 1317, modern (for these two, see *Istanbul Kütüpaneleri tarih-coğrafya yazmaları katalogları*, i/2, no. 69); University Library T 1268, a good old copy (see L. Forrer, in *Isl.*, xxvi (1942), no. 17); Veliyüddin (Beyazıt) 152/3443 (see *Tanıklariyle Tarama Sözlüğü*, iv, Ankara 1957, p. X). There is a copy in the Berlin Staatsbibliothek (Pertsch, *Katal.*, 232), and a good, apparently old, manuscript has recently been acquired by the British Museum (Or. 12896).

Poems by a Ḥadīdī are preserved in some anthologies (see, for example, F. E. Karatay, *Topkapı Sarayı .... türkçe yazmalar kataloğu*, ii, nos. 2665, 2690).

Bibliography: Sehī, 101-2; Laṭīfī, 127-9; M. F. Köprülüzade, in *Mitt. z. osm. Gesch.*, i (1921-2), 220-2; Bursalī Meḥmed Ṭāhir, *ʿOt͟hmānlī müʾellifleri*, iii, 45-6 (inaccurate); Babinger, 59 f. (with further references). (V. L. Ménage)

AL-ḤĀḌINA, a small independent region of South Arabia, now in the Upper ʿAwlaḳī Sultanate. It is one of the most fertile districts of South Arabia and is irrigated by canals from the Wādī ʿAbadān. The products of the soil, which is of volcanic origin, include indigo, which is exported to al-Ḥawṭa, *d͟hura* and millet. Al-Ḥāḍina is inhabited by the tribe Ahl K͟halīfa which claims descent from the Hilāl [*q.v.*]. When the Hilāl emigrated from South Arabia they remained behind, whence their name K͟halīfa. In the past they ordinarily acknowledged no authority, but in time of war would serve under the banner of the Sultan of the Upper ʿAwāliḳ in Niṣāb. According to Philby, who visited the region in 1936, they numbered about 300 male adults, giving a total population of about 1,000. There were nine clans in possession of some sixteen villages of which the most important was D͟jabiyya, a market and the seat of the ʿAḳīl or ruler. Al-Ḥāḍina was famed in Landberg's day as a centre for cotton, which was exported to Bayḥān al-Ḳaṣāb and Ḥarīb. It lies on the caravan roads from Bāl Hāf to Mark͟ha, and D͟jirdān to Bayḥān al-Ḳaṣāb and Mārib.

(J. Schleifer-[A. K. Irvine])

AL-ḤĀDIRA (al-Ḥuwaydira), nickname of the Arabic poet Ḳuṭba b. Aws. Very little is known of his life; he belongs to the Banū T͟haʿlaba b. Saʿd b. D͟hubyān, a tribe of the group G͟haṭafān. He had a quarrel with Zabbān b. Sayyār al-Fazārī and satirized him in his verses. In another poem he boasts of the victory of his kinsmen at al-Kufāfa. The leader in this battle, K͟hārid͟ja b. Ḥiṣn al-Fazārī, later on turned Muslim (Ibn Ḥad͟jar, *Iṣāba*, i, 222) whilst al-Ḥādira is called a pagan poet (*d͟jahilī*); so we may infer that he lived into the beginning of the 7th century. His poems, few in number, were collected by Muḥammad b. al-ʿAbbās al-Yazīdī (d. 310/921-2). One *ḳaṣīda* is included in the *Mufaḍḍaliyyāt* (no. viii, ed. Lyall); it is said that this poem was greatly admired by Ḥassān b. T͟hābit.

Bibliography: *al-Hādirae diwanum cum Yazidii scholiis edidit* ...., G. H. Engelmann, Lugd.-Bat. 1858; Brockelmann I, 26; S I, 154.

(J. W. Fück)

ḤADĪTH (narrative, talk) with the definite article (*al-ḥadīt͟h*) is used for Tradition, being an account of what the Prophet said or did, or of his tacit approval of something said or done in his presence. *K͟habar* (news, information) is sometimes used of traditions from the Prophet, sometimes from Companions or Successors. *At͟har*, pl. *āt͟hār* (trace, vestige), usually refers to traditions from Companions or Successors, but is sometimes used of traditions from the Prophet. *Sunna* (custom) refers to a normative custom of the Prophet or of the early community.

I. The development of Ḥadīt͟h

Tradition came to be considered second in authority to the Ḳurʾān, but this was the result of a lengthy process. The Prophet had made a great impression on his contemporaries, and Islam had not only survived his death, but had quickly spread far beyond Arabia. It is therefore only natural that those who had known him should have much to tell about him and that new converts should have been anxious to learn what they could about him. Many of his Companions settled in conquered countries where it is reasonable to assume that they would be questioned about him; but there would be nothing formal about the retailing of stories and little attempt at first to record them. At that time there was no idea that Tradition was second in authority to the Ḳurʾān because there was no collected body of traditions. At the Prophet's death, the Ḳurʾān remained as the source of guidance and it was only gradually, as new problems arose, that men came to feel the need of a subsidiary authority. Individuals and groups in various regions developed an interest in Tradition, and many traditionists engaged in travels to learn traditions from authorities in different countries. The annual Pilgrimage would also provide an opportunity for people of different regions to meet, and traditions would be spread in this way. The demand for traditions was great, and inevitably the supply grew to meet it.

Gradually the necessity of producing authorities for traditions developed, and there is reason to believe that the practice was to some extent in force before the end of the first century; but it was late in the second century before it seems to have become essential to have a complete chain of authorities back to the source. Ibn Isḥāḳ (d. 150/767 or 151/768) quotes authorities in his biography of the Prophet, but not always with a complete chain, and the same applies to Mālik b. Anas (d. 179/795) whose law-book *al-Muwaṭṭaʾ* gives many traditions with partial chains of authority, some with complete chains, and some with none. When books of tradition came to be compiled the traditions had two necessary

features: (1) the chain of authorities (*isnād*, or *sanad*) going right back to the source of the tradition, and (2) the text (*matn*).

But while traditionists were collecting traditions and attempting to verify their authority, there were others who were nót prepared to lay great emphasis on the importance of tradition. As a result there were disputes between parties; but largely as a result of the genius of al-S̲h̲āfiʿī (d. 204/820) [*q.v.*] the party of Tradition won the day, and *Ḥadīt̲h̲* came to be recognized as a foundation of Islām second only to the Ḳurʾān. Al-S̲h̲āfiʿī laid emphasis on an argument which seems to have been current even before this time (cf. *ZDMG*, lxi (1907), 869), that when the Ḳurʾān spoke of the Book and the Wisdom (cf. ii, 151; iii, 164; iv, 113; lxii, 2) it meant Ḳurʾān and *Ḥadīt̲h̲*. Thus *Ḥadīt̲h̲* was given a kind of secondary inspiration. Though not the eternal word of God, like the Ḳurʾān it represented divine guidance.

II. Collections of Ḥadīt̲h̲

The theory was held by some that traditions should be conveyed only by word of mouth and not written, and there are even traditions in the books supporting this view. Abū Dāʾūd (*ʿIlm*, 3) rather curiously gives two traditions, one after the other, the first stating that the Prophet gave command to write traditions and the second stating that he forbade writing them. Whatever justification there may have been for the view that writing was prohibited, there were, even quite early, men who made notes for their own guidance, and these notes formed a basis for larger works produced later. Among them mention may be made of ʿUrwa b. al-Zubayr (d. 94/712 or 99/717) in Medina who is quoted as transmitting many traditions from his aunt ʿĀʾis̲h̲a, and Muḥammad b. Muslim Ibn S̲h̲ihāb al-Zuhrī (d. 124/741) who settled in Syria and was one of the most widely quoted authorities. Reference is even made to *ṣaḥīfa*s (scripts) in which some Companions of the Prophet collected traditions.

When more formal books were first compiled they were of the type called *musnad* works, the word indicating that each Companion's traditions were collected together. While this arrangement has its interest, it is not very convenient. People would want to consult traditions on particular subjects and would therefore need to read through much irrelevant material before discovering what they were seeking. Such works as those of al-Ṭayālisī (d. 203/818) [*q.v.*] and of Aḥmad b. Ḥanbal (d. 241/855) [*q.v.*] are arranged according to this method. Mālik had arranged his *Muwaṭṭaʾ* according to the subject-matter, but the 3rd/9th century was the time when the important *muṣannaf* (classified) works were compiled. They were said to be arranged *ʿala 'l-abwāb* (according to the sub-sections), and this arrangement of the material proved to be much more convenient. Six of these *muṣannaf* works eventually took precedence over others. The most authoritative were considered to be the *Ṣaḥīḥ*s of al-Buk̲h̲ārī [*q.v.*] and Muslim (d. 261/875), followed in importance by the *Sunan* works of Abū Dāʾūd [*q.v.*], al-Tirmid̲h̲ī (d. 279/892), al-Nasāʾī (d. 303/915) and Ibn Mād̲j̲a (d. 273/886). The *Ṣaḥīḥ*s contain biographical material and Ḳurʾān commentary in addition to details of religious observance, law, commerce, and aspects of public and private behaviour which are the main interest of the *Sunan* works. The corpus of Tradition provides details to regulate all aspects of life in this world and to prepare people for the next. In theory the traditions of al-Buk̲h̲ārī and Muslim are all considered sound, whereas those in the other books have varying degrees of worth; but criticism has been made even of some of al-Buk̲h̲ārī's and Muslim's traditions.

There was no official body to commission the books of Tradition, so they had to make their own appeal to the community. By the 4th/10th century the collections of al-Buk̲h̲ārī and Muslim were fairly generally recognized, and the others gained recognition after longer periods. For example, Ibn K̲h̲aldūn (d. 808/1406) did not recognize Ibn Mād̲j̲a's *Sunan*, but spoke of the 'five' books. Nevertheless the six books were eventually recognized, although some people preferred Mālik's *Muwaṭṭaʾ* to Ibn Mād̲j̲a's *Sunan*. Other works also were compiled, and while they did not command so much general respect as the six books, they are recognized as important and are quoted. Among these mention may be made of the works of al-Dārimī [*q.v.*], al-Dāraḳuṭnī [*q.v.*] and al-Bayhaḳī [*q.v.*]. Commentaries were written on the books of Tradition, and there are many works which give selections of one kind or another. A favourite type of work uses the title *Arbaʿīn* from the practice of collecting forty traditions on some particular subject. Larger works were also compiled giving selections of traditions from various sources. One of the best known of these is *Miṣbāḥ al-sunna* by al-Bag̲h̲awī [*q.v.*], enlarged into the still more popular *Mis̲h̲kāt al-maṣābīḥ* by Walī al-Dīn.

The works to which reference has been made are those recognized by Sunnīs. The S̲h̲īʿīs have books of their own, accepting only traditions traced through ʿAlī's family, an important purpose being to support the claims of the S̲h̲īʿa. They are *al-Kāfī fī ʿilm al-dīn* by Abū D̲j̲aʿfar Muḥammad b. Yaʿḳūb al-Kulīnī (d. 328/939); *Kitāb man lā yaḥḍuruhu 'l-faḳīh* by Abū D̲j̲aʿfar Muḥammad b. ʿAlī called al-Bābūya al-Ḳummī (d. 381/991); *Tahd̲h̲īb al-aḥkām* by Abū D̲j̲aʿfar Muḥammad b. al-Ḥasan al-Ṭūsī (d. 459/1067 or 460/1068), of which he produced a shorter version entitled *al-Ibtiṣār fīmā 'k̲h̲tulifa fīhi min al-ak̲h̲bār*. They are *muṣannaf* works covering subjects similar to those in the Sunnī books.

III. Criticism of Ḥadīt̲h̲

Before the recognized books were compiled the body of Tradition had grown enormously, and serious students recognized that much of it was fabricated. The *ḳuṣṣāṣ* (storytellers) were men who invented the most extraordinary traditions to which they attached seemingly impeccable *isnād*s, their purpose being to astonish the common people and receive payment for their stories. The spurious nature of such was easily recognized. Others fabricated traditions to spread false doctrines, and this was sometimes so cleverly done that it had a chance of being undetected. For example, one such quotes the Prophet as saying, 'I am the seal of the prophets; there will be no prophet after me unless God wills'. The phrase 'unless God wills' is so common that it could easily pass without comment, but men of insight noticed the heretical tendency in spite of the excellent *isnād* which supported it. Some who had invented traditions to teach heretical doctrines afterwards confessed what they had done, but as many of their traditions had been incorporated in books they did not know how to undo the damage. At the other extreme there were pious men who were so disturbed by the laxity of their times that they invented traditions to exhort men to live righteously. Yaḥyā b. Saʿīd (d. 143/760) is reported to have said,

"I have not seen more falsehood in anyone than in those who have a reputation for goodness". Abū ʿĀṣim al-Nabīl (d. 212/827) is credited with the similar statement, "I have not seen the good man lying about anything more than about *Ḥadīth*". The fact that different types of people invented traditions shows how important *Ḥadīth* had become. Because of this, ingenious men made use of it to propagate their ideas.

Criticism was made of transmitters for various other reasons. Some were accused of carelessness in transmission, others of being inaccurate in old age, others of pretending to transmit traditions when they had lost their books and were depending on a faulty memory. Al-Ḥākim (d. 405/1014) accuses some of tracing back to the Prophet traditions which went back only to Companions or Successors.

As a result of the effort to investigate the genuineness of traditions biographical works were compiled regarding the people who appear in *isnāds*. It was important to know the years of their birth and death, for this shows whether they could have met the people they are said to have quoted. Statements were also recorded regarding the degree of their trustworthiness, but these raised problems for they were frequently contradictory. Although it is said that such material was collected from the first century, the books were mainly compiled from the third century onwards. Arabs were notable as genealogists, and therefore one may not unreasonably assume that while the books began to appear comparatively late, materials for the earliest periods were available. Books were also written confined to traditionists in particular districts, *madhhabs*, or centuries, some including people of other interests. It is important to note that while these are called *ridjāl* (men) works, they include many women traditionists (see further AL-DJARḤ WA 'L-TAʿDĪL).

The criticism of traditions soon developed a series of technical terms, a number of which are found in the six books, where comments on traditions are common. Al-Tirmidhī made a notable contribution to the criticism of Tradition, for he not only supplied notes to the large majority of his traditions, but concluded with a chapter in which he discussed some points (see *Varieties of the ḥasan tradition*, in *Journal of Semitic Studies*, vi (1961), 37 ff.). The use of technical terms seems to have been a gradual development, but although a particular term might be used differently at different periods, fairly general agreement about most of them was eventually reached.

Traditions were divided into *ṣaḥīḥ* (sound), *ḥasan* (good), and *ḍaʿīf* (weak) or *saḳīm* (infirm). *Ṣaḥīḥ* traditions have seven grades: (1) those given by al-Bukhārī and Muslim; (2) those given by al-Bukhārī alone; (3) those given by Muslim alone; (4) those not given by either, which however fulfil their conditions (*shurūṭ*); (5) those which fulfil al-Bukhārī's *shurūṭ*; (6) those which fulfil Muslim's *shurūṭ*; (7) traditions sound in the opinion of other authorities. *Ḥasan* traditions are not considered quite so strong, but they are necessary for establishing points of law. Indeed, most of the legal traditions are of this type. There are varieties of the *ḥasan* but authorities are not all agreed on the subject. Al-Tirmidhī has used *ḥasan* along with other words, but in his final chapter he has unfortunately not explained what he means by all the terms he uses. Weak traditions also have various degrees. Allowance is made for using weak traditions dealing with exhortations, stories, and good behaviour, but not for those dealing with matters of law or with things which are allowable or forbidden. Abū Dāʾūd has used *ṣāliḥ* for traditions about which he has made no remark, some being sounder than others. Some have held *ṣāliḥ* to be a grade inferior to *ḥasan*, but this view is not common. Ibn Ḥadjar al-ʿAskalānī (d. 852/1449) distinguishes between *ṣāliḥ al-iḥtidjādj* (fit to be used as proof) and *ṣāliḥ al-iʿtibār* (fit to be considered), the former being equivalent to *ḥasan* and the latter, though weak in itself, deserving consideration to see whether it is corroborated. If that is so it becomes *ṣāliḥ bi-ghayrihi* (fit through another tradition) and *ṣāliḥ al-iḥtidjādj*. But in classical terminology *ṣāliḥ* is applied to transmitters rather than to traditions.

Most of the following technical terms, mainly dealing with the *isnād*, acquired a stable meaning although all authorities did not agree in their interpretation of some. For convenience they are here arranged in five groups.

(i) With reference to the number of transmitters. *Mutawātir* is applied to a tradition with so many transmitters that there could be no collusion, all being known to be reliable and not being under any compulsion to lie. *Mashhūr* is a tradition with more than two transmitters, some such being *ṣaḥīḥ* and others not. *Mustafīḍ* is treated by some as equivalent to *mashhūr*, by some as equivalent to *mutawātir*, but by most as an intermediate class. *ʿAzīz* is used of a tradition coming from one man of sufficient authority to have his traditions collected when two or three people share in transmitting them. *Gharīb* is a tradition from only one Companion, or from a single man at a later stage. It may apply to *isnād*, or *matn*, or both. It is to be distinguished from *gharīb al-ḥadīth* which applies to uncommon words in the *matn* of traditions. *Fard* can be used of an *isnād* with only one transmitter at each stage, or of a tradition transmitted only by people of one district. Ibn al-Ṣalāḥ (d. 643/1245) says every *fard* is not reckoned *gharīb*; al-Nawawī (d. 676/1278) considers those from one district to be *fard* and those from individuals *gharīb*. *Shādhdh* is a tradition from a single authority which differs from what others report. If it differs from what people of greater authority transmit, or if its transmitter is not of sufficient reliability to have his unsupported traditions accepted, it is rejected. *Āḥād* is used of traditions from a relatively small number of transmitters, not enough to make them *mutawātir*. *Khabar al-āḥād*, or *al-ḥadīth al-āḥādī* is to be distinguished from *khabar al-wāḥid*, a tradition from a single man.

(ii) With reference to the nature of the *isnād*. *Muttaṣil* is used of an unbroken *isnād* traced back to the source. If it goes back to the Prophet it is *muttaṣil marfūʿ*, if to a Companion it is *muttaṣil mawḳūf*. *Musnad* is generally applied to a tradition with a fully connected *isnād* traced to the Prophet, *i.e.*, both *muttaṣil* and *marfūʿ*, though it has been applied by some to connected traditions going back to a Companion or a Successor. *Marfūʿ* is a tradition traced to the Prophet whether or not the *isnād* is complete; but some would treat it as equivalent to *musnad*. *Mawḳūf* is a tradition going back only to a Companion. *Maḳṭūʿ* is a tradition going back to a Successor regarding words or deeds of his. Al-Shāfiʿī and al-Ṭabarānī used it in the sense of *munḳaṭiʿ*, which has been used of an *isnād* including unspecified people, or one later than a Successor who claims to have heard someone he did not hear. It is also used of one later than a Successor quoting

directly from a Companion; but commonly it is applied when there is a break in the *isnād* at any stage later than the Successor. *Munfaṣil* (separated, divided) may be found applying to a tradition with several breaks in the *isnād*, to distinguish it from *munḳaṭiʿ*. *Muʿallaḳ* (suspended) is used when there is an omission of one or more names at the beginning of the *isnād*, or when the whole *isnād* is omitted. *Mursal* is a tradition in which a Successor quotes the Prophet directly. *Muʿallal* or *maʿlūl* applies to a tradition with some weakness in *isnād* or *matn*. Al-Ḥākim calls it a tradition mixed with another, or containing some false notion of the transmitter, or given as *muttaṣil* when it is *mursal*.

(iii) With reference to special features of *matn* or *isnād*. *Ziyādāt al-thiḳāt* means additions by authorities in *matn* or *isnād* which are not found in other transmissions. Views differ regarding the extent to which such information is acceptable. *Muʿanʿan* is used of an *isnād* where *ʿan* (on the authority of) is used with no clear indication of how the tradition was received. It is held that when those who use it are known to be genuine, and to have heard the person they quote, the tradition is *muttaṣil*. *Musalsal* is applied when the transmitters in an *isnād* use the same words, or are of the same type, or come from the same place. *Musalsal al-ḥalf* is a type in which each transmitter swears an oath, and *musalsal al-yad* is the type in which each transmitter gives his hand to the one to whom he transmits the tradition. *Mudallas* is used of a tradition with a concealed defect in the *isnād*. The defect of *tadlīs* (concealing defects) may consist in pretending to have heard a tradition from a contemporary when that is not so (*tadlīs al-isnād*), or in calling one's authority by an unfamiliar *ism*, *kunya*, or *nisba* (*tadlīs al-shuyūkh*), or in omitting a weak transmitter who comes between two sound ones (*tadlīs al-taswiya*). *Mubham* (obscure) is used when a transmitter is named vaguely, *e.g.*, *radjul* (a man), or *ibn fulān* (son of so and so) without giving the man's *ism*. *Maḳlūb* (transposed) is applied when a tradition is attributed to someone other than the real authority to make it an acceptable *gharīb* tradition, or when two traditions have the *isnād* of the one with the *matn* of the other. Some use *munḳalib* when there is a slight transposition in the wording. *Mudradj* (inserted) is used of a gloss in the *matn*, or of giving with one *isnād* texts which differ with different *isnād*s, or of mentioning a number of transmitters who differ in their *isnād* without indicating this. Generally it is used of inserting something in the *isnād* or the *matn* of one tradition from another to make this appear part of it. *Muḍṭarib* (incongruous) is used when two people or more disagree with one another in their version of a tradition, they being people of similar standing. The difference may affect *isnād* or *matn*. *Iḍṭirāb* makes a tradition weak. When a man is called *muḍṭarib al-ḥadīth* it means his traditions are confused. *Isnād ʿālī* (a high *isnād*), which is used when there are very few links between the transmitter and the Prophet, or between him and a certain authority, is considered a valuable type on the ground that the fewer the links the fewer are the possible chances of error. *Isnād nāzil* (a low *isnād*) means that there are many links. The quality of the former is called *ʿuluww* and of the latter *nuzūl*. *Muḥarraf* (altered) is used of a change occurring in the letters of a word. *Muṣaḥḥaf* (mistaken) is used of a slight error in *isnād* or *matn*, commonly confined to an error in the dots. *Mudabbadj* (variegated, embellished) is used when two contemporaries transmit traditions from one another. *Iʿtibār* (taking into consideration) means consideration of whether a transmitter who is alone in transmitting a tradition is well known, or whether, if the tradition is solitary by one authority, someone in the chain has another authority, or whether another Companion transmits it.

(iv) With reference to acceptable traditions. *Maʿrūf* (acknowledged) is applied to a weak tradition confirmed by another weak one, or it is a tradition superior in *matn* or *isnād* to one called *munkar* (see below). *Maʿrūf* is also applied to a traditionist when two or more transmit from him. Otherwise he is *madjhūl*, *i.e.*, unknown either as regards his person, or his reliability. *Maḳbūl* (accepted) is a tradition which fulfils requirements and is either *ṣaḥīḥ* or *ḥasan*. *Maḥfūẓ* (committed to memory) applies to a tradition which, when compared with one which is *shādhdh*, is considered of greater weight.

(v) With reference to rejected traditions. *Munkar* (ignored) is used of a tradition whose transmitter is alone in transmitting it and differs from one who is reliable, or is one who has not the standing to be accepted when alone. Some equate *munkar* with *shādhdh*, but *munkar* is normally considered inferior. When one says of a transmitter *yarwi 'l-manākir* (he transmits *munkar* traditions) this does not involve the rejection of all his traditions; but if he is called *munkar al-ḥadīth* they are all to be rejected. *Mardūd* (rejected) is the opposite of *maḳbūl*. More particularly it is a tradition from a weak transmitter which contradicts what authorities transmit. *Matrūk* (abandoned) is a tradition from a single transmitter who is suspected of falsehood in Tradition, or is openly wicked in deed or word, or is guilty of much carelessness or frequent wrong notions. *Maṭrūḥ* (cast out) is held by some to be synonymous with *matrūk*, by others to be a separate class less acceptable than *ḍaʿīf*, but not so bad as *mawḍūʿ* (fictitious), the worst type of all. Some other technical terms are given below. [See also AL-DJARḤ WA 'L-TAʿDĪL].

The criticism of traditions was very detailed, showing how seriously the work was undertaken, and one recognizes the genuine effort made to clear away what was false. But Western scholars have tended to argue that the criticism did not go far enough. Goldziher, in his *Muhammedanische Studien*, ii, and elsewhere, has shown that *Ḥadīth* is not based on such firm ground as the conventional doctrine would lead one to suppose, and he has been followed by many others. One readily notices phrases from the Old and New Testaments put into the mouth of the Prophet as his sayings. There are references to towns far from Arabia which were to be conquered, even to towns not yet founded in the Prophet's time. Parties which arose in the early Muslim period are named, *e.g.*, Khāridjīs, Murdji'a, Ḳadariyya, Djahmiyya. Reference can be found to the rightly-guided Caliphs, and there are unmistakeable references to the Umayyads and the ʿAbbāsids. Many miracles are attributed to the Prophet, although the Ḳur'ān does not represent him as a miracle-worker. There is great detail regarding the tribulations before the end of the world, and regarding the Last Judgment. There are also elaborate descriptions of heaven and of hell. The Western mind finds it difficult to accept such material as genuinely coming from the Prophet. Professor J. Schacht has argued cogently that *isnād*s grew as time passed, and so legal traditions which belonged to a later period were eventually

traced back to the Prophet. While one does not feel justified in explaining away the whole body of Tradition on these lines, it is quite clear that much material coming from a later date has been attributed to the Prophet, and this makes it very difficult to find a satisfactory criterion by which one may recognize what is genuine. Material which accumulated within a certain circle may often have seemed to a later generation to have come from a Companion who settled in the area, and by a natural process to have been attributed to him with the assumption that he had the Prophet as his authority. One result of Western criticism is that we must be chary of accusing men like Abū Hurayra of inventing many traditions, for they probably heard and transmitted very little of what they are reputed to have told.

IV. The study and transmission of Tradition

The study of Tradition is called *ʿUlūm al-ḥadīth* (the sciences of Tradition). Various works had been written on branches of Tradition, but the first to attempt a comprehensive work was Abū Muḥammad al-Rāmahurmuzī (d. 360/971) whose lengthy work in seven parts is called *al-Muḥaddith al-fāṣil bayna 'l-rāwī wa 'l-wāʿī*. Al-Ḥākim al-Naysābūrī wrote a more systematic work entitled *Maʿrifat ʿulūm al-ḥadīth*, divided into 52 *nawʿ* (categories), a method followed by later writers. The work of Ibn al-Ṣalāḥ, *ʿUlūm al-ḥadīth*, which may be considered the classical work on the subject, has 65 *nawʿ*. The study covers minutely a wide range of subjects, dealing with classes of traditions and transmitters (emphasis being specially laid on knowledge of the Companions —*Ṣaḥābīs*, and the Successors—*Tābiʿūn*), with methods of learning and transmitting traditions, with rules about details of writing traditions and methods of making necessary corrections in one's manuscript, even with the ages at which it is appropriate to begin and to stop transmitting. To give one illustration of the rules for writing, when the phrase *ṣallā 'llāhu ʿalayhi wa-sallam* comes after *rasūl Allāh*, one must not end a line with *rasūl*, for to do so would mean that someone happening to glance at the next line might think God was being invoked to bless and preserve Himself.

There were a number of recognized methods by which traditions could be received, but everyone was not agreed about the relative importance of some of them. Ibn al-Ṣalāḥ gives the following: (1) Hearing (*samāʿ*). Hearing directly from the *shaykh*'s mouth is considered superior to other methods. (2) Reciting to the *shaykh* (*al-ḳirā'a ʿala 'l-shaykh*), commonly called *ʿarḍ* (submitting the material to him). One may recite to him his material from memory or from a book, and he may listen with or without his book for reference according to the quality of his memory. The important matter is that he should be able to guarantee the correctness of what is attributed to him. This method is equally valid if one hears someone else reciting. (3) Licence (*idjāza*). Licence to transmit a *shaykh*'s traditions is of various kinds, some more precise than others as to the material and the person or persons to whom it is given. (4) Handing over (*munāwala*). This applies to a copy of the *shaykh*'s traditions being handed to a student with or without *idjāza*. Ibn al-Ṣalāḥ held that *idjāza* must be received to make it valid, but said that a number of traditionists held that *munāwala* alone was sufficient. (5) Correspondence (*mukātaba*). Some held that material received thus may be transmitted though licence has not been given, but others disagreed. Ibn al-Ṣalāḥ holds that if the man who receives the traditions is familiar with the *shaykh*'s handwriting he may transmit the traditions, making clear how he received them. If licence is given this is equivalent to *munāwala* with *idjāza*. (6) Bequest (*waṣiyya*). Ibn al-Ṣalāḥ says that receiving a book of traditions in a bequest does not give one the right to transmit them, but some consider that it does. *Waṣiyya* is also used of a book entrusted to someone by one going on a journey. (7) A find (*widjāda*). One who finds a book in a *shaykh*'s handwriting may transmit the traditions if he explains how he got them, this giving a suggestion of a connected *isnād*. If the book contains the *shaykh*'s traditions copied by someone else, one may say merely that he said such and such, this not suggesting a connected *isnād*. Some at least of these methods were used in the 3rd/9th century, and possibly earlier. Al-Bukhārī has chapters on reading over traditions to a *shaykh* and on *munāwala* and *mukātaba*, and al-Tirmidhī speaks of reading over material to a *shaykh*.

Different words used in the transmission of traditions are discussed, such as *ḥaddathanī* (he told me), *ḥaddathanā* (he told us), *akhbaranī* (he informed me), *akhbaranā* (he informed us), *samiʿtu* (I heard), *anba'anī* (he announced to me), *anba'anā* (he announced to us), *ʿan* (on the authority of). Various views mentioned by people of the 2nd/8th and 3rd/9th centuries suggest that in their day there was no general agreement about the relative importance of these terms. Al-Ḥākim is more precise. He says *ḥaddathanī* should be used when one hears a *shaykh* with no others present and *ḥaddathanā* when others are present; *akhbaranī* when one reads over traditions to a *shaykh* with no others present, and *akhbaranā* when one hears someone else reading to the *shaykh*; *anba'anī* when one submits traditions to a *shaykh* and is given *idjāza* by word of mouth. *ʿAn*, which is generally agreed to be allowable when the transmitter is reliable, often appears in al-Bukhārī's traditions. Al-Khaṭīb al-Baghdādī (d. 463/1071) justifies it especially when the *isnād* is long, as it avoids tedious details. An *isnād* which begins with one or more of the other words often uses only *ʿan* towards the end; or it may begin with one of the recognized words and continue with *ʿan* to the end.

It is not sufficient, according to the strictest rules, to give merely the contents of a collection of traditions for which one has received *idjāza*; one must inscribe on one's manuscript the name of the *shaykh* from whom one received the traditions, telling how and when this took place, along with the line of authorities through whom he heard it. So not only the separate traditions but also the whole collection must have an *isnād*. This practice has continued in certain quarters, but the invention of printing has largely made it unnecessary. The text of some important scholar is printed, his authority sufficing without any attempt to trace the transmission of his version down to the present day. But manuscripts always give details of the transmission of their contents.

In discussing the age at which people may begin to hear and transmit traditions and the age at which they should stop Ibn al-Ṣalāḥ holds that no hard and fast rules can be laid down. Some say the youngest age is five and that people should stop in their eighties, but he argues that some are not too young before five and some have not become senile in their eighties, although there are others who should stop earlier.

Inconsistency in traditions (*mukhtalif al-ḥadīth*)

has caused difficulty, recognizing the existence of traditions which seem contradictory. Ibn Ḳutayba's *Ta'wīl mukhtalif al-ḥadīth* (Cairo 1326/1908; Fr. tr. G. Lecomte, Damascus 1962) is a standard work on the subject. By an exercise of ingenuity it may be possible to reconcile the traditions, or one may be given preference because of the superiority of its transmitters; or by a knowledge of when the traditions were promulgated one may conclude that the later one has abrogated the earlier. This subject has the title of *al-nāsikh wa 'l-mansūkh* (the abrogating and the abrogated). A tradition cannot be abrogated by *idjmā'*; only a tradition can abrogate a tradition.

It is often said that the validity of a tradition depends not on the text but on the *isnād*. While this is generally true, it is not the whole story. For example, al-Ḥākim (*Ma'rifat 'ulūm al-ḥadīth*, 59 ff.) mentions some traditions with very reliable men in the *isnād* which he holds to be faulty and weak. He argues that one requires considerable knowledge to detect this, and can arrive at a conclusion only after discussion with people learned in the subject.

ḤADĪTH ḲUDSĪ (sacred, or holy tradition), also called *ḥadīth ilāhī*, or *rabbānī* (divine tradition), is a class of traditions which give words spoken by God, as distinguished from *ḥadīth nabawī* (prophetical tradition) which gives the words of the Prophet. Although *ḥadīth ḳudsī* is said to contain God's words, it differs from the Ḳur'ān which was revealed through the medium of Gabriel, is inimitable, is recited in the *ṣalāt*, and may not be touched or recited by the ceremonially unclean. *Ḥadīth ḳudsī* does not necessarily come through Gabriel, but may have come through inspiration (*ilhām*), or in a dream. One statement, not generally accepted, says God revealed these traditions to the Prophet on the night of the *Mi'rādj*. The words are not God's exact words, but express their meaning. They may not be used in *ṣalāt*, and there is no harm if one touches them when ceremonially unclean. Disbelief in the Ḳur'ān is infidelity, but this does not apply to *ḥadīth ḳudsī*. When quoting a *ḥadīth ḳudsī* one must not say simply, "God said" as when quoting the Ḳur'ān, but either, "God's messenger said in what he related from his Lord", or, "God most high said in what God's messenger related from Him". Some of these traditions quite clearly have their source in the Bible. For example, "what eye has not seen, nor ear heard, nor has entered into the heart of man" (cf. Isaiah lxiv, 4; 1 Cor. ii, 9), and a tradition telling that on the Day of Resurrection God will say, "O son of Adam, I was sick and you did not visit me", continuing on the lines of Matthew xxv, 41 ff.

The *ḥadīth ḳudsī* do not form a separate group in the books of tradition, but some collections have been compiled from the six Sunnī books and, more commonly, from others. The largest collection, *al-Itḥāfāt al-saniyya fī 'l-aḥādīth al-ḳudsiyya*, by Muḥammad al-Madanī, or al-Madyanī (d. 881/1476), publ. Ḥaydarābād 1323/1905, contains 858 traditions divided in three groups: (1) those beginning with *ḳāla*; (2) those beginning with *yaḳūlu*; (3) those given alphabetically, this last containing 603. The *isnād* is not given, but as the collection from which each tradition comes is mentioned,

those who desire can find its *isnād* there. A collection of 101 *ḳudsī* traditions entitled *Mishkāt al-anwār* by Muḥyi 'l-Dīn Ibn al-ʿArabī (d. 638/1240) was published in Aleppo (1346/1927) along with a collection of 40 compiled by Mullā ʿAlī al-Ḳāriʾ (d. 1014/1605). Ibn al-ʿArabī, who divides his collection into three parts, two of 40 traditions and one of 21, gives a full *isnād* in the first, sometimes in the second, and usually in the third. ʿAlī al-Ḳāriʾ merely mentions the Companion reputed to have heard the tradition from the Prophet. Another collection, not published, is by ʿAbd al-Raʾūf Muḥammad b. Tādj al-Dīn al-Munāwī (d. 1031/1621). It is divided into two parts (cf. Ḥādjdjī Khalīfa, ed. Flügel, i, 150 f.), the first with traditions beginning with *ḳāla* and the second arranged in alphabetical order. It would appear that al-Munāwī, whose smaller work has the same title as al-Madanī's, was largely dependent on that work.

Bibliography: in addition to the works mentioned in the text: al-Tahānawī, *A dictionary of the technical terms used in the sciences of the Musulmans*, ed. Sprenger, etc., Calcutta 1854-62, 280 f.; Ṣubḥī al-Ṣāliḥ, *ʿUlūm al-ḥadīth wa-muṣṭalaḥuhu*, Damascus 1379/1959, 122-5; M. Tayyib Okiç, *Bazı hadis meseleleri üzerinde tetkikler*, Istanbul 1959, 13-6; Muḥammad Djamāl al-Dīn al-Ḳāsimī, *Ḳawāʿid al-taḥdīth min funūn muṣṭalaḥ al-ḥadīth*[2], Cairo 1380/1961, 64-9; S. M. Robson, *The material of Tradition, II*, in *MW*, xli (1951), 261-7; Brockelmann, I, 571 f., S I, 791 (Ibn al-ʿArabī), S II, 151 (al-Madanī), II, 393 f., S II, 417 (al-Munāwī), 517 f., S II, 539 (ʿAlī al-Ḳāriʾ). (J. Robson)

ḤADĪTHA, "New [town]", the name of several cities.

I. Ḥadīthat al-Mawṣil, a town on the east bank of the Tigris, one farsakh below the mouth of the upper (Great) Zāb. Its ruins are to be recognized in the mound of Tell al-Shaʿīr. Various accounts of its origin are given. According to Hishām b. al-Kalbī (*apud* Ibn al-Faḳīh, 129 and Balādhurī, Būlāḳ ed., 340) Harthama b. ʿArfadja, after making Mawṣil the capital, came to Ḥadītha in the reign of ʿUmar b. al-Khaṭṭāb, where he found a village with two churches in which he settled Arabs. That this story is authentic (it is also given in Yāḳūt, ii, 222) is confirmed by Ṭabarī (i, 2807), according to whom in 24/645 Walīd spent some time in Ḥadītha on his way back from Armenia. Ḥamza says that Ḥadītha is the translation of the Persian Nōkard. If this is not an invention of Shuʿūbiyya bias, the best explanation of the name would be that of Balādhurī, namely that inhabitants of the "Newtown" of Anbār Fayrūzshābūr migrated thither and transferred the name to their new abode. When Ḥamza and others ascribe the "foundation" of the town to the last Umayyad Marwān II b. Muḥammad or Bar Bahlūl ascribes it to his father Muḥammad b. Marwān I, the reason may be that these rulers erected some buildings there, but nevertheless the explanations of the name "Newtown" as "newer" than Mawṣil are inventions (cf. Yāḳūt, ii, 22; Hoffmann, *Syr. Akten pers. Märt.*, 178; E. Reitemeyer, *Städtegründungen der Araber*, 83). The town's period of greatest prosperity falls within the early ʿAbbāsid period, when the Caliph al-Hādī stayed there before his death and when the rebel general Mūsā b. Bogha made it his headquarters in the reign of al-Muhtadī (Ṭabarī, iii, 578, 1827). The population remained Christian. Mār Abrahām was bishop of Ḥadītha before he became Patriarch and Katholikos (837-50 A.D.) (Budge, *Thomas of Margā*, ii, 103; Assemani, *Bibl. Or.*, iii/1, 508 note 1).

The town lay on the terraced east bank of the Tigris in the form of a semicircle. Its mosque lay close to the river and the buildings, with the exception of the mosque, were of brick. The tomb of ʿAbd Allāh b. ʿUmar b. al-Khaṭṭāb was shown there, but probably wrongly, as he died in Medina (Muḳaddasī, 139; *Marāṣid*, 292). It is remarkable that Ḥadītha is sometimes described as the northern extremity of Sawād, which had a greater extent than the province of ʿIrāḳ (Yāḳūt, iii, 174; Dimishḳī, 185). Elsewhere it is mentioned as a station on the post-road from Baghdād to Mawṣil. It was ruined as a result of the Mongol invasion.

II. Ḥadīthat al-Furāt, called also Ḥadīthat al-Nūra (Lime-Newtown) on the Euphrates, south of ʿĀna (34° 8′ N. and 42° 26′ E.), a *nāḥiya* of the *ḳaḍāʾ* of ʿĀna. The town itself is built on an island, only the caravan stations being on the western river bank. It has very much declined since 1910, when the reefs and dams in the river were blown up in order to make way for packet-boats which never came into service; it had formerly 400 houses, 2 *djāmiʿ*s and 3 *masdjids*, 2 corn-mills, gardens with 1500 date palms (about 6000 in the whole *nāḥiya*). It was irrigated by great waterwheels called *nāʿūra*, which were erected at the rapids of the river. There are limestone quarries on the western side of the Euphrates valley. There are three saints' tombs of the 5th-7th/11th-13th centuries there, from N. to S.: 1. Shaykh al-Ḥadīd (a certain Muḥammad b. Mūsā al-Kāẓim); 2. The Awlād Sayyid Aḥmad al-Rifāʿī; 3. a certain Nadjm al-Dīn, said to have been one of the occupants of Noah's ark. As to the history of the town, Yāḳūt (ii, 223), following Aḥmad b. Yaḥyā b. Djābir, observes that it was taken before ʿUmar's time in the governorship of ʿAmmār b. Yāsir. It had a strong castle on the island which was of some importance as late as the time of the Caliph al-Ḳāʾim (*Marāṣid*, 292). According to Abū Saʿd al-Samʿānī the inhabitants were Christians.

III. Ḥadītha called Djirsh or Djirs, a village in the Ghūṭa of Damascus (Yāḳūt, ii, 225; *Marāṣid*, 292).

HADIYYA [see HIBA].

HADJAR (locally pronounced *hagar*) is a cognate of the Ethiopic *hagar* "town", and was the normal word for "town" in the epigraphic dialects of pre-Islamic South Arabia. It is still in use today as an element in the place-names given to ruins of pre-Islamic town sites in South Arabia. See Azimuddin Ahmad, *Die auf Südarabien bezüglichen Angaben Našwān's in Šams al-ʿulūm*, Leyden 1916, 108. (A. F. L. Beeston)

HADJAR [see AL-ḤASĀ].

ḤADJAR (A.), stone. The word is applied in Arabic as indiscriminately as in European languages to any solid inorganic bodies occurring anywhere in Nature; sometimes indeed it is used in a still broader sense, as in *Sūra* II, 60/57 and VII, 160, where the rock from which Mūsā procures water is called also 'stone'. Although *Sūra* XVII, 50/53: "Say: Be ye stones, or iron" may indicate a certain discrimination between stones and minerals, later texts, or at least some of them, do not maintain it. In the *Book of Stones* ascribed to Aristotle all the substances

described—metals, and even glass and mercury included—are called stones; so too are certain organic substances, the Bezoar [see BĀZAHR] and the "meat magnet", *maghnāṭīs al-laḥm* (*Das Steinbuch des Aristoteles*, ed. J. Ruska, 1912, 110).

A survey of stones analogous to the surveys of animals and stars by Aristotle and Ptolemy respectively is not known in classical literature. There are a few objective descriptions in Theophrastus and Pliny, but their influence, if any, on Islamic literature has not yet been studied. Aristotle's theories on the origin of minerals in general became known through the Arabic translation of the *Meteorologica* (see AL-ĀTHĀR AL-ʿULWIYYA; the text contained in MS Yeni Cami 1179 has meanwhile been edited by ʿAbd al-Raḥmān Badawī, together with *De coelo*, 1961). It is to be noted that in the editions of the Greek text Book 3 ends (378b 5-6) with the announcement of a detailed discussion of the different kinds of bodies; in the Arabic translation, Book 4 begins (ed. Badawī, 90) with this same announcement, which was therefore judged to be the introduction to this spurious book. However, the promised detailed discussion does not appear there either. This was probably the reason for compiling the spurious *Book of Stones* mentioned above. In Latin translations of the *Meteorologica*, Ibn Sīnā's treatise on the origin of stones and mountains sometimes appears as an appendix, occasionally under Aristotle's name; the Arabic and Latin texts, with an English translation, were published separately by E. J. Holmyard and D. C. Mandeville: *Avicennae de Congelatione et Conglutinatione lapidum*, 1927 (see *OLZ*, 1929, cols. 374-6). Fragments of the *Meteorologica* of Theophrastus in Syriac have recently been edited and translated by E. Wagner and P. Steinmetz, *Der syrische Auszug der Meteorologie des Theophrast* (Ak. d. Wiss. u. d. Lit., Abh. d. Geistes-u. Sozialwiss. Kl. 1964, i); see also P. Steinmetz, *Die Physik des Theophrastos von Eresos*, 1964.

Islamic books on the origin of stones etc. are listed in AL-ĀTHĀR AL-ʿULWIYYA, and also in E. Wiedemann, *Zur Mineralogie im Islam* (*Beitr. z. Gesch. d. Naturw.*, xxx, *Sitz. d. phys.-med. Soz. in Erlangen*, xliv (1912), 205 ff.). A comprehensive discussion of the subject, dealing with the origin of stones in general and enumerating a great many of them in detail, is contained in al-Ḳazwīnī's *Cosmography*, 203-45. Here *maʿdiniyyāt* are divided into metals (the "seven bodies", *al-adjsām al-sabʿa*), stones and oily substances. Ethé's translation (*Die Wunder der Schöpfung*, Leipzig 1868, not mentioned in *GAL*) breaks off after the chapter on metals; the chapters on stones and oily substances were translated by J. Ruska (*Das Steinbuch ... des Ḳazwīnī übers. und mit Anm. versehen*, Beil. zum Jahresbericht 1895/96 der provisor. Oberrealschule Heidelberg, Kirchhain 1896). The relation between 'Aristotle' and al-Ḳazwīnī has been fully discussed by J. Ruska in the introductory chapter of his *Das Steinbuch des Aristoteles*, 1912.

Interest in descriptions of specific "stones" is very many-sided. Apart from the descriptions of substances in medical, commercial, technical and chemical literature, for which, *inter alia*, pharmacological and chemico-alchemical works may be consulted, there exists a special type of stone-books in which genuine information may be found but whose main purpose is magical. The Pseudo-Aristotle mentioned above is one; another, also ascribed to Aristotle, in which a chapter on stones is incorporated, is the famous *Sirr al-asrār* or *al-Siyāsa fī tadbīr al-riyāsa*, published by ʿA. Badawī, *Fontes Graecae doctrinarum politicarum Islamicarum*, i, 1954. A bibliography of such literature was compiled by M. Steinschneider, *Arabische Lapidarien*, in *ZDMG*, xlvii (1895), 244-78, to be supplemented by H. Ritter, *Orientalische Steinbücher*, in *Istanbuler Mitteilungen*, iii (1935), 1-15. For the *Lapidario* of Alfonso the Wise, see BALĪNŪS; for the use of stones for magical purposes, see H. Ritter and M. Plessner's translation of *Picatrix* (Ps.-Madjrīṭī, *Ghāyat al-ḥakīm*, 1962); a chapter on this subject will be included in the forthcoming volume of studies on this book.

Since no attention has been drawn to the unique place in the mineralogical literature of Islam occupied by the *al-Djamāhir fī maʿrifat al-djawāhir* of al-Bīrūnī [*q.v.*], a few remarks on it may be added here. The *djawāhir* proper, *i.e.*, pearls and precious stones, occupy only part of the book; it deals also with many metals and other minerals, always giving exact descriptions, indications of the location of mines, specific weights, prices, uses, and tales concerning them, the last often aptly criticized [see ALMĀS]. The book deserves a full translation with careful textual criticism. M. J. Haschmi's doctoral thesis *Die Quellen des Steinbuches des Berūnī* (Bonn 1935) was prepared simultaneously with the edition of F. Krenkow (Ḥaydarābād 1355) and relies only on manuscript sources. It should be pointed out that al-Bīrūnī questions the genuineness of Aristotle's book of stones (Haschmi, 35; ed. Krenkow, 41). Only two chapters have so far been made accessible to non-Arabists: P. Kahle, *Bergkristall, Glas und Glasflüsse nach dem Steinbuch des Biruni*, in *ZDMG*, xc (1936), 321 ff.; F. Krenkow, *The chapter on pearls in the Book of Precious Stones by al-Beruni*, in *IC*, xv (1941), 399-421 and xvi (1942), 21-36.

Bibliography: Further to works cited in the article: M. Steinschneider, *Lapidarien, ein culturgeschichtlicher Versuch*, in *Semitic studies in memory of Alexander Kohut*, 1897, 42-72; art. *Gemmen* in Pauly-Wissowa, by O. Rosbach, esp. 1097 ff.; art. *Lithika*, *ibid.*, by Th. Hopfner; H. Ritter, *Ein arabisches Handbuch der Handelswissenschaft*, in *Isl.*, vii (1917), 1-91 (*passim*); J. Ruska, *Die Mineralogie in der arabischen Literatur*, in *Isis*, i (1913), 341-50.

(M. PLESSNER)

AL-ḤADJAR AL-ASWAD [see AL-KAʿBA].

ḤADJAR AL-NASR ("the rock of the vulture"), a fortress founded by the last Idrīsids [*q.v.*] in a natural mountainous retreat, placed by Ibn Khaldūn among the dependencies of the town of al-Baṣra [*q.v.*]. Its site has now been identified in the territory occupied by the small tribe of the Sumatra, east-north-east of the Moroccan town of al-Ḳaṣr al-Kabīr (Alcazarquivir). It is reported to have been known also by the name of Ḥadjar al-Shurafāʾ. In 317/929-30 the Banū Muḥammad, expelled from Fās after the assassination of their prince, the famous al-Ḥadjdjām, settled at al-Baṣra. These descendants of Idrīs would not, however, have escaped the blockade and the Fāṭimid persecutions had it not been for the regard in which the Berbers held the descendants of the Prophet. It is without doubt these sentiments which enabled al-Ḥasan b. Gannūn (Djannūn), the local ruler, to manœuvre skilfully between the Umayyads of Spain and the Fāṭimids and to carve out for himself a principality which in about 361/972 comprised not only al-Baṣra but also Tangiers and Tetuan. Al-Ḥakam II, the *amīr* of Cordova, was finally roused by the activities of Ibn Gannūn into sending a fleet and an army to subdue him. The

Idrīsid then took refuge in his fortress with his harem and his treasure and, after several spectacular reverses, he finally inflicted a bloody defeat on the Umayyad troops on 21 Rabīʿ I 362/30 December 972; their leader, Ibn Ṭumlus, was killed and they had to seek refuge within the walls of Ceuta. In order to avenge this cruel defeat, al-Ḥakam II sent to Morocco his best general, the renowned *mawlā* Ghālib [*q.v.*], who gathered together his army as soon as he disembarked and set off to besiege Ḥadjar al-Nasr. Ibn Gannūn resisted so effectively that fresh reinforcements were sent from Spain, with a large supply of gold to buy over the allies of the Idrīsid. The latter realized that he was lost and was obliged to surrender on 21 Djumādā II 363/19 March 974. A week later Ghālib inflicted on him the bitter experience of attending the mosque of the fortress to hear the prayer pronounced in the name of al-Ḥakam, his conqueror. Ghālib returned to Spain six months later, taking with him Ibn Gannūn and his relations of the Banū Muḥammad branch. The arrival of the Idrīsids at Cordova on 3 Muḥarram 364/23 September 974 was the occasion of magnificent celebrations. Pensions and gifts were accorded to the 700 warriors "who were worth 7,000". (For their further history and the assassination of Ibn Gannūn see IDRĪSIDS). With this exile the decay of the fortress presumably began; the texts make no mention of it after this date.

Bibliography: Ibn Khaldūn, *ʿIbar* (tr. de Slane, *Histoire des Berbères*, index); Aḥmad al-Nāṣirī, *Kitāb al-Istiḳṣāʾ*, i, new edition, Casablanca 1954, which summarizes all the Arabic texts (tr. A. Graulle, in *AM*, xxxi (1925)); Lévi-Provençal, *Hist. Esp. Mus.*, ii, where further bibliography can be found. (G. DEVERDUN)

HADJARAYN, a town in Ḥaḍramawt on the Djabal of the same name, about five miles south of Mashhad ʿAlī [*q.v.*] on the Wādī Dūʿan. Situated amid extensive palm-groves, it is built against the slopes of the Djabal. The surrounding land is very fertile and produces *dhura*. Irrigation is provided through channels from the *sayl* and from very deep wells. The town is of importance as a centre on the motor road between Mukallā and Shibām. Its houses are built of brick and are large but the streets are narrow and steep. It belongs to the Ḳuʿaytīs of Shibām [*q.v.*] who are represented in it by a member of their family, who bears the title *naḳīb* and lives in a palace on the summit of the hill. Hadjarayn has about 3,000 inhabitants, many of whom have connexions with Java and speak Malay. In the vicinity of the town there are relics of the pre-Islamic period, when the incense trade still flourished in the district. The ruins of an ancient town, Raydūn, with inscriptions are still to be seen about the valley.

Hadjarayn was known to Hamdānī but in the form *al-Hadjarān*. In his time it consisted of two towns, Khawdūn and Dammūn, lying on opposite sides of the *wādī*. Khawdūn was inhabited by the Ṣadaf, Dammūn by the Kinda. At the foot of the fortified hill, on which Hadjarayn lay, there were palmgroves and fields of *dhura* and *burr*, which were watered by a *ghayl* coming from the top of the hill.

Grohmann, *Südarabien als Wirtschaftsgebiet*, Vienna and Brünn 1922-33, 2 vols., index. (J. SCHLEIFER-[A. K. IRVINE])

ḤADJDJ (A.), pilgrimage to Mecca, ʿArafāt and Minā, the fifth of the five "pillars" (*arkān*) of Islam. It is also called the Great Pilgrimage in contrast to the *ʿumra* [*q.v.*] or Little Pilgrimage. Its annual observance has had, and continues to have, a profound influence on the Muslim world. Those not taking part follow the pilgrims in thought; the religious teachers, and nowadays the press, radio and television help them in this by providing doctrine and news bulletins. For the Muslim community itself this event is the occasion for a review of its extent and its strength. To the religious, social and even political significance which such a gathering has today, was added, until the 18th century, an economic aspect: then, at this time of the year, Mecca was the site of one of the greatest commercial fairs of the world in which were found the products of Europe, Arabia and the Indies. Moreover, in those times, when travelling was still difficult, the pilgrimage helped to produce a mingling among the élite of the Muslim world: scholars on the way to Mecca would stay temporarily at places in the way, forming friendships with colleagues or themselves teaching in the local mosques.

i. — THE PRE-ISLAMIC ḤADJDJ.

The investigation of the original meaning of the root *ḥ.dj* goes no further than hypotheses, some however probable. The Arabic lexicographers give the meaning "to betake oneself to"; this would agree with our "go on pilgrimage". But this meaning is as clearly denominative as that of the Hebrew verb. Probably the root חגג, which in North as well as South Semitic languages means "to go around, to go in a circle", is connected with it. With this we are not much farther forward however; for we do not even know whether religious circumambulations formed part of the original *ḥadjdj*. We do know that in the pre-Muslim period two annual markets were held in the month of Dhu 'l-Ḳaʿda, at Ukāẓ and Madjanna. These were followed in the early days of Dhu 'l-Ḥidjdja by that of Dhu 'l-Madjāz and thence the people went direct to ʿArafāt. The Muslim practice of going out from Mecca to ʿArafāt is therefore probably an innovation; and Islam knows nothing of religious circumambulations in ʿArafāt.

This *Ḥadjdj* to Arafāt was not a local peculiarity; pilgrimage to a sanctuary is an old Semitic custom, which is prescribed even in the older parts of the Pentateuch as an indispensable duty. "Three times a year shall you celebrate for me a *ḥag*" is written in Exodus (xxiii, 14), and "three times a year all thy males shall appear before the Lord Yahwe" (*ibid.*, 17 and xxxiv, 22). But in Arabia also there were probably several places of pilgrimage where festivals like that of the *Ḥadjdj* of ʿArafāt were celebrated. The month of Aggathalbaeith mentioned by Epiphanius seems to presuppose a sanctuary in the north.

The *ḥadjdj* of ʿArafāt took place on 9 Dhu 'l-Ḥidjdja; the most diverse Arab tribes took part in it, but this was only possible when peace reigned in the land. The consecutive months Dhu 'l-Ḳaʿda, Dhu 'l-Ḥidjdja and Muḥarram thus formed a sacred period during which tribal feuds were at rest; weapons were laid aside in the holy territory.

It may be regarded as certain that in Muḥammad's time the sacred festival fell in the spring. Wellhausen has, however, made it appear probable that the

original time of the *ḥadjdj* was the autumn. If, as is probable, the above mentioned intercalary month had for its object to maintain this time of the year, the intercalation did not effect its purpose, but from what cause we do not know. If the *ḥadjdj* originally fell in the autumn, it is natural, when inquiring into its original significance, to compare it with the North Semitic autumnal festival, the "Feast of Tabernacles" (or Day of Atonement), a proceeding which finds further support in the fact that the Feast of Tabernacles in the Old Testament is often called briefly the *ḥag* (*e.g.*, Judges, xxi, 19; I Kings, viii, 2, 65). We will indeed find several features in agreement (see below).

Great fairs were from early times associated with the *ḥadjdj*, which was celebrated on the conclusion of the date-harvest. These fairs were probably the main thing to Muḥammad's contemporaries, as they still are to many Muslims. For the ceremonies had already then lost their religious significance for the people. The following may be stated: a main part of the ceremony was the *wuḳūf*, "the halt", in the plain of ʿArafāt; in Islam the *ḥadjdj* without *wuḳūf* is invalid. This can only be explained as the survival of a pre-Muslim notion. Houtsma has compared the *wuḳūf* with the stay of the Israelites on Mount Sinai. The latter had to prepare themselves for this by refraining from sexual intercourse (Exodus, xix, 15) and the washing of their garments (Exodus, xix, 10, 14). Thus they waited upon their God (נכונים, 11, 15). In the same way the Muslims refrain from sexual intercourse, wear holy clothing and stand before the deity (*waḳafa* = כון = stand) at the foot of a holy mountain.

On Sinai, the deity appeared as a thunder- and lightning-god. We know nothing of the god of ʿArafāt; but he probably existed. Muḥammad is related to have said at the Farewell Pilgrimage: "The whole of ʿArafāt is a place for standing (*mawḳif*), the whole of Muzdalifa is a place of standing, the whole of Minā a place of sacrifice". Snouck Hurgronje has explained these words to mean that the particular places there, where heathen ceremonies were performed, were to lose their importance through these words. A little is known of these heathen places in Muzdalifa and Minā (see below).

It is uncertain whether the day of ʿArafāt was a fast-day or not. In Tradition it is several times expressly stated that Muḥammad's companions did not know what was his view on this question: he was therefore invited to drink and he drank. The ascetic character of the *ḥadjdj* days is clear from the *iḥrām* prohibitions. That these were once extended to include food and drink is clear from Muḥammad's explanation: "the *tashrīḳ* days (11-13 Dhu 'l-Ḥidjdja) are days of eating, drinking and sensual pleasure". In early Islam ascetically disposed persons therefore chose the *ḥadjdj* as the special time for their self-denials (see Goldziher in *RHR*, xxxvii, 318, 320 f.).

The *wuḳūf* lasts in Islam from the moment after midday till sunset. Tradition records that Muḥammad ordered that ʿArafāt should not be left till after sunset, while it had previously been usual to begin the *ifāḍa* even before sunset. But the Prophet is said not only to have shifted the time, but even to have suppressed the whole rite by forbidding the running to Muzdalifa and to have ordered that it should be slowly approached. But how tenacious the old custom is, is clear from modern discriptions of the *ifāḍa*. Snouck Hurgronje thought he saw a solar rite in the latter, a view which was more definitely formulated by Houtsma in connexion with the character of the *ḥadjdj* (see below), viz. that it was originally considered a persecution of the dying sun.

The god of Muzdalifa was Ḳuzaḥ, the thunder-god. A fire was kindled on the sacred hill, also called Ḳuzaḥ. Here a halt was made and this *wuḳūf* has a still greater similarity to that on Sinai, as in both cases the thunder-god is revealed in fire. It may further be presumed that the traditional custom of making as much noise as possible and of shooting was originally a sympathetic charm to call forth the thunder.

In pre-Islamic times, the *ifāḍa* to Minā used to begin as soon as the sun was visible. Muḥammad therefore ordained that this should begin before sunrise; here again we have the attempt to destroy a solar rite. In ancient times they are said to have sung during the *ifāḍa*: *ashriḳ thabīr kaymā nughīr*. The explanation of these words is uncertain; it is sometimes translated: "Enter into the light of morning, Thabīr, so that we may hasten".

When they arrived in Minā, it seems that the first thing they did was to sacrifice; 10 Dhu 'l-Ḥidjdja is still called *yawm al-aḍāḥī*, "day of the morning sacrifices". In ancient times the camels to be sacrificed were distinguished by special marks (*taḳlīd*) even on the journey to the *ḥaram*; for example two sandals were hung around their necks. Mention is also made of the *ishʿār*, the custom of making an incision in the side of the hump and letting blood flow from it; or wounds were made in the animal's skin. It is frequently mentioned also that a special covering was laid on the animals.

According to a statement in Ibn Hishām (ed. Wüstenfeld, 76 f. = tr. Guillaume, 50), the stone-throwing began only after the sun had crossed the meridian. Houtsma has made it probable that the stoning was originally directed at the sun-demon; strong support is found for this view in the fact that the *Ḥadjdj* originally coincided with the autumnal equinox; similar customs are found all over the world at the beginning of the four seasons. With the expulsion of the sun-demon, whose harsh rule comes to an end with summer, worship of the thunder-god who brings fertility and his invocation may easily be connected, as we have seen above at the festival in Muzdalifa. The name *tarwiya*, "moistening", may also be explained in this connexion as a sympathetic raincharm, traces of which survive in the libation of Zemzem water. These are again parallels to the Feast of Tabernacles (or Day of Atonement): the goat, which was thrown from a cliff for ʿAzazel, is not difficult to identify as the type of the sun-demon; and the libation of water from the holy well of Siloam was also a rain-charm, for the connexion between the Feast of Tabernacles and rain is expressly emphasized (Zach., xiv, 17). Further we may call attention to the illumination of the Temple on the Feast of Tabernacles, which has its counterpart in the illumination of the mosques in ʿArafāt and Muzdalifa, as well as the important part which music plays at both feasts.

Quite other explanations of the stone throwing are given by van Vloten (*Feestbundel . . . aan Prof. M. J. de Goeje aangeboden*, 1891, 33 ff.) and Chauvin (*Annales de l'Acad. Royale d'Arch. de Belgique*, 5th Ser., Vol. iv, 272 ff.). The former connects the stoning of Satan and the Ḳur'ānic expression *al-Shayṭān al-radjīm* with a snake, which was indigenous to ʿAḳaba. The latter finds in it an example of scopelism: the object of covering the *Ḥadjdj* ground with stones thrown on it was to prevent the cultivation of it by the Meccans. Both these theories have been satisfactorily refuted by Houtsma. Cf.

also Doutté, *Magie et religion*, 430 ff.—On the significance of shaving in connexion with the history of religions, see the article IḤRĀM.

On the *Tashrīḳ* days some of the pilgrims dry the flesh of the sacrificed animals in the sun to take it with them on the return journey. This custom agrees with the meaning of the word *tashrīḳ* given by the Arab lexicographers, *i.e.*, "to dry strips of meat in the sun"; but it may be doubted whether this is the original meaning of the word. A satisfactory explanation has not yet been given; see, however, Th. W. Juynboll. *Über die Bedeutung des Wortes Taschrīḳ*, in *Zeitschr. f. Assyr.*, xxvii, 1 ff. It must also be noted that Dozy in his book *De Israëlieten te Mekka*, traces the words *tashrīḳ* and *tarwiya* as well as the whole *Ḥadjdj* to a Jewish origin; but his thesis may be considered definitely refuted by Snouck Hurgronje's *Het Mekkaansche Feest*.

(A. J. WENSINCK)

ii. — THE ORIGIN OF THE ISLAMIC ḤADJDJ.

Muḥammad's attitude to the *Ḥadjdj* was not always the same. In his youth he must have often taken part in the ceremonies. After his "call" he paid little attention at first to the festival: in the oldest *sūra*s it is not mentioned and it does not appear from other sources that he had adopted any definite attitude to this originally heathen custom.

Muḥammad's interest in the *Ḥadjdj* was first aroused in Medina. Several causes contributed to this, as Snouck Hurgronje showed in his *Mekkaansche Feest*. The brilliant success of the battle of Badr had aroused in him thoughts of a conquest of Mecca. The preparations for such an enterprise would naturally be more successful if the secular as well as the religious interests of his companions were aroused. Muḥammad had been disappointed in his expectations regarding the Jewish community in Medina and the disagreements with the Jews had made a religious breach with them inevitable. To this period belongs the origin of the doctrine of the religion of Abraham, the alleged archetype of Judaism and Islam. The Kaʿba now gradually advances into the centre of religious worship: the father of monotheism built it with his son Ismāʿīl and it was to be a "place of assembly for mankind". The ceremonies performed there are traced to the divine command (Ḳurʾān, II, 119 ff.). In this period also the Kaʿba was made a *ḳibla* [*q.v.*] (cf. Ḳurʾān, II, 136-45) and the *Ḥadjdj* is called a duty of man to Allāh (III, 91). This is the position of affairs in the year 2 of the Hidjra. It was only after the unsuccessful siege of Medina by the Meccans in the year 5 that Muḥammad was able to attempt to carry out his plans. The first effort was made in the expedition to Ḥudaybiyya, which although it did not bring him to Mecca, yet by the treaty with the Ḳuraysh brought an *ʿumra* into prospect for the next year. In the year 7 Muḥammad instituted the ceremonies at the Kaʿba; but it was only after the conquest of Mecca in 8 that the opportunity was afforded of publicly celebrating the festival. But he did not take advantage of this occasion himself, for in the year 9 he sent Abū Bakr in his stead as leader of the pilgrim caravan to Mecca. While the latter was on the way, he was overtaken by ʿAlī b. Abī Ṭālib, who had been commissioned to read out to the pagan pilgrims the *barāʾa* (Ḳurʾān, IX, 1 ff.) which had been revealed in the meanwhile; in these verses the performance of the pilgrimage was forbidden to unbelievers, except those with whom the Prophet had made special treaties.

In the year 10 Muḥammad himself led the *Ḥadjdj*. Tradition has much to tell on the subject of this so-called farewell-pilgrimage (*ḥadjdjat al-wadāʿ*). These accounts of the ceremonies performed by Muḥammad agree essentially with the later practice. The arrangements which he made on this occasion are of importance, however, for the history of the *Ḥadjdj*, notably the abolition of the "intercalation" (*nasīʾ*) and the introduction of the purely lunar year, which is mentioned in the Ḳurʾān with the words: "Verily the number of months with God is twelve months in God's book, on the day when He created the heavens and the earth; of these four are sacred; that is the true religion. In these shall ye do no injustice to one another. But fight the unbelievers, as they fight you, one and all, and know that God is with the righteous. The intercalation is but an increase of the unbelief, in which the unbelievers err, for they make it [*i.e.*, the time in which it falls or should fall] lawful one year and unlawful the next" (Ḳurʾān, IX, 36 ff.). On other ordinances promulgated on this occasion see below. (A. J. WENSINCK)

iii. — THE ISLAMIC ḤADJDJ

A. The journey to Mecca. It is a duty obligatory on every Muslim man or woman who has reached the age of puberty and is of sound mind to perform the *ḥadjdj* once in his or her life provided that they have the means to do so (cf. Ḳurʾān, III, 91/97). The following are exempt for as long as their incapacity lasts: the insane, slaves, those who have not been able to obtain mounts or save the sums of money (procured honestly, *ḥalāl*) necessary for the journey and for the sustenance of their families during their absence. The obligation is lifted also during periods when the route is unsafe by reason of war, abnormal brigandage, epidemics, etc. For certain categories of Muslims who are unable to go, the law provides the possibility of accepting or hiring the services of other Muslims who will take their place on the pilgrimage. Each substitute may represent only one person and must already have made the pilgrimage on his own behalf. In this way invalids and elderly people can delegate someone to replace them. Provision is even made for a substitute to be sent posthumously.

The pilgrimage of a child (with his family) or of a slave (with his master) is considered a meritorious act but does not fulfil the obligation and must be made again when the one has reached puberty and the other become free. Some *ʿulamāʾ* insist that every woman must be accompanied by her husband or a close male relative (brother, son, etc.) who has the right to enter her harem; others say that a woman is obliged to go even if she has no such protector.

In practice, statistics show that only a small number of Muslims, especially in the case of those in countries far from Mecca, is able to perform the pilgrimage. It is beyond the reach of many people of limited means. And it is established that a fair number of those who could have afforded it die without having been to Mecca.

The *ḥadjdj* always takes place on the same dates of the lunar calendar, during the first two weeks of the month to which it gives its name *Dhu 'l-Ḥidjdja*. Ever since Islam suppressed the intercalary month [see NASĪʾ] which every three years corrected the discrepancy between the solar and the lunar year (Ḳurʾān, IX, 36-7) the Muslim festivals, and consequently the pilgrimage, fall each year ten or eleven days earlier than the preceding year, and thus

run through the whole cycle of the seasons in 32-3 years. The journey is of course much harder when the *ḥadjdj* takes place in high summer, although the cold of winter, especially at night, can also be painful for the pilgrims, insufficiently protected by their ritual garments. Only Muslims may be present at the pilgrimage, though very rarely Christian travellers have been able to mingle with them, protected by a disguise. In the 11th/17th and 12th/18th centuries Muslims sometimes took with them Christian slaves, who thus penetrated into the forbidden territories.

Until the 18th century, the methods of travel available to pilgrims were either sailing ships as far as Djudda, or caravans. The latter were in effect convoys organized by the authorities of the great Muslim countries. The dangers of the journey (the risk of losing their way in the deseit, of being caught in a sandstorm or in the torrent of a river-bed filled with water by sudden rain, the danger of attack by Bedouins, of epidemics, etc.) rendered it a serious undertaking, and the pilgrim knew that he might die on the way. For this reason there have long been more men than women pilgrims. The authorities, for their part, had built at the most important points of the route forts, some of them quite small, which were manned by small garrisons and served also as stations for supplies of water and food. A military escort accompanied the convoy, supplying as it passed the annual relief of the garrisons. The nomad tribes whose territory was crossed were won over by the distribution of money (called *ṣurra*, "purse" [*q.v.*]) and of robes of honour. Each section was directed by a pilgrim leader [see AMĪR AL-ḤADJDJ], in addition to whom there were the leaders of secondary caravans in case the main caravan became divided. From the 7th/13th century onwards, a famous palanquin, the *maḥmal* [*q.v.*], was carried to symbolize the political authority of certain Muslim countries, especially Egypt, and then the Ottoman Empire. Other displays of prestige consisted of taking musicians as part of the caravan and of letting off fireworks at certain points; (for details of the material organization of a caravan, see J. Jomier, *Maḥmal*).

An important caravan was mustered at Damascus and reached the Ḥidjāz by following broadly, as far as Medina, the direction later taken by the Ḥidjāz railway through Maʿān and Madāʾin Ṣāliḥ. It was accompanied by a Syrian *maḥmal* and the journey from Damascus to Medina took about thirty days (see R. Tresse, *Pèlerinage syrien*).

A caravan from the Maghrib, sometimes with a parallel group proceeding by sea as far as Alexandria, made its way first to Cairo, and was sometimes joined en route by groups of pilgrims from Senegal and Timbuktu. Then groups of Egyptians and Maghribīs set off again for the Ḥidjāz at twenty-four hour intervals. Their route led through ʿAdjerūd, ʿAḳaba, the country of Madyan and the eastern shore of the Red Sea. The Egyptian caravan travelled with its *maḥmal*, while the new exterior hangings (*kiswa* [*q.v.*]) for the Kaʿba were carried on other camels. The journey from Cairo to Mecca took about 35 days. However some pilgrims preferred the sea route; indeed at the time of the Crusades there was no choice, and to avoid passing too close to Frankish territory pilgrims coming from Egypt travelled up the Nile and then across the desert to the port of ʿAydhāb, where they took ship for Djudda. In spite of the resumption of the overland caravan under Baybars, the sea traffic continued. Towards the end of the 8th/14th century ʿAydhāb was replaced by the port of Ṭūr (in Sinai), and later it was Suez which, in the 19th century, monopolized the steamship traffic. The last official Egyptian caravan to go by the overland route was in 1300/1883 and it consisted of only 1,170 persons. But once in the Ḥidjāz, the Egyptian pilgrims continued to group themselves into official caravans around their *maḥmal*, which had been brought there by ship, until 1926 when the palanquin was seen in the Holy Places for the last time.

There was also a caravan from ʿIrāḳ, across Arabia, and another from the Yemen (see Burckhardt, *Travels*, appendices i and ii). The pilgrims from central Africa made their way to Port Sudan, where they embarked for Djudda. The arrival at Mecca of the principal caravans, especially those from Syria and Egypt, was a great event for the inhabitants of the city. They camped in places specially allotted to them (see the plan of Mecca in C. Snouck Hurgronje, *Mekka I* or in Rifʿat Pasha, *Mirʾāt al-Ḥaramayn*), and they generally did not appear until a few days before the *ḥadjdj*.

During the last century the journey to the Ḥidjāz has been greatly changed, first by the advent of steam navigation, then by the building of the short-lived Ḥidjāz railway [*q.v.*] (opened in 1908) and finally by the introduction of motor vehicles into Arabia and the spread of air travel. It has been altered also by public health measures, by the introduction of quarantine, and above all by the use of vaccination, so that the terrible epidemics of earlier centuries are now a thing of the past. Nowadays the death rate is relatively low and the main causes of death are the advanced age of some of the pilgrims, and sunstroke. The annual reports of the Muslim quarantine doctors who have accompanied the pilgrimage to the Ḥidjāz form a collection of extremely valuable documents; they consist mainly of technicalities, but often contain much that is of human interest and are often vividly written and sometimes very moving (texts printed practically every year since the beginning of the 20th century by the Quarantine Office at Alexandria, not for sale).

Up to the present only a rough annual figure has been available for the number of pilgrims. For one thing it is difficult to estimate how many Muslims from Arabia itself take part in the *ḥadjdj*, and then the rather fragmentary information provided by the quarantine services or the pilgrimage offices in the different countries, which alone could provide the numbers of non-Arabian pilgrims, would need to be brought together systematically. Dr. Buez, in *Une mission au Hedjaz*, Paris 1873, 84, gives the approximate total of pilgrims for 23 years between 1807 and 1873. The minimum was 50,000 in 1853 and 1859, the maxima 150,000 in 1873 and 160,000 in 1858. In 1926, a very exceptional year for this period, 250,000 pilgrims are reported.

According to the Meccan press during the last few years (but always excluding the pilgrims who come from the Arabian peninsula itself), from 1957 to 1962 there was an annual total of between 140,000 and 180,000. During this period the chief annual contingents varied within the following limits, reckoning in thousands: Egypt 30-40 (with only 10 in 1962 because of tension between Egypt and Saudi Arabia), Iran 10-28, Pakistan 9-23, India 13-20, Indonesia 7-13, Syria 5-13, Sudan 5-7, Nigeria 3-15, Irak 3-11.

Pilgrims have always been able to make financial arrangements with agents (*muḳawwim*), or nowadays with organizations, who undertake to provide for them in advance all the material needs of the journey.

Some pilgrims take advantage of the journey to pay long visits to places on the way and to spend some time in the Holy Cities. Their aim may be devotion, study, commerce, or even simply to work to earn enough to continue their journey. In the Middle Ages many used to arrive at Mecca in Ramaḍān, the month in which the performance of the *ʿumra* is held to be especially meritorious. A special caravan, the *Radjabiyya*, which set off from Cairo in Radjab, is mentioned from time to time in the 8th/14th century chronicles. Devotional motives influenced the decisions of the pilgrims. The year in which the station at ʿArafāt fell on a Friday was held to be particularly blessed, and to die near to the Holy Places was considered to bring especial grace. Until the 19th century many, by carrying on commercial activities during the pilgrimage, were enabled to cover, in part or entirely, the expenses of the journey, and some big merchants were even able to make a considerable profit. Finally it should be mentioned that there exist at the present time in the most impoıtant Muslim cities associations whose aim is to encourage the pilgrimage. (For some aspects of a pilgrimage made by a Shīʿī at the beginning of the 20th century, see Kazem Zadeh, *Relation d'un pèlerinage à la Mecque*, in *RMM*, xix (1912), 144 ff.) The word *ḥādjdj* so often added to Muslim names is an honorific title meaning "one who has made the pilgrimage".

B. Arrival at Mecca. The pilgrim will already have put on the sacred garment or *iḥrām* [*q.v.*] when he passed through (or was on a level with) one of the places prescribed for this by tradition, or before he boarded the plane for Djudda. He is then *muḥrim*, in a state of holiness, observing the prohibitions laid on those who are in this state and repeating frequently the invocation known as *talbiya* [*q.v.*]. The rites on arrival at Mecca are the same for all, for the *ḥadjdj* is in fact an *ʿumra*, that is a rite of visiting the Kaʿba, which is completed by the rites of visiting the Holy Places in the neighbourhood of Mecca. The *ʿumra* consists of walking seven times round the Kaʿba (*ṭawāf* [*q.v.*]), praying two *rakʿa*s facing the *Maḳām Ibrāhīm* and the Kaʿba (this prayer, according to the various juridical schools, is either only *sunna* or *wādjib*), and finally traversing seven times (four times going and three times returning) the distance between Ṣafā and Marwa (*saʿy* [*q.v.*]). What follows these observances depends on the intention which the pilgrim formed at the time of assuming the *iḥrām*. He intended to perform either the *ḥadjdj* alone (*ifrād*) or the *ʿumra* and the *ḥadjdj* together (*ḳirān*); in either of these two cases he does not relinquish the state of *iḥrām* after having performed the rites of arrival. But if he wanted to perform the *ʿumra* first and then to enjoy (*tamattuʿ*) the freedom of a normal life, not resuming the *iḥrām* again until the last minute for the *ḥadjdj*, he deconsecrates himself by having a few locks of hair cut off and coming out of the *iḥrām*. But in this case he will have to offer a sacrifice, which can be made wherever he chooses in the sacred territories and within a period upon the duration of which the jurists differ.

In general, the pilgrim joins a group led by a guide (*shaykh*, *dalīl*, *muṭawwif*). In this town, where the pilgrimage is the sole source of revenue for the inhabitants, who naturally try to gain as much as possible from it, it is useful to have the protection of a guide, no matter what this costs. Some guides visit the various Muslim countries from time to time to recruit their clients in advance.

C. The collective ceremonies of the *ḥadjdj*. Unlike the preceding observances, which each pilgrim carries out individually and at any date he chooses within the months set aside for them, the visits to the Holy Places in the vicinity of Mecca are made collectively in a traditional order, between 8 and 12 Dhu 'l-Ḥidjdja. We can give here only the broad outlines of the question, which has provoked an abundant literature among the casuists, each juridical school having its own requirements regarding details. These will be found in a table given by al-Batanūnī, *al-Riḥla al-Ḥidjāziyya*, 178.

On 7 Dhu 'l-Ḥidjdja, there is preached in the mosque of Mecca a sermon or *khuṭba* in the course of which the pilgrims are reminded of the duties which will fall on them.

It is generally on 8 Dhu 'l-Ḥidjdja that the pilgrims who have relinquished *iḥrām* for *tamattuʿ* assume it again. This day is called "day of watering", *yawm al-tarwiya*; for, say the Arabic writers, on this day the pilgrims water their animals and provide themselves with water for the following days. This explanation is not accepted by Wensinck and Gaudefroy-Demombynes, among others, who prefer to see in this name traces of an ancient rain rite.

The pilgrim then becomes part of an immense crowd moving towards the east. Tens or hundreds of of thousands of men and women in their white ritual garments enter a desert valley overhung with mountains and rocks. Formerly this was a mass of people on foot, and of camels, in which the pilgrims were accompanied by merchants who were there in order to offer them whatever could be sold in such circumstances. Today, cars and lorries proceed along the metalled road, while a string of first aid posts is set up for some days.

The night from 8 to 9 is spent at Minā (merely from custom) or already at ʿArafāt (25 km/15 miles from Mecca), where in the 10th/16th century a firework display was held.

The central event of the *ḥadjdj* is the station (*wuḳūf*), on 9 Dhu 'l-Ḥidjdja, in front of the *Djabal al-Raḥma*, a small rocky eminence in the valley of ʿArafāt itself. All the juridical schools consider this to be an indispensible *rukn*. The station begins at noon (when the sun has passed its apogee) with the joint recital of the prayers of *ẓuhr* and of *ʿaṣr* brought forward, and it lasts until sunset. A sermon is preached to commemorate that which was given by Muḥammad, but it is almost impossible to hear it in this vast valley (the juridical schools differ on whether there ought to be one or two sermons). Tents are erected as a shelter from the sun. This gathering is without doubt the most impressive moment of the pilgrimage, even though some of those present who have come for merely material purposes continue to go about their business. For the crowd of pilgrims it is a time of prayer and of collective emotion, and invocations are heard on every side.

On 27 May 1960, His Excellency Shaykh Shaltūt, the Rector of al-Azhar, gave, in a lecture on Cairo Radio, the following directives for this station: It is enough, he stated in effect, to spend at ʿArafāt one hour of the time between noon and sunset, and at this time the pilgrim should be completely alone with God, whether standing, seated or lying down. It is not, as some assert, enough to be there, but asleep. The ascent of the *Djabal al-Raḥma* is not prescribed by the Law and can be dangerous with such a crowd of people. Finally he said that it is not necessary to remain there until night, so that one adds to the jostling crush as the crowd leaves ʿArafāt.

The doctors of the law admit that those who have

been delayed can still perform individually a brief but valid station at ʿArafāt during the following night and until, but not beyond, the dawn, before hastily overtaking the main mass of pilgrims; but once this permitted period is over they will have to perform the whole pilgrimage again. In the Middle Ages it was sometimes known for pilgrims to remain twenty-four hours at ʿArafāt in order to be quite sure of the validity of their pilgrimage when there was doubt about when exactly the lunar month began and thus of which day was in fact 9 Dhu 'l-Ḥidjdja.

The mass of pilgrims leaves ʿArafāt on the evening of the 9th, when the sun has set. Then there begins the running (called *ifāḍa*), in which the pilgrims retrace the road by which they have come from Mecca. They pass the *ʿAlamayn*, or boundary marks, which show that they are entering again the *ḥaram* which surrounds Mecca. It is said that there is sometimes great confusion among the rushing crowd. The *Maghrib* and *ʿIshāʾ* prayers are recited together at Muzdalifa, the second of the Holy Places outside Mecca which the pilgrims are to visit. The Ḳurʾān speaks of this place under the name of *al-Mashʿar al-Ḥarām*. The mosque here is illuminated. The night is passed here by all except the women and the frail and sick, who may omit this and go ahead of the others to Minā in order to proceed calmly during (but not before) the second part of the night to the ritual stoning of ʿAḳaba.

On the morning of the 10th, the day called *yawm al-naḥr*, after the recital of the first prayer (*al-fadjr*), the crowd proceeds from Muzdalifa to Minā, which for three days will be the place where the pilgrims gather. The pilgrims first proceed to throw seven small stones at a construction called *djamrat al-ʿaḳaba* [see AL-DJAMRA] which stands against the mountain at the western exit from the valley of Minā. This is the only stoning which takes place on the 10th. Around this place, which now in the thoughts of the pilgrims symbolizes the Devil, the crush is indescribable and all that can be seen is a mass of outstretched arms.

Next follow the sacrifices which have given this day its name of Feast of Sacrifices. Tens of thousands of sacrificial victims, mainly sheep and goats, are offered for sale by the Bedouins and the merchants of Minā; only dignitaries of high rank sacrifice camels. A rock near ʿAḳaba is held to be the most auspicious site for the sacrifice (Burckhardt, *Travels*, ii, 59; Burton, *A Pilgrimage*, ii, 240), but in fact the doctors of the law insist that sacrifice can be made anywhere in Minā. The pilgrims themselves consume a part of the meat from the slaughtered animals, then the poor take what they want and the rest is abandoned. For the last fifty years, the local authorities have regulated the slaughter and especially the burial of the remains, so as to put an end to the smell which in former times very soon arose from this huge charnel-house. This offering of a victim in memory of that of Abraham springs from a private devotional act, rules for which are sometimes laid down by the doctors; it is not absolutely obligatory. Many offer at this time the sacrifice which is due for their *tamattuʿ* (or their *ḳirān*, as certain doctors stipulate). It should be noted that this is a simultaneous offering of many individual sacrifices and not a collective ceremony.

It is usual after the sacrifice to have the head ritually shaved or the hair cut short. Then the pilgrim returns to Mecca to perform a *ṭawāf* around the Kaʿba, which is now seen for the first time adorned with its new exterior hangings (*kiswa*). This is the *ṭawāf* of the *ifāḍa*, which forms an indispensible part (*rukn*) of the pilgrimage. It is best if it is done on the 10th, but it can be transferred to the following days under certain conditions laid down by the jurists. The pilgrims who are making only the *ḥadjdj* or the *ḥadjdj* and *ʿumra* combined (*ḳirān*) have now finished the main part of their observances. Only those pilgrims who have chosen *tamattuʿ* have still to perform the ritual running of the *saʿy*.

After the ritual shaving (or the trimming of the hair of the head or the body) the prohibitions end and the pilgrims can leave the state of *iḥrām*. Conjugal relations (*djimāʿ*), however, are permitted only after the *ṭawāf* of the *ifāḍa* (or the *saʿy* for pilgrims who have chosen the *tamattuʿ*). According to certain doctors the order of performing the stoning, sacrifice, shaving and *ṭawāf* may be reversed. As an act of devotion also the water of Zamzam is drunk and a further visit is made to Minā.

The 11-13 Dhu 'l-Ḥidjdja are called *ayyām al-tashrīḳ* (see below). These are days of social relations, and of visits in company to Minā. Witnesses speak of the striking contrast between this motley crowd, clad in the greatest possible variety of local dress, and the sight of it on the previous day in the uniformity of the ritual garments. In the 10th/16th century a firework display was given on the first night. Each day normally between mid-day and sunset, every pilgrim has to throw seven stones at each of the three *djimār* of Minā, ending with that of ʿAḳaba (the only one which had been stoned on the 10th). This order of stoning follows a tradition of the Prophet who is said to have acted thus [see AL-DJAMRA]. It is also the custom to sacrifice near a granite block on the slope of Mount Thabīr (cf. Burckhardt, *Travels*, ii, 65; al-Batanūnī, *Riḥla*, 196, map 184); Abraham is said to have prepared his son for sacrifice here. It is permitted to leave Minā on the 12th and thus to omit the three ritual stonings still prescribed for this day. It appears that the pilgrims usually take advantage of this permission and so return to Mecca. When they are about to leave the town for good, it is the custom for them to perform a last *ṭawāf*, called the 'farewell *ṭawāf*'.

The pilgrims take advantage of their presence at Mecca to visit the places which are connected with memories of the Prophet and his family. Those who have performed only the *ḥadjdj* (*ifrād*) and who now wish to perform an *ʿumra* will again assume the *iḥrām* at a place called Tanʿīm. But it was above all during these days that, until the 12th/18th century, the commercial fair of Mecca reached its height. Finally, a large proportion of the pilgrims make arrangements to go to Medina, either on the way to Mecca or on the return journey, in order to visit the tomb of the Prophet.

The ceremonies briefly described above are the normal ceremonies of the *ḥadjdj*. There is laid down a series of acts which are to be performed in reparation for the omission of one or another of the secondary rites or for any negligence in performing them. They range from the offering of a sacrificial victim to fasting and the giving of food as alms to the poor. But nobody must fast during the feast days at Minā, unless for very special reasons which have been examined by the doctors of law.

D. The spiritual significance of the *ḥadjdj*. The sermons and discourses given in recent years on Cairo Radio allow us to trace in outline the spiritual significance of the pilgrimage as it is regarded today. The primary obligation of the pilgrims is to perform

a monotheistic act of worship; obeying the order of the One God, they come as "guests of God" to visit the "house of God", towards which Muslims throughout the world turn at each of their five daily prayers. Firstly, the pilgrims are exhorted to make this journey for God alone, to purify themselves of all that could estrange them from God, and to avoid all quarrelling. They are to ask of God pardon for their sins and beseech Him to grant them His mercies. Secondly, the traditional formulas of the prayers make the crowd ceaselessly repeat that God is One and has no associates. It is thus expressed in the formula of the *talbiya* [*q.v.*], and in this invocation which is often repeated at ʿArafāt: "There is no god but the One God, Who has no associates; to Him belongs power, to Him belongs glory. He holds all good in His hands and has power over everything". There are many invocations of the same type.

Furthermore, the pilgrim frequently hears preachers telling of the deeds and actions of the Prophet during his last pilgrimage (*ḥadjdj al-wadāʿ*) in the year 10/632. The "descent" of Ḳurʾān, V, 5/3 at ʿArafāt and the *khuṭba* of the Prophet at this same place are especially emphasized. Moreover, everything reminds the pilgrims of the existence of the *Umma* (the Muslim community) and its extent. Sermons and articles are fond of repeating that the pilgrimage is the annual congress of the Muslim world. The equality of all Muslims before God, and its symbolization by the uniformity of the ritual garments, are firmly emphasized. Many pilgrims buy for one of the parts of their *iḥrām* a piece of cloth large enough to serve later as a shroud—the thought of death and judgement is never far off. The pilgrims are counselled to exercise the social virtues of patience and calmness in the face of the thousand and one little incidents which may arise. Finally, in the town of Mecca itself, which saw formerly the defeat of the polytheists at the hands of the Muslims, there are many reminders of the duty of the Holy War (*djihād*), in all the forms of hot or cold war which this struggle can assume in our time. The sacrifice at Minā is used nowadays to demonstrate the necessity of sacrifice in the fight for the cause of Islam.

The memory of Abraham is sometimes evoked concerning the sacrifice, but it is more often linked with the Kaʿba and with the pilgrimage in general, for the Ḳurʾān attributes to Abraham both the building of the sanctuary and the call to the pilgrimage. If the properly performed pilgrimage is rewarded by complete forgiveness of sins (as is taught by a *ḥadīth* frequently quoted, and given by both al-Bukhārī and Muslim), this forgiveness is not linked to any particular rite and certainly not to the slaughter of an animal offered as a sacrifice. The pilgrimage does not include a sacrifice for sin.

As always, the preachers present the ideal state of things; the reality is very much more prosaic. There are all types among the pilgrims, the fervent and the lukewarm, those who are truly pious and those who come out of self-interest or to conform socially. Immediately the period of prohibitions is over, most of them waste no time in returning to the pleasures of life. Until the last century, many of the wealthy pilgrims would buy a concubine slave-girl to take back with them to their country. Nevertheless, it is undeniable that many of the present-day pilgrims who return from the Ḥidjāz, and are welcomed home with great celebrations, have a powerful desire to return again to these places which have made an unforgettable impression on them. It is much more difficult to know the exact kind of spiritual influence which is exerted by the pilgrimage. Does it consist primarily of a development of the sense of belonging to a community? Or is it a loftier attachment to other and strictly Muslim values? This is known only to God.

(A. J. Wensinck-[J. Jomier])

The social, cultural and economic effects of the Pilgrimage in medieval Islam are of immense importance. Every year, great numbers of Muslims, from all parts of the Islamic world, from many races and from different social strata, left their homes and travelled, often over vast distances, to take part in a common act of worship. These journeys, unlike the mindless collective migrations familiar in ancient and medieval times, are voluntary and individual. Each is a personal act, following a personal decision, and resulting in a wide range of significant personal experience. This degree of physical mobility, without parallel in pre-modern societies, involves important social, intellectual and economic consequences. The pilgrim, if wealthy, may be accompanied by a number of slaves, some of whom he sells on the way —as a kind of traveller's cheques—to pay the expenses of his journey. If he is a merchant, he may combine his pilgrimage with a business trip, buying and selling commodities in the places through which he travels, and thus learning to know the products, markets, merchants, customs and practices of many lands. If he is a scholar, he may take the opportunity to attend lectures, meet colleagues, and acquire books, thus participating in the diffusion and exchange of knowledge and ideas. The needs of the pilgrimage—the commands of the faith reinforcing the requirements of government and commerce—help to maintain an adequate network of communications between the far-flung Muslim lands; the experience of the pilgrimage gives rise to a rich literature of travel, bringing information about distant places, and a heightened awareness of belonging to a larger whole. This awareness is reinforced by participation in the common ritual and ceremonies of the pilgrimage in Mecca and Medina, and the communion with fellow-Muslims of other lands and peoples. The physical mobility of important groups of people entails a measure of social and cultural mobility, and a corresponding evolution of institutions. It is instructive to compare the stratified, rigidly hierarchic society and intense local traditions within the comparatively small area of Western Christendom, with the situation in medieval Islam. The Islamic world has its local traditions, often very vigorous; but there is a degree of unity in the civilization of the cities—in values, standards and social customs—that is without parallel in the mediaeval west. 'The Franks' says Rashīd al-Dīn 'speak twenty-five languages, and no people understands the language of any other' (*Histoire des Francs*, ed. and trans. K. Jahn, Leiden 1951, text 11, trans. 24). It was a natural comment for a Muslim, accustomed to the linguistic unity of the Muslim world, with two or three major languages serving not only as the media of a narrow clerical class, like Latin in Western Europe, but as the effective means of universal communication, supplanting local languages and dialects at all but the lowest levels. The pilgrimage was not the only factor making for cultural unity and social mobility in the Islamic world—but it was certainly an important one, perhaps the most important.

Islamic history offers many examples of the impact of the pilgrimage; the biographies of learned and holy men are full of accounts of formative

meetings and studies in the Holy Cities, on the way there, and on the way back. The wandering scholar is a familiar feature of medieval societies: the pilgrimage ensured that the wanderers met, at a determined time and place. It provided the Islamic world as a whole with a centre and a forum, which contributed greatly to the formation and maintenance of an Islamic consensus—almost, one might say, an Islamic public opinion. The Almoravid and Almohad revolutions in the Maghrib were started by returning pilgrims, made aware through travel of the religious backwardness of their own peoples. Indian pilgrims brought the revived Naḳshbandī movement to the Middle East; other Indian pilgrims brought back the stimulus of Wahhābism.

The effect of the pilgrimage on communications and commerce, on ideas and institutions, has not been adequately explored; it may never be, since much of it will, in the nature of things, have gone unrecorded. There can, however, be no doubt that this institution—the most important agency of voluntary, personal mobility before the age of the great European discoveries—must have had profound effects on all the communities from which the pilgrims came, through which they travelled, and to which they returned. (R. BASSET*)

AL-ḤĀDJDJ ʿUMAR B. SAʿĪD B. ʿUTHMĀN TĀL, a celebrated Toucouleur conqueror who founded a short-lived kingdom in west Sudan where he imposed the Tidjānī *wird*; he was also called al-Shaykh al-Murtaḍā, at the time when he was preaching. The son of the *tyerno* Saydu Tāl, who was a fervent Muslim, he was born in about 1797 at Halwar (Aloar on the maps), a village in Fūta Toro, 40 km. from Podor (Senegal); he belonged to the Torobe caste, of the Toucouleur race.

At the age of eighteen, after considerable study of the Ḳurʾān he devoted himself to study and meditation, and then received the Tidjānī *wird* of Sīdī (Sayyidī) ʿAbd al-Karīm b. Aḥmad Nagel, through the intermediary of Sīdī Mawlūl Fal and the Moorish *shaykhs* of the Id-aw ʿAlī. When 23 years old he set out for Mecca by way of Kong, Sokoto, Fezzān and Egypt. There he was once more initiated by Sīdī Muḥammad al-Ghābī Abū Ṭālib who made him a Tidjānī *muḳaddam* and even *khalīfa* for the negro countries. He visited Medina and Jerusalem, returned to Mecca three times, then stayed at al-Azhar, where he had discussions with the *shaykhs* of the Khalwatiyya [*q.v.*]. From there he returned through Fezzān and Bornu, after performing several miracles, according to the legend. He escaped from the assassins sent by the sultan al-Kanemi of Bornu who nevertheless had given him his daughter Maryatū in marriage, and also numerous slaves whom he made his *talibes* (*ṭalaba*). For seven years he remained in Sokoto with Muḥammad Bello, the son and heir of ʿUthmān dan Fodio, and married his daughter Maryam. He travelled through Hamdallahi, the capital of Macina, to Segou where he was arrested by king Tyefolo at the instigation of *shaykh* Amadou (Aḥmad) the king of Macina, who looked on him as a dangerous agitator; on being liberated, he returned to Fūta in 1838. At that period he was for the most part regarded as an informed and inspired religious leader.

After being received with great deference by the *almamy* (*imām*), he settled from 1838 to 1848 in Fūta Djallon, at Diegounko near Timbo, where he founded a *zāwiya*; he instructed a large number of disciples and worked the Boure gold-mines. In 1846 he returned alone to preach the Tidjānī *wird* at Fūta Toro, in his own country, with only moderate success; he also visited Gambia, Saloum, Sine, Baol, and Cayor and made friendly contacts with the governor Caille. In 1848, alarmed by his growing power and the number of his devotees, the *almamy*

asked him to leave his territories; he settled in Dinguiraye, which he fortified and where he pushed forward his preparations for conquest and the holy war by recruiting supporters—whom he called *anṣār*—and by laying in stocks of arms and ammunition; his military commander was Alfa ʿUmar, son of the *tyerno* Baïla, whose army was eager to fight for the faith.

He came to blows with the minor chieftain of Yimba who was demanding some small-arms from him, defeated him and seized his territory. Between 1848 and 1854 he conquered the Manding, Tamba Ounde and Bandiougou Keïta chiefs and overran Boure and Bambouk. At Kolon he defeated a Bambara army from Nioro, and captured Koniakari, Yelimane and Nioro in 1854. He overcame Kandia Koulibali, the last Massassi king of Kaarta, and had him beheaded. His authority at that time extended through the entire territory between Fūta Djallon and Hodh.

Meanwhile, on 21 Dhu 'l-Ḳaʿda 1268/6 September 1852, after the prayer of the *ʿIshāʾ*, he heard three times a voice authorizing him to wage holy war. From that moment, "he strove to sweep the country clean and impose Islam".

His conquests, though rapid, were precarious. As early as 1854 he was obliged to leave Dinguiraye and resume the struggle against the Bambara of Kaarta: the latter were constantly defeated, but continued to revolt. He also fought against the Diawara of Kingi, suffering heavy losses; the kings of Segou and Macina refused to be his allies. In 1855 he made his headquarters at Nioro, and beat off a siege. Under these threats, he launched an attack against Ahmadou Ahmadou, the king of Macina; the Fulani being Muslim, he fought them in order to impose on them the practice of the Tidjānī *wird*, and won a victory at Kassakeri on 12 August 1856. It was during this period that he established cordial relations with the Moorish *shaykh* Sī Aḥmad al-Bakkāy, the enemy of the Fulani; he warred against the Khassonke and attacked the chiefs of the Bondou and the Fūta.

Al-Ḥadjdj ʿUmar was an excellent military leader and his campaigns were swift and victorious; pagan prisoners and wounded were put to death and the women and children enslaved; on the other hand, any Muslim enemies who were wounded were bandaged and sent home.

In 1857 the people of Kaarta, fleeing from the war, took refuge in Khasso; the *shaykh* laid siege to the French fort of Médine which had received the refugees; the town, defended by the half-caste Paul Holl, resisted for three months and finally Faidherbe relieved it.

In 1858 the *shaykh* fortified Koundian, then invaded the Boundou and the Fūta and attacked Matam in 1859; he was repulsed and returned to Nioro; the French took Guénou and relieved the outskirts of Bakel. In 1859 he lost Dimar and Damga, both occupied by the French, while the Fūta Toro was slipping away from his domination.

He then tried to move the populations of Fūta Toro and Bondou in order to repopulate Kaarta, which had been cleared of its inhabitants; his aim was to bring the loyal populations nearer to Nioro. Despite his great religious prestige, the Toucouleur were reluctant to emigrate; he had villages burnt down to force the people to leave, thereby causing a terrible famine. In 1860 he resumed his conquest of the Bambara empire of Segou, which was decimated. At Tio, in January 1861, he defeated the armies of ʿAlī Diara king of Segou and Ahmadou Ahmadou king of Macina. He took Nyamina, Sansanding and Segou on 10 May 1861; this date marks the islamization of the Bambara country, whose population thenceforward had to observe the five obligations of Islam. Segou was fortified and the Tidjānī practice enforced on all.

He conquered Macina in 1861 after a renewed offensive by ʿAlī Diara and Ahmadou Ahmadou, who were defeated. He suggested to the latter that they should both submit to the judgement of God, on the occasion of a great battle, and on 8 April 1862, with an army of 30,000 Sofas, he defeated the Fulani who were commanded by Ba Lobbo, after which he crushed a second Fulani army of 50,000 men; Ahmadou Ahmadou was wounded.

In 1862 he seized Hamdallahi and had the king beheaded. Macina surrendered; he solemnly designated his son Ahmadou as his successor, and himself took the title of sultan of Macina. The *shaykh* then took and sacked Timbuctu, but the Kounta Moors of the Bakkāʾiyya allied themselves with the Fulani, who plotted together and besieged him in Hamdallahi. The siege lasted for eight months and eventually the town was reduced owing to famine; al-Ḥādjdj ʿUmar had it burnt and took refuge among the cliffs of Bandiagara where, deserted by his followers, he died mysteriously, probably by blowing up a keg of gunpowder. The date of his death is taken to be 4 Ramaḍān 1280/12 February 1864. As his heir he left his son Ahmadou al-Kabīr al-Madanī.

His empire stretched from Macina to Faleme and from Tinkisso to Sahel, but it fell to pieces sixteen years after his death. His body never having been found, some believed that he would return.

He was regarded as a saint and man of letters; he knew by heart the two *Saḥīḥ*s, of Muslim and al-Bukhārī, and spent long hours in meditation and prayer before taking his decisions. He had, it is said, received five privileges from God:—he had the power to see God's Messenger, either in dreams or when awake; he knew the unknown "great name" of God; he could read men's hearts; he had God's authorization to direct men spiritually along the right path; he had received God's sanction to wage holy war.

In *khalwa*, he had various visions of the Prophet; he saw also an appearance of *shaykh* al-Tidjānī; he escaped miraculously from the assassins sent by the sultan of Bornu; he persuaded God to send rain; and, another time, he caused a spring to appear.

He was the author of numerous works: the *K. al-Rimāḥ* and the *K. al-Suyūf*, both relating to the Tidjāniyya; *K. Safīnat al-saʿāda li-ahl al-ḍaʿf wa 'l-nadjāda*; *K. al-Nuṣḥ al-mubīn*; *K. al-Maḳāṣid al-saniyya*; *K. Tadhkirat al-mustarshidīn*; *K. Falāḥ al-ṭālibīn*; *Taḳyīd fī khawāṣṣ al-ḥizb al-sayfī*; *Adjwiba fī 'l-ṭarīḳa al-tidjāniyya*.

ḤADJDJĀDJ, ruler of Kirman [see KUTLUGH KHĀNS].

AL-ḤADJDJĀDJ B. YŪSUF B. AL-ḤAKAM B. ʿAḲĪL AL-THAḲAFĪ, ABŪ MUḤAMMAD, the most famous and most able governor of the Umayyads, of the Aḥlāf clan of the Banū Thaḳīf, born

in Ṭā'if about 41/661. His forebears, poor and of lowly origin, are said to have earned their living as stone carriers and builders (Ibn ʿAbd Rabbih, *ʿIḳd*, v, 38; Ibn al-Athīr, *Chronicon*, iv, 313); his mother, al-Fāriʿa, also from the tribe of the Banū Thaḳīf, was the divorced wife of al-Mughīra b. Shuʿba, a man as capable as he was unscrupulous, who was appointed by Muʿāwiya as governor of Kūfa. Already as a child al-Ḥadjdjādj had been given the nickname *Kulayb* ('little dog'), under which he often appears in the satires of the poets (Mubarrad, *Kāmil*, 290 f.); as a young man he was a schoolmaster in Ṭā'if (*ʿIḳd*, v, 13), a detail also satirized by the poets. Apart from this nothing is known of his youth, and little of the early years of his public life: he does not seem to have distinguished himself in the battles in the Ḥarra of Medina in 63/682 (*Aghānī*, xvi, 42) and al-Rabadha in 65/684 (Ṭabarī, ii, 579) or as governor of Tabāla in the Tihāma (Ibn Ḳutayba, *Maʿārif*, ed. ʿUkāsha, 396).

The change began when al-Ḥadjdjādj, in the first years of the reign of ʿAbd al-Malik, set out from Ṭā'if to Damascus to serve in the police force (*shurṭa*) under Abū Zurʿa Rawḥ b. Zinbāʿ al-Djudhāmī, the vizier of the caliph. He attracted the attention of ʿAbd al-Malik because he succeeded in a short time in restoring discipline among the mutinous troops with whom the caliph was about to set out for ʿIrāḳ against Muṣʿab b. al-Zubayr. In the drastic means with which he discharged this task there could already be recognized the method which was later to make him famous, indeed notorious. On the campaign against Muṣʿab, al-Ḥadjdjādj seems to have led the rearguard and to have distinguished himself by some feats of valour. After the victory over Muṣʿab at Maskin on the Dudjayl in 72/691, on the caliph's orders he set out from Kūfa in the same month at the head of about 2000 Syrians against ʿAbd Allāh b. al-Zubayr, the anti-caliph of Mecca. He advanced unopposed as far as his native Ṭā'if, which he took without any fighting and used as a base. The caliph had charged him first to negotiate with Ibn al-Zubayr and to assure him of freedom from punishment if he capitulated, but, if the opposition continued, to starve him out by siege, but on no account to let the affair result in bloodshed in the Holy City. Since the negotiations failed and al-Ḥadjdjādj lost patience, he sent a courier to ask ʿAbd al-Malik for reinforcements and also for permission to take Mecca by force. He received both, and thereupon bombarded the Holy City with stones from the mountain of Abū Ḳubays. The bombardment was continued during the Pilgrimage. Because of his anger at being prevented by Ibn al-Zubayr from performing the *ṭawāf* and *saʿy* al-Ḥadjdjādj did not scruple to bombard the Kaʿba, together with the pilgrims there assembled. A sudden thunderstorm, in which the uneasy soldiers detected a warning of Divine punishment, he was able to interpret to them as a promise of victory. After the siege had lasted for seven months and 10,000 men, among them two of Ibn al-Zubayr's sons, had gone over to al-Ḥadjdjādj, the anti-caliph with a few loyal followers, including his youngest son, was killed in the fighting around the Kaʿba (Djumādā I 73/October 692).

Thus the unity of the state was restored, and the year 73 is sometimes called the "Year of Unity" (*ʿām al-djamāʿa*, *ʿIḳd*, v, 35). ʿAbd al-Malik showed himself grateful and conferred on al-Ḥadjdjādj the governorship of the Ḥidjāz, the Yemen and the Yamāma. The governor himself led the Pilgrimage in the years 73 and 74 and provided for the re-building of the Kaʿba on the original foundations and with the same dimensions as it had had before its restoration by Ibn al-Zubayr. He restored peace in the Ḥidjāz, but with a severity which frequently caused the caliph to intervene. Thus it is not improbable that the complaints of the inhabitants of the Ḥidjāz were among the factors which led to his being transferred to ʿIrāḳ in 75/694; though the immediate reason for this change was the death in this year of Bishr b. Marwān, a brother of the caliph, who until then had been governor of Kūfa. Because of the constant intrigues of the Khāridjīs, the governorship of ʿIrāḳ was the most important and responsible administrative post of the Islamic state. Al-Ḥadjdjādj took over this governorship, at the age of 33, at the beginning of 75/694 (Ṭabarī, ii, 944, line 9, 876, line 3; not so late as Ramaḍān, Ṭabarī, ii, 872, line 9), at first with the exclusion of Khurāsān and Sidjistān (Ṭabarī, ii, 863; Ibn Ḳutayba, *Maʿārif*, 397; Balādhurī, *Ansāb al-ashrāf*, ed. M. Ḥamīdullāh, i, Cairo 1959, 503). The sermon with which he installed himself in Kūfa is no less famous than that of his compatriot and predecessor in Baṣra, Ziyād b. Abīhi, and like it has found its place in Arabic literature. The most urgent task was to restore discipline among the troops of Kūfa and Baṣra, who were garrisoned at Rāmhurmuz on the farther bank of the Tigris under the command of al-Muhallab b. Abī Ṣufra, but who, at the instigation of Bishr, had left their camp without leave and were loitering about in the towns. Al-Ḥadjdjādj threatened that any soldier who had not returned to his post within three days would be put to death and his possessions laid open to plunder. This was effective. The soldiers poured back into the camp and al-Ḥadjdjādj himself undertook the distribution of their pay, whereupon he had to suppress another very dangerous mutiny led by Ibn al-Djārūd because of the reduction in the pay granted by the caliph himself. At this time there occurred also a violent quarrel between al-Ḥadjdjādj and Anas b. Mālik which, thanks to the intervention of ʿAbd al-Malik, ended in a moral victory for the old Companion of the Prophet (*ʿIḳd*, v, 36-9). After this the troops were immediately employed in battle against the Azāriḳa, who had chosen as caliph Ḳaṭarī b. Fudjā'a, famous also as a poet; al-Muhallab defeated them in 77/696. At the same time another Khāridjī leader, Shabīb b. Yazīd, was threatening ʿIrāḳ from Mawṣil, but, after several dangerous reverses, he was defeated, with the help of Syrian troops which al-Ḥadjdjādj had requested from the caliph, at the end of 77/spring 697 on the Dudjayl in Khūzistān. And finally al-Ḥadjdjādj defeated in the same year the governor of Madā'in, al-Muṭarrif b. al-Mughīra b. Shuʿba, who had foolishly taken the first opportunity to rebel in alliance with the Khāridjīs.

After the removal of the Khāridjī danger in ʿIrāḳ, al-Ḥadjdjādj was in the year 78 appointed also to the governorship of Khurāsān and Sidjistān (Ṭabarī, ii, 1032 f.). He left Khurāsān to be administered by al-Muhallab, and to Sidjistān, which had to be subdued anew, he sent from Kirmān the well-tried general ʿAbd al-Raḥmān b. al-Ashʿath at the head of a splendidly equipped army, the "Peacock Army" (*djaysh al-ṭawāwīs*, Masʿūdī, *al-Tanbīh wa'l-ishrāf* [*BGA* viii], 314; Ibn al-Athīr, *Chronicon*, iv, 365-7). This was the beginning of a revolution which was far more dangerous than any earlier one and which was directed not only against al-Ḥadjdjādj, but against the dominating rôle of the Syrians, and thus against the caliph and Umayyad rule itself. Ibn al-Ashʿath at first carried out his campaign carefully and accord-

ing to orders; he pacified each territory as it was conquered, ensured supplies and accustomed his troops gradually to the different climatic conditions. Al-Ḥadjdjādj, with his usual impatience, ordered Ibn al-Ashʿath in several offensive letters to advance without delay, and threatened if he did not do so to transfer the command to his brother Isḥāḳ. Ibn al-Ashʿath left the decision to his chief officers, whom he knew to be opposed to al-Ḥadjdjādj and to this endless war in distant lands. They gave their allegiance to him, and, with an army which soon grew to 100,000 men, Ibn al-Ashʿath marched against al-Ḥadjdjādj, occupied Kūfa and Baṣra, and, in the suburbs of Baṣra, besieged the governor, who was again obliged to call Syrian troops to his aid. The Syrian army, under the leadership of two sons of ʿAbd al-Malik, was instructed first to negotiate with Ibn al-Ashʿath and to hold out to him the prospect of the recall of the hated governor. As he would agree to none of the proposals, the Syrians attacked and defeated him decisively in 82/701 at Dayr al-Djamādjim and at Maskin on the Dudjayl; three years later he died by his own hand (Balādhurī, *Futūḥ*, 400; Ṭabarī, ii, 1135; the chronology of these events is not quite certain).

This was the last revolt of the Arabs of ʿIrāḳ. After al-Ḥadjdjādj had suppressed them and had also pacified the Kurdish and Daylamī brigands (Balādhurī, *Futūḥ*, 323 f.), he strengthened Syrian military rule over the country. In 83/702 he built midway between Kūfa and Baṣra the fortified town of Wāsiṭ, made it his own residence and transferred there the majority of the Syrian troops, ostensibly to protect the inhabitants from encroachments by the Syrians, but in reality to isolate them from the ʿIrāḳīs and to bring them firmly under his authority. Al-Ḥadjdjādj was now master of the whole of the Islamic East with the exception of Khurāsān, where the reigning governor, Yazīd b. Muhallab, the son of the famous conqueror, was only very slowly applying himself to the extirpation of the last followers of Ibn al-Ashʿath. When he did not obey repeated summonses to Wāsiṭ, al-Ḥadjdjādj finally procured from ʿAbd al-Malik his dismissal (85/704; Ṭabarī, ii, 1140 f.) and imprisoned him.

Although ʿAbd al-Malik had now and then restrained the activities of his governor, al-Walīd (86-96/705-15) gave him a free hand in everything and relied on him all the more in that he was indebted to him for his succession to the throne, which al-Ḥadjdjādj had urged to ʿAbd al-Malik against the claims of ʿAbd al-ʿAzīz b. Marwān (Ṭabarī, ii, 1166 f.; *Aghānī*, xvi, 60). Also al-Walīd's great victories in the East were the result of al-Ḥadjdjādj's efforts: Transoxania was conquered by Ḳutayba b. Muslim, ʿUmān by Mudjdjāʿa b. Siʿr (cf. H. Klein, *Kapitel xxxiii der anonymen arabischen Chronik Kashf al-ghumma al-djāmiʿ li-akhbār al-umma* . . ., thesis, Hamburg 1938, 28), India by Muḥammad b. al-Ḳāsim al-Thaḳafī—three outstanding generals whom al-Ḥadjdjādj had wisely appointed in view of their abilities. He did not himself take part in the campaigns, but he prepared them very carefully, sparing no expense, since he calculated that with victory he would recover his expenses many times over. In domestic affairs also al-Walīd conformed to the wishes of his governor, appointing and dismissing officials at his prompting.

Al-Ḥadjdjādj was now anxious to improve the prosperity of the country, which had suffered terribly from the twenty years of war. This too was his ultimate aim in concerning himself with the production of a uniform tradition of the text of the Ḳurʾān: he wanted on the one hand to put an end to the quarrels of the theologians over the different readings and to produce a single text which the Islamic community should be obliged to use, and on the other hand to purge this text of any kind of anti-Umayyad allusions. The division of the Ḳurʾān into separate *adjzāʾ* seems to go back to him (Nöldeke, *Geschichte des Qorans*[2], iii, 260), and it may have been on his orders that new vowel points were introduced (*op. cit.*, 262). In any case, he declared the new text which he had sponsored to be henceforth the only valid one and forbade most strictly the *ḳirāʾa* of Ibn Masʿūd. In connexion with the monetary reform by ʿAbd al-Malik in 76/695, al-Ḥadjdjādj began to strike purely Arabic coins, which gradually superseded the Byzantine and Sāsānid currencies, until then in general commercial use. For this purpose he founded his own mints, first in Kūfa and then in Wāsiṭ, putting them under the management of a Jew named Sumayr (whence these coins were called *al-sumayriyya*) and punished most strictly the making of counterfeits or even the most trivial faults in production (Ibn al-Athīr, iv, 337 f.). Many theologians disapproved of the striking of these coins with the name of God upon them (and hence at first called also *al-darāhim al-makrūha*) for they might fall into the hands of infidels (Balādhurī, *Futūḥ*, 468; Ibn al-Athīr, iv, 337). Yet the new coins established themselves in circulation as legal currency and helped to promote the circulation of money and the stabilization of economic conditions. Al-Ḥadjdjādj caused to be translated into Arabic the tax-*dīwān* which had hitherto been kept in Persian (Balādhurī, *Futūḥ*, 300 f.; cf. also Djahshiyārī, *Wuzarāʾ*, Cairo 1357/1938, 38), in order to be able to study the tax registers himself.

Of especial importance, however, were al-Ḥadjdjādj's efforts to improve agriculture. Like the Sāsānid kings before him, he was anxious to drain the marshes on the lower Euphrates and Tigris by a system of canals, and thus to obtain fertile land; when embankments broke he spared no cost in repairing them (Balādhurī, *Futūḥ*, 274 and 294). He gave to meritorious Arabs, such as Bashshār b. Muslim, a brother of Ḳutayba, uncultivated lands as fiefs (Balādhurī, *Futūḥ*, 361). He took further measures against the migration of countrypeople into the towns which had led to a disastrous reduction in the *kharādj*, and forced the newly converted Muslims to return to the fields which they had left and to continue paying *kharādj*. When the farmers of the Sawād complained to al-Ḥadjdjādj about the desolation of the land—a result of the many wars—he is said to have forbidden them to slaughter cattle in order to preserve the animals for ploughing (on this see the two satirical verses in *Aghānī*, xv, 98).

Al-Ḥadjdjādj was the most loyal servant that a dynasty could wish for. His obedience towards the Umayyads and his willingness to serve them were unbounded, and the caliphs repaid him for this with their unstinted favour. ʿAbd al-Malik, it is true, often urged him to practice restraint, for instance when he felt that the governor was extortionate in the raising of taxes, was too liberal with public resources, or was shedding more blood than was necessary. But in his answers, often pointed by verses composed by himself or others, al-Ḥadjdjādj was always able to give practical reasons for his actions, so that no mistrust on the part of the caliph ever resulted. The books of *adab* provide a large number of examples of this correspondence. The caliph and the governor were dependent on each other.

The latter's occasional journeys to Damascus strengthened the relationship, which was a personal as well as an official one: one of al-Ḥadjdjādj's nieces—the daughter of his brother Muḥammad, who under ʿAbd al-Malik was governor in the Yemen —was married to a son of ʿAbd al-Malik, the later caliph Yazīd II; the first son of this marriage was named al-Ḥadjdjādj in honour of the governor (*ʿIḳd*, iv, 452; Ibn Ḳutayba, *Maʿārif*, 396). The governor for his part named his first three sons after members of the Umayyad house, while his daughter married a son of al-Walīd I, Masrūr (*ʿIḳd*, iv, 422). His relations with al-Walīd seem on the other hand to have been of a more formally correct nature; the relevant correspondence is limited to purely administrative affairs. Al-Ḥadjdjādj feared nothing so much as the death of al-Walīd and the accession of Sulaymān, whom he had made his implacable enemy because of his interference in the question of the succession to the throne; add to this his measures against Yazīd b. al-Muhallab, who was Sulaymān's especial protégé. It was thus his anxious wish not to outlive al-Walīd (Ṭabarī, ii, 1272). This wish was fulfilled: he died one year before al-Walīd in Ramaḍān 95/ June 714, only 52 years old, prematurely aged and worn out by the load of strain, danger and disappointment which he had had to bear, and was buried in Wāsiṭ. The cause of death is said to have been cancer of the stomach (*waḳaʿat fī djawfihi ʾl-ākila*: Masʿūdī, *Prairies*, v, 377; Ibn Khallikān, i, 347; according to Barhebraeus, *Taʾrīkh mukhtaṣar al-duwal*, ed. Ṣālḥānī, Beirut 1890, 195, he died of consumption). The traces of his grave were obliterated in order to preserve it from profanation. His death was mourned by only a few, chief among whom were al-Walīd, the poet Djarīr (*Naḳāʾiḍ Djarīr wa'l-Farazdaḳ*, ed. Bevan, 486 f., cf. 496), and also Khālid al-Ḳasrī, the governor of Mecca (*ʿIḳd*, v, 30 f.); above all Yazīd b. Abī Muslim, al-Ḥadjdjādj's *mawlā*, and later governor of Ifrīḳiya, dared to call Sulaymān's attention to the merits of the deceased (Masʿūdī, *Prairies*, v, 404-6).

Scarcely any figure of the early period of Islam has become the subject of Arabic literature to such an extent as al-Ḥadjdjādj. He was a man of mark. The stories and verses in which are reflected the arguments for and against him are innumerable. Most of them are pungent anecdotes and allow us to understand exceptionally clearly the traits of his character. The ʿAbbāsids remembered him with hatred, but in reality envied the Umayyads this governor. There is no doubt that in the interests of the state al-Ḥadjdjādj could be stern and pitiless; every kind of obstinacy was in his eyes a crime against the State. But the mass executions and other atrocities which were attributed to him are the inventions of his enemies. He is often, and justly, compared with Ziyād b. Abīhi, Muʿāwiya's governor: "They both considered themselves not as holders of a lucrative sinecure, but as representatives of public order and of the Sultan, and repaid the trust of their sovereigns, who granted them great authority and left them in office until the end of their lives, by faithfully fulfilling their duties, unconcerned whether or not they found favour with public opinion" (Wellhausen, *Reich*, 159; cf. English tr. *The Arab Kingdom*, 254).

That al-Ḥadjdjādj did in fact have such a conception of his position can be gathered from his own words which are recorded by al-Muʿāfā b. Zakariyyā al-Nahrawānī (d. 390/1000) in *Kitāb al-Djalīs al-ṣāliḥ al-kāfī wa'l-anīs al-nāṣiḥ al-shāfī*, Ms Istanbul, Topkapısarayı, Ahmed III 2321, fol. 44a. When, after the death of Ibn al-Ashʿath, there was peace in ʿIrāḳ and al-Ḥadjdjādj rewarded the Ḳaysīs richly for their support, ʿAbd al-Malik wrote to him that he must be less generous with public funds. Al-Ḥadjdjādj replied to the caliph with the following verses:

"By my life! The messenger has brought the pages written by you which, after dictation, were folded and sealed.

It is a letter which contains both gentle and harsh things and in which I have been admonished—admonitions are always useful to men of understanding.

Many misfortunes befell me, for this I shall now supply explanations and also reasons and thus justify myself.

When I was a punishing scourge for the people without seeking personal advantage thereby,

—whether they were pleased or angry about this, whether I was praised or blamed or even abused by them—

(and when) in a country into which I came, on my arrival the fires of enmity blazed everywhere,

then I have endured of it all that is known to you and fought unceasingly, until death had almost overcome me!

You have heard how many tumults there have been there, and if another than I had been (there), he would have perished from terror.

Always when they wished to commit one of their unhappy deeds, I have proffered my head without disguising myself,

and if brave men (i.e. the Ḳaysīs) had not defended me against them, jackals and hyenas would have shared out my limbs!"

On the strength of this justification—which tersely outlines the whole of al-Ḥadjdjādj's achievement—the caliph could only write: "Act as you think proper!"

Al-Ḥadjdjādj's assurance and precision in administration, his firmness and knowledge of men, and his quick instinctive grasp in critical moments must have seemed somewhat sinister to his contemporaries. The fact that he did not tolerate bribery and punished the unlawful acquisition of riches, must have made him thoroughly hated by a civil service in which both were traditional. His chief faults were impatience and lack of self-control; he lacked the balance (*ḥilm*) which had earlier distinguished Muʿāwiya. Thus he sometimes demanded the impossible from those under his command, and had fits of rage if his orders were not carried out quickly enough. Nevertheless al-Ḥadjdjādj was a highly cultivated man: his eloquence was unsurpassed (and feared), he attached great importance to a pure Arabic, had literary taste and was accustomed to associate with poets (Djarīr, Farazdaḳ, al-ʿUdayl b. al-Farkh al-ʿIdjlī, al-Ḥakam b. ʿAbd al-Aʿradj al-Asadī, the poetess Laylā al-Akhyaliyya), but he persecuted the satirists (ʿImrān b. Ḥiṭṭān al-Sadūsī, Yazīd b. al-Ḥakam al-Thaḳafī, etc.). He was a devout Muslim, but neither bigoted not superstitious; the squabbling of the theologians left him unmoved, but frankness made an impression on him and as a rule procured exemption from punishment.

The unprejudiced judge sees in al-Ḥadjdjādj one of the greatest statesmen, not only of the Umayyads, but of the whole Islamic world.

(Ed.)

ḤĀDJDJĪ BAYRĀM WALĪ (? 753/1352-833/1429-30), patron saint of Ankara and founder of the order of the Bayrāmiyya [*q.v.*], was born at the village of Solfasol, 7 km. north-east of Ankara, the son of a certain Koyunludja Aḥmad; his personal name was Nuʿmān. After studying at Ankara and Bursa, he taught at the Kara Medrese at Ankara, but abandoned the theological career when invited by Sheykh Ḥāmid (on whom see *Shaḳā'iḳ*, tr. Medjdī, 74 f. = tr. Rescher, 29 f.) to join him at Kayseri (they are said to have met on *Ḳurbān bayramî*, whence he was given the name Bayrām); as his *mürîd* he accompanied him to Syria, thence on the Pilgrimage, and back to Akseray. After his master's death (in 805/1402, according to Mustaḳīmzāde, see A. Gölpınarlı, *Manâkıb-ı Hacı Bektâş* . . ., Istanbul 1958, 120) he returned to his native Ankara, where he gathered a numerous following: among his disciples are counted Aḳ Shams al-Dīn [*q.v.*] and Dede ʿUmar Sikkīnī (heads of the two branches into which, after his death, his order split), the poet Shaykhī [*q.v.*], the brothers Yazīdjī-oghlu Muḥammad and Aḥmad Bīdjān [*qq.v.*], and Ashraf-oghlu Rūmī, author of the *Muzakkī al-nufūs*, who became his son-in-law. In spite of the extremist tendencies of some of his followers, his own teachings did not exceed the bounds permitted by orthodoxy; he seems to have lived a humble life, supporting himself by manual labour, and practising and encouraging works of charity. His activities are said to have aroused the suspicions of Murād II, which were, however, allayed when he was brought before the Sultan at Edirne; a tradition that he had preached in the Eski Djāmiʿ there is reported by Ewliyā (ii, 437; iii, 430 f.). He was buried in a *türbe* beside the mosque, abutting on the Temple of Augustus, which he founded. Attributed to Ḥādjdjī Bayrām are five poems (fullest text given by Okhan, see Bibl.), much commented on by his followers, in the style of the *ilāhī*s of Yūnus Emre.

The current attribution of the mosque to Miʿmār Sinān (presumably based on Ewliyā, ii, 430) is unjustified (see F. Taeschner's brief description in *ZDMG*, lxxxii, 1928, 108); the only inscriptions (Ger. tr. by P. Wittek in M. Schede and H. St. Schultz, *Ankara und Augustus*, Berlin 1937, 45-6, and cf. 36-41) record a repair in 1126/1714 (the inscription published by Mübārek Ghālib, *Anḳara*, ii, 1928, p. 41, no. 82, has no connexion with the mosque). In the Ankara Etnografya Müzesi are preserved clothes allegedly worn by Ḥādjdjī Bayrām, and the wooden doors (photograph in *Yıllık Araştırmalar Dergisi* [Ank. Ün. Ilahiyat Fak.], i, 1956, 231) and shutters of the *türbe* (restored in 1947).

Bibliography: No critical study of the life of Ḥādjdjī Bayrām has been published. The available sources (many in MS) are listed by M. F. Köprülü, *Ilk mutaṣawwiflar*, Istanbul 1918, 377, n. 2; some of these have been used for the monographs of Bursalī Meḥmed Ṭāhir (*Ḥādjdjī Bayrām Welī*, Istanbul 1329, reprinted 1331), Meḥmed ʿAlī ʿAynī (same title, Istanbul 1343) and Mehmet Ali Okhan (*Hacı Bâyramı Velî*, Ankara 1950). See also Ṭāshköprüzāde, *Shaḳā'iḳ*, tr. Medjdī, 77 = tr. Rescher, 31; B. M. Ṭāhir, *ʿOM*, i, 56-7; Abdulbaki [Gölpınarlı], *Melâmîlik ve Melâmîler*, Istanbul 1931, 33-9; D. Krencker and M. Schede, *Der Tempel in Ankara*, Berlin and Leipzig 1936, 60-1 (P. Wittek); for the political and social context of Ḥādjdjī Bayrām's movement see P. Wittek, *De la défaite d'Ankara* . . ., in *REI*, xii (1938), 1-34.

ḤĀDJDJĪ BEG [see RIḌWĀN BEGOVIČ].

ḤĀDJDJĪ BEKTĀSH WALĪ [see BEKTĀSHIYYA].

ḤĀDJDJĪ GIRĀY (d. 871/1466), founder of

the Girāy dynasty of Khāns of the Crimea. On his coins he calls himself 'al-Sulṭān Ḥādjdjī Kerey b. Ghiyāth al-Dīn Khān' (see O. Retovski, *Die Münzen der Girei*, Moscow 1905, nos. 1-4); according to Abu 'l-Ghāzī Bahādur Khān (*Shadjara-i Turk*, ed. Riḍā Nūr, Istanbul 1925, 184) his father and grandfather were Ghiyāth al-Dīn and Tash-timur respectively (cf. M. Riḍā, *al-Sabʿ al-sayyār*, 69-71). The identification of him with Dewlet-berdi (V. D. Smirnov, *Krîmskoe khanstvo* . . ., St. Petersburg 1887, 221-34) seems incorrect. Dewlet-berdi (for a coin of his see Lane-Poole, *Cat.*, vi, no. 568) appears in one source (*ʿUmdat al-tawārīkh*, 95) as the brother of Ghiyāth al-Dīn; he was still ruling as khān at Solghat (Eski-Ḳîrîm) in Dhu 'l-Ḳaʿda 832/August 1429 (N. Iorga, *Notes et extraits* . . ., i, 25; see further Spuler, *Horde*, 157). According to Polish sources (Spuler, *loc. cit.*), Ḥādjdjī Girāy was born near Troki in Lithuania and was assisted in assuming the khānate by Vitovt (Witold, d. 1430); it is known that the Grand Dukes of Lithuania gave sanctuary to Toḳtamîsh and to Ḥādjdjī Girāy's ancestors, and protected them against the khāns dwelling at Sarāy and supported by the powerful *amīr* Edigü (M. Khrushevskiy, *Istoriya Ukrainoy-Rossii*, iv, Lwow 1907), and this same policy was to assist Ḥādjdjī Giıāy in occupying the Crimea and maintaining himself there. One of the main factors facilitating the rise of an independent khānate in the Crimea under Ḥādjdjī Girāy was, according to the native sources (*al-Sabʿ al-sayyār*, 69-71; *ʿUmdat al-tawārīkh*, 94-6), the movement westward, over the northern coasts of the Black Sea and into the Crimean peninsula, of the principal tribes—the Shirin, Ḳonghurat and Barîn—upon whose support the rulers of the Golden Horde relied. With their help, Dewlet-berdi and Ulugh-Muḥammed attempted to seize control of the whole territory of the Golden Horde; but Ḥādjdjī Girāy was to attempt to centralize his authority in the Crimea and its immediate neighbourhood, being greatly assisted by Tekine Mîrzā, the leader of the Shirin and the rival of Edigü's descendants. This much is definite, that in 836/1433 and 837/1434 Ḥādjdjī Girāy, as Khān, was fighting with the Genoese of Kefe [*q.v.*], seeking to secure for himself the important revenues brought in by Kefe and the other ports of the Crimea; like the khāns of the Golden Horde before him, he always regarded these ports as being under his suzerainty (see the *yarlîgh* of 26 Ṣafar 857 in A. N. Kurat, *Altınordu, Kırım ve Türkistan hanlarına ait yarlık ve bitikler*, Istanbul 1940, 66; cf. A. A. Vasiliev, *The Goths in the Crimea*, Cambridge, Mass. 1936, 220). When in the summer of 836/1433 his vassal Prince Alexis of Mangub took Cembalo (Balaklava), he himself opened hostilities against the Genoese of Kefe. To repel this threat, Carolo Lomellino was sent from Genoa with a force of 6000 men; he recovered Cembalo, but as he was advancing upon Ḥādjdjī Girāy's base of Solghat (Eski-Ḳîrîm) he was defeated in a surprise attack (Dhu 'l-Ḥidjdja 837/end of June 1434). Ḥādjdjī Girāy's forces invested Kefe, but, lacking ships and artillery, could do nothing against the defenders, who possessed fire-arms (for the contemporary report of this campaign by Andrea Gatari, see A. A. Vasiliev, *op. cit.*, 208; L. Colli, *Khadži Girey-Khan i ego politika*, Izv. Tavr. U Arkh. Komm. no. 50, Simferopol 1913, 113-21). Failing to take Kefe, Ḥādjdjī Girāy attempted to divert commerce to the harbours of Solghat, Kerč and Inkerman which he controlled, and to transport goods to Anatolia in Tatar ships.

It has been stated (Spuler, *op. cit.*, 163, 168) that the khān of Sarāy, Seyyid Aḥmed, seized the Crimea in about 837/1434 and that Ḥādjdjī Girāy was able to resume power only in Radjab 853/August 1449 with the help of Casimir IV; but coins of his are known, struck at Ḳîrîm (Solghat) in 845/1441 and at Ḳîrîm and Ḳîrḳ-yir in 847/1443 (Retovski, nos. 1-4; A. K. Markov, *Inventarnîy kat. musulmanskikh monet Imp. Ermitaža*, St. Petersburg 1896, 534, no. 5), and in the accounts registers of the Genoese of Kefe (spring 845/1442) there is mention of a victory of his (*Agicarei imperatoris tatarorum*) over Seyyid Aḥmed (N. Iorga, *Notes et extraits* . . ., i, 35, 36; Vasiliev, *op. cit.*, 231, n. 1). In 849/1445 Ḥadjdjī Girāy made an alliance with Casimir IV of Poland, close cooperation with Lithuania and Poland being always his policy. In 856/1452 he attacked from the rear and defeated Seyyid Aḥmed when the latter invaded Casimir's territories.

In Djumādā II 858/June 1454 he entered into an agreement with the Ottoman sultan Meḥemmed II, who had just taken Constantinople, in order to capture Kefe from the Genoese. When the Ottoman fleet approached Kefe, the Khān invested the town by land with 7000 men (18 Radjab 858/14 July 1454), but the town held out; Ḥādjdjī Girāy withdrew, agreeing to accept in future the annual tribute of 1200 gold pieces which the Genoese had earlier undertaken to pay. Later, it seems, the Genoese succeeded in turning the tribal leaders of the Crimea against Ḥādjdjī Girāy; they deposed him and made his son Ḥaydar khān in his place (860/1456). After a few months Ḥaydar was obliged to flee and Ḥādjdjī Girāy resumed power; from thenceforward he had good relations with the Genoese (Colli, *op. cit.*, 120-1; W. Heyd, *Hist. du commerce du Levant*, ii, 398).

Confronted by the efforts of Seyyid Aḥmed Khān to restore the former power and unity of the Golden Horde, Ḥādjdjī Girāy maintained the old alliance with Lithuania and Poland, who were faced by the same threat, and also acted in concert with the grand prince of Moscow (Spuler, 170-4). He thus played an important part in the fragmentation of the Golden Horde. When Sayyid Aḥmad marched on Moscow in Muḥarram 870/July-August 1465, Ḥādjdjī Girāy attacked him near the Don and obliged him to withdraw. The attempt of the Papacy to use him against the Ottomans (H. H. Howorth, *History of the Mongols*, ii, 451) shows that he was at this time one of the most powerful figures of Eastern Europe.

His *yarlîgh* of 26 Ṣafar 857/8 March 1453 gives important details about the extent of his territories: his capital (*Orda-i muʿaẓẓam, Sarāy*) was at that time Ḳîrḳ-yir (cf. Smirnov, *op. cit.*, 102 ff.); his suzerainty extended over Ḳîrḳ-yir, Ḳîrîm (Solghat), Kefe, Kerč, Taman, Ḳabada, and Ḳîpčaḳ. The tribal forces of the Crimea, the *Ḳîrîm tumanî* (6000-7000 men), were under the command of the *beg* of the Shirin, Iminek; the tribesfolk of the Dasht-i Ḳîpčaḳ were not to be relied on. Coins of his, struck at Ḳîrîm in 845, 847, 867 and 871, and at Ḳîrḳ-yir in 847, 858 and 867, are known (see Retovski, Markov, Lane-Poole, *op. cit.*). Pero Tafur's description, of 841/1437, of the *Ordu-bazar* near Solghat (*Travels and adventures*, ed. M. Letts, New York and London 1926, 136) shows that he maintained the traditions of nomadic life; but Ḳîrḳ-yir was a powerful fortress.

Ḥādjdjī Girāy died towards the end of the summer of 871/1466 (Heyd, ii, 398; *al-Sabʿ al-sayyār*, 73), and was buried in the tomb of his ancestors at Saladjîḳ near Baghčesarāy (Simferopol). He had eight sons: Dewlet-yār, Nūr-dewlet Khān, Ḥaydar Khān, Ḳutluḳ-zamān, Kildish, Mingli Girāy Khān [*q.v.*],

Yamghurdjī and Özdemir (Abu 'l-Ghāzī, *Shadjara*, 184).

(HALIL İNALCIK)

ḤĀDJDJĪ KHALĪFA [see KĀTIB ČELEBI].

ḤĀDJDJĪ NASĪM OGHLU [see AK ḤISĀRĪ].

ḤĀDJDJĪ PASHA, DJALĀL AL-DĪN KHIḌR B. ʿALĪ, eminent 8th/14th century Turkish physician and author of several important medical texts, including the famous *Shifāʾ al-askām wa dawāʾ al-ālām* (Brockelmann, II, 233; Ḥādjdjī Khalīfa, ii, 1049). He was born about the second quarter of the 8th/14th century in Konya (and not Aydîn, as stated by Ṭashköprü-zāde, *Shakāʾik al-nuʿmāniyya*, in marg. of Ibn Khallikān, Cairo 1310, 114; Turkish trans. by Medjdī, Istanbul 1269, 74), whence he went to Cairo to study under Mubārak Shāh al-Manṭiḳī and Akmal al-Dīn Bārbartī. As the result of an illness, he changed his studies from *fiḳh* to medicine, and his abilities were great enough to secure for him later the position of chief physician in the Manṣūriyya hospital. Early in the last quarter of the 8th/14th century he returned to Anatolia, where he entered the employ of the Aydîn-oghlu dynasty, serving both as physician and as *ḳāḍī*, and it was to ʿĪsā b. Muḥammad b. Aydîn that he dedicated his *Shifāʾ* (783/1381). His death occurred in the 20's of the 9th/15th century, and he is buried in Birgi.

His works, most of which are in Arabic, include philosophy, mysticism and Ḳurʾānic exegesis, but it is his medical writings which have assured his fame. However, even the scholars who would most insist on his importance in the history of Turkish medicine can claim little originality for his work, and it is probably his Turkish abridgments and simplifications of the *Shifāʾ*—known as the *Muntakhab* and the *Tashīl*—which most command interest today, being amongst the earliest specimens of Ottoman didactic prose. Both have been used and quoted extensively in Vol. ii of the historical dictionary (*Tanıklariyle Tarama Sözlüğü*) published by the Turkish Linguistic Society.

(J. WALSH)

ḤĀDJIB, term which may be translated approximately as chamberlain, used in Muslim countries for the person responsible for guarding the door of access to the ruler, so that only approved visitors may approach him. The term quickly became a title corresponding to a position in the court and to an office the exact nature of which varied considerably in different regions and in different periods. Basically the Master of Ceremonies, the *ḥādjib* often appears as being in fact a superintendent of the Palace, a chief of the guard or a righter of wrongs, sometimes even as a chief minister or a head of government. The word *ḥādjib* itself is derived from the verb *ḥadjaba* "to prevent", and should be considered in conjunction with the term *ḥidjāb* which, together with *sitr*, denotes the curtain used, in accordance with a custom widespread in the Orient before the time of Islam, to conceal the sovereign from the gaze of courtiers or visitors (for the arguments for and against this custom, see al-Djāḥiẓ, *Kitāb al-Ḥidjāb*, in *Rasāʾil*, ed. Sandūbī, Cairo 1352/1933, 155-86; al-Ibshīhī, *Mustaṭraf*, ch. xvii).

i.—THE CALIPHATE.

The *ḥādjib* makes his appearance at the very beginning of the Umayyad period. Certain chroniclers list carefully the names of the persons, nearly all freedmen or clients, who were chamberlains to the first caliphs, from the reign of Muʿāwiya onwards; various texts prove that even at that time palace ceremonial was already developed, so that the importance of the *ḥādjib* can readily be understood. The chamberlain not only introduced into the sovereign's presence friends and visitors; he also supervised the organization of the solemn audiences, at which those present formed themselves into two groups on either side of the hall, leaving the centre of the floor vacant for those who were admitted to address the caliph. At this period the *ḥādjib* figures in the caliph's entourage on a level with the secretaries (*kuttāb*), with no pretension to equal in dignity the representatives of the Arab aristocracy.

The situation changed considerably with the coming of the ʿAbbāsids, who bestowed a more exalted place upon their *mawālī* assistants. The two most important offices of the Court were now those of the *wazīr* and the *ḥādjib*, both granted to *mawālī*, sometimes of very humble origin. The rank of the *ḥādjib* was inferior to that of the *wazīr*, as appears from the account of how the "vizierate" was granted to the *ḥādjib* al-Rabīʿ b. Yūnus in the reign of al-Manṣūr. The chamberlain, appointed from among the Palace servants, was the head of the domestic staff of the palace as well as master of ceremonies; he might also occasionally be commanded to eliminate by violent means persons who had displeased the caliph.

During the first two centuries of the ʿAbbāsid period there was, it is clear, a constant rivalry between the *wazīr*, whose functions are not yet clearly defined but who already assists the ruler in the tasks of administration and government, and the *ḥādjib*, who sometimes managed to procure the removal of the *wazīr* in office and to occupy his place. The chamberlains, former Palace servants, are the rivals of the professional secretaries from whom, for the most part, the viziers were appointed. Thus under al-Manṣūr the chamberlain al-Rabīʿ b. Yūnus was granted the vizierate after the dismissal of Abū Ayyūb and later, under Hārūn, his son al-Faḍl was appointed vizier after the disgrace of the Barāmika [*q.v.*]. In the middle of the 3rd/9th century the rivalry persisted, but at this time the chamberlains were usually recruited from among the new Turkish *ghulāms* [*q.v.*] of the caliphs; such was the case of Ītākh, the *ḥādjib* of al-Mutawakkil, who found himself occupying the highest position when the caliph decided to dispense with a vizier.

At the end of this century the authority of the chamberlain had diminished somewhat compared with that of the *wazīr* who, with a staff of highly specialized *kuttāb*, had become in fact a head of government. He was rivalled also by the *amīr* who, at this period, was the commander in chief of the army. Yet his influence was not negligible, becoming apparent particularly when there were palace revolutions, for he had directly under his orders certain detachemnts of the guard, notably the *Maṣāffiyya*. Thus the attitude of the chamberlain Sawsan was the determining factor in the unsuccessful coup d'état against al-Muḳtadir in 296/908. During the reign of this caliph another chamberlain, Naṣr al-Ḳushūrī, who held office continuously from 296/908 until 317/929 whereas the viziers were constantly changing, came to play an important part in the choice of these ministers whom, moreover, it was his responsibility to arrest when they fell out of favour.

From 317/929 onwards, however, the year of another unsuccessful coup d'état against al-Muḳtadir, the *ḥādjib*'s post assumed more of a military aspect and the chamberlains became rivals of the *amīrs*, who by now had succeeded in gradually supplanting the viziers and in imposing their authority on the caliph. The new chamberlain, an officer and former governor named Yāḳūt, was for some time able to hold his own with the all-powerful Muʾnis and to have his own son appointed Prefect of the Police. But both father and son were dismissed soon afterwards at the demand of Muʾnis, who procured the appointment to the *ḥidjāba* of two devoted officers of his, the Banū Rāʾiḳ. Under the next caliph, al-Ḳāhir, the post of chamberlain was again granted to a soldier, Ibn Yalbaḳ, who, in the course of a short "reign", attempted to gain control of the person of the sovereign and even to impose his own Shīʿī convictions. Thereafter the *ḥidjāba* was associated with the supreme command: the new chamberlain of al-Rāḍī, Ibn Yāḳūt, who was at the same time *amīr*, took over the government and controlled the viziers. The chamberlains were on the point of becoming the real masters of the State, at this period when the authority of the caliph was becoming daily weaker; but they did not enjoy so great financial resources as the provincial governors, to whom they were obliged to yield place. It is for this reason that the caliph finally selected, as the person entrusted with the task of government, the *amīr* Ibn Rāʾiḳ, who received the title *amīr al-umarāʾ* in 324/936. As a compensation, the chamberlain's title was made more exalted: in 329/941 he became *ḥādjib al-ḥudjdjāb*, a more impressive title, although the number of *ḥudjdjāb* under him was decreased.

At this period, as appears from the statements of Hilāl al-Ṣābiʾ, the official duties of the chamberlain were still to supervise all the persons concerned with the service or the guard of the sovereign, to control all that went on within the palace, and to organize the audiences, determining precisely the positions of the various dignitaries and courtiers (*tartīb al-ḥawāshī*).

ii.—SPAIN.

In Muslim Spain the position of the *ḥādjib* was very different from what it was in the East. In the amīrate, and later the caliphate, of Cordova, the title of *ḥādjib* was always superior to that of *wazīr*, the latter belonging to mere counsellors of diverse origins, whom the ruler gathered around him and from among whom, almost invariably, he chose the *ḥādjib*. The *ḥādjib* assisted the prince in the tasks of administration and government and acted as chief minister, controlling the three services of the civil administration, namely the royal residence, the chancellery and the financial department. The *ḥidjāba* did indeed remain vacant for some thirty years in the reign of ʿAbd al-Raḥmān III, but it was filled again, on his death in 351/962, by his son al-Ḥakam II; a few years later it served as a spring-board for the ambitions of Ibn Abī ʿĀmir, the Arab-born secretary who in 367/978 procured for himself appointment to the *ḥidjāba* and managed to gather all power in his hands, becoming, in the reign of the young Hishām II, in effect "Mayor of the Palace"; in 371/981 he adopted a royal *laḳab*, al-Manṣūr bi 'llāh, caused his name to be mentioned in the *khuṭba* immediately after that of the caliph, and then in 386/996 had himself called *al-sayyid* and *al-malik al-karīm*. The prestige thus attached to the title of *ḥādjib* did not disappear, for with the break-up of the Umayyad empire in Spain the princelings of the *ṭawāʾif* adopted the title of *ḥādjib* in preference to that of *malik*, in order to indicate that they regarded themselves as representatives of the caliph.

(D. SOURDEL)

iii. — EASTERN DYNASTIES.

As is shown by such works as Narshakhī's *Taʾrīkh-i Bukhārā* and al-Khʷārizmī's *Mafātīḥ al-ʿulūm*, both the palace administration and the bureaucracy of the Sāmānids were modelled on those of the ʿAbbāsid Caliphs. The Sāmānid *Ḥādjib* thus grew out of the *Amīr*'s own household, although by the middle years of the 4th/10th century, and probably earlier than this, he was no longer purely a domestic official of the palace but primarily a high military commander. Since the core of the Sāmānid army was the Turkish slave guard [see GHULĀM, Persia], the Chief *Ḥādjib* (*al-Ḥādjib al-Kabīr*, *Ḥādjib al-Ḥudjdjāb*, *Ḥādjib-i Buzurg*) combined the twin functions of head of the palace establishment and Commander-in-Chief of the army. Thus, during the reign of ʿAbd al-Malik b. Nūḥ (343-50/954-61) this office was held by Alptigin [*q.v.*], Sebüktigin's master. As Alptigin's career shows, the power of the Sāmānid Chief *Ḥādjib* was such that he could aspire to supreme power in the state after that of the *Amīr*, and could even attempt to play the rôle of king-maker. Other Turkish *ghulām* officers held the rank of simple *ḥādjib* or general beneath the Chief *Ḥādjib*. These *ghulām* generals were sometimes appointed to provincial governorships; until his death in 387/997, Sebüktigin regarded himself as governor in Ghazna for the Sāmānids, and on his tomb he is described as *al-Ḥādjib al-Adjall* "Most exalted general" (cf. S. Flury, *Le décor épigraphique des monuments de Ghazna*, in *Syria*, vi (1925), 62-3). According to Niẓām al-Mulk's account of the training of *ghulāms* at the Sāmānid court (*Siyāsat-nāma*, ch. xxvii), the rank of *ḥādjib* was attained after a man had passed through the grades of *withāḳ-bāshī* "tent leader" and *khayl-bāshī* "detachment commander" (the whole of this account should, however, be treated with caution; cf. Bosworth in *Isl.*, xxxvi (1960), 45).

Miskawayh's use of the term *ḥādjib* shows that it was known as a military rank in the Būyid army, again with the meaning of "general". It does not seem to have implied the headship of a palace organization, for this last institution was not developed amongst the Būyids to the same extent as in the more centralized Sāmānid and Ghaznavid states. Miskawayh speaks of the army of ʿIzz al-Dawla Bakhtiyār (356-67/967-78) and implies an ascending hierarchy of *naḳīb*, *ḳāʾid* and *ḥādjib*: "They [*sc.* the army] .... urged him to treat them just as his father [*sc.* Muʿizz al-Dawla] had done in regard to appointments as *Ḥādjib*, *Ḳāʾid* and *Naḳīb*, and in regard to general promotion policy" (*Eclipse of the ʿAbbasid Caliphate*, ii, 236, cf. 262, tr. v, 251, cf. 279).

The office of *Ḥādjib* passed from the Sāmānids to

the Ghaznavids, their successors in Khurāsān, and Bayhaḳī's *Ta'rīkh-i Mas'ūdī* shows the wide extent of its usage in Ghaznavid military life. As with the Sāmānids, the Commander-in-Chief of the army under the Sultan held the title of *Ḥādjib-i Buzurg*, and there were *ḥādjibs*, generals, directly beneath him. These top commanders had the special designation of a black cloak, a distinctive type of belt and a two-pointed cap (*kulāh-i dū-shākh*). The majority of them were Turks. It seems that the Ghaznavid *Ḥādjib-i Buzurg*, compared with the Sāmānid one, was one step further away from possessing direct control over the palace organization, for the day-to-day running of this was in the hands of a *Wakīl-i khāṣṣ* and the palace guard was responsible to a special general officer, the *Sālār-i Ghulāmān-i Sarāy* (see Bosworth, *The Ghaznavids: their empire in Afghanistan and eastern Iran 994-1040*, 68, 101, 138). He was nevertheless a most powerful and influential figure. In the succession dispute of 421/1030 after Maḥmūd's death, the *Ḥādjib-i Buzurg* was 'Alī Ḳarīb or 'Ali Khwīshāwand, a kinsman of the dead Sultan, and it was the transfer of his support from Muḥammad to Mas'ūd that gave the latter a bloodless victory over his brother (Gardīzī, ed. Nāẓim, 92-3; Bayhaḳī, ed. Ghanī and Fayyāḍ, 1, 12 ff., 50 ff.). When the Sultan did not act personally as war-leader, the *Ḥādjib-i Buzurg* had supreme responsibility in the field; thus until just before the final disaster at Dandānḳān in 431/1040, Mas'ūd left the fighting in Khurāsān against the incoming Saldjūḳs to his Commander-in-Chief, Sübashī Tigin.

Bibliography: Barthold, *Turkestan*, 227; Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, 142; Spuler, *Iran*, 337-9; Bosworth, *Ghaznevid military organisation*, in *Isl.*, xxxvi (1960), 37-77; M. F. Köprülü, in *IA*, s.v. Hâcib, with much useful detail on the Sāmānid and Ghaznavid periods. (C. E. BOSWORTH)

In the Saldjūḳ period, there appears to have been a general tendency for the importance of the office of *amīr ḥādjib* to decline, relative to Ghaznawid times. He was no longer specifically the commander of the army but rather a court official. The various army commanders tended to be referred to by the title *isfahsālār* or *sipahsālār*. The *amīr ḥādjib*, however, like all the *amīrs* naturally took part in military expeditions and in some cases commanded a section of the army of one of the Saldjūḳ sultans or *maliks*. Thus, for example, 'Alī b. 'Umar, the *amīr ḥādjib* of Maḥmūd b. Muḥammad, led the advance guard against Sandjar (Ibn al-Athīr, x, 386); he eventually became paymaster of the army (*ibid.*, x, 391).

Rāwandī, quoting the alleged practice of the Sāsānian Ardashīr b. Bābak, states (p. 97) that a king needed a *wazīr* for the maintenance of the stability of his kingdom, a *ḥādjib* who would administer punishment (*siyāsat afzāyad*), a courtier (*nadīm*) and a secretary (*dabīr*). Niẓām al-Mulk describes the functions of the *ḥādjib* as those of a court official. But since the court was a military court, the *amīr ḥādjib* was, in practice, normally a Turkish *amīr* and the men under him were usually *ghulāms* (military slaves, see GHULĀM; cf. *Siyāsat-nāma*, 94-5, and the description of Sāmānid practice cited above). He was concerned with military discipline as well as court ceremonial; he was the most important official at the court, ranking above the *amīr ḥaras* (chief of the guard and chief executioner, *ibid.*, 121). Under Muḥammad b. Malikshāh the *amīr ḥādjib* acted as intermediary between the sultan and the *wazīr*; he received the orders of the sultan and passed them on to the *wazīr* (Bundārī, 117). Niẓām al-Mulk also mentions an official whom he calls the *ḥādjib-i dargāh*, who was in charge of ceremony and procedure at the royal court (*ibid.*, 111). It is not clear whether his office was different from that of the *amīr ḥādjib*; but it is probable that the two were the same.

Rāwandī mentions at the beginning of each reign the *wazīrs* and *ḥudjdjāb* of the sultan. Some of these were comparatively unknown persons; others, however, like the *amīr* Ḳomač, *ḥādjib* to Malikshāh and Barkyāruḳ (pp. 125, 139), Khāṣṣ Beg, the *ḥādjib* of Mas'ūd b. Muḥammad (p. 225) and Malikshāh b. Maḥmūd (p. 249), 'Abd al-Raḥmān b. Ṭoghan-yürek(?), also *ḥādjib* to Mas'ūd (p. 225), the *atābeg* Ayyāz, *ḥādjib* to Muḥammad b. Maḥmūd (p. 259) and Arslān b. Ṭoghrīl (p. 282), the *atābeg* Pahlavān, *ḥādjib* to Arslān b. Ṭoghrīl (p. 282), and the *atābeg* Āy Āba, *ḥādjib* to Ṭoghrīl b. Arslān (p. 331) were among the powerful *amīrs* of the day. There does not appear to have been any hereditary tendency in the office, and Rāwandī records only one case of a father and son both holding the office of *ḥādjib*, namely 'Alī Bār, who was *ḥādjib* to Muḥammad b. Malikshāh, and his son Muḥammad, who was *ḥādjib* to Maḥmūd b. Muḥammad (pp. 153, 203). In addition to the *amīr ḥādjib*, there were a number of lesser chamberlains (*ḥudjdjāb*) at the court (cf. H. Horst, *Die Staatsverwaltung der Gross-Selğuqen und Ḫorazmšahs (1038-1231)*, Wiesbaden 1964, 103, 105).

The great *amīrs* and provincial governors had their own courts and they, too, had their own *ḥādjibs*. Ibn al-Athīr mentions Ṣalāḥ al-Dīn Muḥammad al-Yaghsiyānī(?), who was *amīr ḥādjib* to al-Bursuḳī and subsequently to 'Imād al-Dīn Zangī (x, 453, 454).

Many prominent men also had their *ḥādjibs* or chamberlains, who were not necessarily members of the military class; this was also the case in Tīmūrid times (cf. H. F. Roemer, *Staatsschreiben der Timuridenzeit*, Wiesbaden 1952, 42, 55).

Under the Ilkhāns the *ḥādjib* was a chamberlain, and so far as the royal court or the provincial courts were concerned tended to be a member of the military classes. Under the Tīmūrids the *ḥudjdjāb* are mentioned among the officials of the court and ranked below the *nuwwāb-i ḥaḍrat* (cf. Tādj al-Salmānī, *Šams al-ḥusn*, ed. Roemer, Wiesbaden 1956, 29). There was a change of terminology under the Ṣafawids, the chief *ḥādjib* becoming known as the *ishik-āḳāsī bāshī* [*q.v.*], whose functions were similar to those of the *ḥādjib-i dargāh* mentioned by Niẓām al-Mulk. (A. K. S. LAMBTON)

iv. — EGYPT AND SYRIA.

The chief chamberlain of the Fāṭimid court was an exalted functionary known as the *Ṣāḥib al-bāb* [*q.v.*]; his subordinates, however, were called *ḥādjibs*, and he himself is occasionally referred to as the *ḥādjib al-ḥudjdjāb*, in place of his more usual title. In describing the officers required for the Fāṭimid chancery, Ibn al-Ṣayrafī (*Ḳānūn dīwān al-rasā'il*, Cairo 1905, 115; cf. Ḳalḳashandī, *Ṣubḥ*, i, 136-7) speaks of a *ḥādjib al-dīwān*, whose duty was to keep out unauthorized visitors and thus safeguard the secrets of the state. The Seldjūḳid rulers of Syria introduced the military *ḥādjib* familiar in the East; Zangid and Ayyūbid institutions, in this as in other respects, show strong signs of Seldjūḳ influence. The *ḥādjib* is now a military officer, with military functions—as for example to command a citadel (Abū

Shāma, *Rawḍatayn*, ii, 69), to act as *Shiḥna* (Ibn al-Ḳalānisī, 208, 224, 234) or, sometimes, as envoy (Ibn al-Ḳalānisī, 293), or to "encourage" the troops (Ibn al-Ḳalānisī, 132; Maḳrīzī, *Sulūk*, i, 133). The term *ḥādjib* was still, however, used in Egypt in the 7th/13th century in the sense of chamberlain (as for example in a verse of Ibn al-Nabīh, d. 686/1287, who links it with the Persian term *pardadār* [*q.v.*]; cited in *Eos*, ed. A. T. Hatto, The Hague 1965, 271).

In the Mamlūk Sultanate, the *ḥādjib* still retains some of the functions of a chamberlain. The chief *ḥādjib*—*ḥādjib al-ḥudjdjāb*—presents envoys, guests, petitioners and other callers at the Sultan's court; he is also responsible for the organization of military parades. The primary functions of the *ḥādjib*s under the Mamlūks, however, were not ceremonial but judicial—the administration of justice among members of the Mamlūk military class, in accordance with the laws of the Mongol *Yasa* [*q.v.*]. According to some Egyptian sources, this separate jurisdiction was set up in the time of Baybars, when the Mamlūks and Mongols became an important element in the Syro-Egyptian state and, though islamized, insisted on following Mongol custom in personal matters. "They therefore set up the *ḥādjib*", says Maḳrīzī, "to adjudicate disputes between them, to restrain the strong among them and give justice to the weak, in accordance with the rules of the *yasa*. They also assigned to him ... disputes concerning *iḳṭāʿ*s [*q.v.*] ..." (*Khiṭaṭ*, ii, 221; cf. Ibn Taghrībirdī, Cairo, vii, 183 ff.). The *ḥādjib*'s courts thus maintained a form of feudal privilege, whereby the Mamlūks had immunity from the courts and laws to which the natives were subject—that is, the *ḳāḍī*'s courts administering the *Sharīʿa*, and were answerable only to special military courts, with Mamlūk not native judges, administering the *yasa*—the laws of the most powerful and most respected of the steppe peoples, among which most of the Mamlūks were recruited. These special courts dealt with matters concerning members of the Mamlūk class, including lawsuits about their fiefs.

In time, the scope and scale of the chief *ḥādjib*'s judicial actions were considerably increased. At first, he was subordinate to the Sultan's viceroy in Egypt, the *Nāʾib al-salṭana* [*q.v.*], but gained greatly in power when this office was left vacant or, later, allowed to lapse. Maḳrīzī dates the usurpation of Islamic judicial authority by the *ḥadjib*s from the mid 8th/14th century. Sultan Shaʿbān (746-7/1345-6) transferred the judicial power previously exercised by the *nāʾib al-salṭana* to the chief *ḥādjib*, who thus became head of an independent court dispensing administrative (*siyāsī*) justice. During the reign of Ḥādjdjī the *nāʾib*'s authority was restored, and the chief *ḥādjib* reverted to his previous status. This set-back was, however, only temporary. In 753/1352 a group of merchants from the Mongol lands appealed to the Sultan for justice against their Egyptian debtors, after failing to obtain satisfaction through the *Ḳāḍī*'s court. The Sultan referred the case for decision to the chief *ḥādjib* Djurdjī, who dealt with the matter by torturing the debtors until they paid their debts. The sultan was displeased with the *Ḳāḍī*, and forbade him to try cases between foreign and Cairene merchants. From this time on, says Maḳrīzī, the *ḥādjib*s acquired arbitrary authority over the people (*Khiṭaṭ*, ii, 221-2; cf. *Sulūk*, ii, 863). After the troubles of 806/1403-4, he says, the *ḥadjib*s became more numerous and more oppressive (*Khiṭaṭ*, ii, 221). In the time of al-Muʾayyad Shaykh (815-24/1412-21) even the office of *muḥtasib* was given, for the first time, to the *Amīr ḥādjib* instead of to one of the *ʿulamāʾ* as previously (Ḳalḳashandī, *Ṣubḥ*, xi, 210). The Muslim sources complain of the encroachments of the *ḥādjib*s, who deal with cases involving native civilians, and even presume to give rulings according to Muslim law. Many litigants preferred the more expeditious and better enforced decisions of the *ḥādjib* to those of the *ḳāḍi*, while the *ḥādjib* for his part had a financial interest in dealing with more cases. Maḳrīzī speaks of Mamlūk *amīr*s who held no fief but lived entirely on fees and fines which they collected as judges. "Today the *ḥādjib* has come to be the judge of the mighty and the humble alike, whether the case be one of *sharʿī* or of what they call administrative (*siyāsī*) justice" (*Khiṭaṭ*, ii, 219-20).

At first there were three senior officers at the centre: the *ḥādjib al-ḥudjdjāb*, the *ḥādjib*, and the *ḥādjib thānī*; Barḳūḳ increased the number to five. The position of the chief *ḥādjib* in the table of precedence varies, at different times and in different sources, from the 3rd to the 12th place after the Sultan. The chief *ḥādjib* (*amīr ḥādjib*) of a provincial city ranked third, and sometimes second, after the governor, whom he could replace in an emergency. Subordinate *ḥadjib*s served under him, in varying numbers. In Damascus, Aleppo and sometimes Tripoli the chief *ḥādjib* was an *amīr* of the first class, in Ṣafad, Ḥamāt and Ghazza of the second class. In Barḳūḳ's time there were six lesser *ḥādjib*s in Damascus, three in Aleppo, two or one in other towns.

Ḳāʾit Bay introduced a new functionary, with the Persian title *pardadār*, to discharge the duties of court chamberlain. This office, held by an *amīr* of the second class, continued to the end of the Mamlūk Sultanate.

V.—North Africa.

In North Africa, the office of *ḥādjib*, which had existed under the Fāṭimids, disappeared shortly afterwards—certainly under the Zīrids—to be of importance again under the Ḥafṣids. The institution of the *ḥidjāba* seems to have been introduced from Spain into Ifrīḳiya, where at first, in the reign of Abū Isḥāḳ (678-82/1279-83), the *ḥādjib* was merely a kind of superintendent of the palace, acting at the same time as the intermediary "between the sovereign and persons of all classes"; after the reign of Abū

Ḥafṣ (683-94/1284-95), the *ḥidjāba* proper was separated from the control of the palace accounts, and the *ḥādjib* acquired increasing importance, to the degree that Abū Bakr (718-47/1318-46) used his *ḥādjib* as his chief minister, introducing in Tunis the practice of the *amīrs* of Constantine and Bougie to make the local *ḥādjib* their right-hand man; the most influential "chamberlain" was Ibn Tafrāgīn, who, in the second half of the reign of Abū Bakr, made the *ḥidjāba*, already an influential office, a post of great responsibility, "by the extent of its powers almost a dictatorship, and soon, under a young sultan, the means to hold him in tutelage and to make all the machinery of the state work as he wished"; for more than twenty years it was he who controlled the whole administration of the realm and directed its policy as he pleased. After the Ḥafṣid restoration in the last third of the 8th/14th century, the title of *ḥādjib* was maintained but the powers attached to the office were suppressed, the chamberlain becoming once more a kind of *chef du protocole*. See H. R. Idris, *Zīrides*, index; R. Brunschvig, *Ḥafṣides*, ii, 54 ff. and index; Ibn Khaldūn, *Muḳaddima*, Cairo ed., ii, 210, tr de Slane, ii, 15, tr. Rosenthal, ii, 18.

Further west, the *ḥādjib* of the Marīnids was at Fās an intimate of the ruler, while at Tlemcen, under the ʿAbd al-Wādids [*q.v.*] he became the major-domo of the palace and minister of finance, but disappeared almost completely after the Marīnid interregnum.

ḤĀDJIB B. **ZURĀRA** B. ʿUDUS B. ZAYD B. ʿABD ALLĀH B. DĀRIM B. MĀLIK B. ḤANẒALA B. MĀLIK B. ZAYD MANĀT B. TAMĪM, an eminent *sayyid* of the Dārim of Tamīm in the period of the Djāhiliyya. His name was, according to Abu 'l-Yaḳẓān, Zayd, and his *kunya* Abū ʿIkrisha.

Ḥādjib, a member of one of the noblest families of Bedouin society, was known for his mildness. A particular incident in connexion with Ḳurād b. Ḥanīfa later caused Ḥādjib to kill Ḳurād, which led to clashes between some families of Dārim.

The first battle attended by Ḥādjib was the battle of Djabala [*q.v.*]. He was captured and freed himself by paying the exceedingly high ransom of 1100 camels. He headed the troops of Tamīm in the encounters of al-Nisār and al-Djifār and was defeated.

Ḥādjib continued the tradition of friendly relations between al-Ḥīra and the Dārim and attempted to gain for the Dārim the privilege of the *ridāfa*, which had been entrusted by the rulers of al-Ḥīra to another branch of Tamīm, the Yarbūʿ. The Yarbūʿ refused to cede the *ridāfa* to the Dārim, marched out against the forces of al-Ḥīra sent against them, and defeated them at Ṭikhfa.

Ḥādjib attained fame through a visit to the court of Persia. He asked the Persian ruler to permit his people to pasture their herds in the Persian territory, since they were suffering from a heavy drought caused by the curse of the Prophet on Muḍar. Ḥādjib left his bow as pledge, promising that his people would not harass the subjects of the Persian ruler. When the Prophet lifted his curse, Ḥādjib was already dead. His son ʿUṭārid went to the Persian king, who returned to him the bow and granted him a precious suit of clothes, which ʿUṭārid presented to the Prophet while visiting him with the delegation of Tamīm in 9/630. The Prophet, however, refused to accept the gift.

This widely current story is contradicted by a report recorded in a commentary of Abū Tammām's *Dīwān*. According to this report Ḥādjib gave his bow as pledge when he was entrusted by the Persian ruler to escort a caravan to ʿUkāẓ. After he had successfully carried out his mission he was "crowned" by the ruler of Persia.

Some traditions claim that Ḥādjib embraced the religion of the Magians. Whether Ḥādjib met the Prophet is rather doubtful, since traditions claiming this seem not to be trustworthy. He died in the twenties of the 7th century.

ḤADJIEWAD [see KARAGÖZ].

BANŪ **HĀDJIR,** Bedouin tribe of Eastern Arabia. Its members (sing. Hādjirī) trace their ancestry to Ḳaḥṭān through Hādjir and Manṣūr, eponym of al-Manāṣīr tribe. The two groups, known together as ʿIyāl Manṣūr, have frequently been allies. Banū Hādjir, according to their traditions, migrated to Eastern Arabia from the Tathlīth area in south-western Arabia. They claim kinship with the Djanb and Āl Shurayf tribes of Eastern ʿAsīr. Their move to the east, said to have been made for economic advantage, probably occurred two or three hundred years ago. Sections of the tribe now range the Ḳaṭar Peninsula and, in Saudi Arabia, the districts north and northeast of al-Ḥasā Oasis known as al-Djawf and al-Bayḍāʾ.

The camel-raising al-Mukhaḍḍaba (also known as al-Makhāḍīb, sing. Makhḍūbī), one of the two main tribal divisions, had the Ḳaṭar Peninsula as its *dīra* until about 1900. The other main division, Āl Muḥammad, whose economy was based on sheep

herding, occupied central al-Ḥasā Province (now Eastern Province). Always loyal to Ibn Saʿūd in his wars against al-ʿUdjmān, Muṭayr, and other tribes, Banū Hādjir were awarded the pasture area of al-Djawf. During the period of *Ikhwān* settlement, Banū Hādjir established colonies in al-Djawf at Yakrub, Shuhaylāʾ, Ṣalāṣil, Fūda, and ʿAyn Dār. With the decline of the *Ikhwān* colonies after 1930, these villages were abandoned. The Saudi Arabian Government was in 1382/1963 encouraging resettlement of these sites; and a few Banū Hādjir groups, particularly Āl Ḥamra, were cultivating small plots.

Ḥamūd b. Shāfī b. Sālim Ibn Shāfī of al-Shabāʿīn (of al-Mazāhima section of al-Mukhaḍḍaba) is paramount *shaykh* of Banū Hādjir. He succeeded his father, who died in al-Kuwayt during the winter of 1375/1955-56. The shaykhly household has summered at al-Rayyān, nine km west of al-Dawḥa, in Ḳaṭar, since 1378/1959.

(G. Rentz and J. Mandaville)

ḤADJR (A.), literally prevention, inhibition, is the technical term for the interdiction, the restriction of the capacity to dispose. The term expresses both the act of imposing this restriction and the resulting status; a person who is in this status is called *maḥdjūr* (abbreviated from *maḥdjūr ʿalayh*). Subject to *ḥadjr* are (a) the minor, (b) the insane, (c) the irresponsible, and in particular the spendthrift, (d) the bankrupt, (e) a person during his mortal illness, and (f) the slave. Whether *ḥadjr* comes into being automatically or needs to be imposed by the *ḳāḍī*, is a subject of controversy between the several schools in the cases (b), (c), and (d), and so are numerous questions of detail. Abū Ḥanīfa, for instance, denied that the irresponsible person who was of age was subject to *ḥadjr*; Abū Yūsuf and Shaybānī held that he was, and, in addition to the spendthrift, they regarded as liable to *ḥadjr* a debtor who refused to sell his property in order to pay his debt, a debtor of whom it was feared that he would spirit away his property by fictitious transactions (these two rulings obviously link up with the *ḥadjr* of the bankrupt), and a person who by the use of his own property caused prejudice to his neigbours. The extent of the *ḥadjr* or, conversely, the kind of transactions which the *maḥdjūr* is entitled to conclude on his own, varies according to the type of case; the *ḥadjr* covers all transactions of the insane, so much so that he cannot even validly adopt Islam if he is a non-Muslim, and of the minor; the others are, generally speaking, entitled to make certain dispositions of a personal nature, such as repudiation (supposing they are married), although these may create pecuniary obligations; the bankrupt is, in principle, prevented only from diminishing his assets, and a person during his mortal illness only from concluding unilaterally disadvantageous transactions if, taken together with any legacies he may have made, they amount to more than one third of the estate. The *ḥadjr* imposed on recalcitrant debtors and on persons who cause prejudice to their neighbours applies only to the transactions and dispositions which are directly relevant. Some texts list many more classes of persons under *ḥadjr*, and sometimes even the dead are included. The curator of the *maḥdjūr* (his guardian in the case of a minor) is called *walī*, and his power to represent his ward, *wilāya* [*q.v.*]. It is, as a rule, either the father or the grandfather, or the *ḳāḍī* or his representative, and the master in the case of a slave. He may confer on the minor the capacity to dispose, but not with regard to purely disadvantageous transactions, and in particular, the master may confer the capacity to dispose upon his slave, whether for a single transaction, such as getting married, or in general, for trade; a slave who has received this last permission is called *maʾdhūn*. This permission, too, does not include unilaterally disadvantageous transactions. The revocation of this permission is also called *ḥadjr*.

This concept of *ḥadjr* has formed the subject of a number of legislative measures in Algeria and in British India.

AL-**ḤAḌR**, Arabic name of the ancient Hatra (Atra, Ἄτραι), situated in the desert to the west of the Tharthār, three short days' march to the south-west of al-Mawṣil. The Arab geographers, who no longer knew the exact site of this former caravan and commercial centre, provide certain legendary details regarding its ancient greatness. According to Yāḳūt (ii, 282), it was built entirely of hewn stone and possessed 60 large towers, each of which was separated from the next by nine smaller towers and linked to a palace and baths. Ibn Ḥawḳal and al-Muḳaddasī do not mention it, however, and the historians' principal reason for naming it is to relate the circumstances of its destruction by the Sāsānid Shāpūr I (Sābūr al-Djunūd), who reigned from 241 to 272 A.D.; the authors are not always entirely certain with regard to the identity of the Sāsānid king, some of them placing the event in the reign of Ardashīr, while others, Firdawsī in particular, put the date in the reign of Shāpūr II, who remained on the throne from 309-10 until 379; it is established that, in 363, the town was already in ruins, and it is probable that the little Arab kingdom of Hatra, a vassal of Rome, fell to the assault of Shāpūr I, after having successfully resisted the attacks of Ardashīr I.

The account of the Sāsānid victory is accompanied by a legend that is very widely disseminated among the Arab authors of the first centuries of Islam and derived from two sources: the first is the *Khudāynāma* translated by Ibn al-Muḳaffaʿ [*q.v.*] under the title *Kitāb Siyar mulūk al-ʿAdjam*; the second is an Arab tradition transmitted by Ibn al-Kalbī and founded mainly on the verses of ʿAdī b. Zayd [*q.v.*], Abū Duʾād al-Iyādī [*q.v.*] and others of greater or lesser authenticity (see F. Gabrieli, *L'opera di Ibn al-Muqaffaʿ*, in *RSO*, xiii/3 (1932), 209; G. E. von Grunebaum, *Abū Duʾād al-Iyādī*: *Collection*

of fragments, in *WZKM*, li/4 (1950), 277 and references cited, with the addition of al-Djāḥiẓ, *Ḥayawān*, vi, 149). The versions that we possess contain considerable divergencies, but they are all arranged according to a single plan, which is presented in the following way: an ancestor of al-Nuʿmān b. al-Mundhir [*q.v.*], named al-Ḍayzan (see *LA* for the meanings of this word in Arabic) b. Muʿāwiya (usually, b. Djabhala, from his mother's name), who was himself descended from Tanūkh b. Mālik [*q.v.*], reigned over al-Ḥaḍr with the title of Sāṭirūn (= Sanatrukes, according to Nöldeke; this title, signifying "king" in Assyrian, is sometimes regarded as the name of the founder of the town, al-Sāṭirūn b. Usayṭirūn in al-Masʿūdī); as he had plundered the territory of the Sāsānid king, the latter came and laid siege to Hatra; after two (or four) years he had still failed to capture it, and it was then that al-Ḍayzan's daughter, al-Naḍīra, saw Shāpūr, became enamoured of him, and offered to deliver the town to him if he would consent to marry her and give her first place. The circumstances of the capture of Hatra are related in various ways: al-Naḍīra made her father and the garrison intoxicated and gave the key of the town to Shāpūr, or else she showed him the way to enter the citadel by following the course of the Tharthār, or else she showed him how to render ineffective the talisman that protected the town. Shāpūr, now master of the place, massacred al-Ḍayzan and his troops, took away al-Naḍīra and married her. During the wedding night she was unable to sleep, and for hours turned restlessly on her couch, soft though it was; in the morning, Shāpūr discovered in a fold of her belly the cause of her sleeplessness, a myrtle-leaf which had lodged there (acording to another version, the leaf was found under the cushions). On discovering to what extent she had been pampered by her father, Shāpūr, indignant at such ingratitude and fearing a similar act of treachery towards himself, brought about al-Naḍīra's death by tying her by the hair to a horse's tail.

The theme of this legend is repeated in a fairy story by Hans Andersen (see A. Christensen, *La princesse sur la feuille de myrte et la princesse sur le pois*, in *AO*, xiv, 241-57).

(CH. PELLAT)

ḤAḌRA, "presence", is used broadly by mystics as a synonym of *ḥuḍūr*, "being in the presence [of Allāh]". Its correlative is *ghayba* ([*q.v.*], with references there given), "absence" from all except Allāh. On the controversy as to whether in expressing this relation to Allāh *ḥaḍra* or *ghayba* is to be preferred—that is, which is the more perfect, final element—see especially R. A. Nicholson's trans. of the *Kashf al-maḥdjūb*, *GMS* xvii, 1911, 248 ff. The term was later extended by Ibn ʿArabī, in working out his monistic scheme, to the "Five Divine *Ḥaḍarāt*", stages or orders of Being in the Neoplatonic chain [see ʿĀLAM and ʿABD AL-RAZZĀḲ AL-ḲĀSHĀNĪ]. There is a short statement of these in the *Taʿrīfāt* of Djurdjānī (Cairo 1321, 6), which has been translated by M. Horten in his *Die philosophischen Systeme des spekulativen Theologen im Islam*, Bonn 1912, 294 f., where, and at p. 151, he gives also some minor uses of the term. See also L. Massignon's edition of the *Kitāb al-Ṭawāsīn*, Paris 1913, 183, with a reference to Ibn ʿArabī's *Fuṣūṣ al-ḥikam*, and Hughes, *Dict. of Islam*, 169. In consequence, the Plotinian scheme of dynamic emanation was called in Islam *madhhab al-ḥaḍarāt* (Ibn Khaldūn, *Muḳaddima*, iii, 69; tr. de Slane, iii, 100; tr. Rosenthal, iii,89). Dervishes call their regular Friday service *ḥaḍra* [see DHIKR]. For the use of *ḥaḍra* (*ḥaḍrat*, T. *ḥaḍret*) as a title of respect, see Ḥasan al-Bāshā, *al-Alḳāb al-islāmiyya*, Cairo 1957, 260-4, and LAḲAB. (D. B. MACDONALD)

ḤAḌRAMAWT. The name Ḥaḍramawt is applicable in its strictest sense to the deep valley running parallel to the southern coast of Arabia from roughly 48° E. to 50° E., between precipitous walls rising to a high plateau (the Djol), which on the south separates it from the narrow coastal plain and on the north from an arid tract merging into the sand desert of the Empty Quarter of Arabia. The eastern end of this valley, where it turns south-eastward into the sea, has the special name of Wādī Masīla, and is not properly speaking part of the Wādī Ḥaḍramawt. In a more extended sense, however, the name Ḥaḍramawt has always been applied to a much larger area, comprising the districts to the north and south of the Wādī Ḥaḍramawt proper, together with an area on the west which includes not only the highlands providing the head-waters of the Wādī Ḥaḍramawt but also a number of wādī-systems draining off those highlands north-westward into the Ramlat Sabʾatayn (an outlier of sand desert isolated from the main part of the Empty Quarter) and southwards into the sea. The western limit of Ḥaḍramī territory can be said to lie approximately at longitude 47° E. [see map to AL-ʿARAB, DJAZĪRAT].

The Hebrew form of the name, Ḥaẓarmaweth, is partly modelled on the classical Arabic form, but no doubt partly influenced by a folk-etymology assuming a connexion with the idea of "presence of death" (which may also have operated to some extent on the classical Arabic form). The native Ḥaḍramī inscriptions use the spelling *ḥḍrmt*, which contrasts with the Sabaean spelling *ḥḍrmwt*; and this is in all likelihood based on the root *ḍrm* (cf. Arabic *ḍirām* "burning heat"), enlarged by a feminine termination *-ot* and a prefix comparable (as C. D. Matthews has suggested) with the definite article encountered in the present-day dialects of south-east Arabia, which fluctuates between *ʾa-*, *ha-* and *ḥa-*.

I.—PRE-ISLAMIC PERIOD

Evidence for the early history of this area is extremely scanty. One possible reason for this may be that some of the main urban centres have not undergone those population shifts which have, further west, left centres like Mārib, Ṣirwāḥ, Tumnaʿ,

etc. as deserted ruins capable of furnishing a rich archaeological and epigraphic booty. The two main centres of the Wādī Ḥaḍramawt, Shibām and Tarīm, are millennium-old foundations still in full occupation; and such archaeological evidence as may have been there has either been destroyed by subsequent occupation or is irretrievably buried under the present towns. The same may well apply to other sites in the Wādī. The only site in the whole area which has been scientifically excavated is Madhāb, an ancient village settlement on the opposite side of the Wādī ʿAmd from the modern Ḥurayḍa, excavated by Caton-Thompson in 1937-8. Some superficial investigations have been made at Shabwa, the ancient metropolis of Ḥaḍramawt. Other important sites which have been recorded are an impressive wall at Mayfaʿat (about 15 km. north of the present-day administrative centre of Mayfaʿa in the Wāḥidī sultanate); the traceable ground-plan of a large settlement at the ancient haven of Cane (just west of modern Bīr ʿAlī), with the adjoining fortress rock of *Mwyt* (modern Ḥusn al-Ghurāb); a strongly fortified wall at Libna, obstructing a valley roughly 30 km. north of present Bīr ʿAlī; and a walled town at Barīra in the Wādī Djirdān to the south of Shabwa. All these have yielded a handful of historically valuable inscriptions, but have never been properly excavated. Apart from some scattered sites which have produced a few, mostly fragmentary, inscriptions, this is the sum total of our primary sources for ancient Ḥaḍramawt. Mention should also be made, however, of a temple site described by W. F. Albright at Khor Rori on the Ẓafār coast about 50 km. east of Salāla, which appears to have been an ancient Ḥaḍrami settlement.

Our secondary sources are the data about the Chatramotitai in Greek and Latin authors (usefully extracted and summarized by C. Conti-Rossini in his *Chrestomathia arabica meridionalis epigraphica*, Rome 1931); and mentions of Ḥaḍramawt in texts from further west, principally Sabaean.

The chronology of ancient Ḥaḍramawt is an even more difficult problem than that of the areas further west. Both primary and secondary sources have furnished us with a fairly ample total of names of kings of Ḥaḍramawt, but the task of sorting these out into even a relative chronology has not yet been satisfactorily achieved. The most that can be said at present is that the earliest Ḥaḍramī texts appear to be slightly later in date than the earliest large bulk of Sabaean texts, and that the independent kingdom of Ḥaḍramawt came to an end around the close of the third century A.D. Thereafter, the "kings of Saba' and Dhū-Raydān" use a formal titulature claiming Ḥaḍramawt as part of their dominions. The first ruler to do this was *šmr yhrʿš*, who figures in the Islamic sources as Shamir Yurʿish (Ṭabarī, i, 910). But even at an earlier period the population of the area appears to have included pockets of Sabaeans, to judge from some fragmentary inscriptions in early Sabaean dialect, and the fact that one "king of Saba'" (assigned by Pirenne to about 250 B.C.) exercised authority over tribes in the "highlands of Ḥaḍramawt" (*CIS*, iv, 126).

During its period of independence, Ḥaḍramawt took part in a kaleidoscopic pattern of wars and alliances with other South Arabian states, the main evidence for which is to be found in Sabaean dialect texts. The two principal political events mentioned in the native Ḥaḍramī texts are the fortification of Libna as a defence against the tribe of Ḥimyar (geographical considerations indicate that this must here imply a section of Ḥimyar occupying the coastal strip west of Mukalla, which is their present-day habitat); and the fortification of *Mwyt* (Ḥusn al-Ghurāb) in the disturbed period following the death of Dhū Nuwās [*q.v.*] in the early sixth century A.D.

The situation of the "metropolis" of Ḥaḍramawt (as Eratosthenes terms it) at Shabwa is remarkable, for it lies right on the north-west perimeter of Ḥaḍramī territory in a small wadi draining into the Ramlat Sab'atayn. Evidently it owes its importance to commercial factors, since it was the principal entrepôt for the incense trade. Frankincense, produced in the Mahra country east of Ḥaḍramawt, was at this point handed over to the caravans which assured its transport up the west coast of Arabia to the markets of the Mediterranean and Mesopotamia. The salt workings in the neighbourhood may also have contributed to its commercial importance; according to Philby (*Sheba's daughters*, 91) they are today "the chief or only economic asset of the locality".

Closely connected with the trade factor was the significance of Shabwa as a cult centre. Pliny's descriptions of the methods of handling the incense at Shabwa indicate strong religious sanctions governing the process; and it remained a shrine and pilgrimage centre down to the latest days of the pre-Islamic South Arabian civilization, as is attested by a fifth century A.D. graffito there associated with the monotheistic cult of Raḥmān. In the earlier polytheistic period, the Ḥaḍramī pantheon shows a close similarity to those of other South Arabian areas, dominated by the astral triad of moon, sun and Venus-star; except that the moon god in Ḥaḍramawt bore the distinctive name Sin, borrowed from Babylonian religion. He is commonly referred to as "Sin of *'lm*", and it has been conjectured that the latter term is the name of the principal shrine of this deity.

Muslim sources are agreed that Ḥaḍramawt was the original homeland of the tribe of Kinda, an offshoot of which founded the central Arabian kingdom of Kinda [*q.v.*]; but it has to be appreciated that these were nomads, and down to about the beginning of the Christian era the nomadic populations of South Arabia were culturally totally distinct from the settled folk whose culture is the one to which our main epigraphic evidence bears witness; and this evidence has, for the earlier periods, nothing whatever to say about the nomads. Only in the few centuries before Islam do we begin to see a fusion and intermingling of the two cultures. The early Islamic writer Muḥammad b. Ḥabīb still speaks of Kinda and Ḥaḍramawt as if they are regarded as independent ethnic entities ("Ḥaḍramawt" representing the ancient settled culture), though both inhabiting the geographical Ḥaḍramī area.

The language of the pre-Islamic Ḥaḍramī inscriptions is close enough to Sabaean, Minaean and Qatabanian to rank with them as all dialects of a single "Epigraphic South Arabian" language. With Minaean and Qatabanian it constitutes a group using a sibilant for the causative verbal prefix and pronominal affixes, against Sabaean *h* in these functions. Its own main distinctive peculiarities are the use of a preposition *h*- "to, for" (Sabaean and Qatabanian *l*-, Minaean *k*-); the fact that *ṯ* and *s* have coalesced into a single phoneme spelt indifferently with either letter; and a differentiation between the masculine and feminine forms of the pronominal affix, not found in the other dialects, though parallelled in the modern Sahori dialect (see Beeston, *Descriptive Grammar of Epigraphic South Arabian*, § 37: 6).

II. — Islamic Period

The editors regret that, for reasons beyond their control, they are obliged to relegate this section of the article to the Supplement.

ḤAḌŪR (Ḥaḍūr Nabī Shuʿayb), a mountain massif in the Yemen on the eastern edge of the Sarāt Alhān, some twelve miles west of Ṣanʿāʾ [*q.v.*], lying between the *wādīs* Sihām and Surdūd. It is separated from the Ḥarāz range to the west by the Ḥaymat al-Khāridjiyya [*q.v.*], known in Hamdānī's time as the Balad al-Akhrūdj and inhabited by the Sulayḥ, a branch of Hamdān. The massif is named after Ḥaḍūr b. ʿAdī b. Mālik, an ancestor of the Prophet Shuʿayb b. Mahdam, who is mentioned in the Ḳurʾān (cf. *Sūra* VII, 83 f. and XI, 85 f.). He had been sent to preach to and to warn his people on Djabal Ḥaḍūr and was slain by them there. According to Arab tradition, Ḥaḍūr Nabī Shuʿayb was the highest of the three mountains which remained above the waters during the Deluge. The other two were Djabal Shahāra and Djabal Kanin (3,400 metres) in Khawlān. The main ridge of Ḥaḍūr is about three miles long and has seven peaks, the highest being Djabal Ḳāhir (Djabal Bayt Khawlān) which is 3,760 metres high and is often covered with thick snow in winter for days at a time. On it is the celebrated tomb (with mosque) of the Prophet Shuʿayb, which is much visited (particularly by young women who hope to be cured of barrenness there); on the last day of Ramaḍān and on the festival of ʿArafāt great festivities are held there.

On the range itself there are several villages. It is traversed by numerous *wādīs*, among them Wādī Dāwūd and Wādī Yāzil, which disperse their *sayl*-waters in all directions. In these valleys excellent vines are found in addition to various fruit-trees. In the deeper parts of Ḥaḍūr the cereals particularly grown are *dhura*, barley and wheat. To the east lies the fertile plain of Ḳāʿat Sahmān, which lies on an average of 2,800 metres above sea level and contains several villages, the most important of which is Matna. This was called Khān Sinān Pasha by the Turks and has a *samsara* [shelter house] said to have been built by Sinān Pasha.

In Hamdānī's time the Mikhlāf Ḥaḍūr comprised several districts. The names of all but al-Djaʿlal, Ḥaḳl Sahmān and Masyab seem to have disappeared without trace. The hard white honey of Ḥaḍūr was famous in Arabia and is even mentioned by Imruʾ al-Ḳays in one of his poems. Hamdānī adds that the people of Ḥaḍūr spoke bad and clumsy Arabic (Ḥimyaritic).

Some 25 miles north-north-west is Ḥaḍūr al-Shaykh, quite distinct from the above and the largest mountain of the Sarāt group Djabal al-Maṣānaʿa. It is about 3,310 metres high. Both were explored by Eduard Glaser in 1885.

Bibliography: E. Glaser in *Petermanns Mitteilungen*, 1886, 42-5; al-Hamdānī, *Ṣifat Djazīrat al-ʿArab*, (ed. D. H. Müller), Leiden 1884-91; Yāḳūt, *Muʿdjam*; C. Rathjens and H. von Wissmann, *Landeskundliche Ergebnisse*, Hamburg 1934. (J. Schleifer-[A. K. Irvine])

HADY, oblation, from the Arabic root *h d y* which has the meanings "to guide", "to put on the right path", "to make a present". The word is certainly of pre-Islamic origin; it used to denote the sacrificial offerings destined for the lord of the Meccan sanctuary (Ibn Saʿd, *Ṭabaḳāt*, i, 92). The ritual of the *taḳlīd* and the *ishʿār*, to which we shall return, suggests that the *hady* had to be some kind of humped animal, especially selected. It appears that the slaughtered beast was left by the man making the sacrifice for the poor and for animals (Ibn Hishām, *Sīra*, i, 146). The term and the consecration ritual survived in Islam, which, however, tended to replace *hady* by *ḍaḥiyya*.

Occurring rarely in the Ḳurʾān (only seven times and that in Medinese *sūras*: II, 196, V, 2, 95, 96, XLVIII, 25), *hady* there denotes the oblations intended for the Kaʿba (XXII, 33), without further definition. But *ḥadīth* and Ḳurʾānic exegesis are generally agreed in restricting the word to victims chosen from the *anʿām* (VI, 143) or animals in flocks or herds. It is the normal offering of the pilgrim, which he must for preference choose from the camel family, or failing that from the bovines, or else the sheep, or finally the goat family (Ibn Rushd, *Bidāya*, i, 222; al-Taḥṭāwī, *Ḥāshiya*, i, 555). The sacrifice must take place on the completion of the Pilgrimage, preferably by the sacrificer himself, so marking his return to secular life.

Although the offering of a *hady* is in theory optional, the prescriptions of the *ḥadjdj* and also possible transgressions of the strict taboos of the *iḥrām* in practice render it obligatory. In the first place, we should recollect that the pilgrimage can be performed by three different methods—*ifrād*, *ḳirān* and *tamattuʿ*. The first consists of making the *ḥadjdj* alone, at the prescribed time, the *ʿumra* being performed outside the month of the pilgrimage or simply neglected. In this case, the believer is not bound to offer a *hady*. But he must make compensation if he chooses the *tamattuʿ* (Ḳurʾān, II, 196), that is to say if he accomplishes the *ʿumra* at the same time as the pilgrimage, resumes secular life and dedicates himself once again for the *ḥadjdj*. Similarly, a kind of penalty is envisaged with regard to the *ḳārin*, one who takes the *iḥrām* at the same time for an *ʿumra* and for a *ḥadjdj*, and who releases himself from the vow only when the pilgrimage is accomplished. In these last two methods, which are regarded by jurists as indulgences, one can redeem oneself by the sacrifice of a *hady*. An oblation is similarly owed by the pilgrim who, having taken his *iḥrām*, finds it impossible to reach the holy city on account of a siege or an illness (II, 196). Moreover, certain transgressions of the strict laws of pilgrimage (violation of the prohibition on hunting [V, 95] and the sexual taboo; cutting of the hair or shaving before desacralization [II, 196]) can similarly be redeemed by the sacrifice of a victim. It is important, however, to make clear that although highly commendable, the offering of a *hady* is not obligatory, and one can also secure redemption by fasting or alms-giving (II, 196, V, 95).

From this it emerges that *hady* is sometimes propitiatory, at other times expiatory. But in no case is its meat regarded as impure, since in any event it is consumed either by the sacrificer, his family and the poor (Ḳur'ān, XXII, 28, 36), or by the last-named only (this is the case, for example, with the *hady* owed by the pilgrim when besieged, *muḥṣar* [al-Shāfiʿī, *Umm*, ii, 144 and 184] and in general with every expiatory *hady*).

The animal offered as *hady* must meet certain requirements in regard to age and appearance defined by *fiḳh*. The legal age varies according to the species: it is 5 years for camels, 2 for cattle, 1 for goats, and 6 months for sheep (Ibn Ḳudāma, *Sharḥ*, iii, 534, 537; Ibn Rushd, *Bidāya*, i, 255). Moreover, the victim must be fat and free from blemish; in particular, it must not be lame, blind or one-eyed, scabby or puny, nor must it reveal certain brand-marks which recall the pre-Islamic *wasm*. Once it is chosen, the pilgrim will proceed to its consecration by the *taḳlīd* and the *ishʿār*. For this purpose, he hangs a sandal (*naʿl*) or a piece of leather from its neck, and with a spear-head cuts a gash in its hump and sometimes in its back (when it is a case of an animal without a hump).

Having been thus consecrated, the *hady* thereafter belongs to the deity. Except for certain circumstances specified by *fiḳh*, it is then no longer possible to exchange, sell or replace it or to inherit it. It is also forbidden to make any profit whatever from it. However, in contradistinction to pre-Islamic practice, it can be ridden by the sacrificer, on condition that no harm comes to it. It is in fact regarded as a valuable object entrusted to the man, who must do everything possible to restore it to its lawful owner, Allāh.

What essentially characterizes the *hady* and distinguishes it from other blood sacrifices is that this is a question of a sacrifice in a fixed place, in that the sacrifice, except when performed under compulsion, must necessarily take place in Mecca. Moreover, and particularly with the *hady* offered for a pilgrimage completed by *ifrād*, *tamattuʿ* and *ḳirān*, it is often also restricted in time, that is to say the beast sacrificed must be slain towards the end of the pilgrimage, more precisely on 10 Dhu 'l-Ḥidjdja, after the two *wuḳūf*s of ʿArafāt and Muzdalifa, this period being regarded as especially propitious for an approach to the divinity.

It appears that among the ancient Arabs of the Ḥidjāz the sacrifices of Minā took place before sunrise. The institution of the *ḍaḥiyya*, which is the Islamic equivalent of the *hady*, reveals the reformer's desire to break away from sun worship by transferring the time of sacrifice to the hour known as *ḍuḥā*, after the morning prayer. The word *ḍaḥiyya* was thus substituted, especially in current speech, for the term *hady*. But in the books of religious jurisprudence the former denotes sacrifices on the day of *naḥr* (slaughter), sacrificed at places other than Minā, reserving the latter for those at Mecca.

ḤAFAR AL-BĀṬIN [see BĀṬIN].

ḤĀFIẒ [see ḲĀRI' and ḲUR'ĀN].

AL-ḤĀFIẒ, the regnal name of the seventh Fāṭimid caliph of Egypt, whose real name was Abu 'l-Maymūn ʿAbd al-Madjīd, born at Ascalon (date of birth uncertain: 466, 467 or 468/1073-6) while famine raged in Egypt (Ibn Khallikān, i, 389).

Little is known of his life before he took his place in the political world. In 524/1130 he was called by two army leaders, Hazārmard and Barghash, to be regent and not caliph, following the assassination of his cousin the caliph al-Āmir [*q.v.*] who had left no male heir, but whose wife Djihā was then pregnant (*Nudjūm*, v, 237 ff.).

But this invitation aroused the hatred of Abū ʿAlī Aḥmad b. al-Afḍal, called Kutayfāt, son of the former Fāṭimid minister al-Afḍal [*q.v.*] who had been assassinated by al-Āmir in 515/1121. The very day on which the regency commenced, Kutayfāt brought off a coup d'état, with the help of Barghash, who had been eliminated from the vizierate. Kutayfāt then overthrew Hazārmard and ʿAbd al-Madjīd, threw the latter into prison, seized the treasures of the palace, and declared himself the representative and lieutenant of the expected imām of the Twelver Shīʿa (Lavoix, iii, p. 163, n. 439). Though he did not suppress the Ismāʿīlī faith, he aroused the hostility of its followers, who no doubt resented its replacement by Twelver Shīʿism as the official doctrine of the state (Suyūṭī, *Ḥusn*, ii, 117-8).

A year later, on 16 Muḥarram 526/9 December 1131, the supporters of the Fāṭimid state made a successful counter coup, with the help of the young followers of al-Āmir, the "Āmiriyya", led by the chamberlain Yānis [*q.v.*], who was of Armenian origin. They killed Kutayfāt, and freed ʿAbd al-Madjīd from prison. At first he was restored as regent, but a few months later a decree (*sidjill*) was read, proclaiming ʿAbd al-Madjīd this time as caliph with the title al-Ḥāfiẓ li-dīn Allāh (Ḳalḳashandī, ix, 291-7). Thereafter an annual feast was celebrated, the feast of victory, *ʿĪd al-Naṣr* (al-Maḳrīzī, *Khiṭaṭ*, Būlāḳ, i, 357, 490; ed. Wiet, ii, 385).

The caliph then tried to assert his legitimacy as a Fāṭimid imām by using the characteristic titles of the Imāmate, such as: Lord and Master, the Imām of this Age and Time (Wiet, *CIA*, 81 f.; Suyūṭī, *Ḥusn*, ii, 16). He gave also in the above-mentioned decree several explanations for his succession to the caliphate. Until then the Fāṭimid imāmate had been transmitted from father to son. He claimed that his cousin al-Āmir had nominated him as his successor just as the Prophet had nominated his cousin ʿAlī, that, furthermore, his grandfather, al-Mustanṣir [*q.v.*], had also foreseen his succession, since he had described his father, Abu 'l-Ḳāsim, who had, however, no right to the succession, as heir-presumptive of the Muslims (*Walī ʿahd al-Muslimīn*). It is also alleged that the child born to al-Āmir's wife was a daughter.

After this al-Ḥāfiẓ paid more attention to the intrigues of the viziers. When he saw that Yānis was becoming powerful and had given his name to a private regiment, the "Yānisiyya", he rid himself of him by poisoning him in 526/1131 (Ibn Aybak, 511; *Khiṭaṭ*, ed. Wiet, iii, 26-7). It was perhaps at this time that he formed his own pretorian guard, called "Ḥāfiẓiyya" in his honour (Ḳalḳashandī, iii, 482, 508).

This time the caliph ruled alone, with the help of his sons. He nominated Sulaymān heir-presumptive and gave to him the duties of vizier (*wāsiṭa*). When, after two months, Sulaymān died, he then appointed another son, Ḥaydara (Ḳalḳashandī, ix, 377-9). But a third son, al-Ḥasan, jealous because of this nomination, plotted against his father and brother. He seized power, killed several army leaders and formed a private corps, *Ṣibyān al-zarad*, the young cuirassiers. But the army, offended by the massacre, gathered in front of the palace and demanded al-Ḥasan's head. Al-Ḥāfiẓ then had his son poisoned by the agency of his Jewish doctor (*Khiṭaṭ*, iii, 27-9).

This time he appointed to the vizierate Bahrām, a Christian Armenian. But this choice provoked a revolt among the Muslims, for once Bahrām came to power he formed an Armenian army of 20,000 men, infantry and cavalry. The Egyptians are said to have feared that he would change the religion of Islam (Ibn Muyassar, 79 ff.).

The Muslim troops being discontented, the caliph incited against Bahrām the governor of Ascalon, Riḍwān b. Walakhashī, who had been banished by Bahrām, but Bahrām sent him away again to the prefecture of al-Gharbiyya. The people of Egypt were grateful to Riḍwān for having prevented the Armenians from entering Egypt when he was at Ascalon. He later gathered troops and Bedouins and drove Bahrām out of Cairo into Upper Egypt. The caliph, however, gave Bahrām a safe-conduct (*amān*) (Ḳalḳashandī, *Ṣubḥ*, xiii, 325) because of the intervention of the king of Sicily, Roger II (*Ṣubḥ*, vi, 458-63).

But once Riḍwān became vizier (*Ṣubḥ*, viii, 342-6), he seized all power and took the title of King (*malik*) (*Khiṭaṭ*, ii, 305). He was also a Sunnī; and when he attempted to depose the caliph he was assassinated in 542/1147 (*Khiṭaṭ*, ii, 173).

After this al-Ḥāfiẓ appointed no more viziers, but the troubles and the disturbance continued. He died of a violent intestinal colic (*ḳawlandj*) in Djumādā II 544/October 1146.

(A. M. MAGUED)

ḤĀFIẒ, (KHᵂĀDJA) SHAMS AL-DĪN MUḤAMMAD SHĪRĀZĪ, Persian lyric poet and panegyrist, commonly considered the pre-eminent master of the *ghazal* form. He was born in Shīrāz, probably in 726/1325-6, though Ḳāsim Ghanī argues for 717/1317 and others favour 720/1320. With a few marked absences, he seems to have spent the greater part of his life in Shīrāz, for long moving in or near the court-circle of the Muẓaffarid dynasty. He is believed to have died in Shīrāz, in 792/1390 (or 791/1389), and his tomb is perhaps that city's best known monument. Though credited with learned works in prose, his fame rests entirely on his *Dīwān*. There are few aspects of the life and writing of Ḥāfiẓ that have not given rise, and especially from about 1930 to 1955, to vigorous scholarly dispute over matters of both interpretation and fact. The reverence in which he is held, not only in Persia but widely throughout East and West, as the undoubted composer of some of the world's most sublime and technically exquisite poetry, will doubtless ensure continued concern with these problems, however intractable and ultimately insignificant some of them may seem to be.

Apart from its general historical framework, the presumed facts of Ḥāfiẓ's life were for long largely drawn from biographical prefaces, from the usual anecdotal *tadhkira* sources like Dawlatshāh, or from casual references by writers like Mīrkhᵂānd and his grandson. Such material has of course frequently been viewed sceptically; but most of it is of its nature difficult to disprove conclusively, and in one or two instances (as in an alleged encounter with Tīmūr, in 789/1387) research has only tended to strengthen, if not fully to confirm, the legend. Informative biographies of Persian poets are a notorious rarity, and it seems unlikely at this late date that any significant new material of an explicitly biographical nature will be discovered relating to Ḥāfiẓ. Though not a new technique, it has recently become fashionable to analyse the poems themselves for new biographical evidence or for some bearing on the material already to hand. The latest, and the most comprehensive and ingenious work of this kind, has been done by Ḳāsim Ghanī and by R. Lescot; but the net result so far is somewhat disproportionate to the formidable effort involved. At best, it has now been convincingly demonstrated that the *Dīwān* bears a much more direct relationship to the milieu of its composition than was suspected in the traditional view. Such methods always have their dangers, particularly where the basic biographical material is itself so slight; in the case of Ḥāfiẓ, the problem is exacerbated by the continued lack of a reasonably authentic text. All this being so, it still seems proper to give here the main outlines of the life in more or less traditional form.

Ḥāfiẓ's father, Bahā' al-Dīn or Kamāl al-Dīn (some sources refer to his grandfather), is said to have migrated from Iṣfahān to Shīrāz, where he died in the poet's infancy, leaving the family in poor circumstances. In a close-knit, flourishing centre of Islamic civilization such as Shīrāz at that time was, humble beginnings were only a relative handicap; and it is plausibly suggested that Ḥāfiẓ received a thorough education on the usual classical lines. It was no doubt in youth that he earned the right to use the title *ḥāfiẓ* (Ḳur'ān-memorizer), which became his pen-name; his verse bears ample evidence of familiarity with Arabic, with the Islamic sciences and with Persian literature generally. He is reputed to have been among other things a baker's apprentice and a manuscript-copyist during these years of adolescence and early manhood; but, to judge in particular by the dedication of certain poems to Ḳiwām al-Dīn Ḥasan (d. 754/1353), sometime vizier to Shāh Abū Isḥāḳ Īndjū, he was into his poetic stride as a panegyrist before the age of thirty. An oft-cited poem (Brockhaus, no. 579; Ḳazvīnī-Ghanī, 363) mentions nostalgically other Shīrāz notables of this period, including the ruler himself. Already by his twenties, in the wake of the disintegration of the Il-Khānid order, Ḥāfiẓ had

lived through dynastic upheavals in and around Shīrāz.

A second phase in the poet's life begins in 754/1353 with the capture of Shīrāz, after a protracted struggle between the Īndjū and Muẓaffarid dynasties, by Mubāriz al-Dīn Muḥammad. The latter ruled for five years, before being deposed and blinded by his son Djalāl al-Dīn Shāh Shudjāʿ. These years were apparently a period of rigid Sunnī observance, hard on Ḥāfiẓ and his fellow-citizens alike; but the poet seems to have recommended himself with some success to Mubāriz al-Dīn's chief minister, Burhān al-Dīn Fatḥ Allāh. The long reign of Shāh Shudjāʿ (759-86/1358-84), while at no time settled politically, and though far from being a period of continuous prosperity and success for Ḥāfiẓ, coincides with his phase of maturest composition. It was during these years that his fame spread throughout Persia, as well as westwards into Arabic-speaking lands and eastwards to India; it seems, nevertheless, that he declined invitations to remove to distant courts. The Muẓaffarid dynasty effectively came to an end at the hand of Tīmūr, in 789/1387, during the last few years of Ḥāfiẓ's life, though random representatives of it, like Shāh Shudjāʿ al-Dīn Manṣūr, seem to have shown the poet sporadic favour to the end.

It is generally believed that Ḥāfiẓ was more or less out of favour with Shāh Shudjāʿ for a period of some ten years (768-78/1366-76), during which time he is said to have spent a year or two in Iṣfahān and Yazd. The reason for such a fall has never been fully explained, though it is traditionally related to the poet's allegedly libertine views and behaviour. Though thereafter he enjoyed favour, from time to time, from the throne and from ministers like Djalāl al-Dīn Tūrānshāh, he seems never fully to have regained his former standing. Yet it should be remembered that there is still no real certainty as to what such standing actually signified: certainly there is frequent reference to poverty throughout the poet's life (whether it be regarded as a complaint, a hint or a literary device), and there is no serious suggestion that he held a regular, richly rewarded office as "court poet". At one time he is said to have been a professor of Ḳurʾānic exegesis at a Shīrāz *madrasa*, but there is doubt as to which of his patrons might have obtained him this preferment and no record of his period of tenure.

Legend credits Ḥāfiẓ with editing his *Dīwān* in 770/1368, *i.e.*, over twenty years before his death, but no manuscript of this version is known. Less speculative, perhaps, but still unattested by real evidence, is the edition (with a preface of doubtful biographical value) compiled after the poet's death by a disciple, a certain Muḥammad Gulandām. From this traditional version are assumed to spring the thousands of manuscripts now extant and over 100 printed editions: many of these versions differ widely in the order and number of poems, in the order and number of verses within a given poem, and in their detailed readings. The bibliography is very extensive, and only some of the principal editions or translations can be mentioned here. (In general, it may be said that serious interest in Ḥāfiẓ seems to have passed, after his death, to the Ottoman world and to India, whence it came by the late 18th century to Europe, returning in strength to Persia only in the 20s and 30s of the present century). First, it should be mentioned that several manuscripts are known in Persia, in Europe and elsewhere, which date from about the second and third quarters of the 15th century, *i.e.*, from thirty to sixty years after the poet's death; the most reliable of these contain just under 500 poems, while later versions rise to 600 and beyond. (In 1958, P. N. Khānlarī published a manuscript dated around 813/1410, which contains 152 poems in good textual condition). Derivative manuscripts, sometimes with commentaries in Persian, Turkish or Urdū, continued to circulate throughout the next four centuries.

The earliest historic recension, for long accepted as authoritative, and as a source of Ḥāfiẓ's life, was that of the Ottoman Sūdī (d. 1000/1591); he was at one time charged with having suppressed one or two poems of Shīʿa sympathy, but modern scholarship has justified him by failing to find these poems in early manuscripts, and by casting at least some doubt on Ḥāfiẓ's Shīʿism. This recension was taken as the basis for another long-dominant edition, the three volumes (692 poems) of H. Brockhaus, Leipzig 1854-61. The late 18th and early 19th centuries saw much fragmentary and dilettante preoccupation with Ḥāfiẓ among Europeans (chiefly British and French), but a landmark in printed texts was the Calcutta edition of 1791 (725 poems), associated with the name of Upjohn; this edition was still based on late manuscripts and largely on the Sūdī recension; its introduction provided much of the material for the traditional life. J. von Hammer-Purgstall produced in 1812-3 a massive German prose-translation of the *Dīwān*, which was known to Goethe at the time he was writing the *West-östlicher Diwan*. Between 1858 and 1864, *i.e.*, roughly at the same time as the Brockhaus edition mentioned above, and using substantially the same sources, V. von Rosenzweig-Schwannau brought out another three-volume edition of the text, accompanied by a remarkably skilful verse-translation in German. The English renderings, partial or complete, of the late 19th century (those, for example, of H. Bicknell, H. Wilberforce Clarke, Gertrude Bell and W. Leaf) deserve only passing mention, despite interesting merits of their own. By 1900 a largely spurious, second-growth Ḥāfiẓ stood beside the several approximations to the real figure. The 20th century saw the rebirth of serious Ḥāfiẓ scholarship in Persia. Special mention has already been made of the fundamental research of Ḳāsim Ghanī, but there are few eminent Persian scholars of the present day who have not contributed important articles in this field. In particular, three editions merit notice: that of ʿAbd al-Raḥīm Khalkhālī, Tehrān 1927 (495 poems, based on a manuscript of 828/1424, but marred by errors); that of Ḥusayn Pizhmān, Tehrān 1936 (994 poems, many marked as doubtful!); and that of Muḥammad Ḳazvīnī and Ḳāsim Ghanī, Tehrān 1941 (576 poems; the most scientific and reliable edition so far, based on some very old manuscripts; contains a good introduction, but lacks a critical apparatus). A new edition, also based on very early manuscripts, is reportedly in preparation by H. Ritter.

It will be seen that the two basic tasks of all research on Persian poetry, the establishment of a significant biography and the edition of an authoritative text, have assumed added and special dimensions in the case of Ḥāfiẓ. In briefest sum, one may state the dilemma thus: no text of Ḥāfiẓ, however good in itself, can be fully intelligible at any level without a marked amplification in our knowledge of his life and times; yet much of such knowledge must come from an analysis of the text, and one can have little confidence in the results of analyses, however scrupulously conducted, that are

based on texts of doubtful reliability. It may well prove that neither task is fully susceptible of solution, even within limited terms of reference: while solidification of the biography must largely wait on the text, such expectation gives no ultimate certainty of a rich yield; any acceptable text will inevitably be based on virtually the sole criterion of seniority of manuscript, and the oldest Oriental manuscripts, particularly if falling outside the author's lifetime, are not necessarily the fullest or the most accurate in any absolute sense. This is especially true of poetry, and indications so far suggest that it is even more than normally true of the *Dīwān* of Ḥāfiẓ. There is, too, the fundamental question of the poet's own intent: should everything he ever wrote (or perhaps merely countersigned) be included, even if he might himself have chosen to omit certain items from the supposed canon of 770/1368? Did he have second (or later) thoughts about the inclusion, the order, or the actual text of whole poems or individual verses? If we cannot now hope to answer questions of this kind, we should be cautious in claiming to do more in effect than publishing early manuscripts and observing their differences from later ones. Certain generally useful conclusions may be drawn, but we may well never be sure what such differences signify in any particular case.

Failure hitherto to solve these basic problems has never quenched interest in several secondary problems related to them. Scholars living in an age of non-representational art and literature are perhaps less concerned than most of their forebears (E. G. Browne was in advance of his age here) to discover positively "whether Ḥāfiẓ meant what he said", whether he was a mystic or a libertine, a good Muslim or a sceptic, or all of these by turns. It is now generally claimed (without prejudice) merely that he spoke *through* the standard themes and terminology of hedonism, the lament for mortality, human and mystical love, and so on; that he was a superb linguistic and literary craftsman, who took these forms so far beyond the work of his predecessors that he practically cut off all succession; and that he revolutionized the *ghazal* and the panegyric both, by making the one the vehicle for the other in place of the *ḳaṣīda*. Nevertheless, useful new work has been done (particularly by R. Lescot) in establishing the chronology of certain poems so as to suggest a development in Ḥāfiẓ's attitude, style and methods. The secondary problem most hotly debated in recent years concerns the "artistic unity" of the poems: even supposing that the present varying order of verses were reduced to an original uniformity, is there any genuine unity in these *ghazals*, and did not Ḥāfiẓ invite later confusion by his failure to develop any theme consistently? There are indications that the problem is neither new nor specifically Western, for Shāh Shudjāʿ is supposed to have made some such criticism, according to an anecdote current no later than the time of Khʷāndamīr. Arguments have been put forward, by A. J. Arberry and by the writer, to suggest that the true unity of Ḥāfiẓ's poetry is not thematic or dramatic in the classical Western sense, but lies rather in a subtle weaving of imagery and allusion around one or more central concepts. These arguments have found some favour with J. Rypka and others, but have also been rejected, both explicitly and by implication, as either invalid or unnecessary.

Or.*, 1944, 57-100; A. J. Arberry, *Ḥāfiẓ: fifty poems*, Cambridge 1947 and reprinted, 1-34; idem, *Classical Persian literature*, London 1958, 329-63; Browne, iii, 271-319; *IA*, s.v. Hâfız, by H. Ritter.

(G. M. Wickens)

ḤĀFIẒ-I ABRŪ, the *laḳab* of ʿAbd Allāh b. Luṭf Allāh b. ʿAbd al-Rashīd al-Bihdādīnī, Persian historian of the time of Shāhrukh, who died in 833/1430. He was also in the suite of Tīmūr as an excellent chess-player and accompanied him and Shāhrukh in some campaigns.

His first known work is probably the anonymous *Dhayl-i Djāmiʿ al-tawārīkh* (unique MS: Nuruosmaniye), which deals with the reign of Üldjaytū and Abū Saʿīd, the first part being an extract from the *Taʾrīkh-i Üldjaytū Sulṭān* by al-Ḳāshānī. The next of his works, completed in 814/1412 by order of Shāhrukh, is the *Dhayl-i Ẓafarnāma-yi Shāmī* about the rest of the life of Tīmūr. Some time later he wrote a history of the reign of Shāhrukh to 816/1413 (unique MS: India Office). In 817/1414 he began at the request of Shāhrukh to translate and to complete an old Arabic geographical work called *Masālik al-mamālik wa-ṣuwar al-aḳālīm*, probably one of the redactions of al-Balkhī. In this unfinished and untitled work he could not repress his interests as a historian and included in it extensive historical passages especially on the history of Fārs, Kirmān and Khurāsān.

While occupied with this geographical work Ḥāfiẓ-i Abrū was in 820/1417 charged by Shāhrukh to compile a voluminous historical enterprise consisting of three famous older historical books, with supplements and a continuation written by himself. The result of this endeavour was the *Madjmūʿa*, which contains: A. Introduction and Contents. — B. The Chronicle of al-Ṭabarī translated by Balʿamī. — C. Continuation of this work to 656/1258 by Ḥāfiẓ-i Abrū. — D. Introduction to the *Djāmiʿ al-tawārīkh* of Rashīd al-Dīn and list of its contents by Ḥāfiẓ-i Abrū. — E. The *Djāmiʿ al-tawārīkh*. — F. History of the Kurtid Dynasty by Ḥāfiẓ-i Abrū. — G. Four small treatises on Tughāy-Tīmūr, Amīr Walī, the Sarbadārids and Amīr Arghūnshāh by Ḥāfiẓ-i Abrū. — H. Continuation of the *Djāmiʿ al-tawārīkh*, dealing with the events in Ādharbāydjān and Arabic ʿIrāḳ in the years 703-95/1304-93. — I. History of the Muẓaffarid Dynasty by Ḥāfiẓ-i Abrū. — J. The *Ẓafarnāma* of Shāmī. — K. The above mentioned Continuation of this work by Ḥāfiẓ-i Abrū. — L. History of Shāhrukh's reign to Rabīʿ II 819/May 1416. Ḥāfiẓ-i Abrū makes use in parts F, H and I of sources known to us. The first three-quarters of F are an extract from the *Harātnāma* by Sayf b. Muḥammad Harawī, about the first two-thirds of I are a simplification of the *Mawāhib-i ilāhī* by Muʿīn al-Dīn Yazdī. In H the history of Üldjaytū's and Abū Saʿīd's reigns is an extract from the *Dhayl-i Djāmiʿ al-tawārīkh* mentioned above. The other passages of his supplements result from sources unknown to us or from oral tradition. L is the second redaction of his History of Shāhrukh. Some parts in G, H, I and L are closely connected with the historical passages of his geographical work.

The further great historical enterprise of Ḥāfiẓ-i Abrū is the *Madjmaʿ al-tawārīkh*, a universal chronicle divided into four voluminous *Arbāʿ*. The first *Rubʿ* treats of the Prophets, the old Iranian myths and the history of Īrān to the Arab conquest, the second the history of the Caliphate to 1258, the third the history of Īrān in the Saldjūḳ and Mongol periods. The fourth, dedicated to Bāysunghur and having a special title *Zubdat al-tawārīkh-i Bāysunghurī*, is subdivided into two parts, the first dealing with the life of Tīmūr (736-807/1336-1405), the second with the reign of Shāhrukh to Rabīʿ II 830/February 1427. The three first *Arbāʿ* have not the value of sources. The end of the third *Rubʿ*, the reign of Uldjaytū and Abū Saʿīd, is more detailed than in the *Madjmūʿa* (H), and agrees with the above mentioned *Dhayl-i Djāmiʿ al-tawārīkh*. The first part of the fourth *Rubʿ* is a copy of the *Ẓafarnāma* of Shāmī, here and there corrected and completed, divided chronologically into single years and having interpolated the parts of F, G, H, I and K of the *Madjmūʿa* which relate to these years. The second part is the third enlarged redaction of his history of Shāhrukh.

As this survey shows, the works of Ḥāfiẓ-i Abrū are an interesting example of the manner of working of a Persian historian of the Middle Ages in what concerns the use of works of other authors and his own former books. For the first 22 years of the reign of Shāhrukh his work is the best source. The *Zubdat al-tawārīkh* was practically the sole source of the *Maṭlaʿ al-saʿdayn* by ʿAbd al-Razzāḳ Samarḳandī and hence of the later Persian chroniclers.

(F. Tauer)

ḤĀFIẒ AḤMED PASHA, (?-1041/1632), Ottoman Grand Vizier. The date of his birth is uncertain. Simone Contarini, in his *relazione* of 1612 to the Signoria of Venice, states that he was then about forty years of age (Barozzi and Berchet, i, 146: "... Cabil bassa già capitan del Mare che regge ora Damasco sarà di 40 anni ..."). He rose in the *enderūn-i humāyūn* to the status of *muṣāḥib, i.e.*, confidant of the sultan, and to the office of *doghāndji bashî*. On leaving the *enderūn-i humāyūn* he became a vizier and also Ḳapudān Pāshā, *i.e.*, High Admiral of the Ottoman fleet—an appointment that he filled (22 Shawwāl 1016/9 February 1608 until 16 February 1609: cf. Naʿīmā, ii, 23 and Salignac, 259, note I) with little distinction, since he failed, in 1017/1608, to safeguard the ships bearing the tribute of Egypt from Alexandria to Istanbul, a number of vessels being lost to a Florentine squadron near Rhodes as a result, in no small measure, of his negligence. Ḥāfiẓ Aḥmed, deposed from the office of Ḳapudān, was now made Beglerbeg of Shām (Damascus). During his tenure of this appointment (April 1609-January 1615: cf. Laoust, 199-201) he was engaged in operations against the Druze chieftain of the Lebanon, Fakhr al-Dīn II [*q.v.*]. Some years later, being then Beglerbeg of Diyārbekir, Ḥāfiẓ Aḥmed was ordered to restore Ottoman control over Baghdād, where the *subashî* Bekir was in rebellion, but he failed in this mission, the forces of the Ṣafawīd Shāh ʿAbbās I seizing the town in the winter of 1033/1623-4. Ḥāfiẓ Aḥmed became Grand Vizier in Rabīʿ II 1034/February 1625. The main event of his Grand Vizierate was a fruitless siege of Baghdād (Ṣafar 1035/November 1625-Shawwāl 1036/July 1626). He was deprived of the office of Grand Vizier in Rabīʿ I 1036/December 1626, becoming now second vizier, but at the same time receiving in marriage the hand of a sister of Sultan Murād IV. Ḥāfiẓ Aḥmed was appointed Grand Vizier for the second time on 29 Rabīʿ I 1041/25 October 1631 (Naʿīmā, iii, 79). A revolt amongst troops from Asia Minor brought about his death, however, on 19 Radjab 1041/10 February 1632 (Pečewī, ii, 420-1).

al-**ḤĀFIẒ** al-**DIMA<u>SH</u>ḲĪ** [see ibn ʿasākir].

ḤĀFIẒ IBRĀHĪM, Muḥammad, Egyptian poet and writer, was born between 1869 and 1872 on a house-boat (Arabic: *<u>dh</u>ahabiyya*) anchored on the Nile near Dayrūṭ (*mudīriyya* of Asyūṭ). On the death of his father, when he was four years old, he was given a home by his maternal uncle, first in Cairo and then at Ṭanṭā, where he had the opportunity of attending, albeit irregularly, the few courses given in the al-Aḥmadī mosque, and of familiarizing himself with Arabic classical poetry, especially that of the ʿAbbāsid period, while serving his apprenticeship in the offices of several lawyers. Continually seeking anxiously for the vocation which he had not yet discovered, and weary of living at his uncle's expense, he left Ṭanṭā to enrol in the military college at Cairo; after graduating, he entered Government service first in the War Ministry and then in the Interior. As an officer, he served for a long time in the Eastern Sudan, at the time of Lord Kitchener's campaign, but after a riot in which he had been involved he asked to be retired. Returning to Cairo in 1906 he had the opportunity of attaching himself to Muḥammad ʿAbduh [*q.v.*], whose disciple he was, and of devoting himself more freely to poetry. He was also at this period in contact with such political leaders as Saʿd Zag<u>h</u>lūl [*q.v.*], Muṣṭafā Kāmil [*q.v.*] and Ḳāsim Amīn [*q.v.*], as well as with the intelligentsia gathered round <u>Kh</u>alīl Muṭrān [*q.v.*] and others. It was only in 1911 that he succeeded in becoming a member of the civil service and in being nominated head of the literary section of the Khedivial Library (now the Dār al-Kutub) at Cairo, a post which he retained almost until his death on 21 July 1932.

Ḥāfiẓ Ibrāhīm must be counted among the representatives of the innovating Egyptian poetical school, whose leader was Sāmī al-Bārūdī [*q.v.*] and who followed their own temperaments and nature, aiming to detach themselves from tradition. But he set himself apart from other spokesmen of the new generation by his more spontaneous adherence to the cause of the people and the cause of the Arab community in general, whose legitimate emotions and ambitions he succceeded in reproducing. In fact, the pieces in his *Dīwān* (Cairo 1937, 2 vols.) reveal a mass of details and direct observations which on the one hand throw light on several aspects of Egyptian political and social life during the first decades of this century, and on the other allow us to glimpse the frequently polemical standpoint of the poet. Particularly in those verses which are immediately recognized as political, he demonstrates his perfect grasp of the reality of the situation, that is, that the three authorities struggling for the good opinion of the public (the British, the Sultan, and the Khedive) must be flattered and that he must above all smother his anger and despair and conceal his thoughts. Thus his occasional poems, in which the poet of the people was forced to adapt himself to the style of panegyrics or threnodies, lack originality and imagination. Suffering, complaints, anxiety and melancholy are the basis for the best verses of Ḥāfiẓ Ibrāhīm, who reserved for such themes his most delicate choice of images and his most effective vocabulary, in a structure that is far from ignoring the classical tradition completely. His poetry, which cannot be subjected to exhaustive criticism in this article, became known fairly rapidly in the learned circles of al-Azhar and received a flattering welcome among the cultured élite and the political leaders of Egypt. Ḥāfiẓ Ibrāhīm, in his sympathy with the wretched, became above all the echo of the sufferings and hopes of his people; it was perhaps this predisposition which led him to translate certain episodes from Victor Hugo's *Les Misérables* (*al-Buʾasāʾ*) (Cairo 1903, and reprints), remarkable especially for the splendour of his Arabic prose; another aspect of his narrative style is represented by *Layālī Saṭīḥ* (1st ed.: Cairo 1906, 2nd ed.: n.d.) in which there appear more strongly the moral objectives which the imitators of the *maḳāmāt* [*q.v.*] cherished at the end of the 19th century; this long *maḳāma* contains a critical survey of Egyptian morals and was perhaps written in imitation of the *Ḥadī<u>th</u> ʿĪsā b. Hi<u>sh</u>ām* of Muḥammad al-Muwayliḥī [*q.v.*], who remains superior to Ḥāfiẓ Ibrāhīm in this *genre*. Also noteworthy is the translation, made in collaboration with <u>Kh</u>alīl Muṭrān, of a work of Paul Leroy-Beaulieu entitled in Arabic *al-Mū<u>dj</u>az fī ʿilm al-iḳtiṣād* (Cairo 1913, 5 vols.).

ḤĀFIẒ RAḤMAT <u>KH</u>ĀN, b. <u>Sh</u>āh ʿĀlam <u>Kh</u>ān b. Maḥmūd <u>Kh</u>ān b. <u>Sh</u>ihāb al-Dīn known as Kōṭā Bābā . . . b. Bharēč <u>Kh</u>ān . . . b. Ḳays ʿAbd al-Ra<u>sh</u>īd, the legendary ancestor of the Paṭhāns or Afg<u>h</u>āns, a *ḥāfiẓ* (memorizer) of the Ḳurʾān, was the head of an important ruling family of Rohilkhand during the 12th/18th century. Some of his ancestors had migrated from <u>Sh</u>ōrābak in the Pi<u>sh</u>in district of West Pakistan to Čač Hazāra where the family ultimately settled. He was born in 1120/1708 at Tor <u>Sh</u>ahāmatpūr, a small little-known village in *rōh* (*i.e.*, a hilly country, a term loosely applied to the tribal areas of present-day West Pakistan and the adjoining territory of Afg<u>h</u>ānistān), after the return of his father from his first visit to India where, in the territory then known as Kaṭēhr (modern Rohilkhand) one of his slaves, Dāwūd <u>Kh</u>ān, had been able to gain wealth and influence with the local rā<u>dj</u>ās and *zamīndārs*, whom he served as a mercenary. Gradually Dāwūd <u>Kh</u>ān was able to carve out a separate principality for himself. His almost meteoric rise to power attracted many of his fellow-countrymen to India including <u>Sh</u>āh ʿĀlam <u>Kh</u>ān, father of Raḥmat <u>Kh</u>ān. On arrival in India he was warmly received by Dāwūd <u>Kh</u>ān, in the manner befitting a master. But <u>Sh</u>āh ʿĀlam <u>Kh</u>ān apparently became jealous of the success of his former bondsman, who had him murdered. Soon afterwards Dāwūd <u>Kh</u>ān was himself killed, and succeeded by his adopted son ʿAlī Muḥammad <u>Kh</u>ān. A brave and dashing soldier, he was awarded a standard and kettle-drums along with the title of Nawwāb by the reigning Mug<u>h</u>al emperor, and won the favour of the Grand Vizier Ḳamar al-Dīn <u>Kh</u>ān. Emboldened by this patronage the Rohillas, under ʿAlī Muḥammad <u>Kh</u>ān, began their depredations in and around the *parganah* of Bareilly [*q.v.*]. Complaints reached the emperor Muḥammad <u>Sh</u>āh (*reg.* 1131/1719-1161/1748) who ordered punitive

measures against them. An unexpected victory over an imperial force encouraged the Rohilla adventurers to further annexations. These alarmed Ṣafdar-Djang [*q.v.*], the Nawwāb-Wazīr of Awadh, who had his own plans of expansion. Himself a Shīʿī, he disliked the orthodox Rohillas, and instigated the Mughal emperor against ʿAlī Muḥammad Khān. An expedition, led by the emperor himself, was mounted against the Rohilla chief, who submitted and, on the intercession of the *wazīr*, was forgiven but carried as a prisoner to Delhi. Ḥāfiẓ Raḥmat Khān, the right-hand man of ʿAlī Muḥammad Khān, was, however, left free. The detention of ʿAlī Muḥammad Khān was taken as a national insult and Raḥmat Khān misused the liberty granted to him by raising a large force and marching to the capital in order to coerce the emperor into releasing his patron ʿAlī Muḥammad. He succeeded in brow-beating the *wazīr* and other counsellors into accepting his demands. Consequently ʿAlī Muḥammad Khān was released from captivity, and the governorship of the *ṣūba* of Sirhind, at that time disturbed by roving bands of Sikhs and Djāṭs, was conferred on him. Raḥmat Khan again distinguished himself by breaking the resistance of the refractory *zamīndārs* and dispersing the marauders. ʿAlī Muḥammad Khān had not been at his post for long when news of Aḥmad Shāh Abdālī's invasion of India (1161/1748) reached Delhi. As a precaution against the defection of the Rohillas, ʿAlī Muḥammad Khān was removed from Sirhind and reappointed to his old post in Kaṭēhr.

On the death of the emperor Muḥammad Shāh in 1168/1748 and that of the *wazīr* Ḳamar al-Dīn Khān, there was a keen contest for this key-post in the empire. Ṣafdar-Djang, an aspirant to the office, was able to enlist the support of ʿAlī Muḥammad Khān, who deputed Raḥmat Khān to help him achieve his ambition. Raḥmat Khān marched to Delhi with 1,000 choice troops and by a bold stroke compelled the emperor Aḥmad Shāh (*reg.* 1161/1748-1168/1754) to confer the office of *wazīr* on Ṣafdar-Djang. Soon thereafter ʿAlī Muḥammad Khān died, on 3 Shawwāl 1162/ 14 September 1749, having, according to *Gulistān-i Raḥmat* (see *Bibliography*), nominated Raḥmat Khān as his successor only two days before his death. Raḥmat Khān, however, willingly withdrew in favour of ʿAlī Muḥammad's minor son Saʿd Allāh Khān, his two elder brothers ʿAbd Allāh Khān and Fayḍ Allāh Khān being away in Afghānistān as prisoners of the Abdālī. Raḥmat Khān virtually adopted the rôle of regent during the minority of Saʿd Allāh. This situation tempted the rapacious Ṣafdar-Djang to try and gain the Rohilla acquisitions for himself. He succeeded in pitting Ḳāʾim Khān, the Bangash Nawwāb of Farrukhābād [*q.v.*] against the Rohillas. A pitched battle was fought at a place three miles from Badāʾūn [*q.v.*], in which Ḳāʾim Khān was slain and his large force of 60,000 horse routed. As fruit of the victory Raḥmat Khān annexed many *parganahs* belonging to the vanquished Bangash chief. Ṣafdar-Djang turned the defeat of his own instrument to advantage and captured Farrukhābād, maltreating his fallen ally's family. Aḥmad Khān, younger brother of Ḳāʾim Khān, however, soon recovered his lost patrimony by defeating and killing Nawal Rāy, the deputy of Ṣafdar-Djang. This incensed Ṣafdar-Djang, who assembled a huge force and marched against the Afghāns. On an appeal for help from Aḥmad Khān, Ḥāfiẓ Raḥmat Khān joined in the battle and their combined troops inflicted a heavy defeat on the Awadh army. Smarting under the blow, Ṣafdar-Djang called in the Marāṭhās under Malhar Rāo Holkar and Djay Appā Sindhiyā. Ḥāfiẓ Raḥmat Khān, finding himself unequal to the Marāṭhas, did not respond to Aḥmād Khān's appeals for help, but Saʿd Allāh Khān, acting independently of the regent, joined the forces of the Bangash Nawwāb. The Marāṭhās completely annihilated Saʿd Allāh's army of 12,000 in a fierce battle near Fatḥgaṛh on 28 April 1751. By imprudently refusing help to a brother Afghān ruler in trouble, Raḥmat Khān brought misery not only to the Afghāns but also darkened his own prospects as an independent ruler of Rohilkhand. Desirous of wielding more power, he began to strengthen his own position and sided with Ṣafdar-Djang, who, after his dismissal from the office of *wazīr*, was trying to make trouble. In the armed conflict that followed between the Marāṭhas and the ruler of Farrukhābād, Raḥmat Khān enigmatically remained neutral. Elated by their victory, the Marāṭhās and their ally Ṣafdar-Djang now thought of invading Kaṭēhr and annexing it. Sensing their designs, Raḥmat Khān and other Rohilla chiefs fled to the difficult reaches of the Terai, where they entrenched themselves. Ṣafdar-Djang and the Marāṭhās laid siege to their camp, but the difficulties of the terrain and the news of Abdālī's impending invasion of India discouraged them. Considering it prudent to retreat, they agreed, at the instance of the emperor Aḥmad Shāh, to open peace negotiations with the Rohillas. The peace treaty was finally signed at Lucknow in February 1752. By it the Rohillas were required to pay an indemnity of fifty lakhs of rupees to the Marāṭhās, the price of their participation in the conflict between Awadh and Kaṭēhr. To establish his superiority further, Ṣafdar-Djang compelled Raḥmat Khān to accompany him to Awadh. However, after reaching Mōhāń, 15 miles from Lucknow, Raḥmat Khān was allowed to return to his own country. With a view to further reducing the position and influence of Raḥmat Khān, the two elder sons of ʿAlī Muḥammad Khān, who had been kept as hostages at Ḳandahār, were released by Aḥmad Shāh Abdālī in 1166/1752 on the occasion of his making yet another invasion of India, and were sent back to Kaṭēhr "with a letter strongly recommending their guardians to carry out Ali Muhammad's will". Willy-nilly Raḥmat Khān had to partition the country into three sections, assigning each to the three major sons of ʿAlī Muḥammad, *i.e.*, ʿAbd Allāh Khān, Fayḍ Allāh Khān and Saʿd Allāh Khān (the ruling prince, but the younger son). The presence of Raḥmat Khān as a virtual 'regent' was resented by ʿAbd Allāh, an ambitious and headstrong young man, who attempted to poison him, but the attempt was foiled; it led to the banishment of ʿAbd Allāh Khān from Kaṭēhr. This division of the country and his subsequent loss of revenue and prestige compelled Raḥmat Khān to seek new possessions, and he consequently extended his rule to Pīlībhīt which he renamed Ḥāfiẓābād (a name which never became popular) and which now became the principal seat of his government; Bareilly [*q.v.*], which had all along been the major centre of his activity, was relegated to a secondary position. At Pīlībhīt he constructed a big palace, a *Dīwān-i Khāṣṣ* and a *Dīwān-i ʿĀmm* to complete the appurtenances of rulership. In the meantime, Ṣafdar-Djang was preparing to fight the emperor's party and summoned Raḥmat Khān to his assistance. He at first responded, but on second thoughts considered it prudent to remain neutral. This was construed as an open act of rebellion against the emperor, for as a loyal subject Raḥmat Khān was expected to side

with the emperor's party against a refractory subject. Ḥāfiẓ Raḥmat Khān had to pay dearly for this political mistake which led to the ruin of the short-lived Rohilla kingdom and dimmed the prospects of Afghān rule in India. In this internal conflict, which may rightly be termed the rebellion of Ṣafdar-Djang, the only Afghān chief who responded to the call of the emperor was Nadjīb al-Dawla [*q.v.*]. The very next year Aḥmad Shāh Abdālī invaded India for the third time, and ordered Raḥmat Khān to help the *wazīr* Ghāzī al-Dīn ʿImād al-Mulk [*q.v.*] realize the *pīshkash* due from Shudjāʿ al-Dawla who had succeeded his father Safdar-Djang in 1170/1756. An agreement was reached eliminating the need for a call to arms. At the battle of Panipat in 1175/1761, which sounded the death-knell of Marāṭhā rule in India, Raḥmat Khān, his son ʿInāyat Khān and his cousin Dūṅdē Khān, father-in-law of Nadjīb al-Dawla, took an active part and helped Aḥmad Shāh Durrānī with their troops. For the help rendered by Ḥāfiẓ Raḥmat Khān, the Durrānī chief conferred the *parganah* of Etawah on him. Raḥmat Khān expelled the Marāṭhās, who still held it. Soon afterwards Shudjāʿ al-Dawla thought of settling old scores with the Bangash ruler of Farrukhābād and in alliance with his former foe, Nadjīb al-Dawla, who had now become *wazīr* and *amīr al-umarāʾ*, commenced operations against Farrukhābād. Ḥāfiẓ Raḥmat Khān sided with the weaker side and was able to avert the fall of the small Afghān kingdom. The next notable event in which Raḥmat Khān was involved was the attack on Patna, then held by the British, in 1177/1763, and the battle of Buxar fought in 1178/1764 between the British and Mīr Ḳāsim ʿAlī, the deposed *nāẓim* of Bengal and Raḥmat Khān's ally Shudjāʿ al-Dawla, who greatly feared the growing power of the British in India. Shudjāʿ al-Dawla was defeated and sought refuge with Raḥmat Khān, who was then encamped at Ḥasanpūr (district Murādābād). Finding him unwilling to render active help, Shudjāʿ al-Dawla turned to the Marāṭhās and they both fell on the British at Kōṙa Djahānābād in 1179/1765. However, their troops could not withstand the destructive fire of the English batteries and were completely routed. Shudjāʿ al-Dawla was compelled to sue for peace, but he bore a grudge against Raḥmat Khān for not having come to his help at a critical juncture. Since the English were convinced of the neutrality of Raḥmat Khān, he was allowed to enjoy a few more years of happiness and prosperity. The danger of growing British supremacy, however, loomed large on the Indian horizon and an acute and shrewd observer like Raḥmat Khān could not easily ignore it. In the meantime Nadjīb al-Dawla, and Raḥmat Khān's cousin and one of his great supporters, Dūṅdē Khān, both died in 1184/1770 and 1185/1771 respectively, thus weakening Afghān power in India. Ḍābiṭa Khān, son and successor of Nadjīb al-Dawla, considered it prudent to become an ally of the Marāṭhās, for he thought that by so doing he would be able to save his possessions from falling into the hands of Shudjāʿ al-Dawla, the enemy of his family. Raḥmat Khān, assessing the political situation much more sensibly, sided with the Nawwāb of Awadh, whom the British wanted to use as a pawn and whose territories they reckoned would serve as a buffer state between the British and the Marāṭhās, both struggling for power in India. As his own share of the price of defence against the Marāṭhās, Ḥāfiẓ Raḥmat Khān bound himself to pay on behalf of the Rohillas forty lakhs of rupees (Rs. 4,000,000) to Shūdjāʿ al-Dawla with the provision to pay Rs. 1,000,000 in cash and the balance in three equal instalments of Rs. 1,000,000 to be spread over three years. To this agreement Sir Robert Barker, the British commander-in-chief, was a witness (cf. C. E. Aitchison, *Treaties, sanads and engagements*, i, 5).

As Ḥāfiẓ Raḥmat Khān felt that the conditions binding him to pay forty lakhs of rupees for warding off the menace of the Marāṭhās had not been fulfilled, he declined to pay. This was construed as a breach of agreement solemnly entered into by the Rohilla chief. This naturally led to the outbreak of hostilities between Ḥāfiẓ Raḥmat Khān and the Awadh *darbār*. Some of the Rohilla chiefs, including Fayḍ Allāh Khān, second son of ʿAlī Muḥammad Khān and later the founder of the princely state of Rāmpūr (now merged with Uttar Pradēsh), dissociated themselves and took no part in the war, in which the British actively helped the Awadh forces. Consequently the two armies met at the battlefield of Kaṭra Mīrānpūr, 7 *kōs* from Tilhar, in 1188/1774. The Rohillas were greatly outnumbered and the defection of a large body of troops under Bakhshī Aḥmad Khān completed the ruin of the Rohillas and the eclipse of their glorious but shortlived rule in India. Ḥāfiẓ Raḥmat Khān was struck by a flying cannon ball and killed outright. His head was severed from his body by one of his former retainers, Murtaḍā Khān Bharēč, and taken to Shudjāʿ al-Dawla, who gloated over it. The corpse was later recovered from the battle-field and the severed head was sewn to it. It was despatched to Bareilly, where it was buried. In 1189/1775 Rāo Pahāṙ Singh, who had received a number of villages in *djāgīr* from Raḥmat Khān, erected a mausoleum over his grave, which was completed by Dhu 'l-Faḳār ʿAlī Khān, a son of Raḥmat Khān, in 1194/1780. It was repaired from time to time but is now in a sad state of neglect.

After the death of Ḥāfiẓ Raḥmat Khān, the victorious armies fell to depredation and spoliation of the helpless population. Thousands of villages which refused to surrender were burnt down and the inhabitants driven out. Hundreds of buildings which had been erected by the Rohilla chiefs or which were an eye-sore to Shudjāʿ al-Dawla as an extreme Shīʿī were razed to the ground. Even the family and close relations of the fallen hero were not spared and were subjected to all sorts of indignities. They were reduced to great straits and even the women-folk were forced to march on foot from Pīlībhīt, where they had taken refuge, to Basawlī. For days together during the fatiguing march via Aonla and Bareilly several members of the ex-ruling family died of hunger and other privations. The prisoners were eventually transferred to the fort at Allāhābād, where they remained for only a few months since the concentration of Rohilla forces under Fayḍ Allāh Khān at Lāldhāng and the serious illness of Shudjāʿ al-Dawla compelled the latter, who had earlier refused to listen to the entreaties of his own mother, to relent and set free some of the prisoners. Maḥabbat Khān, another son of Raḥmat Khān, however, preferred to remain in detention along with his mother, the widow of Raḥmat Khān, and other ladies of his household rather than to win his own personal freedom.

The régime of Raḥmat Khān, a just and humane ruler, was marked by all-round peace and prosperity. "Under his ... rule the peasants were protected; the artisans and craftsmen were encouraged to pursue their vocations in peace and without let or hindrance; trade and commerce flourished and vexatious taxes

upon trade were abolished". A patron of learning and literature, he supported five thousand *ʿulamāʾ* by allowing them stipends from the public treasury. A deeply religious man, he scrupulously observed the Ramaḍān rituals and, after the custom of the *ḥuffāẓ*, also recited privately some parts of the Ḳurʾān himself during the nights of the holy month. A poet in Persian, some poems found in an anthology of Afghān poets preserved in the British Museum are ascribed to him, but it is difficult to establish their authenticity. He is the author of *Khulāṣat al-ansāb*, an account of the genealogy of the Afghāns with a concluding chapter in refutation of Shīʿism (completed in 1184/1770) (MS. I.O.,D.P. 777; cf. also Storey, I/i, 396-7).

ḤĀFIẒ AL-DĪN [see AL-NASAFĪ].

ḤAFĪẒ (ʿ**ABD** AL-), ʿAlawī Sultan of Morocco, commonly known both in Europe and Morocco by the name of Moulay Hafid. He was born in 1880 to the Sultan Moulay Ḥasan [*q.v.*] and his legal wife al-ʿAliyya, who belonged to the Arab confederacy of Shāwiyya. On the death of his father, his younger brother ʿAbd al-ʿAzīz [*q.v.*], who had become Sultan, appointed him *khalīfa* at Marrākush. After a long underhand struggle and with the aid of the great *ḳāʾid* Madanī Glāwī [see GLĀWA] he was proclaimed sultan at Marrākush on 16 August 1907. But at Fās in January 1908 he was recognized as Sultan only on the strength of his promises to follow a xenophobe policy imposed by the powerful Moroccan élite. (An attempted Idrīsid restoration took place at this time but without result). In spite of the support which Moulay Hafid found in Germany, the foreign powers did not recognize him until 1909, and then only after he had defeated the troops of his deposed brother and promised to respect the undertakings given by the latter to the European nations at the Conference of Algeciras (1906). Very well-read, a jurist and a theologian, he did not possess his father's moral qualities and was ill-prepared for the insurmountable difficulties he had to face. During his reign France and Germany reached the agreement of 1909 which recognized the "special interests" of the former in Moroccan affairs and made possible the signing of the Franco-Moroccan protocol of 4 March 1910. This act of diplomacy established "the understanding between the two countries" and enabled an international loan to be launched, which was greatly needed by Morocco. In November of the same year, the settlement of the disorders in Melilla resulted in the signing of an agreement between the Sultan and Spain. Serious events occurred in Morocco at the beginning of 1911 and, faced by increasing disorder, Moulay Hafid officially requested the help of the French troops who had been stationed at Casablanca since 1907. They were soon able to relieve Fās and facilitated the arrest and execution of the agitator (*rogī*) Bū Ḥamāra [*q.v.*] who had been at large in the countryside since 1902. The Spaniards, in order to counterbalance the French operations, occupied Larache (al-ʿArāʾish), al-Ḳaṣr al-Kabīr and then Arzila (Aṣīla). This interference provoked the disapproval of Germany, who sent a gunboat to Agadir and created for herself a zone of influence in the Sūs. The Agadir incident was settled by the Franco-German agreement of November 1911, which gave France a free hand in Morocco in return for considerable territorial compensations in Equatorial Africa. On 30 March 1912 at Fās the sultan signed with M. Regnault, representing the French government, the Protectorate Treaty. Immediately afterwards an insurrection broke out around the capital and, on 17 April, serious riots took place in Fās. They cost the lives of scores of French soldiers and civilians and of a large number of Moroccan Jews whose ghetto (*mallāḥ*) had been plundered. General Lyautey was then appointed Resident Commissioner General of the French Republic alongside H.M. the Sultan of Morocco. The position of Moulay Hafid became impossible, both in the eyes of France and of the Moroccan people, and he decided to abdicate. After he had very skilfully settled his own position and that of his family, the decision was officially announced on 13 July 1912. The Sultan then paid a visit to France, returning thereafter to Tangier, where the palace of the Ḳaṣaba was placed at his disposal. During the 1914-18 War he lived in Spain. He died at Enghien (France) on 4 April 1937. His body was taken back to Fās with the honours appropriate to his rank.

(G. Deverdun)

ḤĀFIẒĀBĀD, headquarters of a *taḥṣīl* of the same name in the Gūdjrāṅwāla [*q.v.*] district of West

Pakistan, lying between 31° 45′ and 32° 20′ N. and 73° 10′ and 73° 50′ E. on the east bank of the river Čenāb, with an area of 894 sq. miles. It is 33 miles by road from Gūdjrāṅwāla with a population (1961) of 34,576. It is an ancient town and was of considerable importance during Mug̲h̲al times, as it finds mention in the *Āʾīn-i Akbarī*, where it is described as the seat of a *maḥāll*. Its importance declined with the rise of Gūdjrāṅwāla, which lies on the main rail-road to Pes̲h̲āwar and Lahore. It is now a small town mainly known as a wholesale market for agricultural produce, chiefly fine quality rice, cotton, wheat and oil-seeds.

Founded by one Ḥāfiẓ, said to be a favourite of the emperor Akbar, it is of little historical importance. During the Sikh supremacy, it suffered along with other parts of Gūdjrāṅwāla district. Its two leading tribes—the Bhaṭṭīs and the Tārars—resolutely resisted the Sikhs and consequently suffered heavily. During the disturbances after the first World War, Ḥāfiẓābād was also badly affected, with the result that martial law was imposed.

(A. S. Bazmee Ansari)

ḤAFRAK, a district in the seventh *Ustān* (Fārs), situated in the plain where the Pulvār Rūd joins the Kurr. Ibn al-Balk̲h̲ī (*Fārs-nāma*, ed. G. Le Strange and R. A. Nicholson, London 1921, 126) mentions the district by name, but gives no description of it. Ḥamd Allāh Mustawfī, *Nuzha* (Eng. tr. G. Le Strange, 126) repeats, but does not add to, Ibn al-Balk̲h̲ī's words; however, in a further passage (178), he states that the district lies on the route from S̲h̲īrāz to Abarḳūh. The Arab geographers appear to have had no knowledge of Ḥafrak. Ḥafrak is not to be confused either with K̲h̲abr, a town in Fārs, or with the large village of K̲h̲abrak, which is in the same province. On the assumption that an earlier form of the name was Hapirak, an endeavour was made to derive this name from Ha-pir-ti, which was then thought to be the name of the Elamite people, but this, besides being geographically incorrect, is also etymologically wrong, since Ha-pir-ti has been shown to be a misreading for Ha(l)tamti; in this connexion, see Poebel, *The Name of Elam in Sumerian, Akkadian and Hebrew*, in *Amer. Jour. Sem. Lang. and Lit.*, xlviii, Chicago 1931-32, 20-6. (L. Lockhart)

ḤAFṢ b. **SULAYMĀN** [see abū salama].

ḤAFṢ b. **SULAYMĀN** b. al-Mug̲h̲īra, Abū ʿUmar b. Abī Dāwūd al-Asadī al-Kūfī al-Fāk̲h̲irī al-Bazzāz, transmitter of the "reading" of ʿĀṣim [*q.v.*]. Born about 90/709, he became a merchant in cloth, which gained for him the surname of Bazzāz. His fame rests solely on the knowledge he had acquired of the "reading" of the master of Kūfa, whose son-in-law he was. After the death of the latter and the foundation of Bag̲h̲dād he settled in the capital, where he had numerous pupils, then went to spread the "reading" of his father-in-law in Mecca. S̲h̲uʿba b. ʿAyyās̲h̲ (d. 194/809) was also concerned in the passing on of ʿĀṣim's "reading", but Ḥafṣ is considered more reliable, and it is the system passed down by his efforts which was adopted for the establishment of the text of the Ḳurʾān published in Cairo 1342/1923 under the auspices of King Fuʾād, which is gaining recognition as the modern Vulgate. This is underlined by R. Blachère (*Introd. au Coran*, Paris 1947, 134-5), who adds that the Islamic community may well recognize in the future only the "reading" of ʿĀṣim handed down by Ḥafṣ. Ibn al-Djazarī notes that Ibn ʿAyyās̲h̲ differed from Ḥafṣ on 520 points, but that the latter respected the "reading" of ʿĀṣim in full, except for one word, from XXX, 53, which he read as *ḍuʿf*, while his master vocalized it *ḍaʿf* (and it is this vocalization which has been adopted by the Cairo edition).

Ḥafṣ died in 180/796.

Khalifé, in *Machriq*, 1961, 342-62, 540-69 (*urdjūza* of 520 verses with glosses); Ibn Ḥadjar, *Tahd̲h̲īb al-Tahd̲h̲īb*, s.v.; D̲h̲ahabī, *Mīzān al-iʿtidāl*, s.v.; Yāḳūt, *Udabāʾ*, x, 215-6; Nöldeke, *Geschichte des Qorans*, iii, tables. (Ed.)

ḤAFṢ al-FARD, Abū ʿAmr or Abū Yaḥyā, theologian, concerning whose life practically nothing is known. According to Ibn al-Nadīm (*Fihrist*, 180; Cairo ed., 255), he was a native of Egypt, and, if we accept the traditional chronology of al-S̲h̲āfiʿī's biography (but see J. Schacht, in *Studia Orientalia Joanni Pedersen ... dicata*, 322), it is probably there that he fell out with al-S̲h̲āfiʿī, who is said to have "excommunicated" him (Ibn Ḥadjar, *Lisān al-mīzān*, ii, 330-1); this incident probably occurred between 188/804 and 195/810-1, so that it is unlikely that Ḥafṣ was the pupil of the *ḳāḍī* Abū Yūsuf (d. 182/798; al-Murtaḍā, *Itḥāf al-sādat*, ii, 47) before joining, in Baṣra, the circle of Abu 'l-Hud̲h̲ayl [*q.v.*], who was resident there until 203/818-9. His adherence to Muʿtazilism does not seem to have been very close; he appears later to have had some disagreement with Abu 'l-Hud̲h̲ayl, before returning to Egypt, where he represented the official theological position during the *miḥna*; nevertheless he seems to have returned to a relatively orthodox attitude.

The fact remains that the heresiographers, who frequently associate him with Ḍirār b. ʿAmr, attribute to him a doctrine which is not Muʿtazilī in that he professed the creation of acts by God (*k̲h̲alḳ al-afʿāl*). The *Fihrist* therefore lists him among the *mudjbira*, and al-K̲h̲ayyāṭ reproves him for anthropomorphism because of his thesis that the *māhiyya* of God is known to Him alone. Ḥafṣ rejected the thesis of al-Naẓẓām on the interpenetration (*mudāk̲h̲ala*) of accidents and preached *mudjāwara*. One original point of his doctrine is the sixth sense which God will create on the Day of Resurrection in order to enable His creatures to see Him.

The *Fihrist* attributes to him six works: *K. al-Istiṭāʿa*, *K. al-Tawḥīd*, *K. fi 'l-mak̲h̲lūḳ ʿalā Abi 'l-Hud̲h̲ayl*, *K. al-Radd ʿala 'l-Naṣārā*, *K. al-Radd ʿala 'l-Muʿtazila*, *K. al-Abwāb fi 'l-mak̲h̲lūḳ*, none of which seems to have survived.

ḤAFṢA, daughter of ʿUmar b. al-K̲h̲aṭṭāb and wife of the Prophet, is said to have been born five years before Muḥammad's mission, while the Ḳurays̲h̲ were rebuilding the Kaʿba. Her mother was Zaynab bint Maẓʿūn, the sister of the famous ʿUt̲h̲mān b. Maẓʿūn [*q.v.*]. Married first to the Ḳurays̲h̲ī K̲h̲umays b. Ḥud̲h̲āfa al-Sahmī and widow-

ed while still childless (her husband, a Badrī, died at Medina on the return from Badr), she was offered by her father in marriage to Abū Bakr and to ʿUthmān b. ʿAffān; the latter refused, explaining that he did not want to marry at that time; the former said nothing and later made his excuses to ʿUmar, saying that he had understood that Muḥammad himself intended to marry Ḥafṣa. Muḥammad did indeed propose marriage and ʿUmar accepted, naturally with enthusiasm. It is very likely that the Prophet was led to contract this marriage for reasons of policy, wishing to strengthen his bonds with such a valuable supporter as ʿUmar, all the more so because shortly before this he had asked in marriage Abū Bakr's daughter ʿĀʾisha.

The name of Ḥafṣa is mentioned in the sources in connexion with the following events. Hidjra: she emigrated to Medina with her father. Marriage: According to the majority of the sources, Muḥammad married her in the month of Shaʿbān 3/February 625, after his marriage with ʿĀʾisha and before the Battle of Uḥud; she was thus his fourth wife. Episodes concerning Muḥammad's harem: At the beginning of Sūra LXVI are verses alluding to an event or events which are certainly of a domestic nature: God reproaches the Prophet concerning his wives and reminds him that one of them has divulged a secret which he had entrusted to her; an allusion is then made to the alliance of two wives against the Prophet and the passage ends with a threat of general repudiation. The commentators, the authors of books of *asbāb al-nuzūl*, the biographers and the *muḥaddithūn* explain these verses thus: Muḥammad, during a temporary absence of Ḥafṣa, had invited into her room Mary the Copt [see MĀRIYA] and had relations with her there. Ḥafṣa, returning, surprised them and created a scene. Muḥammad then placated her, swearing that he would have no more relations with his slave, but at the same time insisted that she should not breathe a word of the affair. Ḥafṣa was unable to refrain from telling her friend ʿĀʾisha and the news of the incident spread. The Prophet was annoyed and divorced Ḥafṣa, but soon retracted his decision because Djibrīl came down from Heaven and charged him to take back his wife because she was very devout and was to be his wife in Paradise (Ibn Saʿd, viii, 58); moreover, ʿUmar was so grieved by the treatment inflicted on his daughter that he was to be pitied (it was probably ʿUmar's resentment which caused the Prophet to reverse his decision). He freed himself from the oath which he swore concerning Mary by means of a *kaffāra*, and for twenty-nine days avoided his wives. Nöldeke dates this episode to 7/628-9, Caetani to 9/630-1. Some reporters of *ḥadīth*s are obviously not very happy about this story, which they consider as dishonourable to the Prophet: they assert that the secret confided to Ḥafṣa, and by her to ʿĀʾisha, was the fact that Abū Bakr would succeed to power after Muḥammad and that ʿUmar would follow Abū Bakr (al-Balādhurī, *Ansāb*, i, 424, etc.). For verse 1 of the same Sūra LXVI the sources supply another *sabab al-nuzūl*, while keeping for the verses which follow the explanation given above: Muḥammad visited one of his wives, generally given as Umm Salama, but sometimes as Ḥafṣa (Ibn Saʿd, viii, 59, etc.; in this case the names change in what follows) and stayed with her longer than usual because she offered him a honey drink of which he was very fond. ʿĀʾisha then agreed with Ḥafṣa and some of the other wives of the harem on a way of preventing this from becoming a habit: one after the other said to Muḥammad when he visited her that a disagreeable smell came from him and that he must have eaten some *maghāfīr* (a sweet resin from the *ʿurfuṭ* tree). But Muḥammad had not eaten this; the smell could only have come from the drink which he had tasted earlier when visiting Umm Salama; the cause must therefore be the bees which frequented the *ʿurfuṭ* trees. Consequently Muḥammad denied himself the use of honey. But God had allowed it and Muḥammad abrogated the prohibition. According to one *ḥadīth* (al-Bukhārī, iii, 358, iv, 273 f.), the secret which the Prophet confided to one of his wives and the oath to which the Ḳurʾān refers are to be connected with this prohibition of honey (and not with the episode of Mary the Copt). Thus already very early some relaters of traditions, conforming to a different ethical system from that which prevailed in the Prophet's milieu, endeavoured to modify as much as possible the accounts transmitted by the others. This tendency to draw a discreet veil over Muḥammad's domestic life is confirmed in the modern *tafsīr*s and notably in Muḥammad ʿAlī's notes to his edition and translation of the Ḳurʾān published under the auspices of the Aḥmadiyya. Another episode, which has no connexion with the Ḳurʾān, shows us once again ʿĀʾisha and Ḥafṣa conspiring to play a trick on a woman of noble family, Asmāʾ bint al-Nuʿmān al-Djawniyya, whom Muḥammad had sent for from her tribe with the intention of marrying her. After having adorned her for her meeting with the Prophet, they advised her to say when he approached her for the first time "I take refuge with God against you," for, they told her, it pleased him when a woman uttered this sentence on such an occasion. The result of this advice was that Muḥammad threw the sleeve of his mantle over his face and cried out three times "It is I who take refuge" and went away. Immediately after this he sent the new bride back to her tribe with gifts to assuage her sorrow; the poor girl did not marry again and died in grief. Ḥafṣa as one of the four privileged wives of Muḥammad: According to Ḳurʾān, XXXIII, 51, the Prophet was authorized by God to invite to him whichever of his wives he chose without observing any order. The wives to whom he gave preference were ʿĀʾisha, Zaynab and Umm Salama, but al-Balādhurī (*Ansāb*, i, 448 and 467) and al-Yaʿḳūbī (ii, 93) add Ḥafṣa. During the final illness of the Prophet: Some *ḥadīth*s mention attempts made by ʿĀʾisha and Ḥafṣa to arrange for the Prophet to have private conversations before his death with their fathers, to the exclusion of the other Companions, and especially of ʿAlī. This is certainly possible, though these *ḥadīth*s are contradicted by others in the matter of the persons who were summoned by Muḥammad to his bedside, and it is impossible to tell which are nearer to the truth. Some *ḥadīth*s mention Ḥafṣa even in connexion with Muḥammad's delegating to Abū Bakr the leading of the public prayer. On the advice of ʿĀʾisha (or of Abū Bakr through ʿĀʾisha as an intermediary), she is said to have suggested to the Prophet that he should entrust this task to ʿUmar instead of to Abū Bakr, asserting that the latter was too weak and that his voice would be strangled by tears. It seems strange that this advice should come from ʿĀʾisha; it has, however, been pointed out that the person chosen to lead the prayer might have suffered harm instead of gaining advantage by taking the Prophet's place at a time when there was not yet any political significance attached to this duty. But in this case also there are some *ḥadīth*s which are completely different. After the

death of the Prophet: Ḥafṣa, like the other wives of Muḥammad, received an annual endowment and enjoyed the respect of the Muslims, but she did not play any political rôle even during the caliphate of her father; all that is reported of her during this period concerns matters which are of minor importance: some of the Companions asked her to persuade ʿUmar to allocate to himself from the public treasury a more liberal allowance, but ʿUmar would not be persuaded to do this, being inspired by the Prophet's example to live very soberly and modestly; as he ate frugally and dressed in too mean a fashion, she exhorted him to spend more on himself. Overcome with anger by Abū Luʾluʾa's assassination of her father, she was among those who incited ʿUbayd Allāh b. ʿUmar [*q.v.*] to take vengeance on al-Hurmuzān, and it was because of this interference that her brother ʿAbd Allāh exclaimed "God have pity on Ḥafṣa!" (Ibn Saʿd, iii/1, 259). When ʿĀʾis̲h̲a revolted with Ṭalḥa and al-Zubayr against ʿAlī, Ḥafṣa wanted to join her in this campaign, but her brother ʿAbd Allāh persuaded her not to become involved. During the conference at Ad̲h̲ruḥ, she urged ʿAbd Allāh to participate in order to prevent a split in the Muslim community. These are the only two actions to prove that she took any part in the events during the period of the civil wars. Death of Ḥafṣa: According to the majority of the sources, Ḥafṣa died at Medina in the month of S̲h̲aʿbān 45/October-November 665, *i.e.*, during the caliphate of Muʿāwiya; some, however, give the year of her death as 41/661-2, immediately after his accession, and Ibn al-At̲h̲īr (iii, 73) gives it as 27/647-8(!). Marwān b. al-Ḥakam, who was governor of Medina at this time, followed her corpse and pronounced the funeral prayer. Text of the Ḳurʾān in Ḥafṣa's possession: The first collection of the fragments of the Ḳurʾān, formed by Zayd b. T̲h̲ābit on the orders of Abū Bakr, was considered as private property and remained in the possession of Abū Bakr; after his death it passed into the hands of ʿUmar and then of Ḥafṣa (Nöldeke-Schwally, *Gesch.*, ii, 15). The committee nominated by ʿUt̲h̲mān to issue the official text made use of these *ṣuḥuf*, but returned them to their owner when the work of collation was finished. After the death of Ḥafṣa, Marwān b. al-Ḥakam had them handed over to him and destroyed them (al-Balād̲h̲urī, i, 427). Character of Ḥafṣa: Ḥafṣa did not have an outstanding personality; she was neither lively, witty and attractive like ʿĀʾis̲h̲a, nor discreet, serious and helpful like Umm Salama. Her character does not emerge very clearly from the accounts in which she is mentioned and, although some *ḥadīt̲h̲*s affirm that she certainly took after her father (*e.g.*, Ibn Ḥanbal, vi, 141, 237 f.), it is difficult to see in what the resemblance between them lay; perhaps they refer to the ease with which she flew into a passion or her ability to get her own way. Certainly she was not one of the most graceful and submissive of women. When Muḥammad at one time was threatening to divorce all his wives (al-Balād̲h̲urī, *Ansāb*, i, 425 f. etc.; Abbott, 52-5), her father advised her not to be excessive in her requests, not to contradict Muḥammad, not to speak behind his back and not to be jealous of ʿĀʾis̲h̲a, who was more beautiful and more loved by Muḥammad. Ḥafṣa was certainly not jealous of Abū Bakr's daughter; on the contrary, the two women were great friends; several *ḥadīt̲h̲*s show them eating together, fasting together, helping each other to maintain their own position in the harem, and perhaps to promote the affairs of their fathers. It should however be mentioned that, although in the first years after their marriages Ḥafṣa had the ascendancy over ʿĀʾis̲h̲a, who was still a child, the latter soon took the lead, and dominated one of the two groups of wives (ʿĀʾis̲h̲a, Ḥafṣa, Sawda and Ṣafiyya) which came into existence within the harem. If in fact she had any influence with Muḥammad and later with her father, she exerted it so discreetly that the sources made no mention of it. Ḥafṣa could read and write, while other wives of the Prophet were able only to read, and some were completely illiterate.

ḤAFṢA BINT AL-ḤĀDJDJ AL-RUKŪNIYYA (al-Rakūniyya), poetess of Granada born after 530/1135, d. 589/1190-1. Ibn al-Khaṭīb (*Iḥāṭa*, i, 316) and other writers praise the beauty, distinction, literary culture, wit, and poetic gifts of this woman, who was remembered in later ages above all for her love-affair with the poet Abū Djaʿfar Ibn Saʿīd of the Banū Saʿīd [see IBN SAʿĪD] family. Abū Djaʿfar was the inspiration of most of her poetry which we possess. After the arrival at Granada of Abū Saʿīd ʿUthmān, the son of the Almohad ʿAbd al-Muʾmin, she frequented his court and indulged in an amorous intrigue with him (though without abandoning Abū Djaʿfar) and was even sent with a delegation to ʿAbd al-Muʾmin at al-Ribāṭ. It was on this occasion that ʿAbd al-Muʾmin is said to have granted her a village or estate near Granada, al-Rukūna, from which her *nisba* is derived but which is otherwise unknown. Jealousy was an element in Abū Djaʿfar's political attitude and Abū Saʿīd's hostility towards him, and the latter finally received orders to execute his rival. After the crucifixion of Abū Djaʿfar in 560/1165 Ḥafṣa lamented her lost lover in verse which expresses a touching grief, dressed in black at the risk of prosecution, then little by little gave up poetry and devoted herself to teaching. She ended her days at Marrākush, where Yaʿḳūb al-Manṣūr had entrusted the education of the Almohad princesses to her.

Of her poetical production, strongly tinged with the romantic atmosphere which still prevailed in Spain, there remain only about 70 lines which attest a deep skill in a well-learned craft, but some personal touches and genuine sentiments often expressed in a style quite free from rhetorical artificiality may be perceived.

Di Giacomo, *Une poétesse andalouse du temps des Almohades*: *Ḥafṣa bint al-Ḥājj ar-Rukūnīya*, in *Hesp.*, xxxiv/1 (1947), 9-101 (very complete monograph containing a more detailed bibliography). (CH. PELLAT)

ḤAFṢIDS (BANŪ ḤAFṢ), a dynasty of Eastern Barbary (627-982/1229-1574), whose eponymous ancestor was the celebrated Companion of the Mahdī Ibn Tūmart [*q.v.*], the *shaykh* Abū Ḥafṣ ʿUmar b. Yaḥyā al-Hintātī [*q.v.*], one of the chief architects of Almohad greatness. His son, the *shaykh* Abū Muḥammad ʿAbd al-Wāḥid b. Abī Ḥafṣ, governed Ifrīḳiya from 603 to 618/1207 to 1221. His grandson, Abū Muḥammad ʿAbd Allāh b. ʿAbd al-Wāḥid, was governor in 623/1226, but was got rid of by one of his brothers (Abū Zakariyyāʾ Yaḥyā) in 625/1228. Under the pretence of defending the purity of Almohad tradition, which he claimed was being undermined, the new governor omitted the name of the Muʾminid caliph from the *khuṭba* (beginning of 627/Nov.-Dec. 1229) and took the title of independent *amīr*; his sovereignty was fully affirmed in 634/1236-7 by the inclusion of his name in the *khuṭba*.

In the 7th/13th century, after its temporary unification by the Almohads, the Maghrib was once again, and not for the last time, divided into three states: the Marīnid empire of Fez, the ʿAbd al-Wādid kingdom of Tlemcen (Tilimsān) and the Ḥafṣid kingdom of Tunis.

I. The *amīr* Abū Zakariyyāʾ Yaḥyā (625-47/1228-49). Having achieved independence, he gathered together what was to be henceforth the Ḥafṣid territory, i.e., the whole of Ifrīḳiya, by seizing Constantine and Bougie (628/1230) and ridding Tripolitania and the country south of Constantine of the persistent rebel Ibn Ghāniya (631/1234). The following year he annexed Algiers, and then subdued the Chelif valley. He encouraged the expansion of the Banū Sulaym (Kuʿūb and Mirdās) when they pushed back the Banū Riyāḥ (Dawāwida) in the Constantine region and the Zāb. In 636/1238, he subdued the Hawwāra of the Algerian-Tunisian borders. He thwarted a dangerous conspiracy (639/1242), and launched an attack against Tlemcen, which he took early in 640/July 1242, handing it back to the ʿAbd al-Wādid in return for his submission to Ḥafṣid rule. On his way back, he conceded to the chiefs of the tribes of the Banū Tudjīn rule over their respective territories, thus setting up in the Central Maghrib a number of small vassal states capable of ensuring his security. From 635/1238 onwards, the power of Abū Zakariyyāʾ spread as far as Morocco and Spain, whence tokens of submission flowed in. When he died, he was in control of the whole of northern Morocco, and Naṣrids and Marīnids acknowledged his overlordship.

He upheld Almohad tradition in his civil and military administration, and in his capital Tunis, on which he conferred many benefits: *muṣallā*, *sūḳ*, *ḳaṣaba* and *madrasa* (the oldest of the public *madrasas* of Barbary). Mālikism was not interfered with by official Almohadism, nor was the mysticism associated with al-Dahmānī (b. 621/1224), ʿAbd al-ʿAzīz al-Mahdawī, Sīdī Abū Saʿīd (d. 628/1231), al-Shādhilī (d. 656/1258 [*q.v.*]), and ʿĀʾisha al-Mannūbiyya (d. 665/1267 [*q.v.*]).

Rapid economic growth followed peace and security, and exchanges became more frequent with Provence, Languedoc and the Italian republics, with whom treaties were signed. From 636/1239, relations with Sicily became closer when the Ḥafṣid ruler began to pay yearly tribute in return for the right to maritime trade and freedom to import Sicilian wheat. About the same time, bonds of friendship were forged between the crowns of Tunis and Aragon. Christian merchant communities (Spanish, Provençal and Italian) settled in the ports, particularly in Tunis, with their own *funduḳs* [*q.v.*] and consuls. At the beginning of the 7th/13th century many Spanish Muslims, craftsmen, men of letters and so on, emigrated to Ḥafṣid Ifrīḳiya, and before long constituted a powerful Andalusian body alongside the Almohad caste in the capital (see ANDALUS, vi, appendix).

II. The caliph al-Mustanṣir (647-75/1249-77). As heir presumptive, Abū ʿAbd Allāh Muḥammad succeeded his father without difficulty. He gave free rein to his love of ostentation, and from 650/1253 he adopted the caliphal title of al-Mustanṣir bi'llāh. His self-confident policy was rewarded by important diplomatic triumphs in Morocco, Spain and even in the Ḥidjāz and Egypt. His rule was never jeopardised by a few plots and rebellions, often started or supported by the Arabs. In 658/1260 he executed the chief of his chancellery, the Andalusian writer Ibn al-Abbār [*q.v.*]. On the whole, relations with Christendom were as easy as they had been under Abū Zakariyyāʾ, though they suffered some setback when the crusade of St. Louis (died at Carthage, 25 August 1270) turned towards Ifrīḳiya. Less than a month later, the crusaders left under the terms of a treaty made with al-Mustanṣir. With his death began a

lengthy period of disturbance and secession (675-718/1277-1318).

III. The reign of his son al-Wāthiḳ (675-78/1277-79) began well, but was marked by the scheming of his Andalusian favourite Ibn al-Ḥabbabar and the rising in Bougie (end of 677/April 1279) in favour of a brother of al-Mustanṣir, Abū Isḥāḳ. As early as 651/1253 he had led a revolt of Dawāwida Arabs, and, after taking shelter at the Naṣrid court of Granada, had been well received by the ʿAbd al-Wādid of Tlemcen when al-Mustanṣir died. Al-Wāthiḳ was at last forced to abdicate in favour of this uncle of his, who entered Tunis as its master (Rabīʿ II 678/August 1279); he had been helped to some extent by military aid furnished by Peter II of Aragon, who was anxious to secure the allegiance of the Ḥafṣid state in his struggle with Charles of Anjou.

IV. Abū Isḥāḳ (678-82/1279-83) executed al-Wāthiḳ, Ibn al-Ḥabbabar and several other notables, and entrusted the governorship of Bougie to his son Abū Fāris. Soon after the Sicilian Vespers (30 March 1282) had tolled the knell of Angevin dominion over Sicily, Ibn al-Wazīr, governor of Constantine, to whom Peter III of Aragon had pledged assistance, proclaimed his independence, but was worsted by Abū Fāris before Peter of Aragon's forces were able to land, and the latter sailed off for Trapani.

Abū Isḥāḳ maintained normal relations with Italy, and gave one of his daughters in marriage to the heir-apparent of Tlemcen. But Ibn Abī ʿUmāra, an adventurer, seized the whole of south Tunisia with Arab help, was proclaimed caliph (681/1282), and was successful enough to cause Abū Isḥāḳ to flee to Bougie to join his son Abū Fāris. The latter obliged him to abdicate in his favour (end of 681/spring 1283).

After the usurper Ibn Abī ʿUmāra (681-3/1283-4) had been proclaimed in Tunis, he overthrew and put to death Abū Fāris (3 Rabīʿ I/1 June 1283), and even had the ex-caliph Abū Isḥāḳ executed. His triumph was short-lived. The excesses in which he indulged and his ineptness, shown particularly in dealings with the Arabs, provoked their discontent, so that they allowed Abū Ḥafṣ ʿUmar, brother to al-Mustanṣir and Abū Isḥāḳ, to dethrone him.

V. Abū Ḥafṣ (683-94/1284-95) succeeded in the task of restoring Ḥafṣid authority. Pious and peace-loving, he initiated much religious building. Aragon-Sicily became hostile, seized Djarba (683/1284), acquired by the treaty of 684/1285 the "tribute" of Tunis formerly paid by the Ḥafṣid to the Angevins of Sicily, made an alliance with the Marīnids against him (685-6/1286-7), plundered the coasts of Ifrīḳiya, and set up a pretender to the throne of Abū Ḥafṣ in the person of Ibn Abī Dabbūs (1287-8), an Almohad prince who had taken refuge in Aragon. Despite several approaches, the ruler of Aragon-Sicily never succeeded in renewing peaceful relations with Abū Ḥafṣ.

After 684/1285, Abū Zakariyyāʾ, a son of the *amīr* Abū Isḥāḳ and nephew of Abū Ḥafṣ, gained control, with the help of the Arabs, of all the western part of Ḥafṣid territory, including Bougie and Constantine. Next year he marched against Tunis. Thrown back to the South, he seized Gabès and advanced towards Tripolitania, but was forced to draw back to defend his capital Bougie, threatened by an ʿAbd al-Wādid incursion instigated by Abū Ḥafṣ, who still exercised suzerainty over the sultan of Tlemcen. Simultaneously, local independent states developed in the Djarīd, at Tozeur, and at Gabès, while the Arabs of the south and of Tripolitania began to show hostility. On the other hand, the allegiance of the Central and Eastern Arabs won for them, for the first time in Ḥafṣid history, grants of land and of revenues. During the last years of the reign, Bougie annexed the Zāb, to whose governor, from 693/1294 onwards, Abū Zakariyyāʾ conceded the control of all southern Constantine. In the same year, the lord of Gabès also recognized the suzerainty of Abū Zakariyyāʾ. Here begins the decline of Ḥafṣid influence, and from now on the opposition of Bougie to Tunis recalls that of the Ḥammādids to the Zīrids.

VI. Abū ʿAṣīda (694-708/1295-1309). A posthumous son of al-Wāthiḳ, he appointed the great Almohad *shaykh* Ibn al-Liḥyānī to be chief minister. He attempted to reduce the disaffected Kingdom of Bougie (695/1296), soon to be threatened also on the west; for Algiers had submitted to the Marīnids, and when these had mastered the Mitidja they laid siege to Bougie (699/1300). Abū Zakariyyāʾ died in 700/1301, and his son and successor Abu 'l-Baḳāʾ at once used every exertion to bring about a reconciliation with Abū ʿAṣīda; eventually they signed a treaty (707/1307-8) which had as object to reunite the two Ḥafṣid branches, and which provided that on the death of one of the two monarchs the survivor should inherit the vacant throne.

Particularly during the last three years of his reign, the realms of Abū ʿAṣīda were seriously disturbed by the Kuʿūb Arabs. We know of certain treaties he concluded with Christendom, but the levying of the "tribute" of Tunis and the occupation of Djarba kept him opposed to Frederick of Sicily.

VII. Abū Yaḥyā Abū Bakr al-Shahīd (709/1309). A second cousin of Abū ʿAṣīda, he was proclaimed by the Almohad *shaykh*s of Tunis, who rejected the arrangement whereby all Ḥafṣid territory was to pass to Abu 'l-Baḳāʾ; but the latter took only seventeen days to get rid of him, and forced the reunion of the two Ḥafṣid states.

VIII. Abu 'l-Baḳāʾ (709-11/1309-11) was unable, however, to prevent a new defection of the Constantine region under his brother Abū Yaḥyā Abū Bakr, who also made himself master of Bougie in 712/1312. Meanwhile, the old Almohad *shaykh* Ibn al-Liḥyānī had seized the throne of Tunis, which Abu 'l-Baḳāʾ was forced to give up.

IX. Ibn al-Liḥyānī (711-7/1311-7). To begin with, relations between the two Ḥafṣid monarchies were good. But, after resisting the onslaughts of the ʿAbd al-Wādids of Tlemcen (713-15/1313-15), the ruler of Bougie, Abū Yaḥyā Abū Bakr, attacked Tunisia (715-16/1315-16), and Ibn al-Liḥyānī had to give it up.

X. Abū Ḍarba (717-8/1317-8). The Tunisians made this son of Ibn al-Liḥyānī their ruler, but he resisted for only nine months the attacks of Abū Yaḥyā Abū Bakr, and Ḥafṣid unity was again restored.

XI. Abū Yaḥyā Abū Bakr (718-47/1318-46) had a hard task in putting down many serious revolts spread over the years between 718/1318 and 732/1332, which were stirred up by Abū Ḍarba or by a son-in-law of Ibn al-Liḥyānī, Ibn Abī ʿImrān, and carried on by the Arabs and the ʿAbd al-Wādids. Ḥafṣid territory was continually assailed, and often with success, by the sultan of Tlemcen (719-30/1319-30); finally Abū Yaḥyā Abū Bakr freed himself from this threat by an alliance with the Marīnid of Fez, whose heir presumptive Abu 'l-Ḥasan married a daughter of Abū Yaḥyā. The difficulties besetting the first fourteen years of the reign led to the defection of many southern localities and to much tribal disaffection. So from 720/1320 Abū Yaḥyā endeavoured

to preserve the unity of his territories by entrusting the administration of the provinces more and more to his sons, advised by chamberlains. The second half of Abū Yaḥyā Abū Bakr's caliphate (733-47/1333-46) is notable for the rise of the Almohad *shaykh* Ibn Tafrāgīn to an all-powerful position as chamberlain (744/1343), the stern quelling of Bedouin turbulence, some diminution of disaffection, the liberation of Djarba from the Sicilian yoke, the lessening of the subordination of Bougie to Tunis, and especially, with Ibn Tafrāgīn's encouragement, the gradual subjection of Abū Yaḥyā Abū Bakr to the Marīnid Abu 'l-Ḥasan, his son-in-law and immediate neighbour now that the latter had annexed Tlemcen and the ʿAbd al-Wādid kingdom.

XII. Abu 'l-ʿAbbās Aḥmad. His father, the late *amir*, had secured the Marīnid Abu 'l-Ḥasan's support for his accession to the throne, but Abu 'l-ʿAbbās Ahmad soon met his death at the hands of one of his brothers, Abū Ḥafṣ, and this murder was Abu 'l-Ḥasan's excuse for an easy conquest of Ifrīḳiya.

The Marīnid occupation (748-50/1348-50) received little support, and the abolition of the revenues which the Bedouins had been collecting from the settled populations set off an Arab revolt, which resulted in such a resounding defeat for Abu 'l-Ḥasan (749/1348) that his reputation never recovered from it. The loss of the greater part of Barbary and the growing hostility of Ifrīḳiya forced him to escape by sea to the west (Shawwāl 750/late December 1349).

XIII. Al-Faḍl. This son of Abū Yaḥyā Abū Bakr, governor of Bône, was proclaimed in Tunis, but was soon (751/1350) put down by Ibn Tafrāgīn, who replaced him by a brother of al-Faḍl, Abū Isḥāḳ.

XIV. Abū Isḥāḳ (750-70/1350-69). The new prince was so young that the wily Ibn Tafrāgīn himself was for fourteen years the real power behind the throne. Disturbances and movements towards autonomy multiplied on all sides; the Banū Makkī held the south-east and the Ḥafṣids the Constantine region, whence Abū Isḥāḳ had to endure many attacks, some of them severe (752-7/1351-6).

The Marīnid of Fez, Abū ʿInān Fāris, fired with the idea of imitating his father's heroic exploits, took Tlemcen, Algiers, and Médéa. The mutual hostility of the three Ḥafṣids ruling in Bougie, Constantine and Tunis lightened the task of the invader; who in addition had the support of the Banū Muznī of the Zāb and the Banū Makkī of Gabès.

The second Marīnid conquest of Ifrīḳiya (753-9/1352-8) began brilliantly with the capture of Bougie (753/1352), slowed down for a while, and then (757-8/1356-7) achieved its objective with the capture of Constantine, Bône and Tunis and the submission of the Djarīd and Gabès. Yet the collapse came even more swiftly than it had for Abu 'l-Ḥasan, and for a similar tactless act—the refusal to permit the Dawāwida to collect certain taxes from the settled population. His forces routed, Abū ʿInān Fāris had to fall back on Fez (758-1357). Abū Isḥāḳ and Ibn Tafrāgīn returned to Tunis only a few months after they had been turned out. The Marīnid died in 759/1358 without having succeeded in re-establishing his authority in eastern Barbary.

While an ʿAbd al-Wādid restoration was taking place in Tlemcen, matters in the East returned to the conditions ruling when Abū Isḥāḳ began his reign: Bougie, Constantine and Tunis governed by three different and independent Ḥafṣids, and the whole of the south, the south-east and a part of the Sahel maintaining their independence of the Ḥafṣid of Tunis. When Ibn Tafrāgīn died (766/1364), Abū Isḥāḳ was able to rule in person, but to no great effect. On the other hand, the Ḥafṣid of Constantine, Abu 'l-ʿAbbās, seized Bougie from his cousin Abū ʿAbd Allāh and succeeded in uniting the whole of the Constantine region (767/1366).

XV. Abu 'l-Baḳā' Khālid (770-2/1369-70). The situation rapidly worsened under this prince, who was too young when he succeeded his father, so that for the third time Ifrīḳiya was united by a Ḥafṣid of Constantine and Bougie, Abu 'l-ʿAbbās.

XVI. Abu 'l-ʿAbbās (772-96/1370-94). By his qualities of mind and heart and his gentle firmness he restored the prestige of the dynasty, of which he was one of the most notable members. From him descended all the succeeding Ḥafṣid sovereigns. Once he had checked the Bedouins (773/1371) and loosened their hold on the sedentary population, he regained piecemeal the lands his forebears had lost to the south and south-west (773-83/1371-81) and even recovered the Zāb. From 783/1381 onwards Abu 'l-ʿAbbās was occupied in consolidating his achievements and curbing any attempt to revive the suppressed local independencies of the south. Thanks to internal ʿAbd al-Wādid quarrels and the intense rivalry between ʿAbd al-Wādids and Marīnids, he had nothing to fear from the west. Relations between Barbary and Christendom were soured by Ḥafṣid acts of piracy, which grew in impudence when the Franco-Genoese expedition against Mahdia (792/1390) was halted. Later, a reconciliation with the Italian republics was brought about.

XVII. Abū Fāris (796-837/1394-1434) carried his father's task to a brilliant completion. In Constantine and Bougie (798/1396), as well as in Tripoli, Gafsa, Tozeur and Biskra, whose local dynasties he had uprooted (800-4/1397-1402), he appointed officials chosen from among his freedmen. He led daring expeditions into the Aurès (800/1398) and the Saharan borders of Tripolitania (809/1406-7). He cleared up a serious crisis which agitated the Constantine region and the south-east in 810-11/1407-8, and rounded it off by taking Algiers (813/1410-1). There followed a long period of calm, broken by the launching of several attacks in the west whereby Abū Fāris attained control over the ʿAbd al-Wādids of Tlemcen (827-34/1424-31). He intervened in Morocco as well, and even in Andalusia. His relations with Christendom were sometimes friendly, sometimes strained, but at all times close, and much diplomatic activity went on all through the reign.

The propitious state in which Abū Fāris's father had left the realm, and his own military prowess account only in part for his unusual success; he benefited in addition from the popularity which he enjoyed for his care for justice and his policy of religious orthodoxy, which was manifest in many ways: favours bestowed on the pious, the *ʿulamā'*, the *sharīf*s, the celebration of the *mawlid*, his efforts to foster Sunnism in Djarba, religious and civil building, the suppression of taxes not authorized by the *Sharīʿa*, the expansion of the voluntary privateering regarded as *djihād*. Mālikī formalism prevailed, owing to the influence of the famous jurist Ibn ʿArafa (716-803/1316-1401), who was mainly responsible for banishing Ibn Khaldūn to Cairo, where he died in 808/1406. The palace of the Bardo, first mentioned in 823/1420, illustrates how far Andalusian influence had penetrated into Ḥafṣid Barbary. Besides being the ruler of a prosperous state and a generous patron, Abū Fāris won a great reputation in the Muslim world by his far-reaching

and discerning liberality. The septuagenarian who had defeated Alphonso V of Aragon at Djarba two years before ended his days in the Ouarsénis at the head of an expedition marching to subdue Tlemcen (837/1434).

XVIII. Al-Muntaṣir (837-9/1434-5). This grandson of Abū Fāris had to contend with rebellious relatives and their Arab allies. He erected a fountain and the *madrasa* al-Muntaṣiriyya which was to perpetuate his name.

XIX. ʿUthmān (839-93/1435-88). Brother of the foregoing, he carried on the work of his illustrious grandfather Abū Fāris. Pious and just, he initiated many hydraulic works, and constructed numerous *zāwiyas*. He took the Tunisian miracle-worker Sīdī Ben ʿArūs (d. 868/1463) under his protection. He too had to contend with his relatives, especially, for the space of seventeen years (839-56/1435-52), his uncle Abu ʾl-Ḥasan ʿAlī. This son of Abū Fāris was expelled from the governorship of Bougie in 843/1439, but for long afterwards held out against the troops of the sultan in the Constantinois. ʿUthmān also undertook military operations in the south (845-55/1441-51). But in fact, once the first phase of Abu ʾl-Ḥasan's venture was over (towards 843/1439), the greater part of the country was at peace. The provinces were governed, as they had been in Abū Fāris's day, by the prince's freedmen, with the title of *ḳāʾid*. One of them, Nabīl, affronted ʿUthmān by the assumption of too great authority at the court, and was imprisoned (857/1453). The second part of the reign was clouded by outbreaks of famine and plague, and by the revival of tribal unrest, which was particularly troublesome in 867/1463; it was checked with severity, but not entirely suppressed. On many occasions ʿUthmān marched against the south and south-west (862/1458, 870/1465). An ʿAbd al-Wādid had taken Tlemcen and though brought once to heel (866/1462), he had again to be reduced to obedience (871/1466). The last years of the reign (875-93/1470-88), as indeed those of the dynasty, are obscure. ʿUthmān tended more and more to appoint his own relatives to provincial governorships. It seems that he retained his hold on Tlemcen and in 877/1472 the new lord of Fez, the founder of the dynasty of the Banū Waṭṭās, recognised his suzerainty.

XX. Abū Zakariyyāʾ Yaḥyā (893-4/1488-9). This grandson of ʿUthmān succeeded him. He dealt pitilessly with those of his relatives who challenged his rule, and was in the end himself killed by his first cousin ʿAbd al-Muʾmin b. Ibrāhīm.

XXI. ʿAbd al-Muʾmin b. Ibrāhīm (894-5/1489-90) was soon dethroned by a son of his predecessor and enemy.

XXII. Abū Yaḥyā Zakariyyāʾ b. Yaḥyā (895-9/1490-4). The Ḥafṣid state might conceivably have recovered its strength under this ruler, had he not died of the plague while still young.

XXIII. Abū ʿAbd Allāh Muḥammad (899-932/1494-1526). A first cousin of the preceding, he was given over to pleasure, and the decline of the dynasty went on apace. He restrained the rebellious Arab tribes only with difficulty, and the Spaniards took from him Bougie and Tripoli in 1510.

XXIV. Al-Ḥasan (932-50/1526-43). Son of the former ruler, he was driven from Tunis in Ṣafar 941/August 1534 by the Pasha of Algiers, Khayr al-Dīn Barbarossa, but after Charles V had occupied La Goulette he restored him to his capital (Muḥarram 942/July 1535). He fought against the Turks of Ḳayrawān (1535-36) and then against Sīdī ʿArafa (1540), the chief of the peculiar marabout state founded at Ḳayrawān by the Shābbiyya tribe. His eldest son Aḥmad deposed him.

XXV. Aḥmad (950-76/1543-69). He too continued the struggle with the Shābbiyya, whose new chief, Muḥammad b. Abī Ṭayyib, had allied himself with the Spaniards and with Muḥammad, the legitimate heir of the late Ḥafṣid ruler. Meanwhile, the pirate Dragut [see TURGHŪD], in alliance with the Turks and Aḥmad, was trying to establish himself in the Sahel. In 959/1552 the Shābbiyya were defeated by Aḥmad. The Spaniards evacuated Mahdia in 1554, and Dragut, returning from Istanbul with the title of Pasha of Tripoli, took Gafsa (December 1556) and Ḳayrawān (December 1557). In 967/1569, the Pasha of Algiers seized Tunis, and Aḥmad went to join his brother Muḥammad at La Goulette. Finally, in 982/1574, Don John of Austria lost Tunis which he had taken the year before, and the city was reduced to the rank of chef-lieu of an Ottoman province.

ḤĀḤĀ, Moroccan confederation of Berber tribes (*Iḥāḥan*) belonging to the sedentary Maṣmūda [*q.v.*], inhabiting the plateaux of the western High Atlas as far as the sea. In the 1939 census they numbered 84,000, among whom were 20 Jews, despite the traditional prohibition upon any Jew travelling about in this territory. It is a country on the ancient route (prehistoric remains) between North and South, between the plains of Marrākush and Tarūdant, either by the mountain passes or by the coast road. The Ḥāḥā are a good example of Berbers that are islamized (perhaps by ʿUḳba b. Nāfiʿ) but almost devoid of Arab blood. They speak the *tashelḥit* dialect (chleuh) and for the most part understand colloquial Arabic. Their territory includes almost the whole steppe- and forest-covered region of the argan-tree [see ARGAN] but, for lack of rain, they have to resort to extensive agriculture and goat-rearing. The houses are not grouped together in villages but are scattered, and each section lives separately. The confederation first appeared in history in the 5th/11th century (al-Bakrī does not know of it) as a supporter of the Almoravid movement, and later of the empire of the Almohads, either voluntarily or under compulsion. After the collapse of that dynasty, their geographical situation, though not giving them complete independence vis-à-vis the Marīnid sultan, allowed them to show their regard for the nomadic Arabs deported by the Almohads, particularly the Ḥārith and the Kalabiya. Ibn Khaldūn praised their intellectual standing at that time and described them as proud and courageous. Over a century later Leo Africanus, followed by Marmol, confirmed their juridical singularities and attributed to them a territory more extensive than that which they occupy at the present time; it apparently extended as far as the Asīf al-Māl, a tributary on the left bank of the Wādī Tansift. Leo also noted that although some of their elements, no doubt near the plain or the coast road, still paid tribute to the last Arab nomads on the occasion of

their annual migration with their flocks, it was not without resistance. The same author records the presence of numerous Jews in the country, from which they have today practically disappeared. The Portuguese advance in Morocco provoked a strong religious and xenophobic reaction among the Ḥāḥā, who spontaneously assumed leadership of the Holy War and made an appeal to the Saʿdid marabouts. The struggle against the Christians lasted for a long time, at the cost of much bloodshed and misery among the confederation (see R. Ricard, *Sources inédites*, 1st series, Portugal, v, Paris 1953). It was amongst them, at Afug͟hāl, that the founder of the Saʿdid dynasty was buried, and the famous al-Djazūlī [*q.v.*] was also to be interred close by, until the time when the two bodies were transferred with great ceremony to Marrāku͟sh (929/1523). The Saʿdids established a section of their cane-sugar industry among the Ḥāḥā; the surviving remains and thedefore station of the region still testify to the economic significance of these destructive enterprises. In 1002/1594 six hundred men were recruited from the Ḥāḥā and sent to Timbuktu by sultan Aḥmad al-Manṣūr [*q.v.*] with the promise of exemption from all levies or taxes (al-Saʿdī, *Tāʾrik͟h al-Sūdān*, ed. and trans. Houdas, Paris 1900, index). The founding of the town of al-Ṣawīra (Mogador) in 1178/1765, by bringing greater wealth to the northern Ḥāḥā, encouraged them to support the cause of the ʿAlawī dynasty. Those in the South, whose centre is still Tamanar, have been a source of constant trouble in the Moroccan Mak͟hzan, penetration of which was only completed under the French Protectorate, and not without difficulties of every sort (on the relations of the Ḥāḥā with the neighbouring tribe of the Seksawa, see J. Berque, *Antiquités Seksawa*, in *Hesp.*, 1953). A Moroccan confraternity, of S͟hād͟hilī origin, bears the name Ḥāḥiyūn (Ibn Ḳunfud͟h, *Uns al-faḳīr*, ed. M. Fasi and A. Faure, forthcoming).

ḤĀʾIK [see LIBĀS].

AL-ḤĀʾIK, MUḤAMMAD AL-ANDALUSĪ AL-TIṬAWNĪ, compiler of the texts of songs deriving from Andalusian Arab music which, in his time (12th/18th century), were still preserved in Morocco; a great number of them have been transmitted orally from generation to generation down to the present day.

Very little is known of al-Ḥāʾik and his name is known only because it is found at the beginning of the introduction of his still unpublished work *Kunnās͟h al-Ḥāʾik*. His ethnical name, al-Tiṭawnī, suggested that he was an inhabitant of Tetuan, and this has been stated by a number of writers on Moroccan music. However, a manuscript fragment which contains the first eighteen pages, bears, after his name and his ethnical name, the words *aṣl^an^*, *al-Fāsī dār^an^*; this fragment was indeed discovered at Fez, and in no other manuscript is this detail given. Al-Ḥāʾik was, then, a native of Tetuan and probably composed his work at Fez, where he was living; this seems natural, given the courtly ambiance which prevailed there at that period, that is, so far as can be ascertained, in the reign of the sultan Muḥammad b. ʿAbd Allāh b. Ismāʿīl b. Mawlāy al-S͟harīf. There exist no other facts about his life; the historians of Tetuan know no more than this and there is nothing in the libraries of Morocco which can throw any light on his biography.

The majority of the musicians of present-day Morocco, who continue the mediaeval tradition, have no knowledge of musical theory, so that the melodies and the texts of songs have undergone alterations; this gives al-Ḥāʾik's work an especial importance in that it has rescued from oblivion all that remained of them in his time. The original manuscript does not survive, or at least it is not known where it is, but a number of copies of it exist in various Moroccan towns; not all of them give the *nawba*s in the same order or contain the same songs, the copyists having given preference to those which were most commonly sung in a given locality.

In 1353/1934-5, there was published at Rabat a book of 182 pages entitled *Madjmūʿat al-ag͟hānī al-mūsīḳiyya al-andalusiyya al-maʿrūfa bi 'l-Ḥāʾik*. Its author, al-Makkī Ambīrkū, has collected the songs of the *nawba*s *Ramal al-māya*, *al-ʿUs͟hs͟hāḳ*, *al-Iṣbahān*, *G͟harībat al-Ḥusayn*, *al-Raṣad* and *Raṣad al-d͟hayl* after having, he claims, compared several MSS. This work, of unequal value, is incomplete, for, in addition to the fact that it contains only six *nawba*s out of eleven, its author has not collected all the songs, nor included those which are found in the margins of the good manuscripts.

In spite of the detailed character of his collection, al-Ḥāʾik did not collect all the Andalusian music which was sung in his time, for several verses of vanished *nawba*s which are still sung at Tetuan are not found in his manuscripts—a further indication that al-Ḥāʾik did not come from Tetuan.

In the absence of a system of musical notation, al-Ḥāʾik, starting from the principle that the musician knows the melody from memory, adds in the margin of each song notes concerning the *mīzān* (rhythm and time) and separates the *as͟hg͟hāl* songs with the number of their *adwār*.

The work begins with an introduction and then sets out the 721 songs which comprise the 24 modes, grouped into 11 *nawba*s. At the beginning of each *nawba* there is a short explanation on the modes, including their origin and their qualities, and illustrated by examples of songs which actually belong to them. Next, arranged by rhythm, are found the various songs which form the *nawba* and whose number is not the same in all cases.

Above the song is given its title of *taws͟hīḥ*, *zadjal* or *s͟hug͟hl*, and almost all of them have in the margin a variant which is sung to the same melody. In the margin there is also given the mode to which the song belongs and its metre, if it has one. The *adwār* are indicated by numbers beside the corresponding verses.

ḤĀʾIL [see ḤĀYIL].

ḤĀʾIR (A.), term (proved by various lexicographical investigations to be identical with *ḥayr*, see H. Pérès, *La poésie andalouse en arabe classique*, Paris 1937, 129) whose meaning is clarified by the study of the remains of *ḥayrs* still surviving around ancient princely residences of the Islamic Middle Ages. The frequent references by Arab authors, which lead to the conclusion that they were either parks or pleasure-gardens, provided sometimes with a sumptuous pavilion, or more exactly zoological gardens like those which are recorded at Sāmarrā or at Madīnat al-Zahrāʾ (cf. H. Pérès, *op. cit.*, index s.vv. *ḥāʾir* and *ḥayr*), are supplemented by the data provided by the ruins of Umayyad or ʿAbbāsid castles, and by the ruins of the Ghaznawid castle of Lashkar-i Bāzār in Afghānistān.

The numerous enclosures which surrounded the palaces of Baghdād and Sāmarrā in ʿIrāḳ, enclosures filled with rare plants and stocked with animals, to make them hunting-reserves, have, it is true, now vanished without leaving any appreciable traces; but on the other hand, at Umayyad sites with the significant names Ḳaṣr al-Ḥayr al-Gharbī and Ḳaṣr al-Ḥayr al-Sharḳī [*qq.v.* and ARCHITECTURE] and at Khirbat al- Mafdjar [*q.v.*], various types of outer walling have survived to a degree sufficient to provide valuable information on the appearance and the dimensions of the gardens which they enclosed. In each case are found walls of stone and brick, now fallen into ruin but formerly of considerable height, which were supported by semi-circular buttresses built alternately against the inner and the outer face; these walls enclosed vast areas of arable land irrigated by aqueducts and with other elaborate installations for bringing and holding water; sluice-gates made it possible to drain off superfluous water brought by torrential rain-storms. The areas enclosed may have been pleasure-parks, continuing the tradition of the elaborate 'paradises' of the kings of the ancient Orient. More probably, however, the land was under very productive cultivation, planted particularly with bushes and trees (fruit-orchards and olives in the steppe-country around Palmyra, orange-trees in the Jordan valley); this would explain the presence of edifices built by members of the aristocracy, and sometimes by caliphs, in places which assured the owners substantial revenues from the products of the soil.

(J. SOURDEL-THOMINE)

ḤĀʾIṬ AL-ʿ**ADJŪZ** "the wall of the Old Woman" (the form Ḥāʾiṭ al-Ḥadjūz is sometimes found, notably in al-Harawī) the name given by Arabic writers to a wall said to have been built by the mythical queen of Egypt, Dalūka [= al-ʿAdjūz], who is said to have mounted the throne after the army of al-Walīd b. Muṣʿab [*sic* = the Pharaoh of Moses], in pursuit of the Israelites, had been engulfed by the Red Sea. In ordeı to protect the surviving women, children and slaves from the attacks of the peoples of the East and of the West, Dalūka is said to have surrounded the Nile Valley, from al-ʿArīsh to Aswan, by a rampart flanked by military posts each within call of the next; according to another tradition, this wall, which was decorated with figures of crocodiles and other animals, was also intended to protect the queen's son, a keen hunter, against wild animals.

This legend, which had already appeared in a similar form in Diodorus Siculus (I, 57), probably owes its origin to the Egyptian habit of building here and there small outlook-posts of sun-dried brick which enabled them to keep a watch on the *wādīs* leadirg towards the Nile and remains of which still existed in the 19th century. This wall is mentioned by many Arabic writers, but whereas al-Masʿūdī (332/943) for example saw only ruins of it, al-Harawī (d. 611/1215) had followed along it "on the tops of mountains and in the depths of valleys" from Bilbays to the Nubian frontier "for a distance of about one month's walking", and Ibn Faḍl Allāh al-ʿUmarī (d. 749/1349), while admitting that the greater part of it had disappeared, stated that he had followed it from farthest Upper Egypt to Dandara.

(CH. PELLAT)

ḤAḲĀʾIḲ, plural of *ḥaḳīḳa* = truth, as a technical term denotes the gnostic system of the Ismāʿīliyya [*q.v.*] and related groups. In this technical sense the term is used particularly by the Ṭayyibīs.

During the eras of the prophets of the law—the time of concealment (*satr*)—the *ḥaḳāʾiḳ* are hidden in the *bāṭin* [see BĀṬINIYYA], the interior truth behind the exterior (*ẓāhir*) of the scriptures and the law. While the law changes with every new prophetic era the truth of the *ḥaḳāʾiḳ* is eternal. This truth is the exclusive property of the divinely guided Imām and the hierarchy of teachers installed by him. It cannot be revealed to anyone except on formal initiation. The *Ḳāʾim* will abrogate all prophetic law and make the hidden truth public. In his era the *ḥaḳāʾik* are fully known free from all symbolism. The teaching hierarchy is no longer needed and discarded.

The two main components of the *ḥaḳāʾiḳ* system are an interpretation of history as the permanent struggle and eventual victory of the hierarchy in possession of the esoteric truth over the adversaries, and a cosmology dividing the world into a spiritual, an astral, and a physical realm. History is viewed as a progression of cycles with recurrent types and situations leading to its consummation in the appearance of the *Ḳāʾim*, who will rule and judge the world. The roots of this interpretation of history are Shīʿī, and it appears in its main features already in Ismāʿīlī texts of the 3rd/9th century. The basis

of the cosmology, at least since the early 4th/10th century, was adapted from Neoplatonism. A Neoplatonic cosmology was introduced by the Persian *dāʿī* al-Nasafī [*q.v.*] (d. 332/943-4). His system was criticized in some points by his contemporary Abū Ḥātim al-Rāzī [*q.v.*], but defended by the younger contemporary Abū Yaʿḳūb al-Sidjzī [*q.v.*]. Fāṭimid Ismāʿīlism adopted the cosmological system apparently only under the caliph al-Muʿizz [*q.v.*] (ruled 341-65/953-75). A new system was propounded by Ḥamīd al-Dīn al-Kirmānī (d. ca. 411/1020), but was not much noticed in Fāṭimid times. Among the Ṭayyibīs in the Yaman a new synthesis introducing mythical elements was adopted by Ibrāhīm al-Ḥāmidī [*q.v.*] (d. 557/1162). His work remained the basis of the Ṭayyibī *ḥaḳāʾiḳ* system. Among the Nizārīs interest gradually turned away from the *ḥaḳāʾiḳ* and centred more and more on the reality of the Imām viewed as an eternal and absolute figure transcending history and the world.

Bibliography: See ISMĀʿĪLIYYA. Zāhid ʿAlī, *Hamārē Ismāʿīlī madhhab kī ḥaḳīḳat aur us kā niẓām*, Ḥaydarābād Dn. 1954, 576 ff.

(W. MADELUNG)

ḤAKAM, arbitrator who settles a dispute (from *ḥakama*: to judge, from whence is derived also *ḥākim*: any holder of general authority, such as a provincial governor and, more precisely, the judicial magistrate). A synonym, also a technical term and in current use, is *muḥakkam* (from *ḥakkama*: to submit to arbitration, whence also *taḥkīm*, the procedure of arbitration or, more precisely, submission to arbitration).

In pre-Islamic Arabia, given the lack of any public authority responsible for the settling of disputes [see DIYA, ḲIṢĀṢ, THAʾR], *taḥkīm* was the sole judicial procedure available to individuals who did not wish to exercise their right of private justice or who were unable to settle their differences by means of a direct friendly agreement. This procedure was of a purely private character, depending throughout solely on the goodwill of the parties involved. In principle, they chose their *ḥakam* freely, and the only binding force of the latter's decision was a moral one. Thus the arbitrator usually asked the parties to the dispute to hand over to him pledges which would ensure that his judgement was carried out.

Nevertheless arbitration acquired a certain systematization and an institutional character amounting to public justice in the fairs held periodically in various localities, such as ʿUkāẓ: a *ḥakam* was appointed there, to whom, by force of custom, recourse was made for the settlement of disputes arising from the transactions being carried out there.

This state of affairs survived in Arab society after the coming of Islam, for the Ḳurʾān maintained, in principle, the system of private justice; all the same, it recommends Muslims to submit their differences to the arbitration of Muḥammad. An illustration is provided by the famous *taḥkīm* to which, in 37/657, in their struggle for power, ʿAlī and Muʿāwiya consented to submit [see ʿALĪ B. ABĪ ṬĀLIB, MUʿĀWIYA, ṢIFFĪN].

In Muslim law, which developed in environments and in social and political conditions entirely different from those of Arabia, arbitration is encountered in its classical form: it is an adventitious procedure, as compared with the organized judicial system of the State.

Nature of arbitration. — Although it proceeds from the will of the parties involved, arbitration constitutes an act of jurisdiction: it is described in the texts as "a branch of the judicial power" (although, on the other hand, an arbitrator's decision is regarded as a transaction). Indeed the *ḥakam* is obliged to give judgement in conformity with the rules of the Law; arbitration in simple equity, by friendly agreement, seems therefore to be impossible. But this disadvantage is offset by the fact that the parties may empower their respective arbitrators to agree, in their name, upon a compromise solution.

Scope. — *Taḥkīm* is possible only for the settlement of private conflicts of interest concerning property.

There may be only a single arbitrator, or the parties may nominate two or more arbitrators. In the last case the arbitrators must, in principle, give a unanimous decision. Nevertheless the question is discussed whether, if the parties agree, a majority decision may be given.

The necessary qualities of an arbitrator are the same as those demanded of a judge; and the same impediments and grounds of objection apply.

Effects. — The agreement to submit to arbitration is not binding, inasmuch as the appointment of the arbitrator is regarded as the nomination of a proxy, so that either party may revoke it *ad nutum*, even when it is the case of a single arbitrator appointed with the agreement of the two parties. This rule admits of only one modification: when the appointment of the arbitrator has been submitted to the judge for his approval, revocation is no longer possible. Nevertheless in the Ḥanbalī *madhhab* one opinion teaches that revocation is no longer possible after the arbitrator has commenced proceedings. The Mālikī *madhhab* rejects these distinctions and recognizes the agreement to submit to arbitration as obligatory in all circumstances.

As for the arbitrator's decision, it is binding in all the *madhhabs*, except for one contrary opinion in the Shāfiʿī *madhhab*. It has therefore full legal force, and does not need to be confirmed by the ratification of a judge. Nevertheless an arbitrator's decision carries less authority than a judge's. On the one hand, it is generally agreed that an appeal against it may be made before the judge, who may annul it if it seems to him to be contrary to the teaching of the *madhhab* which he follows. (Yet it should be remembered that such an appeal may be made also against judicial decisions.) All the same, the party profiting by the arbitrator's decision is free to submit it to a judge, who will confirm it, certifying that it is in conformity with his *madhhab*; in this case the decision will have the validity of a judgement proper. On the other hand, the effects of the decision are strictly limited to the persons who are directly involved. Thus whereas judgements may affect persons not involved in the proceedings but regarded legally as represented by the plaintiff or defendant in the case (one heir by other heirs, the surety by the principal debtor), the decision of an arbitrator is not recognized as having any such effect.

(E. TYAN)

AL-**ḤAKAM** B. ʿ**ABDAL** B. DJABALA AL-ASADĪ, satirical Arab poet of the 1st/7th century. Physically deformed, for he was hunch-backed and lame, he possessed some spitefulness, which shows in his diatribes, but he had a lively wit, prompt repartee, humour, and the subtlety of the Ghāḍira clan to which he belonged [cf. AL-GHĀḌIRĪ]. He was born

at Kūfa and lived there till ʿAbd Allāh b. al-Zubayr drove out the Umayyad authorities (64/684) whom he followed to Damascus where he was admitted to the intimacy of ʿAbd al-Malik b. Marwān. He then went back to Kūfa and was closely connected with Bis̲h̲r b. Marwān [*q.v.*] whom he accompanied to Baṣra when the latter was appointed governor there (74/693-4), and whose death he was to lament at the end of that same year. He was also on excellent terms with ʿAbd al-Malik b. Bis̲h̲r, and frequented the salon of al-Ḥad̲j̲d̲j̲ād̲j̲, who on one occasion rewarded him richly. While poetry was certainly his means of livelihood, he was far removed from the pompous eulogies that poets used to address to the great; he contented himself with merely sending short letters in verse to his benefactors, appealing to their generosity, and the fear of his satires was generally enough to assure him success; al-D̲j̲āḥiẓ (*Bayān*, iii, 74) and other authors after him even describe how, once his reputation for redoubtable satire was established, he limited himself to sending his walking stick to the powers he wished to appeal to, with the object of his request written upon it, and never had to suffer another refusal. His fame, indeed, rests in part at least on a *ḳaṣīda* dedicated to the senior official of the *k̲h̲arād̲j̲*, Muḥammad b. Ḥassān b. Saʿd, to which he added a few lines every time this intractable administrator gave him cause for complaint (text in *Ḥayawān*, i, 249-53). The fragments of his poetry which have come down to us show al-Ḥakam b. ʿAbdal as a likeable rogue, given to drink, and always ready to produce a few witty verses to obtain a present or to escape punishment. His satires, in which he is not above using coarse language, are not, however, sordid; the few amatory verses which have been preserved are rather crude, but what is most surprising is to find under his name a poem written with great simplicity on the misdeeds of a mouse and the usefulness of a cat (*Ḥayawān*, v, 297-300). The date of his death is unknown.

Bibliography: references in Nallino, *Letteratura*, 149 (French tr., 228-9); D̲j̲āḥiẓ, *Buk̲h̲alāʾ*, ed. Ḥād̲j̲irī, 381-2; F. Bustānī, *Dāʾirat al-maʿārif*, iii, 344.—Some poems can be found in D̲j̲āḥiẓ, *Bayān* and *Ḥayawān*, index; Ibn Ḳutayba, *ʿUyūn*, index; Ḳālī, *Amālī*, 1344/1926 ed., ii, 260-1; Mubarrad, *Kāmil*, 458; Abū Tammām, *Ḥamāsa*, index; *Ag̲h̲ānī*, ii, 149-59 and index (Beirut ed., ii, 360-80); Āmidī, *Muʾtalif*, 161.

AL-ḤAKAM B. MUḤAMMAD B. **ḲANBAR** AL-MĀZINĪ, a minor poet of Baṣra, of whose work there remain only some lines of *g̲h̲azal* [*q.v.*] that are entirely proper and for the most part set to music, and also a small number of invectives against Muslim b. al-Walīd [*q.v.*]. The date of his birth, which must have taken place in about 110/728-9, is not precisely known, and the only indications concerning him that we possess are two anecdotes: the first tells of the female slaves of Sulaymān b. ʿAlī (d. 142/759 [*q.v.*]) maltreating Ibn Ḳanbar, even stripping him in the street, because they were astonished to find so ugly a man capable of composing love poems that had become celebrated; the second testifies to his friendly relations with Ruʾba b. ʿAd̲j̲d̲j̲ād̲j̲ (d. in about 145/762 [*q.v.*]). Like so many other Baṣran poets, he went to Bag̲h̲dād, where he appears in the company of Abān al-Lāḥiḳī [*q.v.*] and, in particular, Muslim b. al-Walīd. The two men were enemies, to the point that they sometimes came to blows, and it is related that Muslim took a long time to get the better of his adversary. The epigrams that they exchanged do not appear to have been scurrilous, and it is interesting to see in them the revival of the old tribal disputes and rivalries between the Muhād̲j̲irūn and the Anṣār, Ibn Ḳanbar acting as defender of the former against Muslim who was an Anṣārī; but we possess too little of his poetry to draw conclusions of any value.

Bibliography: *Ag̲h̲ānī*, xiii, 9-12 (Beirut ed., xiv, 153-60), xxi, 228-71 *passim*; Ibn Sallām, *Ṭabaḳāt*, 579 (although the *Ag̲h̲ānī* relates several details on the authority of Ibn Sallām [139-231/756-845], the latter does not give any account of Ibn Ḳanbar); Ṣūlī, *Awrāḳ*, i, 30, 215; Ḥuṣrī, *Zahr al-ādāb*, 153, 761; F. Bustānī, *Dāʾirat al-maʿārif*, iii, 468; Muslim, *Dīwān*, ed. S. Dahhān, index.

(CH. PELLAT)

ḤAKAM B. **SAʿD**, tribe of Arabia dwelling in the Tihāma [*q.v.*].

(AL-)**ḤAKAM IBN ʿUK(K)ĀS̲H̲A**, an Andalusian adventurer. His ancestor ʿUk(k)ās̲h̲a had been one of the numerous *muwallad*s who had joined forces with Ibn Ḥafṣūn to rebel against the central power of Cordova, stationing themselves in the fortresses along the Guadalén, in the region of Jaén and Martos. The rebels submitted without resistance to ʿAbd al-Raḥmān III, in the course of his first Andalusian campaign, known as that of Monteleón, in 300/913; they were granted *amān* but were transferred together with their families to Cordova, so that the *amīr* could be sure that they remained submissive. It was there that (al-)Ḥakam Ibn ʿUk(k)ās̲h̲a lived. At the downfall of the Caliphate he appears in the service of Ibn al-Saḳḳāʾ, the vizier of Ibn D̲j̲ahwar [see D̲J̲AHWARIDS]. The assassination of the vizier led to the imprisonment of (al-)Ḥakam, who nevertheless succeeded in escaping and joining the King of Toledo, al-Maʾmūn. The latter, who also was aiming at annexing Cordova to his possessions, was anticipated by al-Muʿtamid of Seville. But when al-Maʾmūn set him in command of one of his fortresses on the frontier of the Cordovan territory, Ibn ʿUk(k)ās̲h̲a, much helped by the hostility which the Cordovans felt for the ʿAbbādids, managed by a sudden attack to gain entrance to the town and kill the governor ʿAbbād, the son of al-Muʿtamid, together with Ibn Martīn, the chief of his mercenaries. He met with no resistance in making himself master of the city, and proceeded to proclaim as ruler al-Maʾmūn, then in Valencia, who on his arrival in Cordova was solemnly recognized as ruler on Friday 23 D̲j̲umādā II 467/13 February 1075. However, he died, possibly through poisoning, four months later on 14 D̲h̲u 'l-Ḳaʿda 467/1 July 1075. The Cordovans rose in revolt and summoned back al-Muʿtamid; Ibn ʿUk(k)ās̲h̲a fled without contemplating resistance, and as he was crossing the bridge over the Guadalquivir he was killed by a Jew on 29 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 467/15 August 1075. As a sign of contempt, his body was crucified together with that of a dog. His son Ḥarīz fled to Toledo, where al-Ḳādir, al-Maʾmūn's successor, put him in command of Calatrava (Ḳalʿat Rabāḥ); he is mentioned as a poet by al-Fatḥ Ibn K̲h̲āḳān and Ibn al-Abbār.

(A. HUICI MIRANDA)

AL-ḤAKAM I B. HIS̲H̲ĀM, Abu 'l-ʿĀṣī, third Umayyad *amīr* of Cordova. The second son of his father, who died prematurely, he succeeded on 3 Ṣafar 180/17 April 796 when 26 years old. At his

proclamation the internal truce was broken and his uncles Sulaymān and ʿAbd Allāh, sons of ʿAbd al-Raḥmān I, disputed his authority and crossed from Barbary to Spain. ʿAbd Allāh made for the Upper Frontier, but he found conditions unfavourable there and went with his sons ʿUbayd Allāh and ʿAbd al-Malik to negotiate with Charlemagne at Aix-la-Chapelle and offer him support in a campaign against Barcelona and the region of the Ebro delta. In the following year Sulaymān also landed in the Peninsula and made to attack Cordova, but was defeated and withdrew to Merida, where he was captured and put to death. ʿAbd Allāh was pardoned on condition that he did not leave Valencia.

The reign of al-Ḥakam I was almost entirely devoted to suppressing the repeated rebellions which were ceaselessly breaking out on the three frontiers of Toledo, Saragossa, and Merida. There was a rising at Toledo, populated for the most part by *muwallads*, in the year following the proclamation of al-Ḥakam I's succession, and the faithful ʿAmrūs was sent to put it down and decimated its citizens in the famous "Day of the Ditch" (*waḳʿat al-ḥufra*). On the Upper Frontier the Banū Ḳaṣī provoked isolated rebellions which the same ʿAmrūs, now transferred to Saragossa, made it his task to suppress. He also punished the *muwallads* of Huesca and founded the citadel of Tudela so as to provide himself with a firm foothold. On the Lower Frontier the centre of neo-Muslim and Berber resistance was Merida, which did not give in till 197/813. Two great insurrections in the capital, Cordova, coincided with these frontier risings. In Djumādā I 189/May 805 a plot to dethrone al-Ḥakam I and replace him by Muḥammad b. al-Ḳāsim, his cousin, was uncovered, and 72 Cordovan notables were crucified and exposed on the causeway which runs along the right bank of the Guadalquivir. Thirteen years later, in 202/818, the well-known popular uprising of the Arrabal (Suburb) took place and was savagely repressed. 300 notables were crucified and the rest of the inhabitants of the Arrabal were exiled. Some emigrated to Fez; others joined the Levantine pirates: their wanderings led them to Alexandria and Crete, where they survived for a century and a half. Internal insurrections prevented al-Ḥakam I from undertaking any serious offensive against the kingdom of Asturias. In 180/796 a raid through Old Castile (al-Ḳilāʿ) enabled him to take possession of Calahorra and to reach the coast at Santander, but in 185/801 Barcelona fell to Charlemagne's Franks and so Louis the Pious was able to organize the Spanish Marches. In the same year the troops of al-Ḥakam I were defeated in the defile of Arganzón and counter attacks by the Asturians provoked a new offensive which brought about their defeat at Wādī Arūn (which must be the Orón, near Miranda de Ebro).

In spite of the savage cruelty and continual uprisings of the reign of al-Ḥakam I, it coincides with the period of humanization of al-Andalus and foreshadows the era in which, with the succession of his son ʿAbd al-Raḥmān II, ʿAbbāsid influence from the East is to become preponderant and the domination of the neo-Muslims in the civil administration and in military command to become ever greater. At the end of his life al-Ḥakam's character lost some of its asperity as he lost his health and he withdrew into his palace under the guardianship of his faithful foreign mercenaries. Within a fortnight of having his son ʿAbd al-Raḥmān II recognized as his successor he died on 25 Dhu 'l-Ḥidjdja 206/21 May 822, leaving to his son a kingdom completely submitted to the *amīr*'s authority.

(A. Huici Miranda)

AL-ḤAKAM II, AL-MUSTANṢIR BI'LLĀH, second Umayyad Caliph of Spain, son of ʿAbd al-Raḥmān III. His reign was one of the most peaceful and fruitful of the Cordovan dynasty. In his time Cordova, as an intellectual capital, shone even more brilliantly than under ʿAbd al-Raḥmān III. Though nominated heir-apparent in his first youth he was 46 years old before assuming power (2 or 3 Ramaḍān 350/15 or 16 October 961). He had acquired a long and direct experience of public affairs and as a statesman showed himself not unworthy of his illustrious father. The fifteen years of his reign were peaceful; the only alarm to disturb them was a raid by the Danish *Madjūs* [*q.v.*] who landed first at Alcacer do Sal and were repulsed on the plain of Lisbon in 360/971. The indubitable superiority of the Caliphs forces ensured the most complete security of the borderland right from the beginning of al-Ḥakam II's rule. It also imposed a truce on Christian Spain during which embassies arrived in Cordova continuously from 356/966 until 365/975, when count García Fernandez of Castile, with Galician and Navarrese support, broke the peace and was defeated at S. Esteban de Gormaz and later at Langa on the Duero and Estercuel near Tudela. Al-Ḥakam's activity in Morocco, now that the Fāṭimids had removed to Egypt, and until the rise to political and military power of Muḥammad b. Abī ʿĀmir, known as al-Manṣūr (Almanzor of the Christian Chronicles [see AL-MANṢŪR]), was confined to deposing the Idrīsid princes. In the course of ten years, by dint of intrigues, distribution of gold, and armed intervention, he saw to it that his best general, the famous *mawlā* Ghālib, subdued the Idrīsid al-Ḥasan b. Gannūn and transported him and his relatives to Cordova. This minor triumph was celebrated with great pomp as marking the resolution of the last major problem of al-Ḥakam's foreign policy. His glorious reputation, heightened by the interest and good taste with which he enlarged and beautified the marvellous mosque of Cordova, and his literary and artistic predilections seemed to augur well for a long and fruitful reign, but his health, which had always been delicate, took a serious turn for the worse as the result of a stroke which he had suffered two years before these events, and the *de facto* direction of the affairs of state fell to the minister Djaʿfar b. al-Muṣḥafī. Anxious to ensure that the succession should fall to his only son, the adolescent Hishām II, he was proposing to have allegiance sworn to him with great pomp in the Alcázar of Cordova, but he died on 3 Ṣafar 366/1 October 976, and the *bayʿa* to Hishām II took place on the following day. Even before falling ill he gave evidence of exemplary piety, in contrast with the conduct of his father, and sought with enthusiasm the company of jurists and theologians as well as literary men and scientists.

(A. HUICI MIRANDA)

AL-ḤAKAMĪ [see ABŪ NUWĀS; AL-DJARRĀḤ B. ʿABD ALLĀH].

ḤAKĪKA, Various approximate translations of this word can be given, as will appear. The meanings that predominate are "reality", in the sense of the intelligible nucleus of the thing existing, or "nature" of the thing, or "transcendental truth" of that which exists. The term is not Ḳurʾānic, unlike *ḥaḳḳ* (the "real", the "true"), a divine Name, from which it must be distinguished (see below). As al-Djurdjānī indicates (*Taʿrīfāt*, Leipzig 1845, 94), *ḥaḳīḳa* derives from (*ḥaḳḳ* →) *ḥaḳīḳ*, which with the addition of the ة becomes an abstract substantive. — For a more precise understanding of the nuances implied, the vocabularies of grammar, philosophy (*falsafa*) and *taṣawwuf* must be examined.

1. In rhetoric (and exegesis, *tafsīr*), *al-ḥaḳīḳa* is the basic meaning of a word or an expression, and is distinguished (a) from *madjāz*, metaphor, metaphorical and figurative meaning, and (b) from *kayfiyya*, in the general sense of analogy. — Ibn Taymiyya has left (ms., coll. Rashīd Riḍā, Cairo) a treatise *al-Ḥaḳīḳa wa 'l-madjāz*. When the *madjāz* becomes so habitual in use that it acquires as it were a "basic meaning", it is then designated *al-ḥaḳīḳa al-ʿurfiyya* (cf. A. Mehren, *Rhetorik*, 31, cited by Macdonald, *EI*[1]). Louis Massignon quotes (*Passion d'al-Ḥallādj*, Paris 1922, 822) a ms. of al-Ḥallādj entitled *al-Kayfiyya wa 'l-ḥaḳīḳa*: *kayfiyya* is here clearly differentiated from *madjāz* (cf. *ibid.*, quoting another title *al-Kayfiyya wa 'l-madjāz*, common to both al-Ḥallādj and al-Ashʿarī); *ḥaḳīḳa* then becomes the "basic, divine and definitive meaning" (*ibid.*, n. 2).

2. In *falsafa* (especially according to Avicennan usage), *ḥaḳīḳa* possesses a two-fold meaning, the ontological and the logical. (A) Ontological meaning (*ḥaḳīḳat al-shayʾ*): "Everything has a *ḥaḳīḳa* through which it is what it is ... It is what we have called "existence proper" (*al-wudjūd al-khāṣṣ*); by that, we have not meant to signify concrete (*ithbātī*) existence ... It is clear that each thing has its own *ḥaḳīḳa* which is its quiddity (*māhiyya*)" (Ibn Sīnā, *al-Shifāʾ*, *al-Ilāhiyyāt*, Cairo ed. 1380/1960, 31; cf. 45). Or again: the *ḥaḳīḳa* is "the property of being requisite for each thing" (*Nadjāt*, Cairo ed. 1357/1938, 299). There is the same idea in the *Ishārāt* (ed. Forget, Leiden 1892, 139), where it is stated that the *ḥaḳīḳa* of the triangle depends on causes, one formal and one material, and not on causes efficient and final. — It was in the same Avicennan line that al-Djurdjānī was to define *ḥaḳīḳat al-shayʾ* as "the thing as it is in itself" (*Taʿrīfāt*, 95). *Ḥaḳīḳa* must thus be understood not as the thing existing, but as the essence of the thing inasmuch as it exists, the real nature in its absolute intelligibility. The concept that it denotes is in line with the essence, but always in keeping with a connation of "reality", intra- or extra-mental (cf. *Shifāʾ*, 32). We realise that certain texts identify it with quiddity (*māhiyya*) or essence (*dhāt*); these should not, however, be regarded as pure synonyms. It appears that the best translation of *ḥaḳīḳa* must be, according to circumstances, either "nature" or, as Mlle. Goichon suggests (*Introduction à Avicenne*, Paris 1933, 77), "essential reality". — A two-fold series of distinctions has to be established: (i) *huwiyya*, selfness (of the concrete thing); *māhiyya*, quiddity (essential definition); *dhāt*, essence properly speaking; *ḥaḳīḳa*, "essential reality"; (ii) *taḥaḳḳuḳ*, verification (of that which is); *ḥaḳḳ*, Real, transcendingly True; *ḥaḳīḳa*, reality, or transcendental truth. (B) Logical meaning (*al-ḥaḳīḳa al-ʿaḳliyya*): it is the truth which "the exact conception of the thing" establishes in the intelligence (A.-M. Goichon, *Lexique de la langue philosophique d'Ibn Sīnā*, Paris 1938, 84). From this same logical point of view, *ḥaḳḳ* will be the true in the sense of a judgement (*ḥukm*) of equivalence with the real (al-Djurdjānī, *op. cit.*, 94).

3. In *taṣawwuf*, the philosophical sense of the term is internalized in a line of deeply relished intellectual experience (*maʿrifa*). The *ḥaḳīḳa* is the profound reality to which only experience of union with God opens the way, "essential Idea" according to Nicholson (*The idea of personality in Ṣūfism*, Cambridge 1923, 59); cf. Anṣārī, *K. al-Manāzil*, the ten chapters of the section on "realities" (*ḥaḳāʾiḳ*). — There are two attitudes according to the schools. (a) The Ṣūfīs of the "Unity of Witness" (*waḥdat al-shuhūd*), e.g. al-Ḥallādj, reserve for *ḥaḳīḳa* a sense of the absolute intelligibility of things, understood through the spirit of the mystic, which thus leads to the Real but is not itself the Real. "The [essential] reality (*al-ḥaḳīḳa*) of a thing is *on this side* of the real (*dūn al-ḥaḳḳ*)", said al-Ḥallādj (cf. Louis Massignon, *Passion*, 568). (b) Later Ṣūfism, from Ibn ʿArabī, was generally to take *al-ḥaḳīḳa* as the ultimate reality of the real itself in the uniqueness of being of all existence (*waḥdat al-wudjūd*); and the *ḥaḳīḳa* of the universe is to be God manifested in His attributes (cf. the central thesis of the *Fuṣūṣ al-ḥikam* of Ibn ʿArabī). Experience of union or identification will therefore be an effective experience (of intellectual-gnostic type) of the unique "reality" *beyond* the real. — Some Ṣūfi expressions applying this second meaning (al-Djurdjānī, *op. cit.*, 95): *ḥaḳīḳat al-ḥaḳāʾiḳ*, "unique and universal degree of all realities", also called "presence of union" and "presence of being"; *ḥaḳāʾiḳ al-asmāʾ*, "realities" of the divine Names, determinations of the Essence (*dhāt*) and its connexion with the manifested world, — that is to say, the attributes by which men are distinguished from each other; *al-ḥaḳīḳa al-muḥammadiyya*, the divine Essence in the first of these manifestations, "and it is the supreme Name".

4. Other usages could be reviewed. Some references may be given, by way of example, to the usage of al-Ghazzālī, who stands so to speak on the hinge between the two vocabularies of *falsafa* and *taṣawwuf* (before the full elucidation of the "Uniqueness of Being"). *Al-ḥaḳīḳa* is the profound reality, the quintessence of things, the flesh that is discovered behind the peel. The expression *ḥaḳāʾiḳ al-umūr*, "the essential realities of things", often recurs (e.g. *Munḳidh*, 8), *ḥaḳāʾiḳ* here being almost synonymous with *asrār*; similarly *ḥaḳīḳat al-ḥaḳḳ*, "the essential reality of the Real" (e.g. *Ildjām*, 56), which in a flash leads faith (*īmān*) to *yaḳīn*, absolute certainty.

We may further define the meaning of *ḥaḳīḳa* according to two correlative distinctions (*muḳābal*) which frequently serve to explain it. A. *Ḥaḳīḳa* as distinct from *ḥaḳḳ*. The analyses given above form the first step. *Ḥaḳīḳa* and *ḥaḳḳ* can be differentiated as the abstract and the concrete: "reality" and "real", — Deity and God, says L. Massignon (*Passion*, 568). Now, "if reality is on this side of the real" (see above), "everything real, affirms al-

Ḥallādj, has its essential reality" (*ibid.*, 801, n. 1). And again (from al-Sulamī, cf. L. Massignon, *Lexique technique de la mystique musulmane*, Paris 1954, 310): "The Names of God? From the point of view of our comprehension, they are one single (Name); from the point of view of the Real (*al-ḥaḳḳ* = God), they are Reality (*al-ḥaḳīḳa*)". Determined by the definite article, *al-ḥaḳḳ* is the very Name which will most usually denote God in Ṣūfī usage; thus it could not be confused with *ḥaḳīḳa*. But, without the article, *ḥaḳḳ* can assume a fully abstract sense which approximates it to *ḥaḳīḳa*, reality, truth (cf. L. Massignon, ed. of the *Kitāb al-Ṭawāsīn*, Paris 1913, 184, n. 1). Subsequently (in later Ṣūfism), *al-ḥaḳīḳa* so coming to denote an effective, deeply felt experience, the man in quest of God will fix his heart upon this by a purification (*tanzīh*) of his idea of the divine attribute (cf. al-Hudjwīrī, *Kashf al-maḥdjūb*, Eng. trans. by Nicholson, Leiden-London 1911, 384). It is in this sense that *ḥaḳḳ* can denote in God the essence not manifested, and *ḥaḳīḳa* the divine attributes which are indeed the inmost being of things, their essential reality (cf. *Dict. of techn. terms*, 333 ff.). The Ṣūfīs of the "unity of Being" like to call themselves "the People of the *ḥaḳīḳa*"; but "the People of the Sunna and the Community" claim the title of *ahl al-ḥaḳḳ* (cf. H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 166, n. 2).

B.—*Ḥaḳīḳa* differentiated (by contrast) from *sharīʿa*. This is one of the themes of the *Kashf al-maḥdjūb* of al-Hudjwīrī. *Ḥaḳīḳa* here receives a meaning very near to Ghazālī's usage. It is the profound reality which remains immutable "from the time of Adam to the end of the world", like the knowledge of God, or religious practice, which only the inner purpose renders perfect. *Sharīʿa* ("Law") is the reality which can undergo abrogations or changes like ordinances and commandments. Two errors are to be guarded against: that of the pure jurists who refuse to distinguish between inner reality and the regulations of the Law, and that of the *bāṭiniyya* and extremist Shīʿīs (eg. Ḳarmaṭīs), teaching that the Law is abolished when profound Reality is attained. In fact, says al-Hudjwīrī, the *sharīʿa* cannot possibly be maintained without the existence of the *ḥaḳīḳa*, nor can the latter without observance of the *sharīʿa* (*Kashf al-maḥdjūb*, Eng. tr., 383). Each of them rests on three pillars: for *ḥaḳīḳa*, it is the three-fold knowledge (a) of the Essence and Unity of God, (b) of His Attributes, (c) of His Actions and His Wisdom; for *sharīʿa*, the three-fold knowledge (a) of the Ḳurʾān, (b) of the *Sunna*, (c) of the *idjmāʿ* (*ibid.*, 14). In conclusion, the "mutual relation (of *sharīʿa* and *ḥaḳīḳa*) may be compared to that of body and spirit" (*ibid.*, 383).

Thus *ḥaḳīḳa*, in the sense either of profound or essential reality, or of transcendental truth, was to be currently used in very different lexicons (the Ḥanbalī al-Barbahārī, *Ṭabaḳāt*, ii, 22, was to speak of "the reality of the faith", *ḥaḳīḳat al-īmān*, which only the observance of the whole body of religious prescriptions guarantees; cf. H. Laoust, *op. cit.*, 82, n. 1). *Falsafa* was to make it a precise term of ontology and logic; and *taṣawwuf* employed it very differently, depending on whether the inner experience specified was or was not situated within a monist view of the relations of God and the world.

ḤAKĪM [see ṬABĪB].

ḤAKĪM ATA (d. (?) 582/1186), Turkish saint of Khwārizm, the disciple and third *khalīfa* of Aḥmad Yasawī [*q.v.*], and the author of popular poems on the mystic life. His personal name was Sulaymān and his *nisba* Bāḳirghānī, *i.e.*, (according to Barthold, *Turkestan*², 150 and n. 1) of Bāḳirghān, a locality near the modern Kungrad, in the delta of the Āmū Daryā, where his tomb is still pointed out.

The legendary biography of Ḥakīm Ata is recounted in the anonymous *Ḥakīm Ata kitābī* (Kazan 1846): as a child he attracted the attention of Aḥmad Yasawī, and at the age of 15 became his *murīd*; he was given the name Ḥakīm ("wise") by the prophet Khiḍr [see AL-KHAḌIR], who inspired him to utter his poems (*ḥikmets*); his *shaykh* having sent him out on a camel with orders to settle wherever the camel brought him, at Bīnawā he attracted the attention of 'Bughra Khān' and received in marriage his daughter ʿAnbar, by whom he had three sons (for a summary see M. F. Köprülüzāde, *Ilk mutaṣawwiflar*, 98-104).

Three works, all very popular down to modern times in Turkestan and especially in the Volga basin, are attributed to him: (1) *Bāḳirghān kitābī* (MSS very common, printed Kazan 1846, etc.) is a collection of the works of 14 authors, consisting of 124 poems (of which 44 are by 'Sulaymān') and 8 versified tales (with two, on the *miʿrādj* and on Abraham's sacrifice of Ismāʿīl, by Sulaymān); the spirit and style is close to that of Aḥmad Yasawī's *Dīwān*; (2) *Ākhir zamān kitābī* (Kazan 1847, etc.), in *hazadj* metre, on the Day of Judgement; (3) *Ḥaḍrat-i Maryam kitābī* (Kazan 1878, etc.), in *madīd* metre, on the death of Mary the mother of Jesus (a story given also by Rabghūzī [*q.v.*]). His *Miʿrādj-nāme* and some of his short poems are included also in the *Dīwān-i Ḥikmet* of Aḥmad Yasawī (Istanbul 1899, 47-56).

Bibliography: M. F. Köprülüzāde, *Türk edebiyātīnda ilk mutaṣawwiflar*, Istanbul 1918, 40-2, 98-104 (legends of his life), 193-5 (his works), with references to sources; *IA*, s.v. Hakîm Ata, by R. Rahmeti Arat, with further references.

ḤAKĪM-BASHĪ [see HEKĪM-BASHĪ].

AL-ḤĀKIM BI-AMR ALLĀH, sixth Fāṭimid caliph, whose name was Abū ʿAlī al-Manṣūr, one of the most famous caliphs because of his excesses, his cruelty, his persecutions, particularly of the Christians, the divine character which certain of his supporters attributed to him and which is an article of faith with the Druzes, and because of his mysterious end. It is difficult to form an exact idea of his personality, so strange and even inexplicable were many of the measures which he took, and so full of contradictions does his conduct seem. His main characteristic is a tyrannical and cruel despotism, with intervals of liberalism and humility.

Al-Ḥākim, born in 375/985, was only eleven and a half years old when his father, al-ʿAzīz, died at Bilbays on 28 Ramaḍān 386/14 October 996. He had been proclaimed *walī al-ʿahd* in 383/993. On his deathbed, al-ʿAzīz had instructed the chief *Ḳāḍī* Muḥammad b. al-Nuʿmān and the leader of the Kutāma, al-Ḥasan b. ʿAmmār, to proclaim his son caliph. He made his entry into Cairo on the day following his father's death, dressed in a monochrome

durrāʿa, wearing a turban ornamented with precious stones, with a lance in his hand, a sword at his waist and preceded by his father's corpse. On the following day he was solemnly presented to the dignitaries in the great *īwān* of the Palace, seated on a golden throne, and was greeted with the title of *imām* with the *laḳab* of al-Ḥākim bi-amr Allāh.

Right at the beginning of his reign, the Kutāma Berbers, who were the mainstay of the dynasty, insisted that the leadership of the government be entrusted to their chief, al-Ḥasan b. ʿAmmār, who was renowned for his successes over the Byzantines in Sicily, and he was appointed *wāsiṭa* [see FĀṬIMIDS], with the *laḳab* of Amīn al-Dawla. He showed favour to the Berbers in the army, at the expense of the other elements—Turks, Daylamīs and Blacks, had ʿĪsā b. Nasṭūrus, the vizier of al-ʿAzīz, put to death, and quarrelled with the young caliph's tutor, the eunuch slave Bard̲j̲awān [*q.v.*]. The latter, made anxious by the plan formed by the followers of Ibn ʿAmmār to suppress al-Ḥākim, made an alliance with the governor of Damascus, the Turk Mangūtekīn. But Mangūtekīn, having marched towards Egypt accompanied by his Bedouin ally Mufarrid̲j̲ b. Dag̲h̲fal b. al-D̲j̲arrāḥ [see D̲J̲ARRĀḤIDS], was abandoned by him and defeated near ʿAsḳalān by Ibn ʿAmmār's troops under the command of Sulaymān b. D̲j̲aʿfar b. Fallāḥ. However, Ibn ʿAmmār's government lasted only a short time. One of the most powerful Berbers, D̲j̲ays̲h̲ b. Ṣamṣāma, who had been dismissed from his post as governor of Tripoli, joined with Bard̲j̲awān. A revolt broke out against Ibn ʿAmmār, who was defeated and had to go into hiding, and Bard̲j̲awān seized power and took over the position of *wāsiṭa* at the end of Ramaḍān 387/beginning of October 997 and caused the oath of loyalty to the young caliph to be sworn again. Ibn ʿAmmār, at first pardoned, was later assassinated.

The administration of Bard̲j̲awān, helped by his secretary, Fahd b. Ibrāhīm, had to face numerous difficulties: the Byzantine offensive in northern Syria, a rebellion at Tyre of the adventurer ʿAllāḳa with Byzantine support, and disturbances at Damascus and at Barḳa in Tripolitania. Affairs in Syria ended successfully with the defeat of the Byzantine fleet off Tyre; D̲j̲ays̲h̲ b. Ṣamṣāma, although at first defeated outside Afāmiya, pursued and conquered the Byzantines who were disorganized by the death of their leader Damian Dalassenos (see M. Canard's translation of the account by Ibn al-Ḳalānisī in *Revue des Etudes Byzantines*, Paris, xix (1961), 297 ff.). Just before the beginning of this campaign against the Byzantines, Mufarrid̲j̲, who wished to make himself master of Ramla, had had to submit to D̲j̲ays̲h̲ b. Ṣamṣāma. Order was restored at Damascus. It was restored also at Barḳa, but the attempt to take Tripoli from the Zīrid ruler of Ifrīḳiya failed. The negotiations with the Byzantines, begun after the Afāmiya incident and initiated either by the Emperor Basil or by Bard̲j̲awān, came to nothing and Basil began a new campaign in northern Syria, and this time was successful. It was after this, but also after the death of Bard̲j̲awān, that, in 391/1001, a ten year truce was concluded with the Byzantines. The peaceful relations between Byzantium and al-Ḥākim were to be disturbed by the destruction of the Church of the Holy Sepulchre in 400/1009, and in 406/1015-6 Basil even forbade commercial relations with Egypt and Syria.

From Rabīʿ II 390/April 1000, Bard̲j̲awān was no longer in power. Al-Ḥākim, whose personality was beginning to assert itself, found the tutelage of Bard̲j̲awān, who kept him shut up in the palace, irksome. He therefore, with the connivance of the slave Raydān, had him assassinated while he was taking a walk with him. Disturbances followed, for the Turks feared that this was a *coup* by the Berber party. The young caliph was obliged to show himself at the gate of the palace to explain the reasons which had compelled him to have Bard̲j̲awān killed, and to demand obedience and help from all his subjects. This murder, and the cold determination with which it was ordered, showed already in this boy of fifteen those bloodthirsty inclinations to which the majority of his ministers and of the important dignitaries were later to fall victim.

From this time on, al-Ḥākim ruled as an absolute despot, obeying only his own caprice and mood of the moment, whether good or bad, decreeing the most extraordinary and the most unpopular measures, later mitigating them or abolishing them, and then again re-introducing them, alternating harshness and liberalism, to end finally in the madness of the last years of his reign.

The chief features of al-Ḥākim's reign were: (1) a series of measures arising from a spirit of Muslim, and specifically S̲h̲īʿī, religious fanaticism—(a) laws against the Christians and the Jews, (b) anti-Sunnī measures, (c) edicts of an ethico-social character (all measures which were annulled more than once although no clear reasons for this can be detected); (2) a great number of executions and cruelties; (3) rebellions and manifestations of discontent among the population; (4) al-Ḥākim's eccentricities, verging on madness, and his claims to be recognized as divine.

There were occasions on the other hand when al-Ḥākim showed remarkable simplicity, humility and asceticism, liberality and sense of justice, so that judgements of him have not always been unfavourable.

The measures taken against the Christians and the Jews were one of the most striking features of his reign, but it must be admitted that there had already been similar edicts issued by the ʿAbbāsid caliphs. We list al-Ḥākim's measures briefly here:

393/1003: the demolition of a church which was being rebuilt, and the erection in its place of the Rās̲h̲ida mosque (on this see al-Maḳrīzī, *K̲h̲iṭaṭ*, ii, 282); the conversion of two other churches into mosques; the transfer of the Melkite Christians from their own quarter to that of al-Ḥamrāʾ (on which see *K̲h̲iṭaṭ*, i, 298); the prohibition of wine, although Muslim law permits it to Christians, and orders to destroy the wine-jars and to empty the wine onto the ground.

395/1004: the forcing of Christians and Jews to wear black belts (*zunnār*) and turbans.

396/1005-6: a new prohibition of wine.

397/1007: the prohibition of the Palm Sunday procession at Jerusalem and elsewhere.

398/1008: the confiscation of the possesssions of the churches and monasteries in Egypt.

399/1009: the forcing of Christians and Jews to wear when in the baths a distinctive badge hung round their necks—a cross for the Christians and a small bell for the Jews; the demolition of two churches in Cairo and one at Damascus and the desecration of their graveyards; the infliction of tortures on a number of Christian officials, which led a number of others to embrace Islam.

400/1009-10: the demolition of the Church of the Holy Sepulchre at Jerusalem; according to Ibn al-

Ḳalānisī, this was because the caliph was indignant at a fraud practised by the monks in the miracle of the descent of the holy fire on to the altar (on this miracle see Kračkovskiy, *The "holy fire" according to the accounts of al-Bīrūnī and other Muslim writers of the 10th-13th centuries* (in Russian), in *Khristianskiy Vostok*, iii/3 (1915), 226-42).

In the same year: the prohibition in Cairo of the Epiphany Procession, the Muslim authorities being forbidden to attend it as they had formerly done; the destruction of the Melkite monastery of al-Ḳaṣīr on the Mukaṭṭam Hills and the desecration of the graveyard; the destruction of a church at Damietta.

401/1010: the repetition of the order to the Christians and Jews to wear black belts; a new prohibition of wine and of its use in the Mass.

402/1011-12: the forbidding of the display of crosses and the sounding of *nāḳūs* [*q.v.*].

403/1012-13 (in 404, according to al-Maḳrīzī): an order to the Christians and the Jews to wear black turbans and head veils (*ṭaylasān*), and to Christians to wear a wooden cross round their necks; an order forbidding them to ride on horseback; the replacement of Christian officials by Muslims. These measures were made still more severe after Christian petitions were received, and a large number of Christians were forced through fear to embrace Islam. This was a disastrous year for the Christians, all of their convents and churches being destroyed and their treasures confiscated. Only the monastery of Sinai was spared, thanks to a ruse on the part of the abbot. But it did not escape confiscations, since, in 411/1021, the abbot complained to the caliph about them.

In general this policy had the approval of the Muslims, who hated the Christians because of acts of misappropriation and of favouritism by the Christian financial officials, which led for example to the execution in 393/1003 of the secretary Fahd b. Ibrāhīm, who had been at the head of affairs for more than five years, and the imprisonment, although temporary, of several Christian secretaries of the various offices. It should be mentioned that these measures were perhaps not always strictly enforced, otherwise it would not have been necessary to repeat them.

On the other hand, in 404/1013 al-Ḥākim allowed the Christians and the Jews, even those who had embraced Islam, to return to their faith and to emigrate to Greek territory. In 411/1021, when he learned that some Christians who had become Muslims were attending Mass in certain houses, he took no action against them, and in the same year he produced a whole series of measures in favour of the Christians: authorizing the rebuilding of the monastery of al-Ḳaṣīr and the restoration of its possessions, granting protection to all the churches of Jerusalem, restoring some churches and returning their possessions to all the churches, and authorizing Christians who had embraced Islam to apostasize.

One wonders whether al-Ḥākim was not at times inspired by the memory of his Christian mother.

The specifically Shīʿī and anti-Sunnī measures encountered a vigorous opposition from the mainly Sunnī population of Egypt, and were, either because of this or in an access of liberalism, sometimes repealed. Although, in 393/1002-3, thirteen people were arrested, publicly exhibited and imprisoned for three days for having performed the prayer of *al-ḍuḥā* [see ṢALĀT] which had been forbidden since 370, in 399/1009 it was once again permitted to perform it, according to Yaḥyā b. Saʿīd al-Anṭākī. Similarly there were authorized the *ḳunūt* [*q.v.*] in the Friday prayer (which was considered as a usage introduced during the ʿAbbāsid period: cf. al-Nuʿmān, *Daʿāʾim*, i, 121) and the prayer of the *tarāwīḥ* in Ramaḍān; it was permitted in summoning to the prayer of *al-fadjr* to say twice (*tathwīb*), in accordance with Sunnī practice, "prayer is better than sleep"; it was no longer obligatory to call, in the *adhān*, "Come to the best of works", which was a specifically Shīʿī formula (cf. al-Maḳrīzī, ii, 287 and 342, where the dates do not agree). But, according to al-Maḳrīzī, ii, 342, in 403/1012 he ordained a return to the formula "Come to the best of works", suppressed the *tathwīb* and once again forbade the *ṣalāt al-ḍuḥā* and that of the *tarāwīḥ*. The forbidding of women to weep and lament at funerals should probably also be attributed to a reaction against a popular practice which had been forbidden by the Prophet but which the Sunnīs do not seem to have combated very strictly.

One of the measures which often gave rise to disturbances was the anathema pronounced in 395/1005 against the first caliphs and the Companions of the Prophet: orders were given to inscribe these maledictory formulas on the walls of the mosques and of various other buildings and also on the bazaar shops, and this gave rise to a brawl at the time of the return from the Pilgrimage. The edict was therefore repealed two years later and an order was given to efface the anathemas and to punish any who insulted the Companions. This order was renewed in 403/1013. To this reversal of policy and return to Sunnī practices belongs also the authorization to celebrate the fast and the breaking of the fast as the Sunnīs did, when the new moon was actually observed, whereas the Fāṭimid law fixed the beginning of the month by astronomical calculations; and also the suppression of the Feast of Ghadīr Khumm (al-Maḳrīzī, i, 389, 10).

The rigorous measures against the Sunnīs produced a great zeal for Shīʿism and people thronged the lectures which were given at the palace by the chief *Ḳāḍī* ʿAbd al-ʿAzīz b. Muḥammad b. al-Nuʿmān, to such an extent that people died of suffocation.

The creation of the *dār al-ʿilm* or *dar al-ḥikma* [*qq.v.*] in 395/1005 was another measure intended to combat Sunnism and promote Ismāʿīlī propaganda.

The edicts of an ethico-social character are among the most curious decisions of this caliph, and when they were not the result of caprice and of outright whims, it is possible to attribute them to an anxiety to promote good morals and to combat libertinism.

The prohibition of wine which we have already mentioned affected the Muslims as well as the Christians. It was not observed during the revolt of Abū Rakwa (see below). It was repealed in 396/1006, when al-Ḥākim's physician had pointed out to him that wine would be beneficial for his health. But this order was re-introduced several times, certainly out of a concern for morality. Of a similar nature were the suppression of houses of ill-fame, the forbidding of people to appear in baths without wearing a loin-cloth, the forbidding of the sale of slave singing-girls, the prohibition of beer (*fuḳḳāʿ*) and of the sale of honey and of raisins (which could be used to make intoxicating drinks), the prohibition of musical instruments and the forbidding of performances by singers and musicians. For the same reasons he forbade women to adorn themselves and to display their jewels, to go to the baths, the cemeteries and even, at one time, to go out at all, in 405 forbidding the shoemakers to make shoes for them so that they were forced to remain indoors. Some women who

went to the baths in spite of the prohibition were walled up there.

Al-Ḥākim also forbade pleasure parties on the banks of the Nile and boating excursions on the Khalīdj; he also ordered all doors and windows which overlooked the Khalīdj to be closed. He even forbade people to walk about at night or to keep shops open after sunset, though at other times he himself took pleasure in strolling in the lighted streets.

All these measures were extremely unpopular; al-Ḥākim was certainly anxious to deal severely with the debauchery and excesses of certain classes of the population and he did not hesitate to punish most severely any infringements of the prohibitions.

Although it can be admitted that the caliph's motives in issuing certain of the prohibitions were serious, the same cannot be said of a number of other measures. Among these was a series of prohibitions concerning food, which were irksome both for trade and for the consumers. He forbade *malūkhiya*, a very popular mucilaginous vegetable, on the pretext that Abū Bakr, ʿĀʾisha and Muʿāwiya had liked it, the salad known as *muwakkaliyya* (rocket), lupins, certain shell-fish (tellina), fish without scales (which recalls the prohibition in Deuteronomy, XIV, 3 ff.). The forbidding of the killing of cattle except for the Feast of Sacrifices may have arisen from the need to preserve them for agriculture (compare the policy of al-Ḥadjdjādj).

But what can be said of the order, twice issued, to kill all the dogs because their barking annoyed the caliph, and of the prohibition of the game of chess? What explanation can be found for al-Ḥākim's confiscation in 399 of his mother's, his sister's and his wives' possessions?

Infringements of all these regulations were sometimes punished by death, for al-Ḥākim resorted to executions for all kinds of reasons, among them to inspire terror and as a method of government. The number of viziers, high officials and ordinary individuals whom he had put to death is considerable. We mention here only few cases: the assassination of Bardjawān and execution of Fahd b. Ibrāhīm (see above); the execution in 395/1004-5 of all the inmates of the prisons; tortures inflicted in 399/1009 on a number of Christian officials (hanging up by the hands, of which some of them died); in 400/1010, the execution of the vizier ʿAlī b. al-Ḥusayn al-Maghribī and of the ex-vizier Ṣāliḥ b. ʿAlī, and in 401/1010 of his successor, the Christian Manṣūr b. ʿAbdūn, and also of Ḥusayn b. Djawhar and ʿAbd al-ʿAzīz b. Muḥammad b. al-Nuʿmān who, after having fled to the Banū Ḳurra, had returned under safe-conduct; in 404/1013, the mutilation of Abu 'l-Ḳāsim al-Djardjarāʾī and of the black eunuch Ghayn, a high official of the Palace, and in the same year the execution by drowning of several of al-Ḥākim's concubines; in 405/1014, the execution of the vizier al-Ḥusayn b. Ẓāhir al-Wazzān and of two other viziers, one of them being al-Faḍl b. Djaʿfar b. al-Furāt. He even had secretly put to death, in 400/1010, his maternal uncle Arsenius, the Melkite patriarch of Alexandria, whom he himself had had elected ten years earlier. His hypocrisy and cynicism were such that he would even load with gifts people whom he was soon afterwards to execute.

It is not surprising therefore that the whole population stood in terrible fear of al-Ḥākim.

One of his most cruel acts—for it was inspired solely by the desire for vengeance—was his decision, at the end of 410/March 1020, to burn al-Fusṭāṭ, as a result of the circulation of libellous statements against him, accusing him of abandoning Islam completely and of having abolished its fundamental prescriptions (fasting and the Pilgrimage) after the preaching of al-Darazī and of Ḥamza (see below), and because of the riots which had followed the proclamation of the divinity of al-Ḥākim by a propagandist at the Mosque of ʿAmr. He gave orders to his black troops to plunder and to burn al-Fusṭāṭ, and these troops committed atrocities on the inhabitants. The eunuch slave ʿAdī, whom the caliph had sent to restore order, gave him such an angry account of what had happened that al-Ḥākim had him killed on the spot. But he had to intervene himself to stop the fighting, for the Turks and the Berbers had taken the side of the inhabitants of al-Fusṭāṭ and were fighting against the black troops. Some traditions state that the caliph was hypocritical and cynical enough to ask: "But who gave orders for this?", and that he amused himself by watching the burning of al-Fusṭāṭ from the top of the Muḳaṭṭam hills. The disturbances lasted for a whole week and left much of al-Fusṭāṭ in ruins.

The reign of al-Ḥākim was moreover disturbed by a number of rebellions. First there was a revolt of the Arab tribe of the Banū Ḳurra in the region south-east of Alexandria, the Buḥayra. But the most serious was that of Abū Rakwa Walīd b. Hishām, an Umayyad prince driven out from Andalus. After several adventures in different regions, even in Syria, he appeared in the region of Barḳa and won the support of the Zanāta Berbers. He already had with him the Banū Ḳurra, who had revolted previously. He set himself up as anti-caliph and defeated first one army at the end of 395/1005, then that of the Turk Inal (according to Yaḥyā, the Armenian Ḳābil) which al-Ḥākim had sent against him. At this point al-Ḥākim's distress was all the greater in that the population of Egypt and the troops, tired of the executions and the cruelties that the caliph had inflicted on the Banū Ḳurra and the Kutāma of the Syrian army, showed their joy and hoped that they would be rid of the tyrant. It seems even that the vizier Ḥusayn b. Djawhar had entered into correspondence with Abū Rakwa. Al-Ḥākim then called on the Ḥamdānid *ghulāms* who were in Syria and on the Ṭayyī Bedouin of Mufarridj b. Daghfal and put them under the command of al-Faḍl b. Ṣāliḥ. A battle took place between detachments of the two armies on the outskirts of Alexandria. Then Abū Rakwa penetrated as far as the Fayyūm and sent one of his detachments towards Djīza where the caliph had sent reinforcements under the command of ʿAlī b. Fallāḥ, who was defeated. But in Dhu 'l-Ḥidjdja 396/August 1006, al-Faḍl b. Ṣāliḥ gained a decisive victory over Abū Rakwa at Fayyūm and Abū Rakwa, who was fleeting towards Nubia, was captured and delivered up by the *amīr* of the Nubian marches and executed in Cairo in Djumādā II 397/March 1007. The alarm had been great. The caliph had had to humble himself to regain the sympathy of the troops, apologizing for the executions which he had ordered. It seems even that at one point he considered fleeing to Syria, for it was expected that the rebel would enter Cairo and the unrest of the population had caused a serious rise in prices. During the two years that this rebellion lasted, al-Ḥākim's prohibitions concerning food were waived and it was at this time also that he mitigated the anti-Sunnī measures.

A further alarm was caused by the revolt in 402/1011-2 of Mufarridj the Djarrāḥid in Palestine,

encouraged by al-Ḥusayn b. ʿAlī al-Maghribī (the vizier al-Maghribī), who had taken refuge with his son Ḥassān b. al-Mufarridj after the execution of his father ʿAlī al-Maghribī in 400. See the article DJARRĀḤIDS for details of how their intrigues were successful in installing in Palestine an anti-caliph in the person of the *Sharīf* of Mecca in 403/1012-3 and how al-Ḥākim bribed Ḥassān to abandon the *Sharīf*, who returned to Mecca and gave himself up to al-Ḥākim, who pardoned him.

The eccentricities in which al-Ḥākim indulged when he was no longer under the tutelage of Bardjawān are well-known. He began to wander around the streets and alleys of al-Fusṭāṭ at night, accompanied by a few companions. When this happened, the merchants would illuminate their shops and houses and the streets were as lively as in the day-time. He liked to watch scenes of wrestling (*muṣāraʿa*) among the street loafers—brawls which sometimes degenerated into murderous battles between rival groups. He showed at times an unhealthy curiosity. Yaḥyā b. Saʿīd relates a revolting scene which took place in 407/1016-7, when actually in the street he made one of his black attendants make an old debauchee submit to a degrading assault and laughed as he watched this spectacle. Sometimes during these walks he was seized by a fit of absolute madness. One day as he passed a butcher's shop he seized the butcher's chopper and with it struck and killed one of his attendants, passing on without paying any more attention to the body; the terrified crowd did not dare to do anything and the body remained there until al-Ḥākim sent a shroud in which to bury him.

In 405/1014-5 these expeditions increased; he was seen in the streets several times in one day. He did not give up his outings even when he was ill, but he had himself carried in a litter.

There can also be counted among his eccentricities his sudden fits of humility and of asceticism, unless it is thought that he had always an inclination towards Ṣūfism. In 403/1012-3 we see him forbidding his subjects to prostrate themselves in front of him, to call him "Our Lord", and to beat drums or sound trumpets in the neighbourhood of the palace. He made a great point of celebrating the two great Islamic festivals without a procession and without ornaments. He showed abstinence in all he did—in food and in bodily pleasures. He allowed his hair to grow long and wore coarse garments of black wool, rode only on a donkey and distributed alms lavishly. In 404/1013, after his cousin ʿAbd al-Raḥīm b. Ilyās had been proclaimed heir-presumptive, he delegated all the affairs of state to him. It was the heir who rode on horseback in the official processions, wearing all the insignia of the caliph, whereas the latter continued to ride on a donkey. Towards the end of his reign, this humility and asceticism increased to the point that he no longer changed his clothes and wore them filthy with sweat and dust and sticking to his body, that he travelled about the countryside, climbed the Muḳaṭṭam hills and went for longer and longer solitary walks, when, having ordered his attendants to wait for him at a distance, he imagined that he was speaking to God.

His madness (unless it really was absolute religious conviction—Ismāʿīlism taken to its ultimate conclusions) led him to accept and encourage the theories of Ismāʿīlī extremists according to which he was the incarnation of the Divinity. The historians give rather confused accounts of the respective parts played in this affair by the Ismāʿīlī missionaries, Ḥasan b. Ḥaydara al-Farghānī al-Akhram, Ḥamza b. ʿAlī b. Aḥmad al-Zawzānī and Muḥammad b. Ismāʿīl Anushtekīn al-Darazī, and it is certain that several episodes have been confused with one another. However, it seems that it was in 408/1017-8 that this theme began to be preached, with the caliph's approval. It is almost certain that Ḥamza preached it first and that al-Darazī was his disciple, although Yaḥyā makes Ḥamza appear after al-Darazī. Furthermore there was rivalry between the two [see AL-DARAZĪ and DURŪZ]. According to one version, al-Darazī was killed by the Turks who were angered by his theories; according to another, the caliph, fearing for al-Darazī's safety, sent him off secretly to Ḥawrān. Al-Akhram is also said to have been a follower of Ḥamza; he is said to have presented to the *Ḳāḍī* while he was judging in the Mosque of ʿAmr a paper which began with the words "*bi-'sm al-Ḥākim al-raḥmān al-raḥīm*"; this started a riot in which his companions were massacred while he himself was able to escape. Some accounts state that he was killed by a Turk. Ḥamza, who was a great favourite of al-Ḥākim and had a special relationship with him, is said by one tradition to have been obliged to go and hide in the Ḥawrān. It is not known what became of him after al-Ḥākim's disappearance, but he is known to have been the founder of the theological system of the Druzes.

It is not clear whether al-Ḥākim's disappearance was directly related to all this and to what extent this preaching can have increased the caliph's madness.

Al-Ḥākim's end was as extraordinary as his life, and it will probably never be known how it came about. On 27 Shawwāl 411/13 February 1021, he disappeared while walking at night on the Muḳaṭṭam Hills and on the plateau which leads from there to Ḥulwān. He walked away from the two attendants who were accompanying him and whom he had ordered to wait for him. They did not see him again and returned to the palace next morning. A search was made and five days afterwards his clothes were found, pierced by dagger blows. According to one plausible version, he was assassinated at the instigation of his sister, Sitt al-Mulk, with whom he had had a disagreement: Sitt al-Mulk had reproached him for his extravagant behaviour, which she said was threatening the existence of the dynasty, while he reproached his sister for her licentious way of life. Fearing that she might be put to death herself, she acted first and arranged with the *shaykh* of the Kutāma, Sayf al-Dawla b. Dawwās, that al-Ḥākim should disappear. There circulated several traditions, none of which is reliable: he was said to have been killed by an unknown assassin, to have taken refuge in a monastery to end his days there, etc. The Druzes believe in a mysterious *ghayba* [*q.v.*] (a well-known Shīʿī theme) which is to last until the time when he will re-appear (the Shīʿī theme of the "return" [see RADJʿA]). The theory that al-Ḥākim withdrew into solitude because he saw the impossibility of realizing his ideas in Egypt (A. Müller) is merely hypothetical.

The picture we have given of the reign of al-Ḥākim does not on the whole present him in a favourable light. It cannot, however, be said that his reign was particularly unfortunate for Egypt. It had some less gloomy aspects.

During his reign the vast Fāṭimid domain lost none of its territory and in fact al-Ḥākim was even recognized at Mosul by Ḳirwāsh, the ʿUkaylid of Mosul, for a time in 401/1010-1. It was during his reign, also, in 406/1015-6, that Manṣūr b. Luʾluʾ of Aleppo submitted

to the Fāṭimid caliphate, and after his disappearance Aleppo had several Fāṭimid governors. It is true that at the end of his reign the situation at Damascus was troubled. In 410/1019-20, he had appointed as governor the *walī al-ʿahd* designate, who had introduced liberal measures, such as the authorization of wine-drinking, which were not in accordance with al-Ḥākim's ideas; he had the support of some classes of the population—the *aḥdāth* [*q.v.*]—while others did not approve of him. As he had in addition entered into relations with the Djarrāḥid, al-Ḥākim recalled him. He obeyed this order immediately; al-Ḥākim was satisfied and sent him back to Damascus. But there broke out a revolt against him and, on the death of al-Ḥākim, Sitt al-Mulk had him arrested and brought back to Cairo.

It is to al-Ḥākim that Cairo owes the building of the mosques of al-Rāshida (see above) and of al-Maḳs and the completion of the mosque known as that of al-Ḥākim which had been begun by al-ʿAzīz. He was also responsible for the foundation ot the first Muslim university, the *Dār al-Ḥikma* mentioned above, with its considerable library. He patronized the development of the sciences and of letters; the historian al-Muṣabbiḥī was one of his close friends and the astronomer ʿAlī b. ʿAbd al-Raḥmān wrote for him his work *al-Zīdj al-kabīr*. He was on excellent terms with the physician Ibn Muḳashshir, on whose advice he returned to wine-drinking. It is true, however, that he had another physician put to death.

At the beginning of his reign his intention was to rule in regular consultation with the important men of Cairo, but he soon tired of this. This was no doubt one of his fits of humility which, like the others, seems to have contained more of affectation than of sincerity. But all the historians agree that he was generous, that he did his utmost to combat famine by making gifts and by trying to stabilize the price of food, that his concern for justice was such that he himself attended to the *ḥisba*, and that he appointed in addition to the chief of police two *ʿadl* witnesses, without whose consent no sentence could be pronounced. Yaḥyā states that he never allowed himself to seize anyone's property, that he abolished taxes (*mukūs*) and other unjust dues and that he restored to their owners goods which had been unjustly appropriated. The same writer depicts him among the people, welcoming all their requests and endeavouring to satisfy them. He abolished the "fifth" (no doubt the fifth that Fāṭimid juridical theory decreed should be paid to the caliph on any profit made), as well as the *nadjwā*, the tax which had to be paid by those who were present at the *madjālis al-ḥikma*, the Ismāʿīlī learned meetings which were held at the Palace.

A panegyric of al-Ḥākim by a Jewish writer is found in a fragment of a chronicle published by Neubauer in *JQR*, ix, 25; in it he appears as a benefactor of the country and the author praises his sense of justice (see D. Kaufmann, *Beiträge zur Geschichte Aegyptens aus jüdischen Quellen*, in *ZDMG*, li (1897), 442-3; but also M. Schreiner in *REJ*, xxxi, 217, on the burning by al-Ḥākim of a Jewish quarter).

It is an account of his liberality also which has been preserved in some of the tales of the *1001 Nights*, such as the story of the Cairo merchant who, having given splendid hospitality to the caliph when he had stopped in front of his garden during an official procession to ask for a drink, received from al-Ḥākim as a reward all the coins struck by the Mint in that year (Lane, *The Arabian Nights* ..., London 1914, iii, 56). Similarly, in the *Ḥikāyat Wardān al-Djazzār maʿ al-marʾa wa 'l-dubb* (*1001 Nights*, Cairo, nights 353-5): a treasure guarded by a bear is discovered by the butcher in question (see the complicated story); he gives it to al-Ḥākim who has come on his donkey to see the treasure that the butcher has told him about; the caliph keeps a part of it and gives the remainder to the butcher who is thus enabled to build all the shops of the *sūḳ* which is called after him Sūḳ Wardān. This story is related by Ibn al-Dawādārī, who claims to base it on the *Ḥall al-rumūz fī ʿilm al-kunūz* of a certain Muḥammad b. ʿAbd al-Razzāḳ b. ʿAbd al-Aʿlā al-Ḳayrawānī.

The historians have formed very varied judgments of al-Ḥākim's personality. Dozy and A. Müller have tried to show that there was in him a certain idealism. Ivanow, *Rise*, 123 ff., thinks that he was anxious to realize the ideals of the Sunnīs as well as of the Ismāʿīlīs and to this end to suppress Christianity, and that in addition he was always trying to make the Ismāʿīlī doctrine more perfect. But he sees in him also a desire to "play to the gallery" and thinks that there may have been a histrionic streak in him. He even sees a democratic flavour in some of his acts; but this is going rather far.

Yaḥyā, who was a physician as well as a historian, tried to give a medical explanation of his "madness" as a mixture in his brain of pernicious and morbid humours which from his childhood caused him to suffer from a kind of melancholy (in the true sense) and a trouble of the mind which made him a prey to fantasies. He states that in his youth he was subject to fits and that the ill-constitution of his brain caused him to suffer from insomnia (see Yaḥyā-Cheikho, 218 ff.). This insomnia may explain al-Ḥākim's nocturnal walks.

In any case, al-Ḥākim's personality remains an enigmatic one. He seems to have been several persons in succession or even simultaneously.

Bibliography: The main historical sources are Yaḥyā b. Saʿīd al-Anṭākī, an Egyptian Christian (ed. Cheikho, 180-234; ed. and tr. Kračkovskiy and Vasiliev, in *PO*, xxiii, 450-520, this latter edition going only as far as 404/1011) and Ibn al-Ḳalānisī, 44-50, 55-71, 79. Also important is Sibṭ Ibn al-Djawzī, ms. Paris 5866, fols. 154a-242a, up to the year 400/1010. Ibn Muyassar, 52-6, covers only the years 386 and 387. Among the other historians, Abu 'l-Maḥāsin Ibn Taghribirdī, Cairo ed., iv, 176-247 supplies many extracts from earlier historians such as Hilāl al-Ṣābiʾ, Sibṭ Ibn al-Djawzī, al-Ḳuḍāʿī and al-Dhahabī. See also al-Kindī, *Governors and judges*, ed. Guest, index; Abū Shudjāʿ al-Rūdhrāwarī, *Eclipse of the Abbasid Caliphate*, iii, 221 ff.; Nāṣir-i Khusraw, *Safarnāma*, tr. Schefer, index; Ibn Ḥammād (Ḥamado), *Hist. des rois ʿObaïdides*, ed. and tr. Vonderheyden, 49-58 (tr. 76-86); Ibn al-Athīr, under the years 386-411; Kamāl al-Dīn Ibn al-Adīm, ed. Dahhān, i, 196 ff.; Ibn ʿIdhārī, *Bayān*, tr. Fagnan, i, index; Ibn al-Ṣayrafī, *Kitāb al-Ishāra* ..., Cairo 1925 (*BIFAO*, 25), 87 ff. and index; Ibn Khallikān, Būlāḳ ed., ii, 165-8 (tr. de Slane, iii, 449 ff.); Abū Ṣāliḥ, *The Churches and Monasteries of Egypt* ..., ed. and tr. Evetts, Oxford 1895, index; Bar Hebraeus, *Chronicon*, ed. Bruns and Kirsch, 211 ff. (*Chronography*, tr. Budge, 180-90); Maḳrīzī, *Khiṭaṭ*, Būlāḳ ed., i, 389 ff.; ii, 3-4, 31, 277, 282-3, 285 ff., 341-2 and *passim*; idem, *Ittiʿāẓ* ..., ed. Shayyāl, 266 and index. There is also a biography of al-Ḥākim in Ibn Kathīr, *al-Bidāya wa 'l-nihāya*, xii, 9-11. See

also Ibn al-Dawādārī, *Die Chronik des Ibn* ..., Teil 6: *Der Bericht über die Fatimiden*, ed. Salāh ad-dīn al-Munağğid, Cairo 1961, 256-312; Ḳalḳashandī, *Ṣubḥ* ..., x, 384, xiii, 359-60; Ḳayrawānī, *Histoire de l'Afrique*, tr. Pellissier and Rémusat (*Explor. de l'Algérie*, vii), 116 ff.—Among modern works the biography of al-Ḥākim in S. de Sacy, *Exposé de la religion des Druzes*, i, 278 ff., remains the basic work. See also Weil, *Gesch. der Chalifen*, iii, 66, iv, 269; Wüstenfeld, *Gesch. der Fat. Chalifen*, 164 ff. (very important; his account is in part founded on Ibn Ẓāfir, *al-Duwal al-munḳaṭiʿa*); S. (M. Canard)

AL-ḤĀKIM AL-NAYSĀBŪRĪ, Muḥammad b. ʿAbd Allāh b. Muḥammad Abū ʿAbd Allāh Ibn al-Bayyiʿ, a traditionist of note, b. 321/933, d. 405/1014. He travelled in various countries to study *Ḥādīth* and heard traditions from about 2000 *shaykhs*. Because he held the office of *ḳāḍī* for a time he became known as al-Ḥākim. He wrote many books, among them *Maʿrifat ʿulūm al-ḥadīth*, an important work on the science of *Ḥadīth*, which set a standard for the method of dealing with the subject. Though he was held in high esteem for his scholarship and was visited by many scholars, his writings have met with criticism. He has been called a Shīʿī, but al-Subkī stoutly denies this. Al-Dhahabī who, in *Tadhkirat al-ḥuffāẓ*, calls him "the great *ḥāfiẓ* and *imām* of the traditionists", also includes him in his *Mīzān al-iʿtidāl* where he says that he made mistakes in his book *al-Mustadrak ʿala 'l-Ṣaḥīḥayn*. Ibn Ḥadjar, in the parallel passage in *Lisān al-mīzān*, remarks that he is too distinguished to be mentioned among weak traditionists, but that some say he became careless in old age. In spite of criticism he holds an honoured place among traditionists. Printed works by al-Ḥākim: *al-Mustadrak ʿala 'l-Ṣaḥīḥayn*, Ḥaydarābād 1334-42; *al-Madkhal fi uṣūl al-ḥadīth*, ed. Muḥammad Rāghib al-Ṭabbākh, Aleppo 1351/1932; *An Introduction to the Science of Tradition*, ed. and trans. J. Robson, London 1953; *Maʿrifat ʿulūm al-ḥadīth*, ed. Dr. Muʿaẓẓam Ḥusayn, Cairo 1937.

Bibliography: *Taʾrīkh Baghdād*, v, 473 ff.; Ibn ʿAsākir, *Tabyīn kadhib al-muftarī*, Damascus 1347, 227 ff.; Yāḳūt, index; Ibn Khallikān, Būlāḳ, i, 691; Dhahabī, *Huffāẓ*, iii, 227 ff.; Subkī, *Ṭabaḳāt al-Shāfiʿiyya al-kubrā*, iii, 64 ff.; Ibn Ḥadjar, *Lisān al-mīzān*, v, 232 f.; Ibn al-ʿImād, *Shadharāt*, 405 A.H.; Ḥādjdjī Khalīfa, ed. Flügel, v, 521, etc.; Brockelmann, I, 175, S I, 276 f.

(J. Robson)

ḤAḲḲ. The original meaning of the root *ḥḳḳ* has become obscured in Arabic but can be recovered by reference to the corresponding root in Hebrew with its meanings of (a) "to cut in, engrave" in wood, stone or metal, (b) "to inscribe, write, portray" (this also in a Canaanite inscription of the 8th cent. B.C.; S. A. Cooke, *North-Semitic inscriptions*, Oxford 1903, 171, 185), (c) "to prescribe, fix by decree", therefore "prescribed, decree, law, ordinance, custom", (d) "due to God or man, right, privilege" (cf. Brown-Driver-Briggs, *Hebrew and English lexicon*, Oxford 1952; L. Koehler and A. W. Baumgartner, *Lexicon in Veteris Testamenti libros*, Leiden 1953). The word *ḥaḳḳ*, meaning "something right, true, just, real", is common in pre-Islamic poetry (the index prepared by the School of Oriental Studies of the Hebrew University lists 916 places in edited texts); it also occurs, with the meaning "truth", in the proverbs of the Arabs (Maydānī, ed. Freytag, *Arabum proverbia*, nos. 85, 123, 232). Derived from this again is *ḥaḳḳ* as a Divine Name. This is already attested, in the forms *ḥqt* and *ḥq*, in the South Arabic inscriptions (Y. Moubarac, *Les noms, titres et attributs de Dieu dans le Coran et leurs correspondants en épigraphie sud-sémitique*, in *Muséon*, 1955, 86 ff.), and it occurs also in the Arabic translation of the Diatessaron (A. Ciasca, *Tatiani Evangeliorum Harmoniae Arabice*, Rome 1888, 172, on John, XIV, 6).

The primary meaning of *ḥaḳḳ* in Arabic is "established fact" (*al-thābit ḥaḳīḳat^an^*), and therefore "reality", and the meaning "what corresponds to facts", and therefore "truth", is secondary; its opposite is *bāṭil* (in both meanings). This is well stated by Djurdjānī (*Taʿrīfāt, s.v.*), whereas some of the lexicographers start from the secondary meaning (cf. Lane, *Lexicon, s.v.*). *Ḥaḳḳ* in its primary meaning is one of the names of Allāh (cf. AL-ASMĀʾ AL-ḤUSNĀ, no. 52), and it occurs often in the Ḳurʾān in this sense, as the opposite of *bāṭil*. The commentators of the Ḳurʾān usually explain it as *thābit* (*e.g.*, Bayḍāwī on sūra X, 32; XX, 114; XXII, 6, 62; XXXI, 30). A similar usage is implied in pre-Islamic poetry, by the use of the antonym *bāṭil*, in the verse of Labīd (*Dīwān*, ed. Huber, xli, 9): *a-lā kullu shayʾ^in^ mā khala 'llāha bāṭilu*, "Lo, everything except Allāh is vain, unreal." (The occasional explanation of the Divine Name *ḥaḳḳ* as "Creator" is based merely on its alliterative contrast with *khalḳ*, "creation". For another explanation, see Massignon, *K. al-Ṭawāsīn*, 174). But the use of *ḥaḳḳ* in the Ḳurʾān, in Islamic traditions (cf. Wensinck, *Concordance et indices, s.v.*), and in Arabic literature in general, is not restricted to the Divine Name; it may refer to any "reality", "fact", or "truth"; thus, the features of the Day of Judgment, Paradise and Hell are *ḥaḳḳ*. A further meaning of *ḥaḳḳ* (pl. *ḥuḳūḳ*) deriving directly from the primary one, is "claim" or "right", as a legal obligation [see ḤUḲŪḲ]; this use of the term is already fully developed in the Ḳurʾān. Islamic religious law distinguishes the *ḥaḳḳ Allāh*, mainly Allāh's penal ordinances, and the *ḥaḳḳ al-ādamī*, the civil right or claim of a human.

In Ṣūfī terminology, *ḥaḳḳ al-yaḳīn*, an expression taken from sūra LVI, 95, is that "real certainty"

which comes to the creature with his passing away (*fanā'*) in his *ḥāl* after he has acquired visual certainty (*ʿayn al-yaḳīn*) and intellectual certainty (*ʿilm al-yaḳīn*); cf. Djurdjānī, *Taʿrīfāt*, *s.v.*; Ḳushayrī, *Risāla*, Būlāḳ 1290, ii, 99 ff. In Ṣūfī terminology, too, the *ḥuḳūḳ al-nafs* are such things as are necessary for the support and continuance of life as opposed to the *ḥuẓūẓ*, things desired by the *nafs* but not necessary to its existence. The use of the formula *ana 'l-ḥaḳḳ*, 'I am the *Ḥaḳḳ*", by al-Ḥallādj [*q.v.*] was one of the counts on which he was condemned and executed.

To sum up, the meanings of the root *ḥḳḳ* started from that of carved, permanently valid laws, expanded to cover the ethical ideals of right and real, just and true, and developed further to include Divine, Spiritual Reality.

(D. B. MACDONALD-[E. E. CALVERLEY])

HAKKĀRĪ, (1) name of a Kurdish tribe, who from ancient times have inhabited the practically inaccessible mountain districts south and east of Lake Van, a region called after them Hakkāriyya by Arab geographers and historians [see KURDS], and hence (2) the name of the extreme south-east *vilâyet* of the modern Turkish republic (modern name: Hakkâri), population (1960) 67,766 (the most sparsely populated area of Turkey, with a density of only 7 persons per sq. km.); the chief town is Čölemerik [*q.v.*]. Named by Yāḳūt (*Muʿdjam*, s.v.) as a town, district and some villages in the Djazīrat Ibn ʿUmar [see IBN ʿUMAR, DJAZĪRAT], Hakkārī is mentioned as a place also in a Geniza document of the early 12th century (S. D. Goitein, in *J. Jewish St.*, iv (1953), 78). The district came under Ottoman suzerainty as a result of the winter campaign of 920-1/1515-6 (Hammer-Purgstall, *GOR*, ii, 432 ff.); it was sometimes counted as a *sandjaḳ* of the *wilāyet* of Van, but, like other Kurdish districts, it enjoyed the privilege that the Kurdish prince was recognized as the hereditary *sandjaḳ-begi* (I. H. Uzunçarşılı, *Osmanlı tarihi*, ii, Ankara 1949, 572-3), so that Ottoman suzerainty was barely nominal. Only in the middle of the 19th century did the Ottoman authorities begin to make the suzerainty real: for a time Hakkārī formed part of the *eyālet* of Erzurum; in 1876 it was made a separate *wilāyet*; in 1888 it was made a *sandjaḳ* of the *wilāyet* of Van. It was again made a *vilâyet* in 1935. Until the first World War it had a large population of Nestorian Christians [see NESTORIANS]; even at the present time the inhabitants of the region are predominantly Kurds.

ḤAKKĪ [see ʿABD AL-ḤAḲḲ B. SAYF AL-DĪN].

ḤAḲḲĪ [see IBRĀHĪM ḤAḲḲĪ, ISMĀʿĪL ḤAḲḲĪ].

ḤĀL, as a term of grammar [see NAḤW].

ḤĀL (pl. *aḥwāl*), Ṣūfī technical term (*iṣṭilāḥa*) which can be briefly translated by "spiritual state". Dhu 'l-Nūn al-Miṣrī (d. 245/859) outlines the distinction which was to become classic between *aḥwāl* ("states") and *maḳāmāt* ("stations"). We find a more highly developed elaboration in his contemporary in Baghdād, Ḥārith al-Muḥāsibī (165-243/781-857).

The term *ḥāl* belonged to the technical vocabulary of the grammarians, the physicians and the jurists. It seems indeed (cf. L. Massignon, *Passion d'al-Ḥallâj*, Paris 1922, 554) that it was from the medical vocabulary that al-Muḥāsibī borrowed it. In medicine, *ḥāl* denotes "the actual functional (physiological) equilibrium" of a being endowed with *nafs*; in *taṣawwuf*, it was to become the actualization of a divine "encounter" (*wadjd*),—the point of equilibrium of the soul in a state of acceptance of this encounter. Here, and in the later elaboration of the Ṣūfī vocabulary, the original meanings of the grammatical and medical vocabularies approach each other. In grammar, *ḥāl* is the state of the verb in relation to the agent, its "subjective" state. This last notion, which was to be of very direct influence on the philosophical vocabulary of the science of *kalām* (*ḥāl* = intermediate modality between being and non-being, Fakhr al-Dīn al-Rāzī, *Muḥaṣṣal*, Cairo n.d., 38), was for its part to connote many analyses of *taṣawwuf*. In short, the *aḥwāl* can there be defined as modalities of activation, realities essentially "instantaneous" and trans-temporal, which seize the "state" of the subject in the act of "encounter" with an internal "favour" (*fā'ida*), received from God (al-Muḥāsibī).

Thus two notions colour the Ṣūfī *ḥāl*: 1) the idea of activation, of point of equilibrium, and thus of temporal non-succession (which does not necessarily imply non-stability); 2) the idea of "encounter", and hence that the activation takes place under the impact of this "encounter", which will be directly or indirectly related to God. The definition of *ḥāl* as "passive state" often given by Western interpreters appears to be inadequate as a rendering of the exact sense, and transposes too abruptly into *taṣawwuf* a term of Christian mysticism (see below).

Ḥāl appears many times in Ṣūfī texts as the opposite and complement (*muḳābal*) of *maḳām*, or *waḳt* or *tamkīn*.

1.—*Ḥāl* and *maḳām*. The *maḳāmāt* are the "places", the progressive stations that the soul has to attain in its search for God. In general, the authors insist upon the "effort" of the soul in its approach to the *maḳāmāt*, just as they emphasize the "received" character of *ḥāl*. Although the distinction can sometimes apply to the "active" states and "passive" states of Christian mysticism, the equivalence does not appear to be total; to adhere to it would be to falsify the meaning of certain Ṣūfī analyses.—The *maḳāmāt* and the *aḥwāl* are clearly presented as two series of spiritual states, the first acquired, the second received; hence, in the manuals and in descriptions of the soul's ascent, the *maḳāmāt* generally precede the *aḥwāl*. But in fact the difference is one of perspective and stage of analysis. Both are readily called (as with al-Anṣārī and his commentators; cf. also Ibn al-ʿArīf, etc.) *manāzil*, the traveller's "halts" along the route, the resting-places. *Maḳām* evokes the staging posts which continue to remain available—to reach a new *maḳām* does not destroy the preceding *maḳām*; the *ḥāl*, on the contrary, is by nature "instantaneous", there is a succession or alternation of *aḥwāl*, there may be a stabilization of one or the other, but not

a concomitance of several: the heart possessed by a *ḥāl* is seized entirely, even though this *ḥāl* evokes, as it were spontaneously, a second which finally brings it to perfection and denies it (dialectic of the *muḳābals*).

Two remarks follow from this: (a) The same *manzil*, the same resting-place, according to the authors and their analytical processes, may be classed among either the *maḳāmāt* or the *aḥwāl*, for example, *maḥabba* (love of the soul and of God). For al-Kalābādhī, this is the loftiest of the *maḳāmāt* reached; and for al-Anṣārī, the first of the *aḥwāl* (cf. Anawati and Gardet, *Mystique musulmane*, Paris 1961, 127-8 and n. 10). (b) Repentance, asceticism, long-suffering, poverty, humility, fear of God, piety, sincerity, etc., the *maḳāmāt* follow one after another, the order no doubt varying to suit each particular treatise, but obeying a progressive principle. The *aḥwāl*, on the other hand, are subject to every sentiment that takes possession of the soul during its quest for God, and they can be received, according to the various degrees of activation, equally well at the start as during the progress or at the conclusion of the procedure. In conformity with a psychological law upon which the writers of *taṣawwuf* insist, they often present themselves in *muḳābal*, in pairs of complementary opposites—contraction and dilation of the heart (*ḳabḍ* and *basṭ*); absence and presence (*ghayba* and *shuhūd*); annihilation and survival (in God: *fanāʾ* and *baḳāʾ*), etc.

It would be fruitless to attempt to draw up precisely defined lists of *maḳāmāt* and *aḥwāl*. Different examples are to be found in practically every treatise of Ṣūfism, *e.g.*, the *Lumaʿ* of al-Sarrādj (seven *maḳāmāt* and about ten *aḥwāl*), the *Kitāb al-Taʿarruf* of al-Kalābādhī, the *Manāzil* of al-Anṣārī (ten *aḥwāl*, no "section" entitled *maḳāmāt*), etc.

It must also be noted that certain writers, basing their analyses upon the etymological meanings of these terms, maintain that *ḥāl*, once received through pure grace, can become *maḳām* through the zeal of the recipient. "If the *ḥāl* endures, it becomes a possession (*milk*) and is then called *maḳām*. The *aḥwāl* are given, the *maḳāmāt* are acquired; the *aḥwāl* come from the gift itself, the *maḳāmāt* are produced by the zeal of the man who perseveres in striving", says al-Djurdjānī (*Taʿrīfāt*, ed. Flügel, 85): establishing a continuity between *ḥāl* and *maḳām*, the activation received in the soul being as it were destined to be possessed by it. A further point to note is a phrase of al-Hudjwīrī, according to whom "the fleeting state (*ḥāl*) of the saint is the permanent station (*maḳām*) of the prophet" (*Kashf al-Maḥdjūb*, English trans. by R. A. Nicholson, Leiden-London 1911, 236). In general, however (cf. below, § 3), the stabilized *ḥāl* is rendered by some word other than *maḳām*.

2.—*Ḥāl* and *waḳt*. Unlike *maḳām*, *waḳt* may be said to occur on the same analytical level as *ḥāl*. As we have seen, *ḥāl* evokes a point of equilibrium, the impact of an "encounter". *Waḳt* (time) must not be understood as a temporal measure; it transcends measured and measurable time, it is "the unit of psychic measure" (L. Massignon, *op. cit.*, 556) of the *wadjd*, of the encounter, or its absence; cf. al-Hudjwīrī (*op. cit.*, 368) for whom, to "the time of encounter", there corresponds "the time of absence (*faḳd*)". A whole Ṣūfī line, culminating in Ibn ʿAbbād of Ronda, professes "the spirituality of time". But it is frequently emphasized (*e.g.*, al-Hudjwīrī, 369) that *waḳt* "has need of *ḥāl*", that "*ḥāl* (state) is that which descends upon 'time' (*waḳt*) and adorns it, as the spirit adorns the body". It is the actualization of *ḥāl* which makes it possible not to lose *waḳt*, and it is thanks to *waḳt* that the *ḥāl* received is actualized in the soul. According to the degree of completeness of the spiritual experience, emphasis will be placed on either the one or the other. It is said that Jacob was the possessor of *waḳt*, while Abraham possessed *ḥāl*. Similarly, *ḥāl* qualifies the object of desire (*murād*) and *waḳt* the degree introspectively attained by the one who desires (*murīd*). So much so that the *murīd* (which connotes the idea of novice, beginner) "is with himself in the pleasure of *waḳt*", and the *murād* "[is] with God in the delight of *ḥāl*" (al-Hudjwīrī, *op. cit.*, 370).

Ḥāl, an inner received state, may well at the start of the spiritual life be burdened with speech; however, it must succeed in transcending every description (*naʿt*), just as *wadjd* inserted in time shatters time, when from "encounter" it becomes "ecstasy" (cf. al-Kalābādhī, *Kitāb al-Taʿarruf*, ed. Arberry, Cairo 1352/1933, 54).

3.—*Ḥāl* and *tamkīn*. Muḥāsibī, taking his idea of *ḥāl* from the medical vocabulary (cf. above), laid stress on the point of equilibrium experienced internally, from which it followed that *ḥāl*, not measured temporally, was enduring. Other writers (*e.g.*, al-Ghazzālī, *Iḥyāʾ*, Cairo 1352, iii, 16-7) emphasize the multiplicity of *aḥwāl* in the soul, the lack of continuity in their order, and the extreme difficulty of stabilization.

But it is generally stated that *ḥāl*, the internal reality of self *transiens*, unstable at the start of spiritual life, can tend to become stabilized—beyond speech and beyond temporal order. The vocabulary of al-Djurdjānī, who regards it as becoming *maḳām* because "possessed" by the subject, here seems to be at fault. For preference, it is the idea of *tamkīn*, strengthening, stability, that emerges. The *maḳām* is a place, the station where one remains; *tamkīn* is the spiritual act of enduring and stability. *Tamkīn*, says al-Hudjwīrī, (*op. cit.*, 372), is contrasted with *talwīn*, which indicates a change, an alternating transition from one state to another.

Moreover, *maḳām*, exactly like *ḥāl*, can and must be strengthened by *tamkīn*. And this last is of two kinds, depending on whether the action of God or the subject's act is dominant. In the second case, it qualifies the *maḳāmāt* and the *aḥwāl* and is coloured by them; in the first case, "there are no attributes". The weak soul could not persist in the act of *ḥāl*—which may arise, vanish, give way to some new favour. The soul endowed with *tamkīn* becomes stabilized beyond the reach of every psychological change.

According to al-Anṣārī, the stabilized *aḥwāl* progressively become "ascendencies", *wilāyāt*, then "realities", *ḥaḳāʾiḳ*, in order finally to attain the "limits" of the mystical ascent, *nihāyāt*. Cf. S. de Beaurecueil, introduction to *Sharḥ al-manāzil* of ʿAbd al-Muʿṭī, Cairo 1954.

(L. Gardet)

ḤALAB, in Turkish Halep, in Italian, English and German Aleppo, in French Alep; town in Syria, the most important after Damascus.

It is situated in 38°68′5″ E. and 40°12′ N., and at an altitude of 390 metres/1275 ft., at the north-west extremity of the inland plateau of Syria and on the banks of a small river, the Ḳuwayḳ (average rate of flow from 2 to 3 cubic metres per second) which descends from the last foothills of the Taurus. It is surrounded by a vast chalk plain with a healthy though severe sub-desert climate with wide variations in temperature (winter average: 5° to 17° Centigrade; summer average: 20° to 30°) and a low and irregular rainfall (annual average: 420 mm/16½ ins. spread over 40 to 50 days). The basic resources of this arid country come from the growing of wheat and cotton and the rearing of sheep; olive and fig-trees and vines also thrive there, and, in addition, in the immediate outskirts of Aleppo there are market gardens along the banks of the river, and pistachio trees (L. *Pistacia vera*), which have for centuries been a great speciality of the town. At all periods these local resources have supplied Aleppo with commodities for trade and for sale in the neighbouring regions and also the opportunity to develop manufacturing industries which are still active today: chiefly textiles and soap-making. In addition it is a market centre for the nomadic Arabs of the steppes of the northern S̲h̲āmiyya who bring to it sheep, alkalis and salt (from the lagoon of al-D̲j̲abbūl).

Aleppo's importance as an urban centre dates largely from pre-Islamic times: it is certainly not an exaggeration to claim that it is one of the most ancient cities of the world and that no other place which is still inhabited and flourishing can boast of a comparable history.

Aleppo is first mentioned in history in the 20th century B.C., under the same name as it now has (Hittite Khalap; Egyptian Khrb; Akkadian Khallaba, Khalman, Khalwan) and in conditions which clearly imply that even at that early date it already had a very long past behind it. It seems that a rural settlement was formed there in prehistoric times and that this village gradually gained ascendance over the others in the area, owing to the relatively wide resources of its site and in particular to the presence there of a rocky eminence on which the citadel still stands today: it was this acropolis, one of the strongest and the most easily manned defensive positions in the whole of northern Syria, which enabled the masters of the place to extend control over their neighbours so as to found the "great kingdom" which was, in the 20th century B.C., to enter into relations with the Hittites of Anatolia.

At first the relations of the two states were friendly; but at the end of the 19th century B.C. the Hittite king Mursil, attempting the conquest of northern Syria, "destroyed the town of Khalap and brought to the town of Khattusa the prisoners of Khalap and its wealth". Aleppo fell next under the power of the Mitannis (before 1650 B.C.) and about 1430 fell again into the hands of the Hittites, who formed there a principality which was destined to collapse at the same time as the Anatolian kingdom. The Aramaeans, who then settled in northern Syria, seem to have neglected Aleppo in favour of new localities which they founded in its neighbourhood. Nothing is heard of the town either in the period of the Assyrian or of the Persian domination; it seems that this temporary disappearance was the consequence of a more or less serious destruction of the settlement, which probably occurred at the time of the fall of the Hittite kingdom and the effect of which was to reduce it to the status of a small rural town.

Aleppo owed its recovery to the conquests of Alexander and to the formation of the Seleucid kingdom. Seleucus Nicator, to whom it was allotted, founded on its site, between 301 and 281 B.C., a colony of Macedonians called Beroia, built according to a regular plan with rectilinear streets crossing at right angles, ramparts whose four sides formed a square, and a system of canals bringing water from the springs of Haylan 11 kilometres away. Though Beroia never took an important part in the destinies of the Seleucid kingdom, this foundation nevertheless formed a decisive turning-point in the history of the place: not only did it restore to it permanently the urban character which it had lost, but its layout was to be maintained in the Islamic town, some of its characteristic features surviving until the present day.

Incorporated into the Roman province of Syria, which was formed in 64 B.C., Aleppo owed to its new masters a long period of peace and the construction of magnificent market buildings (an agora and a colonnaded avenue). A Christian community established itself there at a very early date and it would seem that the town had a very active economic life during the Byzantine period, for many Jews settled there and there grew up at this period, outside the walls, a suburb for caravan trains inhabited by Arabs of the Tanūk̲h̲ tribe, whence its name, of Arabic origin, al-Ḥāḍir ("the settlement of sedentarized Bedouin"). But the Persian invasion of 540 A.D., led by the king Khosroes I in person, inflicted a serious blow on Aleppo: the citadel, into which the population had retreated, held out against the attack, but the town itself was burned. Its defences were rebuilt by Justinian, who built there a fine cathedral, but the sack of Antioch and the constant threat of Persian invasions inevitably prevented the recovery of the district.

It was in 16/636 that the Muslim troops appeared before Aleppo, under the command of K̲h̲ālid b. al-Walīd: the Arabs in the suburb surrendered immediately, followed very soon by the rest of the inhabitants, in favour of whom Abū ʿUbayda signed a solemn pact guaranteeing them their lives, the preservation of the fortifications and the possession of their churches and houses, against their agreement to pay tribute. As a consequence of this the first mosque of the town was built on a public roadway: it was in fact the monumental arch which stood at the entry to the colonnaded street; its bays were simply walled in to transform it into an enclosed space.

Attached to the *d̲j̲und* of Ḥims, and then to that of Ḳinnasrīn, Aleppo played no administrative or political rôle under the Umayyad caliphate, although some governors of the province did reside in its neighbourhood. Its life seems to have been modified only very slowly by the Muslim conquest: not only did there remain a large Christian community, which continued to be split by the same dissensions as in the past, but in addition it was to be more than a century before the number of Muslims in the region had increased enough to warrant the building of a monumental Great Mosque: it is not known whether it was al-Walīd I [*q.v.*] or his brother Sulaymān [*q.v.*] who was responsible for the construction of this building on the site of the ancient agora, which was

to remain until modern times the chief place of worship in Aleppo.

The ʿAbbāsid caliphate was for Aleppo, as for the whole of Syria, a period of eclipse: it remained during this period a provincial centre, deprived of any political or administrative importance. It fell into the hands of Aḥmad b. Ṭūlūn [*q.v.*], was re-taken by the caliph, besieged by the Ḳarmaṭīs in 290/902-3, then from 325/936-7 became subject to Muḥammad al-Ikhshīd [*q.v.*], who appointed as governor the chief of the Arab tribe of the Kilāb; this encouraged an influx of the Bedouins of this tribe into northern Syria, which was later to have regrettable consequences for the town. Disputed between Ibn Rāʾiḳ [*q.v.*] and the Ikhshīdids, Aleppo was finally captured from the latter, in 333/944, by the famous Ḥamdānid *amīr*, Sayf al-Dawla [*q.v.*], who established himself there.

Thus, for the first time since the advent of Islam, Aleppo became the capital of a state and the residence of a ruler, and was to share in the admiration accorded by historical tradition to the Ḥamdānid prince because of his military successes against the Byzantines, and the brilliant literary activity which centred round the vast palace which he built outside the walls: al-Mutanabbī [*q.v.*], Abū Firās al-Ḥamdānī [*q.v.*], al-Waʾwaʾ [*q.v.*], Ibn Nubāta [*q.v.*], Ibn Khālawayh [*q.v.*], Ibn Djinnī [*q.v.*] and many others less famous, were to give to the court of Sayf al-Dawla a brilliance which at this time was unique. In contrast to this, the administrative methods do not seem to have been very favourable to the development of economic activity. Furthermore, during the winter of 351/962, Nicephorus Phocas appeared unexpectedly before the town, took it by storm after elaborate siege operations, and left it as a deserted ruin, having methodically pillaged and burned it for a whole week and either massacred its inhabitants or led them away captive.

It was to be a long time before Aleppo recovered from this catastrophe. Sayf al-Dawla abandoned it for Mayyāfāriḳīn [*q.v.*] and on his death it passed to his son Saʿd al-Dawla Abu 'l-Maʿālī Sharīf, with whose accession there began the darkest period in the history of the town since the Muslim conquest. The ambitions of the regents, the covetousness of the neighbouring *amīrs*, the successive Byzantine invasions, the Bedouin raids, and the repeated attempts of the Fāṭimids of Egypt to seize a place whose possession would have opened to them the route to ʿIrāḳ all resulted in half a century of disorders, fighting and violence (for details see ḤAMDĀNIDS). Nor did the Fāṭimid occupation in 406/1015 bring any noticeable improvement, because of the revolts of the governors and the weakness of the central administration: the latter soon became so pronounced that in 414/1023 the Bedouin tribes of Syria decided to divide the country among themselves. In this way Aleppo fell to the chief of the Kilāb, Ṣāliḥ b. Mirdās, whose descendants, the Mirdāsids, remained in possession of it for slightly over fifty years under the merely nominal suzerainty of the caliphs of Cairo. Ṣāliḥ himself was powerful enough to drive back the Fāṭimids temporarily as far as Palestine, but the division of his territories among his sons was the signal for an incessant series of quarrels and civil wars which brought anarchy and misery to the town and enabled the Byzantines and the Fāṭimids, each in turn appealed to for help by the rival claimants, to intervene continually in the affairs of the dynasty: thus in 457/1065 the Mirdāsid Rashīd al-Dawla Maḥmūd succeeded in taking Aleppo from his uncle with the help of Turkish mercenaries enlisted with funds provided by the Byzantines.

It was in fact in the Mirdāsid period that the Turks began to penetrate into Syria, as isolated bands which the Mirdāsid princes often took into their service, but which usually roamed the region unhindered in search of plunder. Towards the end of the 5th/11th century, Aleppo itself was to come under the domination of the Turkish dynasties.

In 462/1070, under the pressure of political circumstances, Maḥmūd had officially caused the *khuṭba* to be recited in the name of the ʿAbbāsid caliph al-Ḳāʾim and of the Saldjūḳ sultan Alp-Arslān, in spite of the disapproval of the inhabitants, the majority of whom had from the time of the Ḥamdānids been adherents of the Imāmī Shīʿī doctrine. This attachment to the Saldjūḳ empire remained a purely theoretical one, in spite of a military demonstration by the sultan outside the walls of the town in 463/1071. Some years later, on the occasion of a dispute between two Mirdāsids for the succession, Malik Shāh [*q.v.*] sent against Aleppo his brother Tutush [*q.v.*:] the Arabs of the Kilāb and the ʿUḳaylid chief Muslim b. Ḳuraysh [*q.v.*], who had joined him, having secretly entered into negotiations with the besieged prince, Tutush raised the siege, to return to the attack in the following years. Unable to hold out against him, the last Mirdāsid, Abu 'l-Faḍāʾil Sābiḳ, surrendered the town to Muslim b. Ḳuraysh (472/1079).

This could be only a provisional solution, but the political conditions of the time, in a world which was in the process of change, meant that no stable situation could immediately be established: it was to be another half-century before the fate of Aleppo was settled.

On the death of Muslim b. Ḳuraysh, which occurred in 478/1085 in an encounter with Sulaymān b. Ḳuṭulmısh, Tutush, at the request of the citizens of Aleppo themselves, hastened from Damascus in order to oppose Sulaymān's design on the town, but he in his turn had to retreat before Malik-Shāh; the latter, in 479/1086, sent to Aleppo as governor Ḳāsim al-Dawla Aḳ-Sunḳur [*q.v.*], whose beneficial administration ensured for the town a few years' respite. This annexation of Aleppo to the empire of the Great Saldjūḳs was not to remain unquestioned, because of the political confusion created by the death of Malik-Shāh. Tutush defeated and put to death Aḳ-Sunḳur, who had set himself up as defender of the rights of Barḳyāruḳ [*q.v.*], and thus made himself master of Aleppo; on his death in 488/1095, it passed to his son Riḍwān [*q.v.*]; Riḍwān was succeeded in 507/1113 by his son Tādj al-Dawla Alp-Arslān, who was assassinated in the following year and replaced by his brother Sulṭān-Shāh, a minor to whom there was given as regent one of his grandfather's slaves, Luʾluʾ al-Yaya. This small Saldjūḳid dynasty was not to gain any more than a purely local importance: the smallness of its territory, of modest dimensions and impoverished by so many years of wars, disorders and impositions, its rivalry with the Saldjūḳid dynasty of Damascus, the resistance of the Shīʿī elements of the population (to whom were joined Ismāʿīlīs, who were active and dangerous enough for it to be necessary to humour their demands), all combined to render its authority precarious. The princes of Aleppo were not, any more than were their neighbours, of a stature successfully to oppose the Crusaders, who were able to push forward their enterprises in northern Syria; they even came to attack the town itself (493/1100, 497/1103), which was forced to submit to paying

tribute to them. The assassination of Luʾluʾ was to render this long political crisis still more acute: the Artuḳid prince of Mārdīn, Il-Ghāzī, was chosen as regent, but he was prevented from any effective action by his distance from Aleppo, the ruined state of the town and the dissensions within the family. In 517/1123 moreover, Balak [*q.v.*] ousted his cousins from Mārdīn and deposed Sulṭān-Shāh, but he died the following year without having been able to prevent the Crusaders from desecrating the Muslim sanctuaries on the outskirts of Aleppo. Abandoned, then besieged anew by the Crusaders allied to Sulṭān-Shāh and to Dubays b. Ṣadaḳa, the town was saved only by virtue of the energy and devotion of its *ḳāḍī*, Abu 'l-Ḥasan Ibn al-Khashshāb, who took over the administration and the direction of political affairs: it was he who, with the agreement of the population, appealed for help to the *atābeg* of al-Mawṣil, Aḳ-Sunḳur al-Bursuḳī, whose successors were to save Aleppo and to re-establish its position.

After some years of instability, the consequence of the assassination of al-Bursuḳī, Aleppo was in 523/1129 officially given by the sultan to the famous *atābeg* ʿImād al-Dīn Zangī [*q.v.*], whose victorious campaigns were to have the effect of freeing it rapidly from the threat of the Crusaders. After him, his son Nūr al-Dīn Maḥmūd [*q.v.*] was not only to continue with increasing success his work of reconquest but also to lift the town out of the state of decay into which it had fallen. He was a prudent and just administrator, who knew how to instil into the population respect for governmental authority; he rebuilt the fortified walls, the citadel, the Great Mosque and the *sūḳ*s and repaired the canals; above all it was he who was responsible for the foundation of the first *madrasa*s which were to support his efforts to restore Sunnī orthodoxy. It is true that in 516/1122 an attempt towards this had been made by the Artuḳid Sulaymān b. ʿAbd al-Djabbār, but it had encountered the opposition of the Shīʿīs, who demolished the building as fast as it was erected. Nūr al-Dīn founded at Aleppo no fewer then six *madrasa*s (including the Ḥallāwiyya *madrasa*, the former Byzantine cathedral transformed into a mosque by the *ḳāḍī* Ibn al-Khashshāb as a reprisal for the "atrocities" of the Crusaders, and the Shuʿaybiyya *madrasa*, on the site of the first *masdjid* founded by the Muslims on their entry into Aleppo). He entrusted the teaching in them to Ḥanafī and Shāfiʿī *fuḳahāʾ* whom he invited from ʿIrāḳ and Upper Mesopotamia: Raḍī al-Dīn al-Sarakhsī, ʿAlāʾ al-Dīn al-Kāsānī, Ḥusām al-Dīn al-Rāzī, Sharaf al-Dīn Ibn Abī ʿAsrūn (on whom see Brockelmann, I, 374-5, S I, 649, 971). His *amīr*s followed his example. With the *madrasa*s were built also convents for the Ṣūfīs. The Sunnī propaganda movement thus begun increased in intensity: the failure of the coup attempted in 552/1157, during an illness of the *atābeg*, by the Shīʿī elements of the town with the connivance of his brother Amīr-i Amīrān, clearly shows that the action of the Turkish princes was not long in producing results. Nūr al-Dīn also founded at Aleppo a hospital and a *Dār al-ʿAdl* for his public judicial hearings.

On the death of Nūr al-Dīn, the youth of his son, al-Malik al-Ṣāliḥ Ismāʿīl, encouraged the ambitions of Ṣalāḥ al-Dīn who, having made himself master of Damascus, marched on Aleppo, but the authorities and the population, firmly loyal to the Zangid dynasty, held out against him and even appealed to the Ismāʿīlīs for help, forcing him to abandon the siege. Only eight years later was he able to take Aleppo, the Zangids of al-Mawṣil, who had welcomed him on the death of Ismāʿīl, being only too happy to hand it over to him in order to be able to regain possession of the Mesopotamian territories which he had taken from them (579/1183). Ṣalāḥ al-Dīn gave the town to his son Ghāzī who administered it first as governor, then as ruler under the name of al-Malik al-Ẓāhir [*q.v.*]. Having extended his authority over all northern Syria, he was the first Ayyūbid ruler who dared to arrogate to himself the title of *Sulṭān*, and the dynasty which he thus founded remained until the Mongol conquest powerful enough to oppose with some success the claims of al-Malik al-ʿĀdil [*q.v.*], against whom it obtained support by means of an alliance with the Ayyūbid kingdom of Mayyāfāriḳīn and with the Saldjūḳs of Konya. Ghāzī himself, his wife, Ḍayfa-Khātūn, and his *mamlūk* Toghril, who was proclaimed regent on Ghāzī's death, all displayed remarkable political qualities and were able not only to preserve Aleppo in the hands of the direct descendants of Ṣalāḥ al-Dīn, ousted everywhere else by those of al-Malik al-ʿĀdil, but also to make it the capital of a strong and prosperous state (annual revenue of the treasury in the middle of the 7th/13th century: about 8 million *dirhams*), which was surpassed only by the realm of Egypt. This period marks the apogee of mediaeval Aleppo. Increased by new suburbs in which there lived the Turkish cavalry of the rulers, its industries stimulated by the presence of the royal court, enriched by the trade with the Venetians whom the commercial treaties (1207, 1225, 1229, 1254) had authorized to establish a permanent factory there, its fortifications restored according to modern techniques, its citadel entirely rebuilt to become one of the most splendid works of military art of the Middle Ages, its canal system repaired and extended to reach throughout the town, and its *sūḳ*s enlarged, Aleppo became at this time one of the most beautiful and most active cities in the whole of the Muslim East. *Madrasa*s continued to be built (the Ẓāhiriyya *madrasa* of Ghāzī; the Madrasat al-Firdaws of Ḍayfa Khātūn), as well as Ṣūfī convents (the Khānḳāh of Farafra, of Yūsuf II), both erected in a logical and sober style of architecture and housing an intellectual life which was remarkable for its time, as is witnessed by the names of Shihāb al-Dīn al-Suhrawardī [*q.v.*], of Kamāl al-Dīn Ibn al-ʿAdīm [*q.v.*], of ʿIzz al-Dīn Ibn Shaddād [*q.v.*], of Ibn Ṣalāḥ al-Shahrazūrī (Brockelmann, I, 358), and of ʿAlī al-Harawī [*q.v.*].

The reign of Yūsuf II [see AL-MALIK AL-NĀṢIR] was to mark at the same time the zenith and the collapse of the dynasty: chosen as sultan by the *amīr*s of Damascus, he annexed central Syria and began at the same time an open conflict with the Mamlūks of Egypt, which was ended by the intervention of the caliph of Baghdād. But, on the other hand, Aleppo, which had already had to defend itself twice against armed bands of Khwārizmīs, was attacked by the Mongols of Hūlāgū; abandoned by its ruler and a proportion of its inhabitants and taken by assault on 8 Ṣafar 658/24 January 1260, it was ruthlessly sacked, and Yūsuf II, taken prisoner by the Mongols, was put to death.

Occupied by the Mamlūks after the battle of ʿAyn Djālūt, retaken by the Mongols, again recovered by the Mamlūks, Aleppo was to remain under Mamlūk domination until the Ottoman conquest; it was made by them the capital of a *niyāba* which came immediately after Damascus in the hierarchy of the provinces: corresponding roughly with the area of the former Ayyūbid kingdom, it owed its importance to its geographical situation, on the northern fron-

tier of the empire, whose protection it ensured. Nevertheless the town recovered only slowly from the disaster it had suffered in 658/1260: the continual threat of a renewed Mongol offensive kept it in a semi-deserted state for nearly half a century; it was 32 years before the citadel was repaired and 130 years before the destroyed fortifications were rebuilt. Once security had been restored, the revolts of its governors, the turbulence of the troops and the severe taxation system scarcely helped to restore its activity, and the ravages of the Black Death of 1348, soon followed by those of Tīmūr, completed its paralysis.

But from the beginning of the 9th/15th century, the destruction of the Armenian kingdom of Cilicia and of the Genoese factories on the Black Sea, through which the commercial traffic between Europe and Persia had passed, gave Aleppo a considerable economic advantage, which was very soon to make its fortune: the town became the starting point for the caravans which fetched silk from Djīlān to re-sell it to the Venetians in exchange for cloth of Italian manufacture, and thus enjoyed a vigorous impetus whose effect was to change its topography. While its *sūḳ*s grew and were provided with large *khān*s which are among the most remarkable and typical buildings of the town (the Khān of Abrak, the Khān of Özdemir, the Khān of Khayr-bak), vast and populous suburbs grew up along the caravan routes, doubling the area of buildings and necessitating the rebuilding further out of the eastern walls. In all of these suburbs there arose great mosques provided with minarets (the mosques of Altunbughā, of Aḳbughā, of Manklibughā) and *zāwiya*s intended for the devotions of the Ṣūfīs, whose doctrines and practices were then very popular. One of these suburbs housed the Christians—Maronites, and especially Armenians—who served as brokers and dragomans to the European merchants.

Occupied without fighting by the Ottomans after the battle of Mardj Dābiḳ, Aleppo became the capital of a *wilāyet*, which corresponded to the *niyāba* of the Mamlūks and whose governors had the rank of *mīr-i mīrān*.

The rebel governor of Damascus, Djānbirdī al-Ghazālī [see AL-GHAZĀLĪ, Djānbirdī], failed to capture Aleppo in 926-7/1520, which was incorporated in the Ottoman provincial system. The first detailed (*mufaṣṣal*) register in the *Daftar-i Khāḳānī* [*q.v.*] is dated 924/1518; several other surveys were made during the 10th/16th century. During the Ottoman decline, from the late 10th/16th century, it suffered like other provincial capitals from the factional and political activities of the local military forces. For some years the Janissaries of Damascus imposed their domination on Aleppo, from which they were finally expelled only in 1013/1604. Situated at a junction of routes, and adjacent to Turkoman, Kurdish and Arab tribal areas, Aleppo offered obvious advantages to rebels, and served as a base for the Kurd, ʿAlī Djānbulāṭ [see DJĀNBULĀṬ], defeated in 1016/1607, as well as for Abāza Ḥasan Pasha [*q.v.*], fifty years later. The domination of the local Janissaries was checked in the following century by the emergence (before 1180/1766) of a rival faction, the Ashrāf—a name which may signify no more than the retainers and clients of the Aleppine *naḳīb al-Ashrāf*, Muḥammad b. Aḥmad Ṭāhāzāde, called Čelebi Efendi. There is evidence that the Ashrāf tended to belong to the higher social groups, while the Janissaries, assimilated to the townspeople, were petty artisans and tradesmen. The factional struggles continued after Čelebi Efendi's death (1786); in a notorious clash in 1212/1798, the Janissaries treacherously slaughtered a party of Ashrāf. The leader of the Ashrāf was now Ibrāhīm Ḳaṭārāghāsī, a former servant and protégé of Čelebi Efendi. On Bonaparte's invasion of Syria, he commanded a contingent of Ashrāf, sent to fight the French: there was a separate Janissary contingent. Ibrāhīm was twice appointed governor of Aleppo, but failed to perpetuate his power there, or to secure the ascendancy of the Ashrāf. The Janissaries regained power after his removal in 1223/1808, and although proscribed by the governor, Čapanoghlu Djalāl al-Dīn Pasha, in 1228/1813, remained a force in local politics. In 1235/1819 they combined with the Ashrāf to head an insurrection against the governor, Khurshīd Pasha. Even after the dissolution of the Janissary corps in 1826, they survived as a faction in Aleppo, as did the Ashrāf, until the mid-19th century.

During the whole of this period, in spite of the heavy taxation (treasury revenues farmed out in 991/1583-4, for the town proper: 3,503,063 *aḳče*s; total together with the surrounding villages: 17, 697,897 *aḳče*s), Aleppo did not merely maintain the commercial importance it had acquired under the last Mamlūk sultans, but developed it to the point of becoming at one period the principal market of the whole of the Levant. The signing of capitulations with the western European powers led, in fact, to the opening of new factories there: beside the Venetians, who in 1548 had brought there their consulate and their commercial headquarters, the French in 1562, the English in 1583 and the Dutch in 1613 also opened there consulates and trading offices which, throughout the 11th/17th century, were in fierce competition. Relegated to second place by the rapid development of Smyrna (Izmir) and by the Ottoman wars against Persia, whose effect was to cut it off from the regions with which it traded, and still more adversely affected by the efforts of the English and the Dutch to make Russia and the Persian Gulf the commercial outlets for Iran, Aleppo nevertheless continued to be a centre of world-wide importance, importing from Europe, via Alexandretta and Tripoli, manufactured goods (cloth, metals, chemical products, glass, paper, etc.) which it re-exported to eastern Anatolia, Kurdistan and Persia, exporting the products of its own industry (silks, cottons) and the raw materials supplied by its hinterland (drugs, cotton, nut-gall). In 1775, the total annual value of this trade stood at nearly 18 million gold francs, but after this date it declined continually because of the slowing down of the industrial and maritime activity of France, which had finally obtained a virtual monopoly over Aleppo. Another reason for this decline was the corrupt administration, and also the earthquake of 1822 which destroyed the greater part of the town; in addition, the constantly expanding place which the new trade with Asia and America was filling in world economy deprived the Levant of much of its former importance: in the period from 1841-46 the trade of Aleppo did not exceed even 2 million gold francs.

The intense commercial activity of its hey-day naturally was reflected in a further extension of the *sūḳ*s, many of which were entirely rebuilt in cut stone; at the same time the governors of the town provided *khān*s to house the foreign merchants. These Ottoman *khān*s of Aleppo are among the best-preserved and most characteristic monuments of the town: some of them are attached to other buildings used for trade with which they form a homogeneous complex covering a vast area (*e.g.*, the *waḳf* of Dukagin-zāde

Meḥmed Pas͟ha, 963/1555: a great mosque, three *k͟hāns*, three *ḳayṣariyyas* and four *sūḳs*, covering nearly 3 hectares; the *waḳf* of Ibrāhīm-K͟hān-zāde Meḥmed Pas͟ha, 982/1574: the customs *k͟hān* and two *sūḳs* consisting of 344 shops, the whole covering 8,000 square metres); others, which conform more closely to the traditional type, are no less noteworthy (the *k͟hān* of the Vizier, the *k͟hān* of Kurt-bak). Thanks to these building works of the Ottoman pas͟has, Aleppo possesses today the most beautiful *sūḳs* in the whole of the Muslim world. The great mosques, built at the same time, which reproduce the building style current in Istanbul, show the same breadth of conception, the same lavish resources, and the same successful result (the *d̲j̲āmiʿ* of K͟husraw Pas͟ha, and of Bahrām Pas͟ha; the Aḥmadiyya *madrasa*, the S͟haʿbāniyya *madrasa*, the *madrasa* of ʿOt͟hmān Pas͟ha).

At the same time, as a result of the commercial activity in the town and the impoverishment of the country districts, which together produced a drift of the peasants to the town, new suburbs arose, inhabited by small craftsmen (weavers etc.), increasing the town to an area approaching that which it occupies today: at the end of the 11th/17th century, it contained about 14,000 hearths, a considerable figure for the time.

The installation of the European merchants had naturally been profitable to their habitual intermediaries: the Jews and more especially the Christians. The latter in addition, by acting as dragomans for the consulates, were able to obtain diplomas of immunity [see BERATLÎ]. Thanks to the activities of European missions, many of them became Roman Catholics (4,000 Catholics in 1709; 14,478 Catholics as against 2,638 non-Catholics in the middle of the 19th century). Their suburb grew and middle-class houses were built in it which are among the finest in the town, and it even became a centre of intellectual activity.

Thus, in many respects, the first half of the Ottoman period (10th/16th-12th/18th centuries) constituted the culminating point in Aleppo's history.

From 1831 to 1838 the Egyptian occupation [see IBRĀHĪM PAS͟HA], which temporarily removed Aleppo from Ottoman administration, placed a heavy burden on the population because of the financial levies and the taxation which were imposed, but, here as elsewhere, it opened a new chapter in the history of the town: the revolt of 1266-7/1850, led by the leading inhabitants against the Ottoman governor, can be considered as the last spectacular manifestation of a social system which was already doomed. Throughout the second half of the 19th century, profound changes took place, under the influence of Europe, in social (schools, newspapers), administrative (the legal system) and economic life (the introduction of the tomato, and of kerosene and machines). New districts, planned and built in western style (ʿAzīziyya, D̲j̲amīliyya, al-Talal) grew up outside the old town and attracted primarily the more Europeanized elements of the population: Christians and Jews. When Aleppo became linked by railway to Ḥamāt and Damascus (1906), and then to Istanbul and to Bag͟hdād (1912), the proximity of the stations gave a new life to these districts, and today the centre of gravity of the town tends to move towards them.

Joined to Syria at the end of the 1914-18 war, Aleppo increased in administrative importance but suffered a great economic crisis, being cut off by the new political and customs frontiers from the countries with which it had formerly been trading—Anatolia, Upper Mesopotamia and ʿIrāḳ. This crisis was averted fairly rapidly by the discovery of new outlets for the commerce and manufactures of the town. The capital of a *muḥāfaẓa*, equipped with a veiy elaborate and methodically organized administrative machinery, and provided with many flourishing schools, Aleppo gradually became an industrial town (spinning and weaving mills) and a political and intellectual centre second in importance only to Damascus. Its continually expanding population, which in 1945 was approaching 300,000, even made it appear, immediately after the Second World War, that it had a future as great as its past.

In fact the town of Aleppo now has over 450,000 inhabitants, among them 320,000 Muslims, 130,000 Christians and a few thousand Jews. But it is unfortunate that this development has taken place without any definite measures of town-planning and that the new districts which have grown up on the outskirts, and which are occupied mainly by a population of manual and minor office workers, have not been planned as a harmonious extension of a city whose originality of architecture and intense activity had ensured it a unique place among the other great Muslim cities of the Near East. Although its commercial activity has recently benefited from the construction of the port of al-Lād͟hiḳiyya, the increase in vehicles has led to traffic problems which caused the authorities to open some thoroughfares through the ancient blocks. In addition Aleppo suffers from its situation as the "second" town of Syria, in relation to a capital to which both its history and its ambitions are traditionally opposed; the problems arising from the development of the northern provinces of Syria and of the "market place" which has long served as their centre are among the most urgent of Syria's present concerns.

Bibliography: The basic work remains J. Sauvaget, *Alep: essai sur le développement d'une grande ville syrienne des origines au milieu du XIXe siècle*, Paris 1941, of which the above article is a résumé and which contains a systematic bibliography and list of the sources. See also *İA*, s.v. Haleb, which is here reprinted (with some additions and revisions). Various later publications should be added, in particular the following studies: M. Canard, *H'amdânides*, i, Algiers 1951; D. Sourdel, *Les professeurs de madrasa à Alep aux XIIe-XIIIe siècles*, in *BEO*, xiii (1949-50), 85-115; idem, *Esquisse topographique d'Alep intra-muros à l'époque ayyoubide*, in *Annales archéologiques de Syrie*, ii (1952), 109-133. Some basic texts have been edited or translated: J. Sauvaget, "*Les trésors d'or*" *de Sibṭ ibn al-ʿAjami*, Beirut 1950; Ibn al-ʿAdīm, *Zubdat al-ḥalab fī taʾrīk͟h Ḥalab*, ed. S. Dahan, i-ii, Damascus 1951-4; S. al-Dahhān, *Bug͟hyat al-ṭalab li'bni 'l-ʿAdīm*, in *Annales archéologiques de Syrie*, i/2 (1951), 207-25 (publication of an extract on the walls and the citadel); D. Sourdel, *La description d'Alep d'Ibn Šaddād*, Damascus 1953; al-Harawī, *K. al-Ziyārāt*, ed. and tr. J. Sourdel-Thomine, Damascus 1953-7, 4-6 (tr. 6-12). For Aleppo in the Ottoman period reference may be made to: Barkan, *Kanunlar*, 206-10 (text of an Ottoman *Ḳānūnnāme* for Aleppo, dated 978/1570); R. Mantran and J. Sauvaget, *Règlements fiscaux ottomans*, Paris 1951, 97-118 (for an earlier German version of this *Ḳānūnnāme* see Hammer, *Staatsverfassung*, i, 239-41); B. Lewis, *The Ottoman archives as a source for the history of the Arab lands*, in *JRAS*, 1951, 150-1 (registers of Aleppo in the *Daftar-i K͟hāḳānī* [*q.v.*]); Herbert L. Bodman, Jr., *Political*

factions in Aleppo, 1760-1826, Univ. of N. Carolina Press, Chapel Hill 1963 (note bibliography, pp. 146-53); Ferdinand Taoutel, *Contribution à l'histoire d'Alep/Wathā'iḳ ta'rīkhiyya ʿan Ḥalab*, 3 vols., Beirut 1958-62; Alfred C. Wood, *A history of the Levant Company*, London 1935. The Turkish historian Naʿīmā [*q.v.*] was born in Aleppo, and devotes some attention to its affairs. For the present-day situation see N. Chehade, *Aleppo*, apud *The new metropolis in the Arab world*, ed. M. Berger, New Delhi 1963, 77-102 (Arabic version: *Takhṭīṭ al-mudun fi'l-ʿālam al-ʿarabī*, Cairo 1964, 187-210). The inscriptions have been published, independently of the works of J. Sauvaget, by E. Herzfeld, *CIA*, part ii, Northern Syria, *Inscriptions et monuments d'Alep*, Cairo 1954-5.

(J. Sauvaget*)

AL-ḤALABĪ, Burhān al-Dīn Ibrāhīm b. Muḥammad b. Ibrāhīm, a famous Ḥanafī author. Born in Aleppo, he studied first in his native town and later in Cairo, where Djalāl al-Dīn al-Suyūṭī [*q.v.*] was one of his teachers; then he went to Istanbul where he lived for more than fifty years, finally becoming *imām* and *khaṭīb* at the mosque of sultan Meḥemmed II Fātiḥ, also teacher of the recitation of the Ḳur'ān at the *Dār al-Ḳurrā'* founded by the Grand Muftī, Saʿdī Čelebi (d. 945/1538-9). He was deeply learned in Arabic language, *tafsīr* and *ḳirā'a*, *ḥadīth*, and particularly *fiḳh*. He led a retired and unworldly life, devoted to study, teaching and writing. One personal feature known of him is his hostility to Ibn ʿArabī [*q.v.*]. He died in 956/1549, more than 90 years old.

His main work is the *Multaḳa 'l-abḥur*, a handbook of the *furūʿ* according to the doctrine of the Ḥanafī school. It is based on four works, the *Mukhtaṣar* of al-Ḳudūrī [*q.v.*], the *Mukhtār* of al-Buldadjī, the *Kanz al-daḳā'iḳ* of Abu 'l-Barakāt al-Nasafī [*q.v.*], and the *Wiḳāyat al-riwāya* of Burhān al-Dīn Maḥmūd al-Maḥbūdī (on whom see Ahlwardt, cat. Berlin, no. 4546). Completed in 923/1517, it had an immediate success, acquired very numerous commentaries (the two most popular ones are the *Madjmaʿ al-anhur* of Shaykh-zāde, d. 1078/1667, and the *Durr al-muntaḳā* of al-Ḥaṣkafī, d. 1088/1677), was translated into Turkish and commented upon in this language (*e.g.*, by Muḥammad Mawḳūfātī, who wrote about 1050/1640), and became the authoritative handbook of the Ḥanafī school in the Ottoman Empire. The account of the legal system in the Ottoman Empire in I. Mouradgea d'Ohsson, *Tableau général de l'Empire ottoman* (Paris 1787-1820 in 3 vols., 1788-1824 in 7 vols.), is based on this work. It has often been printed, and was partly translated into French by H. Sauvaire (Marseilles 1882).

Very popular, too, were the two commentaries which Ibrāhīm al-Ḥalabī wrote on the *Munyat al-muṣallī* of Sadīd al-Dīn al-Kāshgharī (an author of the 7th/13th century). The larger one, called *Ghunyat al-mutamallī* (or *al-mustamlī*), is an exhaustive treatment of all questions concerning ritual prayer, and it was highly praised for its clear and attractive style.

Directed against Ibn ʿArabī are his *Niʿmat al-dharīʿa fī nuṣrat al-sharīʿa*, and his *Tasfīh* (sic) *al-ghabī fi 'l-radd ʿalā Ibn ʿArabī* (cf. Ḥādjdjī Khalīfa, ed. Flügel, ii, no. 2973).

Ibrāhīm al-Ḥalabī was well aware of Ḥanafī works produced in India, and he made an extract of the *Fatāwā Tātārkhāniyya*, compiled by order of Tātārkhān (d. soon after 752/1351), a nobleman at the court of Muḥammad II Ṭughlāḳ (726/1324-752/1351), but his fame does not seem to have spread to any considerable extent to that other great centre of the Ḥanafī school.

On these and his other writings, see Brockelmann, II, 570 f., S II, 642 f., also Brockelmann, I, 478, S I, 659 f.

The main sources for Ibrāhīm's biography are the reports of two near contemporaries of his, Ṭāshköprüzāde [*q.v.*] (d. 968), *al-Shaḳā'iḳ al-nuʿmāniyya* (transl. O. Rescher, Konstantinopel-Galata 1927, 311 f.), and Ibn al-Ḥanbalī (d. 971; cf. Brockelmann, 483). This last has not been directly accessible so far, but it is quoted in the accounts of the later biographers, most reliably by Muḥammad al-Ṭabbākh. The *Kawākib al-sā'ira bi-aʿyān al-mi'a al-ʿāshira* of Nadjm al-Dīn al-Ghazzī (Jounieh 1949, ii, 77) contains, in addition, some authentic recollections of the father of the author. The entries in the catalogue of Ḥādjdjī Khalīfa (ed. Flügel, vi, nos. 12848, 13320, etc.) are invaluable for the additional information they give. Ibn al-ʿImād, *Shadharāt al-dhahab*, vii, year 956, is a poor extract from the earlier biographies, but Muḥammad Rāghib al-Ṭabbākh, *Iʿlām al-nubalā' bi-ta'rīkh Ḥalab al-Shahbā'*, v, 569-572, is perhaps the most reliable digest of the earlier biographical sources.

Bibliography: given in the article.

AL-ḤALABĪ, Nūr al-Dīn b. Burhān al-Dīn ʿAlī b. Ibrāhīm b. Aḥmad b. ʿAlī b. ʿUmar al-Ḳāhirī al-Shāfiʿī, Arabic author. He was born in Cairo in 975/1567-8 and pursued the usual studies. His main teacher was the famous Shāfiʿī Shams al-Dīn al-Ramlī. Later on he taught at the Madrasa al-Ṣalāḥiyya. He died in Cairo on 29 Shaʿbān 1044/17 February 1635. His best known work is the *Insān al-ʿuyūn* commonly known as *al-Sīra al-Ḥalabiyya*. It is a biography of the Prophet, written at the request of Abu 'l-Mawāhib b. Muḥammad al-Bakrī, then head of the leading Shaykh-family of Egypt. The work is based on two earlier biographies, *viz.* *ʿUyūn al-athar* by Ibn Sayyid al-Nāsh [*q.v.*] and *al-Sīra al-Sha'miyya* by al-Ṣāliḥī, but it also contains materials taken from other sources. It found a wide circulation, was printed several times and translated into Turkish. For mss of it and of its abridgments see Brockelmann II, 307 and S II, 418. Amongst his other writings enumerated by al-Muḥibbī, we may mention *al-Naṣīḥa al-ʿAlawiyya fī bayān ḥusn ṭarīḳat al-sāda al-Aḥmadiyya* in defence of the Brotherhood of Aḥmad al-Badawī [*q.v.*].

Bibliography: Muḥibbī, *Khulāṣat al-āthār*, iii, 122 ff.; Brockelmann II, 307 and S II, 418.

ḤALĀL WA ḤARĀM [see sharīʿa].

ḤĀLET EFENDI, Meḥmed Saʿīd, Ottoman statesman, was born in Istanbul *ca.* 1175/1761, the son of a *ḳāḍī*, Hüseyn Efendi, from the Crimea. He was educated in the house of the Shaykh al-Islām Sherīf Efendi. He served under various provincial governors in Rumeli and as Ketkhudā [*q.v.*] of the *nā'ib* of Yeñishehir Fener (Larissa). On returning to Istanbul, he became closely attached to Ghālib Dede [*q.v.*], the *sheykh* of the Mewlewī convent at Ghalaṭa, a connexion which enabled him to complete his literary education. He was at this time serving as secretary to certain Ottoman dignitaries, such as Ḳaṣṣābbashī Meḥmed Agha and later the Phanariot Kallimakhi; shortly afterwards the favour of the *ketkhudā-i rikāb-i hümāyūn* Muṣṭafā Reshīd Efendi procured him a place among the *khwādjegān* [*q.v.*].

On 4 Ramaḍān 1217/29 December 1802 he was appointed ambassador to France, with the rank of *bash-muḥāsib*. His mission to Paris was a failure, but it enabled him to learn about the Western world. After his return to Istanbul (late 1806) he was appointed *beglikdji wekīli* and on 23 Rabīʿ I 1222/31 May 1807, two days after the revolution which deposed Selīm III, was promoted to the post of *reʾīs al-küttāb* [*q.v.*]. At the request of the French ambassador Sebastiani, who alleged that he was pro-British in his policy, he was dismissed on 5 March 1808 and exiled to Kütahya; this banishment was in fact a fortunate accident for him, since Muṣṭafā IV was dethroned on 28 July following. In Shaʿbān 1224/September 1809 he was permitted to return to Istanbul.

The new sultan Maḥmūd II sent him on a mission to Baghdād, where he arrived on 25 Djumādā I 1225/28 June 1810. His task was to persuade the quasi-independent *wālī* Küčük Süleymān Pasha to pay various sums due to the sultan. When Süleymān refused, Ḥālet Efendi retired to Mosul where, with the help of the *mutaṣarrif*s of Mosul and Bābān, he prepared a military expedition against the recalcitrant *wālī*. The expedition was successful, Süleymān Pasha being murdered and the former *ketkhudā* ʿAbd Allāh Agha being appointed in his place.

In 1226/early 1811 Ḥālet Efendi was appointed *ketkhudā-i rikāb-i hümāyūn*, and on 5 Shawwāl 1230/10 September 1815 *nishāndji*. He enjoyed the confidence of Maḥmūd II, who sought his advice in state affairs (for the secret correspondence between Ḥālet Efendi and the *berber-bashî* ʿAlī Agha, see Djewdet, *Taʾrīkh*², x, 262-78, xii, 226-8). He supported the sultan in his policy of subduing the *derebeyi*s [*q.v.*] in the provinces, but he did not favour the project to abolish the corps of the Janissaries: indeed he used them as an instrument to maintain his influence over the sultan. For a time he was so powerful that he controlled nominations to the posts of Grand Vizier and of Shaykh al-Islām. According to Slade, his intimacy with the Phanariots brought him under suspicion, and he tried to justify himself by showing 'as great hatred to the Greeks as he was supposed to have friendship' (*Record of travels*, i, 246). His fall was brought about by the part he played in procuring the deposition, in 1820, of ʿAlī Pasha Tepedelenli [*q.v.*] of Yanya; as his rival the *reʾīs al-küttāb* Djānib Efendi had predicted, the expedition against ʿAlī Pasha provoked the Greek revolt in the Morea (March 1821). Accused of being the cause of this disaster, he was exiled to Konya in Ṣafar 1238/November 1822 and strangled there a few days later. His head was brought to Istanbul and was buried in the Mewlewī convent at Ghalaṭa, near the public fountain and the library which he had founded there.

Ḥālet Efendi was a man of great intelligence and eloquence, whose abilities procured him a predominant position in the early years of the reign of Maḥmūd II. He maintained this position by appointing his own creatures to key posts and by sending any adversary to exile or to death. He was a conservative, strongly opposed to westernization. His rôle in precipitating the Greek insurrection was disastrous for the Ottoman Empire.

(E. Kuran)

ḤĀLETĪ, ʿAzmī-zāde Muṣṭafā (977/1570-1040/1631), Ottoman poet and scholar, considered the master of the *rubāʿī* in Turkish literature. He was born in Istanbul, the son of Pīr Meḥmed ʿAzmī (d. 990/1582), the tutor of the prince Meḥmed (later Meḥmed III), who left, besides poems in Turkish, Eastern Turkish, Arabic and Persian, an expanded translation of the *Anīs al-ʿārifīn* of Ḥusayn Wāʿiẓ and an unfinished translation (later continued by his son) of the *mathnawī Mihr u Mushtarī* of the Persian poet Muḥammad ʿAṣṣār (see Rieu, *Cat. Persian MSS*, ii, 626; Pertsch, *Kat.*, 843 ff.).

Ḥāletī studied under such scholars as the historian Saʿd al-Dīn, who arranged his first appointment as *müderris*. He soon distinguished himself and was made *müderris* successively at the *medrese*s of Eyyūb, Sultan Selīm, the Süleymāniyye (1008/1599) and Wefā (1010/1602).

In 1011/1602 he was made *ḳāḍī* of Damascus; there he met the poet Rūḥī [*q.v.*] who mentions him with praise in a *ḳiṭʿa* chronogram. He was later (1013/1604) moved to Cairo, where for a short time he took charge of the office of the *beglerbegi*, upon the murder of Ḥādjdjī Ibrāhīm Pasha, but he was accused of not being firm enough and dismissed. After a short period of disgrace, he was made *ḳāḍī* of Bursa, but was dismissed as a result of the incursions of the famous rebel-chief Ḳalenderoghlu [*q.v.*]. In 1020/1611 he was appointed *ḳāḍī* of Edirne, but was moved to Damascus the same year, where he remained until 1022/1618.

On the accession of ʿOthmān II in 1028/1618 Ḥāletī submitted to the young sultan a petition in verse, and was again made *ḳāḍī* of Cairo. He returned to Istanbul in 1028/1619. He submitted a similar petition to Murād IV, in whose reign he became the *ḳāḍīʿasker* of Anadolu (1032/1623) and later (1037/1627) of Rūmeli. He was made a *müderris* of the *dār al-ḥadīth* of the Süleymāniyye a few months before he died in 1040/1631 (indicated in the chronogram on his tomb-stone: *Rūḥ-i pākine dem-be-dem raḥmet*). He is buried in the courtyard of a school at Ṣofular which he had restored.

Despite many vicissitudes, Ḥāletī had, on the whole, a successful career and reached the second highest position of his profession; his *dīwān*, however, is full of complaints against Fate, and the jealousy of intriguing colleagues. The sources generally agree that Ḥāletī was one of the most learned men of his time. He wrote and translated many books on law, and he left a library of several thousand volumes, most of them annotated in his own hand.

Apart from various religious treatises, he is the author of: (1) *Dīwān*, dedicated to Meḥemmed III in its early version. It has not been edited. MSS contain varying numbers of *ḳaṣīda*s, *ghazal*s and *ḳiṭʿa*s. Some include his *rubāʿī*s, some do not. For a fairly good copy, see Topkapı Sarayı Müzesi, Hazine 894, which contains 31 *ḳaṣīda*s 721 *ghazal*s, 300

*rubāʿī*s and the *Sāḳī-nāme*. Haletī cannot be considered a major poet, but his *dīwān* contains many poems of impeccable form, fresh inspiration and colourful imagery. He owes his fame and place in Turkish literature almost entirely to his *rubāʿī*s, for which reason he has often been compared with ʿUmar Khayyām. His *rubāʿī*s are either included in copies of his *dīwān* or form an independent *risāla*, where they are alphabetically arranged. In both cases their numbers vary greatly (between 70 and 600). These *rubāʿī*s, exquisite in form, impeccable in style and often very personal in expression, are not always original in subject matter. They treat mostly the old themes common to most *dīwān* poets: All things are ephemeral, Fortune is fickle, life is fleeting, Fate is merciless, the beloved is cruel, consolation is to be found in mystic love, etc. But all these thoughts and feelings are so skilfully expressed that poets, scholars and biographers alike proclaimed him as the greatest master of *rubāʿī* (cf. Nedīm's famous verse: *Ḥāletī ewdj-i rūbāʿīde učar ʿanḳā gibi*, "Ḥāletī soars in the topmost heaven ot *rubāʿī* like the *ʿAnḳā*").

(2) *Sāḳī-nāme* (the Book of the Cup-bearer), a *mathnawī* of 520 distichs in *mutaḳārib*, which Ḥāletī wrote following the vogue of the time, when many poets produced works of varying length in this genre, introduced from Persian. It consists of a short introductory prologue followed by 15 sections (*maḳāle*s) and an epilogue (*khatm-i kelām*). Following the pattern, Ḥāletī uses this genre to glorify mystic love symbolized by wine, elaborates on the transience of worldly things and mocks the ostentatious practices of the hypocritically devout; finally he invites all "men of heart" to join in drinking this wine and become brothers.

(3) *Münsheʾāt*, a collection of the letters Ḥāletī wrote to various important personalities of the time. Although they are written in the usual flowery and bombastic *inshāʾ* style, they contain a number of enlightening references to events and personalities of the time.

Yöntem, art. *Hâletî*, in *IA*; Rieu, *Cat. Turkish MSS*, 96b; *Istanbul Kütüphaneleri türkçe yazma divanlar katalogu*, ii, 264-8.

(Fahir İz)

ḤALFĀʾ (A.), alfa-grass, esparto-grass. This name is generally used, loosely, of two rather similar plants: the true alfa-grass (*stipa tenacissima*) with leaves folded into a half-sheath and ears which somewhat resemble those of barley; and the lygeum or esparto-grass or "wild alfa" (*lygoeum spartum*), a smaller plant which has stiffer leaves. The former grows in mountainous districts and on high plateaus; in Tunisia it is called *ḥalfāʾ rūsiyya* and *geddīm*; the latter prefers low-lying ground (*ḥalfāʾ mahbūla, sennāgh*). Although it is difficult to recognize them at first, the experienced eye can distinguish the yellow-green of alfa-grass from the blue-green of esparto-grass. A field of alfa or a pre-Saharan steppe pasture where alfa is predominant is sometimes given the name *zemla*.

The true alfa flourishes in the area extending from the Ḍahra of Morocco to beyond the Djabal Nafūsa in Libya and including the Ḳṣūr Mountains, the plateau of the Awlād Sīdī Shaykh, Djelfa, Bū Saʿāda, the Bū Ṭāleb and the Maʿādid, in Algeria, and the High Tell, the *djabal*s situated to the south of the Dorsal, the chain of the Maṭmāṭa and the plateau of the Ḥāwiya, in Tunisia. This alfa is sometimes subdivided into "sparterie" alfa, with very fine stalks about 40 centimetres long, which have a regular diameter, and "paper-making" alfa, with coarser stalks of varying length.

Usually only the true alfa is used to make pulp for paper-making, since the discovery, in the 1850's, by Thomas Routledge of Eynsham of the possibilities of its use in this industry. The wild alfa or esparto-grass, although its fibres are equally suitable for paper-making, is preferred for sparterie (see below) and rope-making. They are, however, to a certain extent interchangeable.

The alfa fields have given rise to many juridical problems. Originally the state of Tunisia tended to consider the alfa areas as its domain and to instal there workers to harvest it, and public weighing officials. Soon, however, there developed a system of "concessions" with privately employed workers.

The season for the harvesting of alfa, but not of esparto-grass, is officially fixed from September 1st to April 30th, the spring months being left to allow the plant to grow again. The harvesting is done by women and consists of separating the fibrous stalk from the sheath by a sharp pull done with the help of a rod (*moglaʿ*) 30 centimetres long. The woman takes a handful of stalks (*mozla*), twists them round the rod, and, with a brisk action, separates them from the rhizomes. The product of the harvest, first collected into hanks (*zerza*), then bound into sheaves (*ḥnāg*) of from 10 to 12 bunches, is put into a wide-meshed net (*djeyyāba, shəbka*) to be carried to the public weighing machine in the market place (*mənshra*). A good worker can gather as much as 100 kgs. in a day. Among the Awlād ʿAzīz (Maknāsī) a woman's harvesting ability is considered as part of her dowry. After being weighed, the alfa is put into stacks (*gūm*) in the stack-yard to dry thoroughly. After a week it is put into bales which are piled up (*testīf*) to await transport by train or lorries to wholesale markets or factories.

In Tunisia, the markets, the first of which were set up at Sousse and Ḳayrawān, multiplied with the building of the railway between Hanshīr Swātīr and Sousse. Local markets were set up near the stations: Ḥādjeb al-ʿUyūn, Sbeytla, Ḳāṣrīn, Thelepte, Haydra, in the High Tell. Centres at Mazzūna, Sened, Maknāsī, Ḳafṣa, Sīdī Bū Zīd, Fayḍ and Bīr Hafey supply alfa to Sfax or to the recently built cellulose factory at Ḳaṣrīn.

In addition to this industrial use there should be mentioned some uses of alfa in local handicrafts. In Hergla, the Chebba and Kerkena it is used for plaiting the special baskets (*shwāmī*) which are used for holding the pulp of crushed olives when it is put under the press to extract the oil. In Zrība, Takrūna, and the Maṭmāṭa it is used for weaving on a high-warp loom decorated mats with a warp of wool and a weft of alfa, the stalks being either left in their natural colour or died red and black; this craft is done by women and those of Bū Ṭāleb (Algeria) also excel in it. Alfa is used also to make long plaited strips (*ḍfīra*) which are made into hump covers for camels (*bṭāsh*), double panniers (*shārya*) or pairs of saddle-bags (*zəmbīl*), grain silos (*gambūṭ, rwīna*) which are stored in the *ḳṣar*s of the south or in the court-yards of cave-dwellings, sleeping mats, and even sandals (*tarbāga*), which consist of a simple sole fastened to the foot by two or three thongs which are passed between the toes and round the side of the foot and fastened in front. If soaked in lukewarm water alfa can if necessary be twisted into ropes.

In southern Tunisia alfa is used also as fodder for

camels. In spring the semi-nomadic camel-owners graze them on the surrounding alfa-growing plateaus.

Esparto is more easily worked than alfa *rūsiyya* and there are two methods of using it. A. Louis (*Iles Kerkena*, i, 343-56) describes the various processes which transform esparto: from the bale to the soaked fibre (drying, baling, steeping in the sea, drying again, silage) and from the beaten fibre to useful objects.

Fibre which has been steeped in sea-water and beaten on a round stone or a wooden block, then twisted (*teftīl*) once, is made into string or thin ropes (*s͟hrīṭ*, *k͟həzma*, *mradda*), thick ropes for drawing up water from wells or for haulage (*ḥbəl*, *d̲j̲arr*) and even, after being twisted again on an implement for twisting the strands (*ṭag͟hla*), ropes for fishing boats. Twisted cords of esparto are used also for making nets for carrying loads, camel harnesses, sacks and for the partitions of fish-traps, in fact in many objects in current use in agriculture and fishing.

Esparto which is simply soaked and not beaten is used for plaiting. The plaits are then joined to make double donkey-panniers, hump covers for camels, saddle bags, carriers for water-coolers (*nāgla*), and various other everyday objects similar to those made from the true alfa.

This is a family craft and many are skilled in it (though it is agreed that the inhabitants of Kerkena are specialists in twisting and plaiting alfa), hence the proverb "A house without alfa is a deserted house".

(A. Louis)

ḤALĪ [see ḤALY].

ḤĀLĪ, Kʰwād̲j̲a Alṭāf Ḥusayn, Urdū poet. His ancestor K͟hwād̲j̲a Malik ʿAlī came to India in the reign of Muḥammad b. Tug͟hluḳ and was appointed *ḳāḍī* of Pānīpat. Ḥālī was born at Pānīpat in 1837. His father died when he was nine years old; but in spite of the drawback in his early education he studied Arabic and Persian grammar and elementary logic in Dihlī, and in 1856 occupied a petty clerical post at Ḥiṣār. After the Mutiny in 1857 he remained unemployed for four years and during this period studied exegesis, tradition, philosophy, logic and Arabic literature. About this time he began to compose Urdū poetry on the advice of G͟hālib [*q.v.*] whose pupil he became, though he confesses that he was more influenced by the straightforward expression and lack of exaggeration in the verses of his patron Nawwāb Muṣṭafā K͟hān 'S͟hayfta' in whose service he remained as a courtier until 1869. Then, on S͟hayfta's death, he took up a post in the Pand̲j̲āb Government Book Depot at Lahore to revise the text of Urdū translations of English works. This brought him indirectly in touch with the content and values of European literature which came to exercise considerable influence on his critical outlook. In association with Muḥammad Ḥusayn Āzād [see Āzād] and with the encouragement of English officers of the Department of Education in the Pand̲j̲āb, he founded a new school of Urdū poetry, which adopted the *mat͟hnawī* for realistic themes related to Indian life and background. His famous *mat͟hnawī*s *Munād̲j̲āt-i Bewā*, *Barkhārut*, and *Ḥubb-i Waṭan* belong to this period. He also widened the scope of the *g͟hazal* and enriched it with a deep ethical tone.

The most powerful impact on Ḥālī's mind was that of Sayyid Aḥmad K͟hān [*q.v.*] whose movements of educational and social reform he began to support in his articles from 1871, whom he came to know better when he moved from Lahore to Delhi to join there the teaching staff of the Anglo-Arabic School, and on whose suggestion he composed in 1879 *Musaddas-i madd-o d̲j̲azr-i Islām* (popularly known as *Musaddas-i Ḥālī*). This work revolutionized Urdū poetry by introducing into it the dynamics of pan-Islamic revivalism and paved the way for Urdū and Indo-Persian political poems which became a powerful means of religio-political propaganda in Muslim India. In 1887 Ḥālī resigned from the Anglo-Arabic School on being awarded a pension by Ḥaydarābād State and dedicated himself to a life of scholarship until his death in 1914.

The *Dīwān* of his Urdū *g͟hazal*s published in 1893 revived in Urdū the moral trend of Saʿdī [*q.v.*] whose biography Ḥālī had published in 1884. The collected edition of Ḥālī's Arabic and Persian prose and verse appeared in 1914. Between G͟hālib and Iḳbāl [*q.v.*], and as a link between them, Ḥālī is regarded as a poet of stature with whom begins the era of westernized Urdū poetry with a strong Islamic orientation.

As a biographer and critic he holds a high position in Urdū literature. His study of G͟hālib (*Yādgār-i*

Ghālib) appeared in 1884 and of the life and work of Sayyid Aḥmad Khān (*Ḥayāt-i Djāwayd*) in 1901. The long introduction (popularly known as *Muḳaddama-i shiʿr-o shāʿirī*) to his Urdū *Dīwān* marks the beginning of the modern standards of literary criticism in Urdū.

(Aziz Ahmad)

HALIDE EDIB [see KHĀLIDE EDĪB].

ḤALĪMA, a mare, or a valley, or a Ghassānid princess, after whom was named one of the most famous of all the *ayyām* [*q.v.*] of pre-Islamic Arabia, sometimes identified with the *yawm* of ʿAyn Ubāgh.

It is possible that *yawm* Ḥalīma was the "day" which witnessed the victory of Ghassān over Salīḥ [*q.v.*] late in the 5th century A.D. But more probably, it represents the victory of the Ghassānid al-Ḥārith b. Djabala over the Lakhmid al-Mundhir b. al-Nuʿmān, who was killed in the encounter. If true, the battle would have taken place in June, A.D. 554, at the spring of ʿUdhayya, in the district of Ḳinnasrīn.

(Irfan Shahîd)

ḤALĪMA BINT ABĪ DHU'AYB, foster-mother of the prophet Muḥammad. She and her husband belonged to the tribe of Saʿd b. Bakr, a subdivision of Hawāzin. Muḥammad was given to her to suckle from soon after his birth until he was two years old. Well-to-do families thought desert-life healthier for infants than that in Mecca. Some modern scholars have doubted the whole episode, but Muḥammad probably lived with this tribe for a time. After the battle of Ḥunayn he honoured his foster-sister al-Shaymā, and responded favourably when men of Saʿd b. Bakr, negotiating for the return of their captured women, pleaded their milk-relationship to him. Further stories connected with the desert residence are legendary: Ḥalīma and her family prospered miraculously while Muḥammad was with them; she therefore asked to be allowed to keep him for a further period after weaning, but while he and his foster-brother were herding lambs, two men cut him open, purified his heart with snow and returned it to his body, and Ḥalīma, fearing demonic possession, hastily took him back to his mother.

(W. Montgomery Watt)

ḤALḲ AL-WĀDĪ (the "throat", or the "gullet" of the wadi), in French La Goulette (from the Italian form Goletta), township situated on the coastal strip which encloses the wide but very shallow lagoon of Tunis (less than 3 feet deep), to the north of the channel by which it is linked to the sea. After the ports of Carthage were abandoned, this became the port of Tunis; for a long time it had no artificial improvements, the ships anchoring at the entrance to a channel which had to be constantly dredged. There goods were trans-shipped onto flat-bottomed boats which carried them to Tunis, 10 kilometres away, at the west of the lagoon, as is described by al-Idrīsī as early as the 6th/12th century (*Description*, 112/131). The entrance to the channel was guarded to the north by a fortress which is probably the "castle of the chain" mentioned by al-Bakrī in the preceding century (*Description*, 85); it was used for defence and as a customs post. When La Goulette and Tunis were captured from the Ḥafṣids in 940/1534 by Khayr al-Dīn (Barbarossa), the fortress was extensively rebuilt and became a strong bastion. The following year, however, it was seized by the Emperor Charles V who left a garrison there. During his reign and that of Philip II, the bastion was incorporated in a large citadel. But in Rabīʿ II 982/August 1574, the Turks, under the command of Sinān Pasha and ʿUlūdj ʿAlī, drove the Christians permanently from Tunis and La Goulette. The Turks restored the old fortress, but demolished the other parts of the citadel, of which only the substructure now remains. La Goulette remained until the end of the 12th/18th century a haunt of corsairs, which was scarcely disturbed by the demonstrations of European fleets. Under the Bey Ḥammūda (1782-1814), the fortifications were completed: in about 1829, the traveller Nyssen saw there a second fort (to the south) and several batteries. The Bey Aḥmad (1837-1855) built there an arsenal and a summer palace. La Goulette was the first Tunisian port; between 1861 and 1865 in particular, it "was visited by an average of over 600 ships each year, carrying a total of 80,000 tons", which comprised 90% of the imports and 45% of the exports of the Regency (Ganiage, 55-6). In 1872, that is to say nine years before the establishment of the French Protectorate, La Goulette was linked to Tunis and to the palace of the Bardo by a railway track, which never, however, offered serious competition to the inconvenient small boats.

With the construction of the port of Tunis at the end of the lagoon and the digging out in the mud of a channel 10 kilometres long and 7.5 metres deep, La Goulette became, after 1893, the outer harbour of the capital, with a basin of eleven hectares which now permits ships with a draught of up to 10.5 metres to come alongside: iron ore and phosphates from the Haut Tell are loaded there and hydro-

carbons and coal are unloaded; it contains the main electricity station, whose output has recently doubled. This outer harbour is shortly to be enlarged. There has long been a settlement to the north of the bastion—a fishing village whose inhabitants are mainly of Italian origin and which has become a seaside resort and a popular suburb of Tunis. In 1926 La Goulette had a population of 7,400, of whom 2,000 were Jews and nearly 4,000 Europeans, two-thirds of the latter being Italians; in 1956 its population was 26,300 (including 10,150 Europeans and 3,300 Jews, who have almost all left since Tunisia became independent).

(J. Despois)

ḤALḲA, as a term of Ṣūfism [see TAṢAWWUF].

ḤALḲA (literally "circle", "gathering of people seated in a circle", and also "gathering of students around a teacher"), among the Ibāḍī-Wahbīs of the Mzāb [*q.v.*] a religious council made up of twelve *ʿazzāba* ("recluses", "clerks"; on the exact meaning of this word, see R. Rubinacci, *Un antico documento di vita cenobitica musulmana*, 47-8), and presided over by a *shaykh*. On the mystical sense of *ḥalḳa*, the *Ḳawāʿid al-Islām* of al-Djayṭālī [*q.v.*], which is the most complete code of the Ibāḍī sect (written probably in the first half of the 8th/14th century), says: "On their arrival the members of the assembly must seat themselves to form the circle (*ḥalḳa*), leaving no space between them; for spaces delight the devil and let him in". Each Mzābī town had such a council, which met in the town mosque, in the chief mosque if there were more than one. Originally the *ḥalḳa* was simply those who assembled around a Muslim legal scholar or theologian, which later, among the Ibāḍīs of Wargla [*q.v.*], of Wādī Rīgh [*q.v.*] and in particular among those of the Mzāb grew into a "council of recluses" to which the whole existence of the Mzābī cities was subject. In fact, before the French annexation of the Mzāb (1882), the Ibāḍī *ḥalḳa*s in the Mzābī towns took precedence over the *djamāʿa*s, *i.e.*, the municipal councils which directed the affairs of the town.

The first mention of the *ḥalḳa* among the Ibāḍīs of the Maghrib is found in the chronicle of Abū Zakariyyāʾ Yaḥyā b. Abī Bakr al-Wardjilānī [*q.v.*], in the account concerning the two famous 4th/10th century Ibāḍī *shaykh*s, Abu 'l-Ḳāsim Yazīd b. Makhlad and Abū Khazar Yaghlā b. Zaltāf. These *shaykh*s, who were natives of the town of al-Ḥāmma in the Tunisian Djarīd and who belonged to the Zenāta tribe of the Banū Wisyān, were very active, particularly under the Fāṭimid caliph Abū Tamīm al-Muʿizz li-Dīn Allāh (341-65/953-75). Al-Dardjīnī [*q.v.*] includes them among the Ibāḍīs belonging to the seventh *ṭabaḳa* ("class"), which corresponds to the first half of the 4th/10th century. According to Abū Zakariyyāʾ al-Wardjilānī, Abu 'l-Ḳāsim and Abū Khazar formed part of a *ḥalḳa* and all the Ibāḍī-Wahbīs "who wished to be informed in the humane sciences, the science of good behaviour and the traditions of holy men, came to learn from them so that they soon gained a considerable reputation". Abu 'l-Ḳāsim, who was a very rich man, was enabled by his wealth to feed them and provide for their needs. Unfortunately apart from these facts nothing is known of the organization of the *ḥalḳa*. It is known, however, thanks to Abū Zakariyyāʾ al-Wardjilānī, that Abu 'l-Ḳāsim's disciples were not allowed to marry, which reminds us of one of the obligatory rules imposed on the *ʿazzāba* by the great Ibāḍī reformer Abū ʿAbd Allāh Muḥammad b. Bakr (whom we shall mention later), namely that of celibacy (nevertheless Abu 'l-Ḳāsim, who was the *shaykh* of the *ḥalḳa*, did have a wife, a fact which disturbed him greatly). It seems therefore that celibacy was considered essential for a member of the *ḥalḳa* already in this "prehistoric" stage of the institution as represented by the group of students presided over by Abu 'l-Ḳāsim. There is reason to suppose that a "council of recluses", composed, as will appear below, of twelve members grouped around a *shaykh*, existed also at a still earlier date among the Nukkār [*q.v.*], an Ibāḍī sect which was hostile to the Ibāḍī-Wahbīs. In fact, according to a passage in Ibn Khaldūn's history of the Berbers, the famous political head of this sect in the first half of the 4th/10th century, Abū Yazīd Makhlad b. Kaydād [*q.v.*], had with him Abū ʿAmmār ʿAbd al-Ḥamīd al-Aʿmā, accompanied by "twelve other persons of influence", with whom he went from the Bilād al-Djarīd into the Aurès (in about 331/942-3), in revolt against the Fāṭimids. Since Abū ʿAmmār was teaching in the first half of the 4th/10th century in the Bilād al-Djarīd (at Tūzer or at Taḳyūs, *i.e.*, Krīz Tagyūs, the ancient Thiges), where he was the teacher of Abū Yazīd Makhlad b. Kaydād, it may be that Abu 'l-Ḳāsim Yazīd b. Makhlad and Abū Khazar Yaghlā b. Zaltāf, who were natives of another part of the Bilād al-Djarīd, were influenced in their ideas on the *ḥalḳa* by the existence of the Nukkārī council of twelve. Among the pupils of Abū Khazar Yaghlā b. Zaltāf was Abū Muḥammad Wīslān/Wāslān b. Yaʿḳūb, a famous Ibāḍī scholar of Djarba [*q.v.*], who is classed by al-Dardjīnī among the persons of the eighth *ṭabaḳa* (second half of the 4th/10th century). According to al-Shammākhī [*q.v.*], he also presided over a *ḥalḳa* in his native island.

To the following *ṭabaḳa* (first half of the 5th/11th century) there belonged another Ibāḍī scholar who was a native of the Bilād al-Djarīd: Abū ʿAbd Allāh Muḥammad b. Bakr, who was responsible for the first rule concerning the constitution of an Ibāḍī-Wahbī *ḥalḳa*. Abū ʿAbd Allāh studied in the Bilād al-Djarīd under the direction of the *shaykh*s Abū Nūḥ Saʿīd b. Zanghīl and Abū Zakariyyāʾ b. Abū Miswar, who lived in the second half of the 4th/10th century. After the death of Abū Nūḥ, Abū ʿAbd Allāh Muḥammad b. Bakr went to Ḳayrawān to perfect his knowledge of Arabic language and grammar. Then, after returning to the Bilād al-Djarīd, he settled at Taḳyūs, whence he next went to the Wādī Rīgh (Oued Righ). It was in this oasis that he organized his *ḥalḳa*, at the request of some young Ibāḍī-Wahbī students from Djarba, where they had already heard of this institution. This took place in the year 409/1018-9, and hence the cave in the Wādī Rīgh which was fitted up to be the seat of this *ḥalḳa* was given the name of "ninth". It was apparently in this cave that Abū ʿAbd Allāh drew up the rules of the *ḥalḳa* (in Arabic *Siyar al-ḥalḳa*). There exist two

very similar versions of these rules, one of which is contained in the *Kitāb Ṭabaḳāt al-mas̲h̲āyik̲h̲* of al-Dard̲j̲īnī (7th/13th century) and another in the *Kitāb D̲j̲awāhir al-muntaḳāt* of al-Barrādī (beginning of the 9th/15th century). The critical edition of the *Siyar al-ḥalḳa* based on these two versions is by M. R. Rubinacci. This document shows that the members of a *ḥalḳa* were known as *ʿazzāba* (singular form: *ʿazzābī*). They were distinguished from the laity by their tonsure (they had to shave their heads completely) and by their simple white habits. New members were admitted to this council only after a very detailed investigation. At the head of a *ḥalḳa* was a *s̲h̲ayk̲h̲*, who retained this position until his death. He governed the *ʿazzāba*, took charge of the administration, judged, and taught, being responsible for the material possessions (*ḥubus*) and the spiritual well-being of the *ḥalḳa*. He was assisted by a *k̲h̲alīfa* who might take his place if necessary. It was he also who appointed certain experts (inspectors, ushers) known as *ʿurafāʾ* (singular: *ʿarīf*), one of whom supervised the collective recitation of the Ḳurʾān, while another took charge of the communal meals, and others were responsible for the students' education, etc. All the time which the *ʿazzāba* had free after the performance of their professional duties was devoted to prayers and other pious exercises, important among them being the five religious meetings per day, devoted to the recitation and the explanation of the Ḳurʾān. Two of these meetings, one of them held in the middle of the night, were presided over by the *s̲h̲ayk̲h̲* of the *ḥalḳa*. The *s̲h̲ayk̲h̲* concerned himself also with teaching the students. While the main body of the *ʿazzāba* went about its professional occupations, an *ʿarīf* prepared the communal meals of which there were two a day (in the morning and after the *ʿaṣr* prayer). The lives of the *ʿazzāba* were subject, according to the rules laid down by Abū ʿAbd Allāh Muḥammad b. Bakr, to a severe discipline. They were governed by a strict moral code and any misdemeanour was punished immediately.

Tradition also attributes to Abū ʿAbd Allāh a missionary zeal, considering him to have been the most active agent in disseminating and popularizing Ibāḍism in the northern Sahara. It is in fact mainly to him that is attributed an achievement which had far-reaching consequences in the history of African Ibāḍism: the conversion of the Banū Muṣʿab, a Berber tribe settled in the Tadmayt, in the area of the present-day Mzāb, which until then had adhered to the Muʿtazilī doctrine. By this he helped to determine and to a certain extent to facilitate the foundation of the oases which were later all to be known by the general name of Mzāb and to become the refuge of the Ibāḍīs of the Mag̲h̲rib (after the fall of Ibāḍism in the Wādī Rīg̲h̲ and the Wargla oasis) and a place where the institution of the *ḥalḳa* became the supreme religious council of the sect, which in some respects replaced the theocratic government of the former Ibāḍī *imāms* of the Mag̲h̲rib. After the death, in 440/1048-9, of Abū ʿAbd Allāh Muḥammad b. Bakr (who had settled, towards the end of his life, in the Wargla oasis), it was his disciple Abu 'l-K̲h̲aṭṭāb ʿAbd al-Salām Manṣūr b. Abī Wazd̲j̲ūn who continued the work which his master had begun. It was at this time also that the *ʿazzāba* of the Wādī Rīg̲h̲ decided to write a primarily juridical work for the benefit of their "novices". They produced the *Dīwān al-as̲h̲yak̲h̲*, consisting of 25 volumes.

In the first half of the 6th/12th century there lived the Ibāḍī *s̲h̲ayk̲h̲* and scholar Abū Zayd ʿAbd al-Raḥmān b. al-Maʿlā (b. al-Muʿallā), who built up the organization of the *ḥalḳa*. He was the founder of a *ḥalḳa* which was held in the mosque of the town of Tīg̲h̲ūrt (Tuggurt) in the Wādī Rīg̲h̲. It was probably for this council that Abū Zayd drew up a rule which we find mentioned by al-Dard̲j̲īnī and by al-S̲h̲ammāk̲h̲ī. This seems to be the beginning of the use of mosques for the Ibāḍī *ḥalḳas*.

After Abū Zayd, it was Abū ʿAmmār ʿAbd al-Kāfī al-Tināwatī al-Ward̲j̲lānī who made a considerable contribution to the definitive elaboration of the rules of the *ḥalḳa*. Abū ʿAmmār, one of the most eminent Ibāḍī scholars of the period, originated from the Berber tribe of the Tināwat, from the fraction which had settled in the Ward̲j̲lān (Wargla) oasis. He lived in the first half of the 6th/12th century. After having begun his studies in this oasis, he went to Tunis, where he studied among other things the Arabic language. Then he performed the Pilgrimage to Mecca. He died at Wargla and was buried there. He is renowned in the history of Ibāḍism for the part he played in the organization of authority in the Ibāḍī communities, helping to centralize this in the institution of the *ḥalḳa*. He was responsible for the production for this "council of recluses" of a special code of rules (in Arabic *sīra*) which has to a large extent retained its importance until the present day and which today among the Ibāḍī scholars of the Mzāb is known as *Sīrat Abī ʿAmmār ʿAbd al-Kāfī al-Ward̲j̲lānī*. It is a small work of about ten pages, of which the Ibāḍī collection at Kraków possesses two manuscripts brought from the Mzāb by the late Z. Smogorzewski and part of which has been translated into French by E. Masqueray (*Chronique d'Abou Zakaria*, 254-7, note). The *ʿazzāba*, say these regulations, must cut themselves off from their family and live only in a retreat. They must pray at night on the mountain tops. They must wear only woollen clothes; they must know the Ḳurʾān by heart and must occupy without complaining the post assigned to them by the *ḥalḳa*. An *ʿazzābī* must be anxious to possess the Sciences, he must defend energetically the rights of the weak, and he must maintain order in the town. The *s̲h̲ayk̲h̲* of the *ḥalḳa* must be intelligent, polite and moderate. He appoints the members of the *ḥalḳa* and distributes them into three sections, the first of which consists of him alone. The second section consists of four other eminent members of the *ḥalḳa*, and they form, with the *s̲h̲ayk̲h̲*, a special council which directs all the affairs of the *ḥalḳa* (there is also a full council composed of all the members of the *ḥalḳa*). When one of the members of the special council dies, another *ʿazzābī* has to replace him. Among the members of the *ḥalḳa* there is a *muʾad̲h̲d̲h̲in*, three others teach the children in the school, five wash the corpses of the dead, one acts as *imām* and recites the prayers in the mosque, and two others manage the possessions of the mosque. One member of the *ḥalḳa* is responsible for distributing the food to the *ʿazzāba* and to the pupils and another supervises the cleaning of the mosque.

Al-Dard̲j̲īnī, who was a member of the *ḥalḳa* of Wargla for two years (616/1219-617/1220-1), has given us a number of details concerning the internal life of this institution (R. Rubinacci, *op. cit.*, 74-5). It is interesting to learn that it was composed not only of the people of Wargla, but also of *ʿazzāba* who were natives of other Ibāḍī communities, including the Mzāb, such as the pious Abā Yazmū al-Muṣʿabī, who had preceded al-Dard̲j̲īnī in the *ḥalḳa* in question by seven or eight years.

The "council of the recluses" soon became an institution so closely linked with the Ibāḍī-Wahbī sect

that Ibn Khaldūn, writing (towards the end of the 8th/14th century) in a passage of his *History of the Berbers* (tr. de Slane, iii, 278) of the Ibāḍī-Wahbī inhabitants of the Wādī Rīgh (which he contrasts to the Nukkārīs), refers to them simply as *al-ʿazzāba*.

A *ḥalḳa* seems to have existed (but only in an undeveloped form, more akin to a simple gathering of a group of students round a famous *shaykh*) on the island of Djarba, in the second half of the 4th/10th century. This institution still existed there in about 916/1510, at the time of Pedro of Navarre's expedition against Djarba. The council of the *ʿazzāba*, presided over by the legal scholar Abu 'l-Nadjāt Yūnus b. Saʿīd, directed at this time the affairs of the Ibāḍī-Wahbī inhabitants of Djarba, in this case assisting the "governor" of this island, one Abū Zakariyyāʾ, who also was an Ibāḍī. At the same period, there were also some Ibāḍī-Wahbī *ʿazzābas* in the Djabal Nafūsa [see AL-NAFŪSA, DJABAL], in the northern part of Tripolitania; they were in communication with the *ʿazzāba* of Djarba. In fact *ʿazzāba* existed in this district until very recently. Indeed, the Ibāḍī *mudīr* of Djādū, who lived in the middle of the 19th century and who was known to H. Duveyrier, bore the by-name of *al-ʿAzzābī*. In the Berber description of the Djabal Nafūsa composed at the end of the 19th century, there are mentioned houses belonging to the families of the *ʿazzāba* in the *ḳaṣr* of Umm al-Djorsān (cf. A. de C. Motylinski, *Le Djebel Nefousa*, Paris 1899, 73). It must nevertheless be admitted that very little is known of the history and organization of the *ʿazzāba* in the island of Djerba and in the Djabal Nafūsa.

After the disappearance of the Ibāḍī-Wahbīs from the Wādī Rīgh and Wargla, which took place between the 9th/15th and the 12th/18th century (Ibn Khaldūn still speaks towards the end of the 8th/14th century of the existence in the first of these oases of a large number of Ibāḍīs belonging to the various branches of al-Ibāḍiyya), the Ibāḍī *ḥalḳas* survived in the *ḳuṣūr* of the Mzāb where the remnants of the Ibāḍī population of these two oases had fled. According to the description of the Mzāb given by Leo Africanus in 1526 (*Description de l'Afrique*, tr. A. Épaulard, Paris 1956, ii, 437), there were already six of these *ḳuṣūr*, inhabited by a wealthy population of merchants. They were apparently al-ʿAṭf (el-Ateuf), Bū Nūra (Bou Noura), Banū Isdjen (Beni Isguen), Ghārdāya (Ghardaïa), Malīka (Melika) and Sīdī Saʿīd (this latter being destroyed by the Turks in the 17th century). To the five of these *ḳuṣūr* existing until the present day must be added a further two: al-Ḳarāra (Guerara), situated at the extreme east of the Shebka, and Barriyān (Berrian), situated a day and a half's march to the north of Ghārdāya. These two places were founded in the 11th/17th century and are outside the pentapolis which forms the Mzāb proper.

Nothing is known of the history of the *ḥalḳas* of the Mzāb in the earliest times, although local traditions mention holy men and scholars who were natives of this country from the first half of the 6th/12th century (Masqueray, *Chronique*, 140-2, note). Apparently this institution did not yet exist in the Mzāb in the time of al-Dardjīnī, in the first part of the 7th/13th century. Indeed the Mzābīs who wished at this time to enter the "council of recluses" were obliged to seek a *ḥalḳa* far from their native district, as for example the pious *ʿazzābī* Abā Yazmū al-Muṣʿabī, who entered the *ḥalḳa* of Wargla. In the 8th/14th and the 9th/15th centuries there arose among the Ibāḍīs of the Djabal Nafūsa a revival of theology and jurisprudence. The remarkable works written at this time by al-Djayṭālī and by other famous Ibāḍī writers reached the Mzāb, where they rekindled the taste for scholarship which had for long been extinguished in this country. Under the impetus of pious *shaykhs*, among whom should be mentioned Abū Mahdī ʿĪsā b. Ismāʿīl al-Muṣʿabī (first half of the 9th/15th century), the Ibāḍī *ḥalḳas* of the Mzāb, composed of *ṭalaba* ("students", plural of *ṭālib*, used here in the sense of *ʿazzāba*), who were ignorant and had little influence, reformed themselves and applied themselves to a religious revival. It is from this period that there date the numerous reforms made by the *ṭalaba* (*ʿazzāba*) of the Mzābī *ḳuṣūr*. As a result of these reforms, the *ʿazzāba* of the Mzāb began once again to play a considerable part in the life of the Ibāḍī communities of that country, side by side with the lay municipal councils of the Mzābī towns. Proofs of this exist from as early as the beginning of the 9th/15th century. It was in fact at this period (Radjab 807/January 1405 and Dhu 'l-Ḳaʿda 811/March 1409) that two decrees were issued, as we read in the first words of these documents, following unanimous agreement, by "the *madjlis Wādī Mizāb*—the *ṭalaba* and the *ʿawāmm* (laity)". There is no doubt that the *ṭalaba* mentioned in these documents (of which the Ibāḍī collection at Kraków possesses a copy made in 1913 for the late Z. Smogorzewski) were merely the delegates of the *ʿazzāba* of all the towns of the Mzāb who had met together in one common session. In another document, which is, however, very late (it dates from the year 1245/1829), the word *ṭalaba* is explained by *ʿazzāba*. We read in fact "*madjlis ʿazzāba Wādī Mizāb—ṭalaba* and laity".

The text of the internal regulations of the *ʿazzāba* of Ghārdāya (tr. A. de C. Motylinski, *Guerara depuis sa fondation*, 23-8) dates probably from the first half of the 9th/15th century. These regulations were drawn up by the *shaykh* Abu 'l-Ḳāsim b. Yaḥyā, a scholar of Ghārdāya, who lived (according to local tradition) in the first half of the 9th/15th century. Adopted with general agreement by the *ʿazzāba* of Ghārdāya, these regulations concern their internal discipline and the organization of the *ḥalḳa*. The document states that these regulations conform "to the traditions handed down by our ancestors". The document next refers to the laxity, the disagreement and the divisions which reigned among the *ʿazzāba* of Ghārdāya in the period immediately preceding the production of these regulations. It deals chiefly with punishments for faults committed by the *ʿazzāba* (including excommunication in the case of an *ʿazzābī* who has committed a sin considered as "great"), and with the admission of new members of the *ḥalḳa* (an examination and a long period of observation of the candidate were obligatory). According to the regulations, an *ʿazzābī* might not reveal the secrets of the *ḥalḳa*, on pain of being excluded from the council. The *ʿazzāba* were expected to uphold the interests of those who had suffered wrongs, and to judge impartially between rich and poor. The regulations deal also with the organization of the meetings of the *ḥalḳa*, the *ḥubus* which provided for the upkeep of the mosque and for the support of the *ʿazzāba* and *ṭalaba*, etc. It is interesting to note that they are silent on the question of the celibacy of the *ʿazzāba*, which had formerly been so important.

The part which the *ʿazzāba* played in the Mzāb immediately before the French annexation of the country was a very important one. An account of the history of one of the Mzābī towns, Ḳarāra (Guerara), composed in about 1883 by Sī Muḥammad b. Shetīwī

b. Slīmān, an orthodox Muslim inhabitant of this town, gives an impressive picture of the importance of the *ʿazzāba* in the government of the town. According to this account, the administration of Ḳarāra was in the hands of three institutions: the *ʿazzāba*, the *dj̲amāʿa* of the laity (in Arabic *ʿawāmm*, which in the Mzāb was used of "everyone who is not a *ṭālib*") and the armed force responsible for maintaining order, composed of soldiers who were known as *makārīs*. The word *makrūs*, of which *makārīs* is a plural, means in Algerian Arabic "an adolescent of 12-14 years" and in the Mzāb "an adult fit to carry arms". "Twelve *ṭalaba*", according to the account of Sī Muḥammad, "known as *ʿazzāba*, and versed in the Ḳurʾān, were in charge of the mosque and responsible for its upkeep. They instructed the children and taught the various sciences to the adults, punished wrongdoers, protected the weak, the widows and the orphans, ... passed acts and pronounced judgements according to the law, determined the boundaries of houses, lands and gardens, and administered the possessions which the mosques had acquired by religious donations and which provided food for the *ʿazzāba* and the *ṭalaba*. After them came twelve men who formed the *dj̲amāʿa* of the *ʿawāmm*. They were responsible for the management of the affairs of the town, both internal and external, but they could not interfere in matters which were the province of the *ṭalaba* of the mosque (= *ʿazzāba*). When they had to deal with a matter which was beyond their competence, they consulted the twelve *ʿazzāba* who had the supreme authority. The *dj̲amāʿa* of the laity, the middle authority, was responsible mainly for the population of the town and the extension of the oases. After them came twelve men known as *makārīs* who were the police authorities, maintaining order and arresting wrongdoers and those guilty of disorderly behaviour". The *makārīs* also formed a separate *dj̲amāʿa*, which, however, possessed no powers other than those which were delegated to it by the two other *dj̲amāʿas*. It must, however, be pointed out that very often the practice did not correspond with the theory; for example, in the town of Guerara itself the lay groups composed primarily of ambitious persons gained the upper hand by by-passing the *ʿazzāba* as early as the time of the first internal struggles (end of the 18th or beginning of the 19th century). At the head of the *ʿazzāba* (or, by extension, of the *ṭalaba*) was a *s̲h̲ayk̲h̲* who, before the French annexation of the Mzāb, was the real president of the Government Council, the representative of the supreme authority of each of the towns in the Mzāb, which were constituted, as appears from what has been said above, as true theocratic republics. These *s̲h̲ayk̲h̲*s and presidents of the Government ceased to exist as such after the arrival of the French: thus for example the last *s̲h̲ayk̲h̲* of this type in Malīka, ʿUmar b. Ḥādjdj ʿĪsā, ceased to govern in about 1832. Two exceptions are known, however: the *s̲h̲ayk̲h̲* of Banū Isdjen, Muḥammad b. ʿĪsā b. Ayyūb, who was still governing in 1883, and the *s̲h̲ayk̲h̲* of G̲h̲ārdāya, Ḥādjdj Ṣāliḥ b. Ḳāsim, who was assassinated in 1881. The *s̲h̲ayk̲h̲*s of this type were elected by the *ʿazzāba* of the individual towns, but it was necessary to have also the agreement of the *s̲h̲ayk̲h̲*s of other Mzābī towns. One of these *s̲h̲ayk̲h̲*s consecrated the person elected by putting on his head, after a suitable speech, a white turban, the symbol of his rank. Besides the councils of the *ʿazzāba* and of the laity, who were responsible for the administration of the individual towns of the Mzāb, there was also a *dj̲amāʿa*, or rather a general *madj̲lis*, composed of the delegates from the *ʿazzāba* of the whole country (at least two *ʿazzāba* from each town). This *dj̲amāʿa*, which was responsible for the most important matters or those matters which concerned all the Mzābī towns together, met in the mosque of the cemetery of the *s̲h̲ayk̲h̲* ʿAbd al-Raḥmān al-Kurtī, situated between Bū Nūra and Banū Isdjen, or in the mosque of the cemetery of the *s̲h̲ayk̲h̲* ʿAmmī Saʿīd al-Djarbī, near G̲h̲ārdāya.

After the annexation of the Mzāb by the French in 1882, the *s̲h̲ayk̲h̲*s of the *ʿazzāba* still continued to wield great moral authority in the Mzābī towns, but they had already ceased to possess any political power. Their authority nowadays is limited only to the *ʿazzāba* and the *ṭalaba* of the individual towns of the Mzāb, and to the mosque itself. They also ensure that the lay population fulfils the regulations ot the Ibāḍī doctrine, making use in serious cases of a *tabriʾa* (excommunication). Within this field the authority of the *ʿazzāba* and of the *s̲h̲ayk̲h̲* of the *ḥalḳa* is still very great. They control all the Ibāḍī population of the Mzāb. The *ḥalḳa* still remains the supreme religious and moral institution of the Mzābīs. Nowadays a Mzābī *ḥalḳa* has 12 *ʿazzāba* members (sometimes there are 24, 12 of whom, however, are only substitutes). The *ʿazzāba* are recruited from among the *ṭalaba*, *i.e.*, students (in the Berber of the Mzāb they are called *aru*, plural *irwan*), both the oldest and the most learned, though it is true that the moral qualifications of the candidates often take precedence over their learning. One exception only is known: Banū Isdjen, where candidates for admission to the local *ḥalḳa* are subjected to an examination (they have to know the whole of the Ḳurʾān by heart). The candidates must be married, in contrast to the rule of Abū ʿAmmār ʿAbd al-Kāfī al-Wardjlānī which obliged the candidate to separate from his wife. The *s̲h̲ayk̲h̲*, who is today primarily a teacher, teaches the *ṭalaba* in a mosque. The *ṭalaba* are supervised by an *ʿarīf* chosen from among the oldest and most learned of the *irwan*. Another *ʿarīf* supervises the communal meals (which are provided by the *ḥubus* and from gifts). Two or three masters are chosen from among the *ʿazzāba* to teach the children the elements of the Arabic language and also the Ḳurʾān (such an *ʿazzābī* bears the title *muʿallim*). One *ʿazzābī* acts as *imām*, another is *muʾad̲h̲d̲h̲in*, four or five wash corpses, etc. The *s̲h̲ayk̲h̲* elected from among the members of the *ḥalḳa* by the other *ʿazzāba* is the thirteenth member of this council. The four oldest *ʿazzāba*, summoned by the *s̲h̲ayk̲h̲*, form the special council which acts in more important cases. The decision of this council is binding (also for the *s̲h̲ayk̲h̲* himself). The *ḥalḳa* meets in the town mosque and the meetings of the *ʿazzāba* are always secret. There are also in the Mzābī towns *ḥalḳa*s composed of women. These female *ʿazzāba* have an *imām* (who also is a woman), but no *s̲h̲ayk̲h̲*, and the *ḥalḳa*s of women have only a limited power. Thus, for example, the *tabriʾa* concerning a member of such a *ḥalḳa* may be imposed only by a *s̲h̲ayk̲h̲* from a *ḥalḳa* of men in the area.

ḤALḲA, term used in Ayyūbid and Mamlūk times for a socio-military unit which, during most of the period of Mamlūk rule, was composed of non-Mamlūks. The sources do not indicate the date of its foundation, and there is no convincing explanation of the meaning of its name (for two different views, see Quatremère, *Histoire des Sultans mamlouks*, i/2, 200-2 and A. N. Poliak, in *BSOAS*, x (1940-42), 872). The *ḥalḳa* had been in existence during most of the Ayyūbid period, being mentioned for the first time in 570/1174 (see H. A. R. Gibb, *The armies of Saladin*, in *Cahiers d'Histoire Égyptienne*, Cairo 1951, 305, reprinted in *Studies on the civilization of Islam*, London 1962, 74). Under Ṣalāḥ al-Dīn it seems to have constituted the *élite* of his army. Under his Ayyūbid successors, this unit is mentioned only rarely, yet it must have preserved a considerable part of its power and status, for even during the early years of Mamlūk rule it was still very strong. In those years the *ḥalḳa* included a considerable number of pure Mamlūks. The commanders of the unit, called *muḳaddamū al-ḥalḳa*, held honoured positions, and are named side by side with the Mamlūk *amīrs* in all important ceremonies. They also served as envoys to important states, functions which were usually reserved for the *khāṣṣakiyya* [*q.v.*]. Their pay was, however, even in that early period, much lower than that of the *amīrs*. Originally a *muḳaddam ḥalḳa* was entitled to command 40 men during an actual military expedition (but not after its termination). With the decline of the *ḥalḳa* this right had only a theoretical significance.

The members of the *ḥalḳa* were generally called *adjnād al-ḥalḳa*, sometimes *ridjāl al-ḥalḳa*, and sometimes simply *adjnād*.

Until the reign of al-Nāṣir Muḥammad b. Ḳalāʾūn, we find no clear indications of the decline of the *ḥalḳa*. During the reign of his father, Ḳalāʾūn, we still hear of 4,000 *ḥalḳa* soldiers participating in the war against the Mongols in 680/1281 as *élite* troops fighting in the centre (*ḳalb*) of the Sultan's expeditionary force; the number of the Royal Mamlūks fighting in that centre was only 800.

The first conspicuous sign of a major decline appears during the land redistributions (*rawk* [*q.v.*]) of the late 7th/13th and early 8th/14th centuries. One of the chief aims of the *rawk*s, which included the regrouping and reallocation of the fiefs (*iḳṭāʿ*), was to reinforce the Royal Mamlūks and to weaken the *ḥalḳa*. These moves against the *ḥalḳa* were completely effective, and led to its rapid decline. After the death of al-Nāṣir Muḥammad it became usual for the members of the *ḥalḳa* to exchange their feudal estates against payment or compensation (*muḳāyaḍa*), a special department called *dīwān al-badal* being established for this purpose. As a result many socially inferior elements—pedlars, artisans and other kinds of "common people" (*al-sūḳa wa 'l-ʿāmma*)—joined the *ḥalḳa*. Towards the close of the 8th/14th century the *ḥalḳa* lost practically all its importance as a fighting unit. Only a few of its members continued to take part in military expeditions, the majority being left behind in Cairo to perform guard duties there during the absence of the main force.

Al-Muʾayyad Shaykh (815/1412-824/1421), who tried to rejuvenate the Mamlūk army in general, attempted also to arrest the decline of the *ḥalḳa*, but, as with his other reforms, his success was short-lived. Sultan Barsbāy (825/1422-842/1438) reversed Shaykh's policy towards this unit, and from then on the *ḥalḳa* was on a steady down-grade up to the very end of Mamlūk rule. The very name *ḥalḳa* is gradually replaced by the term *awlād al-nās* [*q.v.*], one of its sub-units.

The *ḥalḳa* regiment of Syria, like the whole of the Syrian military society under the Mamlūks, deserves a separate study, for what is true of the armies stationed in Egypt does not, in many cases, apply to the forces stationed in Syria. Generally speaking, the status of the Syrian province was far inferior to that of Egypt. Mamlūk *amīrs* were usually reluctant to serve there, and the élite units of pure Mamlūks were concentrated in Egypt, mainly in Cairo. The Royal Mamlūks, the main cause of the *ḥalḳa*'s decline in Egypt, had no garrisons in Syria; thus in Syria the *ḥalḳa* was a far stronger and a far more important element than was its counterpart in Egypt. The central place which the *ḥalḳa* units occupied in Syria may be seen from Khalīl b. Shāhīn al-Ẓāhirī's (d. 872/1468) chapter on the Syrian provinces and their armies (*Zubdat kashf al-mamālik*, 131-5), where the *ḥalḳa* is mentioned repeatedly but the other units are mentioned only occasionally, if at all. It is true that some of the figures which this author quotes refer to the *ḥalḳa*'s numerical strength in the past (*ḳadīm*an), but this should be taken as an indication of the general decline of the armies of Mamlūk Syria and not of the decline of the Syrian *ḥalḳa* in particular (see also *Zubda*, 103-6, and *BSOAS*, xvi, 71-2). The *ḥalḳa* survived in Syria, after a fashion, into Ottoman times (see B. Lewis, in *BSOAS*, xvi (1954), 479).

Bibliography: D. Ayalon, *Studies on the structure of the Mamluk Army*, in *BSOAS*, xv (1953), 448-59 (the reasons for the *ḥalḳa*'s decline being discussed at 455 f.). (D. Ayalon)

AL-ḤALLĀDJ (the wool-carder), Abu 'l-Mughīth al-Ḥusayn b. Manṣūr b. Maḥammā al-Bayḍāwī, Arabic-speaking mystic theologian (244-309/857-922). His life, his teaching and his death throw light on a crucial period in the history of Muslim culture, and the interior experience which he describes can be considered a turning point in the history of *taṣawwuf*. (This article includes, as well as the article of *EI*[1], some extensive additions drawn from the later works of L. Massignon).

I. — Biographical details

Origins. Al-Ḥallādj was born in about 244/857-8 at Ṭūr, to the north-east of al-Bayḍā in Fars. In Ṭūr an Iranian dialect was spoken; al-Bayḍā was an Arabized town where Sībawayh was born. It is said that al-Ḥallādj was the grandson of a *gabr* and a descendant of Abū Ayyūb, the Companion of the

Prophet. His father, who was probably a wool-carder, left Ṭūr for the textile region which extended from Tustar to Wāsiṭ (on the Tigris), a town founded by Arabs, with a predominantly Sunnī-Ḥanbalī population (with, in the country districts, an extremist Shīʿī minority), and the centre of a famous school of Ḳurʾān readers. At Wāsiṭ, al-Ḥusayn lost the ability to speak Persian. Before he was 12 years old, he learned the Ḳurʾān by heart and became a *ḥāfiẓ*. He very early attempted to find an inner meaning in the teaching of the *sūras* and applied himself to *taṣawwuf* at the school of Sahl al-Tustarī.

At Baṣra. When he was twenty he left Tustarī to go to Baṣra. There he received the habit of the Ṣūfīs from ʿAmr Makkī, and married Umm al-Ḥusayn, the daughter of Abū Yaʿḳūb al-Aḳṭaʿ. He did not take any other wives and he and his wife remained united all their lives, having at least three sons and one daughter. His marriage earned him the jealousy and the opposition of ʿAmr Makkī. When he was absent from home, al-Ḥallādj was able to entrust the support of his family to his brother-in-law, a Karnabāʾī. Through the latter, he found himself in contact with a clan which supported the Zaydī rebellion of the Zandj [*q.v.*], who were contaminated in varying degrees by Shīʿī extremism; this is probably the origin of his persistent but unfounded reputation as being a Shīʿī *dāʿī* or "missionary preacher". He retained from this period some curious and apparently Shīʿī expressions, but continued to lead at Baṣra a fervently ascetic life and to remain profoundly faithful to Sunnism. He went to Baghdād to consult the famous Ṣūfī Djunayd, but in spite of the latter's advice, tired of the conflict which existed between his father-in-law al-Aḳṭaʿ and ʿAmr Makkī, he set off for Mecca immediately after the Zandj rebellion had been crushed.

First Pilgrimage. At Mecca he made his first Pilgrimage, and made a vow to remain for one year of *ʿumra* in the courtyard of the sanctuary, in a state of perpetual fasting and silence. In this he was trying out his personal way to union with God, and, going against the discipline of secrecy, began to proclaim it. ʿAmr Makkī then broke off relations with him, yet he began to attract disciples.

Khūzistān, Khurāsān and departure from Tustar. Having returned to Khūzistān, he gave up the tunic of the Ṣūfīs and adopted the "lay" habit (probably the *ḳabā*, a cloak worn by soldiers), in order to be able to speak and preach more freely. This beginning of his apostolate, the main aim of which was to enable everyone to find God within his own heart, and which earned for him the name of *Ḥallādj al-Asrār*, "the carder of consciences", exposed him to suspicion and hatred and scandalized the Ṣūfīs. Some Sunnīs, former Christians some of whom were to become viziers at Baghdād, became his disciples. But some Muʿtazilīs and some Shīʿīs, who were important treasury officials, accused him of deception and of false miracles and incited the mob against him. He left for Khurāsān to continue his preaching among the Arab colonies of eastern Iran and remained there for five years, preaching in the cities and staying for some time on the frontiers in the fortified monasteries which housed the volunteer fighters in the "Holy War". He returned to the region of Tustar, and, with the help of the Secretary of State, Ḥamd Ḳunnāʾī, was able to instal his family in Baghdād.

Second Pilgrimage, distant journeys, Third Pilgrimage. With four hundred of his disciples, he then made his second pilgrimage to Mecca, where some of his former friends, Ṣūfīs, accused him of magic and sorcery and of making a pact with the *djinns*. It was after this second *ḥadjdj* that he undertook a long tour in India (Hinduism) and Turkestan (Manicheism and Buddhism), beyond the frontiers of the *dār al-Islām*. "Au delà de la Communauté musulmane, c'est à toute l'humanité qu'il pense pour lui communiquer ce curieux désir de Dieu, patient et pudique, qui dès lors le caractérise ..." (L. Massignon). About 290/902, al-Ḥallādj returned to Mecca for his third and last pilgrimage. He returned there clad in the *muraḳḳaʿa*, a piece of patched and motley cloth thrown round his shoulders, and a *fūṭa*, an Indian loin-cloth, round his waist. His prayer at the station of ʿArafāt was that God should reduce him to nothing, should make him despised and rejected, so that God alone might grant grace to Himself through the heart and the lips of His servant.

Final preaching at Baghdād. After returning to his family at Baghdād, he set up in his house a model of the *Kaʿba*, prayed at night beside tombs and in the daytime proclaimed in the streets or the *sūḳs* his burning love of God and his desire "to die accursed for his Community". "O Muslims, save me from God" ... "God has made my blood lawful to you: kill me" ... This preaching aroused popular emotion and caused anxiety among the educated classes. The Ẓāhirī Muḥammad b. Dāwūd was angry that al-Ḥallādj should claim a mystical union with God; he denounced him at the court and demanded that he should be condemned to death. But the Shāfiʿī jurist Ibn Suraydj maintained that mystic inspiration was beyond the jurisdiction of the courts. It was at this period that, according to the hostile account of the grammarians of Baṣra, al-Ḥallādj replied to al-Shiblī, in the Mosque of al-Manṣūr, by the famous *shaṭḥ* ("theopathic phrase"): *Ana 'l-ḥaḳḳ*, "I am [God] the Truth", proclaiming that he had no other "I" than God.

Arrest. A movement for the moral and political reform of the community was taking shape in Baghdād, inspired by the preaching of al-Ḥallādj and by those of the faithful who were anxious to see in him the hidden "Pole" [see ḲUṬB] of the time. He dedicated to Ibn Ḥamdān and to Ibn ʿĪsā some treatises on the duties of viziers. In 296/908, some Sunnī reformers (under the Ḥanbalī influence of al-Barbahārī, see H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, *passim*) made an unsuccessful attempt to seize power and to raise Ibn al-Muʿtazz to the caliphate. They failed, and the infant caliph, al-Muḳtadir, was restored, his vizier being the Shīʿī financier Ibn al-Furāt. Al-Ḥallādj was involved in the consequent anti-Ḥanbalī repression and succeeded in fleeing to Sūs in Ahwāz, a Ḥanbalī town, although four of his disciples were arrested. Three years later, al-Ḥallādj himself was arrested and brought back to Baghdād, a victim of the hatred of the Sunnī Ḥāmid. He remained in prison for nine years.

Imprisonment. In 301/913, the vizier Ibn ʿĪsā, the cousin of one of al-Ḥallādj's disciples, put an end to the trial (cf. the *fatwā* of Ibn Suraydj) and the imprisoned supporters of al-Ḥallādj were released. Nevertheless, owing to pressure from his enemies and the influence of the chief of police, who was an enemy of the vizier, al-Ḥallādj was exposed for three days on the pillory with "Ḳarmaṭī agent" written above him. He was later confined in the palace, where he was able to preach to the ordinary prisoners. In 303/915, he cured the caliph of a fever, and in 305 "restored to life" the crown prince's parrot. The

Muʿtazilīs denounced his "charlatanism". The vizier Ibn ʿĪsā, who had been favourable to al-Ḥallādj, was replaced in 304-6 by Ibn al-Furāt, who was anti-Ḥallādj, but the influence of the queen-mother prevented the latter from re-opening the trial. It appears that two of al-Ḥallādj's most important works date from this period: the *Ṭā Sīn al-Azal*, a meditation on the case of Iblīs, "the disobedient monotheist", and the short work on the "ascension" (*miʿrādj*) of Muḥammad, who halted on the threshold, two bow-shots from the Divine Essence.

These meditations condemned Iblīs's refusal and suggested that beyond the experience of Muḥammad there could be attained a union in love between man and God. They seem to have been a reply to the Shīʿī extremist al-Shalmaghānī, who considered that faith and impiety, virtue and vice, election and damnation were all *muḳābal* ("related opposites") and equally pleasing to God. Al-Shalmaghānī had a considerable influence at the Baghdād court and even on the course of the trial of al-Ḥallādj.

The condemnation. The trial was re-opened and the case argued in 308-9/921-2. The background to it was Ḥāmid's financial speculation, which had been opposed in vain by Ibn ʿĪsā. It was to destroy the latter's influence that Ḥāmid procured the re-opening of the trial of al-Ḥallādj. He was helped in this by Ibn Mudjāhid, the respected leader of the corporation of the Ḳur'ān readers and a friend of the Sūfīs Ibn Sālim and al-Shiblī but opposed to al-Ḥallādj. The Ḥanbalīs, at the instigation of Ibn ʿAṭā', himself a Ḥanbalī and a mystic, held demonstrations and "prayed against" Ḥāmid: both in protest against his fiscal policy and in order to save al-Ḥallādj. They even demonstrated against al-Ṭabarī, who condemned the riot. These disorders gave the vizier Ḥāmid the opportunity to make Ibn ʿAṭā' appear before the tribunal. But Ibn ʿAṭā' refused to witness against al-Ḥallādj and maintained that the vizier did not possess the right to judge the conduct of "holy men". He was ill-treated by a guard during the court hearing and died from the blows he received.

Ḥāmid and the Mālikī *ḳāḍī* Abū ʿUmar Ibn Yūsuf, who always supported those in power at the time, arranged in advance the judgement of the tribunal which was to condemn al-Ḥallādj. Al-Ḥallādj had said "The important thing is to proceed seven times around the *Kaʿba* of one's heart": they therefore accused him of being a Ḳarmaṭī rebel who wished to destroy the *Kaʿba* of Mecca. There was no Shāfiʿī present at the trial. The Ḥanafī *ḳāḍī* declined to give judgement, but his assistant agreed to support Abū ʿUmar, and the syndic of the professional witnesses succeeded in producing eighty-four signatories. Sitting in judgement, Abū ʿUmar, urged by Ḥāmid, pronounced the formula: "It is lawful to shed your blood".

The execution. For two days the grand chamberlain Naṣr and the queen-mother interceded with the caliph, who, stricken with a fever, countermanded the execution. But the intrigues of the vizier triumphed over the hesitation of al-Muḳtadir who, as he was leaving a great banquet, signed the warrant for al-Ḥallādj's execution. On 23 Dhu 'l-Ḳaʿda, the sounding of trumpets announced the impending execution. Al-Ḥallādj was handed over to the chief of police, and in the evening in his condemned cell exhorted himself to face martyrdom and foresaw his glorious resurrection. These prayers, noted down and handed on, were to be re-grouped in the *Akhbār al-Ḥallādj*.

On 24 Dhu 'l-Ḳaʿda, at Bāb Khurāsān "before an enormous crowd", al-Ḥallādj, with a crown on his head, was beaten, half-killed, and exposed, still alive, on a gibbet (*ṣalīb*). While rioters set fire to the shops, friends and enemies questioned him as he hung on the gibbet and traditions relate some of his replies. The caliph's warrant for his decapitation did not arrive until nightfall, and in fact his final execution was postponed until the next day. During the night there spread accounts of wonders and supernatural happenings. In the morning, according to al-Tūzarī, those who had signed his condemnation, grouped around Ibn Mukram, cried out: "It is for Islam; let his blood be on our heads". Al-Ḥallādj's head fell, his body was sprinkled with oil and burned and the ashes thrown into the Tigris from the top of a minaret (27 March 922).

Witnesses reported that the last words of the tortured man were: "All that matters for the ecstatic is that the Unique should reduce him to Unity", recapitulating the appeal to the one authentic *tawḥīd*, that which God utters in the heart of His friends; and that he then recited Ḳur'ān, XLII, 18.

II. — Principal (published) works

(1) Twenty-seven *Riwāyāt*, collected by his disciples in about 290/902, in the form of *ḥadīth ḳudsī*, Arabic text in 3rd ed. of the *Akhbār al-Ḥallādj* (Fr. tr. L. Massignon, *Passion d'al-Ḥallāj*, Paris 1922, 893-904); (2) *Kitāb al-Ṭawāsīn*, a series of eleven short works (including the *Ṭā Sīn al-Azal*), Arabic text and Persian version of Baḳlī, ed. by L. Massignon, Paris 1913 (Fr. tr. L. Massignon, *Passion d'al-Ḥallāj*, 830-93); (3) some poems collected (cf. *Kitāb al-Taʿarruf* of al-Kalābādhī) in the *Dīwān d'al-Ḥallāj*, Arabic text and Fr. tr., ed. L. Massignon, Paris 1931; new Fr. tr., Paris 1938; (4) some *logia* and especially the *novissima verba* of the last night, collected in the *Akhbār al-Ḥallādj*, ed. L. Massignon (Paris 1914; ²Paris 1936; ³Paris 1957).

(For the other writings of al-Ḥallādj and the discussion of their authenticity, see L. Massignon, *Kitāb al-Ṭawāsīn*, introd. i-iv; *Passion d'al-Ḥallāj*, 804-22; *Dīwān d'al-Ḥallāj*, 1931 ed., 1-9; and *Opera Minora*, Beirut 1963, ii, 40-5 and 191).

III. — The main accusations

The trial of al-Ḥallādj took place against the background of the religious and political intrigues, and those concerning financial policy, which disturbed the Baghdād court during the minority of al-Muḳtadir. It illustrates the position of the ʿAbbāsid dynasty at the beginning of the 4th/10th century and the rôle played in it by the viziers held together by common interests. Al-Ḥallādj's two main enemies were the Shīʿī vizier Ibn al-Furāt and the Sunnī vizier Ḥāmid. All his sermons in the Baghdād *sūḳ*s were aimed at a drastic application of the values of faith to the inner life and at the proclamation of a union in love between the soul and God: all this within the framework of a dogma which deliberately stressed his Sunnī adherence. But his sermons fell on deaf ears, not only among the political circles of the court, but also in the world of the traditional jurists, the majority of them Mālikīs and Ḥanafīs, who revolved around them. It is surprising that al-Ḥallādj's strongest supporters were recruited among the Ḥanbalīs, whose pietism had at that time a considerable influence among the common people. Al-Ḥallādj's demands for moral reform and his influence on the

people were an annoyance to many of those in power. They based their accusation on two pretexts:

(a) Religious pretext: al-Ḥallādj's unmeasured utterances called in question the esoteric prudence and the discipline of secrecy which had become the rule in Ṣūfī circles since the time when Nūrī and his followers had been called to give an account before the courts of their teaching on the love of God. One result was that the Ṣūfīs such as ʿAmr Makkī and Djunayd who had been al-Ḥallādj's friends blamed him for having spoken publicly of his personal experience and for having expressed it in "theopathic statements" (*shaṭaḥāt*); in addition, some rather confused Ṣūfī tendencies, particularly those concerning "ʿUdhrī love", felt that they had to condemn the search for the One through willing love and the way of suffering. This was perhaps the main reason why the Ẓāhirī Ibn Dāwūd became an enemy of al-Ḥallādj, bent on his destruction. After this al-Ḥallādj was accused of blasphemy and of claims to *ḥulūl* (substantial union with God); and his anxiety to give an inner significance to ritual acts ("proceed seven times round the Kaʿba of your heart") was denounced as a wish to abolish the acts themselves.

(b) Political pretext: this was probably the most telling and the most decisive. Al-Ḥallādj's marriage had connected him with the Zaydī Zandj; his distant travels made him seem to be a Ḳarmaṭī *dāʿī* ("missionary"); and the language which he used, and even his themes of meditation, did borrow a certain number of Shīʿī elements, even although his replies to the interrogations on this matter remained of profoundly Sunnī inspiration. His accusers, who feared his influence on the people as well as on the members of the court, then decided to present him as an agitator and a rebel who was a threat to the order of the Community. A falsely literal exegesis of some of his sayings (see above) accused him of wishing, like the Ḳarmaṭīs, to destroy the Kaʿba at Mecca. It thus became "lawful to shed his blood" in the name of the Community itself.

Actually, during the last years of his life, al-Ḥallādj seems to have drawn onto himself his torture and condemnation—but for quite different reasons: recognizing that the way of union with God through love and suffering which he must follow was something which transcended the juridical framework of the Community, and offering himself as a sacrifice for this Community by submitting voluntarily to its laws.

IV. — Significance of the experience and the witness

In the history of *taṣawwuf*, al-Ḥallādj retains a privileged position in the line known as *waḥdat al-shuhūd*. It has sometimes been suggested that this phrase should be translated as "unity of vision" or of look" (in reference to the meaning of the 3rd form of the root *sh h d*); or, rather better, by "unity of presence". But *shuhūd* really means the act of being present at, of being a witness of, and we consider it advisable to retain the meaning of "unity of witness" (or "monisme testimonial", L. Massignon, *Lexique technique de la mystique musulmane*², Paris 1954, 103). The *waḥdat al-shuhūd* is not only "sight" or "look", but an actual presence which *is* total witness: it is God witnessing to Himself in the heart of His votary (*ʿābid*). This union with God (*djamʿ*) leads to a unification (*ittiḥād*) which is not a unification of substance, but operates through the act of faith and of love (*ʿishḳ, maḥabba*), which welcomes into the emptiness of oneself the Loving Guest (= God), "the essence whose Essence is Love", as al-Ḥallādj expressed it.

The mystical experience thus understood was to be sharply criticized by the other main Ṣūfī line, that of the *waḥdat al-wudjūd* ("unity of the Being" or "monisme existentiel", Massignon, *ibid.*), which was dominant from the 6th-7th/12th-13th centuries [see ALLĀH, 416]. A double objection was made:

(1) An objection to the idea of *ḥulūl*, infusion of substance, "incarnation",—this was an alignment with one of the accusations at the trial. Al-Ḥallādj had in fact written: "Thy Spirit has mingled itself with my spirit as amber mixes with fragrant musk" (*Dīwān*, M. 41), and above all "We are two spirits fused together (*ḥalalnā*) in a single body" (*ibid.*, M. 57). But the whole context of the poems and the writings makes it clear that *ḥulūl* here was not to be understood in the sense, which later became current, of "incarnation" or union of substance. In its most obvious sense the *ḥulūl* of al-Ḥallādj is to be understood as an *intentional* complete union (in love), in which the intelligence and the will of the subject—all in fact which enables him to say "I"—are acted upon by Divine grace. Thus the "we are two spirits fused together in a single body" should be compared with the saying of the Christian mystic St. John of the Cross: "Two natures (God and man) in a single spirit and love of God".

(2) From this arose the second, and most frequent, objection aimed at al-Ḥallādj by the *waḥdat al-wudjūd*, which was to be, as expressed by Ibn ʿArabī, that he maintained in the *djamʿ* and the *ittiḥād* a "duality". The monism of the "unity of Being" in fact intends that the *ittiḥād* should operate not, indeed, through *ḥulūl* but through a total substitution of the divine "I" for the empirical "I". To be "one" (*aḥad*) with God is to make actual the divine which in man's spirit has emanated from God (emanated, not been created *ex nihilo*; cf. al-Ghazālī's statement in the *Risāla laduniyya*: "the (human) spirit is from the *amr* of God"). This charge of "duality" aimed at the "unity of witness" reveals the difference in orientation between the two ways: the unification in and through the acts of faith and love (supreme Witness), for the *waḥdat al-shuhūd*; and the reabsorption of the acts of the created being in his first act of existence (conceived here as emanating from the Divine Being) for the *waḥdat al-wudjūd*.

V. — Vocabulary and "technical terms"

The principal writings of al-Ḥallādj are either meditations on themes symbolizing the progress of the mystic in his quest for God, or the direct (poetic) expression of this actual progress. He was constantly making his vocabulary more precise; his profound knowledge of the technical vocabularies of *fiḳh*, of *ʿilm al-kalām* and of the nascent *falsafa* combined to produce a semantic equipment which was strikingly suited to the analysis of the "spiritual states" (*aḥwāl*). "Ḥallādj, a dialectician and an ecstatic (cf. Lullius, Swedenborg), endeavoured to bring dogma into harmony with Greek philosophy on a basis of mystic experience; he was in this a precursor of Ghazālī" (L. Massignon in *EI*¹).

In the last section of the *Kitab al-Taʿarruf*, al-Kalābādhī devotes several chapters to the *iṣṭilāḥāt* ("technical terms") of Ṣūfism. The definitions of these terms are clearly based on al-Ḥallādj: thus *wadjd* ("ecstasy"), *sukr* ("intoxication"), *djamʿ* ("union"), etc., and in particular those *muḳābals*

("related opposites") which are *tadjrīd* ("enclosed solitude") and *tafrīd* ("open solitude"), *tadjallā* ("irradiation") and *istitār* ("the action of veiling, making secret"), *fanāʾ* ("annihilation") and *baḳāʾ* ("continuing existence"), etc. These terms were to have a very precise meaning in the *waḥdat al-shuhūd* of the school of al-Ḥallādj; they were to receive another meaning in the future *waḥdat al-wudjūd*; and in each case were to be understood with reference directly to the experience being described and to the conception of the world which underlay their formulation. Nevertheless their first definition by al-Ḥallādj was of prime importance in the development of the *ʿilm al-taṣawwuf*. It often gave rise to disagreements, even among al-Ḥallādj's followers themselves: as with the use of *ʿishḳ*, concurrently with, and often in preference to, *maḥabba*, for the love of God and of man. *ʿIshḳ* was part of the vocabulary of the earliest Ṣūfism (cf. al-Ḥasan al-Baṣrī); but the sense of "desire", which was one of its usual connotations, was to be rejected, through fear of attributing to God either mutability or passivity. L. Massignon has shown that the editors of the texts of al-Ḥallādj, among them the Shīʿī Baḳlī, had no hesitation in substituting *maḥabba* for *ʿishḳ* in these texts, thus diluting al-Ḥallādj's thesis that *ʿishḳ* is a divine attribute of Essence (cf. *Notion de l'"essentiel Désir"*, in Massignon, *Opera Minora*, Beirut 1963, ii, 226-53).

VI. — The school and the sects of the Ḥallādjiyya

It seems that in 309/922 al-Ḥallādj's disciples had been formed into a *ṭarīḳa* (religious fraternity). After the execution of their Master, they went into hiding and dispersed, and thus even became split up. In fact legal persecution continued, and in 311-2/924-5 several followers of al-Ḥallādj were beheaded in Baghdād.

A certain number of disciples fled to Khurāsān, where several of them took part in the Ḥanafī-Māturīdī reform movement. Ibn Bishr and particularly Fāris Ibn ʿĪsā (founder of the *Ḥallādjiyya-ḥulūliyya*) upheld and spread al-Ḥallādj's teaching in the Ṣūfī circles in Khurāsān. The *Kitāb al-Taʿarruf* of al-Kalābādhī stems from this tradition. In the 5th/11th century, according to al-Sulamī and al-Khaṭīb, there were still at Nīshāpūr some Ḥallādjī "extremists". Among them may be included Ibn Abi 'l-Khayr (the subject of a study by Nicholson) and Fārmadhī, who was the *shaykh* of al-Ghazālī—hence the latter's favourable judgement of al-Ḥallādj.

Other disciples, such as Ibn Khafīf (who had been al-Ḥallādj's friend at the end of his life rather than his disciple), introduced some Sālimiyya elements into the reform movement of al-Ashʿarī.

In Ahwāz and at Baṣra an ephemeral sect of the Ḥallādjiyya (known however only through the attacks of its enemies, especially al-Tanūkhī) is said to have adopted extreme positions. Its main representative, al-Hāshimī, is said to have declared himself to be a prophet inspired by the Spirit who, after having been "fused" into al-Ḥallādj, abode in one of his sons, hidden from all (Ismāʿīlī influences).

At Baghdād, other Ḥallādjiyya, mentioned by ʿAṭṭār, presented themselves as Sunnīs, but in a very liberal sense, and saw a connexion between the *Ana 'l-ḥaḳḳ* of the Master and the Divine Word addressed to Moses from the Burning Bush (Ḳurʾān, XX, 14). The important Ḥanbalī, Ibn ʿAḳīl (studied by George Makdisi), after having first defended al-Ḥallādj, was obliged to retract.

In his *Farḳ*, al-Baghdādī cites the Ḥallādjiyya among the sects which had to be treated legally as apostates. During the 5th/11th century, there was lively polemical argument. The principal points at issue seem to have been the following:

(a) In *fiḳh*: the five "personal obligations" (*farāʾiḍ*) are replaceable, even the *ḥadjdj* (= *isḳāṭ al-wasāʾiṭ*).

(b) In *kalām*: the transcendence of God (*tanzīh*) beyond the dimensions of the created (*ṭūl*, *ʿarḍ*); the existence of an uncreated Spirit of God (*rūḥ nāṭiḳa*) which comes to unite itself to the created *rūḥ* of the ascetic (*ḥulūl al-lāhūt fi 'l-nāsūt*); the saint (*walī*) becomes the living and personal witness of God (*huwa huwa*), whence the theopathic expression *Ana 'l-ḥaḳḳ*.

(c) In *taṣawwuf*: complete union with the Divine Will (*ʿayn al-djamʿ*) through suffering accepted and desired. The *dhikr* which the *shaykh* al-Sanūsī attributes to the Ḥallādjiyya is modern.

In Shīʿī-Imāmī circles, the first reaction was to condemn and excommunicate the Ḥallādjiyya as *ghulāt*, heterodox extremists. Later the follower of Avicenna Naṣīr al-Dīn Ṭūsī (7th/13th century) and Ṣadr al-Dīn Shīrāzī (11th/17th century) declared al-Ḥallādj to be a saint, though it is true that they interpreted his road to union according to their own philosophical tenets. In this way a cult of al-Ḥallādj continued to exist in certain Iranian circles, but it was severely attacked by other movements. In Sunnī Islam the term *Ḥallādjiyya* came to mean no longer a religious fraternity but any jurisconsults, theologians or mystics who, through personal conviction, believed in the sainthood of al-Ḥallādj (cf. above the attitudes of Ibn ʿAḳīl, of al-Ghazālī, etc.): this was strongly condemned by Ibn Taymiyya. The last Ḥallādjiyya adherents were to merge into the *ṭarīḳa* of the Ḳādiriyya [*q.v.*]. Today there exist no more Sunnīs who are openly Ḥallādjī. Many of them "excuse" al-Ḥallādj according to the Shāfiʿī juridical formula; but they go no further. He continues to be invoked however, and his tomb is visited by pilgrims from distant towns.

VII. — Judgements of his contemporaries and of posterity

Few persons in Islam have been so much discussed as al-Ḥallādj. In spite of the *idjmāʿ* [*q.v.*] of the judges who condemned him, he had his devotees among the doctors as well as among the people. We give here, with a note of their opinions, a list of the principal doctors who have taken part in this famous discussion. The various opinions can be divided into three groups: (a) *taraddud* (condemnation), which is subdivided into *radd* (simple rejection) and *takfīr* (excommunication): indicated in the following list by the sigla *rdd*; (b) *taraḥḥum* ("canonization") or *wilāya* (affirmation of sainthood), which is subdivided into *iʿtidhār* (justification with excuse) and *ḳabūl* (full and complete acceptance): sigʾa *w*; (c) *tawaḳḳuf* (suspension of judgement, abstention): sigla *t*.

(A) Jurists (*fuḳahāʾ*): *Ẓāhirīs*: Ibn Dāwūd and Ibn Ḥazm (*rdd*); *Imāmīs*: Ibn Bābūya, Abū Djaʿfar Ṭūsī and Ḥillī (*rdd*), Shūstarī, ʿĀmilī (*w*); *Mālikīs*: Ṭurṭūshī, ʿIyāḍ, Ibn Khaldūn (*rdd*), ʿAbdarī, Dulundjāwī (*w*); *Ḥanbalīs*: Ibn Taymiyya (*rdd*), Ibn ʿAḳīl (who retracted), Ṭawfī (*w*); *Ḥanafīs*: Ibn Buhlūl (*t*), Nābulusī (*w*); *Shāfiʿīs*: Ibn Suraydj, Ibn Ḥadjar, Suyūṭī, ʿUrḍī (*t*), Djuwaynī, Dhahabī (*rdd*), Maḳdisī, Yāfiʿī, Shaʿrāwī, Haythamī, Ibn ʿAḳīla, Sayyid Murtaḍā (*w*).

(B) "Theologians" (*mutakallimūn*): *Muʿtazilīs*:

Djubbā'ī, Ḳazwīnī (*rdd*); *Imāmīs*: Mufīd (*rdd*), Naṣīr al-Dīn Ṭūsī, Maybudhī, Amīr Dāmād (*w*); *Sālimiyya*: *in globo*, (*w*); *Ashʿarīs*: Bāḳillānī (*rdd*), Ibn Khafīf, Ghazālī, Fakhr al-Dīn Rāzī (*w*); *Māturīdīs*: Ibn Kamālpāshā (*rdd*), Ḳārī (*w*).

(C) "Philosophers" (*falāsifa* and *ḥukamā'*): Ibn Ṭufayl, Suhrawardī (*Shaykh al-ishrāḳ*), Ṣadr al-Dīn Shīrāzī (*w*).

(D) Ṣūfīs (*ṣūfiyya*): ʿAmr Makkī and the majority of the early teachers (*rdd*), with the exception of Ibn ʿAṭā', Shiblī, Fāris, Kalābādhī, Naṣrābādhī, Sulamī (*w*), and Ḥuṣrī, Daḳḳāḳ, Ḳushayrī (*t*). Later: Ṣaydalānī, Hudjwīrī, Ibn Abi 'l-Khayr, Anṣārī, Fārmadhī, ʿAbd al-Ḳādir Djīlānī, Baḳlī, ʿAṭṭār, Ibn ʿArabī, Djalāl al-Dīn Rūmī, and the majority of the moderns: (*w*). There should be noted the abstention (*t*) of Aḥmad Rifāʿī and of ʿAbd al-Karīm Djīlī. It can be said that, although al-Ḥallādj would have repudiated their prudent esotericism, the Ṣūfīs as a whole made of him their "martyr" par excellence. For the details, discussions and analyses, see L. Massignon, *Passion*, chap. ix, "Ḥallāj devant le ṣūfisme", 400-29.

Al-Ḥallādj's "survival after death" was to develop into a "legend", sometimes scholarly (in Arabic, Persian, Turkish, Hindustani, Malayan and Javanese) and sometimes popular. See L. Massignon, *op. cit.*, chap. x, 430-60, and idem, *La Légende de Hallacé Mansur en pays turcs*, in *Opera Minora*, ii, 93-139.

In the West, there has been as great a diversity of opinion on al-Ḥallādj. The opinions of the earlier writers were superficial. Thus A. Müller and d'Herbelot believed him to be secretly Christian; Reiske accuses him of blasphemy, Tholuck of paradox; Kremer makes him a monist, Kazanski a neuropath, and Browne "a dangerous and able intriguer", etc. But the outstanding researches of L. Massignon restored this incomparable figure to his rightful place in his environment and in the development of Muslim thought. After this, there is scarcely a work devoted to the culture of the Islamic countries which omits to mention al-Ḥallādj; while there is continual confirmation of the value and authenticity of his mystic approach and of the witness of his life and of his death. In addition to the works of the specialists, it can be said that the fame of al-Ḥallādj has become part of universal culture (see, for example, the articles of P. Marechal written as early as 1923, and the recent work (1964) of R. Arnaldez).

Bibliography: To the works of L. Massignon cited in the article add: idem, *Recueil de textes inédits concernant l'histoire de la mystique en pays d'Islam*, Paris 1929, 57-70; idem, *Opera Minora*, Beirut 1963, ii, 11-342. There is an exhaustive bibliography of al-Ḥallādj (up to 1922) in L. Massignon, *La Passion d'al-Ḥallāj, Martyr mystique de l'Islam*, chap. xv (appendix); and up to 1948 in idem, *Nouvelle Bibliographie ḥallāgienne*, in *Opera Minora*, ii, 191-220. To these should be added various more recent works, including: L. Gardet, *Expériences mystiques en terres non-chrétiennes*, Paris 1953, 131-141, 173; A. J. Arberry, *Revelation and reason in Islam*, London and New York 1957, 29-30 and 107-8; L. Gardet, *Thèmes et textes mystiques*, Paris 1958, 19, 135-40; Paul Nwyia, *Ibn ʿAbbād de Ronda*, Beirut 1961 (see *index* s.v.); G.-C. Anawati and L. Gardet, *Mystique musulmane*, Paris 1961, 35-40, 101-4, 107-10, 118-21, 171-3, and passim; G. Makdisi, *Ibn ʿAqīl et la résurgence de l'Islam traditionnel au XIe siècle*, Damascus 1963 (see index, s.v.); R. Arnaldez, *Ḥallāj ou la religion de la croix*, Paris 1964; H. Corbin, *Histoire de la philosophie islamique*, Paris 1964, 275-9. A revised edition of *La Passion d'al-Ḥallāj*, considerably augmented from the texts and notes left by L. Massignon, is in course of preparation by G. and D. Massignon.

(L. Massignon-[L. Gardet])

ḤALY, a group of about 35 villages in a cultivated area on the Arabian Red Sea coast, latitude 18° 45′ N. An *amīr* appointed by the Saudi Arabian Government resided, in 1383/1963, at the chief village of al-Suffa, near the coastal road. The larger markets are here and at the neighbouring hamlet of Kiyād. Other important villages are al-Shiʿb, Kudwat al-Aʿwadj, and al-Bayḍayn, all of which had government elementary schools in 1383/1963. The agricultural economy of Ḥaly is based on the seasonal flow of Wādī Ḥaly. Sesame, sorghum, and millet are cultivated in an irrigated area of 200 sq. km which is liable to damage by floods. Some produce is sold in al-Ḳunfidha, 53 km to the northwest. The people of Ḥaly come chiefly from al-Hiyala, Kināna, and al-ʿUmūr tribes.

Ḥaly, also known as Ḥaly Yaʿḳūb or Ḥaly Farʿūn, was ruled by a chief of Kināna when Ibn Baṭṭūṭa landed there in c. 731/1330. The traveller left a description of Ḳabūla al-Hindī, one of a group of Muslim ascetics at Ḥaly. In later times the district was taxed intermittently by the *sharīf*s of Mecca; and Egyptian troops passed through the villages on their 19th century campaigns against al-Ḥidjāz and ʿAsīr. Occupied briefly by the Wahhābīs in ca. 1218/1803, Ḥaly became a part of the modern Saʿūdī state after ʿAbd al-ʿAzīz Ibn Saʿūd conquered al-Ḥidjāz in 1344/1925.

(J. Mandaville)

ḤĀM (Cham), son of Noah [see nūḥ]; he is not explicitly mentioned in the Ḳur'ān, but is perhaps alluded to as the unbelieving son of the Patriarch who refused to follow his father at the time of the Flood (XI, 44[42]-49[47]). Later tradition is acquainted with the Biblical story in *Genesis*, IX, 18-27 (according to which it is not Ḥām but his son Canaan who was cursed for a sin committed by his father) and with the legendary amplifications elaborated by Jews and Christians; as the story in the Ḳur'ān in conjunction with these details calls for a fourth son of Noah, it is Canaan or an invented son called Yām who fills this rôle. Ḥām's sins—carnal relations in the Ark (according to the Jewish Aggada), an offence against his father—are variously told by Muslim historians, who know also that this character, born white, turned black as a result of his father's curse. It is also told that Jesus (ʿĪsā [*q.v.*]) brought Ḥām back to life for a while (so al-Ṭabarī; Sām according to al-Thaʿlabī) and that the latter told the Apostles some of the episodes of life in the Ark and the end of the Flood. The Muslim authors also mention the lot of the three sons of Noah; a version handed down by al-Ṭabarī, however, softens the fate of Ḥām who, reduced to servitude, nevertheless profited from the leniency of his brothers (it is to be remarked that according to Balʿami, Japhet was similarly cursed, which is explained by the fact that the Iranian author did not favour "the Turks, the Slavs, Gog and Magog", reputed to be descended from the latter). Finally, Muslim historiography has retained from the list of nations in *Genesis* X elements which were adapted to the geographico-political situation of the time; this explains how, apart from the genealogical

link between Ḥām and the black races, produced by multiple incests, Āfrīdūn should also be considered as descended from him, at least according to an indication in *al-Badʾ wa 'l-taʾrīkh*, iii, 144-9.

(Smit, 16 f.); Ṭabarī, i, 187-216 (*Chronique de Tabari*, i, 112-4); Masʿūdī, *Murūdj*, i, 75-80 (Pellat, i, 32, §§ 66-8), iii, 240, vi, 154; Ps.-Balkhī, *al-Badʾ wa 'l-taʾrīkh*, i, 26 ff./27 ff. and the passage referred to above; Kisāʾī, *Vita prophetarum*, 98 f.; Thaʿlabī, *ʿArāʾis al-madjālis*, 36-8; M. Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, 85-7; J. Horovitz, *Koranische Untersuchungen*, 108; D. Sidersky, *Les origines des légendes musulmanes*, 27 f.; H. Speyer, *Biblische Erzählungen im Koran*, 105 f.; B. Heller, in *Handwörterbuch des Islam*, 160 f. = *Shorter Encyclopaedia of Islam*, 128. (G. Vajda)

Languages. Words derived from this name have served to designate languages related to the Semitic languages. The Hamito-Semitic family (chamito-sémitique, hamito-semitisch) has had its name since 1887. It was generally believed to embrace a Hamitic group as opposed to a Semitic one. This point of view was rectified in *Les Langues du monde*, 1st. edition 1924: In the recognized Hamito-Semitic family there are four distinct branches: Semitic [see sām]; ancient Egyptian with Coptic [see ḳubṭ]; the Berber tongues [see berber]; the Cushitic languages [see kūsh]. It seems that to these should be added the Hausa [*q.v.*] group.

As the non-Semitic branches do not show any common characteristics by which to unite them in a clearly defined group, the term Hamitic must be abandoned; it would be more correct to speak only of Hamito-Semitic with four or five branches.

The history of this study and its bibliography can be found in Marcel Cohen, *Essai comparatif sur le vocabulaire et la phonétique du chamito-sémitique*, Paris 1947; see also by the same author the chapter *Langues chamito-sémitiques*, in the 2nd edition of *Les Langues du monde*, 1952, and *Résultats acquis de la grammaire comparée chamito-sémitique*, in *Conférences de l'Institut de Linguistique de l'Université de Paris*, Paris 1934.

For a detailed comparison see sām.

Physical types. The terms Hamites (Hamiten, Chamites), Hamitic (Hamitisch, Chamitiques) are sometimes used to designate the African peoples who speak non-Semitic Hamito-Semitic languages and certain others, and seem to be a mixture of Whites and Blacks; these elements are also referred to as African whites and Ethiopians (in the anthropological sense). See William H. Worrell, *A study of races in the ancient Near East*, Cambridge 1927 and, more recently, in R. Biasutti, *Le razze e popoli della terra*,[2] Turin 1953-7. (M. Cohen)

ḤAMĀ [see ḥamāt].

HAMADHĀN (hamadān), city in central Iran located in a fertile plain just south of Mt. Alwand, 48° 31′ E. (Greenw.), 34° 48′ N., altitude ca. 1800 metres/5900 ft.

Hamadhān is a very old city. Whether the name is first mentioned in cuneiform sources dating about 1100 B.C., telling of the conquests of Tiglatpileser I, is uncertain but unlikely. Herodotus (I, 98) says that the Median king Deiokes in the seventh century B.C. built the city called Agbatana, or Ekbatana according to other Classical authors. This name has been interpreted as an Iranian word **hangmata* "(place of) gathering", but an Elamite form **hal. mata . na* "land of the Medes", might suggest another etymology. The city was well known as the capital of the Medes, a winter capital of the Achaemenids, and an important city on the trade route between Mesopotamia and the east under the Seleucid, Parthian and Sasanian dynasties. The city is mentioned in Armenian sources as Ahmatan and Hamatan, in the Bible as Aḥmetā (Ezra, VI, 2), and in Syriac sources in various forms. It underwent sieges and suffered destruction several times in its ancient history.

The ancient, but mythical, pre-Islamic history of the city was known and mentioned in many Arabic sources, principally the geographers (see Schwarz, below). After the battle of Nihāwand, in 641 or 642 A.D., the Persian commander in Hamadhān made peace with the victorious Arabs. The circumstances of the Arab conquest of the city are contradictory in the sources, but it seems that the initial agreement of submission was broken by the Persians and the city had to be taken by storm, probably in the spring of 645 (Ṭabarī, i, 2650, 6 and Balādhurī, 309). Arabs from the tribes of Rabīʿa and ʿIdjl were settled in the city, since they are mentioned as residing there in 77/696 (Ṭabarī, ii, 994, 17). Christians and Jews are mentioned as part of the population.

The city is described by the geographers as strongly fortified, perhaps the strongest in the entire area called al-Djibāl by the Arabs, which encompassed ancient Media. In the fighting between Maʾmūn and Amīn for the caliphate in 195/810, the city underwent a long siege (Ṭabarī, iii, 829, 15).

Hamadhān of the 4th/10th century is described by the geographers as a large city, mostly rebuilt since the Arab conquests. It had four gates in its walls, three bazaars, and extensive suburbs. The main mosque was already then called an old structure. In 319/931 the city was taken by the Daylamī leader Mardāwīdj, after which he massacred many of the inhabitants (al-Masʿūdī, *Murūdj*, ii, 396). The city recovered only slowly from this catastrophe, and in 345/956 it suffered from an earthquake. The religious controversies and struggles of the time were also felt in Hamadhān, for in 351/962 a religious clash in the city cost many lives (Ibn al-Athīr, viii, 404).

According to the sources Hamadhān was not a cultural or intellectual centre like Rayy, Iṣfahān, or other cities, but was rather a commercial city in a rich agricultural area. Nor was it an important industrial or textile centre, but such items as gold work and leather articles are mentioned as exported from Hamadhān. The altitude, and consequent cold climate in winter, restricted the agricultural produce of the area. The geographer al-Muḳaddasī (398) gives a few examples of the peculiarities of the Persian dialect spoken in Hamadhān, such as the addition of *-lā* to Arabic proper names.

Hamadhān was plundered by the Ghuzz Turkomans in 420/1029, and in 494/1100 a Saldjūḳ army sacked the city (Ibn al-Athīr, x, 127). A pestilence swept the area in 531/1136 causing many deaths. During the second half of the 6th/12th century Hamadhān was a Saldjūḳ capital. In 618/1221 the city was captured by the Mongols after a long siege and destroyed. Most of the inhabitants were killed or fled. Some inhabitants returned to the ruins but were massacred by a new invasion of the Mongols in 621/1224 (Ibn al-Athīr, xii, 176, 192).

Unfortunately, no history of Hamadhān has survived. A history of the city by Abū Shudjāʿ Shīrawayh b. Shahvdār (died 509/1115) was used by

Yāḳūt in his geographical dictionary. Ḥādjdjī Khalīfa (i, 310) mentions other histories of the city, none of which have survived, an indication of the lack of a strong and continuous scholarly tradition in the city. One of the famous sons of Hamadhān was the rustic poet Bābā Ṭāhir, also a mystic, who lived under the early Saldjūḳs. Ibn al-Faḳīh al-Hamadhānī, the geographer (d. *circa* 290/903) also came from the city, but he gives few details about his birthplace.

Under the Īl-Khāns Hamadhān regained its former importance, and Ābāḳā Khān died there in 680/1282. The historian of the Mongols Rashīd al-Dīn was probably born in Hamadhān *circa* 645/1247. The city, of course, passed from under the Djalayir [*q.v.*] to Tīmūr, and later to the Aḳ Ḳoyunlu, until the Ṣafawids established their rule in the city after 908/1503. Several times during the 10th/16th century Hamadhān was occupied by Ottoman troops. In 1136/1724 Aḥmed Pasha, the Ottoman governor of Baghdād, held the city until he was expelled by Nādir Shāh eight years later (a two volume survey [see DAFTAR-I KHĀḲĀNĪ] of the town and district of Hamadhān, compiled during this period, is preserved in the Turkish archives—see B. Lewis in *Mélanges Massé*, Tehrān 1963, 260). After changing fortunes Hamadhān reverted to Iran in 1732. In 1789 the city was taken by Agha Muḥammad Ḳādjār, founder of the Ḳādjār dynasty, and the citadel, on the hill now called al-Muṣṣalā, was destroyed.

The population of the city about 1820 was estimated at 40,000 by Ker Porter. Curzon in 1889 estimated it as 20,000. The 1931 census gave 51,000; in 1934 it was 60,000, and in 1950 about 120,000. The principal remains of the past in or near the city are the Gandj Nāmah, two Old Persian inscriptions by Darius and Xerxes carved on Mt. Alwand 12 kilometres south-west of the city, the pre-Islamic stone statue of a lion mentioned in Arabic sources (see Schwarz, 528), the so-called tomb of Esther and Mordecai, the ʿAlawiyān mosque from the Saldjūḳ period, the Burdj-i Ḳurbān, a mausoleum from Mongol times, and the tomb of Bābā Ṭāhir.

Bibliography: *A Guide to Hamadan* published by the geographical division of the General Staff of the army, under the direction of Ḥ. ʿA. Razmārā (Tehrān 1954) gives a map of the city and general information. Schwarz, *Iran*, v, 513-34, and Le Strange, 194-196, give references to the geographers. There is no general history of the city and historical citations have been mentioned above. For more recent history see R. Ker-Porter, *Travels in Georgia* . . . , London 1821; G. N. Curzon, *Persia*, London 1892. (R. N. FRYE)

AL-**HAMADHĀNĪ**, Aḥmad Badīʿ al-Zamān "the Prodigy of the Age", Arabo-Persian writer and letter-writer, was born at Hamadhān in 358/968 and died at Herāt in 398/1008. He pursued his early studies in his native town, where his master was Ibn Fāris [*q.v.*]. Aided by an exceptional memory and talents, he was soon noted for his virtuosity in handling the Arabic and Persian languages. He apparently remained true to Shīʿism for the greater part of his life. At about 22 years of age, he settled at Rayy where the intellectual atmosphere appeared favourable to his ambitions; the Būyid *wazīr* Ibn ʿAbbād [*q.v.*] granted him his patronage; it is possible that in this town the young man mixed with the local beggars' guild and notably with the unorthodox poet Abū Dulaf, an intimate friend of the *wazīr* (see al-Thaʿālibī, iii, 175-94). It may be supposed that these contacts gave to al-Hamadhānī the idea of composing certain of his first *Maḳāmāt*. Perhaps as a result of a quarrel, the young man went to Djurdjān where he is said to have come into contact with Ismāʿīlī elements. In 382/992 he went to Nīshāpūr, apparently attracted by the renown and the activity of this intellectual metropolis; there he made some useful contacts but clashed with the letter-writer Abū Bakr al-Khʷārizmī, then at the height of his fame; he finally prevailed and eclipsed his adversary, who died, overcome by chagrin. From this time al-Hamadhānī undertook a series of journeys which were also triumphs; perhaps he went to Zarandj (in Sīstān) to the court of the *amīr* Khalaf, whose panegyrist and favourite he was. After the deposition of the Sāmānids, he attached himself for a while to Maḥmūd of Ghazna, whose praises he sang (see al-Thaʿālibī, iv, 200) before settling finally at Herāt where he died, scarcely aged 40; a short time earlier he had embraced Sunnism.

Even in his lifetime it would appear that al-Hamadhānī had created for himself a certain reputation as a poet; the collection of verse which survives under his name (ed. Cairo 1903) does not, however, reveal any originality, and by the subjects dealt with as well as by the style it is related to the poetical works composed at this time in the circles of the wits of ʿIrāḳ and Iran. The same may be said of the "Epistles" or *Rasāʾil* in rhymed and rhythmic prose, part of which has been published (Istanbul 1298, Beirut 1890); the brilliance of the often affected style does not succeed in convincing us that so much artistry should be put to the service of such wordlly and empty preoccupations. Of a completely different interest is the volume of *Maḳāmāt* or "Séances", which has perpetuated the writer's name.

Al-Hamadhānī seems to deserve the title of creator of this genre. The hypothesis of Zakī Mubārak that the idea of the "Séance" is to be found in the works of the grammarian Ibn Burayd arises from a misinterpretation of a passage of al-Ḥuṣrī. The composition of the *Maḳāmāt*, begun about 380/990, seems to have extended over many years. Al-Hamadhānī is said to have dictated not less than four hundred of them; only fifty-two are now known. These "sketches" vary in length but rarely exceed a few pages; they are made up according to a strict balance; they are of rhymed and rhythmic prose, mixed with verse; the learned, sometimes precious, style constitutes the principal but not the sole concern of the author. In fact, he shows himself to be a keen observer of life and men; through his contacts with the beggars' guild, he feels obliged to devote a fairly important place to those who represent it; one séance is even devoted to the vernacular of these rogues; the common people find a place in these narrations as well as the bourgeoisie and the literati; the satire of manners, so rare in Arabic literature, is developed here with burlesque and piquancy; certain séances are sometimes also panegyrics of patrons. It may be said that in al-Hamadhānī's hands the *maḳāma* reflects contemporary society. This writer has the final merit of having given a framework to this genre; with the exception of a few "sketches" which are narratives set in the past (such as the Séance of Ghaylān, Beirut ed., 43-8), the greater part of the collection is made up of accounts which portray a cultivated and cynical bohemian and a bourgeois suffering for his own credulity. The "Séance" thus conceived was to serve as a model for almost a thousand years [see MAḲĀMA].

ḤAMĀʾIL [see SIḤR, TAMĀʾIM, ṬILASM].

AL-**ḤAMAL** [see NUDJŪM].

ḤAMĀLIYYA, or Ḥamālliyya, Hamallism, an African Islamic movement which is named after *Sharīf* Ḥamāllāh, whose name was thus transcribed by the first French writers (P. Marty, *Étude sur l'Islam et les tribus du Soudan*, Paris 1920, v); others have rendered it as Ḥamā Allāh, or Hamala. His followers call themselves *ikhwān*, and they are also known as Ḥamālliyyīn; their Tidjānī adversaries call them "eleven beads", *sapo e gô* (in Tukolor), and regard them as heretics.

This doctrine made its appearance in Mali at the beginning of this century, not as a new confraternity but as an attempt to reform the teaching of the Tidjāniyya, especially in regard to the recital of the prayer *djawarat al-Kamāl*; according to the Ḥamāllists, this has to be recited eleven times and not twelve, as the Tidjānī *wird* lays down.

The founder of this movement was Shaykh Sīdī Muḥammad b. ʿAbd Allāh, known as *Sharīf al-akhḍar*, a native of Touat, who is said to have received the Tidjānī *wird* from Ṭāhir b. Abū Ṭayyib (Thaar ben Bou Tayeb), *wakīl* of the Tidjānī *zāwiya* of Tlemcen (Algeria). He settled at Nioro in 1904 and determined to restore the Tidjāniyya to its pristine purity; he caused the chaplet with eleven beads to be adopted, but he died in 1909 without being able to spread his doctrine, despite the help of some Wolof merchants in Nioro.

His disciple, Sharīf Amadou Ḥamā Allāh Ḥaydara, born in 1886 and 26 years of age when his master died, took over the teaching with much greater success. Ḥamā Allāh belonged to the tribe of the Ahl Sīdī Sharīf of Tichit. His grandfather and his father Muḥammad ūld (*walad*) Sayyidna ʿUmar, of a Sharīfian family, were traders who had settled in the town of Nioro at the end of the 19th century; his mother Aïssa Diallo was a Fulani from Niamina. Shaykh Ḥamā Allāh traced back his genealogy to ʿAlī, the Prophet's son-in-law, through ʿAbd Allāh b. al-Ḥasan b. al-Ḥasan b. ʿAlī. He was thus a descendant of the Ḥasaniyya *Sharīf*s. He studied at the Ḳurʾān school of his tribe with Shaykh ūld Sīdī, and then with al-Ḥādjdj Muḥammad ūld Mukhtār who later became his enemy, and finally with Shaykh Sīdī Muḥammad. Seldom going out and always wearing white, he dedicated himself to devotions, mortification and ecstasy; he was a mystic who had ecstatic visions which, it was said, put him in direct communion with Allāh or the Prophet and on which his reputation was based; he was visited by large numbers of mystics who shared his ideas and, at the beginning, by some Moors from the locality.

In about 1925, he took the title Shaykh and appointed *muḳaddams*. Without leaving his *zāwiya*, he was able to employ zealous propagandists who spread his teaching to Nioro, Walata, Kiffa, Kayes, Timbreda, Nara and Nema. In a few years his doctrine, which had not had much success with the Moors, had spread over a wide area among the negroes inhabiting the river basins of the Senegal and Middle Niger; he also had *muḳaddams* among the Awlād Zayn, Ahl Terenni, Ahl Togba, Ladoum, Awlād Nāṣir, Awlād Mbārek, Ahl Sīdī Maḥmūd and Laghlal. He preached the purified Tidjānī *wird*, his followers vowed themselves for life and could not adopt any other creed; the obedience of his *ikhwān* had to be absolute. He was reputed to be a *walī*, and by some regarded as *mahdi*. Among his disciples he had officials of the administration and some of the local police. His prestige spread throughout the Sahel, but he lost control over the most turbulent of his followers.

The preaching of Ḥamā Allāh soon came up against very lively resistance from Tidjānī circles, especially among the Kaba Diakité and the Silka, disciples of al-Ḥādjdj ʿUmar [*q.v.*]; it was also challenged by the Ḳādiriyya and several Moorish tribes. The origin of this hostility, apart from the matter of the eleven beads, lay in the fact that his preaching was given in Nioro, the fief of powerful ʿUmarian families, and that it revealed a social aspect that was opposed to the structure of society of that period.

Shaykh Ḥamā Allāh granted the *wird* to women, prisoners (Ḥarātīn [*q.v.*]) and young people, releasing them from paternal authority or that of their masters; finally, he authorized women to take part in ceremonies which brought men together without any distinction of caste. He criticized the depravity of women and recommended the wearing of decent garments; secular and social problems he ignored.

It is certain that although Aḥmad al-Tidjānī had prescribed the recital of the prayer *Djawarat al-Kamāl* eleven times on the instructions of the Prophet whom he saw in a dream, which was in conformity with the mystique of numbers, he had the same prayer recited twelve times, for reasons not explained, at a period when he was compelled to struggle against the Turks (ʿAyn Mahdī was captured by the Turkish forces in 1197/1783 and in 1201/1787); it is possible that the innovation derives from his son Muḥammad al-Kabīr. The Ḥamāllist chaplet consists of eleven beads on each side, counting from the pendant.

Al-Ḥādjdj ʿUmar Tall, initiated in 1835, practised the eleven recitations until the moment when he received the *wird*, for the second time, from Shaykh Muḥammad Ghālī, in Mecca; but, in his work *al-Rimāh*, he wrote that the true number of recitations was eleven.

Ḥamā Allāh's disciples preached the equality of castes, and of men and women; they made recruits among the opponents of the Tall clan, among people of caste, slaves, and also certain families with mystical tendencies. The doctrine was exalted by the *muḳaddams*, some of whom disturbed public order by extravagant hero-worship of the *Shaykh*; one of the most active was Yacouba (Yaʿḳūb) Sylla of Kayes. The conflict passed swiftly from the social sphere to the political. The French administration tried to temporize and to avoid becoming involved in a religious quarrel, but was compelled to intervene when incidents became more serious: in 1923, politico-religious conflicts broke out between the Laghal and Tenouadjiou tribes, starting a vendetta which lasted for several years. In 1924, the Ḥamāllists attacked

the chief of Nioro's house; Shaykh Ḥamā Allāh, who had not intervened to put a stop to these incidents, was sent to Mederdra. In 1929, Yacouba Sylla was the source of a scandal in Kayes: the Tidjānīs accused him of orgies and seditious songs, and to avoid disturbances he was sent away to Kaedi. In the same year, further serious incidents broke out in Kaedi, on the occasion of his preaching on the equality of women, the wearing of jewellery and the uselessness of the Ḳur'ān; he caused luxurious textiles to be burned and gold necklaces to be sold; later, Yacouba Sylla organized public confessions which led to numerous divorces; he also organized the "dances of Paradise"; on 15 February 1930 a riot in which Tidjānīs and Ḥamāllists were the opponents led to fifteen deaths. In 1933 Fodié Sylla proclaimed himself *Mahdī* and, after attempting to attack the administrative post, was imprisoned in Kidal. The excesses of the two Sylla were castigated by Shaykh Ḥamā Allāh.

In 1933, Ḥamā Allāh was reconciled with the administrative authorities and returned to Nioro. In about 1936, the Ḥamāllists changed their *ḳibla* and prayed in the direction of Nioro, which they called "their Mecca". In 1938, the Tenouadjiou attacked the Ḥamāllist Laghlal and seriously wounded their chief, Bābā, a son of the *shaykh*. Later, he was again attacked and his enemies burned the soles of his feet. Believing himself to be in danger, Ḥamā Allāh took certain religious measures and prescribed the prayer shortened to two *raḳ'as*: his disciples were swift to follow him. In August 1940, Bābā felt that he was in a position to take revenge and attacked Tenouadjiou encampments and caravans on several occasions; the matter ended in the deaths of 400 men, women and children and appalling atrocities. The personal and direct responsibility of the *shaykh* does not appear to have been proved: at least, some Ḥamāllists such as the Reyanes condemned these excesses. However, he was deported to Algeria, and later to France.

In face of rigorous repression, all the more severe since France was at war, the brotherhood went underground; its followers limited the *shahāda* to its first part, or sometimes introduced the name of Ḥamā Allāh in place of the Prophet's, and some had themselves tattooed on the forehead or arms with the brand of his flock. Inquiries into subsequent incidents at Bobo Dioulasso, 'Ayn Berbegha and al-Agher revealed the presence of Ḥamāllists, but did not implicate the brotherhood. The *shaykh* died on 28 August 1942 at Montluçon, where he is buried.

After the 1939-45 war, the Ḥamāllists reappeared but, under pressure and in face of the hostility of the 'Umarian Tidjānīs, they often preserved a semi-clandestine character. Yacouba Sylla, exiled to the Ivory Coast, had enormous success there; he maintains a community of 250 persons whose members pool their resources and indulge in public confession; he has the reputation of being able to read minds and see the past; he does not mix with the Muslim merchants of Gagnoa and preaches the uselessness of the Pilgrimage. In Mopti, Muḥammad Kambiri takes pains to preserve the pure teaching of the *Shaykh* in religious matters. His disciples live apart and do not go the mosque; they practise the Muslim ritual among themselves.

In about 1939, Ḥamā Allāh had converted to his doctrine the Tyerno Bokar Salif Tall, a man very well known in Mali where, among the Fulani, he has left the reputation of being a saint; having undertaken the defence of the *shaykh*, Bokar was abandoned by the Tall family and died soon afterwards, but his disciples have continued his teaching: they practise recitation of prayer with eleven beads according to Ḥamā Allāh, but the emphasis is placed on charity and love of God and man, following Bokar Salif Tall.

In 1950, 70,000 Ḥamāllists were recorded in the district of Nioro, out of a total of 155,000 Muslims; in the town itself, more than half the population is Ḥamāllist; they teach their faith in about thirty Ḳur'ān schools; in the rest of Mali, there are about 150,000 followers at Bamako, Ségou, Timbuktu, Ansongo, Kidal, Kayes and Bandiagara. In Mauritania, they are fairly numerous in Hōdh, and some are found as far away as Atar; in Haute-Volta there are about 80,000 at Ouahigouya, Dori, Yako and Bobo Dioulasso; and there are some in the valley of the Senegal and at Niamey.

The present holder of the *wird* is apparently Sharīf Aḥmad ūld Ḥamā Allāh, who is 50 years of age and lives at Nema, in Mauritania.

Bibliography: there are few serious works on this subject: P. Marty, *Etudes sur l'Islam et les tribus du Soudan*, Paris 1920, v; A. Gouilly, *L'Islam depuis l'Afrique Occidentale Française*, Paris 1952; L. Massignon, *Annuaire du Monde Musulman* [4], Paris 1954, 320-1; J. S. ḤAMĀM (pl. *ḥamā'im*, *ḥamāmāt*), a collective substantive which, taken in a wide sense, denotes any bird "which drinks with one gulp and coos" (*kull ṭayr 'abba wa hadara fa-huwa ḥamām*), that is to say the family of the Columbidae, with which the mediaeval Muslim naturalists incorporated that of the Pteroclidae, the sand-grouse (*ḳaṭā* [*q.v.*]), morphologically very closely related to the pigeons. The Columbidae, which *ḥamām* represents, are fairly widespread from 'Irāḳ to the Maghrib with their different species of pigeons and turtle-doves, both resident (*awābid*) and migrant (*ḳawāṭi'*). In the genus *Columba* we find—a) the ring-dove or wood-pigeon, *Columba palumbus* (*warashān*, *sāḳ ḥurr*, *ḥaydhuwān*, *dalam*; Maghrib: *za'ṭūṭ*, *zaṭṭūṭ*), a bird of passage in 'Irāḳ and Syria, absent from Egypt and resident in the Maghrib with the sb/sp. *C.p. excelsus*;—b) Bruce's green pigeon, *Treron waalia*, (*ḥaḳm*, *abu 'l-akhḍar*, *khaḍrā'*), especially in southern Arabia;—c) the stock-dove or blue dove, *Columba oenas* (*yamām*, *ḥamām barrī*), a winter visitor in 'Irāḳ, Egypt and the Maghrib;— d) the rock-dove, *Columba livia* (*ṭūrānī*, *ḥamām khalawī*), with the sb/sp. *C.l. livia*, in the Maghrib, *C.l. palaestinae* in Syria, Jordan and northern Arabia, *C.l. gaddi* from Palestine to 'Irāḳ, and *C.l. schimperi* in Egypt; it is from this pigeon that all the tame and domesticated breeds are descended. The genus *Streptopelia* is represented by—a) the turtle-dove, *Streptopelia turtur* ('Irāḳ: *shifnīn*; Arabia and Syria: *uṭrughull*, *turghull*, *dhikr Allāh*, *Abū dhikrā*, *ṣulṣul*; Egypt: *ḳumrī*; Maghrib: *īmām*), with the sb/sp. *S.t. turtur*, a bird of passage in autumn and spring in

all the Arabic-speaking countries, *S.t. arenicola* which nests throughout the Maghrib as far as Tripolitania, a bird of passage in Syria, Palestine, ʿIrāḳ and northern Arabia, *S.t. lugens*, a resident in south-western Arabia, and *S.t. isabellina* which is restricted to the Nile delta;—b) the red-eyed dove, *Streptopelia semitorquata*, a somewhat rare resident in south-western Arabia;—c) the collared turtle-dove, *Streptopelia decaocto* (*fākhita, sitt al-rūm, yā karīm, karīma*), with the sb./sp. *S.d. decaocto*, a resident of Palestine, Syria and ʿIrāḳ, and *S.d. arabica*, a resident in the Ḥidjāz and the Yemen;—d) the palm-dove or laughing-dove, *Streptopelia senegalensis* (*dubsī, ḳinṭir*; Maghrib: *ḥamām al-ghāba*), with the sb./sp. *S.s. senegalensis*, a resident in western Arabia, Egypt, Tripolitania and the Maghrib; *S.s. aegyptiaca*, a resident in the Nile delta, *S.s. phoenicophila*, a resident in the Saharan regions of the Maghrib and *S.s. cambayensis*, a bird of passage on the east coast of Arabia;—e) the long-tailed dove or Namaqua dove, *Oena capensis* (*yaḥmūm, ḥumḥum/ḥimḥim, umm balīma*), resident throughout Arabia, though rare in the Yemen.

In the restricted sense, *ḥamām* denotes the domestic pigeons deriving from the rock-dove, whether the free or "roof-pigeons" that are established in towns (*ḥamām ahlī, ḥamām al-amṣār*) and on which the Meccans prided themselves (*ḥamām Makka*), or the artificially bred or "dove-cot" pigeons (*buyūtī, dādjin*) trained to live (*muwaṭṭan*) in private lofts (*ʿamūd*, pl. *aʿmida*) or official pigeon-houses (*burdj*, pl. *burūdj*). It is to this last category that mediaeval writers in Arabic devoted so much of their work in both prose and verse; indeed; the contact established between the Muslims and the pigeon-loving Byzantines gave such a fillip to pigeon-keeping (*laʿb bi 'l-ḥamām*) among the Arabs that it quickly became a pastime that attracted several caliphs, such as the ʿAbbāsids al-Mahdī, Hārūn al-Rashīd, al-Wāthiḳ and al-Nāṣir. It is necessary only to recall the lengthy passages devoted by al-Djāḥiẓ to the pigeon (*K. al-Ḥayawān*, iii) to be able to assess the passion with which this hobby was pursued in the great cities of Baghdād, Baṣra, Damascus and Cairo. On the subject of the "sporting pigeon" (*al-hādī*, pl. *al-huddā'*) the philologists have compiled a large quantity of lexicographical material drawn from the technical vocabulary of pigeon-devotees (*arbāb al-hawādī*). Indeed, in the whole physiognomy of the pigeon there is not a single remex or rectrix without its own name; forms, colours and breeds provided the subject for learned treatises, most of which are lost, although we know their titles and general content from references made to them by later authors when making compilations. Thus, Ibn al-Nadīm names (*Fihrist*, 80, 222) a *Kitāb al-Ḥamām* by the philologist Abū ʿUbayda (d. 210/824), a *K. ʿAnsāb al-ḥamām* and a *K. mā wurida fī tafḍīl al-ṭayr al-hādī* by a certain Ibn Ṭarḥān al-Mughannī; al-Ḳalḳashandī refers (*Ṣubḥ al-aʿshā*, ii, 87 ff., xiv, 369 ff.) to al-Ḳawwās al-Baghdādī who wrote a work on pigeons for the ʿAbbāsid caliph al-Nāṣir, and we know that the *ḳāḍī* Muḥyi 'l-Dīn Ibn ʿAbd al-Ẓāhir (620-92/1123-93), to whom al-Maḳrīzī is much indebted in his *Khiṭaṭ Miṣr*, wrote a *K. Tamā'im al-ḥamā'im* which is often mentioned.

Like falconry, the sport of pigeon-flying (*zadjl, zidjāl*) in competitions (*sibāḳ*) enjoyed very great popularity from the 2nd/8th until the 7th/13th century, among all the Muslim peoples; less onerous than the pursuit of hawking, it provided satisfaction for their love of gambling, the question at stake being whose pigeons were the most highly bred and best trained to return to the loft from the greatest distance. Records of pedigrees (*dafātir al-ansāb*) were kept and, according to al-Djāḥiẓ, selected specimens could reach prices ranging from seven hundred to a thousand *dīnārs* in the Baghdād market. Some long-flight birds (*samāwiyyāt, naḳḳāzāt*) were capable of flying from the Bosphorus to Baṣra, from Cairo to Damascus, or from Tunis to Cairo in a single flight; moreover, the homing pigeon (*zādjil*, pl. *zawādjil*) from the time of its birth received the closest attention from its owner. The moment was awaited when the young pigeon, having grown its feathers, left the nest (*nāhiḍ, budjdj/mudjdj, djawzal, ʿazhal, zaghlūl*) and tried to fly, in order to compel it to return to the nesting-place (*ḳurmūṣ* from the Greek κηραμός, *ufḥūṣa, miḥḍana*) through narrow pierced pigeon-holes (*timrād*, pl. *tamārīd*) at the foot of the loft; the bird was thus obliged to climb up the ladder inside, by a series of jumps which strengthened its muscles: it became an "indoor" pigeon (*bāṭinī*), as distinct from an "outside" one (*ẓāhirī*) which returned to the loft through pigeon-holes at the top. Once it could fly easily and was "accustomed" (*muwaṭṭan*) to the loft where it was born, although still a novice (*ghumr*) in respect of sense of direction (*ihtidā'*), it had to be trained so that its homing instinct should be "acquired" (*mudjarrab*). For this purpose it was mated at a very early age, and the owner relied on the absolute constancy of the pair to make completely certain that the bird would return when taken away from its mate; it was carried in a basket, the distance being increased each time, and was released from each of these stages (*mazādjil*).

Like the Greeks and the Romans, the Muslims made skilful use of the valuable qualities of the homing pigeon, employing it as an entirely trustworthy means of communication. Pigeon post, an official institution integrated into the Intelligence Service (*barīd*), is said by the Muslim historians to have been the work of the *atabeg* of Syria Nūr al-Dīn Maḥmūd b. Zangī (541-69/1146-74). The ʿAbbāsid caliph al-Nāṣir li-Dīn Allāh (575-622/1180-1225), an ardent pigeon-enthusiast, restored this institution, which disappeared with the coming of the Mongols (656/1258) under the caliphate of al-Mustaʿṣim bi 'llāh; we know from Joinville that when St. Louis landed at Damietta (1249) "for a moment the sky was darkened" by the cloud of carrier pigeons released by the inhabitants to warn the sultan of the danger threatening their city. The Mamlūk Baybars (658-76/1259-78) made Cairo a centre for pigeon-keeping, and it included nearly two thousand pigeons bearing the symbol of the State (*dāgh*); only the sultan himself used to open the messages, which had to be brought to him by the pigeon-officer (*barrādj, baṭā'iḳī*) as soon as they arrived. These notes were written on special very thin paper called "bird-paper" (*waraḳ al-ṭayr*) and were perfumed if they contained good news, bad news being carried by a bird whose plumage was darkened with soot. It was the custom that the text of the message should have no margin and should be without any preamble of formal praise of Allāh, since it might fall into the hands of infidels, that it should not bear the date of the current year but only the day and month, and that by way of signature at the end there should be the formula *kafā bi'llāh hādiyan* ("Allāh is sufficient guide"). These air-borne letters were rolled up and fastened to one of the carrier pigeon's remiges, without in any way interfering with its flight; ordinarily they were sent in duplicate, without any mention of address; any Muslim, not the intended

recipient, who by chance received a message of this sort felt it his duty to sent it on, after attending to the pigeon's needs and making a note of his action on the back of the message.

It was during the 9th/15th century that the use of the pigeon-post gradually disappeared. Whatever the chroniclers may say, there is every ground for asserting that this method of communication was in current use in Islam well before the 6th/12th century, as is proved by the remains of the "pigeon stages" (*marākiz al-ḥamām*) placed at regular intervals (*mudarradja*) along the shores of the eastern Maghrib, following a continuous line of *ribāṭ* [*q.v.*] and ensuring the safe dispatch of the correspondence of the Aghlabid governors of Ifrīḳiya (3rd-4th/9th-10th centuries); the modern place-name Hammamet (*al-Ḥamāmāt*, "the pigeons") is a living reminder.

The theme of the "gentle dove", the messenger of love, peace, and good fortune, was the unfailing inspiration of Arab poets of all periods and in all the Muslim countries, and it would be useless to try to enumerate all the *ḳaṣīda*s which, in their conclusion, evoked the image of eternity in the tender cooing of turtle-doves (*al-hawātif*) high up among tall trees. In Islam, as everywhere else, this bird is regarded with popular affection, and a pair in a cage are very often the chosen companions of the Muslim home; at a very early date, this affection found expression in various proverbs and legends which hold up the Columbidae as examples of sweetness, attachment and fidelity, as for instance Noah's dove, or the two carrier pigeons sent from Mecca by Allāh to the Prophet Muḥammad when hidden in the cave. It appears, however, that the latter did not share this feeling of affection since, by a tradition which relies on the testimony of Abū Hurayra (see *Sunan* of Abū Dāwūd), he is alleged to have included pigeons among the ranks of the demons. Nevertheless, in the eyes of Ḳur'ānic law the flesh of the columbidae is permitted as food, and mediaeval Muslim medicine credited both it and also pigeon-dung with great therapeutic and aphrodisiac properties (see Ibn al-Bayṭār, trans. L. Leclerc, i, 457); oneiromancy, for its part, allowed great significance to the *ḥamām* seen in a dream, while ornithomancy did the same for the *ḥamām* encountered in the wild.

HĀMĀN, name of a person whom the Ḳur'ān associates with Pharaoh (*Firʿawn* [*q.v.*]), because of a still unexplained confusion with the minister of Ahasuerus in the Biblical book of Esther. To the details given s.v. FIRʿAWN, should be added the fact that, according to al-Masʿūdī, *Murūdj*, ii, 368, Hāmān built the canal of Sardūs, but Firʿawn obliged him to repay to the peasants the money which he had extorted from them for this.

HĀMARZ, Persian officer who, at the battle of Dhū Ḳār [*q.v.*], was in command of the Persian troops who were driven back by the Bakr b. Wā'il [*q.v.*] and who was killed in the battle. Al-Masʿūdī (*Murūdj*, ii, 228 = ed. Pellat, i, 648) calls him, in error, al-Hurmuzān, but he should not be confused with the Persian general of this name [*q.v.*] who was assassinated by ʿUbayd Allāh b. ʿUmar.

ḤAMĀSA (A.), "bravery", "valour" (used nowadays together with *ḥamās*, to translate "enthusiasm"), is the title of a certain number of poetic anthologies which generally include brief extracts chosen for their literary value in the eyes of the anthologists and classified according to the genre to which they belong or the idea which they express; these works are related to a more general category, that of "poetic themes", *maʿānī 'l-shiʿr* [*q.v.*], but differ from it in the apparent effacement of the author who abstains from any comparison or judgement and imposes his taste without indicating the reasons for his choice. The origin of the title, which has embarrassed modern critics, seems however very clear: *al-Ḥamāsa* (verses on bravery in war) is the title of the first—and incidentally the longest—chapter in the oldest and most celebrated anthology of this type, that of Abū Tammām (d. 231/849 [*q.v.*]): following a procedure currently practised until our own times in many literatures, this title has been adopted for the complete work as a whole and has replaced the name which its author had given to it: *al-Ikhtiyārāt min shiʿr al-shuʿarā'* and another name which a copyist had probably attributed to it (see al-Masʿūdī, *Murūdj*, vii, 166). This anthology met with such success, in both Mashriḳ and Maghrib, that later anthologists imitated it and retained the title, which little by little lost its etymological sense to become synonymous with *mukhtārāt*, "selections", "anthology"; this is so much the case that the *Ḥamāsa* of Ibn al-Shadjarī (see below) was also published, in Cairo, in 1306, under the title *Mukhtārāt shuʿarā' al-ʿArab*.

i. — Arabic literature

The *Ḥamāsa* of Abū Tammām marks a new orientation in comparison with earlier anthologies which contained complete poems [see *e.g.*, AL-MUFAḌḌAL AL-ḌABBĪ] or the whole available work of a poet, or even of a tribe [see *e.g.*, HUDHAYL]. Here, on the contrary, the anthologist, himself a poet, allows his own personal taste to be exercised in extracting from a poem the one or more verses which seem to him to illustrate most felicitously a literary genre and later, after Abū Tammām, a given theme. This *Ḥamāsa* is divided into ten chapters of unequal length containing respectively, in no apparent order, lines on bravery in warfare, death (*marāthī*), morality (*adab*), love (*nasīb*), the faults of the adversary (*hidjā'*), hospit-

ality (*diyāfa*), various qualities (*ṣifāt*), the sleep enjoyed by travellers (*al-sayr wa'l-nuʿās*), witticisms (*mulaḥ*) and women's failings (*madhammat al-nisāʾ*). The majority of the poets quoted are ancient ones going back to the pre-Islamic period or to the beginnings of Islam, but some are more recent.

The success of this *Ḥamāsa* inspired several commentaries (see al-Baghdādi, *Khizāna*, Cairo ed., i, 33), of which that of al-Tabrīzī is the best known (see R. Blachère, *HLA*, i, 152; see also ABŪ TAMMĀM, adding there: a *Ḥamāsa ṣughrā* or *K. al-Waḥshiyyāt* by him was edited by I. al-Kaylānī, Damascus 1964). In the Maghrib, its vogue was no less great; study of it constituted one of the foundations of literary culture (see H. Pérès, *Poésie andalouse*, 28), and al-Aʿlam al-Shantamarī, who imitated it, made a new commentary on it.

In order not to be left behind, al-Buḥturī (d. 284/897 [*q.v.*]) also composed an anthology which he entitled *Ḥamāsa*, so contributing in a decisive manner to the semantic evolution of the term and its definitive adoption. In the *Ḥamāsa* of al-Buḥturī, the verses are no longer divided under a small number of rubrics, but are grouped together, according to the poetic themes that they contain, in 174 very subtly graded chapters (*e.g.*, thirteen of them are concerned with fleeing from the enemy), with the result that this anthology may be considered to come into the category of *maʿānī 'l-shiʿr*. It should be added that it enjoyed far less success than the earlier work; it does not seem to have been studied in Spain, where al-Buḥturī was, however, held in great esteem, and only a single manuscript of it has been discovered.

The next work chronologically appears to be that of a certain Abū Dumāsh (or Dimās), of which we have only a brief mention in the *Fihrist* (Cairo ed., 120); then come those of Muḥammad b. Khalaf Ibn al-Marzubān (d. 309/921), of which we know only the title (see *Fihrist*, 213-4, which does not mention the *Ḥamāsa*; Yāḳūt, *Udabāʾ*, xix, 52; F. al-Bustānī, *Dāʾirat al-maʿārif*, iv, 31-2) and of Ibn Fāris (d. 395/1004 [*q.v.*]), entitled *al-Ḥamāsa al-muḥdatha* (see *Fihrist*, 119; Yāḳūt, *Udabāʾ*, iv, 84). The two Khālidīs, Abū Bakr Muḥammad b. Hāshim (d. 380/990) and his brother Abū ʿUthmān Saʿīd (d. 400/1009), who lived in the entourage of Sayf al-Dawla, are the authors of a *Kitāb Ḥamāsat shiʿr al-muḥdathīn*, the title of which clearly shows the gradual change in meaning of the word *ḥamāsa* (see *Fihrist*, 240; M. Canard, *Sayf al Daula*, Algiers 1934, 293-5; their *Ḥamāsa*, also entitled *al-Ashbāh wa'l-naẓāʾir*, survives in manuscript in Cairo).

In the following century, it was in Spain that al-Aʿlam al-Shantamarī (d. 476/1083 [see AL-SHANTAMARĪ]), already the author of a commentary on Abū Tammām, composed a *Ḥamāsa* (quoted by al-Baghdādī, *Khizāna*, i, 33).

The same literary form was again followed by Ibn al-Shadjarī (d. 542/1148 [*q.v.*]), whose *Ḥamāsa* was published under this title by F. Krenkow at Ḥaydarābād in 1345 (see above). Somewhat later, ʿAlī b. al-Ḥasan *alias* (al-) Shumaym al-Ḥillī (d. 601/1204 [*q.v.*]) composed a new and more original one; this grammarian and poet, with his inordinate pride and uncommon vanity, thought himself capable, not only of selecting the best poems of the earlier poets, but also of himself writing other and equally good poems; thus, following Abū Tammām, he composed a *Ḥamāsa* in which he included only poems of his own composition (see Yāḳūt, *Udabāʾ*, xiii, 72 ff.).

It was an Andalusian living in Tunis, Abu 'l-Ḥadjdjādj Yūsuf b. Muḥammad al-Andalusī al-Bayāsī (572-653/1177-1255) who was the author of the next *Ḥamāsa*; a philologist, historian and poet well schooled in classical poetry, he compiled in Tunis in 646/1248 a collection of poems, stories and fables to which he unwarrantedly gave the name *Ḥamāsa* (see al-Maḳḳarī, *Analectes*, index; A. González Palencia, *Literatura*², 107; R. Brunschvig, *Ḥafṣides*, ii, 384, 399, 406); this work exists in manuscript at Gotha.

The last *Ḥamāsa* that we know is that of Ṣadr al-Dīn ʿAlī b. Abi 'l-Faradj al-Baṣrī (killed in 659/1261); it is known by the name *al-Ḥamāsa al-Baṣriyya* (see al-Baghdādī, *Khizāna*, i, 33), and a manuscript of it is preserved in Cairo.

The interest of these works, and especially of the *Ḥamāsa* of Abū Tammām, is multiple. For us, their merit lies in preserving poems by poets otherwise unknown, and of serving in a subsidiary way as secondary sources for the publication of the *dīwān*s of ancient poets, but they also provide us with reasonably precise indications in regard to the tastes of a period. For generations of young Arabic-speakers, in both the Mashriḳ and Maghrib, the *Ḥamāsa* of Abū Tammām has largely contributed—in perhaps too fragmentary a form—to the maintenance of the prestige of archaic poetry, considered as a model for imitation, and has at the same time constituted a sort of manual of ethics.

The original meaning of *ḥamāsa* encouraged the provisional adoption of the term as the designation of the epic, and Bocthor was one of the first to suggest translating "epic poem" by *shiʿr ḥamāsī*; however, in Arabic, the use of *ḥamāsa* was short-lived, and today the word has been replaced, in this sense, by *malḥama* (pl. *malāḥim*); however, in order to give the present article greater homogeneity, it is here that the question of the epic in Arabic literature will be discussed.

Accounts of heroic adventures accompanied by wonderful happenings are not rare in this literature [see ḤIKĀYA, SĪRA], and if such were the complete definition of the epic, it would be possible to assert that this literary form was practised by the Arabs; the romance of Baṭṭal [*q.v.*], the *Sīrat al-amīra Dhāt al-Himma* [see DHU 'L-HIMMA], the saga of the Banū Hilāl [see HILĀL], the romance of Sayf b. Dhī Yazan [*q.v.*], and the *Sīrat ʿAntar* [see ʿANTAR] in particular offer features which bring them close to the great epics of universal literature, and one cannot fail to be struck by the evident resemblances between the *Sīrat ʿAntar*, considered, however, as a romance of chivalry, and the *Chanson de Roland*; but to be counted true epics, these narratives are in general lacking in the literary elaboration which is the mark of the masterpieces of epic literature. Although the *Sīrat ʿAntar* also contains, to a somewhat limited extent, another element of the epic, namely a feeling of the greatness of the fatherland represented by a hero who possesses all the virtues, in these narratives we are not conscious of the inspiration which animates the *Shāhnāma*, for example, and it may perhaps be thought that, if epics are linked with the awakening of nationalities, the Arabs hardly needed this element during the most brilliant period of their literature which corresponded with the apogee of their power; yet it may be regretted that no genius revealed himself during the centuries of decadence or produced a work comparable with that of Firdawsī, which was then available in Arabic.

To explain the absence of epics in the classical period, it has been said that the Arabs were unacquainted with Homer's masterpieces; in fact feeling convinced of the superior value of their own poetry, they scarcely knew the *Iliad* or the *Odyssey*, and

in any case were daunted by the difficulties of translating verse (see G. Wiet, *Les traducteurs arabes et la poésie grecque*, in *MUSJ*, xxxviii/16 (1962), 361-8; the embarrassment of Mattā b. Yūnus is nevertheless instructive for, in his translation of Aristotle's *Poetica* (ʿA. Badawī, *Arisṭūṭālīs, Fann al-shiʿr*, Cairo 1953, 96), he was content to render ἐποποιία by قول (while Badawī, in his own trans., 3 and *passim*, uses *malḥama*).

It has also been said that the rule of the monorhyme excluded long compositions in verse; now the *urdjūza* permits the composition of very long works, and it is precisely in *radjaz* that some poems have been written that come near to being epics, without, however, ceasing to be versified chronicles except when they have a purely didactic character; Ibn al-Muʿtazz is one of the first representatives of this form, which flourished especially in al-Andalus in the hands of Ghazāl, Ibn ʿAbd Rabbih, Ibn Zaydūn, Ibn ʿAbdūn, Ibn al-Khaṭīb and others. In certain poems of Abū Yaʿkūb al-Khuraymī, of Abū Tammām, of Abū Firās or of al-Mutanabbī, there is certainly a strong feeling of epic, but it would be exaggeration to regard these *ḳaṣīdas* as true epics.

Rather than attempt to find an explanation for the Arabs' continued ignorance of a noble literary form which has contributed to the universal prestige of the great literatures of antiquity and the Middle Ages, it is fitting simply to reflect that, while possessing all the necessary documentary, literary and technical elements for the creation of the epic, they did not achieve the final stage of the process; they preferred to follow a tradition which may be called national, and which Islam helped to anchor still more deeply in their hearts. This is basically the opinion of many modern Arab critics—from the talented translator of the *Iliad*, Sulaymān al-Bustānī (see his *Introduction*) to Aḥmad Abū Ḥāḳa, author of the *Fann al-shiʿr al-malḥamī* (Beirut 1960)—who agree that the epic genre, in spite of the works mentioned above, is lacking in Arabic literature.

From the nineteenth century onwards, the translation of Homer and the reading of great epics have inspired some more or less successful attempts, among which may be mentioned those of Aḥmad Muḥarram, *al-Ilyādha al-islāmiyya* (an epic of the Prophet), of Būlus Salāma, *ʿĪd al-Ghadīr* (a Shīʿī epic) and *ʿĪd al-Riyāḍ* (a Saʿūdī epic), and of Fawzī Maʿlūf, *Bisāṭ al-rīḥ*, which Abū Ḥāḳa considers the best.

ii. — PERSIAN LITERATURE

When introduced into Iran by the Arabs, the word *ḥamāsa* at first retained its original meaning (bravery) and then, rather later, was used in Persian to denote the heroic and martial epic (*ḥamāsa-i pahlavānī*), a literary genre, the works composed in this form being comparable with the heroic epics of the other Indo-European peoples; this is the meaning of *ḥamasa-sarāyī* (from *sarāyidan*, to sing, and, by extension, to compose), the title of the work by Dr. Ṣafā on the Persian epic.

The earliest texts of a heroic character are concerned with the kings of antiquity and the period when the Iranians were still in direct contact with the Aryans of India. In brief, the heroic legend in Iran started to take shape even before the Iranians emigrated from India towards what was later to be Iran; it was subsequently enriched with new elements and developed into oral or written narratives, particularly during the last period of the Sāsānid dynasty. Upon comparing the Vedas and the Avesta, one observes that the Indo-Iranians, even before their separation, were familiar with the legendary exploits of the same heroes. Some of these narratives were mainly products of the imagination (the creation of the world and of man); others had some historical basis; but, with the passing of time and the accretion of oral elements, they assumed a legendary aspect. In the *Avesta*, the *Yasht* are of great importance in regard to national legends. Several sections allude to legends and beliefs similar to those found in the Vedas: thus Vivasvat, father of Yama, and Trita Aptya (of the Rig-Veda) correspond to Vivanhant, father of Yima (Djam), and to Athwiya (Abtin) father of Thraetaona "the child of Thrita" (Farīdūn) who are named in the *Hom Yasht* (of the *Yasna*), "the most important chapter for the comparative history of the beliefs of Avestan Persia and Vedic India" (J. Darmesteter, *Zend-Avesta*, i, 79); they appear later in Persian epic texts [see DJAMSHĪD, FARĪDŪN]; other *Yasht* mention heroes, most of whom figure in the *Book of Kings* of Firdawsī, and places situated in North-West Persia (ancient Media). According to Nöldeke (in *Gr.I.Ph.*, ii, 131), it can be accepted that, at the period when the *Avesta* took shape, some presentation of the mythical history of Iran, if not written at least traditional, was in existence. But, unlike the Persian epics composed from the 5th/11th century, which bring together a mass of details, these particulars are short and incomplete in the Avestan texts.

On the other hand, striking analogies have been found between the legendary accounts recorded by Greek historians and several episodes in the *Book of Kings* of Firdawsī—but only from the time of the Achaemenids: for example, the fragments by Ctesias, physician to Artaxerxes II (4th century B.C.), collected by Diodorus Siculus (i, 11), provide information from Median tradition; as for the parallels, Achaemenes as a child was brought up by a falcon, according to Aelianus, just as the hero Zāl (in the *Shāh-nāma*) was brought up by the *Sīmurgh* (a kind of phoenix); the histories of Cyrus and Kay Khusraw, the one recounted by Herodotus, the other by Firdawsī, present obvious analogies; on the one hand we find the new-born Cyrus exposed by order of his maternal grandfather Astyages, king of the Medes, but left in the keeping of shepherds by his minister Harpagos and, on reaching manhood, overthrowing the empire of the Medes; on the other hand the infant Kay Khusraw left among the shepherds in the mountains on the orders of his maternal grandfather Afrāsyāb (the murderer of his son-in-law and king of Turan), then recognized as the lawful heir of the kings of Iran and taking vengeance on Afrāsyāb for the murder of his father and his uncle; in the 5th century A.D., Moses of Khorene attributes the same adventure to the Sāsānid king Ardashīr and records other legendary Iranian narratives (the Persian epic had a great influence on the Armenian epic; see F. Macler, in *JA*, ccxxvii, 549). In short, the influence of the Avestan texts was maintained over what was later to become the Persian epic up to the time of the Parthian period and even later, for the

ancient names were often given to the sovereigns and leading personages of the Sāsānid period.

Moreover, on the decline of the Sāsānids, several works were written in Pahlavi containing traditions and stories of heroes; and there were also others during the 7th and 8th centuries A.D. Of some, only the title is known (through the medium of Arab authors): such are the *Kitāb al-Sakīsarān*, the title of a prose work named by al-Masʿūdī (*Murūdj*, ii, 118 = tr. Pellat, § 541)—probably Sagēsarān (the chiefs of the Saka, of Sīstān, perhaps connected with the family of the Rustamids, see A. Christensen, *Les Kayanides*, 143)—and hence a text of great importance for epic traditions, translated into Arabic by Ibn al-Muḳaffaʿ, and the *Kitab-i Paykār*, "Book of combats", named by al-Masʿūdī (*Tanbīh*, French tr., 136). Others were preserved in part; such are the history of *Bahram Čūbīn*, which survived thanks to the Arab historian al-Dīnawarī (*Akhbār ṭiwāl*, ed. Guirgass, 81-104) and also to Firdawsī (trans. J. Mohl, in-12, vi, 460 and vii); the duel of *Rustam and Isfendyār*, translated into Arabic prose by al-Thaʿālibī (*Ghurar*) and into verse by Firdawsī (iv, 461 ff.); the *Mudjmil al-tawārīkh* mentions a work relating to the hero Pīrūz (Tehrān ed., 66, 70) and an *ʿAhd-i Ardashīr* (61-4) which was used by Miskawayh (*Tadjārib al-umam*); the *Taʾrīkh-i Sīstān* (Tehrān ed., 8) mentions a *Bakhtyār-nāma* devoted to the great exploits of a commander-in-chief under Khusraw Parvīz. The history of Alexander by the pseudo-Callisthenes was probably translated into Pahlavi, and then from Pahlavi into Arabic, with additions relating to Dhu 'l-Ḳarnayn [see ISKANDAR NĀMA]); other works concerning the Sāsānid period and mentioned in the *Fihrist* (Ṣafā, *Ḥamāsa*, 45 and n.) survive as fragments in the works of Arab authors; several short Pahlavi post-Sāsānid works (collections of moral aphorisms, *pand-nāmak*) are to be found scattered in Firdawsī.

Of all these works, only two survive in their Pahlavi text; they are therefore essential for the study of the genesis of the Persian epic. The *Memorial of Zarīr* (*Aiyatkār-i Zarīrān*; see *Gr.I.Ph.*, index, s.v. Yatkār), the versified form of which (in syllabic metre) has been identified by E. Benveniste, represents the Sāsānid adaptation of a poem of the Arsacid period (before the 3rd century A.D.)—a poem composed "in about the 6th century of our era, the contents of which go back to some vanished Yasht" (Zarīrān is named twice in the *Yasht*); Daḳīḳī [*q.v.*] sometimes drew inspiration from it textually (cf. *JA*, 1932/2, 255 and Firdawsī, trans. Mohl, in-12, iv, 298-9) in writing the thousand or so lines of verse that Firdawsī inserted in his *Shah-nāma*. The second of these works, in prose, is the *Kārnāmak-i Ardashīr* (Book of the exploits of Ardashīr) in which "a whole series of features from the legend of the great Cyrus can be discovered" (see A. Christensen, *L'Iran sous les Sassanides*, 91); it was very closely followed by Firdawsī (trans. in-12, v, 265; and *Gr.I.Ph.*, index, s.v. Kārnāmak).

In addition, two important Pahlavi works transmit not only religious but also heroic traditions—the *Dinkart* (written in the 10th century) preserves fragments from the Avesta and numerous facts relating to the earliest Iranian dynasties, and the *Bundahishn* (11th century) contains information about the dynasties of the Kayanids and the Sāsānids.

It is known that the kings of ancient Persia took an interest in the histories of their reigns: under the Sāsānids, "as had previously been the case in the time of the Achaemenids, the royal court kept official annals; it is supposed that these annals were utilized by the author or authors of the *Book of sovereigns* probably written ... under Yazdgard III" (cf. A. Christensen, *op. cit.*, 53 and n. 4). The Greek historian Agathias (d. 582) states that he had been able to consult these royal annals which were housed in the archives of Ctesiphon (*op. cit.*, 70). Now according to Baysonghur's preface to the *Shah-nāma* [see FIRDAWSĪ], in the reign of the last of the Sāsānids, Yazdgard III, the *dihḳān* Danishvar of Madāʾin had all these chronicles, from the earliest times to Khusraw II, written down systematically, with the assistance of *mobads* and learned men (Nöldeke, in *Gr.I.Ph.*, ii, 141); this book was entitled *Khʷatāy-nāmak*; several Arab and Persian authors refer to the Arabic translation of it under the title *Siyar al-mulūk*, which corresponds with the Pahlavi title, the word *khʷatāy* ('god') having also the meaning of 'sovereign' (cf. al-Bīrūnī, *Āthār*, Leipzig ed., 102); it gave the history of the kings of Iran, from mythical times to the end of the Sāsānids, mingling legendary and historical facts, the latter being predominant for the Sāsānid period. The Arabic translation by Ibn al-Muḳaffaʿ (2nd/8th century) was an indispensable source for Arab historians. The Pahlavi original disappeared, but much of it was preserved thanks to Ibn al-Muḳaffaʿ (cf. al-Thaʿālibī, *Histoire des rois des Perses*, ed. and tr. Zotenberg, introd. 42). On account of the copyists' carelessness, copies of the *Siyar al-mulūk* are by no means in agreement: according to Ḥamza Iṣfahānī, Mūsā b. ʿĪsā al-Kasrawī collated several copies and did not find any two the same. According to Ibn al-Muḳaffaʿ, others (who are named by al-Bīrūnī, *Āthār*, Leipzig ed., 99) had translated the *Khʷatāy-nāmak* into Arabic, each in his own way, sometimes introducing accounts from other countries into the history of Iran (Nöldeke, *Tabari, Geschichte der Perser ... zur Zeit der Sassaniden*, introd.; and especially the résumé of V. Rosen's study of these Arabic translations and the changes and alterations of the Pahlavi text in these translations: A. Christensen, *op. cit.*, 54 and n. 1). Not one of these translations survives; but fragments from them can be seen in a series of Arabic and Persian works, with occasional variants resulting from the diversity of the sources.

Apart from that of the written sources, the importance of the traditions and legends transmitted orally is not negligible. But it is certain that the earliest Persian epics derive from written sources, using Pahlavi documents (either directly or through Arabic translations), as well as traditions preserved in families and transmitted orally by narrators or story-tellers (*rāwī*) from Khurāsān, Sīstān or Transoxania. Al-Bīrūnī gives the names of some of those he had heard (*Āthār*, 42, 44, 99); the author of the *Mudjmil al-tawārīkh* states that "the *rāwīs* of earlier days based their stories on the ancient books of the Fārsīs" (Tehrān ed., 2). Finally, the influence of the Arab authors who devoted themselves to the history and legends of ancient Iran must not be forgotten.

All these factors led the Iranians to undertake a general compilation, on the lines of the annals drawn up on the orders of the ancient kings: thus, during the 4th/10th century, three prose *Shāhnāma* were written [see FIRDAWSĪ], the last of which, by Abū Manṣūr, was freely used by Daḳīḳī and later by Firdawsī; all that remains of it is the very important introduction, published by Muḥammad Ḳazwīnī (*Bīst maḳāla*, Tehrān 1313/1935, ii, 1-64); it was consulted also by al-Bīrūnī (*Āthār*, 112 and 116), which tends to prove that at the end of the 4th/10th

century, and afterwards, it was regarded as the accepted *Shāhnāma*; al-Thaʿālibī (*Ghurar*) similarly drew upon it to a considerable extent, a fact which explains the points of resemblance between his book and Firdawsī's epic, both as regards the historical facts and also the legendary stories.

In addition to the *Shāhnāma* of Abū Manṣūr, there were also other texts in Pahlavi (or translated into Arabic) which served as sources, during the second half of the 5th/11th century and the first half of the 6th/12th, for writers of epics (analysed by J. Mohl, introd. to the *Livre des Rois*)—epics which were inferior to Firdawsī's in breadth and power but which complete the whole epic structure that he had brought into being; poems celebrating Gershāsp (the most original and the oldest, composed about 458/1066 [see ASADĪ]), his grandson Sām, the three children of his great-grandson Rustam—Djihāngīr, Farāmarz and Banū Gushāsp—, Bārzū [see BĀRZŪ-NĀMA], Bahman, Rustam's redoubtable adversary (by Īrānshāh, in about 499/1106), Shāhryār, Bārzū's son, the last of the family (by Mukhtārī, d. *ca.* 545/1150) and about eight epics celebrating minor heroes (Ṣafā, *op. cit.*, 3rd part, ch. III).

From the 6th/12th century onwards, the decline of the national epic gradually became evident under the influences of Islam, of Arab culture and, later, of the predominance of the Turks; in any case, the great epic and national subjects of Iranian antiquity had already been treated. However, one of these subjects, which Firdawsī was unable to develop to its fullest extent, provided Niẓāmī with the opportunity to write a vast and learned epic (587/1191), the *Romance of Alexander* [see ISKANDAR, ISKANDAR NĀMA, NIẒĀMĪ]—a subject to which Amīr Khusraw and Djāmī later returned, not to speak of the adaptations made in Turkey, India and other Oriental countries. The first epic to honour a contemporary prince was the *Shāhānshāh-nāma*, written by Muḥammad Pāʾīzī in honour of sultan ʿAlāʾ al-Dīn Muḥammad Khwārizm Shāh, in about 596/1200. The most important historical epic, after Firdawsī's, is the *Ẓafar-nāma* (Book of victory) of Ḥamd-Allāh Mustawfī Ḳazwīnī which continues the *Book of Kings* from the occupation of Iran by the Arabs up to the period in which the author was living, the time of the Mongol invasion; hence the real interest, at once historical and literary, of the third and last part of this poem which consists of 75,000 *bayts* (completed in 735/1335). Another epic relating to the history of the Mongols down to the successors of Čingīz-Khān is the *Shāhānshāh-nāma*, completed by Aḥmad Tabrīzī in 739/1338. The epic by Adharī Ṭūsī (d. 866/1462), devoted to the history of the Bahmanid sultans of Dekkan, left unfinished, was completed by an anonymous author. Tīmūr's resounding exploits were celebrated by Hātifī (d. 927/1521), a nephew of Djāmī, under the title *Ẓafar-nāma* (ed. Lucknow 1869); to the same poet we owe about a thousand lines of verse of an epic on the reign of Shāh Ismāʿīl which he left unfinished. The reign of this same ruler and that of his son formed the subject of an epic written by Ḳāsimī Gunabādī and completed in 939/1533 (ed. Bombay 1287); to him we owe also an epic on the reign of Shāh Rukh, the son of Tīmūr. The capture of the island of Kishm and the town of Hurmuz (Djārūn) from the Portuguese was recounted in verse by Ḳadrī (*Djangnāma-i Kishm*, 1032/1623, and *Djārūn-nāma*). Lastly, a *Shāhānshāh-nāma* was written by Ṣabāʾ (d. 1822) in honour of Fatḥ ʿAlī Shāh. These are the principal epic works, most of them written under the influence of Firdawsī or Niẓāmī. In addition, throughout the 11th/17th and 12th/18th centuries, a series of secondary works commemorated certain sovereigns and leading personages of Iran, India and Turkey (*Gr.I.Ph.*, ii, 238).

As regards the second category of these epics (devoted to heroes of the Shīʿī faith; Ṣabā, *op. cit.*, 305 ff.), the oldest is the *Khāvarān-nāma* of Ibn Ḥusām (d. 875/1470), celebrating the virtues and exploits of the caliph and *imām* ʿAlī. The anonymous *Ṣāhib-ḳirān-nāma* (1072/1662) similarly honoured Ḥamza b. ʿAbd al-Muṭṭalib. One of the most important of these works, the *Ḥamla-i Ḥaydarī*, glorifies the lives of Muḥammad and ʿAlī, their saintliness and their achievements; its authors are Muḥammad Rafīʿ Bādhil, a native of Mashhad, who had emigrated to India where he held high office; after his death (1123/1711), his work was completed by Abū Ṭālib Fanduruskī. The same subject was used in a more extended work (30,000 *bayts*) written in a better style than the preceding one, composed in the 19th century by Mullā Bamūn ʿAlī (*takhallus*: Rādjī) entitled *Ḥamla-i Rādjī* (ed. 1270/1854). Ṣabā, named above, is the author of the longest of the works in this category, the *Khudāvand-nāma*, on the same subject as the *Ḥamla-i Ḥaydarī*; here, more than in these other works, the influence of Firdawsī is to be discerned.

As *ḥamāsa* denoted exclusively the heroic epic, it has been necessary to leave out of this account the cycle of romantic epics (the earliest of which, Zaryadres and Odatis, was known as early as the 4th century B.C., according to Atheneus, XIII, 575), that is to say the episodes devoted to love, which are treated briefly in the *Shāhnāma* of Firdawsī and which the poets of different periods (Niẓāmī, Amīr Khusraw and Djāmī in particular) magnified into vast versified romances (not to mention Firdawsī's other works, for example *Farhād u Shīrīn*, and Gurgānī's *Wīs u Rāmīn*; see also ASADĪ).

Bibliography: In addition to the works mentioned in the text, two essential works: Nöldeke, *Das Iranische Nationalepos*, in *Gr.I.Ph.*, ii, 130 ff. (2nd ed. 1920); English trans. by L. Bogdanov, *The Iranian national epic*, Bombay 1930, Persian trans. by Buzurg ʿAlawī, *Ḥamāsa-i Millī-i Īrān*, Tehrān 1327 (solar); Dh. Ṣafā, *Ḥamāsa-sarāyī dar Īrān*, Tehrān 1334/1956. Reference may also be made to A. Christensen, *Heltedigtning og Fortaellingsliteratur hos Iranerne i oldtiden*, Copenhagen 1935. (H. MASSÉ)

iii—TURKISH LITERATURE.

From the 19th century onwards the Arabic adjective *ḥamāsī* became in Turkish the equivalent of the adjective "epic", while *ḥamāsiyya* indicated an epic poem (see H. C. Hony and Fahir Iz, *A Turkish-English dictionary*[2], Oxford 1950, s. vv. *hamasi*, *hamasiyat*; Mustafa Nihat Özön, *Osmanlica-Türkçe Sözlük*, Istanbul 1952, s.v. *ḥamāsī*); *ḥamāse* became the synonym of the Persian *destān*, which also is used to render "epic" (see M. N. Özön, *op. cit.*, s.v. *destān*). In the *Türkçe Sözlük* ([3] Ankara 1955), published by the Türk Dil Kurumu, the two terms, Arabic and Persian, are found linked together: *hamaset destanı*.

In Turkish literature the Persian term *destān* was used for the ancient popular epics in syllabic verse, transmitted orally, then also the first verse chronicles of epic type, celebrating the prowess of a historical character who had become a legendary figure. The ancient epics of the Turks of Central Asia, sung by the *ozan* or popular poet-musician accompanying

himself on the *ḳopuz*, have not survived, and the *Oghuznāme*, the national epic of the Oghuz Turks, can be studied only through a prose compilation made in the 9th/15th century, the *Kitāb-i Dede Ḳorḳut* [see DEDE ḲORḲUT]. The same is true of the epic literature of the Islamicized Turks transplanted into foreign countries, who, taking for their model the Persian or Arabic heroic tales, created for themselves a new national epic celebrating the exploits of the conquerors of Anatolia and dominated by the ideal of the Holy War: the saga of Sayyid Baṭṭāl [*q.v.*], that of Melik Dānishmend [*q.v.*] and that of the dervish-*ghāzī* Ṣarī Ṣalṭuḳ Dede [*q.v.*] have survived only in the form of prose compilations made in the 8th/14th or 9th/15th centuries. But although the ancient *destān*s, epic poems transmitted by oral tradition, have not survived, there are known some works of epic character, which are composed according to the rules of Arabo-Persian prosody, in the *mathnawī* form and in *ramal* metre, and which have the title of *destān*. Among the earliest may be mentioned the *Destān-i Maḳtal-i Ḥüseyn*, an epic poem commemorating the tragedy of Kerbela, composed in 762/1361 by the poet Shādhī for the *emīr* of Ḳasṭamonu, Kötürüm Bāyezīd (MSS: University of Bologna, Marsigli collection no. 3325; Ankara Univ. Lib., Üsküdar Kemankeş coll. no. 528). Towards the 9th/15th century there appeared verse chronicles of epic type which, while recounting the exploits of historical characters, preserved the heroic spirit of the ancient epics; the poet often gives to these verse chronicles the name of *destān*. To this category belong the *Ghazāwetnāme* which forms part of the *Iskendernāme* of Aḥmedī [*q.v.*] (d. 816/1413) and which relates, in the form of an epic poem, the history of the first Ottoman rulers up to Emīr Süleymān (d. 813/1410), and the *Destān of Umūr Pasha*, the second part of the *Düstūrnāme* of Enwerī, written in 869/1465, which celebrates the exploits of Umūr Aydînoghlu [*q.v.*]; to describe this part of his work, written in the form of a popular tale in verse, the poet uses the term *destān* (cf. I. Mélikoff, *Le Destān d'Umūr Pacha*, Paris 1954, 31-5, 72, verse 744).

(I. MÉLIKOFF)

iv.—CENTRAL ASIA

However near to extinction the tradition of oral heroic poetry among the Turkic-speaking peoples may or may not be, it is one of the most important in living memory and deserves closer study in the West than it has as yet received.

Oral heroic narrative in Turkic dialects ranges from the hero-tales of the Altaic tribes (Schiefner, Radloff, Ulagashev) to the full-scale epics of great bards like the Kirgîz Sagîmbay and Sayakbay (*Manas*) or the Özbek Fazîl Yuldash-oghlî (*Alpamish*). If we go north of the Altai to include the hero-tales of, in part, non-Turkic tribes, we can trace one of several hypothetical lines of epic development entire, from shamanistic adventures in the upper and lower worlds, where the hero is borne on the wings of eagles if not of thought itself, to military expeditions against empires beyond the steppe, where man's dream of free movement at speed had matured in the taming of that heroic beast, the horse.

If, as is probable, some Huns were Turks, the Turkic peoples will have had some form of heroic poetry for at least the past fifteen or sixteen hundred years. As companion of a Byzantine ambassador extraordinary, Priscus witnessed a performance of panegyric heroic poetry glorifying Attila as he presided at a banquet. 'When evening fell, torches were kindled, and two barbarians went into the presence of Attila and recited lays of their composition lauding his victories and warlike qualities. The feasters gazed at them fixedly, and while some took delight in the verse, others recalled the battles and were fired in their hearts, while yet others, because their bodies were grown frail with age and their spirit abated, shed tears.' (Ἐπιγενομένης δὲ ἑσπέρας δᾶδες ἀνήφθησαν, δύο δὲ ἀντικρὺ τοῦ Ἀττήλα παρελθόντες βάρβαροι ᾄσματα πεποιημένα ἔλεγον, νίκας αὐτοῦ καὶ τὰς κατὰ πόλεμον ᾄδοντες ἀρετάς. ἐς οὓς οἱ τῆς εὐωχίας ἀπέβλεπον, καὶ οἱ μὲν ἥδοντο τοῖς ποιήμασιν, οἱ δὲ τῶν πολέμων ἀναμιμνησκόμενοι διηγείροντο τοῖς φρονήμασιν, ἄλλοι δὲ ἐχώρουν ἐς δάκρυα, ὧν ὑπὸ τοῦ χρόνου ἠσθένει τὸ σῶμα καὶ ἡσυχάζειν ὁ θυμὸς ἠναγκάζετο. C. Müllerus, *Fragm. Hist. Graec.* IV, 1885, 92b). It is as unnecessary to infer that the Huns copied such poems from their Gothic allies as that these copied them from the Huns. Indeed, although there may have been mutual influence and although each of the two peoples may have cultivated both panegyric and epic lay, the extant evidence permits us safely to infer only the panegyric lay for the Huns and the epic lay for the Goths. The fact that δύο.., παρελθόντες βάρβαροι is not in the dual does not exclude the possibility that the 'two barbarians' performed as a pair, as the two performers in the Old English *Wīdsīþ* may have done in a passage which could refer to panegyric (lines 103 ff.). The fragments of heroic poetry cited by al-Kāshgharī [*q.v.*] c. 1077 A.D., largely derive from highly stylized laments for dead heroes, and from panegyric or more frequently self-panegyric (whether the first person sing. or pl. is directly stated or only implied). The fragments show Muslim Turks at grips with an alien people, the Tangut of the Koko Nor region, or with fellow-Turks of the 'idolatrous' Buddhist religion, the Uigur—patterns which are repeated in the 19th and 20th century epics, with the Kalmîk as hated enemy. The form is that of long couplets with rhyming caesura: A+A, A+X, B+B, B+X, etc. This enables scholars to reassemble couplets scattered by al-Kāshgharī, as Brockelmann has done, under the three heads: 'Battle with the Tangut', 'Campaign against the Uigur', 'Battle with the Yabaḳu' (a Turkicized Mongol tribe), furnishing some idea of what a 9th or 10th century Turkic lay may have looked like: but there can be no guarantee of unbroken sequence among these couplets, as some have assumed. The only internal sign of Islamic influence, and it is a negative one, is the unquestioning assurance with which the warriors desecrate the images of the Buddhist Uigur.

Although there is no surviving epical version, the legend of Oghuz Ḳaghan, the mythical eponymous founder of the Oghuz tribes, cannot be omitted from even the briefest account of Turkic epic. Both Rashīd al-Dīn [*q.v.*] (Chap. I) and Abu 'l-Ghāzī [*q.v.*] quote the legend; but the most important witness to it is

the text in the unique Schefer ms. Paris, Bibl. nat. suppl. turc 1001, written in the Uigur script. It is reasonable to assume that the account of the realms subdued by Og͟huz Ḳag͟han must postdate the period of Čingiz and his immediate heirs; but, after this, opinions diverge. Pelliot (followed by S͟hčerbak) considered the text to be a recension in the Uigur of Turfan towards 1300 A.D., though adapted orthographically in Kirgiz territory in the course of the 15th century (while S͟hčerbak considers the writing to resemble that of the *yarlik* of Toktamis͟h). Bang, on the other hand, held that it was written in 'later East Turkic' but that beyond this its date and dialect are totally inscrutable. Sümer argues that it was written in Iran, under G͟hazan K͟hān or his successor, by an Uigur *bak͟hs͟hi* or *bitikči* on the basis of Türkmen oral narrative. The text is incomplete at beginning and end, and there are other imperfections. As the text stands, it is not possible to determine whether the hero's birth is miraculous or merely remarkable, though one must suppose the former in the light of what follows. For, later, Og͟huz Ḳag͟han's acquisition of at least the first of his two wives (future matrons of groups of tribes) is due to heavenly intervention. His first exploits are against wild beasts, and preeminently a unicorn. Before he sets out to conquer nations, he assembles his princes, proclaims himself Ḳag͟han, and chooses 'Grey Wolf!' as his war-cry. And, indeed, before his first battle, a grey wolf emerges (like his first wife) from a heaven-sent ray, and leads the army. Together they conquer Asia, Egypt and Byzantium. Various Turkic tribes, like the Kipčak and Karluk, are founded en route; and when Og͟huz Ḳag͟han comes to rest he gives each of the three sons of his first wife, Kün (Sun), Ay (Moon) and Yultuz (Stars), a third of a golden bow, and the sons of his second, Kök (Sky), Tag͟h (Mountain) and Tengiz (Sea), each a silver arrow as insignia of their tribal organization. The legend is evidently a tribal origin-myth fused with a wishful travesty of the saga of the more dazzling Mongols as reflected in their *Secret History*, from the totemistic Grey Wolf onwards, but always at the poetic level of myth and folk-tale. The form of the narrative is prose, but Riza Nur and Pelliot each detected a group of lines (both situated at high points in speeches by Og͟huz Ḳag͟han) in octo-syllabic rhyming metre (XI, 6-XII, 3; XLII, 3-7), which Pelliot interprets as citations from an epic poem now lost. Nevertheless, prose or rhyming prose breaking into verse at points of heightened interest is a favoured narrative vehicle among the Turkic and neighbouring peoples. As to the influence of the legend in later days, it is thought that the figure of Manas in the 19th and 20th century Kirgiz cycle owes something, in his rôle of conqueror, to the figure of Og͟huz Ḳag͟han.

Some modern epics, like the Kirgiz 'national epic' *Manas* [*q.v.*], are confined to one Turkic people, though some of its characters (including Manas himself) may also appear in the epics of other Turkic peoples. Other epics, like *Alpamis͟h* [*q.v.*], *Edige-batir*, *Koblandi-batir*, *S͟hora-batir* and the romantic epic *Kozi Körpös͟h*, may be shared by several peoples, although not always at the same level of literary development. For example, among the Özbek at least ten variants of *Alpamis͟h* are known, among the Kazakhs two, among the Karakalpaks one, and the scale ranges from shorter poems of *ca.* 2,500 lines to full scale epics of some 14,000; whereas in the Altai it appears as the rather primitive hero-tale of *Alip-Manas͟h*, but again, among the 14th-15th century Og͟huz, in the highly polished version of 'Bamsi-Beyrek' in the *Kitāb-i Dede Ḳorḳut* [*q.v.*]. *Manas* is unique in that by a process of dynastic and other cyclization, it has engulfed not only Kirgiz epics which were once independent of it (*e.g.*, *Er Kökčö*, *Er Tös͟htük*, the latter a tale of a hero's adventures in the underworld much as in Altaic hero-tales) but also the bulk of Kirgiz oral folklore, leaving only such 'minor epics' as *Djanis͟h and Bayis͟h* (closely linked with the Türkmen-Özbek *Yūsef and Aḥmed*, *v. infra*), *Kurmanbek*, *Sarindji*, *Er-Tabildi* intact. The *Manas*-bards (*manasči*) were either permitted or encouraged to record in the laboratory such high numbers of lines of *Manas* and of its continuations *Semetey* (2nd generation) and *Seytek* (3rd generation) as 250,000 (*Sagimbay*, 1867-1930) and 400,000 (Sayakbay, b. 1894) respectively. The *ca.* 12,500 lines of *Manas* recorded by Radloff in the latter part of the 19th century on the other hand represent rather the 'bare bones' of possible live performances, having been taken down by the frustrating method of dictation to hand. Genuine performances suited to various types of patrons and audiences could last from one evening to many weeks of evenings and so run to many thousands of lines. Such length was obtained not so much by wealth of incident as by means of 'static' lyrical elaboration of any matter of beauty or interest. This fluidity in the treatment of basic themes also extended in part to the subject-matter itself; for example, as a compliment to Radloff (or so he thought), his singer introduced the White Czar (a figure to whom the great Manas himself looked up in awe), compounding him of the remote Czar of Russia and the great white god of the shamans. So far, two main 'schools' of *Manas* tradition have been distinguished: those of Tien Shan (Sagimbay) and Issik Kul' (Sayakbay). Themes of *Manas* are the hero's miraculous birth and prodigious boyhood; his unification of the Kirgiz tribes after defeating rebellious kinsmen and other k͟hāns; his various expeditions, above all the Great Expedition to China with its tragic return, ending in Manas' death; and his resurrection, linked with legends attached to ancient tombs in Kirgizia. Unusual depth is given to the epic by the unhappy rôle of Manas's milk-brother Almambet, a Chinese (Radloff: Oirot-Kalmik) prince converted to Islam, to whom he entrusts the leadership of the Great Expedition, demoting loyal old Bakay in order to do so and thereby inflaming Kirgiz jealousy. In addition to relying on magic animal helpers who are clearly of shamanistic origin, Manas has the stock Turkic retinue of forty warriors (*kirk-čoro*), most of whose names are common to Radloff and the 20th century bards. The chief Kazakh heroic epics are: *Alpamis-batir*, *Edige-b.*, *Er-kokča*, *Er-sayn*, *Er-targin*, *Kambar-b.*, *Koblandi-b.* and *S͟hora-b.* (period of the capture of Kazan). *Kiz-žibek* and *Kozi Körpös͟h and Bayan Sulū* (the Turkic Romeo and Juliet) are of a more lyrical and romantic turn. *Ayman S͟holpan and Uraḳ-batir* derive from the times of Russian expansion into Central Asia. As stated above, the poem of *Alpamis͟h* attained truly epic dimensions in Özbek. Özbek shares the military romance of *Yūsuf and Aḥmed* with the K͟hʷārizm-Türkmens (*Boz-Og͟hlan*) and also has the historical *dāstān S͟heybānī-k͟hān* and the romances *Kuntugmis͟h*, *S͟hīrīn and S͟hakar*, and *Orzigul*. The leading epic of the Karakalpaks is *Ḳirk-ḳiz*—'The Forty Maidens'. Although this poem has undergone much influence from the recent past, the heroine Gulaym conforms to an ancient Central Asiatic type of warrior-maiden remembered in poetry over a wide area despite the intrusion of Islamic notions of womanhood. Gulaym's

father Allayar, ruler of the Karakalpak stronghold of Sarkop, gives her the fertile region of 'Miueli' (Fruit-land'?), which she fortifies and develops. Her father falls to the Kalmîk Khān, but she avenges him with the help of her lover, the Khʷārizmian hero Arîslan. In Ādharbāydjān the story of the Robin Hood-like Köroghlu [*q.v.*] = Gorogli—Ravshan, 'Son of the Blind Man'—is widely known but has not been taken to the stage of epic. As well as in Turkey, Armenia, Georgia and Persian Ādharbāydjān, the *Gorogli* cycle is known in the lands of the Türkmens, Kazakhs and Özbeks, the last of whom told it elaborately, though not yet epically, as 'The Forty Dastans of Gorogli'.

In the epics of the Kazakh, and, through them, of the Kîrgîz, the heroic prestige of the Nogay, like that of the Achaeans in Homer, is great. In Radloff's version of the Kîrgîz epic, Manas himself is of the Sarî-Nogay, whereas Sagîmbay makes him the grandson of the eponymous Nogay-khān. This is undoubtedly a reflection of the standing of the historical Nogay (d. 1299), and then of his following, among the Tatars of the Golden Horde and also among their eastern neighbours. As was stated above, the Kazakhs also know an epic of Edige, another Emir of the Horde (d. 1419). It is from this time onwards that the modern epics receive traces of names or events, however faintly or however generalized, which can be related to known history rather than to myth and legend. The Kîrgîz, Kazakhs and Karakalpaks share the conception of the perfidious, jabbering, heathenish Kalmîk as paramount enemy. This must derive from the centuries of Kalmîk expansion and pressure on the Turkic tribes (15th-18th centuries), yet after their decline the Kalmîk remained the classic adversary right through the period of the great khānates (which also left their precipitates in the epics) and Russian expansion, up to the present day. Despite the emphasis on the heathenry of the Kalmîk enemy, however, the positive influence of Islam on Turkic epic remains superficial, whereas the deeper layers often reveal shamanistic conceptions [see SHAMANISM]. In recent centuries the epics have come increasingly under the influence of such literary forms as the Persian *dāstān*, whose name has been adopted even for extempore oral epic, and ultimately also epic in book-form, which has preserved several earlier popular versions of epics (*e.g.*, *Kambarbatîr*—see bibliography). Turkic epic shares with oriental music the advantages and disadvantages of improvised performance. On the one hand there are the freedom and ecstasy of the inspired bard.—It is said that when the *manasči* Keldîbek (b. circa 1755) began to sing, the *yurt* trembled and a great whirlwind arose, and in its gloom and din supernatural horsemen, battle-comrades of Manas, flew down so that the ground shook beneath the thud of the hooves. On the other hand, a political disaster could all but shatter a great tradition in a single generation, and a new start must be made. One result of this is a marked diversity of tradition and the repetition of stock motifs in ostensibly different epics over a wide area—such epics are apt to be attracted into the orbits of others. For example, *Ḳozî Ḳörpösh* runs parallel to *Alpamîsh* for part of its course. Another result of extemporization in frenzy, instead of recitation from memory of a perfected work of art, is the total absence of archaic language: each generation has created the fabric of its epics anew within the broad lines laid down by tradition.

The materials for the study of Turkic epic poetry are at present available only in the Soviet Union. Until the conditions governing the recording, editing, and publication of epic performances are more widely known, it will not be possible for others to assess those texts, far from complete in number, which have found their way to the West. Epic poetry of its nature is intimately bound up with political life, and the *Iliad* will have been no exception, so that it is not of itself disturbing that modern bards have become, for example, radio personalities. But the Central Asiatic and Mongolian epics have experienced such marked fluctuations of fortune, following political decisions, as to abash the disinterested scholar. Some recent publications, however, both editions and critical studies, encourage the belief that the basic recordings of a still living major tradition of heroic epic are intact and may one day be given to the world in full.

v.—Urdu Literature

In the Deccan, where Urdu literature developed earlier, epic begins with Nuṣratī's *ʿAlī Nāma*, celebrating the exploits of ʿAlī ʿĀdil Shāh II (1656-1672) of Bidjāpūr. In northern India it developed very late, but elements which can be described vaguely as epical are found in the *shahr āshūb* poems lamenting the economic and social decline of Dihlī and its environs written from the early eighteenth century up to a few years after the Mutiny of 1857, beginning with Shāh Ḥātim Dihlawī (1699-1791), continuing through the *mathnawī*s and satires of Mīrzā Rafīʿ 'Sawdā' (1713-1781) and Mīr Taḳī 'Mīr' (1733-1810), and culminating in the famous *shahr āshūb* of Mīrzā Khān 'Dāgh' (1831-1905). The eighteenth and early nineteenth century ornate and rhymed prose *dāstān* shows the fossilization of a possible epic residue in stale magical romance. These *dāstān*s, which are rooted in the Amīr Ḥamza cycle, current in the Islamic world from Turkey to Indonesia, later developed into voluminous, long-drawn-out, stereotyped, repetitive narratives *Ṭilism-i hūshrubā* and *Būstān-i khiyāl*. Situated in a world of magical phantasmagoria, their content deals with an endless struggle, plot and counter-plot by a triangular set of characters: degenerate pseudo-heroes whose literary ancestry going back to the Ḥamza cycle, their helpers the *ʿayyār*s (tricheurs), their opponents the pagan magicians who with some stretch of imagination might be equated with the predatory Marātha and Djāt bands which had engulfed the Mughal Empire in the eighteenth century.

The first heroic epic poem in the modern sense is, perhaps, a short anonymous Dakanī *mathnawī* written to lament the fate of Tīpū Sulṭān [*q.v.*] fighting with his back to the wall. Mūʾmin Khān 'Mūʾmin' (1800-1851) is the most eminent of Urdu poets who wrote short heroic poems supporting the *djihād* and the movement of Sayyid Aḥmad Barēlwī [*q.v.*]. Mawlawī Liyāḳat al-Lāh and others among Barēlwī's group of *mudjāhidīn* used the short *razmiyya mathnawī*s for incitement and the call to the *djihād* in an unpoetic and colourless style.

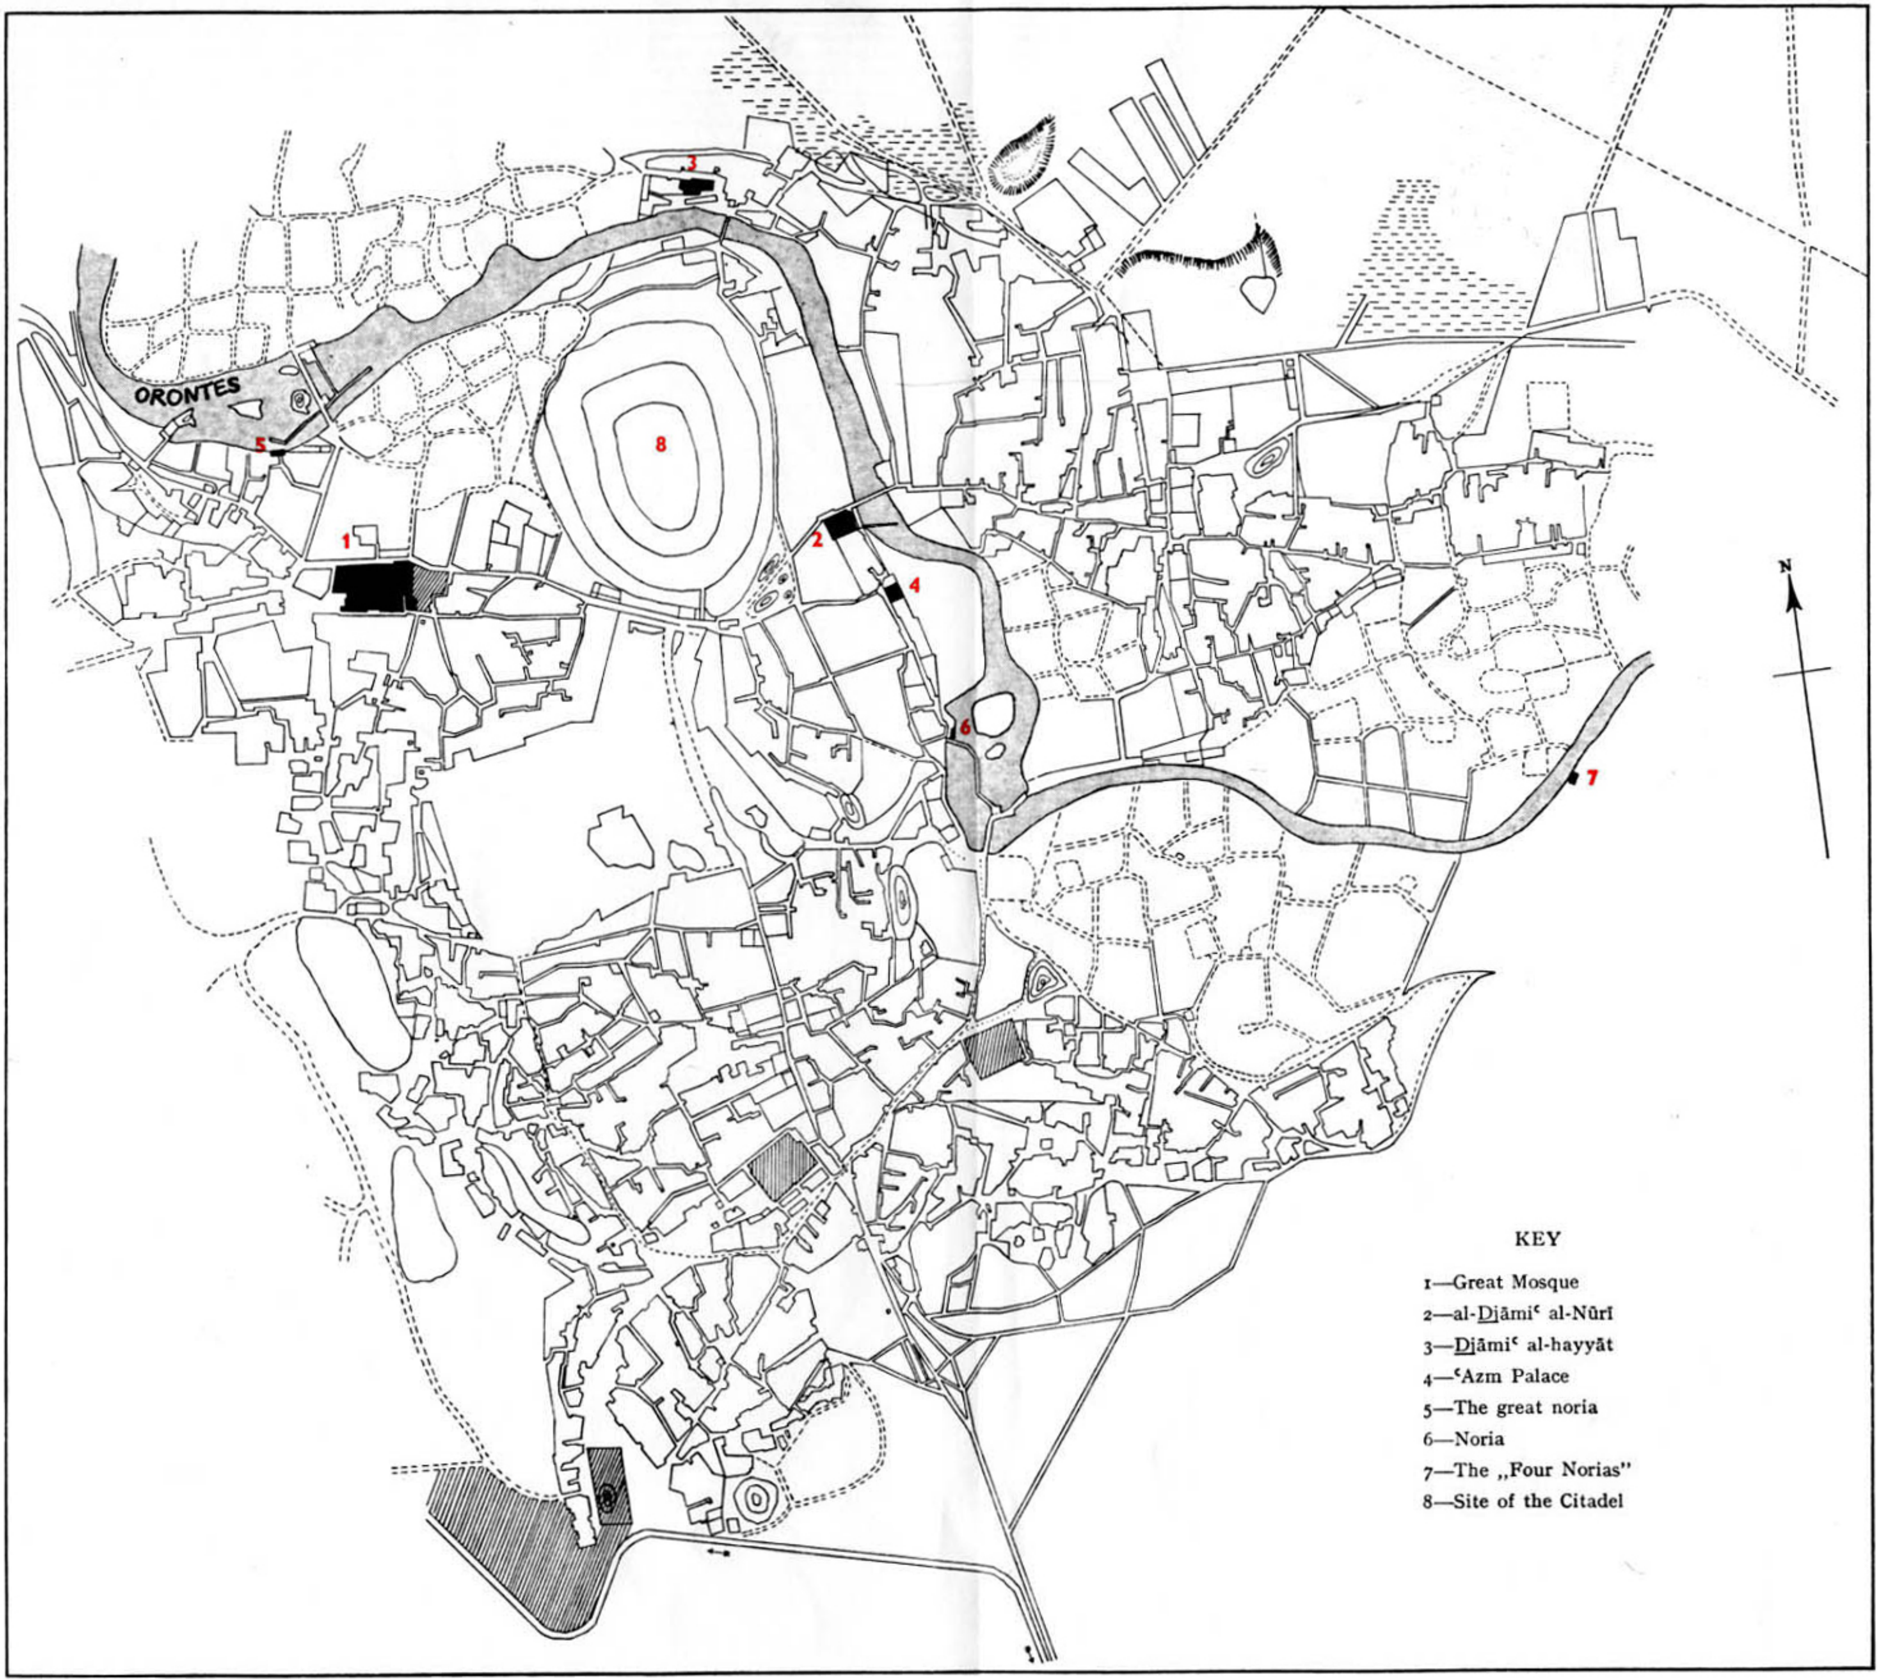
The *marthiya* written in Lakhnaʾū in the middle of the nineteenth century lamenting the tragedy of Karbalā (61/680) receives epical treatment and rises to epic grandeur in the work of Mīr Babar ʿAlī 'Anīs' (1802-1874) and his contemporary Mīrzā Dabīr (1803-1875). In the vein of martyrological epic it dwells upon the theme of the heroic resistance and suffering of Ḥusayn b. ʿAlī, fighting heroically against overwhelming odds; it contains elaborate descriptions of the desert and the hero's horse and sword, but confuses anachronistically the emotional and social, and to a large extent geographical, milieu of 1st/7th century ʿIrāḳ with nineteenth-century Awadh.

After 1857, when Urdu poetry entered its modern phase, the epic theme and glory of historical Islam became the dominant note underlying the political poem which began with Alṭāf Ḥusayn 'Ḥālī''s [*q.v.*] *musaddas Madd-u djazr-i Islām* and culminated in the poems of Iḳbāl. In the political poem the epic intent emphasizes revivalism and juxtaposes it with modernism; usually the treatment is not narrative and the epic motive is served by references to particular men or events in Islamic history. Ḥafīẓ Djāllandharī has written a narrative *Shāhnāma-i Islām* which is versified history and lacks genuine epic elements.

Sadiq, *A history of Urdu literature*, London 1964. (Aziz Ahmad)

ḤAMĀT, town in central Syria, 54 km. north of Ḥimṣ and 152 km. south of Ḥalab on the road which connects these two towns, and built on both banks of the Nahr al-ʿĀṣī [*q.v.*] or Orontes, which at this point winds a great deal. The steppe plateau which surrounds the town is in part made into ploughed land (cereals), Mediterranean-type orchards and market gardens, thanks to the hydraulic installations which bring water from the river to its fertile soil.

The town of Ḥamāt goes back to early antiquity: it was occupied by the Hittites, who left inscriptions there, then, in about the 11th century B.C., it passed into the hands of Aramaean kings: it is at this period that it is mentioned in the Bible under the name of Hamath. After having been forced, in the reign of Solomon, to recognize the supremacy of the Hebrews, these kings regained their independence, then, in the middle of the 9th century B.C., fought on the side of the Aramaean kings of Damascus against the Assyrian Salmaneser and finally, in 738 B.C., had to pay tribute to Tiglath-pileser; soon afterwards, in 720 B.C., following a revolt, the Aramaean kingdom



of Ḥamāt was incorporated into the Assyrian empire. In the Hellenistic period, the town received, probably under Antiochus IV Epiphanes, the name of Epiphania, which it did not retain after the Arab conquest. This took place in 15/636-7 and the town, now of little importance, which had been taken "by capitulation", belonged until the beginning of the 4th/10th century to the *dj̲und* [*q.v.*] of Ḥimṣ. Little is known about its organization at this time; we know only that already in the Umayyad period it contained a Great Mosque, which seems to have been built on the site of a Byzantine church, parts of which were re-used in building it, and which was restored under the ʿAbbāsid caliph al-Mahdī, and that during the reign of the caliph al-Muʿtaḍid (end of the 3rd/9th century) it was a large market town protected by walls.

During the reign of the Ḥamdānid Sayf al-Dawla, the town of Ḥamāt was incorporated into the district of Ḥalab, and until the beginning of the 6th/12th century its destiny was to continue to be linked with that of this town, which at that time was going through a troubled period. It is known that after the raid of Nicephorus Phocas in 357/968, during which the Great Mosque at Ḥamāt was burned, northern Syria had been under the nominal domination of the Fāṭimids, who allowed the Mirdāsids to ravage it, and had then passed into the hands of the Saldj̲ūḳid princes. On the death of the last Saldj̲ūḳid, Riḍwān, in 507/1113-14, Ḥamāt was probably occupied by the *atābeg* of Damascus, Tug̲h̲takīn [*q.v.*], but in 509/1116-17 it fell into the power of the governor of Ḥimṣ, K̲h̲īrk̲h̲ān b. Ḳarādja, who later gave it up to his brother S̲h̲ihāb al-Dīn Maḥmūd. During the first third of the 6th/12th century Ḥamāt was one of the principal stakes in the struggles between the rulers of northern Syria and those of southern Syria, while the Franks also coveted it, though they never succeeded in taking it. On the death of Maḥmūd, in 517/1123, the town of Ḥamāt was taken again by Tug̲h̲takīn, then, in 522/1128, belonged to his son and successor Tādj̲ al-Mulūk Būrī [*q.v.*], who installed there his own son Sevindj̲. After concluding an agreement with Zangī [*q.v.*], Būrī send Sevindj̲ to him in 524/1130, when he was immediately and treacherously imprisoned. Zangī was thus able to enter Ḥamāt together with K̲h̲īrk̲h̲ān b. Ḳarādj̲ā to whom he handed over the town, re-taking it from him shortly afterwards. The other son of Būrī, Ismāʿīl, succeeded in seizing it again and in holding it from 527 to 529/1133-5, but was finally forced to withdraw before Zangī, who then occupied it definitively. Ḥamāt next passed into the hands of Nūr al-Dīn [*q.v.*], then of Ṣalāḥ al-Dīn [q.v.], who occupied it in 570/1174-5. It was the latter who handed it over, in 574/1178-9, to his nephew al-Malik al-Muẓaffar ʿUmar, whose descendants remained masters of the town throughout the Ayyūbid period and even after the intervening period of the Mongol invasion (which they made no attempt to resist) until the beginning of the Mamlūk period. The principal line becoming extinct in 698/1299, the town had become the headquarters of a Mamlūk *niyāba* of Syria, but the nephew of the last prince, the famous author Abu 'l-Fidāʾ [*q.v.*], succeeded, thanks to the friendship of the sultan al-Nāṣir Muḥammad, in getting himself restored, in 710/1310, to the governorship of the town, then, in 720/1320, in receiving the title of *sulṭān*, which was also accorded to his son al-Malik al-Afḍal Muḥammad. The latter, however, incurred the wrath of the sultan of Cairo and was exiled to Damascus until his death in 742/1342.

In the Ayyūbid period, and during the governorship of Abu 'l-Fidāʾ, the town of Ḥamāt (which was the birth-place of the geographer Yāḳūt [*q.v.*]) enjoyed true prosperity. Its unusual appearance is stressed by eastern and western travellers, and in particular by Ibn Dj̲ubayr. While possessing no monuments of outstanding grandeur, it occupied an unusual site, on both banks of the Orontes, with its houses crowded close to the river, and possessed its own peculiar charm which, it was said, was appreciated only by those who explored its various quarters. Along the river thirty-two water-wheels or norias (*nāʿūra*) of various sizes (the tallest being 22 metres high) raised water to aqueducts which supplied both sections of the town and irrigated the surrounding gardens; drinking water was provided, it is not known exactly from what date, by a special aqueduct which came from the region of Salamiya. On the right bank there extended a quarter which Ibn Dj̲ubayr describes as a "suburb" and which, joined to the other bank by an arcaded bridge, was especially remarkable for its *k̲h̲āns*; it was here that travellers stayed. The town proper was situated on the left bank, which was higher (reaching in places as much as 40 metres above the level of the river) and dominated by a line of mountains; it consisted of a lower and an upper town, both surrounded by a wall which dated from al-Malik al-Muẓaffar ʿUmar, also a citadel, built along the bank of the river on an isolated eminence overlooking the lower town; each of these towns had a mosque (that of the lower town having been built by Nūr al-Dīn and that of the upper town being the original Great Mosque) and *sūḳ*s; the lower town possessed in addition a hospital and three *madrasas* (one of which had been founded by Nūr al-Dīn for the great jurist Ibn Abī ʿAsrūn), but the *sūḳ*s of the upper town were the more famous.

From the middle of the 8th/14th century, Ḥamāt was administered by Mamlūk governors, who continued at first to use the former palace of al-Malik al-Muẓaffar ʿUmar, which today is ruined, and who caused to be engraved the numerous texts of decrees which are still visible on the walls and the columns of the Great Mosque. The town suffered at the hands of Tīmūr, to whom the destruction of the citadel is attributed. But the Mamlūk administration concerned itself with the prosperity of Ḥamāt and it was during the 8th/14th and 9th/15th centuries that the Mamlūk governors built or rebuilt two of the most important norias of the town and also the largest aqueduct.

In the Ottoman period Ḥamāt became, at the time of the first administrative reorganization of the empire, the headquarters of a *liwāʾ* belonging to the *eyālet* of Tripoli; but in the middle of the 18th century the town was attached to the *pas̲h̲alık* of Damascus as a fief (*mālikāne*) of the Pas̲h̲a. It was at this time that Asʿad Pas̲h̲a al-ʿAẓm built there a residence which still exists, now used as a museum, and which, while not the equal of the "ʿAẓm Palace" at Damascus, is nevertheless a very fine specimen of Ottoman civil architecture, and remarkable for its terraces overlooking the Orontes. In the 19th century, at the time of a new administrative reorganization, Ḥamāt was attached to the *wilāyet* of Damascus. In 1906 the town was linked by railway to Aleppo in one direction and to Ḥimṣ and Damascus in the other. At the beginning of the 20th century its population seems to have been stable: approximately 60,000 inhabitants are recorded in 1893 and in 1930. By this time such importance as the town had arose

from its position as a market used mainly by the Bedouin from the surrounding district, who obtained there the various products which they needed and notably some very good textiles, while it remained one of the most picturesque cities of Syria, with nine norias still working out of the eighteen recorded in the 18th century. But, since 1945, the town of Ḥamāt has shared in the general tendency to expansion of the towns of Syria and its population now exceeds 150,000.

There remain in Ḥamāt several monuments worthy of note. The most important is the Great Mosque, which dates from the Umayyad period; as is proved by the presence in its courtyard of a pavilion on columns intended as the local *bayt al-māl*. The hall of prayer is of an original plan: its three naves are in fact each of different width and its eight pillars support five cupolas in the form of a cross. The courtyard is surrounded by vaulted porticoes with semi-circular arches, some of which appear to date from the time that the mosque was built. The western portico opens into an adjoining mausoleum, which contains the tomb of al-Malik al-Muẓaffar III (683-98/1284-98), the last direct descendant of the nephew of Ṣalāḥ al-Dīn. Of its minarets, the one, isolated, to the east of the hall of prayer, bears an inscription of 529/1135, but is built on a base which seems earlier; the other, abutting on the north portico, dates from the Mamlūk period.

On the right bank of the Orontes is the *Dj̲āmiʿ al-Nūrī*, the mosque of the lower town, founded by Nūr al-Dīn, in which still survive important parts of the original building and which is particularly famous for the interesting *minbar* which belongs to the first foundation. On the opposite bank of the Orontes is the *Dj̲āmiʿ al-ḥayyāt*, or mosque of the snakes, so-called because of the form of the small columns which frame one of the windows of the hall of prayer and which resemble intertwined snakes. Beside this mosque is the tomb of Abu 'l-Fidā'.

(D. Sourdel)

HAMAWAND, also ḤAMAWAND (generally Arabicized as Aḥmadwand, though Ḥama is the normal hypocoristic form of Muḥammad), a small Kurdish tribe of obscure origins, numbering about 10,000 souls, now settled mainly in the Čamčamāl and Bāzyān districts west of Sulaymāniya, in ʿIrāḳ. The chief family is divided into the four branches Ramawand, Ṣafarwand, Ras̲h̲awand and Bagzāda. Ag̲h̲as of this family were until recently established in some fifty villages of the area, having both tribal followers and client villagers in their service.

With the exception of one offshoot, which went to S̲h̲īrāz, the tribe is supposed to have migrated from the area of Kirmāns̲h̲āh, in Persia, about 1185/1770. They supported the Baban princes of Sulaymāniya until their autonomy came to an end in 1847. For some decades thereafter the tribe continued to harass the Ottoman and Persian authorities equally, and earned themselves considerable notoriety by taking to systematic brigandage over the whole area between Bag̲h̲dād, Kirmāns̲h̲āh and Mosul. In 1889, however, having suffered losses at the hands of the Persians, they retired to Bāzyān and were then deported by the Ottoman authorities, half to Adana and half to Tripoli in North Africa. Seven years later the latter contingent, men, women, and children, fought its way back to Bāzyān and the whole tribe was shortly allowed to reunite. As late as 1908 caravans travelling from Kirkuk to Sulaymāniya did so in terror of attack from the tribe.

ḤAMAWĪ [see SAʿD AL-DĪN ḤAMAWĪ].

ḤAMḌ, WĀDĪ AL-, Iḍam of the classical Arab geographers, a seasonal watercourse in north-western Arabia which enters the Red Sea 50 km. south of al-Wadj̲h. Wādī al-Ḥamḍ is one of the major physiographic features of western Arabia; it and its tributaries drain a basin 455 km. long lying between the mountain chain of al-Ḥidj̲āz and the *ḥarra*-capped plateau to the east. Wādī al-Dj̲izl, the main tributary of the system in the north, drains the southern and western slopes of Ḥarrat al-Raḥāh and Ḥarrat al-ʿUwayriḍ. Tributaries in the south-east flow from Ḥarrat K̲h̲aybar. The southern limit of the Wādī al-Ḥamḍ watershed lies 75 km. south-southwest of Medina in the upper reaches of one of the several *wādī*s known as al-ʿAḳīḳ [*q.v.*]. The Wādī al-ʿAḳīḳ which drains a large plateau area east of Ḥarrat Rahaṭ and southeast of Medina is not, as often reported, part of the Wādī al-Ḥamḍ system. Classical Iḍam lay in the *dīra*s of As̲h̲djaʿ and Dj̲uhayna. Its

upper reaches near Medina were called al-Ḳanāh, and a tributary of Wādī al-Ḥamḍ near the city is still known by that name. The name Iḍam occurs in the works of the early poets, and there are records of Muslim raids into the valley in the years 8/629-30 and 10/631-32. The Damascus-Medina pilgrim track and the Ḥidjāz Railway route enter Wādī al-Ḥamḍ at Hadiyya Station, 165 km. from Medina, and follow its course nearly all the way to the Holy City.

ḤAMD ALLĀH b. Abī Bakr b. Aḥmād b. Naṣr al-**MUSTAWFĪ** al-**ḲAZWĪNĪ**, Persian historian and geographer, born about 680/1281-2 at Ḳazwīn, d. after 740/1339-40. He came of a Shīʿī family which had provided a series of governors of Ḳazwīn in the 3rd/9th and 4th/10th centuries. His great-grandfather had been the Auditor-General of ʿIrāḳ and the family had since then borne the appellation Mustawfī. Ḥamd Allāh was appointed financial director of his home town and of several neighbouring districts by the well-known minister and historian Rashīd al-Dīn [*q.v.*], who also inspired his historical studies. About 720/1320 he began with a *Ẓafar-nāma*, closely imitating Firdawsī in style and diction, which in 75,000 verses describes Islamic history up to 734/1333-4, that is, almost to the end of the Īlkhān empire. Ḥamd Allāh worked for 15 years on this material and in that connexion wrote his own studies of Firdawsī. This work has not been published. *Taʾrīkh-i guzīda* (completed 730/1330) is similar in content, concise and very readable in style; in essentials it depends on known sources (al-Ṭabarī, Ibn al-Athīr, Djuwaynī, Rashīd al-Dīn, and also on the *Shāh-nāma* for the mythical period), but it contains a quantity of useful information about the author's times which is not to be found elsewhere, so that it is indispensable as a source for the later Īlkhān period (pub. in facsimile with English paraphrase by E. G. Browne and R. A. Nicholson, Leyden and London, 1911-14: *GMS*, xiv/1 and 2). Even more important is his *Nuzhat al-ḳulūb* (Hearts' Bliss), an essentially cosmographical and geographical work, which is also written in an easily comprehensible manner. This work is practically our only source for the whole human geography of the last period of the Īlkhān empire; it still assumes the unity of that empire, which was crumbling from 735/1335 onwards. Only from the *Nuzhat al-ḳulūb* can we gather all the essential facts on the organization of administration, commerce, economic life, sectarian divisions, tax-collection and similar subjects; apart from literary sources (some classical geographers, reference books like Yāḳūt, the cosmography of al-Ḳazwīnī, and the *Fārs-nāma* of Ibn Balkhī), Ḥamd Allāh used to a great extent his own knowledge and official documents available to him as a financial official (complete edition, Bombay 1894; *The Geographical Part*, text and translation, by Guy Le Strange, Leyden and London 1915-19: *GMS*, xxiii/1-2). The two last-named works were frequently transcribed because of their clear structure and simple style, and still deserve high regard as outstanding products of Persian mediaeval geography and historiography.

ḤAMD ALLĀH, shaykh, Ottoman calligrapher [see khaṭṭ]

ḤAMDALA means the saying of the formula *al-ḥamdu li'llāh* (for the different vocalizations—*du, di, da*—see *LA*, iv, 133, 7 ff.) "Praise belongs to Allāh"; for from Him all praise-worthiness proceeds and to Him it returns. *Ḥamd* is the opposite of *dhamm*, being praise for something dependent on the will of him who is praised and it differs in this from *madḥ* which is not so limited; it is thus different from, although it may be an expression of *shukr*, "gratitude", the opposite of which is *kufrān*; *thanāʾ*, often rendered "praise", more exactly "taking account of", is used both of praise and dispraise. The phrase is formally *ikhbārī* or *khabarī*, "narrative", but in its use it is *inshāʾī*, "assertive", for the speaker makes it an expression of the praise which he at the moment directs towards God (Muḥammad ʿAbdū in *Tafsīr al-Fātiḥa*, Cairo, 1323, 28; see, too, the elaborate discussion by al-Baydjūrī in his *Ḥāshiya* on the *Kifāyat al-ʿawāmm* of Faḍālī, Cairo 1315, 3 ff. In Lane's translation, "Praise Be" (*Lexicon*, 638) he meant an emphatic affirmation, not a *duʿāʾ*; this is plain from his letter to Fleischer on the translation of *tabāraka* (*ZDMG*, xx, 187). But this use of "be" is misleading and hardly defensible as English. Perhaps the *inshāʾī* force could be indicated by a mark of exclamation as Palmer does in his translation of the Ḳurʾān. As the phrase occurs twenty-four times in the Ḳurʾān, besides other forms such as *lahu 'l-ḥamd*, it naturally became frequent in Muslim usage. All things come from Allāh, and for all things, pleasant or grievous, He is to be praised. Yet the word *ḥamdala* does not seem to belong to the classical language and is thus later than *basmala*, which may even be pre-Islamic. In the *Ṣaḥāḥ* and the *Lisān* it does not occur, though *basmala* is in both, in the latter fortified with a verse from ʿUmar b. Abī Rabīʿa (Schwarz, *Dīwān*, no. 413, ii, 241; the evidence for the line and the usage is fullest in the *Tādj*, s.v.). In the *Miṣbāḥ* (finished 784/1382) *ḥamdala* is mentioned, but only under *basmala*; it has no entry of its own. Finally, it is entered in its place in the *Ḳāmūs*; so slowly did it win recognition as a word. Besides its broad, devout usage the phrase is statedly a part of the *ṣalāt* and of the supplemental *tasbīḥ*, being repeated thirty-three times in the latter (Lane, *Modern Egyptians*, chap. iii; *Lexicon*, 1290b). Further, as one of the seven *mathānī*, i.e. the verses of the *Fātiḥa*, it has part with the *Fātiḥa* in various mystical and magical usages and meanings. Thus it is the *mathnā* assigned to the first of the seven stages of the Rifāʿī *ṭarīḳa* (W. H. T. Gairdner, *Way of a Mohammedan Mystic*, 12, 23). Even in orthodox tradition the *Fātiḥa* has begun to have magical value; cf. in al-Bukhārī (*Kitāb al-Tafsīr, Bāb Fātiḥat al-Kitāb*) the story of the man who used it as a charm (*ruḳya*) against snake-bite, and the Prophet approved. For later elaborate developments in magic, see al-Būnī, *Shams al-maʿārif*, faṣl X, and Aḥmad al-Zarḳāwī, in *Mafātīḥ al-ghayb*, 175. But the *ḥamdala* does not seem to be used by itself in magic as is the *basmala*. Again, the tendency to use the phrase as an introductory

formula soon expressed itself as a tradition from the Prophet: "Whatever is not begun with praise of Allāh is maimed" [see BASMALA]. Thus the *ḥamdala* became one of the three required things at the beginning of any formal writing. But this requirement was distinctly later, for, while the use of the *basmala* in this way held from the earliest times, we do not find the *ḥamdala* prefixed to the *Sīra* of Ibn Hishām nor to the *Kitāb al-Aghānī* nor even to the *Fihrist*. See on this usage and the traditions supporting it, the commentary of Sayyid Murtaḍā on the *Iḥyā'*, i, 53 f. and on the praiseworthiness of this exclamation especially v, 13 ff. (*Kitāb al-Adhkār*). The Friday sermon (*khuṭba*) in the mosques usually begins with the *ḥamdala*; and in earlier days a *khuṭba* lacking the *ḥamdala* was called *batrā'*.

Bibliography: References as above and also Bayḍāwī, ed. Fleischer, i, 5, 26 ff.; Ṭabarī, *Tafsīr*, i, 45 ff.; Rāzī, *Mafātiḥ*, i, Cairo 1307, 115 ff. There exist numerous minor works, still in manuscript, on the *basmala* and the *ḥamdala* but these works often merely reproduce what is to be found in the *Tafsīrs* and the treatises. (D. B. MACDONALD)

HAMDĀN, a large Arab tribe of the Yemen group, the full genealogy being Hamdān (Awsala) b. Mālik b. Zayd b. Rabī'a b. Awsala b. al-Khiyār b. Mālik b. Zayd b. Kahlān. Their territory lay to the north of Ṣan'ā [*q.v.*], stretching eastwards to Ma'rib [*q.v.*] and Nadjrān [*q.v.*], northwards to Ṣa'da [*q.v.*], and westwards to the coast (Abū Arīsh). The eastern half belonged to the sub-tribe of Bakīl, the western to Ḥāshid [*q.v.*], and these are still found there.

In the Djāhiliyya Hamdān worshipped the idol Ya'ūḳ (but probably not Yaghūth as sometimes stated; cf. Wellhausen, *Reste*, 20, 22). Ibn al-Kalbī (*Aṣnām*, 10) suggests that they may have accepted Judaism at the time of Dhū Nuwās; many of their allies of Bal-Ḥārith (al-Ḥārith b. Ka'b) were Christian. There is little mention of them in poetry and in the accounts of early battles. When Abraha [*q.v.*], ruler of the Yemen, marched against Mecca, Hamdān joined in the attack made on him by a Yamanī prince, Dhū Nafr, allegedly to defend the house of God. On the "second day of Kulāb" they, along with Kinda and Ḳuḍā'a, supported Bal-Ḥārith against Tamīm. Again with Bal-Ḥārith they defeated their neighbours on the east, Murād, at Mulāḥa (Razm in the Djawf), allegedly on the very day of the battle of Badr in 624. Another victory over Murād was at al-Ḳā' (in the Djawf).

To seek alliance with Muḥammad a deputation from Hamdān came to Medina in 9/631, led by the poet Mālik b. Namaṭ and Abū Thawr Dhu 'l-Mish'ār, probably a prince (Ibn Hishām, 963; cf. Ibn Sa'd, i/2, 73 f.); but this deputation seems to have represented only a part of the tribe. Others are said to have submitted to 'Alī on his expedition to the Yemen in 10/631-2 (al-Mas'ūdī, *Tanbīh*, 274). Muḥammad set 'Āmir b. Shahr (of Bakīl) over Hamdān (Ṭabarī, i, 1851-3). At the *ridda* some of the tribe were inclined to revolt, but most stood firm behind the leaders (cf. W. Hoenerbach in *Abh. der Akad. der Wissenschaften und der Literatur* (Geistes- und sozialwissenschaftliche Kl.), Mainz 1951, 274-7). According to al-Ḳalḳashandī (*Nihāyat al-arab*, Cairo 1959, 438 f.) Hamdān became dispersed as they moved into the conquered lands, apart from those who remained in the Yemen. For a time, however, there was a strong body of them in Kūfa (cf. J. Wellhausen, *Arab Kingdom*, index), including 'Āmir b. Shahr (*Usd*, *s.v.*) and the poet A'shā of Hamdān (d. 83/702 [*q.v.*]). They were nearly all fervent supporters of 'Alī and his sons (cf. al-Mas'ūdī, *Murūdj*, index). Twelve thousand of them are said to have been in 'Alī's army at Ṣiffīn, and their leader Sa'īd b. Ḳays took a prominent part in the battle. For a time they were reckoned, along with Ḥimyar and Madhḥidj, a "seventh" of the Arabs (Ṭabarī, i, 2495). The geographer al-Hamdānī (d. 334/945) [*q.v.*] belonged to the group remaining in the Yemen.

(J. SCHLEIFER-[W. MONTGOMERY WATT])

ḤAMDĀN ḲARMAṬ B. AL-ASH'ATH, the leader of the Ḳarmaṭian movement in the *sawād* of al-Kūfa. Originally a carrier from the village of al-Dūr in the *ṭassūdj* of Furāt Bādaḳlā, he was converted to the early Ismā'īlī movement by the *dā'ī* [*q.v.*] al-Ḥusayn al-Ahwāzī. The date 264/877-8 given in this connexion by a much later report may be approximately correct. When al-Ḥusayn died or left the district, Ḥamdān became his successor. He organized the movement throughout the *sawād* and appointed the *dā'īs* for the major districts. His main assistant was his brother-in-law 'Abdān [*q.v.*], who soon became the leading spirit and conducted the propaganda quite independently. The movement spread rapidly among the peasants, and many of the Bedouin clans and tribes in touch with the *sawād* also became adherents. Various taxes were collected from the converts, culminating in the fifth on all income to be saved for the expected Mahdī. Eventually a kind of communal ownership of goods was introduced and care was taken of the needy in the community. In 277/890-1 a fortified *dār al-hidjra* was built as a place of refuge and congregation. As the Baghdād government had not since the time of the Zandj revolt re-established effective control over the region, the movement escaped its notice until the year 278/891, when some people from al-Kūfa accused it of creating a new religion and permitting warfare against the Muslims. No action was taken. As this, however, was the first Ismā'īlī movement of which the government took notice, the name 'Ḳarmaṭian' was later applied to other groups not organized by Ḥamdān Ḳarmaṭ.

The doctrine propagated by Ḥamdān and 'Abdān probably closely resembled that ascribed to the Ḳarmaṭians by al-Nawbakhtī. Its central theme was that the appearance of the Mahdī Muḥammad b. Ismā'īl, the seventh Imām and seventh Apostle of God, was at hand, ending the era of Muḥammad, the sixth Apostle. He would rule the world, establish justice, abolish the law of Islam, and proclaim the hidden truth of the former religions. This truth could already be attained at least partially by the converts on initiation. The doctrine had a distinctly antinomian character. Reports of the Sunnī sources that the followers of Ḥamdān dispensed with the Islamic ritual and law are trustworthy, but not so their allegations that this led to licentiousness and libertinism among them.

This was essentially also the teaching of the leaders of the Ismā'īlī movement with whom Ḥamdān kept up correspondence. When the later Fāṭimid Caliph al-Mahdī succeeded to the leadership in Sala-

miyya, he introduced certain doctrinal changes which aroused the apprehension of Ḥamdān. ʿAbdān was sent to find out the reason for the change. He learnt that the new leader denied any connexion of Muḥammad b. Ismāʿīl with the movement and claimed the Imāmate for himself. Thereupon Ḥamdān and ʿAbdān broke off the propaganda, causing a momentous split in the Ismāʿīlī movement. This happened about the year 286/899. Ḥamdān soon afterwards went to Kalwādhā and from there disappeared. A report of Ibn Mālik that he was killed in Baghdād does not seem reliable.

Bibliography: The report of Akhū Muḥsin, probably mostly taken from Ibn Rizām, is best preserved by Ibn al-Dawādārī, *Kanz al-durar*, ed. Ṣ. al-Munadjdjid, vi, Cairo 1961, 44 ff., and also by al-Maḳrīzī, *Ittiʿāẓ al-ḥunafā'*, ed. Bunz, Leipzig 1909, 101 ff., and by al-Nuwayrī, *Nihāyat al-arab*, transl. S. de Sacy in *Exposé de la religion des Druzes*, Paris 1838, i, pp. CLXVI ff.; Ṭabarī, iii, 2124 ff.; M. J. De Goeje, *Mémoire sur les Carmathes du Bahraïn et les Fatimides*², Leiden 1886, 16 ff.; W. Madelung, *Fatimiden und Baḥrainqarmaṭen*, in *Isl.*, xxxiv (1958), 36 ff.; idem, *Das Imamat in der frühen ismailitischen Lehre*, in *Isl.*, xxxvii (1961), 59 ff. (W. MADELUNG)

AL-**HAMDĀNĪ**, ABŪ MUḤAMMAD AL-ḤASAN B. AḤMAD B. YAʿḲŪB B. YŪSUF B. DĀWŪD B. SULAYMĀN DHI 'l-DUMAYNA AL-BAKĪLĪ AL-ARḤABĪ, often named IBN DHI/ABI 'l-DUMAYNA or IBN AL-ḤĀ'IK "the weaver's (*i.e.*, the poet's) son" after his ancestor Sulaymān, who was a poet (cf. *Iklīl*, x, 197), South-Arabian scholar, most famous as antiquarian, genealogist, geographer and poet. On account of his rich and varied literary production he was called "the tongue of South Arabia" (*lisān al-Yaman*).

Al-Hamdānī, whose family originated from al-Marāshī in the territory of Bakīl, was born in Ṣanʿā' in the latter half of the 3rd/9th century, perhaps in 280/893 according to a cryptic notice in the recently discovered 10th *maḳāla* of his *Sarā'ir al-ḥikma* (*Iklīl*, i, ed. al-Ḥiwālī, Preface p. 62). Having received an excellent education in all branches of learning, he made extensive travels and acquired a detailed knowledge of Arabia, as is shown by his classic description of this peninsula (*Ṣifat Djazīrat al-ʿarab*), which is perhaps a supplement to the otherwise unknown work *Kitāb al-Masālik wa'l-mamālik* (cf. al-Ḳifṭī, *Inbāh al-ruwāh*, i, 283). He visited ʿIrāḳ, lived for a long time in Mecca and was in contact with many eminent scholars, such as the older Anbārī, Zāhidī and Ibn Khālawayh.

The main authority of al-Hamdānī for South-Arabian archaeology and genealogy was Abū Naṣr Muḥammad b. ʿAbd Allāh b. Saʿīd, called al-Yaharī (after his ancestor Dhū Yahar) and al-Ḥanbaṣī (from his castle in Bayt Ḥanbaṣ near Ṣanʿā'). The rich material supplied by this authority, by the records (*sidjill*) of the tribe of Khawlān in Ṣaʿda, and by other oral and literary sources was collected in his magnum opus, the encyclopaedia *al-Iklīl*, "the Crown". For our knowledge of the South-Arabian tribes the *Iklīl* plays the same fundamental rôle that the *Djamharat al-ansāb* of Ibn al-Kalbī does for the Northern ones. Only four of its ten parts are so far known to exist in manuscript: I, II, VIII, X. The first two books—treating the genealogy of Mālik b. Ḥimyar, *viz.* al-Hamaysaʿ b. Ḥimyar—were discovered in 1932 in the Berlin ms. Or. oct. 968, of which a facsimile edition was published in 1943. This ms. gives the text in the recension of Muḥammad, the son of the famous Nashwān b. Saʿīd al-Ḥimyarī, made about 600/1200. According to the introduction the redactor made only some minor omissions from the original text. There are, however, several later additions incorporated, among them some marginal notes of Nashwān. A second ms. of book II exists in Cairo. Book VIII, containing descriptions of the old castles of the Yaman, with much poetry inserted, enjoyed great popularity; it is preserved in several MSS. of mediocre quality, so that all editions and translations are unreliable in details. Extracts from this book in a better recension were found in the Ambrosiana (see *Orientalia*, N.S., xii, 135-45). Book X finally gives the genealogies of the twin Hamdān tribes, Ḥāshid and Bakīl.

Of the remaining, lost, parts of the *Iklīl*, book III is said to have treated the merits (*faḍā'il*) of Ḳaḥṭān, books IV-VI the old history of South Arabia (*al-sīra/siyar al-ḳadīma, al-wusṭā, al-akhīra*) until the beginning of Islam, book VII a critic of false traditions, and book IX finally the Ḥimyaritic inscriptions (*masānid*). Quotations from this book in the commentary on Nashwān's Ḥimyaritic *ḳaṣīda* show that al-Hamdānī had some knowledge of the *musnad* writing, but no real understanding of the inscriptions.

Apart from genealogical, historical and topographical material, the *Iklīl* provides us also with a rich anthology of old Yamanī poetry. At the end of book I there are given three complete *ḳaṣīdas* of ʿAbd al-Khāliḳ b. Abu 'l-Ṭalḥ al-Shihābī, who is otherwise little known (cf. *Ṣifa*, 58). The work also preserves numerous samples of al-Hamdānī's own poetry, which was collected in a *Dīwān* of six volumes and commented upon by Ibn Khālawayh (d. 370/980), but is now lost. Al-Hamdānī's famous *ḳaṣīda al-Dāmigha* is preserved at the end of the Berlin MS. of the *Iklīl*, I-II. With this fervent defence of the Banū Ḳaḥṭān against the Banū ʿAdnān, al-Hamdānī engaged himself in the old fatal controversy between northern and southern tribes that had been started about 200 years earlier by Kumayt b. Zayd al-Asadī with his *Mudhahhaba*. His engagement in the tribal *mufākhara* may have been fatal for al-Hamdānī, who was accused by his enemies of blasphemy against the Prophet, as belonging to the Banū Hāshim (cf. *Iklīl*, i, ed. al-Ḥiwālī, Preface p. 49, the passage from the *Maṭlaʿ al-budūr* of Ibn Abu 'l-Ridjāl).

Al-Hamdānī spent the greater part of his life in Rayda, where he enjoyed the favour of Abu Djaʿfar al-Ḍaḥḥāk, called Sayyid Hamdān, and wrote his *Iklīl* in the castle of Talfum. Having moved from there to Ṣaʿda, he was involved in political controversies and put in prison by Asʿad b. Abū Yuʿfir al-Ḥiwālī (d. 332/943) on behalf of the Rassī Imām Aḥmad al-Nāṣir b. Yaḥyā al-Hādī in Ṣaʿda. In his *Ḳaṣīdat al-djār*, printed by al-Ḥiwālī in his preface to *Iklīl* i (pp. 49-56), al-Hamdānī blames Asʿad, while Yaḥyā b. ʿAbd Allāh al-Ukaylī, who released him from prison, is praised in the context of *Iklīl* i. A second imprisonment brought about a strong reaction among the Arabs and led to the battle of Katafā, and eventually to the death of al-Nāṣir and his brother Ḥasan. Having been released from prison with the consent of Ibn Ziyād, the ruler of Zabīd, al-Hamdānī praised the leaders of the revolt in poems (see *Iklīl*, i, ed. al-Ḥiwālī, pp. 331 ff.). Hence there are strong reasons to disbelieve the current statement, made by Ṣāʿid al-Ḳurṭubī in his *Ṭabaḳāt* (ed. Cheikho 59) on the authority of the Umayyad Caliph al-Ḥakam al-Mustanṣir (350-366), that al-Hamdānī died in prison in Ṣanʿā' in the year 334/945 (*ibid.*, Preface 48, 59 s.).

Only one other book of al-Hamdānī, *K. al-Djawharatayn al-ʿatīḳatayn*, on the two precious metals gold and silver, has been preserved and is being edited by Toll in Uppsala. Of the astrological work *Sarāʾir al-ḥikma* a fragment has recently come to light (v. supra). Of the remaining works attributed to al-Hamdānī nothing has been recovered so far; some of these are cited in the *Iklīl*. Their titles are: (1) *al-Siyar wa'l-akhbār* (= *Iklīl* iii-v?), (2) *Ayyām al-ʿarab*, (3) *al-Yaʿsūb* (on shooting and hunting), (4) *al-Ḳuwā* (on medicine), (5) *al-Zīdj* (astronomical tables), (6) *al-Ṭāliʿ wa'l-maṭāriḥ* (mentioned only in Ḳifṭī's *Inbāh*).

(O. Löfgren)

HAMDĀNIDS, three families of the Banū Hamdān whose tribal rule over Ṣanʿāʾ and its dependencies extended from 481-570/1088-1175. Throughout Yemen's long history of political anarchy, the large and powerful tribe of Hamdān [*q.v.*], many of whose members were Shīʿī, either of the Zaydī or Ismāʿīlī sect, often imposed their rule over Ṣanʿāʾ and its environs whenever there was a decline of a larger dynastic state. Such was the case with the weakening of the Ṣulayḥid [*q.v.*] dynasty, whose members were of a sub-tribe of the Hamdān, towards the end of the 5th/11th century.

Upon the transfer of the capital of the Ṣulayḥid state from Ṣanʿāʾ to Dhū Djibla in 481/1088-89 by the second ruler of this Fāṭimid dynasty, al-Mukarram Aḥmad, ʿImrān b. al-Faḍl, one of the leaders of the Banū Hamdān from the sub-tribe of al-Yām, and Asʿad b. Shihāb, maternal uncle of al-Mukarram Aḥmad, were appointed as the Ṣulayḥid governors over Ṣanʿāʾ. On the death of al-Manṣūr Sabā, the third Ṣulayḥid ruler, in 492/1098-99, and the resultant decline of his state, the rule of Ṣanʿāʾ passed more directly into the hands of the Banū Hamdān in the person of Ḥātim b. al-Ghashīm al-Mughallasī.

Ḥātim died four years later and was succeeded by his second son, ʿAbd Allāh. Intratribal strife, perhaps in part caused by sectarian differences, began, with control of Ṣanʿāʾ as the prize; only two years after ʿAbd Allāh came into power, and although he was recognized as a just ruler, he was killed by poison in 504/1110-11. He in turn was succeeded by his younger brother, Maʿn b. Ḥātim. By now the dissension in the tribe had reached full force, with the elders, led by the *Ḳāḍī* Aḥmad b. ʿImrān, son of the former Ṣulayḥid governor, ranged against Maʿn while a large group of the tribe came to his support. At length, in 510/1116, Maʿn was deposed and imprisoned by the *Ḳāḍī* Aḥmad, and the tribal control of the city passed into the hands of another Hamdānid family.

Hishām b. Ḳubayb (not Ḳubbayt as in Lane-Poole) b. Rusaḥ and his brother, al-Ḥumās, ruled in succession for the next seventeen years (the year of Hishām's death is not known). Upon the demise of al-Ḥumās, in 527/1132-33, he was followed by his son Ḥātim. With the continuance of tribal discord the Ṣanʿānīs rose in revolt and deposed Ḥātim in favour of Ḥamīd al-Dawla Ḥātim, the son of the *Ḳāḍī* Aḥmad b. ʿImrān, in 533/1138-39. He is reported to have entered Ṣanʿāʾ with 700 Hamdānī horsemen in support of his régime.

By this time Yemen had reverted to its usual state of political and religious anarchy with the main towns and districts of both the coast and the highlands in the hands of local independent rulers, a condition ripe for the rise of religious reformers and adventurers. One of these reformers was the Imām al-Mutawakkil Aḥmad, a direct descendant in the sixth generation from al-Hādī ila 'l-Ḥaḳḳ Yaḥyā, the founder of the Zaydī sect in the Yemen. Al-Mutawakkil Aḥmad, rising in 532/1137-38, proclaimed his leadership of the Zaydīs in their chief centre, Ṣaʿda, and set out to conquer the highlands, taking Nadjrān, al-Djawf, and al-Ẓāhir before marching against Ṣanʿāʾ. In 545/1150-51 he attacked and defeated Ḥamīd al-Dawla, but was unable to seize Ṣanʿāʾ from the Hamdānids.

On the death of Ḥamīd al-Dawla in 556/1161 control over Ṣanʿāʾ passed to his son, ʿAlī b. Ḥātim, during whose reign the Mahdid [*q.v.*] ruler of Zabīd in the Tihāma began his campaigns for territorial conquest and the spread of the apostate religious doctrines instituted by his father, ʿAlī b. Mahdī (d. 554/1159). In 568/1172-73 the Mahdid attacked the Zurayʿid [*q.v.*] ruler of ʿAdan by laying siege to the city. The Zurayʿids, unable to withstand the Mahdids alone, requested and received the assistance of ʿAlī b. Ḥātim and that of two other Hamdānid tribes of the highlands. In a series of encounters during the first part of 569/1173 the Mahdid was driven back to the Tihāma by the allies.

Shortly after the return of ʿAlī b. Ḥātim to Ṣanʿāʾ the Ayyūbids under Tūrān Shah reached the outskirts of the city in their conquest of Yemen. ʿAlī fled to the safety of his mountain fortress leaving the city open to the invaders, and with the capture

of Ṣanʿāʾ by the Ayyūbids in 570/1174-75 the Fāṭimid rule of the Hamdānids of nearly a century came to a close.

(C. L. Geddes)

ḤAMDĀNIDS, Taghlibī Arab family which, in the 4th/10th century, provided two minor dynasties, which arose, owing to the decadence of the ʿAbbāsid caliphate, in Mesopotamia or Djazīra (Mosul) and in Syria (Aleppo), and whose most distinguished representative was the *amīr* of Aleppo, Sayf al-Dawla.

The Ḥamdānids are descended from ʿAdī b. Usāma . . . b. Taghlib, which is why they are called Taghlibīs and ʿAdawīs (see their genealogical tree in Wüstenfeld, *Tabellen*, C, 32 and in M. Canard, *Histoire de la dynastie des H'amdânides de Jazîra et de Syrie*, i, Algiers 1951, 287-8; cf. the appendix to the edition of the *Dīwān* of Abū Firās by S. Dahan, Beirut 1944). They came originally from Barkaʿīd in the eastern part of the Djazīra (on Barkaʿīd, see M. Canard, *op. cit.*, 105).

The first Ḥamdānids. The first member of the family on whom historical information is available is Ḥamdān b. Ḥamdūn b. al-Ḥārith, who appears in 254/868 with other Taghlibīs in an army which was fighting against the Khāridjīs of Djazīra, but is found from 266/879-80 onwards, and particularly in 272/885-6, among the Khāridjīs, whence his nickname of al-Shārī. In 279/892-3, at the time when al-Muʿtaḍid assumed power and decided to re-establish the authority of the caliph in Djazīra, Ḥamdān b. Ḥamdūn was in possession of certain places there, including Māridīn, and, on the left bank of the Tigris, Ardumusht (on this place see M. Canard, *op. cit.*, 112 and *passim*). In 282/895, the caliph seized Māridīn, which Ḥamdān had left; then his troops took Ardumusht, which Ḥamdān's son, Ḥusayn, who had been left to guard the fortress while his father fled, yielded to the caliph's forces, himself going over to the caliph's side. After a vigorous pursuit along both banks of the Tigris, Ḥamdān gave himself up to the caliph outside Mosul and was imprisoned. (On this episode, see M. Canard, *op. cit.*, 301-2; Ibn al-Muʿtazz, *apud* Lang, *Muʿtaḍid als Prinz und Regent*. . ., in *ZDMG*, xli, 243; Abū Firās, *Dīwān*, ed. Dahan, 148, in the great *ḳaṣīda* which he wrote in praise of his family.)

His son Ḥusayn b. Ḥamdān, now on the side of the caliph, gave the latter valuable support in the fighting against the Khāridjīs and their leader Hārūn al-Shārī. It was due to him that Hārūn was captured, and the grateful caliph rewarded him by pardoning his father Ḥamdān and granting him the command of a corps of Taghlibī horsemen, which several members of the family joined. He took part in the fighting in the Djabal against Bakr b. ʿAbd al-ʿAzīz b. Abī Dulaf [see DULAFIDS] in 283/896, and in the expeditions against the Ḳarmaṭīs. During the caliphate of al-Muktafī, he was responsible in 291/903, under the orders of Muḥammad b. Sulaymān, *ṣāḥib dīwān al-djaysh*, for the victory in Syria over the Ṣāḥib al-Khāl, who was captured. He also took part in Muḥammad b. Sulaymān's expedition in which he re-conquered Egypt from the last Ṭūlūnid ruler in 292/904-5, refusing to accept the governorship of Egypt. He again fought the Ḳarmaṭīs in Syria in 295/907-8. Having taken part in the conspiracy to put Ibn al-Muʿtazz on the throne in 296/December 908, he fled after the plot failed. His brother, Abu 'l-Haydjāʾ ʿAbd Allāh b. Ḥamdān, was ordered to pursue him but was unable to overtake him. Ḥusayn finally asked for *amān* through the mediation of his brother Ibrāhīm, which was granted. He was even appointed governor of Ḳumm and Kāshān in the Djabal. He returned to Baghdād and received in 298/910-11 the governorship of the Diyār Rabīʿa. But he quarrelled with the vizier ʿAlī b. ʿĪsā, revolted, and was captured by the eunuch Muʾnis in 303/916. He was imprisoned, and put to death in 306/918 in circumstances which are obscure, perhaps as the result of a Shīʿī conspiracy in which he is said to have take part while in prison, for he had pronounced Shīʿī sympathies (see M. Canard, *op. cit.*, 330-1, 338-9).

Ḥusayn's brothers, ʿAbd Allāh Abu 'l-Haydjāʾ, Ibrāhīm, Dāwūd and Saʿīd, had remained loyal to the caliph. The first had been appointed governor of Mosul in 293/905-6. He subdued the Kurds of the region, directed, as has been said, the operations against his brother Ḥusayn in 297, but in 301/913-4 was dismissed for reasons which are not clear, revolted, but then gave himself up to Muʾnis, was pardoned and was re-instated as governor of Mosul in 302/914-5. He was under suspicion at the time of Ḥusayn's revolt in 303, and for a time both he and his brother Ibrāhīm were imprisoned. Soon he was again given a command in the army, and fought under Muʾnis against Yūsuf b. Abi 'l-Sādj, the governor of Ādharbaydjān and Armenia, who revolted in 307/919. His brother Ibrāhīm was appointed governor of the Diyār Rabīʿa in 307 (being succeeded, on his death in 308, by his brother Dāwūd); while Abu 'l-Haydjāʾ was appointed in 308/920 governor of the Ṭarīḳ Khurāsān and Dīnawar and was re-appointed in 313/925-6 to the governorship of Mosul as well, to which were shortly added the regions of Bāzabdā and of Ḳardā on the left bank of the Tigris. Abu 'l-Haydjāʾ was to retain these positions until his death in 317/929; in the history of the caliphate he played an active political and military rôle which took him away from Mosul, where he left as his lieutenant his son al-Ḥasan, the future Nāṣir al-Dawla. In 311/923-4 he was given the task of ensuring the security of the Pilgrimage route: on his return he was attacked by the Ḳarmaṭī Abū Ṭāhir Sulaymān and taken prisoner, but was freed in 312/928. In 315/927-8, the Ḳarmaṭīs had reached ʿAyn al-Tamr near al-Anbār on the Euphrates and presented a serious threat to Baghdād. Abu 'l-Haydjāʾ, with his three brothers Sulaymān, Saʿīd and Naṣr, served in the army sent to halt the Ḳarmaṭīs. According to one tradition, it was due to the initiative of Abu 'l-Haydjāʾ, who persuaded the commander of the army to destroy the bridge over the Nahr Zubāra, that Baghdād was saved and the Ḳarmaṭīs forced to turn their attentions elsewhere.

However, Hārūn b. Gharīb, the son of the maternal uncle of the caliph al-Muḳtadir, was ambitious to take the place of the commander-in-chief, the eunuch Muʾnis, who was friendly to the Ḥamdānids. Having obtained the governorship of the Djabal, he dismissed Abu 'l-Haydjāʾ from his governorship of Dīnawar. Abu 'l-Haydjāʾ then came with his troops to Baghdād. He took part in the conspiracy which came to a head at the beginning of 317/February 929 and whose aim was to overthrow al-Muḳtadir and to replace him by his brother Muḥammad al-Ḳāhir. Working closely with the chief of police, Nāzūk, he played a very

important part in the conspiracy and it was he who installed al-Ḳāhir in the palace and procured al-Muḳtadir's abdication; at the same time, keeping his own interests in view, he caused to be bestowed on himself the governorship of a wide area. But there arose a counter-revolt; the new caliph was besieged in his palace and Abu 'l-Haydjā' died heroically defending al-Ḳāhir to the end. Al-Muḳtadir, returned to power, evinced the most profound grief at Abu 'l-Haydjā''s death.

Abu 'l-Haydjā' was at this period the most notable member of the Ḥamdānid family. His great qualities of valour and generosity and his frank and independent spirit commanded respect and were universally esteemed. But he possessed also the spirit of intrigue which was characteristic of the great feudal lords of the time and he was finally the cause of his own undoing. Abū Firās gives him an important place in his *ḳaṣīda* and praises his powerful sword-strokes. Like Ḥusayn, and probably the whole family, he had definite Shīʿī tendencies, which were to re-appear in his son Sayf al-Dawla: Ibn Ḥawḳal mentions that he was responsible for the restoration of the tomb of ʿAlī at Kūfa (on Abu 'l-Haydjā', see M. Canard, *op. cit.*, 341-76, and on his brothers, *ibid.*, 378-81).

Abu 'l-Haydjā''s two sons were to be the most famous members of the Ḥamdānid family and, inheriting their father's prestige, were to follow his political example and to make renowned the two emirates, Mosul and Aleppo, which they governed. But Abu 'l-Haydjā' may be considered as the founder of the emirate of Mosul and of the Ḥamdānid dynasty.

The Ḥamdānid emirate of Mosul. Al-Ḥasan b. ʿAbd Allāh b. Ḥamdān, the son of Abu 'l-Haydjā' and the future Nāṣir al-Dawla, had at first some difficulty in making himself *amīr* of Mosul. On his father's death he inherited only a part of his domains, on the left bank of the Tigris, his claim to Mosul being denied. He regained it in 318/930, however, but was deprived of it again as a result of the intrigues of his uncles, Naṣr and Saʿīd, who left him only the western part of the Diyār Rabīʿa. In 322/934 he again became master of Mosul and of the Diyār Rabīʿa, but was ousted once again by his uncle Sāʿid, who was intriguing against him from Baghdād. He therefore rid himself of him by a villainous murder, then Mosul was re-occupied by the troops of the vizier Ibn Muḳla. Ḥasan, who had fled to Armenia, prepared from there the re-conquest of Mosul. He defeated the lieutenants of the caliph and of the rival Taghlibī clan, the Banū Ḥabīb, who had sided with the caliph against him. At the beginning of 324/end of 935, the caliph al-Rāḍī finally appointed him governor of Mosul and of the three provinces of the Djazīra (Diyār Rabīʿa, Diyār Muḍar and Diyār Bakr). He nevertheless had to fight, with the help of his younger brother ʿAlī, the future Sayf al-Dawla, in order to wrest Diyār Bakr from one of his former auxiliaries, a Daylamī, and Diyār Muḍar from some Ḳaysī tribes and an officer of the caliph. In 936 he was master of the whole of the Djazīra and henceforward was to be able to give free rein to his ambitions.

The crisis in the caliphate which had forced the caliph al-Rāḍī to hand over his powers to an *amīr al-umarā'* gave rise to rivalry among all the candidates for this position. Ḥasan, with the power which the possession of a rich province gave him, desired the position and engaged in a conflict with the *amīr al-umarā'*, Badjkam [*q.v.*], who tried unsuccessfully to dispossess him of Mosul. At one moment Ḥasan gave his support to another *amīr al-umarā'*, Ibn Rā'iḳ, and to the caliph al-Muttaḳī, who were being threatened by the ambitious Aḥmad al-Barīdī of Baṣra, but then had Ibn Rā'iḳ assassinated and himself took his place at Baghdād in 330/942 after having brought back the caliph to his capital (4 June 942). He had earlier received the title of Nāṣir al-Dawla (Defender of the dynasty), while his brother ʿAlī, who, with his cousin Ḥusayn b. Saʿīd b. Ḥamdān, had helped him, received that of Sayf al-Dawla (Sword of the dynasty). Nāṣir al-Dawla governed the attenuated ʿAbbāsid empire for about a year, but had to give up the position to one of his officers who had led a revolt against him, the Turk Tūzūn, and returned to Mosul. The caliph al-Muttaḳī quarrelled with Tūzūn and put himself under the protection of the Ḥamdānid, but the latter, after being defeated by Tūzūn, abandoned the caliph who, after trying to gain the protection of the Ikhshīd of Egypt, who was master of Syria, returned to Baghdād. Nāṣir al-Dawla then concluded in 332/944 a pact with Tūzūn which assured him the governorship of the Djazīra. Next he unsuccessfully opposed the Buwayhid Muʿizz al-Dawla when in 334/January 946 the latter took possession of the capital, and concluded an agreement with him in 335/946. He was confirmed in his possessions and the Buwayhid even supported him when his troops revolted. But twice there was conflict between them, in 337/948-9 and in 347/958-9, because of the Ḥamdānid's refusal to fulfil his financial obligations to the central power as represented by the Buwayhid. In 347 Nāṣir al-Dawla even had to take refuge with his brother Sayf al-Dawla, the master of Aleppo (from 336/948, see below), until the signing of a new treaty which Muʿizz al-Dawla concluded with Sayf al-Dawla, regarding Nāṣir al-Dawla as the subordinate of his brother. Nāṣir al-Dawla was once again driven out of Mosul by Muʿizz al-Dawla, and for the same reasons, in 353/964, but he was able to make a victorious return there with his sons. However, Muʿizz al-Dawla would have dealings only with Abū Taghlib, the eldest son of Nāṣir al-Dawla, who was already beginning to follow a policy of his own.

This year 353 marks the decline of the power of Nāṣir al-Dawla, who, now old and in conflict with his sons, was deposed by them and exiled in 356/967 to Ardumusht, where he died in 358/969.

Nāṣir al-Dawla's power had extended over the Diyār Rabīʿa, Mosul, the districts on the left bank of the Tigris, and Raḥba in the Diyār Muḍar. As we shall see, he had left the Diyār Bakr to his brother Sayf al-Dawla, who also held the greater part of the Diyār Muḍar. At the beginning of his reign, Nāṣir al-Dawla had made two unsuccessful attempts, in 324/935-6 and in 333/944, to extend his domination to Ādharbaydjān. His penetration into Armenia in 323/935 when he was forced to leave Mosul (see above) was also only temporary, and it is doubtful whether he was able to make his authority recognized there as Sayf al-Dawla did later. In the Byzantine war Nāṣir al-Dawla played only a part of little importance (on the reign of Nāṣir al-Dawla see M. Canard, *op. cit.*, 377-407, 409-52, 507-39, and art. NĀṢIR AL-DAWLA).

He was succeeded by his son Faḍl Allāh Abū Taghlib al-Ghaḍanfar. Abū Taghlib came into conflict first with his brother Ḥamdān, who alone had opposed the removal of Nāṣir al-Dawla and who had a certain amount of power at his command, for he held the governorship of Nisibis in the Diyār Rabīʿa, of Māridīn and of Raḥba in the Diyār Muḍar, and he

had in addition seized Raḳḳa and Rāfiḳa after the death of Sayf al-Dawla of Aleppo. In order to fight against Ḥamdān, Abū Taghlib made an agreement with Bakhtiyār, who had succeeded Muʿizz al-Dawla at Baghdād, and Ḥamdān was forced to abandon his possessions and to flee to Baghdād. Bakhtiyar succeeded in procuring his return to Raḥba in 359/970; but the war between the two brothers recommenced, resulting in a battle, in which Ḥamdān mortally wounded another of his brothers, and in further quarrels in the Ḥamdānid family, several members of which abandoned Abū Taghlib. Ḥamdān was defeated, however, and again obliged to flee to Baghdād where he was joined at the end of 360/971 by his brother Abū Ṭāhir Ibrāhīm.

Abū Taghlib did not on the other hand enter into conflict with his cousin at Aleppo, Abu ʾl-Maʿālī Sharīf, the successor of Sayf al-Dawla, who, having difficulties in Syria, tacitly accepted the nominal suzerainty of the emirate of Mosul over that of Aleppo which had been granted to Abū Taghlib by the caliph al-Muṭīʿ, thus continuing the state of affairs which had existed during the time of Nāṣir al-Dawla. Nor did he oppose Abū Taghlib's seizure of the Diyār Bakr and the Diyār Muḍar.

But Abū Taghlib's chief opponent was the Buwayhid Bakhtiyār, master of the caliphate and the representative of the central power to which the Ḥamdānid had to pay tribute. Hostility between the two was inevitable, especially as the Ḥamdānid's ambition was to play in Baghdād the rôle which had formerly been played by his father Nāṣir al-Dawla, and also as two of his brothers were there, one of whom especially, Ḥamdān, was urging Bakhtiyār to drive Abū Taghlib out of Mosul. At first Abū Taghlib and Bakhtiyār followed a policy of alliance, which showed itself in their common attitude towards the Ḳarmaṭīs and the Fāṭimids, but in 368/973, prompted by Ḥamdān, Bakhtiyār undertook the conquest of Mosul and marched on the town. A shrewd move by Abū Taghlib in the direction of Baghdād led Bakhtiyār to negotiate. The terms of the agreement, which contained one clause requiring the Ḥamdānid to keep Baghdād supplied with wheat, were observed by neither side and hostilities recommenced, ending in a new agreement in 974. Relations then improved, and Abū Taghlib, to whom Bakhtiyār had persuaded the caliph to grant the *laḳab* of ʿUddat al-Dawla, gave the Buwayhid his support against the rebel Turkish leaders and advanced even as far as Baghdād. But it was due to the intervention of the Buwayhid of Shīrāz, ʿAḍud al-Dawla (the son of Rukn al-Dawla of Rayy), that Bakhtiyār was restored to his throne at Baghdād. In 364/975 Abū Taghlib obtained a new treaty, which freed him from the payment of tribute. When ʿAḍud al-Dawla attempted, in 367/977, to gain for himself Bakhtiyār's position at Baghdād and to send the latter to seek a new fortune in Syria, Abū Taghlib gave his support to Bakhtiyār, who was trying to recapture Baghdād, on condition that his brother Ḥamdān, who was with Bakhtiyār, was handed over to him; he then had Ḥamdān put to death. But the troops of Bakhtiyār and Abū Taghlib were defeated by ʿAḍud al-Dawla in 367/978. The Buwayhid seized Mosul and forced Abū Taghlib to flee. He reached Nisibis, then Mayyāfāriḳīn, then Arzan and Armenia, then Ḥiṣn Ziyād in the Byzantine territory of Anzitene held by the Byzantine rebel Skleros, hoping to obtain his help by forming an alliance with him. But his hopes were disappointed; he returned towards Amid without encountering any opposition from the Buwayhid troops who were engaged in besieging Mayyāfāriḳīn. After the capture of this town in 368/978, Abū Taghlib no longer felt secure and turned towards Raḥba. From there he tried in vain to reach an agreement with ʿAḍud al-Dawla, who was now master of the greater part of the Djazīra, and decided to continue into Syria into Fāṭimid territory, while the Buwayhid army arrived to occupy the Diyār Muḍar. Avoiding passing through the territory of his cousin at Aleppo, Saʿd al-Dawla, who had acknowledged the suzerainty of ʿAḍud al-Dawla and had been invited by him to arrest the fugitive, he managed to reach the Ḥawrān. He hoped to enter Damascus and to obtain from the Fāṭimid caliph the governorship of this town, which at that time was in the hands of a rebel, al-Ḳassām. But the latter prevented him from entering the town and Abū Taghlib, after some skirmishes, headed southwards and reached Kafr ʿĀḳib on the Lake of Tiberias. He began negotiations with the Fāṭimid general Faḍl and promised to help him to reconquer Damascus. But Faḍl had undertaken to support Mufarridj b. Daghfal b. al-Djarrāḥ, the master of Ramla, who was disturbed by the presence and the ambitions of Abū Taghlib. Faḍl, violating his agreements, on the contrary promised Ramla to Abū Taghlib. Finally Abū Taghlib joined forces with the enemies of Mufarridj, the Banū ʿUkayl, and with them embarked on an action against him. Mufarridj then appealed to Faḍl. In the ensuing battle Abū Taghlib was taken prisoner by Mufarridj and put to death (369/979)

Abū Taghlib had had to endure violent Byzantine attacks in 361-2/972, but in the following year his lieutenant took prisoner the Domesticus Melias, who died in captivity. In /974, the Emperor in revenge ravaged Mesopotamia. It appears that about this time Abū Taghlib paid tribute to the Empire. At the time of the revolt of Skleros, after the death of John Tzimisces in /976, the Byzantine rebel relied on the help of Abū Taghlib, with whom he concluded a pact, and we have seen that in 368/978 he spent some time at Ḥiṣn Ziyād, the headquarters of Skleros (on the reign of Abū Taghlib see M. Canard, *op. cit.*, 541-77, 838 ff.).

The Ḥamdānid dynasty of Mosul ended tragically. It had indeed led a rather precarious existence from the time of the arrival at Baghdād of Muʿizz al-Dawla.

Abū Taghlib's sister, Djamīla, who had fled with her brother, also met a tragic end. One tradition had it that she took her life after being handed over to ʿAḍud al-Dawla. The other members of the Ḥamdānid family at Mosul, notably Abū Taghlib's two brothers Abū ʿAbd Allāh Ḥusayn and Abū Ṭāhir Ibrāhīm, transferred their allegiance to the Buwayhid. After the death of ʿAḍud al-Dawla, a Kurdish *amīr*, Bādh, had taken possession of the Diyār Bakr. In order to halt Bādh's attempts to gain the remainder of the Djazīra, the Buwayhid Ṣamṣām al-Dawla, who had come to the throne in 379/989, authorized the two brothers to return to Mosul. They attempted there to regain power and fought against Bādh with the help of the Banū ʿUḳayl. Bādh was killed in a battle against Ḥusayn in the region of Balad. Bādh's successor, his nephew Abū ʿAlī b. Marwān, carried on the struggle against the two brothers and took Ḥusayn prisoner, but released him on the intervention of the Fāṭimid caliph al-ʿAzīz, who received him in Syria and made him governor of Tyre in 387/997. Another of Abū Taghlib's brothers, Abu ʾl-Muṭāʿ Dhu ʾl-Ḳarnayn, also entered the service of the Fāṭimid, and became governor of Damascus

in 401/1010-1. Abū Ṭāhir Ibrāhīm was arrested and put to death by the ʿUḳaylid *amīr* with whom he had fought against Bā**dh**. Mosul then passed into the power of an ʿUḳaylid dynasty.

One of Ḥusayn's grandsons, Ḥusayn Abū Muḥammad, who like his ancestor bore the title Nāṣir al-Dawla, played an important rôle in Egypt in the reign of al-Mustanṣir, first as governor of Syria, then in Cairo during the disturbances of 459/1065 and the following years. He was at one moment absolute master in Cairo, tried to re-establish the ʿAbbāsid suzerainty there and deprived the caliph of all authority. He died in 465/1072, the victim, with his brother Fa**kh**r al-ʿArab, of a conspiracy [see FĀṬIMIDS, AL-MUSTANṢIR and NĀṢIR AL-DAWLA].

The Ḥamdānid emirate of Aleppo. The formation of the Ḥamdānid emirate of Aleppo was the work of ʿAlī b. Abi 'l-Hay**dj**āʾ ʿAbd Allāh b. Ḥamdān, Sayf al-Dawla. After the assassination of Ibn Rāʾiḳ, Nāṣir al-Dawla had tried to gain control of his fief of the Diyār Muḍar and of northern Syria. But the lieutenants whom he sent there had only a precarious authority and were disposed to render allegiance to the I**kh**s**h**īd. In 332/944, the caliph, who was under the protection of the Ḥamdānid, sought the support of the I**kh**s**h**īd and tried to go to Syria. Fearing that the whole of Syria and the Diyār Muḍar would fall into the hands of the I**kh**s**h**īd, Nāṣir al-Dawla sent troops under the command of Ḥusayn b. Saʿīd b. Ḥamdān, who gained control of Aleppo. The caliph left for Raḳḳa, accompanied, or rather escorted, by Sayf al-Dawla who had left Nisibis with him. However, the I**kh**s**h**īd, who had driven Ḥusayn b. Saʿīd out of Aleppo, had arrived at Raḳḳa, to meet the caliph there. The caliph received the I**kh**s**h**īd and confirmed him in the possession of Syria. Then the I**kh**s**h**īd, who had refused to commit himself further, returned to Egypt, while the caliph retraced his steps to Ba**gh**dād. As the authority of the administrators whom the I**kh**s**h**īd had appointed in northern Syria seemed rather precarious, Sayf al-Dawla decided to seize northern Syria, with the help of troops and money supplied by his brother. He entered Aleppo in Rabīʿ I 333/October 944, by arrangement with the Kilābīs of the region and without any fighting. Then the I**kh**s**h**īd reacted; after a war of more than two years, interrupted in 334/945 by a truce which the death of the I**kh**s**h**īd encouraged Sayf al-Dawla to repudiate, a definitive peace was concluded between the Ḥamdānid and the son and successor of the I**kh**s**h**īd, Unu**dj**ūr, and in 336/947 Sayf al-Dawla became master of a state which comprised northern Syria (*djund* of Ḥimṣ and of Ḳinnasrīn, ʿAwāṣim), the Syrian frontier marches, which submitted to him in 335/946, and the greater part of the Diyār Muḍar and the Diyār Bakr (see above). This Syro-Mesopotamian state remained theoretically subordinate to that of Mosul, Nāṣir al-Dawla being the elder, but in practice it was territorially and politically more important, and Sayf al-Dawla (who until then had fought for Nāṣir al-Dawla in ʿIrāḳ, in Mesopotamia, even in Armenia, where in 328/940 he had received the submission of the Armenian princes, and against the Byzantines) became in fact independent of him and of the caliph.

From the time he became master of Aleppo, responsible for the defence of the Syro-Mesopotamian frontier (which extended from Cilicia to **Sh**ims**h**āṭ and to Ḳālīḳalā in Armenia), Sayf al-Dawla's main task was the war against the Byzantines; but he had also to fight against the rebel tribes in Syria. He built himself a splendid palace outside Aleppo, his main capital, the second being Mayyāfāriḳīn, on which too he lavished every care. He gathered round him a number of members of his family, including his cousin Abū Firās, whom he had made governor of Manbi**dj**, and formed for himself a court made famous by the poets who were attached to it. He reigned in Aleppo from 336/947 until 356/967. The first period of his reign was marked by successes both within the realm and outside it, but in the later period, from 350/961-2 onwards, he suffered serious reverses—the temporary occupation of his capital by the Byzantines, the loss of Cilicia, internal disturbances and rebellions, and finally his own illness (hemiplegia). He died at Aleppo in Ṣafar 356/ February 967, aged 51. Nevertheless the brilliance which he conferred on the emirate of Aleppo by his military victories and by his cultural influence, and through the poets and the prose-writers of what has been called the "circle of Sayf al-Dawla", has made him one of the most famous rulers of Islam. Without going into detail, we refer the reader to the article SAYF AL-DAWLA, which will deal with his campaigns against the Byzantines and against the tribes, the beginnings and the end of his career, his internal and external policy and his cultural rôle (on him see M. Canard, *op. cit.*, 489-505, 596-663, 741-827. Ulla S. Linder Welin, *Sayf al-Dawlah's reign in Syria and Diyārbekr in the light of the numismatic evidence*, offprint from *Commentationes de nummis saeculorum IX-XI in Suecia repertis*, i, Lund 1961, deals with the political events as reflected in the coins issued by Sayf al-Dawla).

Sayf al-Dawla's successor was his son Saʿd al-Dawla Abu 'l-Maʿālī, who at that time was at Mayyāfāriḳīn and did not arrive in Aleppo until June-July 967. He was the son of the sister of Abū Firās al-Ḥari**th** ibn Abi 'l-ʿAlāʾ Saʿīd and was only 15 years of age. He had to face the rebellion of Abū Firās, his father's cousin, who was at that time governor of Ḥimṣ. Abū Firās was killed in battle in 357/April 968. After this Saʿd al-Dawla had to leave Aleppo because of the threat of the Byzantine armies, which at the end of 968 reached as far as Ḥimṣ and Tripoli but did not, however, trouble Aleppo, where Saʿd al-Dawla had left his chamberlain (*ḥādjib*) Ḳar**gh**ūyah, who had been his father's chamberlain and had already governed Aleppo during the absence of Sayf al-Dawla. Saʿd al-Dawla was unable to return to Aleppo as soon as the disturbance was over because Ḳar**gh**ūyah, ambitious to seize power for himself, had come out in open rebellion (358/968). The young *amīr*, deprived of Aleppo by Ḳar**gh**ūyah and of Raḳḳa by Abū Ta**gh**lib, wandered from Sarū**dj** to Ḥarrān, Mayyāfāriḳīn and Manbi**dj**, whence he advanced towards Aleppo. But he had to retreat before the presence of the Byzantine forces. In fact, Peter the Stratopedarch and Michael Bourtzes had taken Antioch at the end of 358/October 969, and Peter the Stratopedarch had entered Aleppo and imposed on Ḳar**gh**ūyah a treaty making Aleppo a Byzantine protectorate (Ṣafar 359/December 969-January 970) which excluded Saʿd al-Dawla from the emirate of Aleppo in favour of Ḳar**gh**ūyah and, after him, of his lieutenant Bak**dj**ūr. Saʿd al-Dawla obtained refuge at Ḥimṣ, whence he succeeded in returning to Aleppo only in 367/977, after Ḳar**gh**ūyah had been removed by his lieutenant Bak**dj**ūr.

At first Saʿd al-Dawla's authority extended only over the Syrian provinces, Abū Ta**gh**lib having in 360/971 seized the whole of the **Dj**azīra. However, by

recognizing the suzerainty of the Buwayhid ʿAḍud al-Dawla in 368/979 (which gained for him from the caliph the *laḳab* of Saʿd al-Dawla), he succeeded in recovering the Diyār Muḍar, with the exception of Raḥba and Raḳḳa, from Abū Taghlib, now a fugitive. He had appointed Bakdjūr governor of Ḥimṣ, but he lost no time in entering into conflict with him. Bakdjūr relied for help on the Fāṭimid, who had promised him the governorship of Damascus and whose plan was to take advantage of the enmity between Bakdjūr and Saʿd al-Dawla to seize the emirate of Aleppo for himself. In order to fight against Bakdjūr, Saʿd al-Dawla relied on the help of the Byzantines, who, in 371/981-2, had just sent an army to Aleppo to remind the *amīr* of his obligations under the treaty of 359, which from then on he was obliged to fulfil more or less scrupulously. It was a Byzantine army which, in 373/983, forced Bakdjūr, who had come to lay siege to Aleppo, to raise the siege, and which also returned Ḥimṣ to Saʿd al-Dawla. The conflict between Bakdjūr and Saʿd al-Dawla ceased during the time that Bakdjūr, driven out of Ḥimṣ, was governor of Damascus for the Fāṭimid caliph al-ʿAzīz, particularly as Saʿd al-Dawla, no longer able to rely on support from the Buwayhids whose power was then in decline, made overtures to the Fāṭimid caliph and recognized his sovereignty in 376/986. But hostilities recommenced when Bakdjūr, engaged in conflict with the Fāṭimid vizier Ibn Killis, was obliged to abandon Damascus and installed himself at Raḳḳa, whence he marched against Aleppo. He received little support from the Fāṭimid, whereas Saʿd al-Dawla received Byzantine reinforcements, and he was defeated at Nāʿūra to the east of Aleppo in 381/991, captured and executed. But Saʿd al-Dawla quarrelled with the Fāṭimid caliph over the arrest of Bakdjūr's children, which was done contrary to a promise that he had given, and if he had not died in Shawwāl 381/December 991, like his father of hemiplegia, he would certainly have attacked the Fāṭimid possessions in Syria, as he had haughtily threatened the Fāṭimid ambassador that he would do.

Saʿd al-Dawla's policy had been to manœuvre among Byzantium, the Buwayhid and the Fāṭimid. He was not absolutely loyal either to the Fāṭimid or to the Emperor, for in 375/985 the Emperor had to invade his territory because he was not fulfilling his obligations. Saʿd al-Dawla avenged himself for this intervention, which had led to the capture of Killis and the bombardment of Apamea and of Kafarṭāb, by sending Karghūyah against the monastery of Dayr Samʿān [*q.v.*] where he massacred a great number of monks and led others in captivity to Aleppo. However, a new agreement was concluded in 376/May 986, which did not prevent Saʿd al-Dawla from supporting the rebel Skleros when the latter was set free by the Buwayhid at the end of 986, and in addition from recognizing at the same time (December 986) Fāṭimid suzerainty. In internal affairs he had only a precarious authority (on all this see M. Canard, *op. cit.*, 665-94).

Saʿd al-Dawla was succeeded by his son Saʿīd Abu 'l-Faḍāʾil Saʿīd al-Dawla. The history of his reign is almost exclusively that of the attempts of Fāṭimid Egypt to gain the emirate of Aleppo, which were opposed by the Byzantine emperor. A first attempt in 382/992 by the Fāṭimid general Mangūtekīn, who laid siege to Aleppo, failed, less by reason of the operations of Bourtzes, the Byzantine governor of Antioch, than because of Mangūtekīn's lack of vigour and the excellent resistance of Aleppo. A second attempt by the same Mangūtekīn in 384/944 was almost successful, for Bourtzes, to whom Saʿd al-Dawla and his minister Luʾluʾ, the former chamberlain of Saʿd al-Dawla, appealed for help, was defeated at the Ford of the Orontes, and Aleppo was besieged for about eleven months. But on the one hand the persistence of Luʾluʾ and on the other the arrival of the emperor Basil II in person, sent for from Bulgaria by a Ḥamdānid ambassador, in the spring of 995, forced Mangūtekīn to retreat. The Ḥamdānid *amīr* and Luʾluʾ humbly prostrated themselves before the emperor in gratitude for this. Later, the Egyptians extended their authority further and further over the emirate of Aleppo. In 388/998 they even defeated the Byzantines outside Apamea, which remained in Egyptian hands. In 389/999 a new Byzantine campaign, which advanced as far as Beirut, strengthened the defence of Aleppo against the Egyptians by the establishment of a Byzantine garrison at Shayzar. But in 391/1001 Basil II concluded a peace treaty with the Fāṭimid caliph al-Ḥākim, who, on his side, signed a treaty with the *amīr* of Aleppo.

After this the emirate of Aleppo steadily declined. After the beginning of the reign of Saʿīd al-Dawla, a large number of Ḥamdānid *ghulāms* had passed into the service of Egypt. Luʾluʾ aimed to seize entirely the power which he was in fact already wielding, for he completely dominated Saʿīd al-Dawla, to whom he had given his daughter in marriage. He therefore had Saʿīd al-Dawla assassinated in 392/1002. From then on he held the power, which he shared with his son Manṣūr. In 394/1003-4, he rid himself of the members of the Ḥamdānid family: the two sons of Saʿīd al-Dawla, Abu 'l-Ḥasan ʿAlī and Abu 'l-Maʿālī Sharīf, were exiled to Cairo; a son of Saʿd al-Dawla, Abu 'l-Haydjāʾ, fled, disguised as a woman, to the court of the emperor Basil.

Luʾluʾ died in 399/1008. His son Manṣūr succeeded him and received investiture from the Fāṭimid caliph with the title of Murtaḍā al-Dawla (the Approved of the dynasty). His reign was marked by an attempt to restore the Ḥamdānids in the person of Abu 'l-Haydjāʾ, the son of Saʿd al-Dawla. At the request of a large faction at Aleppo, his brother-in-law, the Marwānid Mumahhid al-Dawla of the Diyār Bakr, obtained the Emperor's permission for Abu 'l-Haydjāʾ to leave Constantinople. He reached Mayyāfāriḳīn, whence he marched with a small army on Aleppo. But he was not given the Emperor's support. Manṣūr b. Luʾluʾ enticed over to his side the Kilābīs who had joined Abu 'l-Haydjāʾ and obtained in addition Egyptian help, for he was scarcely more than a Fāṭimid governor. The defeated Abu 'l-Haydjāʾ fled towards Malaṭya and from there returned to Constantinople. The Emperor wished to send him back into Muslim territory but Manṣūr intervened to persuade the Emperor to keep him with him. It is probable that he was converted to Christianity and served in the Byzantine army, for there exists his seal with on one side his name in Arabic and on the other the representation of a person who seems to wear his hair in military style and to wear a belt with a legend in Greek: Hagios Theodoros (Saint Theodore Stratilates?). (See Halil Edhem, *Sceaux du Musée de Constantinople*, 1321, 42, no. 31).

By a curious trick of fate, Mansūr b. Luʾluʾ, after he had been dethroned by Ṣāliḥ b. Mirdās in 406/1015-6, also took refuge in Byzantine territory and received as a fief the castle of Shīḥ al-Laylūn, near to the frontier; he also made an unsuccessful attempt to return to Aleppo and served in the Byzantine army, for he appears on the side of Romanus Argyrus

at the battle of Aʿzāz in 421/1030 (see Kamāl al-Dīn, *Zubdat al-ḥalab*, ed. Dahan, *sub anno*; cf. M. Canard, *op. cit.*, 709-11 and 859).

Thus ended, after that of the Ḥamdānids of Mosul, the dynasty of the Ḥamdānids of Aleppo. Both were of a character uncommon at this time, in that they were Arab dynasties. Both played an important political rôle; they had their period of greatness which was followed by decline. The historian of Mayyāfāriḳīn, Ibn al-Azraḳ, has given a melancholy account of this (see M. Canard, *Sayf al-Dawla. Recueil de textes*, 1934, 279-80). The patronage of Nāṣir al-Dawla and of Sayf al-Dawla favoured in Mosul and Aleppo a remarkable literary development. The names of Ibn Nubāta, of Kus̲h̲ād̲j̲im, of al-Nāmī, al-Sarī, Babbāg̲h̲ā, Abū Firās, of al-Mutanabbī and others will always be associated with the Ḥamdānid dynasty. The Ḥamdānids have been praised, by writers impressed by their efforts in the Holy War, by their Arab qualities of courage and generosity and by the ostentation with which they surrounded themselves, and they retained enormous prestige. But they have also had their critics. In their own time, Ibn Ḥawḳal (119-20, 140 ff., 153-4) did not spare them his criticisms, for he was outspoken in his judgement of their tyrannical administration and their cupidity. Of present day writers, Kurd ʿAlī has also reacted against the unbounded admiration which the Arab world has accorded them.

Bibliography: The outstanding study of Freytag, *Geschichte der Dynastien der Hamdaniden in Mosul und Aleppo*, in *ZDMG*, x (1856) and xi (1857), although now out of date, remains of importance. See now M. Canard, *Histoire de la dynastie des H'amdânides de Jazîra et de Syrie*, i, Algiers-Paris 1951, with bibl. in the introd., 15-71. Information on the members of the family is given also in Abū Firās, *Dīwān*, ed. S. Dahan, Beirut 1944, index. (M. Canard)

ḤAMDĪ, ḤAMD ALLĀH (853/1449-909/1503), Turkish poet, born at Göynük near Bolu. He was the youngest of the twelve (or seven) sons of the famous *s̲h̲ayk̲h̲* Aḳ S̲h̲ams al-Dīn [*q.v.*], who had succeeded Ḥād̲j̲d̲j̲ī Bayram as the superior of the Bayrāmiyya. Ḥamdī lost his father at the age of ten. He had an unhappy childhood, which probably inspired him to write his famous *mat̲h̲nawī Yūsuf we Zuleyk̲h̲ā*. In the introductory part of this work he relates that his lazy, ignorant and quarrelsome brothers ill-treated him and were jealous of him because of the great affection their father Aḳ S̲h̲ams al-Dīn showed him. "Joseph reached the extremity of his misfortunes, there is no end to my suffering" (*Yūsuf we Züleyk̲h̲ā*, Istanbul, MS Üniversite T.Y. 675, fols. 11b-12a). Although he has nothing laudatory to say of his brothers, some of them are mentioned in the sources as outstanding *ʿulemāʾ* (Hüseyn Enīsī, *Menāḳib-i Aḳ S̲h̲ams al-Dīn* and Tas̲h̲köprü-zāde, *al-S̲h̲aḳāʾiḳ al-nuʿmāniyye*, *passim*).

Very little is known about his early life and his education. Judging by his works and by the fact that he was for a short time *mudarris* at the *madrasa* of Meḥemmed I in Bursa, he must have had a classical training. From various complaints and remarks scattered in his works, particularly in his *mat̲h̲nawī Leylā we Med̲j̲nūn* (Istanbul, MS Üniversite T.Y. 800, fol. 110) it seems evident that Ḥamdī did not enjoy protection or encouragement from any sultan, vizier or other dignitary. According to some *ted̲h̲kire*-writers (Laṭīfī, Ḳinalī-zāde Ḥasan Čelebī, Beyānī, s.v.) he originally submitted his *Yūsuf we Züleyk̲h̲ā* to Bāyezīd II, with a dedicatory introduction. As there was no response from the sultan, he removed the dedication in subsequent copies and replaced it with lines complaining of Fate. During his short stay in Bursa as *mudarris*, Ḥamdī became a disciple of the *s̲h̲eyk̲h̲* Ibrāhīm Tennūrī, one of his father's *k̲h̲alīfa*s, and retired to Göynük where he lived a secluded life. His circumstances must have been difficult as Ḥasan Čelebī reports that he made his living by copying and selling his own works. He died at Göynük where he is buried beside his father.

Apart from various treatises on religion and mysticism mentioned in the sources, which have not come down to us, Ḥamdī is the author of the following works: (1) *Dīwān*, a small volume, copies of which are extremely rare and which is not characteristic of the poet, since Ḥamdī distinguished himself in the *mat̲h̲nawī* genre and his conventional *ḳaṣīda*s and *g̲h̲azal*s, mostly with a mystic leaning couched in *ṣūfī* terminology, are of rather limited inspiration. For a fairly good copy see Süleymaniye-Esad Efendi no. 2626; (2) *Yūsuf we Züleyk̲h̲ā*, a *mat̲h̲nawī* on the story of Joseph and Potiphar's wife, treated in a mystical manner. Originally based on the data given in the Ḳurʾān and its commentaries, later elaborated by outstanding Persian poets, the story was made the subject of a *mat̲h̲nawī* by several Eastern and Western Turkish poets. Ḥamdī's work, completed in 897/1492, became immensely popular and very many copies are to be found in the libraries of Turkey and Europe (for copies in Istanbul libraries see *Istanbul Kütüphaneleri Türkçe Hamseler Kataloğu*, Istanbul 1961, 22-37). Ḥamdī says in his work that he followed the *Yūsuf we Züleyk̲h̲ā* attributed to Firdawsī and particularly that of D̲j̲āmī. In fact most of the *mat̲h̲nawī* is in line with D̲j̲āmī's with the difference that he uses the *k̲h̲afīf* metre instead of D̲j̲āmī's *hazad̲j̲* and he intersperses the *mat̲h̲nawī* with *g̲h̲azal*s following the tradition of S̲h̲eyk̲h̲ī; (3) *Leylā we Med̲j̲nūn*, a *mat̲h̲nawī* completed in 905/1499-1500, based on the well-known legend of Arabic origin, also a parallel to D̲j̲āmī's homonymous work. Although not inferior to the *Yūsuf we Züleyk̲h̲ā* this *mat̲h̲nawī* did not enjoy the same popularity and was almost ignored after Fuḍūlī's (a good copy dated 936/1530 is MS Ayasofya 3901/2); (4) *Tuḥfet al-ʿus̲h̲s̲h̲āḳ*, an allegorical *mat̲h̲nawī*, the most original of Ḥamdī's works. A young merchant (the human soul) sets forth from Caesarea (the sacred country), as the result of guidance by the *s̲h̲eyk̲h̲* Ewḥad al-Dīn, with servants and merchandise (the capabilities of the soul) for Constantinople (this sad world), where his great beauty causes the Byzantine vizier (beshrouded reason) to select him as a fitting husband for his equally beautiful daughter (bodily delight). The young merchant abandons his true faith and devotes himself to his beloved. Two sons are born to them. At a service in the church of St. Sophia, the young merchant sees his volume of the Ḳurʾān which he had placed there when he abandoned Islam. As he opens the pages of the volume, he lights on a verse exhorting those whose hearts have grown hard to return to God. The young merchant cries aloud as the light of divine guidance streams into his soul. The vizier and his daughter embrace Islam at this holy sign and all three depart for Caesarea. Since most *mat̲h̲nawī*s elaborated usually one of the known and common themes of the Islamic world, this original tale does not seem to have aroused much interest, as the MSS are extremely rare (a good copy is in the British Museum, MS Or. 7115); (5) *Ḳiyāfet-nāme*, (the Book of Features), a short *mat̲h̲nawī* in *k̲h̲afīf* metre on the tra-

ditional science of physiognomy, dealing with the relationship between physical features and moral characteristics, without particular literary value (a good copy dated 991/1583 in Süleymaniye-Esad Efendi, in a *medjmūʿa*, no. 3613, fols. 84-90); (6) *Mewlid*, a *mathnawī* on the life of the Prophet with particular emphasis on the events accompanying his birth, his heavenly journey, miracles and death, one of the many poems of this genre, the most famous of which is Süleymān Čelebī's *Wesīlet al-nedjāt*. Ḥamdī's work varies in many details from that of Süleymān Čelebī and it has none of its religious lyrical fervour. For a fairly good copy see Süleymaniye-Fatih no. 4511; (7) *Aḥmediyye*, a poem in *mathnawī* form in praise of the Prophet. Although some sources give its name as *Muḥammediyye*, Ḥamdī himself is quite clear about it: "I called this poem *Aḥmediyye* and completed it in 900" (Selimağa-Kemankeş, no. 1111). Ḥamdī's works have not been edited. For extracts see *Bibliography*.

Bibliography: The *tedhkires* of Sehī, Laṭīfī, ʿĀshiḳ Čelebi, Ḳinalī-zāde Ḥasan Čelebi, Riyāḍī, Ḳāf-zāde Fāʾiḍī, Beyānī, s.v.; Ḥüseyn Enīsī, *Menāḳib-i Aḳ Shems al-Dīn*, Süleymaniye-Hacı Mahmut no. 4666, *passim*; Tashköprü-zāde, *al-Shaḳāʾiḳ al-nuʿmāniyye*, *passim*; Gibb, *Ottoman Poetry*, ii, 138-225 and vi, 74-85; M. ḤAMDĪ BEY, ʿOTHMĀN [see ʿothmān ḥamdī bey].

ḤAMDŪN al-ḲAṢṢĀR, Ḥamdūn b. Aḥmad b. ʿUmāra Abū Ṣāliḥ al-Ḳaṣṣār, a celebrated Ṣūfī and learned divine, was a follower of Sufyān al-Thawrī [*q.v.*] and the chief of the Malāmatīs (who incurred blame by concealing their good deeds, in order to avoid self-conceit). He lived and taught in Nīshāpūr, where he died in 271/884, and was buried in the cemetery of Hīra. Among his associates were Abū Turāb al-Nakhshabī, ʿAlī Naṣrābādī and Abū ʿAlī al-Thaḳafī. His followers formed a sect of Ṣūfīs called Ḳaṣṣārīs or Ḥamdūnīs: among his pupils was ʿAbd Allāh Mubārak.

He taught asceticism and also tolerance of others, counselling men to associate with the learned, but to have patience with the ignorant. He advised contentment with little, "Sufficiency will bring you ease without weariness: you weary yourself in seeking too much". Association with the Ṣūfīs, he said, teaches tolerance, for ugliness in their fellow-beings is excused by them, and beauty is not praised, lest praise should lead to pride. To a man who reviled him, Ḥamdūn said, "My brother, if you were to accuse me of all ill-doing, you would never revile me as I myself do".

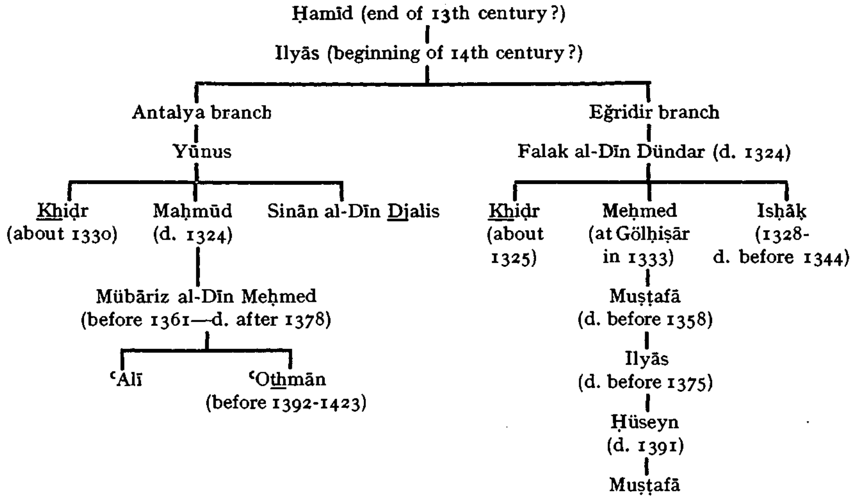
ḤĀMĪ, a coast-town in Ḥaḍramawt, about 18 miles north-east of Shiḥr [*q.v.*], near Raʾs Sharma in a very picturesque and fertile district. Like Makalla and Shiḥr it belongs to the Ḳuʿayṭī of Shibām [*q.v.*] and has, as the name shows, thermal wells of the temperature of boiling water. The houses of the little town are low and built of mud; in the centre of the town and on the shore there are two important *ḥiṣn*. The inhabitants are mainly fishermen; their number was estimated by Capt. Haines at 500 in 1839. Behind the town lie thick palm-groves and fields with luxurious crops of Indian corn.

Bibliography: Captain S. B. Haines, *Memoir to accompany a chart of the south coast of Arabia ...*, in *JRAS*, ix (1839), 153; Ritter, *Erdkunde*, xii, 635, 639; Van den Berg, *Ḥadhramout*, Batavia 1886, 11; Leo Hirsch, *Reisen in Südarabien, Mahraland und Hadramūt*, Leiden 1897, 11, 37, 38; Th. Bent and Mrs. Th. Bent, *South Arabia*, London 1900, 210, 211. (J. Schleifer)



ḤĀMĪ-I ĀMIDĪ, Aḥmed Ḥāmī, (1090?-1160/1679?-1747), an Ottoman poet from south-east Anatolia. He was born at Āmid (Diyār-Bakr) and taught by Ḥāsim Āmidī and Āgāh Samarḳandī. In 1121/1709 he went to Istanbul, where, through the patronage of Muḥsin-zāde ʿAbd Allāh Pasha, he entered the Imperial *Dīwān*. He returned to his native town in 1129/1717 when his patron was appointed *Beglerbegi* of Diyār-Bakr. After acting as secretary (*kātib*) there, he fulfilled the same function in Erzurum, taking part later in the Tabrīz campaign and being promoted to the rank of the *Khwādjegān* [*q.v.*]. He retired from service to the State in 1138/1726, and devoted himself to poetry. He also built a mansion (*ḳonaḳ*) in his native town and a pavilion (*köshk*) on the Tigris. He visited Istanbul once again in 1143/1730. Towards the end of his life the *Wālī* of Diyār-Bakr made him the gift of a village. He died in his native town.

His *Dīwān*, of which several copies are in existence in Turkish libraries (two MSS copied in 1207/1792 are in the author's possession), has been printed in Istanbul (1272). Ḥāmī is the author of skilfully written *ḳaṣīdas* and *marthiyas*. Among the former, a *ḳaṣīda* of 370 couplets ending in the *redīf* "*üzre*" and a *lāmiyya* (poem rhyming in "l") are the best known. He was able to describe events from daily life without too great an addiction to metaphor and simile.

Bibliography: Rāmiz, *Tedhkire* (Ist. Univ. Lib. T.Y. 91), 65; Esʿad (Ṣaḥḥāflar-Sheykhi-zāde), *Baghče-i ṣafā-endūz* (Ist. Univ. Lib. T.Y. 2095), 112 (a copy in the author's handwriting can also be found at the Süleymaniye Library, MS Esad Ef. 84); Faṭīn, *Tadhkira* (*Khātimat al-ashʿār*), Istanbul 1271, 58; ʿAlī Emīrī, *Tadhkira-i shuʿarāʾ-i Āmid*, Istanbul 1328, 187-209; Bursalī Ṭāhir, *ʿOthmānlī müʾellifleri*, ii, Istanbul 1333, 139-40; Gibb, *Ottoman poetry*, iv, 71-3; Şevket Beysanoğlu, *Diyarbakırlı fikir ve sanat adamları*, Istanbul 1957, i, 211-24. (Abdülkadir Karahan)

ḤĀMĪ 'l-ḤARAMAYN [see khādim al-ḥaramayn].

ḤAMĪD, or **ḤAMĪD OGHULLARI**, the sons of Ḥamīd, one of the Turkish principalities in Anatolia in the 8th/14th century. Founded in the region of Uluborlu in Pisidia by Ilyās, the son of the eponym, it rapidly embraced the whole region of the Pisidian lakes, and then the Pamphylian plain and the mountain passes linking them, thereby constituting a state that was situated on an important road and so controlled one of the principal variants of the South-North route from the Mediterranean to the Mongol Empire. Two branches had their respective centres at Eğridir [*q.v.*] and in the region of Antalya and its *yayla* Korkuteli, ruled by Yūnus, elder son of Ilyās. The Eğridir branch, whose tenure was for a time interrupted by the defeat and death of Falak al-Dīn Dündar, the younger son of Ilyās, at the hands of the governor of Anatolia for the Īlkhānids, Demirtash, in 724/1324, was revived by Isḥāḳ in 728/1328 and by his brother Meḥmed, who was ruling in Gölḥiṣār in 733/1333 (Ibn Baṭṭūṭa, trans. Gibb, ii, 423).

A prince of this family was in command at Ṣuhud near Afyon Ḳaraḥiṣār in 769/1368. This northern principality was absorbed by the Ottomans in 793/1391. The Antalya branch was exposed to the attacks of the Cypriots who occupied the town from 1361 to 1373 (Mübāriz al-Dīn then retreated to Korkuteli). Annexed by Yīldīrīm Bāyezīd in 794/1392, the southern principality was restored in 805/1402, after the battle of Ankara, by a certain ʿOthmān, who reconquered all its territories except Antalya, despite his alliance with the Ḳaraman oghullarī, and whose defeat and death in 826/1423 marked the end of the dynasty.

Bibliography: the sources, which are essentially epigraphic, have been collected by İ. H. Uzunçarşılı, *Kitabeler*, 1929, and subsequently in *Ün* (review of the Halkevi of Isparta), *passim*, years 1934-5; historical syntheses: İ. H. Uzunçarşılı, *Anadolu beylikleri*, Ankara 1937; idem, article Hamîd oğulları in *İA*; X. de Planhol, *De la plaine pamphylienne aux lacs pisidiens*, Paris 1958, 90-4 (for economic history and historical geography); Barbara Flemming, *Landschaftsgeschichte von Pamphylien, Pisidien und Lykien im Spätmittelalter*, Wiesbaden 1964, especially 67-92, with map (p.132). (X. de Planhol)

ḤĀMID b. al-ʿAbbās, Abū Muḥammad, born 223/837, died 311/923, in early life, according to the satirist Ibn Bassām, a waterseller and vendor of pomegranates, was one of the ablest financiers of the ʿAbbāsid caliphs from al-Muwaffaḳ to al-Muḳtadir. He combined the collection of the *kharādj* and domains (*ḍiyāʾ*) of Wāsiṭ (from 273/886) with that of Fars (from 287/900) and Baṣra. He succeeded Ibn al-Furāt [*q.v.*] as vizier on 3 Djumādā II 306/11 November 918, but showed himself inadequate, so that the caliph al-Muḳtadir appointed as *nāʾib*, to assist him, ʿAlī b. ʿĪsā b. al-Djarrāḥ [*q.v.*]. His vizierate, which lasted until 20 Rabīʿ II 311/7 August 923, was marked by a sullen rivalry between the vizier and his assistant; Ḥāmid was forced to bring Ibn al-Furāt to trial, adopted a tax policy which resulted in riots in Baghdād, and took violent measures against dissidents: Ḳarmaṭīs, Ṣūfis (*e.g.*, the condemnation and execution of al-Ḥallādj [*q.v.*]) and particularly Imāmīs (*e.g.*, the imprisonment of the *wakīl* of the *imām*, Ibn Rūḥ); all these actions hastened his fall. He was tortured and humiliated by the son of the new vizier, Ibn al-Furāt, who had taken over his office, and returned to die at Wāsiṭ, probably poisoned.

Amedroz, Beirut 1904, index (a portrait of this wily and ruthless financier is given in the preface, 18 n. 1); ʿArīb, *Ṣilat Taʾrīkh al-Ṭabarī*, 73-110; Miskawayh, *Eclipse*, i, 58-91; H. Bowen, *The life and times of ʿAlí ibn ʿÍsà*, Cambridge 1928, index; D. Sourdel, *Vizirat ʿabbāside*, ii, 413-26 and index (bibliog. at 414 n. 3); idem, in *Arabic and Islamic studies ... H. A. R. Gibb*, Leiden 1965, 602-8. (L. Massignon*)

ḤĀMID b. **MUḤAMMAD** al-**MURDJIBĪ** [see al-murdjibī].

ḤAMĪDĀBĀD [see isparta].

ḤĀMIDĪ (830?-90?/1427?-85?), a poet at the Court of Sultan Meḥemmed the Conqueror. He was born in Iṣfahān and educated there. Ḥāmidī left his native town at an early age and after visiting many cities entered the Ottoman dominions in 861/1457, where he succeeded in making the acquaintance of the Grand Vizier Maḥmūd Pasha, becoming later a poet at the Court of the Conqueror. For almost twenty years he enjoyed the Sultan's favours as one of his constant companions. During that time he copied many rare and valuable works for his patron's library and also presented *ḳaṣīdas* and *ghazals* to the Sultan or made translations for him. In 881/1476, however, he incurred the Sultan's displeasure and was sent to Bursa where he became *türbedār* at the *ʿimāret* of Murād I. He was later pardoned and appointed *türbedār* of Emir Timürtash. Two of his sons, Maḥmūd and Djelīlī are known, the latter being a talented poet who flourished at the beginning of the 10th/16th century.

Ḥāmidī's works include the *Kulliyāt-ī dīwān*, ranking first in importance, the *Djām-ī sukhangūy* (or *Fālnāme*) and a *Tawārīkh-i āl-i ʿOthmān*. The *Kulliyāt* includes a *mathnawī* in Persian entitled *Ḥasbiḥāl-nāma*, and having a certain autobiographical character, as well as *ḳaṣīdas*, *taʾrīkhs*, *ghazals* and *muḳaṭṭaʿāt*. Most of it is in Persian, although there are also some Turkish *ḳaṣīdas* and *ghazals*. Of the known MSS of the *Kulliyāt* (in the Istanbul Archaeological Museum and the library of the Türk Tarih Kurumu, Ankara), the Ankara MS has been published in facsimile (Ismail H. Ertaylan, *Külliyāt-ı*

Dīvān-ı Mevlānā Ḥāmidī, Istanbul 1949). For criticism see Ahmed Ateş, in *Belleten*, xiv (1950),116-26; Ali Canib Yöntem, in the newspaper *Yeni Istanbul*, 3 October 1950.

Bibliography: Laṭīfī, *Tadhkira*, Istanbul 1314, 119; ʿĀshiḳ Čelebi, *Mashāʿir al-shuʿarā* (Ist. Univ. Lib. T.Y. 2406), 80b-82a; Beligh, *Güldeste-i riyāḍ-ı ʿirfān*, Bursa 1302, 454-5 (a copy of this in the author's handwriting is in the Ist. Univ. Lib. no. T.Y. 6195, f. 222a); ʿAṭā (Enderūnlu), *Taʾrīkh*, v, 160. (ABDÜLKADIR KARAHAN)

AL-**ḤĀMIDĪ**, (1) IBRĀHĪM B. AL-ḤUSAYN B. ABI 'L-SUʿŪD AL-HAMDĀNĪ, the second *dāʿī muṭlaḳ* of the Ṭayyibī Ismāʿīlīs in the Yaman. According to ʿUmāra, not supported by Ṭayyibī sources, the Ṣulayḥid Queen al-Sayyida in 526/1132 appointed him chief *dāʿī*, but then transferred the headship to the Amīr of ʿAdan, Sabaʾ b. Abi 'l-Suʿūd b. Zurayʿ, who supported the claim of the Fāṭimid al-Ḥāfiẓ to the Imāmate. If the report is reliable, Ibrāhīm may have been deposed for his sympathy with the claim of al-Ṭayyib. After the death of the *dāʿī* al-Khaṭṭāb b. al-Ḥasan in 533/1138, the first Ṭayyibī *dāʿī muṭlaḳ*, Dhuʾayb b. Mūsā, chose him as his assistant. After Dhuʾayb's death in 546/1151 (Hamdānī: 536/1141-2) he became his successor as the highest religious authority in the absence of the Imām. The situation of the Ṭayyibī community was precarious, because it found little protection among the princes of the Yaman, while the Zurayʿid rulers of ʿAdan actively championed the cause of the rival Ḥāfiẓī community. Ibrāhīm resided in Ṣanʿāʾ, whose Yāmid rulers had left the community but did not interfere with the missionary work. There he died in Shaʿbān 557/July 1162.

Ibrāhīm apparently was the founder of the peculiar Ṭayyibī *ḥaḳāʾiḳ* [*q.v.*] system. He introduced the *Rasāʾil Ikhwān al-ṣafāʾ* into the literature of the community and relied heavily on the works of Ḥamīd al-Dīn al-Kirmānī while interpreting them according to his own ideas. His main work *Kanz al-walad* became the model of a series of later Ṭayyibī *ḥaḳāʾiḳ* works.

(2) ḤĀTIM B. IBRĀHĪM (1). He succeeded his father as the third *dāʿī muṭlaḳ*. He gained support among the tribes of Ḥimyar and Hamdān, who conquered the fortress Kawkabān for him. This roused the jealousy of the Yāmid ruler of Ṣanʿāʾ, ʿAlī b. Ḥātim. He made war on them and in 364/974-5 took Kawkabān. Ḥātim stayed some time in Bayt Radm and then moved to Sh-ʿāf in the mountainous region of Ḥarāz, where he succeeded in converting the people, who had been Ḥāfiẓīs. Conquering several fortresses, he chose al-Ḥutayb as his residence. After his main supporter Sabaʾ al-Yaʿburī was killed and the Ayyūbids extended their rule over most of the Yaman, Ḥātim's activity was restricted to the clandestine organization of the Ṭayyibī propaganda. On 16 Muḥarram 596/6 November 1199 he died in al-Ḥutayb and was buried there.

In his major work *al-Shumūs al-zāhira*, Ḥātim made use of the Mufaḍḍal literature of the *ghulāt* [*q.v.*], while at the same time condemning some of their views. His short treatise *Zahr badhr al-ḥaḳāʾiḳ* has been edited by ʿĀdil al-ʿAwwāʾ (*Muntakhabāt Ismāʿīliyya*, Damascus 1958).

(3) ʿALI B. ḤĀTIM (2). He took the place of his father as the fourth *dāʿī muṭlaḳ*. As the Yaʿburīs in Ḥarāz turned away from him he took up residence in Ṣanʿāʾ. The Ayyūbids did not interfere with his activity. He died on 25 Dhu 'l-Ḳaʿda 605/31 May 1209, in Ṣanʿāʾ.

Bibliography: The main biographical source, Idrīs b. al-Ḥasan, *Nuzhat al-afkār*, is not edited. It has been studied by Ḥ. F. al-Hamdānī, *al-Ṣulayḥiyyūn*, Cairo 1955, 269 ff.; ʿUmāra in H. C. Kay, *Yaman*, London 1892, 102. Other sources are edited and discussed by S. M. Stern, *The succession to the Fatimid Imam al-Āmir*, in *Oriens*, iv (1951), 214 ff. For their works see W. Ivanow, *Ismaili Literature*, Tehrān 1963, 52 ff., 61 ff. (W. MADELUNG)

ḤAMĪDĪ, ḤAMĪD AL-DĪN ABŪ BAKR ʿUMAR B. MAḤMŪD, born in Balkh, died in 559/1164, a *ḳāḍī* who in 551/1156 began to compile his collection of twenty-three Ḥamīdian sessions (or scenes) (*maḳāmāt-i Ḥamīdī*) to serve as a pendant in the Persian language to the celebrated Arabic *Maḳāmāt* of al-Hamadhānī and al-Ḥarīrī, as he states in his preface. Like these authors, he subordinated matter to form, above all endeavouring in his writings to show himself as a consummate stylist. For the most part, his *maḳāmāt* describe some episode in his adventures or travels; others deal with more general subjects (a season of the year, some mystical point, war or love); four of them are debates (*munāẓara* [see ASADĪ]); the thirteenth describes Balkh, at one time a prosperous place but devastated in 548/1153 by the invasion of the Ghuzz; he apologizes for ending the work *ex abrupto* because, he says, he has been overwhelmed by the calamities of the time. His work was praised by the poet Anwarī (in lines translated by E. G. Browne) and by Niẓāmī-i ʿArūḍī (*Čahār maḳāla*, tr. Browne, 14, n. 6).

ḤAMĪDĪZĀDE MUṢṬAFĀ EFENDI [see MUṢṬAFĀ EFENDI].

ḤĀ-MĪM B. MANN ALLĀH B. ḤĀFIẒ B. ʿAMR, known as AL-**MUFTARĪ**, Berber prophet of the beginning of the 4th/10th century, who appeared among the Ghumāra Berbers, or, to be more exact, in the tribe of the Madjkasa settled not far from Tetuan. He began to preach his religion in 313/925 and was killed not far from Tangier, in a battle against the Maṣmūḍa, in 315/927-8. His religion appears to have survived him for a period whose length is unknown, but which did not go beyond the end of the 4th/10th century.

Just as in the religion of the Barghawāṭa [*q.v.*], this doctrine, about which we have very little information, was in part a garbled version of Islam, with a 'Ḳurʾān', in Berber, only two daily prayers, a weekly fast day, a fast of three or ten days in Ramaḍān, a tithe given in alms, but no ablution or pilgrimage. Forbidden foods were fish, birds' eggs, and the heads of any animals. On the other hand the meat of wild animals was allowed, but not that of the wild boar. Breaches of these laws were punished by fines of which Ḥā-Mīm and his relatives reaped the benefit. Lastly, two women played an important rôle in this religion, a paternal aunt of the prophet and a sister of his, both of them sorceresses.

In short, this belief appears to have been a mixture of distorted Islam and Berber beliefs.

(R. Le Tourneau)

al-**ḤAMMA**, Sp. Alhama, a name commonly given to hot springs and which, in those regions of Spain long occupied by the Muslims, replaced the old Romance terms Caldas (*aquas calidas*) and Baños (*balneos*). This same name was also given, however, to two rivers which are in no sense thermal: one rises in the province of Soria and is a right-bank tributary of the Ebro; the other is a minor stream of the northern slope of the Sierra Nevada which flows into the river Fardes. The Alhamas which are best known for their history and their baths are four: that of Almería, which according to the *Rawḍ al-miʿṭār* had the best medicinal waters of the Peninsula; that of Aragón, known to the Hispano-Romans as Aquae Bilbilitanae; that of Murcia, also Roman, which was reconquered by James I of Aragón, who handed it over to Castile; finally, the best known, that of Granada. It was rich through its celebrated textile factories, well fortified by nature and art, and the summer residence of the kings of Granada. It lies about 25 miles from the capital. The Muslims possessed it till 887/1482, in which year, after a stubborn resistance, it was taken by assault by Diego Ponce de Merlo, the marquis of Cadiz, and Diego Hernández Portocarrero, the governor of Andalusia. The sultan Abu 'l-Ḥasan ʿAlī tried three times to retake it with much persistence and bloodshed, but the Catholic Monarchs were determined to keep it and from it to dominate the whole kingdom of Granada, so they reinforced it with numerous troops and the sultan had to give up the attempt. Well-known *romances* such as "Ay de mí Alhama" sing of this loss which was so severely felt by the Muslims, and the epic assault was commemorated in a fine bas-relief in Toledo cathedral.

ḤAMMĀD b. al-**ZIBRIḲĀN** [see next art.]

ḤAMMĀD ʿADJRAD (in *status constructus*), Arab satirical poet whose genealogy has not been exactly established; his *kunya*, Abū ʿUmar, would justify the following: Ḥammād b. ʿUmar b. Yūnus (rather than b. Yaḥyā or Yūnus b. ʿUmar) b. Kulayb al-Kūfī. Born at the latest at the beginning of the 2nd/8th century, this *mawlā* of a clan of the ʿĀmir b. Ṣaʿṣaʿa probably owes his by-name (*ʿadjrad* = completely naked) to the saying of a Bedouin. His biographers agree in declaring that he achieved fame only under the ʿAbbāsids, but they do not fail to point out that al-Walīd II b. Yazīd II (125-6/743-4) had him come to his court, with a certain number of other poets, and that he returned to his native land after the death of the Umayyad caliph (R. Blachère, in *Mélanges Gaudefroy-Demombynes*, 110, does not quote him, however). This is, in any case, the only datable information we possess on his life, which appears to have been quite eventful. Only al-Djahshiyārī (*Wuzarāʾ*, 190) represents him as a secretary in the chancellery and notes that he had served under Yaḥyā b. Muḥammad b. Ṣūl at al-Mawṣil and ʿUḳba b. Salm b. Ḳutayba in Baḥrayn, and it is possible that this activity dates before the year 140/758. Under al-Saffāḥ he seems to have enjoyed the company of the governor of Kūfa, Muḥammad b. Khālid, and to have been the tutor of the caliph's son, Muḥammad b. Abi 'l-ʿAbbās; under al-Manṣūr he was in touch with the *wazīr* al-Rabīʿ b. Yūnus [*q.v.*], and the caliph himself is said to have appreciated his satirical verve. According to one tradition, the latter even induced him to accompany, with other dissolute characters, Muḥammad b. Abi 'l-ʿAbbās to Baṣra on his nomination as governor of the city (147/764-5), for al-Manṣūr wished to discredit his nephew and to disqualify him for the caliphate. This prince was about the only person with whom Ḥammād ʿAdjrad remained on good terms and whose eulogy he composed, although al-Ḥuṣrī (*Djamʿ al-djawāhir*, 312) wonders whether one of his *ḳaṣīdas* addressed to Muḥammad is *madḥ* or *hidjāʾ*; he mourned him at his death, in 150/767-8. But since he had composed for him some amorous verses about an ʿAbbāsid princess, Zaynab, her brother Muḥammad b. Sulaymān had been striving to take revenge. Therefore the poet left Baṣra to take refuge with al-Manṣūr, who did indeed protect him and even engaged him to satirize his enemy. Some biographers describe his stay in Baghdād, with others of his kind, during the reign of al-Mahdī (158-69/775-85), but the traditions concerning his death diverge widely. According to some, Muḥammad b. Sulaymān, who was three times governor of Baṣra (see Ch. Pellat, *Milieu*, 281), had him assassinated at al-Ahwāz, where his presence is indeed attested; according to others, he died of sickness between al-Ahwāz and Baṣra, but the date of this event varies considerably according to the sources, and is placed in 155, 161, 167 or 168. The date 161 appears probable because, on the one hand, he died before Bashshār (d. 167 or 168/784-5), and, on the other, legend tells that the latter, by a strange irony of fate, was buried next to him.

The greater part of Ḥammād's extant verses are nothing but diatribes against Bashshār, and the *Aghānī* is full of anecdotes about the contentions of the two men. Although the blind poet recognizes the talent of his adversary, certain of whose verses had affected him grievously (*Aghānī*, Beirut ed., xiv, 328; al-Djāḥiẓ, *Bayān*, i, 30; idem, *Ḥayawān*, iv, 66), criticism is unanimous in considering that the two poets cannot be compared. According to the *Aghānī* (xiv, 332), the scholars of Baṣra found only about forty verses of merit in the epigrams of Ḥammād, while they discovered more than a thousand in those of Bashshār; al-Djāḥiẓ, while occasionally appreciating the talent of Ḥammād (cf. *Ḥayawān*, i, 239, 240-2), places him well below his adversary (cf. *Ḥayawān*, iv, 453-4) and even judges him far inferior to Abān al-Lāḥiḳī [*q.v.*].

Skilled at setting friends at loggerheads, incapable of respecting his own friendships, he let fly at them, even at Muṭīʿ b. Iyās [*q.v.*], sallies which were often scurrilous, practised a sordid blackmail, and busied himself in bringing dishonour to his victims in terms which detract from his own character. There is no reason to be surprised that posterity, since the end of the 2nd/8th century, should hold against him accusations of Manichaeism, which he certainly did not deserve, for he does not seem capable of feeling the slightest religious sentiment; his *zandaḳa* lay, in fact, in an attitude of profound religious indifference, of libertinism and of impertinence, which was shared more or less by his habitual companions, amongst whom figured his two namesakes Ḥammād al-Rāwiya [*q.v.*] and the grammarian Ḥammād b. al-Zibriḳān (on whom see particularly *Ḥayawān*,

iv, 445, 447; *Aghānī*, index; al-ʿAsḳalānī, *Lisān al-Mīzān*, ii, 347). Ibn al-Nadīm (*Fihrist*, 473) does not mention him amongst the *zanādiḳa*, and G. Vajda has dealt conclusively with the accusations of Manichaeism made against the libertines with whom he is generally mentioned (see *Les zindiqs en pays d'Islam*, in *RSO*, xvii (1937), 173-229).

From his poetic works, which were certainly abundant, there survive only a few relatively feeble verses, mostly satirical. There are some poems, however, in which he displays a wisdom that is surprising for him, also some erotic verses which do not lack freshness and were deemed worthy of being set to music.

Bibliography: Notices and verses are to be found in Djāḥiẓ, *Bayān* and *Ḥayawān*, index; Ibn Ḳutayba, *Shiʿr*, 754-6 and index; idem, *ʿUyūn al-akhbār*, index; Buḥturī, *Ḥamāsa*, 372; Ibn al-Muʿtazz, *Ṭabaḳāt*, 23-6; *Aghānī*, xiii, 70-98 (Beirut ed., xiv, 304-63); Ṣūlī, 3-8, 10; Khaṭīb Baghdādī, *Taʾrīkh Baghdād*, viii, 148; Yāḳūt, *Udabāʾ*, x, 249-54; Ibn Khallikān, i, 165; Āmidī, *Muʾtalif*, 157; ʿAsḳalānī, *Lisān al-Mīzān*, ii, 349-50; Marzubānī, *Muʿdjam*, index; Ibn al-Djawzī, *Muntaẓam*; Ṭāhā Ḥusayn, *Ḥadīth al-arbiʿāʾ*, i, 197-212. (Ch. Pellat)

ḤAMMĀD al-RĀWIYA, *i.e.*, "the transmitter", Ibn Abī Laylā, a collector of Arabic poems, especially the *Muʿallaḳāt* [*q.v.*]. He was born at Kūfa in 75/694-5 (the date 95 is a misreading). He was of Iranian stock, his father being a captive from al-Daylam, named Sābūr or Hurmuz or Maysara. Ḥammād, like his namesakes and boon-companions Ḥammād ʿAdjrad and Ḥammād b. al-Zibriḳān, belonged to a set of beaux-esprits at Kūfa, who at their merry gatherings used to drink wine and recite verses and were in the eyes of the pious suspect of heresy (*zandaḳa*). Ḥammād was very fond of poetry; many anecdotes show him in conversation with al-Ṭirimmāḥ (*Aghānī*[3], vi, 95), al-Kumayt (*Aghānī*[1], xiv, 113), ʿUmar b. Abī Rabīʿa (*Aghānī*[1], x, 50), Kuthayyir (*Aghānī*[1], viii, 152 f.), al-Farazdaḳ (*Aghānī*[3], vi, 73), Djarīr (*Aghānī*[3], viii, 36), Dhu 'l-Rumma (Marzubānī, *Muwashshaḥ*, 177), and other poets. His intimate knowledge of the poetry, genealogy, history and lore of the Bedouins won him the favour of the caliphs, especially al-Walīd b. Yazīd, and their dignitaries. It is uncertain whether he was invited already by Yazīd b. ʿAbd al-Malik; for the story (*Aghānī*[3], vi, 75 ff.) is chronologically inconsistent, because Yūsuf b. ʿUmar was appointed governor of the East only in 120/738. The downfall of the Umayyads hit him hard. It seems that he went to al-Manṣūr (*Aghānī*[3], vi, 80) but felt disappointed (*Aghānī*[3], vi, 82 f.; viii, 253 f.) and returned to Kūfa where he died in 155/772 (Yāḳūt) or in 156/773 (*Fihrist*). Later dates are unwarranted. He was mourned by Muḥammad b. Kunāsa in an elegy (*Fihrist*, etc.). Amongst his pupils were his *rāwī* al-Haytham b. ʿAdī (*Aghānī*[3], vi, 70, 72), Khalaf al-Aḥmar (Yāḳūt, iv, 179), and al-Aṣmaʿī who owed nearly all the poems of Imraʾ al-Ḳays to Ḥammād.

Ḥammād was no scholar, but rather a dilettante who enjoyed poetry as one of the good things in life and did not care too much about authorship and authenticity. He took no interest in the studies of grammar which were making rapid progress during his later years. There was in addition the rivalry between the schools of Baṣra and Kūfa. He was held in high esteem by Abū ʿAmr ibn al-ʿAlāʾ [*q.v.*], the founder of the Baṣra school (*Aghānī*[3], vi, 73), but was denounced in the next generation. According to the Baṣran Yūnus b. Ḥabīb, Ḥammād knew nothing about grammar, prosody, and correct speech (*Aghānī*[3], viii, 283; Djumaḥī, 14), whilst his rival, the Kūfan Mufaḍḍal b. Muḥammad al-Ḍabbī, did not deny his vast knowledge, but accused him of having ruined the tradition of Bedouin poetry beyond repair by his clever forgeries (*Aghānī*[3], vi, 89).

Ḥammād collected, according to al-Naḥḥās, d. 337/948-9 (Ibn Anbārī, *Nuzhat al-alibbāʾ*, 48), the seven long odes, commonly known as *al-Muʿallaḳāt*. Abū Ḥātim al-Sidjistānī quotes poems of al-Ḥuṭayʾa from the book (*kitāb*) of Ḥammād al-Rāwiya, mainly to blame him for admitting spurious verses (Ibn al-Shadjarī, *Mukhtārāt*, 123, 127, 136; cf. Goldziher, *ZDMG*, xlvi, 48 ff.). In the Dīwān of ʿĀmir b. al-Ṭufayl there is a piece (no. 26, ed. Lyall) which corresponds to the verses copied by Ibn al-Kalbī from a manuscript which again is called "the book of Ḥammād al-Rāwiya". Otherwise traces of Ḥammād's literary activities are scarce.

Blachère, *HLA*, i, 103-5. (J. W. Fück)

ḤAMMĀDA (a.) is synonymous with 'plateau' in the Sahara of the southern Maghrib and Tripolitania, but is used only by some of its Arabic-speaking inhabitants. The word stands for large areas which are the outcrops of horizontal beds of secondary or tertiary limestone or sandstone (or calcareous or gypso-calcareous crusts of the quaternary era), and which stand out as a result of the erosion caused by running water during periods which were less arid than the present. The surface of the *ḥammāda*s is almost always rocky and totally devoid of vegetation, except in small basins where the limestone has dissolved (*ḍāya*; classical *aḍāt*); it is often blackened, consolidated and rendered barren by a "desert patina" due to the exudation of iron salts; it is sometimes partly covered by a *reg* formed by the breaking up of angular stones. The edge of the *ḥammāda*s, steep and jagged, is called *kreb* in southern Morocco. The principal *ḥammāda*s are those of the Drāʿ or of Tindouf, of the Saoura and the Guir in Southern Morocco, those of Tademaït and Tinghert in Southern Algeria, that of Murzūḳ and the Ḥammāda al-Ḥamrāʾ, in Southern Tripolitania. The use of the word *ḥammāda* is extended to even very small hills with calcareous incrustations in the lower steppes and in the Sahel of Tunisia and even to small plateaus on the Tunisian backbone (*ḥammāda* of the Awlād Ayar, of the Awlād Aoun, of the Kessera). The term *ḥammāda* is not found in Eastern Libya beyond lat. 14° E. (Greenwich) and has not the same meaning in the East, where it is applied to semi-arid plains. In the Sahara the word *ḥammāda* is rivalled and replaced, over fairly large areas, by *ḍahr* (back, reverse of slope), both in the Tuniso-Tripolitanian range of plateaus and in the Mauritanian Adrar, or, less frequently, by the word *gāʿda* (Djabal ʿAmūr, eastern Morocco, Mauritania). Lastly the huge plateaus of primary sandstone which surround the Ahaggar massif are called *tassili*, a Ṭuāreg Berber term; in the south of Morocco *kemkem*, another word of Berber origin, is the synonym of *ḥammāda*; the great lava plateaus of the Tibesti are called *tarso* by the Tūbū. (J. Despois)

ḤAMMĀDIDS (Banū Ḥammād) a Central Maghrib dynasty (405-547/1015-1152) collateral with that of the Zīrids of Eastern Barbary, taking its name from its founder Ḥammād b. Buluggīn b. Zīrī b. Manād.

The aspirations towards Ifrīḳiya of the Ṣanhādja *amīrs*, the Zīrids, lieutenants and vassals of the Fāṭimids in the Maghrib, brought about the split between the Central Maghrib and Ifrīḳiya proper. Under the second Zīrid, al-Manṣūr b. Buluggīn, his uncle Abu 'l-Bahār b. Zīrī had already tried without success to carve out a kingdom in the Central Maghrib (379-83/989-93). Now al-Manṣūr's successor Bādīs had to confront a powerful Zanāta wave which broke from Tiaret to Tripoli from 386/996 and at length overwhelmed him (391/1001), thanks mainly to his uncle Ḥammād b. Buluggīn. In 395/1004-5 he gave Ḥammād the task of pacifying the restive West, and undertook never to recall him and to give up to him Ashīr, the Central Maghrib and any town he was able to conquer. Ḥammād met with such success that in 398/1007-8 he founded a new town north-east of Msīla with an eye to its serving as his capital, the celebrated Ḳalʿa (Ḳalʿat Ḥammād/Ḳalʿat Banī Ḥammād/al-Ḳalʿa [*q.v.*]). Ḥammād disobeyed Bādīs's order to surrender part of the Constantine territory to his heir, and, with his brother Ibrāhīm, rebelled (405/1015).

I. Ḥammād b. Buluggīn (405-19/1015-29). He severed his relations with the Fāṭimids of Cairo and had made with al-Muʿizz b. Bādīs, who marched against him and besieged the Ḳalʿa for two years; at the end of this time a reconciliation between the two cousins was brought about (434/1042-3). There is some uncertainty about the date of al-Ḳāʾid's repudiation of the Fāṭimids and his recognition of the ʿAbbāsids, but it must be around the time of al-Muʿizz (whose break with Cairo was an established fact by 439/1047) since he sent him a body of cavalry which participated in the famous battle of Ḥaydarān (443/1052). But most likely it was after this Hilālī victory, which put an end to the culture of Ḳayrawān, that he once more recognized Fāṭimid suzerainty, thus acquiring the honorific appellation of Sharaf al-Dawla which had formerly been borne by his cousin.

III. Al-Muḥsin b. al-Ḳāʾid (446-7/1054-5). His father's advice to deal circumspectly with his uncles was unheeded. His violent and tyrannical disposition got the better of him, and led to his assassination, after nine months' rule, by one of his cousins, who succeeded to his throne.

IV. Buluggīn b. Muḥammād b. Ḥammād (447-54/1055-62). As the alliance between the Ḥammādids and the Hilālī Athbadj grew closer, so the Zīrids relied more and more on the Riyāḥ and the Zughba. Then, when thrown out of Ifrīḳiya by the Riyāḥ, it was the turn of the Zughba to put themselves at the disposal of the Ḥammādids. In 450/1058-9 Buluggīn obliged the Biskra chiefs to recognize him and treated the

Genealogical table of the dynasty

- I.—Ḥammād b. Buluggīn b. Zīrī (405-19/1015-28)
  - II.—al-Ḳāʾid (419-46/1028-54)
    - III.—Muḥsin (446-7/1054-5)
  - ʿAlannās
    - V.—al-Nāṣir (454-81/1062-89)
      - VI.—al-Manṣūr (481-98/1089-1105)
        - VII.—Bādīs (498/1105)
        - VIII.—al-ʿAzīz (498-515 or 518/1105-21-2 or 1124-5)
          - IX.—Yaḥyā (515 or 518-47/1121-2 or 1124-5 to 1152)
  - Muḥammad
    - IV.—Buluggīn (447-54/1055-62)

transferred his allegiance to the ʿAbbāsids of Baghdād; thus the Ḥammādid kingdom came into being. Bādīs laid siege to the Ḳalʿa and after six months gained a decisive victory in 406/1015; but death overtook him when he seemed about to reduce his uncle to obedience (end of 406/May 1016). His successor al-Muʿizz b. Bādīs dealt the rebel so crushing a blow (468/1017) that he sued for pardon, which was granted him. This peace, consolidated by alliances by marriage, which gave him complete sovereignty over all Central Maghrib, was to be respected by Ḥammād until his death (419/1028). It would seem that he had returned to the Fāṭimid allegiance.

II. Al-Ḳāʾid b. Ḥammād (419-46/1028-54) successfully checked an adventure of the Maghrāwī *amīr* of Fez, and made him swear allegiance (430/1038-9). In 432/1040-1 he broke the pact his father Zanāta with severity. After the Almoravids had taken Sidjilmāssa, one of the main routes for gold whose importance had increased with the Hilālī invasion, Buluggīn attacked the Zanāta of Morocco and seized Fez (454/1062). But shortly afterwards on his way back he was assassinated by his cousin al-Nāṣir b. ʿAlannās who then entered the Ḳalʿa.

V. Al-Nāṣir (454-81/1062-89) gradually established his authority and attracted important allies: the petty king of Sfax Ḥammū b. Mallīl, and the *muḳaddam* of Ḳasṭīliya paid him homage, and a delegation of Tunisian *shaykhs* asked him to appoint a governor. This was ʿAbd al-Ḥaḳḳ b. ʿAbd al-ʿAzīz b. Khurāsān, the first Khurāsānī prince to govern Tunis with a council of *shaykhs*. Al-Nāṣir invaded Ifrīḳiya at the head of an imposing coalition which included the Athbadj. But Tamīm and the Riyāḥ put up such a defence that at Sabība (between Ḳayrawān

and Tebessa) he suffered a defeat comparable in gravity with that inflicted on al-Muʿizz b. Bādīs at Ḥaydarān. Anarchy and devastation spread throughout Central Maghrib, which now experienced the evils that Ifrīḳiya had suffered for years. The crushing of the Ṣanhādja at Sabība (457/1065) finally sealed the ascendancy of the Hilālīs over all eastern Barbary, while the Riyāḥ held sway in Ifrīḳiya and the Athbadj in Central Maghrib. Just as the Zīrids had been forced to give up Ḳayrawān and to retire on Mahdia, so the Ḥammādids lost their hold on the Ḳalʿa and fell back on Bougie, named al-Nāṣiriyya after its founder al-Nāṣir who installed himself there shortly after 461/1068-9. There was some indication of a revival of Zīrid-Riyāḥid power when they seized Khurāsānī Tunis (459-60/1067), and to thwart this al-Nāṣir led the Athbadj in an attack on Ifrīḳiya (460/1067-8), took Laribus and then Ḳayrawān (though this he had to give up), and he returned to the Ḳalʿa. Al-Nāṣir certainly played some part (though the affair is obscure) in the sale of Ḳayrawān by the Zughba in about 470/1077-8, the year in which a Zīrid-Ḥammādid pact was concluded; al-Nāṣir married Tamīm's daughter Ballāra. This peace, which was destined to last until the end of Tamīm's reign (501/1108), marks the peak of Ḥammādid superiority over their Bādīsid cousins, overwhelmed by the Hilālī invasion. Al-Nāṣir led a number of expeditions to the West and made allies of the heads of an important Zanāta tribe, the Banū Mākhūkh. On many occasions he had to take vigorous action against the Zanāta when they joined with the Arabs in acts of brigandage.

VI. Al-Manṣūr (481-98/1088-1105). In spite of his youth, this son of al-Nāṣir and Ballāra followed firmly in his father's footsteps and was the recipient of Ibn Ḥamdīs's panegyrics. Although the district was overrun by Arabs, he stayed in the Ḳalʿa until he left it for Bougie (483/1090-1). Ibn Khaldūn considers that he was the first of his line to issue a coinage, and it was he who "civilized" the Ḥammādid kingdom, hitherto semi-nomadic and totally lacking in the polish of the Bādīsids of Ḳayrawān. On his accession, he instructed Abū Yaknī to remove Balbār, an uncle of his and governor of Constantine, and rewarded him with the governorship of that city and of Bône. In 487/1094, Abū Yaknī rebelled and tried to bring about a great coalition of al-Manṣūr's enemies—Tamīm (to whom he offered Bône), the Arabs and the Almoravids. Al-Manṣūr recovered Bône and Constantine. Abū Yaknī took refuge in the Aurès, and was later put to death. Al-Manṣūr had also to intervene in the West, which had been overrun by the Almoravid Yūsuf b. Tāshufīn as far as Algiers (473-5/1080-3). From Tlemcen the Almoravids were attacking Ṣanhādja territory with the connivance of the Zanāta, themselves egged on by the Banū Mākhūkh, notwithstanding their relationship by marriage to al-Manṣūr. Al-Manṣūr punished the Banū Mākhūkh, and invested Tlemcen so closely that Yūsuf b. Tāshufīn sued for peace. The Almoravids soon broke this peace, and again had to be forced to withdraw. But later (after 484 ?/1091) al-Manṣūr met defeat at the hands of the Zanāta of Mākhūkh and was obliged to fall back on Bougie. Not satisfied with the murder of his wife, Mākhūkh's sister, he wrought further vengeance by sacking Tlemcen (496/1103). The next year saw the end of Ḥammādid-Almoravid hostility, with the signing of a peace treaty. This done, al-Manṣūr turned to the repression of the Zanāta of Central Maghrib.

VII. Bādīs (498/1105). This son and successor of al-Manṣūr was a Caligula whose bloody tyranny fortunately endured for less than a year.

VIII. Al-ʿAzīz (498/1105 to 515 or 518/1121-2 or 1124-5). Unlike his brother Bādīs, he enjoyed a long and peaceful reign. He took pleasure in the company of lawyers. He made peace with the Zanāta and married one of Mākhūkh's daughters. Nevertheless, his fleet subdued Djerba (the date is uncertain) and in 514/1120-1 he laid siege to Tunis and obliged the Khurāsānī Aḥmad b. ʿAbd al-ʿAzīz to offer submission. About this time he laid on his son the duty of recovering the Ḳalʿa from Hilālī occupation.

IX. Yaḥyā (515/1121-2 or 518/1124-5 to 547/1152) drove the Khurāsānī Aḥmad b. ʿAbd al-ʿAzīz from Tunis and deported him to Bougie where he eventually died, and assigned the town to one of his uncles (522/1128). Tunis stayed in Ḥammādid hands until 543/1148-9. A Ḥammādid army took the citadel of Tozeur (the date is uncertain) whose rebellious chief was imprisoned in Algiers, where he ended his days. Yaḥyā launched a great attack by sea and land against Mahdia (529/1135) at the instance of some Arab clans and of the inhabitants who were vexed because their prince al-Ḥasan, last of the Zīrids, had yielded to certain demands of Roger II of Sicily. The venture was a failure, for al-Ḥasan was able to enlist the support of Arab contingents and a Sicilian fleet. In about 536/1141-2, Yaḥyā strove to get on good terms with the Fāṭimid al-Ḥāfiẓ, but in the end acknowledged the ʿAbbāsids, for in 543/1148-9 he minted coins at al-Nāṣiriyya (Bougie) in the name of the caliph al-Muḳtafī. Towards 537/1143 the ambitions of the Normans towards Ifrīḳiya became dangerously obvious when they made an onslaught upon Djidjelli. In 539/1144-5 it was the turn of Brechk, between Cherchell and Tenes, to undergo attacks by the Sicilian fleet. Yaḥyā's luckless cousin, the last Zīrid al-Ḥasan, had been expelled from his capital Mahdia (543/1148) by Roger II's admiral George of Antioch, and he was obliged to live under surveillance at Algiers, for Yaḥyā was anxious lest the fugitive should establish contact with the Almohad ʿAbd al-Muʾmin whose growing influence was giving good cause for anxiety. In 543/1148-9 Yaḥyā concentrated in Bougie such of his treasures as remained at the Ḳalʿa. Now came the lightning conquest of Central Maghrib (547/1152). ʿAbd al-Muʾmin captured in turn Tlemcen, Miliana, Algiers (where the last Zīrid al-Ḥasan and the Athbadj *amīr* both submitted), and finally Bougie (Djumādā I 547/August 1152). Yaḥyā fled to Bône, and thence to Constantine. ʿAbd al-Muʾmin's son ʿAbd Allāh seized the Ḳalʿa and sent his troops on from there against Constantine. A bloody battle ended in victory for the attackers; the last Ḥammādid surrendered and was removed to Bougie, where the Caliph ʿAbd al-Muʾmin treated him and his family with kindness, and finally to Marrākush where they were granted handsome pensions and Yaḥyā had ample leisure to indulge in hunting, his favourite pastime. He followed ʿAbd al-Muʾmin to Salé in 548/1153-4, and ended his days there in 557/1161-2.

The history of the Ḥammādids is even less clear than that of the Zīrids, with which it is closely interwoven, in sources that are mainly bookish, partial, biased and second-hand. Of Ḥammādid daily life and institutions, unquestionably ruder and simpler than those of Zīrid Ifrīḳiya, we are in almost complete ignorance.

ḤAMMĀL (A.) "street-porter", "bearer". In old towns with narrow winding streets, the use of porters is indispensable for the transport of packages, cases, furniture, etc., which elsewhere is effected by means of beasts of burden, carts or, at the present day, by motor vehicles. The most elementary equipment used by the *ḥammāl* is a simple rope, fairly thick, which he first ties round the object to be carried and then loops over his forehead; in this way the burden is held on the porter's back, and he controls its lateral movement by keeping both hands on it. In certain cases, especially in Istanbul, the *ḥammāl*'s equipment is more elaborate; on his back he wears a small leather apron (*arkalık*) and a kind of padded saddle (*semer*) on which the weight of the burden rests. When the burden is beyond the powers of one man or is particularly difficult to handle, two or more porters take a long pole, called *sırık* in Turkish, from which they hang the chest or bale of goods by means of ropes. The shouts of the porters as they clear a way for themselves add to the picturesqueness of eastern streets: *bālək!* in the West, *rāsak! ḍahrak! djambak!* "[Mind] your head, your back, your side" in the Arab East, *dokunmasın!*, *varda!* or *varda destur!* in Turkey.

Works of *ḥisba* are hardly concerned with porters, except in forbidding them to interfere with the flow of traffic or to overload themselves in a manner dangerous for themselves and for passers-by (see R. Arié, in *Hespéris-Tamuda*, i/3 (1960), 360). On this point Ibn ʿAbdūn (E. Lévi-Provençal, *Séville musulmane*, Paris 1947, 91) states that a porter's load must not exceed half a *ḳafīz*, that is about 116 litres of dry foodstuffs.

In Fās, the *ḥammāla* mostly carry cereals, while the *zərzāya* form a special guild which has had a long history and which possesses its own particular organization; no doubt their name derives from that of the villages of Zərzāya (in Berber, *azərzay*, pl. *izərzayən*, which has given the singular *zərzāy* in Arabic). According to the local tradition, the Berber porters are said to have received certain privileges as early as the reign of Idrīs II [*q.v.*], and in practice it is still native Berbers of the same tribe who form the guild (see M. Lakhdar, *Les izerzaïn ou portefaix berbères*, in *Hespéris*, xix (1934), 193-4). Leo Africanus (trans. Epaulard, i, 193-4) speaks of them at some length; he relates that their *amīn* each week selected those who were to work and be at the disposal of the public for that period, and that their takings went to a communal fund, the contents of which were divided at the end of the week; they maintained constant solidarity and received the benefit of exemption from taxes and the free baking of bread.

R. Le Tourneau recently made a study (*Fès avant le protectorat*, Casablanca 1949, index, s.v. portefaix) of their organization which has hardly been modified since. They are divided into several groups which elect their *amīn* for six months; these *umanāʾ* in their turn elect, for one year, an *amīn* in chief who is recognized by the government as head of the guild. Their numbers are very much the same as in the time of Leo Africanus (about 300), and the members of the guild are replaced frequently, a factor which explains the short period in office of the *umanāʾ*. They all dress in the same way and are equipped with a rope and sack; they stand together in groups at various points of call where clients come to fetch them. Their charges are not governed by a tariff, and in general they seem to be satified with what they are given. Moreover their honesty is proverbial, and any shortcoming is severely punished by the *amīn*. Quite recently, they were still sleeping, at night, in small groups in the markets, stores and *funduḳ*s and making their rounds for the purpose of preventing thefts and giving the alarm in case of fire.

(Cl. Huart-[Ch. Pellat])

ḤAMMĀM or steam bath, often still referred to as "Turkish bath" (and in French as "bain maure"), is a building typical of the Islamic world where archaeological remains witness to its existence as early as the Umayyad period (in addition to references in texts which mention the construction of baths in the first towns founded after the conquest: the bath of ʿAmr at Fusṭāṭ in Ibn Duḳmāḳ, i, 105; the first three baths of Baṣra, in al-Balādhurī, *Futūḥ*, 353) and where it has continued until the present day to occupy a position of primary importance, recognized by the Arab writers themselves (who for example mention *ḥammām*s among a town's ancient claims to pre-eminence, and compile contemporary detailed lists of these buildings in addition to inventories of monuments).

The ritual use of the *ḥammām* in the performance of the major ablution explains why it has always been considered one of the essential amenities of the Muslim city, gradually assimilated as "a sort of annex of the mosque" (W. Marçais), while at the same time the life of a whole quarter revolved around it. Thus the Muslims gradually forgot the prejudices that had at first surrounded it as being an element which was borrowed from a foreign civilization (as late as the 4th/10th century mention is still found of *ḥammāmāt rūmiyya*) and whose decoration was for a long time derived from conventions of pre-Islamic times. People went to it for relaxation as well as to fulfil the laws of hygiene or a religious regulation, and the public baths, which were numerous in every town (and reserved on certain days or at certain times for men and at others for women), formed considerable sources of revenue for the private individuals or the authorities who established them. The popularity of the use of the *ḥammām* had also led to the installation of private baths in the precincts of palaces or within larger town houses.

Information on the number of baths existing in the Middle Ages in the chief Muslim towns can be found in the early sources, and this information has sometimes been used as a basis for modern estimates of the populations of towns at that period. In fact the value of the details thus provided varies greatly according to whether they are obtained from accurate inventories of monuments or simply from estimates by chroniclers.

To the first category belong for example the data provided by Ibn ʿAsākir on Damascus in the 6th/12th century (57 baths *intra muros*: *Taʾrīkh Dimashḳ*, ed. Ṣ al-Munadjdjid, ii/1, Damascus 1954, 162-4) and, a century later, by Ibn Shaddād on the baths of Aleppo (80 public baths *intra muros* and 94 *extra muros* plus 31 private baths, making a total of 195: *Description d'Alep*, ed. D. Sourdel, Damascus 1953, 130-8) and of Damascus (85 baths *intra muros* and 31 *extra muros*, making 116 in all: *Description de Damas*, ed. S. Dahan, Damascus 1956, 291-302), data which seem reasonable when we consider that about 30 years ago Damascus had 60 baths of various dates, 41 of which were still in use.

On the other hand the contradictory data given by

such a writer as Hilāl al-Ṣābiʾ about Baghdād seem much less reliable: for a period extending from the 3rd/9th to the 4th/10th century the figure he gives for the number of baths in the town varies from 60,000 to 1,500 [see BAGHDĀD]. Similarly for Cordova at the end of the 4th/10th century we find figures ranging from 300 baths in the reign of ʿAbd al-Raḥmān III (Ibn ʿIdhārī, *Bayān*, ii, ed. Dozy, 247; Fr. tr. Fagnan, 383) to 600 in the period of al-Manṣūr b. Abī ʿĀmir (al-Maḳḳarī, *Analectes*, i, 355). The information given by Leo Africanus for Fez in the 10th/16th century seems more reliable (100 baths listed, whereas in 1942 not more than 30 existed), also that given for 11th/17th century Istanbul by Ewliyā Čelebi (61 baths *intra muros* and 51 *extra muros*, plus private baths, making a total of about 150), details which can hardly be accused of exaggeration. But we have given these few statistics only as examples to demonstrate the extent of the potential documentation, which would demand careful comparisons between parallel sources of information (with recourse where possible to archives) in order to produce a reliable contribution to social and economic history.

From another aspect there should be mentioned the graphic descriptions of Muslim baths which feature in the accounts of early or later Western travellers, from Chardin or La Boullaye le Gouz for example (on the less well-known account of the latter, see *Voyages et observations*, Paris 1657, 40-2) to E. W. Lane (*Manners and customs of the modern Egyptians*, chapter 16; see also the text of N. Diaz de Escovar, *De como se construia un baño en tiempo de los árabes*, cited by E. Lévi-Provençal), not forgetting the iconographic material provided by some Persian or Turkish miniatures, such as the representation of a *ḥammām* by an artist of the school of Bihzād (see B. Gray, *Persian painting*, Geneva 1961).

But even more useful information could be obtained from the juridical works and from the manuals of *ḥisba* [*q.v.*], which provide much detail on the control exercised by the *muḥtasib* over the cleanliness of the buildings as well as over the seemly behaviour of the users and of the bath attendants.

Unfortunately at present there has been no sufficiently detailed study of the number and the use of the *ḥammām*s which are still functioning in the old quarters of various Islamic towns, on the model of what has been done for Damascus, where an archaeological inventory of the buildings of this type, begun in 1931, has very recently been completed by some new observations. The existence of these baths is in fact a proof of the continued vitality—at least among the common people—of habits which have long been traditional in Muslim society and many aspects of which need to be clarified by means of sociological and linguistic studies, in particular the local variations in arrangement and terminology.

The details thus collected could then usefully be compared with those supplied in addition by juridical or literary texts, for example the nomenclature of the various personnel connected with the running of the *ḥammām* which is found in a writer such as the 4th/10th century Hilāl al-Ṣābiʾ (*Rusūm dār al-khilāfa*, Baghdād 1964, 19). In the latter case for instance, a brief research has shown that two members of the staff, the *waḳḳād* ("stoker") and the *zabbāl* ("superintendent of the supply of dung-fuel for the furnace") are still called by these names in Damascus (at Fez they are called *sakhkhān* and *ghabbār*), while it appears that there is no longer in use today the term *ṣāḥib al-ṣundūḳ* for the superintendent of the changing-room (called *gellās* in Fez and combined in Damascus with the *muʿallim* or "proprietor") nor that of *ḳayyim* for the lessee of the bath. The posts of *muzayyin* ("barber") and *ḥadjdjām* ("cupper", "blood-letter"), also mentioned by Hilāl, seem to have lost their importance in favour of that of *mukayyis* or *kayyās*, the "masseur" (who wields the *kīs* or bag of tow used to massage the clients), who is probably connected with the *ḥakkāk* ("beater") attested in Cordova in the 4th/10th century and with the *dallāk*, with the same meaning, mentioned for Istanbul by Ewliyā Čelebi.

Thus we have to deal with an extremely rich and changing vocabulary, which reflects the variations which must have existed between the usage peculiar to each region and each period and is often preserved in the abundant literature of proverbs, tales and popular legends which seems always to have surrounded the *ḥammām*, a favourite centre for local beliefs and superstitions and in particular the favourite haunt of *djinn*s [*q.v.*] (see for example the "Farce of the *Ḥammām*" published by E. Saussey, *Une farce de Karagueuz en dialecte arabe de Damas*, in *BEO*, vii-viii (1937-8), 5-37).

It is, however, the architectural aspect of the Islamic bath which would be most worthy of study, so much were buildings of this type governed by the factors of siting (*e.g.*, the necessity for an abundant supply of water) and by the practical exigencies imposed by the solution of difficult and often interesting problems. Not only do the *ḥammām*s which are identifiable and available for archaeological study today provide, because of the long periods they have occupied the same sites, excellent starting points for the exploration and the reconstruction of the stages in the development of the towns to which they belong; but in addition the older parts of them provide significant illustrations, in compositions which are often original both in plan and in form, of the methods of construction, the tastes in ornament and the technical abilities of their early builders.

For this reason it would be particularly useful to know the stages in the evolution of these buildings, which have not yet been traced with the necessary thoroughness—chiefly because of lack of sufficient numbers of preliminary monographs—but the broad lines of which at least we can already attempt to trace. This evolution is in fact dominated, from the first appearances of the *ḥammām* in the Umayyad period until the spread of these buildings into the furthest provinces, by the existence of a rigid procedure, which is apparent in the most varied interpretations and which was conditioned by the nature of the operations performed in Muslim baths.

The order in which these operations are performed has remained practically the same everywhere. The clients of the *ḥammām*, who have removed their clothes and put on a simple loin-cloth composed of towels knotted together, gradually accustom themselves to an atmosphere which becomes increasingly hot and humid as they proceed towards the centre of the building, where their spell in the sweating-room produces an intense perspiration. They pass into the hands of specially-trained staff, male for men and female for women, who wash them clean with soapy lather, rub them vigorously, massage them, remove their body-hair and shave them. They next proceed either to wash in warm water or to immerse themselves in baths of warm or hot water. Finally a brief period of relaxation in a rest room is intended to restore bodies exhausted by this vigorous treatment.

To provide for this programme, the *ḥammām*

consists basically of a certain number of rooms each with its especial function: first an undressing and rest room, generally known as *mus̲h̲allaḥ* or *mas̲h̲laḥ* in the East, *maslakh̲* in Egypt and Morocco, and *maḥras* in Tunisia, which communicates with latrines and may be linked to the central part of the bath by staggered corridors of varying length; then a transition room, without means of heating but whose atmosphere is nevertheless already warmed by its proximity to the heated section and which in winter is used for undressing, and which may be known as "outside" (*barrānī*) as in Fez, or "first room" (*bayt awwal*) as in Cairo, or more precisely as "intermediate outside" (*wasṭānī barrānī*) as in Damascus, or *bīt al-barəd* in Tunis (adjoining a *bīt al-bədəl*); next a first heated room, or warm room, which in Damascus is called "intermediate interior" (*wasṭānī d̲j̲uwwānī*), in Fez "middle" (*wusṭā*), and in Tunis usually *bīt əs-sk̲h̲ūn*; finally a second heated room, the hot room proper or steam bath (*taḥmīm*; *ʿarrāḳa* or *zḳāḳ* in Tunis) which may be called simply *ḥarāra* as in Cairo, or more expressively "interior", *d̲j̲uwwānī* at Damascus and *dak̲h̲li* at Fez. This steam room is generally provided with a certain number of alcoves (called in Damascus *maḳṣūras*), where are found either benches of stone or brickwork (*maṣṭabas*), used for the attentions given to the bathers by the staff, or pipes bringing supplies of hot or cold water (*ḥanafiyyas*), or stone basins which serve as little swimming pools (*mag̲h̲ṭas*), filled with hot or cold water.

Although in some cases light and air are obtained through vents with adjustable flaps, usually neither windows nor ventilation holes are provided for in the central section, where the efficient retention of heat and steam is ensured by means of thick walls, crowned by vaults or cupolas which are equally thick, with steam-proof linings of marble or of varnished plaster over paved floors, provided with runnels to carry off the water. Light penetrates only through thick pieces of glass, a sort of "bottle-ends" inlaid in the domes, where they often form simple decorative motifs. Furniture is provided only in the changing and rest room, which is the most luxuriously arranged, with wooden benches, covered with cushions, generally disposed around a pool with a fountain (in Tunis: *k̲h̲aṣṣa*). The clients' entrance itself, the only opening through which this tightly closed building is in contact with the world outside, is only rarely conceived as an architectural motif to embellish an important façade.

To the collection of rooms accessible to the public, or used by the owner of a private bath (for the two types of building, conceived according to the same model, have never differed from each other except in size or in the degree of richness in their decoration), are joined the indispensable annexes which house the heating system and its services, which are not linked by any passage to the *ḥammām* proper but which possess their own exit onto the street, used especially for deliveries of fuel. The furnace room, which in Damascus is called *k̲h̲izāna* or "reserve" of heat and steam (in Tunis: *fornāḳ*), is separated from the hot room only by a thin partition, pierced with holes through which the steamy air passes: in it a continually stoked furnace maintains the temperature of the cauldrons (in Tunis *naḥāsa*) of boiling water. From these hot water is circulated in the interior of the bath, where it is complemented by the circulation of cold water, by the system of ventilation from the stove and by the circuit evacuating the waste water, all of which are usually led through earthenware pipes embedded in the walls or beneath the floor. Finally, the supply of water from outside is assured either by pipes, drawing it off from the town system of water supply when one exists, or by the use of an elevating machine, usually worked by a draught animal.

Based on this classical and complete arrangement, there emerged later developments, some successful and some not, which may take the form either of a slightly different arrangement (*e.g.*, the situation of the boiler in the centre of the steam room instead of in an adjacent room separated from it by a partition), or particularly by simplifications involving most often the omission of one or several of the rooms whose purpose was to permit a gradual increase in the temperature. These various modifications correspond to local habits or temporary customs which, in the present state of the documentation, it is still difficult to ascertain precisely.

Among the types of baths on which most information is available, however, are the Umayyad *ḥammāms*, successors to the *thermae* of antiquity from which they presumably derive—which explains their sudden appearance in the 2nd/8th century in an already developed form—but not without undergoing transformations profound enough to banish any idea of a mere slavish imitation of their models. We have only to compare the most important remains of baths from this period with earlier buildings to realize, in spite of the striking similarities in the methods of construction (the use of hypocausts and of heating pipes in the walls for example), the originality of the layout, in which we no longer find for example the traditional succession of the *apodyterium*, the *frigidarium*, the *tepidarium* and the *calidarium* nor their relative proportions.

In fact only the first of these terms can continue to be applied to the changing and rest room of the Umayyad *ḥammām*, which more or less retained the functions and appearance of the ancient *apodyterium*, even to the extent of including in its decoration statues and frescoes with figures imitated from Hellenistic works. But the adjacent unheated room has no longer any feature in common with the *frigidarium* (even though the frequently used name of "cold room" has led to a certain amount of confusion in this matter), of which it has retained neither the vast dimensions nor, more especially, the appointments (galleries, swimming-pools, gymnasiums) which made this room the chief element in the antique baths and the centre of the social and sporting activities which took place there. Finally, the two heated rooms also differ from the ancient *tepidarium* and *calidarium* or *sudatorium* in that they have come to fill, in relation to the other sections of the *ḥammām*, a place whose importance indicates a change from the customs practised in late antiquity.

This fact was first pointed out by D. Schlumberger, when he published the results of his preliminary investigations of a small private *ḥammām* of the Umayyad period, that of the castle of Ḳaṣr al-Ḥayr al-G̲h̲arbī [*q.v.*] near Palmyra. But the same adaptation of the antique plan to new requirements by the suppression of the *frigidarium* and parts of the architectural features henceforward of no use, is seen in the ruins of many other Umayyad sites, the true nature of which was first defined in the researches of J. Sauvaget. In fact not only is it illustrated by the famous baths of Ḳuṣayr ʿAmrā [*q.v.*] and of Ḥammām al-Ṣarak̲h̲ [*q.v.*] (the former of which owes its fame to its rich décor of paintings and both of which possess examples of an interesting elaboration of the rest room, adapted in this case to the function of

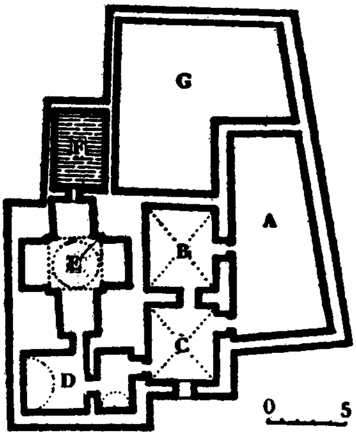

Fig. 1. Plan of a typical Umayyad *ḥammām* : the *ḥammām* of ʿAbda, where A and B are the undressing rooms, C is the unheated room, D the hot room, E the steam room, F the boiler, and G the service court (cf. J. Sauvaget, *Remarques*, fig. 7)

reception room for official personages), but it also explains the less well-known buildings, of sometimes doubtful date, the remains of which are still visible in the Syro-Jordanian steppe (at Djabal Says, Khirbat al-Bayḍā, ʿAbda, Ruḥayba and al-Ḥuṣub), and in which there regularly appear, besides the series of three small rooms—unheated, warm and hot—a room reserved for rest or for undressing and another, formerly containing the boiler, which was flanked on one side by the steam room and on the other by the essential service court (fig. 1).

The only exception to this uniform type is the magnificent *ḥammām* of Khirbat al-Mafdjar [*q.v.*], recently discovered in an Umayyad residence in the Jordan valley, which deserves in this connexion a special mention. Its two small interior rooms supplied with steam by an orifice made in the wall of the adjacent furnace room, and the two intermediate rooms of the same dimensions which preceded them, were in fact accompanied by a huge square hall, more than 30 metres long, with interior pillars and a roof of cupolas to which were annexed elaborate latrines and a small room with an exedra decorated with especial care. This vast *apodyterium*, access to which was through a huge porch, surmounted by a princely statue, which itself served as ante-room to the room with exedra where probably the owner of the bath sat, had been provided with a remarkable ornamentation—a mosaic pavement and painted and sculpted stucco in all its upper section. The presence of a large swimming-pool occupying the whole of the length of the south wall of the room reveals in addition a deliberate adaptation of the *frigidarium* of antiquity. This arrangement is quite exceptional in an Islamic *ḥammām*, and has already been proved to be compatible with the luxurious tastes of the founder of the castle; it must be seen in this setting of costly fantasy in order to understand why (apparently) no later building was inspired by it.

The arrangement of the later mediaeval baths, so far as can be judged from the scattered examples which exist, merely reproduces, with further simplification, that of the classical Umayyad prototypes: four rooms, consisting of an undressing room, two intermediate rooms and a steam room adjacent to the section containing the heating apparatus. This

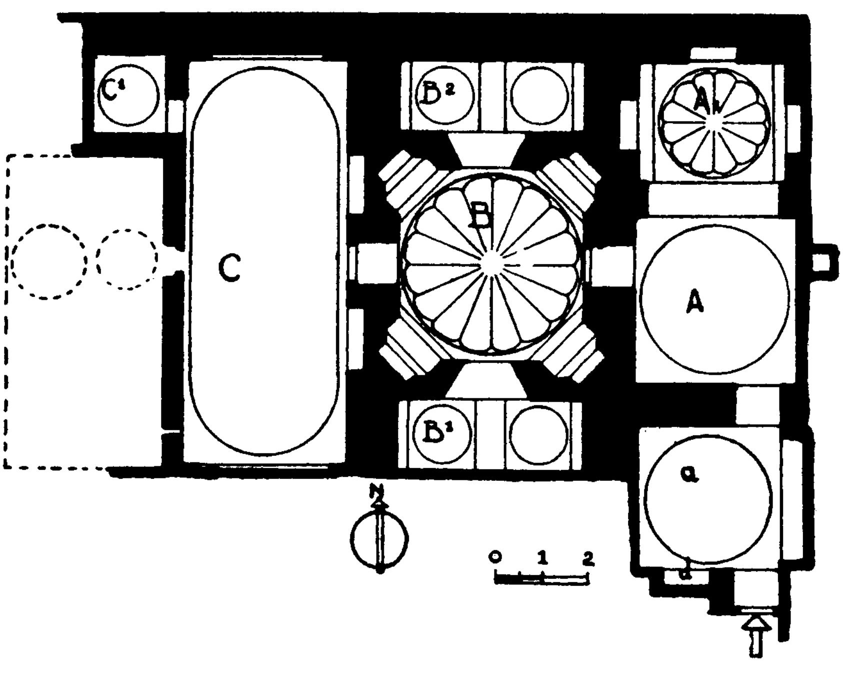

Fig. 2. Ayyūbid type: restoration of the original plan of the Sūḳ al-Bzūriya bath at Damascus, where A indicates the unheated rooms, B the hot room and its annexes, and C the steam room (cf. M. Ecochard, *Monuments ayyoubides*, fasc. ii, fig. 57)

is the plan to which in particular the Damascus baths of the Ayyūbid period conform. These have been the object of especially detailed archaeological studies and can therefore be profitably cited here, although unfortunately there exist no architectural data on the hiatus of four centuries which separates them from the Umayyad buildings or on the Iranian baths of the Saldjūḳ or earlier periods which might perhaps foreshadow some of their features (the brief notes by E. Schroeder, in A. U. Pope, *A survey of Persian art*, Oxford 1939, 998,concerning the existence of an early *ḥammām* at Nigar to the south of Kirmān are in this respect quite inadequate).

At Damascus, in the 6th/12th century, we first notice the abandoning of the system of hypocausts in favour of a more simple solution, which consists of passing the chimney of the stove beneath the paved floors that are to be heated: hence the rooms of the central part of the *ḥammām* are laid out according to the axis of this flue pipe. Next the effect of Mesopotamian influences on the architectural methods is felt in the lavish use of conches and ribbed cupolas. Finally there should be mentioned the clear predominance, in the arrangement of the whole, of the middle or warm room, which may have an elaborate octagonal form and which then forms the centre of the plan of the building (fig. 2).

The modifications which the following periods brought to this scheme involved firstly the disappearance, in the 9th/15th century, of the intermediate unheated room, then the continual expansion of the hot room which increased in decoration and in size, thanks to the multiplication of the *maḳṣūra*s which surrounded it, until, in the 12th/18th century, it predominated over all the other rooms and, in still more recent buildings, became the only room. Before a more than local importance is attributed to this arrangement, a similar evolution (which would have to be linked with a previous change in the habits of the users of the baths) would have to be established in other Syrian towns, in particular in Aleppo. It would also be useful to know whether it appeared in a neighbouring province such as Egypt, particularly in Cairo, where some early *ḥammām*s with a radiating plan, the majority of which go back to the Mamlūk period, have not yet been the subject of sufficiently detailed archaeological research.

In Spain and the Maghrib on the other hand, the buildings appear to belong to a different tradition, which is of Andalusian as well as Umayyad origin. Some very early specimens, including baths of the 5th/11th and 6th/12th centuries at Granada and Tlemcen, thus show a very great simplicity in conception and execution, with no attempt at architectural decoration anywhere except in their changing rooms. Next, in the 7th/13th and 8th/14th centuries, there appears a certain elaboration of the buildings due to the adoption, within axial and rectangular plans, of the types of cold, warm and hot rooms (with the warm room predominating) which were found in the Ayyūbid *ḥammām*s in the East. But the possible connexions between the well-known Marīnid baths (fig. 3) and their Eastern models at varying distances from them have not yet been studied nor even mentioned with the attention which the hypothesis deserves.

The baths built after the Saldjūḳid conquest in Iran, and the baths of Turkey, form a particularly important chapter in the history of the *ḥammām*, especially noticeable in the remarkable proliferation of buildings of this type in Anatolia and Istanbul. More solidly built than the Ṣafawid baths, on which in any case studies and surveys are lacking (one rare example is a bath of Kashān, the plan of which has been published by P. Coste, *Monuments modernes de la Perse*, Paris 1867, pl. 45), the Turkish *ḥammām*s have often been cited as works of the utmost technical perfection, conforming to the habitual Muslim arrangement while also inheriting the experience which the Byzantine buildiers had acquired earlier in this field. The Ottoman period above all saw the erection of many harmoniously arranged buildings, in which the principle of a multiplicity of rooms was abandoned in order to put the emphasis on the changing room and the steam room, which were most frequently built as majestic domed halls. These baths often consisted of two symmetrical groups of buildings which had no communication with each other—since one was reserved for men and one for women—but which were supplied by the same service annexes, on the model of various works of Sinān [*q.v.*] and of the Khāṣṣeki Ḥammāmī in Istanbul (fig. 4).

(J. SOURDEL-THOMINE)

In the Maghrib the *ḥammām*, as well as being a place intended for the major purification of the

Believer and for his bodily hygiene, is a meeting place and a centre of social life. With its entrance near the mosque, of which its acts almost as the antechamber, and sometimes situated in the middle of a *sūḳ*, it assumes in the Maghribī city the character of a social centre. The *ḥammām* is often several centuries old and proudly displays its letters of pedigree; and its double entrance door, painted in green and red, is sometimes surmounted by a marble plaque with an inscription testifying to its early foundation.

Although it is true that the forty or so Turkish baths in Tunis differ in size and in the comforts which they offer to their patrons, there is scarcely any variation in the general layout of the building and the way in which it works.

The area reserved for the users consists of two quite distinct parts: the section for dressing and resting and the bath proper, which includes warm and hot rooms, usually three in all, one leading into the next (see above).

The proprietor of the *ḥammām* (*ḥammāmdjī*) and the attendants formerly came from among the Mzabis from southern Algeria who had settled in Tunis. They formed a guild. In addition to the manager, the personnel consists of: one in charge of the dressing room (*ḥārəz əl-maḥraṣ*) helped by staff stationed in the rest room (*ḥārəz əl-maḳṣūra*); one in charge of the linen (*ḥārəz əl-bədəl*) assisted by a number of cubicle stewards and servants who wash the loin-cloths and several masseurs (*ṭayyāb*) whose services are available on request; one in charge of the heating (*frānḳī*) with one or two assistants. The name of "master of the bath" (*raʾīs al-ḥammām*) which is often given to him is a clear indication of the importance of his duties. Formerly the master of the furnace and his assistants were always natives of Ouargla (southern Algeria) and they too belonged to a special guild. They were employed without a contract, receiving each year from the owner a lump sum. The hairdresser and coffee waiter available for the clients do not form part of the staff but are tenants of the *ḥammām*. The staff of the women's baths are all women: the manageress and her deputy are assisted by a number of female attendants (*ḥārza*). There are no professional masseuses.

The client presents himself to the manager, who acts as cashier. When he enters the dressing-room he is taken in charge by the *ḥārəz əl-maḥraṣ* or the superintendent of the *maḳṣūra*, who gives him a loin-cloth (*fūṭa*), a bath towel (*bəshkīr*) and a pair of pattens *ḳabḳāb*). He is given also a second towel in which to wrap his clothes. He then goes into the *bīt al-bārəd*. On coming out of this "cold room", he gives his long bath-robe to the *ḥārəz əl-bədəl*, in charge of the linen, and, wearing only a loin-cloth, is led into the second room (*bīt əl-skhūn*). As soon as he has become sufficiently accustomed to the heat, he proceeds to the third room where he waits until he starts to sweat. After sweating abundantly he leaves the *ʿarrāḳa* and returns to the second room for friction with a special glove (*kāsa*), the scouring of his skin and, if he wishes, massage (*təmsīd*). The friction-glove is made of a mixture of woollen and goat's hair threads sewn together and arranged so as to form a rough surface. This vigorous friction enables the top layer of skin, together with the dirt (*ūsakh*) accumulated in the pores, to be rubbed off in greyish rolls.

When the friction, scraping and massage are completed, the bather goes into the cubicle to complete the purification and attentions necessary for hygiene. When asked by the cubicle steward, he slips his loin-cloth under the door, takes the two *bəshkīr* which the steward passes to him, wraps himself in them, and goes towards the *bīt əl-bədəl*. The *ḥārəz əl-bədəl* dries him, envelops him in fresh dry towels and wraps his head in a sponge-cloth in the form of a turban.

Then the superintendent of the dressing-room or of the rest room receives the bather in either the entrance hall or one of the little rest-rooms adjacent to it, wishes him good health and prepares a place for him to lie down. The coffee waiter comes to offer him refreshments. This is the time of relaxation after all the attentions which the bather has received, which lasts until the call inviting the clients to give up their places to other bathers.

The majority of *ḥammāms* serve at different times both men and women, though some are strictly reserved for one or the other sex. A veil stretched across in front of the entrance hall is often used to indicate that is is the women's turn. When woman are bathing the usual manager and staff are replaced entirely by women.

Formerly the Tunisian lady went to the bath with much ceremony and an escort of two or three servants. One carried the clean linen wrapped in a silk scarf (*ṣorra*), another, the silver or copper bucket (*ṣṭol əl-ḥammām*) in which were placed the traditional objects: a copper bowl with a long handle to ladle out the water (*ṭāṣa*), the box of fuller's earth (*ṭaffāla*), the coarse-toothed comb (*khallāṣ*), the fine-toothed comb made of tortoise-shell (*fəllāya*), the friction-glove and the small round "curry-comb" (*maḥākka*, *ḥakkāka*) made of threads of coarse wool or of hempen tow mounted on a cork disc. The clay (*ṭfal*) had been bought long before in the *sūḳ* and perfumed with rose-water, essence of rose geranium or orange-flower water.

Although most town houses contain all that is necessary for a woman's toilet, the Tunisian woman still patronizes the *ḥammām*. Nowadays many modern beauty-products replace the traditional lotions taken with the clean linen in the suitcase to the bath; but some of the procedures are repeated from one generation to another: after washing the body and the friction comes the application of *ṭfal* to the hair, the removal of bodily hair, etc. The session at the bath might be prolonged if the master of the heating did not produce a violent jet of steam, the *ḳaṭṭūs*, to remind the bathers that it is time to wrap themselves in the towels held out for them by the attendants and to go and rest in the *maḳṣūra*.

These women's sessions provide the occasion, both in towns and villages, for the young bride to parade herself before her friends in the various items of her trousseau. The proceedings are enlivened with songs, "youyou" and lengthy gossip. Women also take advantage of meetings at the *ḥammām* in order to make themselves up and wear all their finery.

In addition to its use for ritual purification [see WUḌŪʾ] the *ḥammām* is considered, in the popular phrase, as a "silent doctor" (*əṭ-ṭbīb əl-bakkūsh*), able by its warm atmosphere, as well as by the abundant perspiration which it produces, to cure all ailments and particularly the various forms of rheumatism.

All the great occasions in life are accompanied by a bath in the *ḥammām*. The expectant mother comes there in order to ensure an easier delivery; forty days after the birth, she comes again for purification. The young boy is taken there before his circumcision. The young bride visits it three times during the period of the marriage festivities: *ḥammām əl-ūsakh*, the bath for cleanness, seven days before the wedding; *ḥammām əl-dbagh*, the bath for the application of

henna on the third day of the celebrations; and *ḥammām əl-təshlīl*, the rinsing bath, on the eve of the consummation of the marriage. The future husband invites his friends to accompany him to the bath at the beginning of the marriage celebrations, returns after the application of henna, and is there again a few hours before entering the conjugal home and on the day following the wedding night.

The popular poets have not failed to write of the delicious bodily languor which drives away all memory of suffering and anxiety, the beneficial heat which induces rest and relaxation, the indefinable atmosphere of well-being and of mystery peculiar to *ḥammāms*: "water of winter, heat of summer, sweetness of autumn and smile of spring".

(A. Louis)

ḤAMMĀM AL-ṢARAKH is a ruined bath building which stands within an isolated enclosure wall about sixteen miles east of Zarḳaʾ in the Balḳā, and three miles south-east of Ḳaṣr al-Ḥallābāt. It was visited and first planned by H. C. Butler in 1905 and 1909; but the most recent drawings of the building were made by L. H. Vincent with K. A. C. Creswell in 1926 (Creswell, *Early Muslim Architecture*, i, 274-5). The ruins have since suffered much from earthquake and stone-robbers, so that all published photographs, including some more recent than 1926, show walls and vaults standing intact which no longer exist. Here, therefore, we describe a past state of affairs.

A square, stone-paved and cement-lined pool and a circular well close to the main building are the only visible signs of water. The bath is stone-built and vaulted throughout of locally quarried materials, the walls being for the most part of limestone ashlar, the vaulting partly of ashlar but mostly of rough-hewn shale fragments or a concrete of light volcanic cinders. Vaults and arches throughout are slightly pointed: barrel-vaults over rectangular and cross-vaults over square compartments. On the walls Butler and Musil (in 1909) both found traces of figured frescoes. The roofs were covered with a fine water-proof cement mixed with crushed pottery.

The building closely resembles Ḳuṣayr ʿAmra [*q.v.*] in plan and has analogies in certain respects with the bath at Khirbat al-Mafdjar [*q.v.*]. It comprises two clearly differentiated parts: a large hall with a deep recess on one axis flanked by two secluded chambers; and a series of smaller rooms. The hall served undoubtedly as an apodyterium and reception room, and the smaller rooms for bathing.

The hall is nearly square (8.9 × 7.9 m), with its corners towards the points of the compass. The shorter, south-west, wall containing the entrance is now totally destroyed. In the middle of the south-east side there is a deep recess, or *īwān*, from which two doors give access to two small flanking rooms each lit by three slit windows and furnished with a square niche in a back corner. The main hall is lit by three windows set high in the wall opposite the recess. It is roofed by three barrel-vaults resting on two transverse arches which spring from low wall-piers attached to the long walls. The central vault is carried into the recess. Similar vaults cover the flanking rooms.

A door in the north-east wall leads into the baths proper, which are strikingly small in relation to the hall. Three or four connecting rooms provide a sequence of increasing temperature. No furnace or hypocaust is visible, but vertical flues in the walls of the second and third rooms prove that these were heated, a tepidarium and calidarium respectively, the first being a cold room. Architectural interest is chiefly centred in the calidarium, a domed square with semi-circular apses in two opposite walls. In this room four wall arches carry ashlar pendentives supporting a dome comprised of shale fragments compressed between projecting radial ribs made of wedge-shaped lengths of shale. Eight round windows lighted the dome. The apses are semi-domed, with voussoirs set in wedge-like courses radiating from a lunate block at the centre of the springing. Each recess had a round-headed window.

Opposite the door of the calidarium a vaulted passage, nearly as wide as the room itself, leads to a rectangular chamber now totally demolished. Similar arrangements well preserved at Khirbat al-Mafdjar prove that this contained a boiler, doubtless heated by a furnace below, to provide steam for the calidarium.

The plan of Ḥammām al-Ṣarakh is almost identical with that of Ḳuṣayr ʿAmra, and this, with the frescoes, may suggest that the same mind planned both, and for the same purpose: to provide at once for the relaxation and official receptions of some Umayyad prince. No residence in either case stood near. In both a rectangular recess formed the princely *miḥrāb*, directly confronting the axis of an assembly hall and apodyterium. This reflects a simpler ceremonial than the separate and elaborate reception

room at Khirbat al-Mafdjar, attributed to al-Walīd b. Yazīd. Ḥammām al-Ṣarakh may then be dated some years or decades earlier; perhaps to the Caliphate of al-Walīd b. ʿAbd al-Malik, if Ḳuṣayr ʿAmra and another closely similar bath at Djabal Says (*Syria*, xx, 246-56) have been rightly so attributed.

(R. W. Hamilton)

ḤAMMŪDIDS, dynasty which reigned over various towns in Muslim Spain from 407/1016 till 450/1058. Sulaymān al-Mustaʿīn [*q.v.*], on his second succession to the caliphal throne in Shawwāl 403/ May 1013, had to distribute large fiefs among the Berbers who had raised him to power. He allotted to ʿAlī b. Ḥammūd the governorship of Ceuta and to his brother al-Ḳāsim that of Algeciras, Tangier, and Arzila. The two were genuine Idrīsids [*q.v.*], their great-grandfather Ḥammud being the great-grandson of Idrīs II. ʿAlī, who considered himself to be the heir of Hishām II [*q.v.*], proclaimed his independence, and on the pretext of liberating Hishām (whom he thought to be still alive), decided to make himself master of Cordova. Sulaymān al-Mustaʿīn put up almost no resistance and was defeated and made prisoner in Muḥarram 407/July 1016. The ambitious ʿAlī ordered the corpse of Hishām II to be disinterred, and on it being proved that he had been murdered, took it upon himself personally to execute Sulaymān as a regicide and had himself recognized as caliph with due form and ceremony. Thus he became the first non-Marwānid to occupy the Cordovan throne since the restoration of the Umayyads on Spanish soil. During the first eight months of his rule he won the approval of his subjects by applying the law strictly to the Berbers, who had become accustomed to immunity. But soon, seeing that Cordovans were beginning to mutter against him as a foreign usurper and to show their sympathy for the Umayyad pretender al-Murtaḍā, he forgot his moderation, allowed the Zanāta to enjoy their privileges and immunities, and subjected the capital to a reign of terror until he was murdered by three Slav palace slaves. His Zanāta partisans called upon his brother al-Ḳāsim, who was in Seville as governor, and proclaimed him caliph. The only pretender to dispute the throne with him was a great-grandson of ʿAbd al-Raḥmān III, who was proclaimed caliph on 10 Dhu 'l-Ḥidjdja 408/29 April 1018 by the Slav *fatā* Khayrān, lord of Almería, and the Arab Mundhir of Saragossa, but on attacking Granada before making for Cordova he was vanquished and killed. The Cordovans could now enjoy an unexpected tranquillity for three years, thanks to the moderation of al-Ḳāsim who, surrounded by a bodyguard of Negro mercenaries, won over the Slav chiefs who had upheld al-Murtaḍā. This liberal régime could not last. The Berbers of the capital, feeling themselves disregarded, invited Yaḥyā, the eldest son of ʿAlī b. Ḥammūd, to cross from Morocco to Málaga and march against Cordova. His aged uncle al-Ḳāsim gave up the struggle and took refuge in Seville. Yaḥyā was proclaimed caliph in the Alcázar of Cordova on 22 Rabīʿ II 412/5 August 1021. He could maintain himself on the throne for only a year and a half, for his insufferable arrogance alienated the sympathies of the very Berbers who had enthroned him, and he fled to Málaga. His uncle al-Ḳāsim returned from Seville to install himself once more in the capital, but after six months, on 21 Djumādā II 414/10 September 1023, the Cordovans, weary of the insolence of the Africans, rebelled and forced him to flee. The Sevillans declined to receive him and when he went to take refuge at Jerez his nephew Yaḥyā went from Málaga to besiege him. He gave himself up and was imprisoned with his two sons, to be murdered after a few years in prison. Yaḥyā reigned at Málaga until 427/1035. He had successors at Málaga until 449/1057, in which year Bādīs (see zīrids of Spain), the Berber prince of Granada, entered it and dethroned the last Ḥammūdid, Muḥammad II al-Mustaʿlī. At Algeciras al-Ḳāsim's son Muḥammad al-Mahdī reigned from 431/1039 to 440/1048 and his son al-Ḳāsim al-Wāthiḳ from 440/ 1048 to 450/1058. In this latter year Málaga was occupied by the Abbādids of Seville.

(A. Huici Miranda)

HĀMŌN, Moses, chief Jewish physician to Süleymān I. His father, Joseph Hāmōn, a native of Granada, served as physician at the court of Bāyezīd II and Selīm I. Probably born *ca.* 1490, Moses Hāmōn became a leading court physician and influential courtier under Süleymān I. He seems to have allied himself with the powerful court faction headed by Khurrem Sulṭān [*q.v.*], the Sultan's favourite consort, her daughter Mihr-i Māh [*q.v.*] and the latter's husband, the Grand Vizier Rüstem Pasha [*q.v.*], who, *inter alia*, conspired against the heir presumptive, Prince Muṣṭafā [*q.v.*], executed in 1553. Shortly before Hāmōn's death in 1554, he was dismissed as a result of the intrigues of envious colleagues or the temporary disgrace of Rüstem Pasha.

Hāmōn possessed a valuable collection of manuscripts, among them the famous Dioscorides codex of the 6th century A.D., now in Vienna. He wrote an early Turkish treatise on dentistry and was instrumental in the printing of several Hebrew works and of a well-known Persian translation of the Pentateuch. He also played an important part in Jewish communal affairs.

(U. Heyd)

HAMPĪ, the name now commonly given to the ruins of the capital city of the Vidjayanagara [*q.v.*] empire, on the right bank of the Tungabhadrā river 60 km. north-west of Bellary. The name seems to be derived from the prominent temple to Pampāpati (Kannada *h* < Old Kann. *p*) in the *bāzār* area.

The Vidjayanagara empire is of importance for the Muslim world not only as an active Hindū power which defied its Muslim neighbours for over two centuries, but also for the evidence it offers of the progressive synthesis of certain aspects of Hindū and Muslim cultures from the 8th/14th to the 10th/ 16th centuries; this article is concerned with that

synthesis as expressed in its buildings.

Most of the buildings of Vid̲j̲ayanagara are characteristically Hindū works in the late Hoysaḷa style; but in some the Muslim influence is apparent, especially where the building concerned is (presumably) one built for the Muslim community or by a section of it. It is known that the ruler Devarāya I (1406-22 A.D.) had many Muslim mercenaries in his service: the first of his line to appreciate the advantages of cavalry, he had imported many horses from Arabia and Persia and enlisted trained troopers to ride them; and reference is made also to the 'Turkish' bowmen he attracted by liberal grants of cash and land (the adjective is perhaps not to be taken literally, as *turaka, turas̲h̲ka* in non-Muslim Indian texts frequently means no more than 'Muslim'). They are no doubt responsible for reconstructions in the walls and gates of the citadel of Hampī: thus, the northern gate is of the typical Hindū beam-and-bracket construction, but the remains of the turret above it show arches and parapets of the same general shape as exhibited in the Bahmanī [*q.v.*] buildings at Gulbargā; the southern gateway, one of the main entrances to the city, shows a tall domed structure supported on four open arched sides, similar to the late Bahmanī and Barīd S̲h̲āhī tombs at Bīdar [*q.v.*]. Within the citadel is a large high-walled enclosure generally referred to as the *zanāna*; the accounts of travellers to the Vid̲j̲ayanagara court suggest that the kings did indeed keep their women in seclusion—a practice which was known in early Hinduism but seems to have been most freely adopted by Hindūs as a direct imitation of Muslim practice—but that they were allowed to watch spectacles taking place in the city. The so-called "watch towers" on the walls of the enclosure appear to have been built for the pleasure of the ladies of the *zanāna*, a purpose similar to that seen in the Mug̲h̲al palaces [see BURD̲J̲, iii, *ad fin.*]; these towers, one square and one octagonal, have arched openings on all their faces and are thus strikingly unlike any other Hindū work in the sub-continent, although the synthesis of the Hindū and Muslim styles appears here in that the roofs are of the stepped pattern which characterizes the temple roof (*śikhara*). Within the enclosure stands the finest and most complete of the mixed-style buildings, known as the Lotus Pavilion; this is an open pavilion on the ground floor, with massive piers and foliated arches showing a triple recession of planes of the intrados which recalls the style of the Lodī mosques of Dihlī [*q.v.*]. The upper storey is provided with numerous small arched windows in each face, originally equipped with wooden shutters, and is separated from the ground storey by a deep eaves roof on corbelled brackets very similar in effect to the deep eaves of the Bīd̲j̲āpur buildings. The roof, however, is of the Hindū pyramidal stepped variety. This appears to be a late building (ca. 983/1575 ?).

Outside the *zanāna* enclosure is a long oblong building with eleven tall arched openings alternating with walls of blind arches, generally known as the 'elephant stables', but which Havell takes to be the mosque built by Devarāya II (1422 ?-46 A.D.) for his Muslim troops. The arched chambers are domed, and the central chamber is surmounted by a square turret, probably originally crowned by a stepped tower of the Hindū pattern, approached by steps from within and therefore providing access to a high place to cry the *ad̲h̲ān*. A local tradition asserts that this building was later used as a stable for the state elephants, but there seems to be no trace of the occupancy of these animals; further work on the site, including excavation, will be necessary if the thesis that it was the mosque can be supported. A structure in the army commander's enclosure has been identified by Longhurst as Devarāya's mosque; but this building faces due north (the *ḳibla* here being slightly north of west) and the identification may be rejected.

Near the 'elephant stables' is an oblong arcaded building called a 'guard-room' by Longhurst and 'Rām Rād̲j̲'s treasury' by Havell; it has also been known as the 'concert hall'. This shows the best use of the structural arch in the Hampī buildings: foliated arches with radiating brick voussoirs, supported on slender columns; the roof is incomplete. Its purpose cannot now be known, but it obviously reflects work by Muslim craftsmen.

Other buildings of Muslim style at Hampī include some of the constructions associated with the elaborate irrigation system, the relation of which with the irrigation systems of the Muslim cities of Bīdar and Bīd̲j̲āpur has not yet been ascertained. These include two baths—the *ḥammām* was another Muslim institution borrowed by these Hindū dynasties—and an octagonal pavilion with fountains. About 1.8 km. to the west of the citadel stand two Muslim tombs whose style resembles that of the early Bahmanī period at Bīdar; nothing is known of the history of these tombs.

That the synthesized tradition of the Hampī buildings endured after the conquest of Vid̲j̲ayanagara by the Deccan Muslim confederacy at Tālikoṭā [*q.v.*] in 972/1565 is shown by the palace of the last dynasty built twenty years after the conquest at their new capital of Čandragiri, in the North Arcot district of Madras some 370 km. south-east of Hampī. This is a three-storeyed building with a façade 45 m. wide, each storey showing a range of pointed arches; inside there are excellent pillared halls, the upper one of intersecting arches roofed by shallow domes. The roof is crowned by seven pyramidal towers of the Hindū *śikhara* type.

AL-ḤAMRĀʾ, the name of several places in Morocco. This name has been or is still borne by:—

(1) Marrākus̲h̲: on the basis of numerous documents emanating from the Naṣrids and Saʿdids, Colonel de Castries has proposed translating the expression "*ḥamrāʾ Marrākus̲h̲*" by "l'Alhambra de Marrakech", and applying it to the palace or *ḳaṣaba* of the Saʿdids in that town. But other texts suggest that, even in the diplomatic vocabulary, the word *ḥamrāʾ* had progressively assumed the sense of capital (substantive or adjective) in the 11th/17th and 12th/18th centuries; and it seems that the true meaning of this word is optative, in that red, one of the Prophet's favourite colours, is a sign of joy, good fortune and above all power. Since the 19th century it has been customary in Morocco to reverse this expression (perhaps under European influence), and one writes "*Marrākus̲h̲ al-ḥamrāʾ*" (Marrākus̲h̲

the Red) or simply *al-Ḥamrāʾ*. On this question, see G. Deverdun, *Inscriptions arabes de Marrakech*, Rabat 1956, 17-23, which gives the bibliography. See further Muḥammad b. Ibrāhīm al-Zarhūnī, *Riḥla*, Rabat MS; French trans. Col. Justinard, *La Riḥla du Marabout de Tasaft*, Paris 1940, 17, 127, 128, 163, 197, and J. Caillé, *Les Accords internationaux du sultan Sidi Mohammed ben Abdallah*, Paris 1960, 155.

(2) Several villages in southern Morocco, see V. P. Lancre, *Repert. alpha. des confédérations de tribus ... et des agglomérations de la zone française de l'Empire chérifien*, Casablanca 1939, 380, 422.

(3) Al-Baṣra [*q.v.*]: the identification is given by al-Bakrī, *K. al-Masālik wa'l-mamālik*, 110, Fr. tr. M. G. de Slane, Algiers 1911-13, 216.

4) Dar al-Hamara: Marmol, *L'Afrique*, Fr. tr. Perrot d'Ablancourt, Paris 1667, ii, book IV, 200, gives this name to an ancient Roman town situated to the North of the mouth of the Wādī Lukkus, and adds in the table of contents "on the mountain of the Zarhoun" ... but this mistake has not been made on the map of the "Kingdom of Fez" (between pp. 136 and 137). Marmol identifies this locality, without either proof or reason, with "l'Epticienne de Ptolemée". Dar al-Hamara has not yet been discovered.

5) Fās: al-Khūrī, in his *Akrab al-mawārid*, Beirut 1889, records under the word *al-ḥamrāʾ*, though without any evidence, "the name of the new town of Fās". We know of a mosque at Fās with this name, the significance of which remains enigmatic.

(Sidjilmasa did not bear the name *al-ḥamrāʾ*, but rather *al-ʿamrāʾ*: see D. J. and J. Meunié, *Abbar, cité royale du Tafilalet*, in *Hesp.*, i/2 (2e trim.), 1959.)

Bibliography: in the article.

(G. DEVERDUN)

AL-ḤAMRĀʾ, the Alhambra of Granada [see GHARNĀṬA].

ḤAMRĪN, DJABAL, modern name of an isolated western chain of the mountains of the Iranian border, about 500 miles long. Its northern extremity crops up in the Djazīra, south of the Djabal Sindjar and the Tigris flows through it at al-Fatḥa. At Shahrabān it is crossed by the great road from Baghdād to Hamadān and Tehrān, at Ahwāz it separates the plains of the ancient Elam, the modern Khūzistān, from those of the Shaṭṭ al-ʿArab, and is finally united with the Iranian plateau in the province of Fārs. This range has had its name repeatedly changed. Its Assyrian appellation is not certain. The Syrians called it Ūrukh or Orukh, which appears in Polybius, v, 52 with reference to the campaign of Antiochus III against Molon, as τὸ Ὀρειχὸν ὄρος. Bārimmā is the oldest Arabic name, which may be traced to the Syriac Bēth Remmān, *i.e.*, temple of Rimmon, probably an Assyrian sanctuary. The mountains took this name from a village on the eastern bank of the Tigris, where the river flows through the mountains. It lay on the Baghdād-Mawṣil road, was inhabited by Jacobites and for a time formed a bishopric with Bēth Wāzīḳ. Ḳudāma and Yāḳūt give the Syrian name Sātīdamā to the western part of the range in the Djazīra; the word means blood-drinker and appears elsewhere as the name of frontier rivers. Later in Ibn Ḥawḳal, this western part is called Djabal Shaḳūḳ, traces of which name remain in that of the modern village of al-Shaḳḳ. Iṣṭakhrī and Yāḳūt, following Abū Zayd al-Balkhī, say that there were springs of pitch in the midst of the waters, as indeed is still the case at the place where the Tigris breaks through the Bārimmā, and that the range extended from the centre of Djazīra in the west, to the borders of Kermān in the east, where it becomes the hills of Māsabadhān (Pusht-i kūh). The remarkable length of this homogeneous range has given rise to fanciful notions, so that Yāḳūt, for example, speaks of *al-djabal al-muḥīṭ bi 'l-arḍ*, as comparable with the ocean surrounding the earth. The modern name of Ḥamrīn appears first in Yāḳūt (iii, 7) under the form Ḥumrīn. It is found also as early as 758/1357 in the great *waḳfiyya* inscription of the Madrasa al-Mirdjāniyya (cf. L. Massignon, *Mission en Mésopotamie, Inst. Français d'Arch. Or.*, Cairo 1912, 16, 28). The part west of the Tigris is now called Djabal Makḥūl. A parallel range is called Djabal Mukayḥil, *i.e.*, coloured with *kuḥl*, probably after a village on the Tigris (Assemani, *Bibl. Orient.*, ii, 218, and *Marāṣid*). Such names derived from colours are nowadays fast driving out the ancient names from Arab nomenclature; even Ḥumrīn is a modern name, the "reddish", from *aḥmar*, in spite of the old Syriac ending in *-īn*. A place close to the Tigris bears the ancient, expressive name of Khanūḳa which means the "strangled" or "confined".

In the unpublished Turkish work *Djāmiʿ al-anwār fī manāḳib al-akhyār* of Ṣafā al-Dīn ʿĪsā al-Ḳādirī al-Naḳshbandī al-Bandanīdjī of 1077/1666 a tomb of Mādjid al-Kurdī (d. 567/1171-2) is mentioned as a well-known place of pilgrimage on the Ḥamrīn; it has not yet been identified (see Massignon, *op. cit.*, 60).

(E. HERZFELD*)

ḤAMŪLA, name given in some parts of the Arab Middle East to a group of people who claim descent from a common ancestor, usually five to seven generations removed from the living. The word is derived from the Arabic verb *ḥamala*, to carry, and literally means a "female carrier". Some writers believe that the reference is to a beast of work and that the word was originally used in this sense to describe the landless patronymic groups who worked as tenants for landowners. A more plausible explanation is that the reference is to a woman in her capacity of bearing children. E. Peters [see *Bibl.*] suggests that such reference symbolizes descent from 'one womb' and signifies full brother unity and hence a high degree of group cohesion.

The *ḥamūla* is usually a territorial group whose members cooperate economically and politically. In Arab villages in Palestine during the Ottoman régime each *ḥamūla* occupied a special quarter (*ḥāra*) and its members held adjacent plots of common land (*mushāʿ*). The members cooperated in agricultural work, exchanged gifts on special occasions and helped each other economically when in need. Politically, the *ḥamūla* formed a "blood group" whose members paid or received blood compensation (*diya*) collectively in cases of homicide. Its members were described as 'those who stand together in one line' (*yaṣuffu maʿa baʿḍ*). They literally "stood" in this way on two major occasions: in a peace-making ceremony (*ṣulḥa* [*q.v.*]) and in the graveyard when

burying one of their number.

The men of a *ḥamūla* were also linked together through the sharing of a number of rights and obligations in relation to one another's sisters and daughters. They had a priority right in marrying a woman from within the *ḥamūla* (a first, or a classificatory, father's brother's daughter — *bint ʿamm*) over any outsider. They were also bound to protect the honour of *ḥamūla* women. Through the practice of preferential in-*ḥamūla* marriage they were further linked together by matrilateral and affinal ties. Children born of such marriage had the same men as both paternal and maternal uncles or cousins (*muʿammamīn wa mukhawwalīn*) and in cases of disputes were not likely to harbour conflicts of loyalties.

In subsequent decades law and order came progressively under the control of the centralized government, and common land was increasingly converted to private property. As a result the *ḥamūla* lost some of its economic and political functions. Also, stratification cut across *ḥamūla* boundaries and the principle of in-*ḥamūla* marriage came into conflict with the principle of equality of status between spouses in marriage [see KAFĀʾA], and this brought further disruption to the *ḥamūla*.

However, largely through the enduring ties resulting from in-*ḥamūla* marriage, from co-residence and from continued cooperation in a number of ways, the *ḥamūla* has shown a remarkable degree of persistence in the face of drastic social change. Under some circumstances it has assumed new functions in new political and economic situations.

Bibliography: Most of the material so far published on the *ḥamūla* deals only with peasant and Bedouin communities in Palestine and Israel: A. Jaussen, *Coutumes des Arabes au pays de Moab*, Paris 1908; J. Weulersse, *Paysans de Syrie et du Proche Orient*, Paris n.d. [?1946]; Hilma Granquist, *Marriage conditions in a Palestinian village*, Helsingfors 1931-3; eadem, *Arabiskt Familjeliv*, Stockholm 1935; *Conditions in Arab villages, 1944*, in *General Monthly Bulletin of Statistics*, London, July and September 1945; R. Montagne, *La civilisation du désert*, Paris 1947; Afif Tannous, *The Arab village community in the Middle East* [Smithsonian Report for 1943, publication 3760], Washington D.C. 1944, 523-44; A. Granott, *The land system in Palestine*, London 1952; E. Peters, *The proliferation of segments in the lineage of the Bedouin in Cyrenaica*, in *Journal of the Royal Anthropological Institute*, xc/1 (1960); A. Cohen, *Arab border villages in Israel*, Manchester 1965. (A. COHEN)

HĀMŪN, name for a salt plain in eastern Īrān, Afghānistān and Balūčistān, usually the drainage area of a river. The etymology of the word, found in Pahlavi as *dasht-ē hāmūn*, is disputed, but it is used especially for the lake in Sīstān into which the Hilmand River [*q.v.*] drains. This lake or swamp changes its size and even location according to the season. The usual name for the lake, until recent times, was Zarah or Zirih (compare Avestan *zrayah* "lake"), but this name is now used for the depression in Afghānistān south of Sīstān into which the Hilmand flows when the water is excessive (Gawd-i Zarah). One may find much information about the lake of Sīstān under the name Zarah in the Arabic and Persian geographers.

Bibliography: Le Strange, 338; *Taʾrīkh-i Sīstān*, ed. M. Bahār, Tehrān 1936, *passim*; *Ḥudūd al-ʿālam*, 185; G. P. Tate, *Seistan*, Calcutta 1910-12, 2 vols. (R. N. FRYE)

HAMZA, orthographical sign *alif*, which is the first letter of the Arabic alphabet, with numerical value *one*; transcribed ʾ internally and at the end of words, ignored initially (except in special cases) in the system of the *EI*.

Definition: *unvoiced glottal occlusive*. For the Arab grammarians, *hamza* is a *ḥarf ṣaḥīḥ* defined as: *shadīda madjhūra*, having as *makhradj*: *akṣā ʾl-ḥalḳ* "the farthest part of the throat" (like *h*) (al-Zamakhsharī, *Mufaṣṣal*², § 732). For the phonological oppositions of the phoneme *hamza*, see J. Cantineau, *Esquisse*, 178; for the incompatibilities, *ibid.*, 201.

Hamza madjhūra. Hamza, a priori, should be unvoiced, J. Cantineau has said (see below); nevertheless he placed it, "with every reserve" it is true, as a voiced sound opposite the unvoiced *h* (*Consonantisme*, 280). The symmetry of the system benefited by this, but there is very little probability that *hamza* was voiced in Arabic. There was simply a mistake on the part of the Arab grammarians, who were unable to distinguish sufficiently the vowel articulated with the *hamza* and the unvoiced consonantal element of the *hamza*; the vowel having become an integral part of the *hamza*, the latter was then of course voiced. The *makhradj* given in the definition of *hamza* is that taught by Sībawayhi, followed by grammatical tradition. As for al-Khalīl, he does not even seem to have perceived a consonantal element in the *hamza*. He considers it like *alif, wāw, yāʾ*: they are called *djūf* (pl. of *adjwaf*) "because they come out of the *djawf*, the hollow of the breast"; "they are *fiʾl-hawāʾ*, in the air [expired]; they have no articulatory region to which they can be assigned except the *djawf*, the hollow of the breast" (see *Traité*, § 44 j *n.* and § 46 f). His *Kitāb al-ʿAyn* begins with *ʿayn*, *akṣā ʾl-ḥuruf kullihā* "the farthest away of all the *ḥurūf*", according to his description. See *Traité*, § 46 a-f; J. Cantineau, *Cours*, 22, *Esquisse*, 187.

Alif as sign of two *ḥarf*s. In phonetics, the Arab grammarians considered *alif* as the sign of two *ḥarf*s: *hamza*, here definite, and *alif ḥarf al-madd*, called *alif layyina* (*ḥarf muʿtall*), except only al-Mubarrad, who ignored *hamza* (see *Traité*, § 44 a *n.* and particularly Ibn Djinnī, *Sirr ṣināʿa*, i, 46).

The Arabic script is derived from the Nabatean Aramaic writing. This, like the more ancient Aramaic writing, denoted the Semitic glottal occlusive by the character *ālaf*. In Aramaic this occlusive had become very much weakened; in Nabatean *ālaf* served to denote final *ā* in all emphatic states. Thus there is already in this script the double use of *ālaf*, but in a restricted manner as regards to notation of *ā*. There is no example of the notation of this long vowel in the middle of a word. Such notation by means of *alif* is an Arab innovation (J. Cantineau, *Nabatéen*, i, Paris, 1930, 47). But this introduction of *alif* for *ā* in the script of the text of the Ḳurʾān was carried out irregularly, under the influence of partial improvements, inserted at various periods, without any definite plan (see R. Blachère, *Introduction au Coran*², Paris 1959, 71, 80, 93-4, 101). The Cairo edition of the Ḳurʾān (published under the patronage of King Fuʾād I), which is an archaizing edition, makes good the *alif*s lacking in the text with a superscript upright *alif* (see *ibid.*, 152-3). Even in current Arabic writing, *alif* is lacking in the ductus of some words, for example. in *lākin* "but" and some demonstrative pronouns

Modifications. "A glottal occlusive ʾ, which should *a priori* be unvoiced, is attested in all ancient Semitic languages and in some modern dialects" (J. Cantineau, *Consonantisme*, 288). It was therefore part of the common Semitic consonantal system. In Arabic, one modification of *hamza* which appears

to be unconditioned is the development of initial *hamza* into *ʿayn*: the *ʿanʿana* of the Tamīm and the Ḳays (see *Muzhir*[3], i, 221 end: C. Rabin, *Anc. West-Ar.*, § 2 o, 8 *q*, 14 *f*). They said, for example, *ʿudhn* for *ʾudhn* "ear". More important modifications affected *hamza* in the Ḥidjāz where it became very weak.

The Arab grammarians (Sībawayhi, ii, Ch. 411; al-Zamakhsharī, *Mufaṣṣal*[2], 658-62) designated all the accidents which can befall *hamza* as *takhfīf al-hamza*. This *takhfīf*, literally "weakening", includes (1) the *hamza bayna bayna*; (2) the phonetic change of *hamza* into another articulation; this is the *ibdāl* of *hamza*, which is properly a *ḳalb*; (3) the suppression (*ḥadhf*) of *hamza*. All this has been set out in detail in H. Fleisch, *Traité*, § 17 to 20, and by J. Cantineau in *Cours*, 77-84.

(1) The *hamza bayna bayna*. The 105th question discussed in the *Kitāb al-Inṣāf* by Ibn al-Anbārī demonstrates the difficulty which the Arabs found in explaining this; many authors have written of it (references in *Traité*, § 45 b). The European writers, G. Weil, A. Schaade (references *ibid.*), were no more successful in achieving a satisfactory explanation and J. Cantineau is not very clear in *Cours*, 77. The Arabs, as the existence of *hamza* in their language indicates, were a people who practised "the hard attack" on vowels (see J. Marouzeau, *Lexique de la terminologie linguistique*[3], s.v. *attaque*); that is to say, in the articulation of a vowel, there was first precession (closing) of the vocal cords; then their sudden opening produced the explosive glottal stop, the *hamza*; then came the vibrations of the vowel; and when the vowel was ended the vocal cords closed. This explains why they needed a *hamza* to pronounce an initial vowel and why they were unable to pronounce two vowels successively with a simple hiatus; when the first vowel was ended the vocal cords closed into the position for the hard attack on the second.

The *hamza bayna bayna*, according to the Arab grammarians, was produced intervocally, when, after articulation of a vowel belonging to a preceding syllable, the following syllable had to be enunciated beginning with a *hamza*, as follows: *-āʾa-* in *sāʾala*, *-aʾa-* in *saʾala*, *-āʾu-* in *tasāʾul*, *-aʾu-* in *laʾuma*, *-āʾi-* in *ḳāʾil*, *-uʾi-* in *suʾila*, etc. After the articulation of the first vowel, the vocal cords closed, as has been said, into the position for the hard attack on the second, but, after the closure of the vocal cords there was no explosive glottal stop: the *hamza* was reduced to the firm clear interruption established by the closure of the vocal cords. One passed from this closure, characterized by strong articulatory tension (since it begins the first part of the syllable, with increased tension) direct to the vocalic vibrations; this was sufficient to maintain the autonomy of the syllable. But it is apparent that, according to the extent to which the glottal stop was attenuated, many degrees of weakening of the *hamza* were possible, right up to its absence (*hamza bayna bayna*).

The Arab grammarians were unable to make this analysis. They lacked a proper notion of the vowel; their *ḥaraka* is not a *ḥarf* and has no autonomy; they had to proceed by means of the detour of the *ḥarf al-madd*, of which the *ḥaraka* formed part. They recognized the weakness of the *hamza bayna bayna*, near the state of *sākin*, but still *mutaḥarrik*. In the expression of Sībawayhi *hamza bayna bayna* (ii, 452, *l.* 10) they saw the indication of an "intermediate" *hamza*, that is, one placed between two *makhradj* (as is made clear in *Mufaṣṣal*[2], 165, *l.* 19-20): for (ʾ)*a*, between the *makhradj* of the *hamza* and the *makhradj* of the *alif* (of which the *fatḥa* is a part); for (ʾ)*i* between the *makhradj* of the *hamza* and the *makhradj* of the *yāʾ* (*sākina*) (of which the *kasra* is a part), etc. These explanations remain obscure by reason of the deficiency of the means of analysis at the Arabs' command.

(2) The *ibdāl* (*ḳalb*) of *hamza*. This *ibdāl* was produced only in the middle of a word or in the conjunction of two different words. In both cases the standardizing activity of the Arab grammarians led to the acceptance of the sequences *-iʾa-* > *-iya-*, *-uʾa-* > *-uwa-*, as permitted (though not obligatory) assimilations, *e.g.*, *muliʾat* in *Ḳurʾān*, LXXII, 8 is read as *muliyat*; *muʾadjdjal* and *muwadjdjal* "which has a fixed term". They rejected *-iʾu-* > *-iyu-*, *-iʾi-* > *-iyi-* and *-uʾi-* > *-uwi-*, though these pronunciations have existed among the Arabs. In these cases they admitted the possibility only of a *hamza bayna bayna*. On the other hand, after *ū* and *ī*, they rejected the pronunciation of a *hamza bayna bayna* but admitted assimilation: *khaṭīʾat* > **khaṭīyat*, then *khaṭiyyat* "sin", *maḳrūʾun* > **maḳrūwun*, then *maḳruwwun* "read (passive participle)".

In the middle of a word, in the sequence *-aʾa-*, the weakness of the *hamza* might lead to its disappearance. The *hamza* simply dropped out and the two adjointing short vowels contracted into one long vowel: *-aʾa-* > *-ā-*. This may explain the form *sāla* for *saʾala* "to ask".

(3) Suppression (*ḥadhf*) of the *hamza*. Except in the case of pause, *hamza* placed between vowel and consonant or consonant and vowel *may* disappear: between vowel and consonant, it disappears and there is a compensatory prolongation of the vowel, *e.g.*, *raʾs* > *rās* "head", *dhiʾb* > *dhīb* "wolf", *muʾmin* > *mūmin* "believer"; between consonant and vowel it simply drops out, *e.g.*, *ḥawʾab* > *ḥawab* "wide valley", *sawʾat* > *sawat* "turpitude"; this may explain *yasalu* for *yasʾalu* (unaccomplished of *saʾala*). Cases of compensatory prolongation of the vowel are few, as *al-marʾat* > *al-marāt* "the woman", *al-kamʾat* > *al-kamāt* "the truffle".

Meeting of two *hamza*s. The Arabs generally experienced especial distaste for repeating the same consonant successively when the separator was a simple short vowel (see H. Fleisch, *Traité*, § 28). This distaste was much increased when it was a question of repeating *hamza*. There are no Arabic words with *hamza* as 1st and 2nd or 2nd and 3rd radicals. *LA* (i, 14-5/i, 23a-24b) gives only 7 roots with *hamza* as 1st and 3rd radicals, all only slightly productive and of secondary origin (see *Traité*, § 20 a). Nevertheless the Arabic language was unable to avoid the meeting of two *hamza*s, whether in the pattern of morphological forms or in the employment of words with *hamza* as their 1st or 3rd radical.

Thus the Arab grammarians distinguished between a meeting of two *hamza*s in the same word and a meeting of two *hamza*s in two different words (at the end of one and the beginning of the next). All the details cannot be given here, but reference may be made to H. Fleisch, *Traité*, § 20 d-p, or to J. Cantineau, *Cours*, 82-3. For two successive *hamza*s in the same word, the following normal changes may be briefly indicated: *ʾaʾ* > *ʾā*, by dissimilation and compensatory prolongation of the vowel, *e.g.*, **ʾaʾkharu* > *ʾākharu* "other"; *ʾuʾ* > *ʾū*, similarly by dissimilation, *e.g.*, **ʾuʾsaru* > *ʾūsaru* "I am bound"; *ʾiʾ* > *ʾī*, equally by dissimilation, *e.g.*, **ʾiʾthar* > *ʾīthār* "to choose". For haplologies or dissimilations occurring in nouns and particles, see *Traité*, § 30 h and i.

For the repercussions of the weakness of *hamza* on the morphological system see J. Cantineau, *Cours*, 81-2, or *Traité*, § 22. The dissimilation **ʾarʾā* > *ʾarā* "I see" may be noted. Dissimilation may also have been at work in *ʾasʾalu* > *ʾasalu* "I ask"; *saʾala* and its unaccomplished may have undergone various influences (see *ibid.*, § 22 b and d).

For the treatment of the pause on *hamza* see J. Cantineau, *loc. cit.*, 80-1 or *Traité*, § 21.

The action of the Arab grammarians in the question of *hamza* may be summed up as follows: adhering to the tradition of the Tamīm, their efforts at standardization were a reaction against the pronunciation of the Ḥidjāz. As possible, but not obligatory, *ibdāl* they accepted only *iʾa* > *iya* and *uʾa* > *uwa*; as possible, but not obligatory *ḥadhf* they accepted cases like *raʾs* > *rās*, *dhiʾb* > *dhīb*, *muʾmin* > *mūmin*. In the meeting of two *hamza*s, apart from cases like *ʾaʾ* > *ʾā* given above, they set up as standard the weakening (*hamza bayna bayna*) of one of the two *hamza*s. But one thing remained outside the scope of their attack: the diversity in writing *hamza*.

Orthography of *hamza*. The very first rudimentary attempts to put the Ḳurʾān into writing were made according to the local pronunciation of the Ḥidjāz, which subjected *hamza* to all the *takhfīf* already described. The Ḳurʾānic orthography however was surrounded with a holy reverence which forbade any change in the traditional ductus of the words. When the Muslim community and its leaders wished to fill in the inadequacies of this orthography and pass from *scriptio defectiva* to *scriptio plena* (see R. Blachère, *Introduction*, 4, 71, 78-98) they had to give a sign to *hamza*, properly pronounced, in contrast to the usage of the Ḥidjāz. They used a point, but of a colour different from that of the vowel points. The system lasted a long time; "it was still the current usage in the 5th/11th century at the time of al-Dānī" (*ibid.* 97). The current sign appears to use a little *ʿayn* instead of the point. Placed over *alif*, the complementary sign indicated for *alif* the glottal occlusive pronunciation (*hamza*). When, by *ibdāl*, this glottal occlusive had become *w* or *y*, entailing *wāw* or *yāʾ* in the ductus of the word, the sign of *hamza* was placed above them; this is the origin of *wāw* and *yāʾ* as *kursī* of *hamza*. When nothing remained in the spelling to recall the glottal occlusive, the *hamza* was put back in the empty space, so to say, that is, without *kursī*. These are, schematically, the principal lines of the story of writing *hamza*. It was conditioned by the anxiety to preserve the glottal occlusive *hamza* in an unalterable text which had not made provision for it. But there remain obscurities in the orthography of verbs with *hamza* as 2nd radical, in the accomplished of the forms *faʿila*, *faʿula*, *fuʿila*. See *Traité*, § 16; on the writing of *hamza*, al-Zadjdjādjī, *al-Djumal*, 277-80; on the usage of the Cairo Vulgate, R. Blachère, *Introduction*, 151-2.

Difficult cases. According to Ibn al-Sikkīt (C. Rabin, *Anc. West-Ar.*, § 14 s), *hamza* sometimes develops into *h* among the Ṭayyiʾ, *e.g.*, *hin* for *ʾin* "if". "But it is difficult to say whether we can speak here of a sound change", adds C. Rabin. For *ʾa* as interrogative particle, Wright (*Ar. Gr.*[3], i, 282 C) quotes the ancient dialect forms *hamā* (= *ha* + *mā*) for *ʾamā* (= *ʾa* + *mā*) and *hadhā-lladhī* for *ʾadhā-lladhī* "Is this he who?" Is there development from *hamza* to *h*? G. Garbini, *Sull' alternanza h-ʾ in semitico* (in *AIUON*, sezione linguistica, i (1959), 47-52) on every occasion when he acknowledges an alternation *h-ʾ*, considers that the *h* must be regarded as primitive and the *hamza* as secondary, thus: *h* > *ʾ*, in accordance with the general tendency of "the laryngeals and the pharyngeals" to weaken.— Matters are not so simple as that. But one point at least may be observed: *hamza* as a demonstrative element appears in Arabic with the three vocalic states (as does an independent base): *ʾa*, *ʾā*, *ʾay*, employed as vocative particles.

Modern dialects. J. Cantineau (*Cours*, 84-5) has set out the situation of *hamza* in the modern dialects: in eastern dialects, where "*hamza*, though weakened, has remained a phoneme in the phonological sense of the word" (84); and in Maghrib dialects where "*hamza* is no longer a phoneme and has almost entirely disappeared" (*ibid.*). Reference should be made to him.

Bibliography: In the text *Traité* refers to H. Fleisch, *Traité de philologie arabe*, i, Beirut, 1961. The publications of J. Cantineau, *Cours de phonétique arabe*, *Esquisse d'une phonologie de l'arabe classique*, *Consonantisme du sémitique*, are quoted respectively as *Cours*, *Esquisse*, *Consonantisme*, with reference to the Jean Cantineau memorial volume *Études de linguistique arabe*. The article *hamza* in *al-Muʿdjam al-kabīr*, i, 1-32 (Cairo 1956, Madjmaʿ al-lugha al-ʿarabiyya) gives an account of the whole Arab viewpoint, but without references, or with vague references only. The exclusion of *hamza* from the number of the *ḥurūf*, attributed to Abu 'l-ʿAbbās al-Mubarrad by 4 MSS of the *Sirr ṣināʿa* of Ibn Djinnī (see the edition, i, 46), is attributed in this *Muʿdjam* (p. 1) to Abu 'l-ʿAbbās Thaʿlab. The art. *hamza* in *LA* (i, 10-4/i, 17-22) gives the names of all the *hamza*s distinguished by the Arabs, *takhfīf* and the treatment of the *ḳirāʾāt*. For the *khaṭaʾ al-ʿawwām*, the mistakes of the ordinary people over *hamza*, see Ibn Ḳutayba, *Adab al-kātib*, ed. Grünert, 392-400 (repeated in the *Muzhir*[3] by al-Suyūṭī, i, 311-3). The *Cours* of J. Cantineau or H. Fleisch, *Traité*, give further precise useful references; otherwise see under ḤURŪF AL-HIDJĀʾ. For a general discussion of the phonetics of Arabic see MAKHĀRIDJ AL-ḤURŪF. For the use of *hamza* as *mater lectionis* for the *iḍāfat* of Persian, see IḌĀFA, ii.

(H. FLEISCH)

ḤAMZA B. **ʿABD ALLĀH** [see ḤAMZA B. ʿABD AL-MUṬṬALIB].

ḤAMZA B. **ʿABD** AL-**MUṬṬALIB**, the paternal uncle of the Prophet, was the son of ʿAbd al-Muṭṭalib and Hāla bint Wuhayb. He played a part in negotiating with Khuwaylid b. Asad, the father of Khadīdja, for the Prophet's marriage, and on his conversion became one of the bravest champions of Islam, although he had previously been an opponent of the new religion. He defended the Prophet against the insults of Abū Djahl, took part in the action against the Jewish Ḳaynuḳāʿ clan, and led an expedition to the sea coast at al-ʿĪṣ with thirty of the Muhādjirūn. On the way they encountered the followers of Abū Djahl but there was no fighting, thanks to the intervention of Madjdī b. ʿAmr al-Djuhanī. Ḥamza fought with great courage at Badr (2/624), distinguishing himself in single combat with many polytheists, but in the following year he was slain fighting heroically at Uḥud by the Abyssinian slave Waḥshī who thereby gained his manumission. After he fell, his body was barbarously mutilated by Hind bint ʿUtba who chewed his liver. This was evidently a survival of prehistoric animism.

Lammens, *Fāṭima et les filles de Mahomet*, 23, 25, 30, 45, 46, 138; Ibn Ḳays al-Ruḳayyāt, *Dīwān* (ed. Rhodokanakis), no. xxxix, 20; *Aghānī*, iv, 25; xiv, 15, 22; xix, 81-82.

Like so many heroes, Ḥamza passed into the world of legend after his death and became the central figure of a popular romance to whom were attributed all manner of fantastic adventures. These took place in lands which the real Ḥamza never visited—Ceylon, China, Central Asia and Rūm. The explanation suggested by Bahār (*Sabk-shināsī*, i, 284-5) is that the source was a work, no longer extant, entitled *Ḳiṣṣa-i maghāzī-i Ḥamza* which is mentioned in the *Taʾrīkh-i Sīstān*. This deals with the exploits of a Persian Khāridjī leader, Ḥamza b. ʿAbd Allāh, who led an insurrectionary movement against Hārūn al-Rashīd and his successors. According to the *Taʾrīkh-i Sīstān*, Ḥamza undertook expeditions to Sind, Hind and Sarandīb (*i.e.*, India and Ceylon). His boldness appealed to the Persian imagination long after the Khāridjī movement had died down and, by identification with the Prophet's uncle, he became an orthodox Muslim hero in popular literature, acceptable to all.

Before passing to the Romance of Amīr Ḥamza, it is necessary to discuss the career of Ḥamza b. ʿAbd Allāh very briefly. His name is given in the *Zayn al-akhbār* of Gardīzī as Ḥamza b. Ādharak, which is spelt in the Arabic sources as Adrak or Atrak. Ṭabarī gives only a brief outline of his life but a more detailed account occurs in the Persian sources. He was a native of Sīstān and the son of a *dihḳān*, tracing his genealogy to Zav, the son of Ṭahmāsb. Since one of the Caliph's agents had made insulting remarks about his lineage, he rebelled. Ṭabarī and Ibn al-Athīr (whom Gardīzī follows) state that this took place in 179/795-6. In the *Taʾrīkh-i Bayhaḳ*, however, the date is given as 181/797-8, which is accepted by Mme Pigulevskaya. Ḥamza successfully defied al-Rashīd and prevented the men of Sīstān from paying the *kharādj*. Against his growing power, ʿAlī b. ʿĪsā, the governor of Khurāsān, asked for help from the Caliph who came in person to Sīstān in 192/807-8. Although the latter gave him a written promise of safe-conduct, Ḥamza refused to accept it and determined on further resistance. After the death of al-Rashīd, he led expeditions to Sind and Hind and died in 213/828-9. Gardīzī says, on the other hand, that he was killed in battle in 210/825-6.

In favour of Ḥamza the Khāridjī, it can be said that he was certainly a patriot and champion of local rights but the good in him was outweighed by the ruthlessness and cruelty he displayed to gain his ends. Shahrastānī (96) mentions the religious views of his associates, the Ḥamziyya. These held rigid views on predestination—that even the children of their adversaries and of polytheists were destined for hell-fire. He also states that Ḥamza was one of the companions of al-Ḥuṣayn b. al-Ruḳād who rebelled in Sidjistān. "Khalaf the Khāridjī opposed him in the doctrine of predestination and on the category of persons worthy to hold power, and so they separated. Ḥamza held it lawful that there could be two Imāms at the same time as long as there was general theological agreement and the enemy were not subdued" (Baghdādī, *Farḳ*, 76-80).

There is every indication that the Romance of Amīr Ḥamza (called variously *Dāstān-i Amīr Ḥamza*, *Ḥamza-nāma*, *Ḳiṣṣa-i Amīr Ḥamza*, *Asmār-i Ḥamza* or *Rumūz-i Ḥamza*) was of Persian origin. The action centres round the Sāsānian court at Ctesiphon, and Van Ronkel draws an interesting parallel between events in the Romance of Ḥamza and the adventures of Rustam in the *Shāh-nāma*. Earlier and simpler recensions reveal some traces of archaic phraseology which might easily be as early as the 5th/11th century. It is significant also that none of the Arabic sources makes any reference to the existence of a Romance before the 7th/13th century. At that time Ibn Taymiyya refers to stories current among the Turcomans of Syria about the mighty feats of Ḥamza (*Minhādj al-sunna*, Būlāḳ 1322, iv, 12). In the Persian version the number of sections varies between 69 and 82. At least three different recensions can be recognized from the numerous lithographed editions and manuscripts (see *BSOAS*, xxii/3 (1959), 473-4). One of these was the archetype of all subsequent versions in various languages. The Romance was ascribed to Djalāl-i Balkhī, but in a manuscript at Dresden the author's name appears as Shāh Nāṣir al-Dīn Muḥammad Abu 'l-Maʿālī. An anonymous poetical version entitled *Ṣāḥib-ḳirān-nāma* is mentioned by Dr. Ṣafā (*Ḥamāsa-sarāʾī dar Īrān*, 379). It is in 62 sections and was composed in 1073/1662-3.

There is a considerable difference between the Arabic *Sīrat Ḥamza* and the Persian Romance. In its most complete form the Arabic version is in ten parts, and many new names and episodes appear. The hero is not the well-known uncle of the Prophet as in the Persian version, but is an entirely different person who is, however, some relative of the Prophet. Copies of the Arabic version at Gotha and Paris are ascribed to Aḥmad b. Muḥammad Abu 'l-Maʿālī al-Kūfī al-Bahlawān who may be the same as the author of *Sayf b. Dhī Yazan*. To complicate further the vexed question of authorship, a copy of the Arabic version in the Ambrosiana Library at Milan is said to be by Shihāb al-Dīn Aḥmad al-Dahhān.

From Persia the Romance of Ḥamza spread to India and achieved great popularity at the Mughal court. The story was much embroidered at this period and it became a favourite subject for the miniature-painter. An Urdū translation was made which, according to Garcin de Tassy, was written by a certain Ashk. The latter mentions a version in fourteen volumes prepared for Maḥmūd of Ghaznī—a statement of dubious authenticity. In the majority of Urdū versions the story has been divided into nineteen *daftar*s, each of which has a title of its own. A partial English translation from the Urdū was published at Calcutta by Shaykh Sadjdjād Ḥusayn in 1892. Translations were also made into Bengali and Tamil.

According to Köprülü, the Ḥamza cycle became very popular among the Turks. Ewliyā Čelebi mentions a series of miniatures depicting the combats of Ḥamza with well-known champions and demons. The earliest Ottoman version was made by Ḥamzewī (d. 815/1412-3) in twenty-four volumes. It was in prose, freely interspersed with verses. Copies of Turkish versions are to be found in Vienna (Flügel, ii, 29-30), in Paris (Blochet AF 352: S 632, 647-9, 654, 656), and in Milan (Ambrosiana, no. 226, 330). In the 10th/16th century, Ākhūremīrizāde Hāshimī wrote, in the popular language of the story-tellers, a poem *Berḳ-i pūlād-dil* on the exploits of the son of Ḥamza, which is mentioned by ʿĀshıḳ Čelebi.

Among the adaptations and imitations of the Romance in other languages, the Georgian romance cycle entitled *Amiran-Darejaniani* is important as one of the first made from the Persian. It is attributed to Mose Khoneli who is said to have lived in the 12th century. A full Georgian translation, however, was not made until the 19th century (Bodleian Library Ms. Wardrop c. 3). Other versions were made in Malay (*Ḥikāyet Amīr Ḥamza*), and Javanese (*Menak*) from which the Balinese and Sundanese translations originated.

Stevenson entitled *Amiran-Darejaniani: a cycle of medieval Georgian tales traditionally ascribed to Mose Khoneli*, Oxford 1958; Garcin de Tassy, *Histoire de la littérature hindouie et hindoustanie*[2], Paris 1870-1, i, 236; Borst, *Twee Soendasche Amir Hamzah-Verhalen*, in *TITLV*, lxxviii (1938), 137-57. (G. M. MEREDITH-OWENS)

ḤAMZA B. **ʿALĪ** B. AḤMAD, the founder of the Druze religious doctrine. He was of Persian origin from Zūzan and a felt-maker.

Among the Ismāʿīlī followers of the Fāṭimid caliph al-Ḥākim [*q.v.*] there had been speculations encouraged by his strange conduct and predictions of earlier authorities that he might be the expected *Ḳāʾim*. While the leaders of the official propaganda organization tried to counteract these speculations, al-Ḥākim early in 408/summer 1017 began to favour a movement led by al-Ḥasan al-Akhram proclaiming his divinity. Al-Akhram tried to win over prominent officials by sending them letters and was honoured in public by al-Ḥākim. In Ramaḍān 408/January-February 1018 he was murdered while riding in the retinue of al-Ḥākim. The caliph punished the murderer but cut off completely his connexion with the movement.

Ḥamza had participated in the proclamation of al-Ḥākim's divinity and the end of the distinction between exoteric and esoteric Islam, but had remained in the background. After al-Akhram's death he suspended his propaganda. In Muḥarram 410/May 1019 al-Ḥākim again showed his favour to the movement. Now Ḥamza claimed the leadership as the Imām and *ḳāʾim al-zamān* and adopted the title *Hādī al-mustadjībīn*. The centre of his activity was the Raydān mosque near the Bāb al-Naṣr outside the walls of Cairo. He met a prominent rival in the Turkish official al-Darazī [*q.v.*] who, after trying in vain to come to terms with Ḥamzā, acted independently and attracted many of Ḥamza's followers. On 12 Ṣafar 410/19 June 1019 Ḥamza sent a delegation to the chief Ḳāḍī in the Old Mosque with a letter demanding his conversion. Three of the men were killed by the mob and riots ensued. Al-Ḥākim had the transgressors arrested and executed at various times. The Turkish troops were incensed by this and turned against their countryman al-Darazī, besieging him in his residence (*dār*). Forty of his followers were killed but he escaped to the palace. The Turks demanded his extradition from al-Ḥākim, who put them off to the following day. On their return he informed them that al-Darazī had been killed. Now all the soldiers turned against Ḥamza in the Raydān mosque and besieged him with twelve of his men. Ḥamza escaped and had to hide a short time but by Rabīʿ II 410/August 1019 regained al-Ḥākim's favour. He now built up a strong missionary organization, attributing cosmic ranks to its leaders. The movement spread rapidly, particularly in Syria. When al-Ḥākim disappeared in Shawwāl 411/January 1021, the adherents of the Ḥākim-cult were persecuted and Ḥamza had to hide. In some letters (which appear to be genuine) he promised his followers his triumphal return. According to Yaḥyā b. Saʿīd he was killed some time after his flight. Bahāʾ al-Dīn al-Muḳtanā, who became the leader of the movement, pretended to be in touch with him and still in 430/1038 predicted his near reappearance.

For Ḥamza's religious doctrine see DURŪZ.

Bibliography: Ibn Ẓāfir, *Akhbār al-duwal al-munḳaṭiʿa*, *apud* F. Wüstenfeld, *Geschichte der Fatimiden-Chalifen*, Göttingen 1881, 202 ff. (copied with an erroneous "correction" by al-Nuwayrī, *Nihāyat al-arab*, transl. S. de Sacy in *Exposé de la religion des Druzes*, Paris 1838, i, pp. CCCCXXX ff.) is based on a good source, but the stories of al-Akhram and al-Darazī are placed a year too late. Yaḥyā b. Saʿīd al-Anṭākī, *Taʾrīkh*, ed. L. Cheikho, B. Carra de Vaux and H. Zayyat, Beirut 1909, 220 ff., 237 (followed by al-Makīn) replaces al-Akhram wrongly by al-Darazī. Beeston, *An ancient Druze manuscript*, in *Bodl. Libr. Rec.*, v (1956), 286 ff.; M. G. S. Hodgson, *Al-Darazī and Ḥamza in the origin of the Druze Religion*, in *JAOS*, lxxxii (1962), 5 ff. (W. MADELUNG)

ḤAMZA B. **BĪḌ** AL-ḤANAFĪ AL-KŪFĪ (the spelling Bīḍ is attested by a verse where this name rhymes with *tanbīḍ*; al-Djāḥiẓ, *Bayān*, ed. Hārūn, iv, 47), is one of those Arab poets, full of wit and verve,

whom the great men of the day did not take seriously but loaded with riches to gain their eulogies and escape their sarcasms, for they were quick to get the laugh on their side and, free of all scruples, did not hesitate to use blackmail. Ḥamza b. Bīḍ, who is treated by his biographers with indulgence and sympathy, is said to have succeeded in extracting from the great men whose company he frequented a million *dirhams*, and this figure does not appear exaggerated, if we are to judge by the sums which the slightest scraps of verse brought him. A childhood friend of Bilāl b. Abī Burda [see al-ASHʿARĪ, Abū Burda] who did not, however, succeed in detaining him at Baṣra, he lived on familiar terms especially with the Umayyad princes and the sons of al-Muhallab b. Abī Ṣufra [*q.v.*], whom he always approached with success, even when he went to see them in prison. The *Aghānī* reproduces several anecdotes which show with what spontaneous audacity he managed, thanks to two or three verses, to provoke the hilarity of his friends and to make them loosen their purse-strings; at times he was commissioned by groups in difficulty to make petitions on their behalf, for his tongue was feared because his predictions or maledictions had a curious tendency to come true. Verses addressed to Sulaymān b. ʿAbd al-Malik, foretelling his accession to the throne, could still encourage Hārūn al-Rashīd, while yet heir presumptive; other verses gained the admiration of a grammarian like al-Naḍr b. Shumayl [*q.v.*], who made al-Maʾmūn appreciate them. Taken as a whole, the poetry of Ḥamza b. Bīd is of great simplicity and in certain respects recalls the satirical songs of our days by the humour it exudes, the use of droll terminology (*fakhkhāra* to indicate the head, for example) and the complete absence of affectation. Although the critics seem to reproach him for his habit of drinking wine, which was however quite customary at that period, for his effrontery and for his libertinism (*khaliʿ mādjin*), it is astonishing that the *Aghānī* includes him among the *fuḥūl* of his generation and that Yāḳūt does not hesitate to class him among the best and to describe him as *mudjid*. He died in 116/734-5.

Bibliography: Djāḥiẓ, *Ḥayawān*, v, 454; idem, *Bayān*, index; Marzubānī, *Muʾtalif*, 100; Ibn Ḳutayba, *Maʿārif*, 591; idem, *ʿUyūn*, index; *Aghānī*, xv, 15-26 (Beirut ed., xvi, 143-63); Yāḳūt, *Udabāʾ*, x, 280-9; R. Blachère, *HLA*, iii, index. (Ch. Pellat)

ḤAMZA b. ḤABĪB b. ʿUmāra b. Ismāʿīl, Abū ʿUmāra al-Taymī al-Kūfī al-Zayyāt, one of the "Seven Readers" of the Ḳurʾān. A *mawlā* of the family of ʿIkrima b. Ribʿī al-Taymī, he was born in Ḥulwān in 80/699 and became a merchant; his surname al-Zayyāt arises from the fact that he transported oil from Kūfa to Ḥulwān, whence he brought cheese and nuts. Having settled at Kūfa, he became interested in *ḥadīth* and the *farāʾiḍ*, on which he left a *Kitāb al-Farāʾiḍ* which was probably collected by his pupils (*Fihrist*, 44). His fame, however, rests particularly upon his "reading". A pupil, in this field, of al-Aʿmash [*q.v.*] and of Ḥumrān b. Aʿyan, both of whom followed Ibn Masʿūd, of ʿĀṣim [*q.v.*] and of Ibn Abī Laylā who founded his authority upon ʿAlī, he established an independent system which became canonical and was put together in a *Kitāb Ḳirāʾat Ḥamza* (*Fihrist*, 44); he was criticized, particularly by Ibn Ḥanbal and Ibn ʿAyyāsh, perhaps because of their insufficient knowledge of his "reading". Notable among his numerous pupils were Sufyān al-Thawrī and al-Kisāʾī, but those who passed down his "reading" are his immediate disciples, Khalaf b. Hishām (150-229/767-843) at Baghdād and Khallād b. Khālid (d. 220/835) at Kūfa. Ḥamza died at Ḥulwān in 156/772.

The "reading" of Ḥamza, which had become quite widespread in the Maghrib, was ousted, thanks to the zeal of a scholar of al-Ḳayrawān, al-Khayrūn (d. 306/918), by that of Nāfiʿ [*q.v.*], which owed its diffusion to the fact that it was adopted by the Imām Mālik, so that it followed the spread of Mālikism; however, it is still in use in some areas in Maghrib where the appellation Ḥamzāwī is not uncommon.

Blachère, *Introduction au Coran*, Paris 1959, index. (Ch. Pellat)

ḤAMZA b. ʿUMĀRA [see KARBIYYA].

ḤAMZA FANṢŪRĪ, Indonesian Ṣūfī, author of Malay treatises and poems, from Pansur, *i.e.*, Barus on the west coast of Sumatra. He lived before Shams al-Dīn of Pasai (d. 1630) who cited his poems and commented on them, and before the doctrine of emanation in seven grades became popular in Indonesia through the influence of Muḥammad b. Faḍl Allāh's (d. 1620) work *al-Tuḥfa al-mursala*; his lifetime may thus have been the second half of the 10th/16th century. He belonged to the school of mysticism characterized by names like Ibn al-ʿArabī and ʿIrāḳī. Works: *Asrār al-ʿārifīn*, *Sharāb al-ʿāshiḳīn* and poems (*Rubāʿī*) (ed. J. Doorenbos, *De geschriften van Hamzah Pansoeri*, 1933, uncritical, many poems clearly not by Ḥamza; see Drewes, *TITLV*, lxxiii, 391), *Kitāb al-Muntahī* (unpublished, see Voorhoeve, *Twee Maleise geschriften*, 25). His doctrine: H. Kraemer, *Een Javaansche primbon*, 1921, 24-44, in *Djâwâ*, iv, 29 ff.; A. Johns, in *JMBRAS*, xxviii/1, (1955), 74. (P. Voorhoeve)

ḤAMZA al-ḤARRĀNĪ, ancestor of the Banū Ḥamza who for several generations held the office of *naḳīb al-ashrāf* [see SHARĪF] in Damascus, with the result that in the end the family was named *Bayt al-Naḳīb*.

As early as 330/942 a representative of this house, Ismāʿīl b. Ḥusayn b. Aḥmad al-Natīf, was acting as *naḳīb*. Several of his descendants distinguished themselves through their ability and learning. Two sons of ʿAlāʾ al-Dīn ʿAlī b. Ibrāhīm, the *sayyid* Nāṣir al-Dīn Muḥammad and the *sayyid* Shihāb al-Dīn, left their names in the history of Damascus. The former, called *al-Zurayḳ* on account of his blue eyes, was made responsible for the teaching at the *madrasa* al-Nāṣiriyya and for the direction of the *Khānḳāh* al-Asadiyya. He died on 2 Ṣafar 814/26 May 1411 at the age of 35. His brother Shihāb al-Dīn succeeded him as head of the Nāṣiriyya. In 818/1415 he was temporarily deprived of part of his duties, whereby he lost a thousand dirhams a month; later, in about 830/1427, he received most of the appointments of shaykh Shams al-Dīn Abū ʿAbd Allāh al-ʿAdjlūnī, who resigned them in his favour. Shihāb al-Dīn's son ʿIzz al-Dīn Ḥamza b. Aḥmad, born in 818/1415, was a well-known teacher at the *madrasa* al-ʿImādiyya, who died of an illness in 874/1469.

In the 11th/17th century Kamāl al-Dīn Ḥamza b. Muḥammad b. Ḥusayn b. Muḥammad b. Ḥamza al-Ḥusayn al-Ḥanafī, who was born in 1007/1598, is noteworthy. He was *raʾīs* in Damascus and taught

in the *madrasa* al-Ḥāfiẓiyya. He died in 1067/1657. His son Ḥusayn, born in 1031/1622, made a prolonged visit to Istanbul and afterwards held the post of *nāʾib* in Damascus where he taught in the *madrasa* al-Fārisiyya (built in 808/1405) and wrote a collection of poems known by the title *al-Ḥusayniyya*; he died in Ramaḍān 1072/April-May 1662 and was buried on the slopes of Ḳāsiyūn.

In modern times, the most illustrious member of the family was Maḥmūd b. Muḥammad Nasīb Ḥamza al-Ḥusaynī al-Ḥamzāwī al-Ḥanafī, born in Damascus in 1236/1821. After the serious study of literature and Muslim law he was appointed *ḳāḍī* in 1260/1844. He stayed for a long time in Istanbul and Anatolia. On returning to Damascus, he became a member of *al-Madjlis al-Kabīr*. At the time of the massacres in 1860 he distinguished himself by protecting numerous Christians; seven years later he held the office of *muftī* of Syria.

He ranks as one of those scholars whose writings, especially on religion and *fiḳh*, are unusually voluminous. Part of his reputation he owes to his rare virtuosity in calligraphy : he was able to write the *fātiḥa* on a grain of rice and to engrave on the stone of a signet-ring the names of the warriors who had fallen at Badr. He died in his native town in 1305/1887.

(N. Elisséeff)

ḤAMZA AL-IṢFAHĀNĪ, (Ḥamza b. al-Ḥasan, [Ibn] al-Muʾaddib), philologist and historian of the 4th/10th century. Born about 280/893, he died after 350/961 (the year in which his *Chronology* was completed; note also that ʿAḍud al-Dawla, for whom he is supposed to have written one of his works, was so named only in 351) and, it is said, before 360/970-71. Most of his life was spent in his native Iṣfahān. He mentions three visits to Baghdād, one dated in 308/920-1, and another, his third, in 323/935. He had contact with many important scholars, among them al-Ṭabarī and Ibn Durayd. He appears to have been a prominent citizen of Iṣfahān, highly regarded because of his vast learning which caused the malevolent to dub him "drivel merchant". His scholarly interests gravitated toward history, proverbs, poetry, and lexicography. The following works are preserved or known through occasional quotations:

On history, (1) a History of Iṣfahān, which seems to have combined political and biographical information, and (2) the famous Chronology of pre-Islamic and Islamic dynasties (*Taʾrīkh sinī mulūk al-arḍ wa 'l-anbiyāʾ*), a survey of world history which has been studied in the West since the eighteenth century and which was first published in its entirety with a Latin translation by I. M. E. Gottwaldt (St. Petersburg-Leipzig 1844-48, repeatedly reprinted, *e.g.*, Beirut 1961; English trans. of part of the work by U. M. Daudpota, in *Journal Cama Or. Inst.*, xxi (1932), 58-120).

On proverbs, (3) *al-Amthāl ʿalā afʿal*, dealing with comparative proverbs and including some appendixes on other types of proverbial expressions and on superstitious beliefs and amulets, and (4) *al-Amthāl al-ṣādira ʿan buyūt al-shiʿr*, preserved in Ms. Berlin Or. qu. 1215.

On poetry, (5) an edition of the *Dīwān* of Abū Nuwās, which goes beyond being a mere collection of poems and contains much valuable literary information. Further, (6) a *Kitāb Maḍāḥik al-ashʿār* (cf. Thaʿālibī, *Thimār*, 293-5) and (7) a *Ris. al-ashʿār al-sāʾira fi 'l-nayrūz wa-'l-mihradjān* (cf. Bīrūnī, *Āthār*, 31, 52; apparently identical with the work on "Persian Festivals" by ʿAlī b. Ḥamza al-Iṣbahānī, summarily referred to in connexion with his chapter on the subject by Nuwayrī, i, 185).

On lexicography, (8) the partly preserved *Muwāzana* (*bayn al-ʿarabī wa-'l-ʿadjamī*), written for ʿAḍud al-Dawla, in which, as is shown by numerous citations, the author was greatly concerned with finding—often far-fetched—Persian etymologies (for those, *e.g.*, of *asṭurlāb* and *awdj*, cf. Bīrūnī, *Ifrād al-maḳāl*, 69, and *Tamhīd al-mustaḳarr*, 17 [*Rasāʾil al-Bīrūnī*, Ḥaydarābād 1368/1948]), and (9) *al-Tanbīh ʿalā ḥudūth al-taṣḥīf*, on misspellings caused by the ambiguities of the Arabic script, which, in addition, is an outstanding achievement in the field of cultural history (cf. P. Kraus, *Jābir*, ii, 171, 245, and idem, in *al-Thaḳāfa*, v (1943), reprinted in Ṣ. al-Munadjdjid, *Muntaḳā*, Cairo 1955, ii, 177-84).

A quotation dealing with the interpretation of *sūra* XXXV, 1, supposedly from a *R. al-Muʿriba ʿan sharaf al-aʿrāb* (?) (Ḳasṭallānī, *Irshād*, Būlāḳ 1288, viii, 31) is doubtful. Other titles are mentioned in *Fihrist*, 139.

Ḥamza is described, in particular by al-Ḳifṭī, as a Persian nationalist with strong prejudices against the Arabs. This may well be a true description. We do find him greatly concerned with matters Persian, but he also shows himself fully aware of the importance of the cultural rôle of the Arabs. His works prove him to be a thorough and, to a degree, original scholar who always looks for the best sources and the most authentic information available, using, for instance, Jewish and Byzantine informants on Jewish and Greco-Roman chronology, who always probes deeply and intelligently, and who reports many unusual and highly interesting matters which give a greater insight into the immense variety and curiosity of Muslim intellectual life in the ninth and tenth centuries. His importance was acknowledged by later Muslim scholars through the wide use they made of his works, in particular, his chronological history and the collection of *afʿal* proverbs.

(F. Rosenthal)

ḤAMZA BEG, Prince of the Aḳ Ḳoyunlu [*q.v.*] dynasty (the *Kitāb-i Diyārbakriyya* mentioned in the *Bibl.* to that article has now been published by

Necati Lugal and Faruk Sümer, 2 vols., Ankara (TTK, Series III, no. 7) 1962-4).

ḤAMZA BEG (IMĀM), second *imām* of Dāghistān, leader of the popular politico-religious movement which disturbed the northern Caucasus from 1832 to 1859 and which is known as *Murīdism*, from the religious ideology from which it arose. This movement was based on Muslim mystical influences which originated in Bukhārā, in particular those propagated by the Naḳshbandīs [*q.v.*], but made use of religious dogma for political ends and was closely linked with the practical conception of the Holy War. It was a consequence of the Russian punitive expeditions in the Caucasus and was directed at the same time against the Russians, their allies the Avar khāns, and the mountain peoples who had submitted to their domination. After the death of the first *imām*, Ghāzī Muḥammad, or Ghāzī Mollā, who was surrounded and killed in the village of Gumri on 17 (29) October 1832 by a Russian detachment, Ḥamza Beg (called by the Russians Gamzat Bek) became *imām* of Dāghistān. Although Ḥamza Beg belonged to the family of the Avar khāns, being a *čanḳa*, *i.e.*, the son of the khān by a woman of humble birth, and consequently had no right to the succession, he nevertheless aspired to the khān's throne and made use of the movement for his own ends. On 13 August 1834, he defeated and massacred the Avar khāns, on the River Tabor, near their capital Khūnzāḳ, which he occupied after driving out the Russians. This act cost him his life: he was assassinated on 19 September 1834 in the main mosque of the town by the brother of the famous Ḥādjdjī Murād [see MURĀD], *nā'ib* of Shāmil [*q.v.*]. The latter replaced Ḥamza Beg as *imām* of Dāghistān, and with him Murīdism received its definitive form. It was to last until the surrender of the *imām* Shāmil on 25 August 1859.

ḤAMZA ḤĀMID PASHA, Ottoman Grand Vizier under Sultan Muṣṭafā III, was the son of a merchant of Develi Ḳara Ḥiṣār, named Aḥmed Agha; born in Istanbul *ca.* 1110/1698-9 he entered upon his official career in the offices of the Sublime Porte. Owing to the protection of the celebrated Rāghib Pasha [*q.v.*], whose pupil he was in the elaborate prose of the official style, he was nominated *mektūbdju* (Secretary to the Grand Vizier) on 19 Dhu 'l-Ḳa'da 1153/5 February 1741, a position he held for many years. On 19 Muḥarram 1169/25 October 1755 he was appointed *re'īs al-kuttāb* (Minister of Foreign Affairs), and, in addition to other high offices in the years following, three times filled the office of *ketkhudā* (Minister of Home Affairs) but only for short periods and without further distinguishing himself. After being appointed vizier in Rabī' I 1176/September-October 1762 he took the place of the Grand Vizier Rāghib Pasha on 9 Ramaḍān 1176/24 March 1763, when the latter fell severely ill and on his death (24 Ramaḍān/8 April) he succeeded him. But he was not a strong enough man for this position, for, as his biographers say, he was slow in coming to a decision and was too fond of ease and comfort. The only noteworthy event of his period of office was his sending Aḥmed Resmī Efendi [*q.v.*] to the court of Frederick II in response to Count Rexin's embassy (cf. Zinkeisen, v, 897 ff.). After less than seven months of office he was deposed on 23 Rabī' II 1177/31 October 1763 and sent to Crete as governor, where he remained, except for a brief interval, till 1183/1769. In this year, on 16 Rabī' I/20 July, he was given the governorship of Djidda and Ḥabesh and died in Mecca in Dhu 'l-Ḥidjdja 1183/March-April 1770.

(J. H. MORDTMANN-[E. KURAN])

ḤAMZA MĪRZĀ, Ṣafawid prince, second son of Muḥammad Khudābanda, born *ca.* 973/1565-6. In 985/1577 Shāh Ismā'īl II ordered that Ḥamza Mīrzā be put to death at Shīrāz, together with his father and brother, Abū Ṭālib, but Isma'īl II was assassinated before the order could be carried out.

After the accession of his weak and purblind father, as Sulṭān Muḥammad Shāh, in Dhu 'l-Ḥidjdja 985/February 1578, Ḥamza Mīrzā was made heir-apparent at the instance of his mother, Mahd-i 'Ulyā, who, until her murder by the *ḳizilbāsh* [*q.v.*] in 987/1579, was the real power behind the throne; he also had the support of the Turkmān-Takkalū *ḳizilbāsh* faction, which then dominated the political scene in the capital, Ḳazwīn.

In 989/1581 Ḥamza Mīrzā suppressed a revolt staged by the Shāmlū-Ustadjlū faction in Khurāsān in support of his younger brother, 'Abbās Mīrzā [see 'ABBĀS I], and thereafter he played an increasing part in state affairs. Though endowed with great personal bravery, he was proud, quick-tempered and impulsive, and lacked the maturity of judgement needed to steer a safe course between the rival *ḳizilbāsh* factions. In 992/1584-5, when the *amīr al-umarā* of Ādharbāydjān, Amīr Khān Turkmān, obstructed his efforts to identify those responsible for his mother's murder, Ḥamza Mīrzā listened to the promptings of the Shāmlū-Ustādjlū faction, and put the Turkmān chief to death. This action provoked a Turkmān-Takkalū revolt in support of his youngest brother, Ṭahmāsp. Ḥamza Mīrzā crushed the revolt, but was unable to prevent the occupation of Tabrīz by the Ottomans under 'Othmān Pasha in 993/1585. The following year, the Shāmlū-Ustādjlū faction, for reasons which are not entirely clear, conspired with the Turkmān-Takkalū faction to arrange the assassination of Ḥamza Mīrzā in the Ṣafawid camp near Gandja. Their tool was Ḥamza Mīrzā's personal barber who, on 24 Dhu 'l-Ḥidjdja 994/6 December 1586, stabbed the prince to death while he was in a drunken stupor.

Bibliography: Iskandar Beg Turkmān, *Ta'rīkh-i 'ālam-ārā-yi 'Abbāsī*, 2 vols., Tehrān 1955-6, index, s.v.; Naṣr Allāh Falsafī, *Zindigānī-yi Shāh 'Abbās-i Awwal*, i, Tehrān 1955, index, *s.v.*

(R. M. SAVORY)

SILIḤDĀR **ḤAMZA PASHA**, Ottoman Grand Vizier, was born at Develi Ḳara Ḥiṣār *ca* 1140/1728-9, the son of a landed *agha* named Meḥmed; he began his career in 1156/1743-4 in the *ḥalwa-khāne* (honey-bakery) of the *Kilār-i humāyūn* (Imperial Privy Commissariat), but his gifts soon won him a position among the pages of the *Enderūn* [*q.v.*],

where he won the favour of Muṣṭafā III. When the latter came to the throne on 16 Ṣafar 1171/30 October 1757, he at once appointed Ḥamza his *silihdār* [*q.v.*], afterwards granted him the rank of vizier (Shawwāl 1171/June 1758) and betrothed him to the infant princess Hibet Allāh, who died however in Dhu 'l-Ḥidjdja 1175 /July 1762. From 1172/1759 to 1182/1768 he filled in quick succession no fewer than twelve governorships in Rumelia and Anatolia, in accordance with the system then in force of annual change of office; in this period he fell into disgrace for a few months in 1178/1765 and was banished to Dimetoḳa with loss of his rank. As *wālī* of Egypt in 1179/1766 he came into conflict with the Mamlūk *amīr*s and the celebrated *shaykh al-balad* ʿAlī Bey [*q.v.*] and was finally driven out of the country by them (Dhu 'l-Ḳaʿda 1180/April 1767). When in 1182/1768 the Sulṭan was eager for a breach with Russia, but found his bellicose plans opposed by the Grand Vizier Muḥsin-zāde Meḥmed Pasha [*q.v.*] and the Shaykh al-Islām Walī al-Dīn Efendi, he dismissed the former on 23 Rabīʿ I 1182/7 August 1768 and appointed in his place on 20 Rabīʿ II/3 September his old favourite the Silihdār Ḥamza Pasha, who was at that time *wālī* of Anadolu. A few days after his arrival in the capital the new Grand Vizier had the ultimatum to Russia approved at a great council (4 October) and imprisoned the Russian resident Obreskov, who declined to fulfil the demands of the Porte, in Yedikule (6 October); in consequence the disastrous war with Russia broke out, which was concluded only by the peace of Küčük Kaynardja [*q.v.*] in 1774. Ḥamza Pasha did not live to see the beginning of hostilities; he was suddenly dismissed from office on 5 Djumādā I 1182/17 October 1768, the reason given being insanity, but others say at the instigation of the Khān of the Crimea; he was sent to Crete as governor of Canea; but on his way there he died at Gelibolu in the same month.

ḤANĀBILA (a.), pl. of Ḥanbalī, denotes the followers of the school of theology, law and morality which grew up from the teaching of Aḥmad b. Ḥanbal (d. 241/855 [*q.v.*]) whose principal works, the *Musnad* and the *responsa* (*masāʾil*), had begun to be codified even during the lifetime of their author. Ḥanbalism, while being hostile to the very principle of speculative theology (*kalām*) and to esoteric Ṣūfism (*ḥulūl*, *maʿrifa*, *ibāḥa*) did not develop in complete isolation. A great number of Ḥanbalī authors were themselves dogmatic theologians or Ṣūfīs. The often intransigent rigidity of the dogmatic position of Ḥanbalism, which purported to recognize no other sources than the Ḳurʾān and the *sunna*, did not fail on the contrary to influence consistently the very formation of the other Muslim schools.

1. Ḥanbalism from 241 to 334/855-945. It was during the period from the Sunnī reactionary movement of al-Mutawakkil (232-47/847-61) to the advent of the Būyids in 334/945 that Ḥanbalism was truly constituted as a school. The great collections of *responsa* which were then produced, thanks to the zeal of a considerable number of theologians coming from very different regions of the Muslim world, undoubtedly bear witness to a common effort in the search for a unity of doctrine. But there is every reason to suppose, if one may judge by those which have been preserved, that these works were, to a large extent, collections in which the accent was placed, according to the personalities of the reporters or their interests, on particular ideas of Ibn Ḥanbal or particular aspects of his doctrines. They were never simple works of pure theoretical speculation, but the response to a need for religious and moral direction. Very often they went hand in hand with the transmission of *responsa* attributed to other teachers, notably the teachers of the school of Ḥidjāz or that of Khurāsān, like Mālik b. Anas, Fuḍayl b. ʿIyāḍ, ʿAbd Allāh b. al-Mubārak or Isḥāḳ b. Rāhawayh. They contributed towards the settling of Ḥanbalī doctrine at a very early stage, without, however, ending in a very rigorous systematization, and at the same time allowing divergences from the thought of the founder of the school to survive.

Two of the sons of Ibn Ḥanbal played an important rôle in the transmission of his work. The elder of the two, Ṣāliḥ (d. 266/879-80), made his career in the service of the ʿAbbāsid Caliphate as *ḳāḍī* at Ṭarsūs and at Iṣfahān. The younger, ʿAbd Allāh (d. 290/903), in particular put in order the materials of the *Musnad*, to which he made a certain number of additions and to which his pupil Abū Bakr al-Ḳaṭīʿī (b. 368/978-9) put the finishing touches. The additions of al-Ḳaṭīʿī are, within the Ḥanbalī school, quite often disputed (on the other compilers of *masāʾil*, see aḥmad b. ḥanbal, the *Masāʾil*).

Several other eminent traditionists reported the *Masāʾil* and may be regarded as true disciples of Ibn Ḥanbal. Thus Abū Dāwūd al-Sidjistānī (d. 275/888-9), was the author of the *K. al-Sunan*, and his *K. al-Masāʾil* (published in Cairo in 1353/1934) is the sole collection of *responsa* available today. Abū Ḥātim al-Rāzī (d. 277/890-1), who is sometimes compared with al-Bukhārī and with Abū Zurʿa al-Rāzī, followed the teaching of Ibn Ḥanbal and collected a large number of *Masāʾil* certain of which are considered rare; his *ʿaḳīda* defends, on the basis of the nature of the faith and of the Ḳurʾān, and equally on the basis of the condemnation of *kalām*, the most characteristic ideas of Ḥanbalism.

One name dominates the history of Ḥanbalism during this period; that of Abū Bakr al-Khallāl (d. 311/923-4), who was a pupil of Abū Bakr al-Marwazī, knew the *shaykh* ʿAbd Allāh and taught at Baghdād in the mosque of al-Mahdī. In his *K. al-Djāmiʿ*, he collected and classified the *responsa* of Ibn Hanbal which had already been the subject of individual recensions. This enormous compilation was still used, in the 8th/14th century, by Ibn Taymiyya and Ibn al-Ḳayyim. Still other works are attributed to Abū Bakr al-Khallāl, and enjoyed a great authority, in particular a *K. al-Īmān*, a *K. al-Sunna*, his *K. fi'l-ʿilm* and a *K. al-ʿilal*. In addition Abū Bakr al-Khallāl composed the first history of Ḥanbalism which is known to us. His work was finished by ʿAbd al-ʿAzīz b. Djaʿfar (d. 363/973-4), known by the name of Ghulām al-Khallāl [*q.v.*].

Two other names are closely connected with the history of Ḥanbalism at the end of the 3rd/9th and at the beginning of the 4th/10th century. The first is Abū Bakr al-Sidjistānī (d. 316/928), a son of the traditionist Abū Dāwūd. From him we have a *K. al-Maṣāḥif* (edited by A. Jeffery, Leiden 1937) and a short profession of faith in verse in the best Ḥanbalī tradition. Several other works of exegesis or tradition are attributed to him. The second is Abū Muḥammad al-Rāzī (d. 327/938-9), whose work enjoyed a wide popularity. His *K. al-Djarḥ wa 'l-taʿdīl* was considered

one of the most important works which had been written in this discipline. His *Tafsīr*, in the judgment of Ibn Kat͟hīr, constituted the work *par excellence* of traditional exegesis and surpassed in its doctrinal value that of al-Ṭabarī. His *K. al-ʿIlal*, on the subject of defects in *ḥadīt͟h*, demonstrates this tendency to follow the classifications (*abwāb*) of *fiḳh*. There is further attributed to Abū Muḥammad al-Rāzī a refutation of the D̲j̲ahmiyya and a eulogistic biography of Aḥmad b. Ḥanbal.

The considerable rôle which Ḥanbalism played, on the other hand, in the religious and political history of the Caliphate is illustrated by the activities of al-Barbahārī (d. 329/940-1 [*q.v.*]), traditionist and jurisconsult, pupil of Abū Bakr al-Marwazī and of Sahl al-Tustarī, a vigorous preacher who struggled bitterly against S̲h̲īʿism and Muʿtazilism for a reform of the Sunnī Caliphate. The excess of his zeal led, in 323/935, to the condemnation of Ḥanbalism by a decree of the caliph al-Rāḍī.

His contemporary Abu 'l-Ḳāsim al-K̲h̲iraḳī (d. 334/945-6), who left Bag̲h̲dād to take refuge in Damascus with the advent of the Būyids, is the author of the first manual of Ḥanbalī *fiḳh*, the *Muk̲h̲taṣar*, which was commented upon in turn by Ibn Ḥāmid (d. 403/1012-3), the *ḳāḍī* Abū Yaʿlā (d. 458/1066) and the *s̲h̲ayk̲h̲* Muwaffaḳ al-Dīn b. Ḳudāma (d. 620/1223). The *Muk̲h̲taṣar*, upon which, according to Yūsuf b. ʿAbd al-Hādī (d. 909/1503-4), there were almost three hundred commentaries, still remains today an excellent introductory manual to Ḥanbalī doctrine in the sphere of *furūʿ*.

2. Ḥanbalism under the Būyids (334-447/945-1061). From the moment of the installation of the Būyids in Bag̲h̲dād Ḥanbalism was an active and numerically strong school which possessed a doctrinal literature comparable to that which the other schools were able to offer. The progress of Imāmī S̲h̲īʿism, encouraged by the Būyids, and of Ismāʿīlism after the Fāṭimid conquest of Egypt in 358/969 and the foundation of Cairo, came into conflict with the Ḥanbalī theologians and preachers, who exercised a decisive influence on the beginnings of the Sunnī restoration which began to assert itself from the reign of al-Ḳādir (381-422/991-1021). Ḥanbalism then took the rôle of a politico-religious opposition party and was in the forefront of the ideologies which were developed or founded for the defence of the Caliphate and Sunnism.

From among the numerous representatives of Ḥanbalism whose names have been preserved for us in bio-bibliographical works we shall here cite only those few teachers who appear to us to be, both for their work and their activities, most typical of the vitality and the internal diversity of the school.

Abū Bakr al-Nad̲j̲d̲j̲ād (d. 348/959-60) held sessions of popular exhortation at Bag̲h̲dād in the mosque of al-Manṣūr. He compiled the *Musnad* of Ibn Ḥanbal, wrote a *K. al-Sunan* and, apart from a treatise of *fiḳh*, a *K. Ik̲h̲tilāf al-fuḳahā'*.

Abū Bakr al-Ād̲j̲urrī (d. 360/971), who was educated at Bag̲h̲dād and afterwards led a life of seclusion at Mecca, is claimed at the same time by Ḥanbalism and S̲h̲āfiʿism. His *K. al-S̲h̲arīʿa* (published Cairo, 1369/1950) shows obvious affinities with the professions of faith in the Ḥanbalī style. It seems that one can see in him one of those S̲h̲āfiʿī teachers who, refusing any concession to *kalām* or to As̲h̲ʿarism, were Ḥanbalī in *uṣūl* and S̲h̲āfiʿī in *furūʿ*.

Abu 'l-Ḳāsim al-Ṭabarānī (d. 360/971) is the author of three celebrated *Muʿd̲j̲ams*, of a *K. al-Sunna* and a *K. Makārim al-ak̲h̲lāḳ* . . . (*Ṭabaḳāt*, ii, 49-51).

Abu 'l-Ḥusayn b. Samʿūn (d. 387/997), through his Ḥanbalī training and his inclination towards Ṣūfism, is one of those many scholars whom it is difficult to place, with any degree of certainty, within the confines of one school. The *ḳāḍī* Abu 'l-Ḥusayn (*Ṭabaḳāt*, ii, 155-62) and Ibn ʿAsākir (*Tabyīn al-muftarī*, 200-6) each lay claim to him. Ibn Samʿūn, who commented upon the *Muk̲h̲taṣar* of al-K̲h̲iraḳī, held sessions of religious and moral exhortation at Bag̲h̲dād which acquired a widespread reputation.

His contemporary Ibn Baṭṭa al-ʿUkbarī (d. 387/997), educated at Bag̲h̲dād, retired when nearly forty, after travels to Mecca and Syria, to his native town. We owe to him several important works, in particular a renunciation of legal stratagems (*ḥiyal*) which were employed in certain schools of *fiḳh*, and two professions of faith which were subsequently widely used: the *Ibāna kabīra* and the *Ibāna ṣag̲h̲īra*. The *Ibāna ṣag̲h̲īra* (cf. H. Laoust, *Profession de foi d'Ibn Baṭṭa*, *PIFD*, 1958) is primarily designed to be a profession of popular faith addressed more particularly to young people and to the non-Arabs. Its purpose was to lead back to the imitation of the Prophet all those who were tending to waver in their faith because of the proliferation of sects and doctrines.

Ibn Ḥāmid (d. 403/1012-3; *Ṭabaḳāt*, ii, 171-7), one of the intimate circle of the caliph al-Ḳādir, was first and foremost a teacher and a *muftī*. His most famous work is his *K. al-D̲j̲āmiʿ fi 'k̲h̲tilāf al-fuḳahā'*, subsequently often used in Ḥanbalism. There are further attributed to him two dogmatic treatises which are also often cited: a *K. fī uṣūl al-dīn* and a *K. fī uṣūl al-fiḳh*. Ibn Ḥāmid, both by his teaching and his written works, contributed to the education of numerous Ḥanbalīs, whether natives of Bag̲h̲dād or attracted to the ʿAbbāsid metropolis by the reputation of its learning.

One of his disciples was the *ḳāḍī* Abū Yaʿlā Ibn al-Farrā' (d. 458/1066), who made his career at Bag̲h̲dād in the service of the caliph al-Ḳā'im. The work of the *ḳāḍī* Abū Yaʿlā, almost totally lost, is known to us through his *Aḥkām sulṭāniyya* (published Cairo 1356/1938) which would appear to have been copied verbatim from the treatise on public law of al-Māwardī (d. 456/1064), unless the two works both stem from a common source. Those of his works which were most frequently used were his commentary upon al-K̲h̲iraḳī, a treatise on *uṣūl al-fiḳh* (*K. al-Mud̲j̲arrad*), another on the divergent opinions of legal scholars (*K. al-Ik̲h̲tilāf*), and finally an important treatise of dogmatic theology, the *K. al-Muʿtamad*, an abbreviated version of which has survived (ms. at the Ẓāhiriyya in Damascus). The *K. al-Muʿtamad*, constructed in the fashion of contemporary treatises of *kalām*, devotes considerable space to the theory of the Caliphate. The *ḳāḍī* Abū Yaʿlā, who was present in 433/1041-2 and in 445/1053-4 at the formal reading of the *Ḳādiriyya*, was, as much through his official duties as through his scholarship and his teaching, closely associated with the policy of Sunnī restoration under al-Ḳā'im.

3. Ḥanbalism during the final two centuries of the Caliphate of Bag̲h̲dād (447-656/1061-1258). In 447/1061 Tog̲h̲rïl Beg occupied Bag̲h̲dād and put an end to the S̲h̲īʿī dynasty of the Būyids. The attempt of al-Basāsīrī, in 451/1059, to re-establish S̲h̲īʿism in Bag̲h̲dād had all the characteristics of a desperate and ephemeral action. In 459/1067 the Niẓāmiyya was inaugurated at Bag̲h̲dād for the teaching of S̲h̲āfiʿī *fiḳh*. The Sunnī reconquest of central and southern Syria followed. In

467/1074-5 the *amīr* Atsīz re-established the ʿAbbāsid *khuṭba* at Damascus. The political disruption of the first great Saldjūḳid empire began in 485/1092 with the death of Malik Shāh. A short time afterwards the Crusaders made their appearance in Syria and Palestine, occupying Antioch in 491/1098, Jerusalem in 492 and Tripoli in 503/1109-10. However, the momentum of the movement of Sunnī restoration continued, with the revival of the Caliphate beginning with all-Muḳtafī (530-55/1136-60), and with the constitution, in Syria, of the dynasty of the Zangids and the Ayyūbids. This period of two centuries was the golden age of Ḥanbalism which, however great its attachment to the traditionalism of its *credo*, itself also appeared, through the personality of its principal representatives, as a movement of profound diversity.

The *sharīf* Abū Djaʿfar al-Hāshimī (d. 470/1077-8), a successor in spirit of al-Barbahārī and Ibn Baṭṭa, distinguished himself in particular by the energetic drive he brought to bear in support of the Ḥanbalī *credo* and the restoration of the authority of the ʿAbbāsid Caliphate. We see him then at Baghdād taking command of a series of popular uprisings against Muʿtazilism and Ṣūfism; in 460/1068 against the teaching of Muʿtazilism at the Niẓāmiyya; in 461 against Ibn ʿAḳīl, who was condemned for his sympathies towards Muʿtazilism or al-Ḥallādj; in 464 against various forms of corruption; in 465 again against Ibn ʿAḳīl, who was forced to recant in public; finally in 469 against Ibn al-Kushayrī who, in his teaching at the Niẓāmiyya, had taken up again against Ḥanbalism the old charge of anthropomorphism (*tashbīh*).

Abu 'l-Khaṭṭāb al-Kalwadhānī (d. 510/1116-7), on the other hand, was a technical specialist in *fiḳh* who lived far from any political agitation (*Ṭabaḳāt*, ii, 258). In the *Hidāya* he endowed Ḥanbalism with a manual of *fiḳh* which long remained authoritative. His *K. al-Tamhīd fī uṣūl al-fiḳh*, preserved in manuscript at Damascus, on the metholology of law, deserves to be edited. Several others of his works are frequently cited in the literature of the school: two treatises on *ikhtilāf*, another, more controversial, on the law of succession, and a short profession of faith in verse, the *Dāliyya*, which was still learned by heart in the 8th/14th century and in which Aḥmad b. Ḥanbal is extolled as the safest guide to follow after the Prophet and his companions.

Abu 'l-Wafāʾ ibn ʿAḳīl (d. 513/1119-20) is not only one of the great scholars of Ḥanbalism but also one of the most famous Arab prose writers. Several of his masters were Ḥanafīs or Shāfiʿīs. In his youth he was interested in Muʿtazilism and in the doctrine of al-Ḥallādj; we have referred above to the two struggles which, in 461/1069 and 465/1073, saw him opposed by the *sharīf* Abū Djaʿfar and to his retraction. In 475/1082-3 he conducted a vigorous academic attack against Ashʿarism; in 484/1091-2, at the time of the arrival of Malik Shāh and Niẓām al-Mulk at Baghdād, he was summoned to explain to the latter the meaning and the importance of Ḥanbalism. He enjoyed a considerable reputation with the Caliphs al-Muḳtadī (467-87/1074-94) and al-Mustaẓhir (487-512/1094-1118). His interventions in political life were frequent.

Ibn ʿAḳīl was a particularly prolific author (*Dhayl*, i, 158). His voluminous *K. al-Funūn*, of which only one volume survives, is a treatise of *adab* which was much used by Ibn al-Djawzī. His more technical works, however, should not be forgotten: the *K. al-Fuṣūl*, also known by the name of *Kifāyat al-muftī*; the *K. al-Irshād fī uṣūl al-dīn*, his main treatise of dogmatic theology; the *K. al-Wāḍiḥ fī uṣūl al-fiḳh*, on the methodology of law; finally the *K. al-Intiṣār li -ahl al-ḥadīth*, the title of which emphasizes well enough the place that the study of tradition held with this author (G. Makdisi, *Ibn ʿAḳīl et la résurgence de l'islām traditionaliste*, *PIFD*, 1962).

In the century which preceded the fall of the Caliphate three names dominate the history of Ḥanbalism. The first is the vizier Ibn Hubayra (d. 560/1165) who, while still a youth, wandered through the markets of Baghdād with a Ṣūfī preacher to exhort the population to live according to the dictates of the Ḳurʾān and the Sunna. Ibn Hubayra owed his career to the caliph al-Muḳtafī (in 555/1150) who, in 544/1149-50, appointed him vizier. Al-Mustandjid (555-66/1160-71) retained him in office, though not without difficulties. In 557 Ibn Hubayra founded, in the quarter of Bāb al-Baṣra, a *madrasa* destined for the purpose of teaching Ḥanbalī tradition and *fiḳh* and for the benefit of which he made a *waḳf* of his valuable personal library. His political programme rested on two aims: the restoration of the Sunna and of the authority of the Caliphate. To succeed in this he tried, on the one hand, to free the Caliphate from Saldjūḳid control and to spur on Nūr al-Dīn to the conquest of Fāṭimid Egypt; on the other hand he endeavoured to band together, around the Ḥanbalī *credo* and opposed to Shīʿism, all the families of Sunnism. His *K. al-Ifṣāḥ* consisted of a commentary upon the *Ṣaḥīḥ*s of al-Bukhārī and of Muslim; he included therein a treatise of *ikhtilāf* (published Aleppo 1928). The work, read and commented upon in the mosques at the request of the vizier, seems to have enjoyed, at least during his lifetime, a fairly wide-spread popularity (*Dhayl*, i, 251-89).

The *shaykh* ʿAbd al-Ḳādir al-Djīlī (d. 561/1166 [*q.v.*]) is the founder of the first great Ṣūfī order, that of the Ḳādiriyya [*q.v.*]. His doctrinal position is difficult to ascertain, owing to the distortions to which his personality and his ideas were subjected by his principal biographer, al-Shaṭṭanawfī (d. 713/1313-4), and the legends transmitted by his admirers. The *shaykh* ʿAbd al-Ḳādir belonged to Ḥanbalism not only by education but also by the very nature of his work. The *K. al-Ghunya*, edited many times, constitutes his principal treatise of dogmatic and moral theology. Here are to be found, grouped together, a profession of faith, a manual of *ādāb sharʿiyya*, a précis of the fundamental rules of *fiḳh* and elements of heresiography—the whole in the pious and militant tradition of Ḥanbalism.

Abu 'l-Faradj Ibn al-Djawzī (d. 597/1200), jurisconsult, traditionist, historian and above all preacher, was intimately connected with the political life of his time. He had, for teachers, Ḥanbalī scholars many of whom were well known, and owed the first successes of his career to the vizier Ibn Hubayra, during the caliphates of al-Muḳtafī and al-Mustandjid. The outstanding period of his activity as an official preacher is set in the caliphate of al-Mustaḍiʾ (566-74/1171-9). The advent of al-Nāṣir (575-622/1179-1225) did not immediately put an end to his activities but progressively marked the beginning of his decline. In 590/1194 he was arrested and held for five years under house arrest at Wāsiṭ; his death followed shortly after his release. His massive work (cf. *Dhayl*, i, 416-20) embraces, it might be said, all the types of Islamic literature. Strongly influenced by Ibn ʿAḳīl and by Abū Nuʿaym al-Iṣfahānī, he is the historian of the Caliphate in the *Muntaẓam* and of Ṣūfism in the

Ṣifat al-ṣafwa. His *Talbīs Iblīs*, directed against the *bid*ʿas introduced into Islam by Ṣūfism, *falsafa*, the sects or the doctors of the law, is in the aggressive tradition of Ḥanbalism. But his best known works are the eulogistic biographies (*manāḳib*) which he devotes to the religious and political personalities of the first centuries of Islam. An uncompromising critic, he also composed refutations of al-Ḥallād̲j̲, ʿAbd al-Ḳādir al-D̲j̲īlī and the Caliph al-Nāṣir.

In the following fifty years, Ḥanbalism still had several eminent representatives at Bag̲h̲dād. Ibn al-Māristāniyya (d. 599/1203), who was interested in the sciences inherited from Greek antiquity and composed a history of Bag̲h̲dād, energetically defended the policy of Ibn Hubayra in the eulogistic monograph which he devoted to him (*D̲h̲ayl*, i, 442-6). Muḥammad b. ʿAbd Allāh al-Sāmarrī (d. 616/1219-20), who was *ḳāḍī* at Sāmarrā, *muḥtasib* at Bag̲h̲dād and entered the service of the Chancellery, left two highly regarded treatises of *fiḳh:* the *K. al-Mustawʿib* and the *K. al-Furūḳ* (*D̲h̲ayl*, ii, 121-2). Isḥāḳ b. Aḥmad al-ʿUlt̲h̲ī (d. 634/1236-7), a Ṣūfī and relentless polemist, was noted for his reforming zeal, which went to the lengths of criticizing the Caliph al-Nāṣir for his policy and Ibn al-D̲j̲awzī for his complacency towards *taʾwīl* (*D̲h̲ayl*, ii, 205-11). Muḥyī al-Dīn Ibn al-D̲j̲awzī (d. 656/1258), a son of the celebrated preacher, made his career in the service of al-Nāṣir, al-Ẓāhir and al-Mustanṣir. Killed with his three sons at the time of the capture of Bag̲h̲dād by the Mongols, he left an apology for Ḥanbalism. In the course of an official journey he had founded a *madrasa* at Damascus, the D̲j̲awziyya, which served as the tribunal of the Ḥanbalī *ḳāḍī*.

In the provinces Ḥanbalism also made a very early appearance. At Iṣfahān, Abū ʿAbd Allāh b. Mandah (d. 395/1004-5) and his son Abu 'l-Ḳāsim (d. 470/1077-8) are often mentioned as important authors (*Ik̲h̲tiṣār*, 339 and 396).

At Herāt, al-Anṣārī (d. 481/1088-9 [*q.v.*]) gave Ḥanbalism its most celebrated Ṣūfī treatise, the *K. Manāzil al-sāʾirīn*.

At Damascus one of the earliest teachers of the school appears to have been the *s̲h̲ayk̲h̲* Abū Ṣāliḥ Mufliḥ (d. 333/941-2), founder of a mosque to which he gave his name outside the Bāb S̲h̲arḳī (*Bidāya*, xi, 204-6). It was particularly with Abu 'l-Farad̲j̲ al-S̲h̲īrāzī (d. 486/1093) that Ḥanbalism became firmly rooted in Palestine and Syria (*Ṭabaḳāt*, ii, 248-9; *D̲h̲ayl*, i, 68-73). His son ʿAbd al-Wahhāb (d. 536/1141-2), himself also a preacher and author of a refutation of As̲h̲ʿarism, founded at Damascus the first great Ḥanbalī *madrasa* (*D̲h̲ayl*, i, 198-201).

Two other families of Ḥanbalī scholars were eminent at Damascus under the Zangids and the Ayyūbids; that of the Banū Munad̲j̲d̲j̲ā and particularly that of the Banū Ḳudāma, natives of Palestine (cf. H. Laoust, *Précis de droit d'Ibn Ḳudâma*, *PIFD*, 1950). To this last family belonged the *s̲h̲ayk̲h̲* ʿAbd al-G̲h̲anī (d. 600/1203-4), a traditionist of Ṣūfī tendencies hostile to As̲h̲ʿarism, and the *s̲h̲ayk̲h̲* Muwaffaḳ al-Dīn Ibn Ḳudāma (d. 620/1223), to whom we owe a treatise of Ḥanbalī law, the *Mug̲h̲nī* (12 vols., Cairo 1922-30), which has enjoyed and continues to enjoy a great reputation. The town of Ḥarrān, on the other hand, was also from very early times an active centre of Ḥanbalism. The most renowned teacher of this school was Mad̲j̲d al-Dīn Ibn Taymiyya (d. 652/1254-5), to whom is owed the *Muntaḳā* (Cairo 1932) and the *Muḥarrar* (Cairo 1950).

4. Ḥanbalism under the Mamlūks and the Ottomans. Ḥanbalism remained very active in Syria and Palestine under the Baḥriyya Mamlūks. It then had as its most celebrated representative Aḥmad b. Taymiyya (d. 728/1328, see IBN TAYMIYYA), whose family had sought refuge in Damascus in 666/1267-8 before the threat of a Mongol invasion. It was at Damascus that Ibn Taymiyya was educated, interesting himself not only in Ḥanbalī literature but in all the Muslim schools, as well in the field of *fiḳh* as in *kalām* or *falsafa*. Intimately concerned in the religious and political life of his time, Ibn Taymiyya very soon found himself, because of his polemical zeal, clashing with numerous opponents and was subjected to frequent persecutions. Sent to Cairo in 705/1305-6 he was imprisoned once for almost eighteen months until 707 (25 September 1307). Exiled to Alexandria for seven months, he was freed and taken back to Cairo by al-Malik al-Nāṣir after the fall of Baybars al-D̲j̲ās̲h̲nikīr. He returned to Damascus in 712/1313. Imprisoned once, in 720/1320, in the citadel for a period of about five months for holding, on the question of repudiation (*ṭalāḳ*), a doctrine deemed to be heretical, he was imprisoned a second time in 726/1326 for his views on the visitation of tombs (*ziyārat al-ḳubūr*), which he denounced as heretical. It was in prison, in the citadel of Damascus, that he died on 20 D̲h̲u'l-Ḳaʿda 728/26 September 1328. As much by his doctrinal works as by his teaching or his personal activities, Aḥmad b. Taymiyya left a deep imprint on the history of Ḥanbalism.

His principal pupil, Ibn Ḳayyim al-D̲j̲awziyya (d. 751/1350-1; *D̲h̲ayl*, ii, 447-53), who shared some of his later persecutions, was more a preacher than a polemist and commented on the *Manāzil* of al-Anṣārī (3 vols., Cairo 1916). We owe to him also an important treatise on *uṣūl al-fiḳh*, the *Iʿlām al-muwaḳḳiʿīn* (3 vols., Cairo 1915), a treatise of public law built around a theory of proof, the *Ṭuruḳ ḥikmiyya* (Cairo 1317, and later eds.), and finally a profession of faith in verse, the *Nūniyya*, principally directed against the D̲j̲ahmiyya and the Ittiḥādiyya (published several times in Cairo since 1902).

ʿAbd al-Raḥmān b. Rad̲j̲ab (d. 795 /1393), from a family which originated from Bag̲h̲dād but which had settled in Damascus, was a pupil of Ibn al-Ḳayyim. Jurisconsult and traditionist, he established himself, by his *D̲h̲ayl*, as the trustworthy and precise historian of Ḥanbalism. His great legal work, the *Ḳawāʾid* (Cairo 1933), deserves to be made the subject of a monograph. To Ibn Rad̲j̲ab are owed also several dissertations which endeavour to establish, on points of dogma, and not without a certain rigidity, the so-called position of the Ancients (*salaf*).

Under the Circassian Mamlūks (784-923/1382-1517) Ḥanbalism lost some of its importance in Syria and Palestine for reasons that are hard to ascertain, though doubtless its hostility to the school of Ibn ʿArabī and that of the Ittiḥādiyya, whose influence was increasing, contributes to the explanation of this relative decline. Though greatly weakened, however, Ḥanbalism did not disappear altogether. Represented by great families of jurisconsults who monopolized, along with the teaching, the official posts and the profits derived therefrom, it was distinguished by several theologians whose importance deserves emphasis. The list of them is found in the *Muk̲h̲taṣar ṭabaḳāt al-ḥanābila*, the work of the venerable *muftī* of the Ḥanbalīs in Damascus, the *s̲h̲ayk̲h̲* Muḥammad D̲j̲amīl al-S̲h̲aṭṭī (published Damascus 1330/1921), which is based on *al-Manhad̲j̲ al-aḥmad*, still unpublished, of Mud̲j̲īr al-Dīn al-

ʿUlaymī (d. 927/1521 [*q.v.*]), the historian of Jerusalem and Hebron.

The chief *ḳāḍī* Burhān al-Dīn Ibn al-Mufliḥ (d. 884/1479-80) belonged to a family which gave to the school several other equally well-known *ʿulamāʾ*; among other works he composed a history of Ḥanbalism, as yet unedited.

ʿAlāʾ al-Dīn al-Mardāwī (d. 885/1480-1) is particularly known, in the literature of the school, through a voluminous manual of *furūʿ*, the *K. al-Inṣāf*, and a treatise of legal methodology, the *K. al-Taḥrīr fī uṣūl al-fiḳh*. His influence made itself felt upon several of the *ʿulamāʾ* of Egypt at this time (*Mukhtaṣar*, 69). Shihāb al-Dīn al-ʿAskarī (d. 912/1506-7) continued his work (*ibid.*, 78-9).

After the conquest of Syria and Egypt (1517) the Ottoman régime, to the extent that it gave pre-eminence to Ḥanafism or Māturīdism, was not favourable to the development of Ḥanbalism. Several scholars, however, in Syria, Palestine and Egypt, deserve to be mentioned.

Sharaf al-Dīn Mūsā al-Ḥudjāwī (d. 968/1560-1), a native of Jerusalem who enjoyed great authority in these three countries, is above all the author of the *K. al-Iḳnāʿ* (publ. Cairo) which long remained one of the fundamental treatises of Ḥanbalī *fiḳh* and is continually used (*Mukhtaṣar*, 85).

Manṣūr al-Bahūtī (d. 1051/1641), who taught at the University of al-Azhar, similarly left several valuable manuals [see AL-BAHŪTĪ].

Ibn al-ʿImād (d. 1089/1679), who was born at Damascus, studied in Cairo and died at Mecca, is above all, in the eyes of posterity, the author of the *Shadharāt al-dhahab* (*Mukhtaṣar*, 61).

ʿAlī al-Burādiʿī (d. 1150/1737-8), who was official preacher in Damascus at the mosque of Sinān Pasha and directed the ʿUmariyya *madrasa*, left behind him the reputation of being a great preacher (*Mukhtaṣar*, 123).

The *Shaykh* ʿAbd al-Raḥmān al-Baʿlī (d. 1192/1778), whose family also gave other eminent scholars to Islamic sciences, was initiated in the mysticism of Ibn ʿArabī and Ibn Fāriḍ under the direction of the *shaykh* ʿAbd al-Ghanī al-Nābulusī (*Mukhtaṣar*, 133) — a fact which does not constitute an isolated phenomenon, for there was no shortage of Ḥanbalīs who attempted to achieve the intelligent co-existence of the Sharīʿa and the *ḥaḳīḳa*.

The dominant fact in the history of Ḥanbalism under the Ottomans was the appearance of Wahhābism with the *shaykh* Muḥammad b. ʿAbd al-Wahhāb (d. 1206/1792; see WAHHĀBIYYA and H. Laoust, *Essai sur Ibn Taymīya*, 506-40). Born at ʿUyayna, in about 1115/1703, but educated for the most part in Mecca and Medina, he succeeded in winning over to his cause, after several unsuccessful attempts, at Darʿiyya, the *amīr* Muḥammad b. Saʿūd. Thus was born, in 1157/1744, the Saʿūdī state which, after diverse vicissitudes, has survived up to the present day. Muḥammad b. ʿAbd al-Wahhāb remains, throughout this long history, the accredited theoretician *par excellence* of the movement. Apart from several professions of faith, his most important work is his *K. al-Tawḥīd* (printed several times). The fundamental works characteristic of the movement are to be found in the *Madjmūʿat al-tawḥīd al-nadjdiyya* (Cairo 1346) and the *Madjmūʿat al-rasāʾil wa'l-masāʾil al nadjdiyya* (Cairo 1346, 4 vols.).

Muḥammad b. ʿAbd al-Wahhāb and his disciples made much use of the work of Aḥmad b. Taymiyya, in particular the *Wāsiṭiyya*, the *Siyāsa sharʿiyya*, the *Minhādj al-sunna* and the various dissertations of this author against the cult of saints and certain forms of Ṣūfism (notably that of the Ittiḥādiyya). After Ibn Taymiyya, Ibn al-Ḳayyim is also often cited. But other authors, early or late, such as the *ḳāḍī* Abū Yaʿlā or al-Ḥudjāwī, are also used by the Wahhābī writers.

Within Ḥanbalism, however, Wahhābism did not gain the unanimous support of the doctors of the law; certain authors did not follow it or were even hostile to it. Such was the case with Ibn Ḥumayd al-Makkī (d. 1295/1878; Brockelmann, S II, 812), the author of an important collection of Ḥanbalī biographies, *al-Suḥub al-wābila*; an edition of this work would be a great contribution to a better understanding of modern and contemporary Islam.

Passionately discussed at the time of its appearance and at other periods of its history, Wahhābism, which had bitter enemies in the Ottoman Empire, in Persia and in different Arab countries, exercised an influence more or less lasting and more or less profound in the Maghrib, India and the Arabian peninsula. Its influence on the Syro-Egyptian Muslim reform movement made itself particularly felt with Rashīd Riḍā (d. 1935) in the period after the first world war. It has sometimes been sought to establish an influence if not of Ḥanbalism, at least of the *Musnad* of Ibn Ḥanbal, in the birth of the movement of the Ikhwān al-Muslimīn (cf. J. Heyworth-Dunne, *Religious and political trends in modern Egypt*, 1950, 16). For the rest, Ḥanbalī *fiḳh* remains operative, in a large measure, in Saʿūdi Arabia. Numerous Ḥanbalī publications have also been brought out, in the course of the last century, not only in Arabia but also in India, Syria and Egypt.

Bibliography: H. Laoust, *Le hanbalisme sous le caliphat de Bagdad (241-656/856-1258)*, in *REI*, 1959, 67-128; idem, *Le hanbalisme sous les Mamlouks Bahrides*, in *REI*, 1960, 1-71. Reference may be made also to the following printed sources: Abu 'l-Ḥusayn (d. 526/1132), *Ṭabaḳāt al-ḥanābila*, ed. Muḥammad Ḥāmid al-Fīkī, 2 vols., Cairo 1371/1952; Ibn Radjdab (d. 795/1393), *Dhayl ʿalā Ṭabaḳāt al-ḥanābila*, partial edition by Laoust and Dahan, *PIFD*, 1951, complete edition by Muḥammad Ḥāmid al-Fīkī, 2 vols., Cairo 1372/1953; al-Nābulusī (d. 797/1395), *K. Ikhtiṣār*, ed. Aḥmad ʿUbayd, Damascus 1350/1932; Ibn al-ʿImād (d. 1089/1678), *Shadharāt al-dhahab*, 9 vols., Cairo 1351/1933; Djamīl al-Shaṭṭī, *Mukhtaṣar ṭabaḳāt al-ḥanābila*, Damascus 1339/1921. A useful introduction to the subject is Ibn Badrān, *Madkhal ilā madhhab al-imām Aḥmad b. Ḥanbal*, Damascus n.d. (H. LAOUST)

ḤANAFIYYA, the Ḥanafī *madhhab* or school of religious law, named after Abū Ḥanīfa [*q.v.*] al-Nuʿmān b. Thābit. It grew out of the main body of the ancient school of Kūfa, and absorbed the ancient school of Baṣra, too. As early as the generation following Abū Ḥanīfa (d. 150/767), we find Abū Yūsuf [*q.v.*] (d. 182/795) refer to him as "the prominent lawyer" (*Kitāb al-Kharādj*, 11), and al-Shaybānī [*q.v.*] (d. 189/805) speak of the "followers of Abū Ḥanīfa". Shāfiʿī [*q.v.*] (d. 204/820) refers repeatedly to the followers of Abū Ḥanīfa as a homogeneous group (*Ikhtilāf al-ḥadīth*, on the margin of *Kitāb al-Umm*, vii, 122, 337, and elsewhere). The transformation of the bulk of the ancient school of Kūfa into the school of the Ḥanafīs was helped by the extensive literary activity of Abū Yūsuf and, above all, of al-Shaybānī whose main works, the *Kitāb al-Aṣl* (edition begun by Shafīḳ Shaḥāta, Cairo 1954), the *Djāmiʿ al-kabīr* (ed. Abu 'l-Wafā al-Afghānī,

Cairo 1356), and the *Djāmiʿ al-ṣaghīr* (Būlāḳ 1302, on the margin of Abū Yūsuf's *Kitāb al-Kharādj*), became the standard texts of the school. Abū Yūsuf and al-Shaybānī came to be regarded as the two main companions of Abū Ḥanīfa, and together with him they form the triad of the highest authorities of the school although other companions of his, such as Zufar b. al-Hudhayl and al-Ḥasan b. Ziyād al-Luʾluʾī, were equally prominent at the time. They often disagree with one another, and the uniform character of the doctrine is much less pronounced in the Ḥanafī *madhhab* than in the other schools. (The differences of opinion of the three authorities are listed in Abu 'l-Layth al-Samarḳandī, *Mukhtalif al-riwāya*.) For adventitious reasons, Abū Ḥanīfa and his school became the main target of the Traditionists [see AHL AL-ḤADĪTH] in their attack against the use of subjective opinion (*raʾy*) in religious law [see AṢḤĀB AL-RAʾY].

Having originated in ʿIrāḳ, the Ḥanafī school was favoured by the first ʿAbbāsid caliphs. It has always been well represented in its home country and in Syria. It spread early to the East, to Khurāsān, Transoxania, and Afghānistān (where the present constitution gives official recognition to the Ḥanafī doctrine), also to the Indian subcontinent, to Turkish Central Asia, and to China. Numerous famous representatives of the school came from Khurāsān and Transoxania. From the 5th/11th century until well into the time of the Mongols the family of the Banū Māza wielded political power in Bukhārā as the hereditary chiefs (*raʾīs*) of the Ḥanafīs in the town, with the title of *ṣadr*. In Khurāsān, from the 3rd/9th century onwards, the Ḥanafīs developed a special law of irrigation, adapted to the system of canals there (cf. Gardīzī, *Zayn al-akhbār*, 8). In the Maghrib, too, the Ḥanafī school had adherents alongside the Mālikīs during the first few centuries of Islam, particularly in Ifrīḳiya under the Aghlabids [*q.v.*]; in Sicily they even predominated (al-Muḳaddasī, 236 ff.). Finally, the Ḥanafī school became the favourite school of the Turkish Saldjūḳid rulers and of the Ottoman Turks; it enjoyed the constant favour of the dynasty and exclusive official recognition in the whole of the Ottoman Empire. As a legacy of former Ottoman rule, the Ḥanafī doctrine has retained official status, as far as Islamic law has remained valid, even in those former Ottoman provinces where the majority of the native Muslim population follows another school, *e.g.*, in Egypt, Sudan, Jordan, Israel, Lebanon, and Syria.

Among the well-known members of the Ḥanafī school in the older period, of whom more or less considerable works have survived, are al-Khaṣṣāf (d. 261/874), the court lawyer of the caliph al-Muhtadī, who wrote a handbook on *waḳf* which has become a classic, a handbook on the duties of the *ḳāḍī*, and a work on legal devices (*ḥiyal* [*q.v.*]); al-Ṭaḥāwī [*q.v.*] (d. 321/933), a convert from the Shāfiʿī school; al-Ḥākim al-Shahīd (d. 334/945), who abbreviated the contents of the main works of al-Shaybānī in a book called *al-Kāfī*; Abu 'l-Layth al-Samarḳandī [*q.v.*] (d. 375/985), a fertile writer on *fiḳh* and other branches of religious sciences; and al-Ḳudūrī [*q.v.*] (d. 428/1036), upon whose *Mukhtaṣar* later works draw a good deal. During this whole period there was in the Ḥanafī school a strong tradition of producing books concerning the application of Islamic law in practice. The *Mabsūṭ* of Shams al-Aʾimma al-Sarakhsī [*q.v.*] (d. 483/1090), a commentary on the *al-Kāfī* of al-Ḥākim al-Shahīd, marks the transition to a more logical and systematic arrangement of the subject-matter within each chapter; it was followed by the *Badāʾiʿ al-ṣanāʾiʿ* of al-Kāsānī (d. 587/1191), which has a strictly systematic arrangement. These older works were, however, ousted by later handbooks and their commentaries in a process common to all schools of Islamic law. One of the most important of these is the *Hidāya* of al-Marghīnānī [*q.v.*] (d. 953/1196; English transl. by Charles Hamilton, London 1791, reprinted Lahore 1957); it acquired numerous commentaries, and Burhān al-Dīn Maḥmūd al-Maḥbūbī (7th/13th century) produced a synopsis of it which he called *Wiḳāyat al-riwāya*. Another member of the literary family deriving from the *Hidāya* is the *Djāmiʿ al-rumūz* of al-Ḳuhistānī (d. 950/1543) which enjoyed great authority in Transoxania. The second important later work is the *Kanz al-daḳāʾiḳ* of Abu 'l-Barakāt al-Nasafī [*q.v.*] (d. 710/1310), again with numerous commentaries, *e.g.*, the *Tabyīn al-ḥaḳāʾiḳ* of al-Zaylaʿī (d. 743/1342), and particularly the *Baḥr al-rāʾiḳ* of Ibn Nudjaym [*q.v.*] (d. 970/1563). The same Ibn Nudjaym wrote the *Kitāb al-Ashbāh wa 'l-naẓāʾir*, a treatise on the systematic structure of positive law. In the Ottoman Empire, the *Durar al-ḥukkām* of Mullā Khusraw (d. 885/1480), a commentary on his own *Ghurar al-aḥkām*, gained particular authority. Based on Ḳudūrī's *Mukhtaṣar*, the *Mukhtār* of al-Buldadjī (d. 683/1284), the *Kanz al-daḳāʾiḳ*, and the *Wiḳāyat al-riwāya* is the *Multaḳa 'l-abḥur* of Ibrāhīm al-Ḥalabī [*q.v.*] (d. 956/1549); this work soon became the authoritative handbook of the Ḥanafī school in the Ottoman Empire. The two most popular commentaries on it are the *Madjmaʿ al-anhur* of Shaykh-zāde (d. 1078/1667), and the *Durr al-muntaḳā* of al-Ḥaṣkafī (d. 1088/1677). This same al-Ḥaṣkafī is the author of the *Durr al-mukhtār*, on which Ibn ʿĀbidīn (d. 1252/1836) wrote a commentary called *Radd al-Muḥtār*, a highly esteemed work which pays particular attention to the problems of the contemporary world. The latest great exposé of the Ḥanafī doctrine in the traditional style is the *Hukukı islâmiyye ve istilahatı fıkhıyye kamusu* by Ömer Nasuhi Bilmen, *mufti* of Istanbul, 6 vols., first ed. Istanbul 1950-2 (Publications of the University of Istanbul, no. 402, of the Faculty of Law, no. 90). The most authoritative handbook of traditional Ḥanafī doctrine in India, after the *Hidāya*, is the so-called *Fatāwā al-ʿĀlamgīriyya* [*q.v.*], not a collection of *fatwā*s but an enormous compilation of extracts from the authoritative works of the school, made by order of the Mughal emperor Awrangzīb ʿĀlamgīr (1067/1658-1118/1707). Parts of it were translated into English by N. B. E. Baillie and by Mahomed Ullah ibn S. Jung.

Among the more important collections of Ḥanafī *fatwā*s are those of Burhān al-Dīn Ibn Māza (d. about 570/1174), called *Dhakhīrat al-fatāwā*, of Ḳāḍī-Khān [*q.v.*] (d. 592/1196), of Sirādj al-Dīn al-Sadjāwandī (end of the 6th/12th century), who is also the author of a very popular treatise on the law of inheritance, of al-Bazzāzī al-Kardarī (d. 827/1424), of Abu 'l-Suʿūd [*q.v.*] (d. 982/1574), and of al-Anḳarawī (d. 1098/1687).

Famous Ḥanafī works on *uṣūl* are the *Kanz al-wuṣūl* of al-Pazdawī (d. 482/1089), the *Kitāb al-uṣūl* of Shams al-Aʾimma al-Sarakhsī (see above), the *Manār al-anwār* of Abu 'l-Barakāt al-Nasafī (see above), the *Tawḍīḥ* of ʿUbayd Allāh b. Masʿūd al-Maḥbūbī, known as Ṣadr al-Sharīʿa al-Thānī (d. 747/1346), on which the Shāfiʿī author al-Taftāzānī [*q.v.*] (d. 792/1398) wrote a commentary called *Talwīḥ*,

the *Taḥrīr* of Ibn al-Humām (d. 861/1457), with its commentary called *Taḳrīr*, by Ibn Amīr al-Ḥādjdj (d. 879/1474), and the *Mirḳāt al-wuṣūl* by Mullā Khusraw (d. 885/1480). (On the work of al-Pazdawī, see R. Brunschvig, *Théorie générale de la capacité chez les Hanafites médiévaux*, in *Revue Intern. des Droits de l'Antiquité*, ii (1949), 157-72).

Works of Ḥanafī *ṭabaḳāt*: ʿAbd al-Ḳādir b. Muḥammad (d. 775/1373), *al-Djawāhir al-muḍīʾa*; Ibn Ḳutlūbughā [*q.v.*] (d. 879/1474), *Tādj al-tarādjim* (ed. G. Flügel, *Die Krone der Lebensbeschreibungen*, Leipzig 1862); Kemāl Pasha-zāde [*q.v.*] (d. 940/1534), *Ṭabaḳāt al-mudjtahidīn* (digested by G. Flügel, *Die Classen der hanefitischen Rechtsgelehrten*, in *Abh. Sächs. Ges. Wiss.*, viii, Leipzig 1860, 269-358); Ṭashköprüzāde [*q.v.*] (d. 968/1560), *al-Shaḳāʾiḳ al-nuʿmāniyya* (German transl. by O. Rescher, Konstantinopel-Galata 1927); Muḥammad ʿAbd al-Ḥayy al-Laknawī (d. 1304/1886), *al-Fawāʾid al-bahiyya* and *al-Taʿlīḳāt al-saniyya*.

In British India, from 1772 onwards, Islamic law as it was administered locally fell under the influence of English legal thought, and an independent legal system, substantially different from Islamic law according to Ḥanafī (and, for the Shīʿa minority, according to Shīʿī) doctrine, came into being. This is properly called Anglo-Muhammadan law (see SHARĪʿA—India and Pakistan). There are numerous handbooks of Anglo-Muhammadan law, the most elementary but the most scholarly of which is A. A. A. Fyzee, *Outlines of Muhammadan Law*, 3rd ed., London 1964, completed by his *Cases in the Muhammadan Law of India and Pakistan*, Oxford 1965.

For the Ottoman Empire, the actual legal system and the administration of justice at the end of the 18th century are described in I. Mouradgea d'Ohsson, *Tableau général de l'Empire ottoman*, Paris 1787-1820 in 3 vols., 1788-1824 in 7 vols. Then, in 1877, Ottoman Turkey enacted a codification of the law of contracts and obligations and of civil procedure, according to Ḥanafī doctrine, as the Ottoman Civil Code, or the *Medjelle* [*q.v.*]. Traditional Islamic law cannot be adequately expressed in the form of a code, and the *Medjelle*, having been undertaken under the influence of European ideas, is not an Islamic but a secular code, however often modern lawyers may have used it as an authoritative statement of Ḥanafī doctrine. It also contains certain modifications of the strict doctrine of Islamic law, mostly by way of omission. But through the intermediary of the *Medjelle*, the Ḥanafī form of Islamic law has deeply influenced the "civil law" of several countries in the Near East. In Egypt, about the same time, Muḥammad Ḳadrī Pasha put the Ḥanafī law of family and inheritance, of property, and of *waḳf* into the form of codes, but these efforts, only the first of which was officially sponsored, were never enacted as codes.

The only Western accounts of the strict Ḥanafī doctrine of Islamic law are L. Blasi, *Istituzioni di diritto musulmano*, Città di Castello 1914, and *G. Bergsträsser's Grundzüge des islamischen Rechts*, ed. J. Schacht, now replaced by J. Schacht, *Introduction to Islamic Law*², Oxford 1966.

HĀNIʾ b. **ʿURWA** al-**MURĀDĪ**, a Yemenī chief of Kūfa who lost his life during the attempt made by al-Ḥusayn b. ʿAlī Ṭālib to seize power, at the end of 60/680. Hāniʾ possessed great influence among the Yemenīs of Kūfa who, represented by the Madhḥidj, Kinda and Hamdān, formed a numerous element in the town; an anecdote related in the *Kāmil* of al-Mubarrad and in the *ʿIḳd* gives further proof that it was an advantage to enjoy his favour. He had a thorough knowledge of the Ḳurʾān, and his name is mentioned in a list of readers belonging to the nobility (*al-ashrāf al-ḳurrāʾ*). But the fact to which Hāniʾ owes his renown is his participation in the preparations for al-Ḥusayn's revolt. We know that the ʿAlid, urged by the Shīʿīs of Kūfa to come there and place himself at the head of his supporters, at first sent his cousin Muslim b. ʿAḳīl to take stock of the situation and to rally the support of those who sympathized with the movement. These steps not having passed unnoticed, the caliph Yazīd appointed ʿUbayd Allāh b. Ziyād [*q.v.*] governor of Kūfa, with instructions to bring this dangerous situation under control. The house of Hāniʾ, used as a meeting-place by the conspirators, was almost the scene of an attempt against the life of Ibn Ziyād himself (al-Ṭabarī, ii, 244, 246-9; Abū Ḥanīfa al-Dīnawarī, 247 f., etc.); Muslim came there to take refuge, on learning that the net was closing round him. Finally Ibn Ziyād invited Hāniʾ, who on the pretence of illness had for some time absented himself from his meetings, to come and see him. Hāniʾ hesitated, but in the end allowed himself to be persuaded, relying on the powerful influence he possessed, and unaware that a spy had discovered the part that he had taken in hatching the plot. When he had come into Ibn Ziyād's presence, the latter overwhelmed him with reproaches and accused him of giving asylum to Muslim. Hāniʾ denied the charge, but the spy was summoned and Hāniʾ was compelled to admit that Muslim had been given protection by him; nevertheless he tried to excuse himself and, possibly feeling convinced that the revolt would be successful, ventured to promise Ibn Ziyād that no harm would befall him (according to al-Masʿūdī, he advised him to flee with his family to Syria). Instead the governor, who had been instructed to arrest Muslim, demanded that he should be handed over to him, but this Hāniʾ obstinately refused, even under the threat of execution; in a fury, Ibn Ziyād struck his face with the stick he was holding; streaming with blood, Hāniʾ made a vain attempt to wrest the spear from one of the guards, and was locked up in a wing of the castle. When the news that he had been killed spread about, an angry crowd of Madhḥidjīs gathered, but dispersed

when Ibn Ziyād sent the *ḳāḍī* Shurayḥ with assurances that Hāniʾ was still alive. Finally Muslim was discovered in his latest hiding-place, taken to the castle and beheaded; Hāniʾ was taken to the sheep-market and also put to death (al-Ṭabarī, ii, 268 f.), being perhaps later crucified in the place known as al-Kunāsa (*ibid.*, ii, 231). The news of this double execution reached al-Ḥusayn after he had arrived in ʿIrāḳ. Elegiac verses on Muslim and Hāniʾ, attributed to Ibn al-Zabīr al-Asadī or other poets, are repeated in several sources. Together with Muslim b. ʿAḳīl, Hāniʾ became a character in the *taʿziya* (E. Rossi and A. Bombaci, *Elenco di drammi religiosi persiani*, Vatican 1961, index).

The poems are also in *The Naqāʾiḍ of Jarīr and al-Farazdaq*, ed. Bevan, 246; *Tādj al-ʿarūs*, iii, 359. (L. Veccia Vaglieri)

ḤANĪF (a.) (pl. *ḥunafāʾ*), means in Islamic writing one who follows the original and true (monotheistic) religion.

1. The Ḳurʾān. The word *ḥanīf* is used especially of Abraham as the type of this pure worship of God; II, 135/129; III, 67/60, 95/89; IV, 125/124; VI, 79, 161/162; XVI, 120/121, 123/124; XXII, 31/32. In most of these verses the *ḥanīf* is contrasted with the idolaters (*mushrikūn*). It is also asserted that Abraham was neither a Jew nor a Christian (III, 67/60; cf. II, 135/129), and that the people of the book were originally commanded to worship God as *ḥunafāʾ* (XCVIII, 5/4). In the remaining two passages where the word is used in the Ḳurʾān (X, 105; XXX, 30/29), Muḥammad and his followers are commanded to worship God as *ḥunafāʾ*, not idolaters. In III, 19/17 Ibn Masʿūd read *ḥanīfiyya* instead of *islām*: "the true religion in God's sight is the *ḥanīfiyya*" (A. Jeffery, *Materials for the history of the text of the Qurʾān*, Leiden 1937, 32). All this indicates that there is a definite conception of the *ḥanīf* and his religion in the Ḳurʾān. This conception is closely linked with the resistance of the Muslims to the intellectual criticisms of Muḥammad's religion by Jews and Christians. In effect the Muslims are to defend themselves by saying that their religion is the pure worship of God, revealed by Him to previous prophets and to Muḥammad, but partly corrupted in the course of time in Judaism and Christianity [see taḥrīf]. Further this religion is in accordance with the natural disposition (*fiṭra* [*q.v.*]) created in men by God (XXX, 30). Thus the *ḥanīfiyya* is contrasted both with polytheism and with the 'corrupted' monotheism of the Jews and Christians. It must indeed for a time have been the name applied to Muḥammad's religion, as is evidenced by the reading of Ibn Masʿūd in III, 19/17, which could hardly be an invention of his own, by the reference to Abraham as *ḥanīf muslim* in III, 67/60 and also by later Islamic usage. This name presumably belongs to the years immediately following the *hidjra*, especially after the break with the Jews. The technical use of *muslim* and *islām* is said not to be before the end of 2 A.H. (R. Bell, *Introduction to the Qurʾān*, Edinburgh 1953, 108), and may be later.

2. Later Islamic usage. The apologetic position associated with the Ḳurʾānic conception of *ḥanīf* is maintained. *Ḥanīf* is occasionally used as the equivalent of *muslim* (Ibn Hishām, 293, 982, 995; cf. 871). More frequent is the use of *ḥanīfiyya* for the 'religion of Abraham' or for Islam (Ibn Hishām, 143, 147; Ibn Saʿd, i/1, 128; iii/1, 287). The form *taḥannuf* is used to mean "the adoption of Islam" (*Kāmil*, 526, poem by Djarīr; *LA*, x, 404; al-Ṭabarī, i, 2827). These ideas were sometimes employed in the elaboration of Ṣūfī doctrines. Al-Ḥallādj spoke of himself as "the least *ḥanīf* of the community of Muḥammad" (Massignon, *Akhbār*[3], 161); and al-Anṭākī and al-Bisṭāmī spoke of the basic form of monotheism as *al-ḥanīfiyya* (Massignon, *Passion*, 607; *Essai* [2], 282; etc.). The general Islamic usage underlies the question in *Kāmil*, 244, "What is a *ḥanīf* ʿ*ala 'l-fiṭra* ...?" (cf. Diyārbakrī, ii, 177). In the verses quoted by Yāḳūt, ii, 51, and other authors, which contrast the *ḥanīf* with the Christian priest and Jewish rabbi, the word almost certainly means Muslim; and the same may be true of the verse of Ṣakhr (*Hudhailiten*, ed. Kosegarten, xviii, 11) where wine-drinking Christians make a noise round a *ḥanīf* (and the scholiast suggests *muslim*). The poem ascribed to Umayya b. Abi 'l-Ṣalt, which speaks of the *dīn al-ḥanafiyya* as the only religion which will survive the resurrection (cf. Schulthess, *Beiträge sur Assyriologie*, viii, 3), is presumably of Islamic inspiration. So too is the verse in Ibn Hishām (180) which speaks of "establishing the *ḥanīf* religion". A case can also be made for holding that the religion of him who *yataḥannafu* with whom the Christians ally themselves (Djarīr, *Naḳāʾiḍ*, ii, 595) is Islam, and that *al-ʿābid al-mutaḥannif* who observes his prayers (*ṣalāt*) (poem by a Nadjdī pagan, Djirān al-ʿAwd, *LA*, x, 404; cf. *Khizānat*, iv, 198) is a Muslim. Another possible interpretation of the last two passages is considered below.

3. Christian usage. The word *ḥanīfiyya* is more frequently used for Islam by Christian writers than by Muslims (*JSS*, ii (1957), 360, n. 4; in Eutychius, *Burhān*, 1, the rendering "Muslims" is almost certain). The word occurs in a letter written about 590/1194 by a Spanish Christian king to the Almohad ruler (quoted by Ibn Khallikān-De Slane, iv, 338). Most revealing, however, is a passage in the *Risāla* of ʿAbd al-Masīḥ al-Kindī (London 1880, 42) where, after speaking of Abraham worshipping the idol as a *ḥanīf*, he adds that "he abandoned the *ḥanīfiyya*, which is the worship of idols, and became a monotheist and believer, for we find that the *ḥanīfiyya* in the revealed books of God is a name for the worship of idols". This statement may have been sharpen-

ed in the interests of anti-Islamic polemic, but it has ample justification in earlier Syriac usages. It was probably because of Christian polemics that the Muslims in the main abandoned the word.

4. Pre-Islamic usage and religious practice. The fact that Muḥammad was able to regard himself and the Muslims as following Abraham the *ḥanīf* shows that there was no organized religious body in the early 6th century A.D. known as the *ḥanīfiyya*. Since the whole conception, however, had a bearing on apologetics, Muslim scholars tended to look for a basis in pre-Islamic history; that is, they tried to find actual *ḥanīf*s. Their statements on such matters must therefore not be accepted without careful scrutiny. Thus, when men are said to have set out to seek "the *ḥanīfiyya*, the religion of Abraham" (Ibn Hishām, 143, 147), it may be true that they set out on a religious quest, but it is practically certain that they did not use that phrase. The primary question, which has been much discussed by modern scholars, is whether there is any conclusive evidence that *ḥanīf* was used before the revelation of the Ḳur'ān for a religious ascetic, Christian or otherwise. The suggestion of Ibn Hishām (152) that *taḥannuf* and *taḥannuth* are the same is an example of the attempt to find corroborations of the Ḳur'ānic conception of *ḥanīf*, for *taḥannuth* almost certainly is derived from Hebrew and means devotional exercises, and thus has no connection with *taḥannuf* (H. Hirschfeld, *New Researches into . . . the Qoran*, London 1902, 10n.). Some of the verses quoted above (such as those of Ṣakhr and Djirān) may be interpreted of a pre-Islamic Arab ascetic; so may that of Dhū Rumma (*LA*, xiii, 206) mentioning a *ḥanīf* who turns west. Yet several such "possible" interpretations are not conclusive evidence of the supposed pre-Islamic use of *ḥanīf* for "ascetic".

The result of careful examination of the passages of early poetry is that the word *ḥanīf* "seems generally to mean *Muslim* and in the odd occurrences which may be pre-Islamic to mean *heathen*" (A. Jeffery, *Foreign vocabulary of the Qur'ān*, Baroda 1938, 114). This last point is paralleled by the use of *ḥanīf* and its derivatives in early translations into Arabic to represent the Syriac *ḥanpo* (pl. *ḥanpé*) etc.; and the Syriac word normally means "heathen", but sometimes has the connotation of "a person of Hellenistic culture" (cf. N. A. Faris and H. W. Glidden, *The development of the meaning of the Koranic Ḥanīf*, in *Journal of the Palestine Oriental Society*, xix (1939), 1-13, esp. 6-9, where much fresh pre-Islamic material is adduced; Ar. tr. in *Abḥāth*, xiii (1960), 25-42). Even Syriac material, however, must be used with care, since the hellenized pagans of Ḥarrān, who came to be known as Ṣābians [see AL-ṢĀBI'A], in their attempts to establish themselves as a "people of the book" seem to have taken over the Ḳur'ānic conception of the *ḥanīfiyya* and to have claimed that they were *ḥanpé* and the heirs of the original *ḥanpūtho* (*loc. cit.*, 8, giving a passage from Thābit b. Ḳurra (d. 288/901), quoted by Barhebraeus, *Chronicum Syriacum*, Paris 1890, 168). Such assertions by Thābit and possibly other Ḥarrānians are doubtless the source of al-Mas'ūdī's references to the Ṣābians as following the religion of the *ḥanīfiyya* (*Tanbih*, 6, 90 f., 122 f., 136, 145; cf. Glossary). Al-Mas'ūdī, however, who is here dealing with the pre-Christian Roman emperors, appears to be following Christian sources which used *ḥunafā'* in the sense of "pagan", since the forty emperors preceding Constantine could be described as "pagan" but not as "Ṣābian"; his acceptance of the identification of the *ḥanīfiyya* with the Ṣābian religion would then be part of the attempt to illustrate factually the Ḳur'ānic conception of *ḥanīf*. A similar borrowing of *ḥunafā'*, "pagans", from a Christian source is found in al-Ya'ḳūbī, i, 51 f., where it is applied to opponents of Saul and David (*i.e.* the Philistines, cf. I Samuel, 17), who are further described as worshippers of stars (cf. Theodore Abū Ḳurra, *al-Dīn al-Ḳawīm*, in *al-Mashriḳ*, 1912, ad init., *al-ḥunafā' al-awwalīn* as star-worshippers).

5. Etymology. Suggestions that *ḥanīf* is formed from the Arabic root or is derived from Hebrew or Ethiopic have little to commend them. The source must be Syriac, probably with the plural *ḥunafā'* (representing *ḥanpé*) coming first. In some Aramaean circles, however, the primary meaning of "heathen" or "pagan" was overshadowed by secondary connotations, such as "of Hellenistic culture", so that the word could be applied to philosophically-minded persons who were essentially monotheistic. The Ḳur'ānic usage neglected the primary meaning and developed some of the secondary connotations, a semantic process not unknown elsewhere (cf. "snob" in French).

6. Conclusions. The common Islamic conception of *ḥanīf* and the *ḥanīfiyya* is derived solely from the Ḳur'ān. The word *ḥanīf*, if used independently of the Ḳur'ān (as by pre-Islamic Arabs or Christians), means primarily "pagan". It is therefore vain to look for religious or ascetic movements or individuals to whom this name was actually applied in pre-Islamic times. The movements and individuals exist, but any assertion that some one is a *ḥanīf* (in the Islamic sense) is the work of a later Muslim apologete, or one under Islamic influence like Thābit b. Ḳurra, and is therefore historically valueless.

Bibliography: in the article. Earlier literature is summarized in Faris and Glidden, *op. cit.*

(W. MONTGOMERY WATT)

ḤANĪFA B. LUDJAYM, ancient Arab tribe, part of Bakr b. Wā'il [*q.v.*] on a level with Tha'laba and 'Idjl. The chief subdivisions were al-Dūl (or al-Du'il), 'Adī, 'Āmir, Suḥaym. They were partly nomadic, partly agricultural (date-palms and cereals), and also partly pagan, partly Christian. The town of al-Hadjr, capital of al-Yamāma, belonged chiefly to them, also the town of Djaww (later al-Khidrima). Other localities mentioned as belonging to them (and as chiefly occupied by them) include: the *wādī* of al-'Irḍ, al-Awḳa, Fayshān, al-Kirs, Ḳurrān, al-Manṣif (a fortified town), Tala' b. 'Aṭā, al-Thaḳb (or al-Naḳb), Tu'ām, Ubād, 'Uthāl. The Ḥanīfa are said to have moved from al-Ḥidjāz to al-Yamāma after the extinction of an older culture there [see ṬASM]. Their separation from the rest of Bakr apparently took place towards the end of the war of Basūs [*q.v.*], and they were absent from the battle of Dhū Ḳār [*q.v.*]. This absence may be connected with the fact that they recognized the suzerainty of the Lakhmids of al-Ḥīra and were employed in conducting Persian caravans from the Yemen to 'Irāḳ. In extending their influence over the region between al-Yamāma and 'Irāḳ they came into conflict with Tamīm, and there were several battles. The leader about 600 A.D., Ḳatāda b. Maslama, was succeeded by Hawdha b. 'Alī, apparently a Christian, who on one occasion was well received at the Persian court and given a crown, in reward for his services in conducting caravans. With the decline of the Persian empire after 628, Hawdha began negotiations with Muḥammad, but had not become a Muslim before his

death in 630. Thumāma b. Uthāl, who may have been Hawdha's successor, is said to have become a Muslim after being captured in a raid. He was leader of the loyal Muslims of Ḥanīfa in the wars of the *ridda*, when a large section of the tribe revolted against Medina under Musaylima [*q.v.*].

ḤANĪFA, WĀDĪ [see wādī ḥanīfa].

HANSALIYYA, a religious brotherhood of Moroccan origin which established itself in the Central Atlas and in the neighbourhood of Constantine.

It appears to have its origin in the *zāwiya* founded towards the end of the 6th/12th century by a Berber from the Sūs, Saʿīd u ʿAmur al-Ahansalī, on the banks of the *asīf* Ahansal, in the heart of the Berber country. From modest beginnings this *zāwiya* became better known in the second half of the 11th/17th century, when a descendant of the founder, Abū ʿUthmān Saʿīd b. Yūsuf al-Ahansalī, who died in 1702, founded a new *zāwiya* in the same region and founded a brotherhood. Abū ʿUthmān had pursued long studies in Morocco and had spent several years in the Orient. He had been initiated by Sayyidī ʿĪsā al-Djunaydī at Damietta.

His son Yūsuf succeeded him and acquired a certain political as well as religious influence in the region of the Wādī al-ʿAbīd, especially after the death of Mawlāy Ismāʿīl. On his death the brotherhood declined in Morocco but took on new vigour in the region of Constantine. Nevertheless, several *zāwiya*s of the order remained in the region of Wawizaght and at the time of the French occupation were playing a minor political rôle under the direction of Sayyidī Moḥā u Aḥmad al-Ahansalī. If this little brotherhood still survives, which is not certain, it no longer exercizes more than a very feeble influence.

One of the sons of Sayyidī Yūsuf, Sayyidī Saʿdūn, threatened by the Moroccan authorities, fled to the Constantine area about 1730, made converts there, and erected a *zāwiya* of minor importance; it appears that there is an offshoot of this *zāwiya* at Le Kef in Tunisia.

The Hansaliyya combined the customary mystic practices—the *wird* and recitations of the verses of the *Damyāṭiyya*, a mystic poem by the *imām* ʿAbd Allāh Muḥammad al-Dīrūṭī al-Damyāṭī—with dances, songs, and flagellations which induced ecstasy. In Morocco, in the milieu where they arose, they long enjoyed the reputation of miracle-workers in communication with the *djinn*.

Bibliography: Muḥammad al-Ḳādirī, *Nashr al-mathānī*, Fez 1309/1891, ii, 170; Salāwī, *K. al-Istiḳṣā*, iv, 57; Rinn, *Marabouts et Khouan*, Algiers 1884, 385 ff.; Depont and Coppolani, *Les confréries religieuses musulmanes*, Algiers 1897, 492; Ch. de Foucauld, *Reconnaissance au Maroc*, Paris 1934, 264, 267; de Segonzac, *Au cœur de l'Atlas*, Paris 1904, 55; E. Michaux-Bellaire, *La zaouia d'Ahançal*, in *AM*, xxvii (1927), 87-113; G. Drague, *Esquisse d'histoire religieuse au Maroc*, Paris n. d., 163-82, and genealogical table at end. (R. Le Tourneau)

HĀNSAWĪ, Shaykh Djamāl al-Dīn Aḥmad, also called Ḳuṭb Djamāl al-Dīn, a Ṣūfī mystic of the Indian Čishtiyya [*q.v.*] order, b. 580/1184-5, d. in Hānsī 659/1260-1. He was a descendant of the theologian and religious lawyer Abū Ḥanīfa, and was a senior *khalīfa* of Shaykh Farīd al-Dīn Masʿūd "Gandj-i Shakar" [*q.v.*] during the time the latter spent at Hānsī [*q.v.*]. He is said to have been the *khaṭīb* of Hānsī when he joined Farīd al-Dīn, and to have resigned this post and its consequent material benefits as a necessary condition of his spiritual discipline.

He is known as the author of two works: his *Mulhamāt* (Arabic; lith. Alwar 1306, Dihlī 1308) is a collection of Ṣūfī aphorisms, with particular reference to the difference between the externalist recluse (*zāhid*) and the true mystic (*ʿārif*), without much specific reference to purely Indian conditions; and his *Dīwān* (Persian; lith. Dihlī 1306) is the earliest known poetical work of a Čishtī mystic, which in addition to its mystical content is valuable for the light which it throws on contemporary religious and political thought and institutions, the popular beliefs, customs and practices, and the attitudes of the mystics to all these, of the early 7th/13th century in north India. A manuscript copy of the *dīwān*, no. 360 in the Bibliotheca Nova of the library of the University of Uppsala, is described by K. V. Zetterstéen, *Die arabischen, persischen und türkischen Handschriften der Universitätsbibliothek zu Uppsala verzeichnet und beschrieben*, in *MO*, xxii (1928), 298-302, 428; *ibid.*, xxix (1935), 150 ff., where a short extract from the *Mulhamāt* is also given, 152 ff. The table of contents of the *Dīwān*, with translations of some verses, is given by Zetterstéen in *Selections from the divan of Jamāluddīn Aḥmad Hānsawī*, in *Islamic Research Association Miscellany*, i (1948), 165-82.

Bibliography: Mīr Khurd, *Siyar al-awliyā'*, Dihlī 1302, especially 178 ff., which also contains a notice of the two sons of Djamāl al-Dīn: the younger, Burhān al-Dīn, was also admitted as a disciple of Farīd al-Dīn; Muḥammad Ghawthī Shaṭṭārī, *Gulzār-i abrār*, MS A.S.B. Calcutta, 17^{r-v}; ʿAbd al-Ḥaḳḳ Muḥaddith Dihlawī, *Akhbār al-akhyār*, Dihlī 1309, 67 ff.; Raḥmān ʿAlī, *Tadhkira ʿulamā'-i Hind*, Lucknow 1914, 42; many references *passim* in the hagiographical literature, for which see Bibliography to čishtiyya. See also K. A. Nizami, *The life and times of Shaikh Farid-u'd-din Ganj-i-Shakar*, ʿAlīgaṛh 1955, index; idem, *Some aspects of religion and politics in India during the thirteenth century*, ʿAlīgaṛh 1961, index. On the *Mulhamāt* cf. M. G. Zubaid Ahmad, *The contribution of India to Arabic literature*, Allāhābād 1946, 85 f. (J. Burton-Page)

HĀNSĪ, a town of the Indian Pandjāb, situated 29°7′ N., 76° o′ E., in the Hariyānā [*q.v.*] region of which it was the old capital until supplanted by Ḥiṣār Fīrūza [*q.v.*] in 757/1356. It is known from inscriptions that it was occupied by the Tomārs and Čawhāns before the Muslim conquest, and was perhaps occupied from Kushāṇa times, 1st or 2nd century A.D.: certainly the old fort, to the north-east of the present town, is an extensive *tell* representing an accumulation of many cultural layers. Hānsī was already a major stronghold when Masʿūd, son of Maḥmūd of Ghazna, stormed this "virgin fortress" in the winter of 429/1037-8 (Abu 'l Faḍl Bayhaḳī, *Ta'rīkh-i Masʿūdī*, Tehrān 1324/1945, 533-4; Eng.

tr. Elliot and Dowson, *History of India* . . ., ii, 140), capturing it at his second attempt. From that time Hānsī became an important forward position in the Ghaznawids' Indian province, and we read of Masʿūd's second son, Madjdūd, who had been appointed governor of that province, spending the winter of 433/1041-2 at Hānsī waiting his chance to launch an attack on Dihlī. Two years later, however, the Dihlī rādjā Mahīpāl recaptured Hānsī, and it was strengthened by him and subsequent builders. Towards the end of the next century it was enlarged and further strengthened by Prithwī Rādj as a bulwark against the Ghūrī forces; but, after the defeat of the Hindū forces at Tarāwarī by Muḥammad b. Sām, Hānsī also surrendered (588/1192). At the end of that year a Čawhān army invaded Hariyānā, compelling the Muslim governor Nuṣrat al-Dīn to take refuge in the fort; but they were overcome by Ḳuṭb al-Dīn Aybak (details incorrect in Wolseley Haig, *Cambridge history of India*, iii, 41, cf. Hoḍīvālā, *Studies in Indo-Muslim history*, i, Bombay 1939, 179-80). Within a few months Aybak had taken Dihlī, and made it the headquarters of Muslim power in India; the Muslim hold on Hānsī thereafter remained secure.

Hānsī frequently figures in the chronicles of the Dihlī sultanate both as an important stronghold (for its strategic importance see HARIYĀNĀ, of which it was the principal town) and as an *iḳṭāʿ* of numerous officials: doubtless a convenient one for the sultan to have at his disposal, for it was far enough from Dihlī to make appointment—or banishment—to it a reality, but it was sufficiently close to the power of arms at the capital to prevent a rebel from easily asserting his independence. For example, it was the *iḳṭāʿ* of Ghiyāth al-Dīn Balban [see DIHLĪ SULTANATE] in about 640/1242, to which he was banished in 650/1252-3 after the conspiracy against him; when he had gathered some local support there he was sent further, to Nāgawr, and Hānsī was nominally given to an infant son of the king but in practice was occupied by one of Balban's opponents (Minhādj-i Sirādj Djuzdjānī, *Ṭabaḳāt-i Nāṣirī*, ed. Bibl. Ind. 202; Eng. tr. Raverty, ii, 140); other princes had held this *iḳṭāʿ* previously, for example Abu 'l-Fatḥ Maḥmūd, the son of Iletmish, who died in 626/1229, held Hānsī before 623/1226 (*Ṭabaḳāt-i Nāṣirī*, 180) and there built the *ʿīdgāh* (no date; inscription in J. Horovitz, in *EIM*, 1911-12, 28 and plate XIX/1, 2). The prestige of Hānsī declined after the foundation of Ḥiṣār Fīrūza by Fīrūzu Shāh Tughluḳ in 757/1356, which took over the function of headquarters of a *shiḳḳ*; in the previous reign, however, Hānsī had been described by Ibn Baṭṭūṭa as "an exceedingly fine, well-built and populous city". It certainly remained in operation as a stronghold for some time, for in 923/1517 Ibrāhīm Lodī confined his brothers there to keep his kingdom secure while he was faced with a rebellion at Djawnpur.

Hānsī itself is little mentioned during Mughal times; it appears in the *Āʾīn-i Akbarī* merely as a *maḥall* in the *sarkār* of Ḥiṣār Fīrūza in the *ṣūba* of Dihlī. For its general history under the Mughals and their successors see HARIYĀNĀ, and for the period in which Hānsī became the headquarters of the English adventurer George Thomas see also MARĀTHĀS. Thomas is said to have re-fortified Hānsī; certainly a military fort was established there by the British in 1803, and one Mīrzā Ilyās Beg was appointed *nāẓim* of Hariyānā by General Ochterlony; but the country remained subject to constant raids and was for long in disorder until the British established direct rule over the region in 1818.

Monuments.—The old fort has already been mentioned; it was dismantled after the mutiny of 1857, but gateways and lengths of bastioned wall remain. The *dargāh* of Sayyid Shāh Niʿmat Allāh, who accompanied Muḥammad b. Sām in 588/1192 and was killed at the conquest of Hānsī, stands in the fort; Hindū materials were freely used in its construction, and if the date 588 in the inscription of the attached mosque is correct it must be the oldest mosque in India (some doubt; cf. Horovitz, *op. cit.*, 19). On the west of the town stand the mosque and tomb of the "four Ḳuṭbs", Ḳuṭb Djamāl al-Dīn Hānsawī [see HĀNSAWĪ] and his three successors; the shrine itself was not built until 903/1496, but in a mosque in the enclosure is a tombstone with an Arabic inscription of 1 Dhu 'l-Ḳaʿda 622/4 November 1225, the oldest dated tombstone in India; another mosque nearby bears the date Muḥarram 877/June 1472; and in the same enclosure is the tomb of ʿAlī Mīr Tudjdjār (*sic*; the word is used as a singular in Urdū), a disciple of Ḳuṭb Djamāl al-Dīn. This is the finest building in Hānsī, a square domed mausoleum with glazed tiles in inlaid patterns in the spandrels of the openings and filling the small blind arches above the level of the doors; it appears to date from the 9th/15th century, although the local tradition assigns it to the 7th/13th. Also to the west of the town is the *ʿīdgāh* already referred to. Further still is a mound, with a small mosque, called the Shahīd Gandj, traditionally supposed to be where 150,000 Muslims were slain, presumably in Masʿūd's first unsuccessful attempt on Hānsī.

Bibliography: In addition to the references in the article, see the bibliography to HARIYĀNĀ; general account in *Punjab District Gazetteers, ii a, Hissar District, Part A*, Lahore 1916. For the monuments: H. B. W. Garrick, *Report of a tour in the Panjab* . . ., in *ASI*, xxiii, Calcutta 1887, 13-9 and Plates V-VII; the monuments are cursorily described in this volume, and their serious study is now an urgent necessity. ḤĀNYA [see IḲRĪTISH].

ḤANẒALA B. **ABĪ ʿĀMIR** [see GHASĪL AL-MALĀʾIKA].

BANŪ **ḤANẒALA** B. **MĀLIK**, a branch of the tribe of Tamīm [*q.v.*], of the group of Maʿādd, descended from Zayd Manāt b. Tamīm. The chief subdivisions were Dārim (from which came the poet al-Farazdaḳ), Yarbūʿ (to which Djarīr belonged) and the Barādjim (five families descended from Mālik b. Ḥanẓala). They inhabited the Yamāma between the hills Djurād and Marrūt, near *ḥimā* Ḍariyya [*q.v.*]. Among their villages were al-Ṣammān (with wells, cisterns and irrigation) and al-Raḳmatān; but they were mainly nomadic.

In history they appear at the first "day of Kulāb" (probably before 550 A.D.) as supporters of Shuraḥbīl, prince of Kinda, there defeated and killed by his brother Salama. Towards 570 Zurāra b. ʿUdas, chief of Dārim, was in good relations with the king of Ḥīra, but the death of the latter's brother while among Dārim led to a raid (second "day of Uwāra") as a result of which 100 captives of Ḥanẓala were burnt alive by the king. Another important battle was on "the day of Rahrahān", a few years later, when B. ʿĀmir b. Ṣaʿṣaʿa [*q.v.*], annoyed because Laḳīṭ b. Zurāra had given hospitality to the killer of their chief, attacked a caravan of Ḥanẓala and made some prisoners and took booty. An attempt by Laḳīṭ to revenge this defeat led to the more disastrous defeat

at Shiʿb Djabala. Ḥanẓala were part of the forces of Tamīm on the second "day of Kulāb", when they successfully repulsed an attack. Among the first of the tribe to become a Muslim was al-Aḳraʿ b. Ḥābis [*q.v.*] of Dārim. It was among Tamīm that the prophetess Sadjāḥ appeared in the "wars of the *ridda*"; among those supporting her was Mālik b. Nuwayra (Yarbūʿ), who was put to death by Khālid b. al-Walīd. To Ḥanẓala belonged Asmāʾ bint Mukharriba, mother of Abū Djahl [*q.v.*]. After the conquests many of the tribe settled in Baṣra and elsewhere in ʿIrāḳ, and to them the Zuṭṭ [*q.v.*] and Sayābiga [*q.v.*] became clients (Pellat, *Milieu Baṣrien*, 37, 41). Some Khāridjī leaders came from Ḥanẓala, notably ʿUrwa b. Udayya who led the opposition to ʿAlī at Ṣiffīn and was executed in Baṣra about 58/678; also his brother, Abū Bilāl Mirdās (killed 61/681).

ḤANẒALA B. ṢAFWĀN, one of the people of the Interval (*fatra* [*q.v.*]), regarded as a prophet sent to the Aṣḥāb al-Rass [*q.v.*], who maltreated and killed him before being destroyed themselves. The formation of the legend apparently began in the 3rd/9th century (cf. al-Djāḥiẓ, *Tarbīʿ*, ed. Pellat, index) but Ibn Ḳutayba does not mention Ḥanẓala among the prophets of the *fatra*, and al-Masʿūdī, in the *Murūdj* (i, 125, iii, 105), devotes only a few lines to him. Later on, the necessity felt by the exegetists to explain the Ḳurʾānic expression Aṣḥāb al-Rass (XXV, 40/38, L, 12) brought about a widespread development of the legend, which finally attributed to Ḥanẓala the role played by Khālid b. Sinān [*q.v.*] in the removal or destruction of the fabulous bird called *ʿanḳāʾ* [*q.v.*], which was ravaging the Aṣḥāb al-Rass (al-Ḳazwīnī, *ʿAdjāʾib*, ed. Wüstenfeld, 367). Furthermore, the verse (XXII, 44/45): "how many stone-built wells, how many powerful palaces [are abandoned]!" inspires a commentary in which Ḥanẓala appears and, once more, the Aṣḥāb al-Rass. The latter, near ʿAdan, had a well which supplied them with abundant water and a king who governed them with justice and assured their happiness; when the king died, his people embalmed him in order to preserve his image and, urged by Satan who had entered the king's dead body and had proclaimed that he was not dead, began to worship this idol, which Satan had ordered to be concealed by a veil. However, God sent to this people the prophet Ḥanẓala b. Ṣafwān al-ʿAbsī (who received his inspiration only while sleeping) to reveal to them Satan's deceit and to turn them from their worship of him, but the Aṣḥāb al-Rass had no faith in his words, killed him, and cast him into the well. Divine retribution soon followed, the people were destroyed and their country was given over to *djinns* and wild beasts.

(CH. PELLAT)

ḤANẒALA B. ṢAFWĀN b. ZUHAYR AL-KALBĪ, general and governor of the Umayyads who, in Shawwāl 102/April 721, was appointed by the caliph Yazīd II governor of Egypt in place of his brother Bishr b. Ṣafwān, who had been sent to Ifrīḳiya. During his three years in Egypt (Shawwāl 102—Shawwāl 105/April 721—March 724) he had statues destroyed and paintings effaced, on the orders of Yazīd. Hishām, after removing him from office, was obliged to send him back to Egypt (7 Shaʿbān 118/20 August 736), as the incompetence of his successor, ʿAbd al-Raḥmān b. Khālid, was causing this province to be in danger of recapture by the Byzantines. He had been governing it for five years and eight months when Arab rule in the Maghrib was seriously threatened by the revolt of the Khāridjī Berbers, who completely destroyed an Arab army on the banks of the Subū and killed Kulthūm b. ʿIyāḍ, the governor of Ifrīḳiya (123/740-1). Ḥanẓala, on Hishām's orders, arrived in Ṣafar 124/December 741-January 742, in time to repel the Berbers who had invaded Ifrīḳiya and were threatening Ḳayrawān. After establishing his headquarters in the capital, Ḥanẓala made a sortie and defeated successively ʿAbd al-Wāḥid b. Yazīd al-Hawwārī, at al-Aṣnām (Djalūlā?), and ʿUkkāsha b. Ayyūb al-Fazārī, at al-Ḳarn (the chronological order of these two victories varies according to the sources); ʿUkkāsha was then arrested and put to death (Djumādā II 124/April-May 742).

The disturbances which resulted in the fall of the Umayyads had their repercussions in the Maghrib. A usurper, ʿAbd al-Raḥmān b. Ḥabīb al-Fihrī, who was descended from ʿUḳba b. Nāfiʿ, returned from Spain, raised a revolt at Tunis, and called on Ḥanẓala to hand over Ḳayrawān to him; because of religious scruples, the latter offered no resistance and left the capital (Djumādā I 127/February 745) to return to the East.

ḤARAKA WA-SUKŪN "motion and rest", a technical expression used, on the one hand, in philosophy and theology, and, on the other, in grammar.

I.—PHILOSOPHY AND THEOLOGY

I.—The *Falāsifa* take the Greek theories for their base. Thus al-Kindī exactly reproduces Aristotle's thought when he writes, like him linking time and motion, that time is a duration that is counted by motion (*mudda taʿudduhā 'l-ḥaraka*; cf. *Phys.* IV, 219 b: ἀριθμὸς κινήσεως ... ὁ δὲ χρόνος ἐστι τὸ ἀριθμούμενον, that is to say that time is the *counted*

number of motion). Furthermore, al-Kindī knows the famous formula: time is the number of motion; he identifies it with the preceding one (*Li-anna 'l-zamān innamā huwa ʿadad al-ḥaraka, aʿnī annahu mudda taʿudduhā 'l-ḥaraka*). There is no motion without body and time; these three realities are simultaneous in existence. Motion presupposes something moveable that is a body; if there is neither motion nor time there is nothing that goes from ... to (*fa-lā shayʾ min ... ilā*; cf. *Phys.* V. 224b I: ἔκ τινος εἴς τι), and thus there is no duration, and without duration there is no body, no means of being at all (*fa-lā ḥal al-battata*). Thus al-Kindī defines motion, in general, as "the fact that the manner of being of an essence is modified" (*tabaddul ḥāl al-dhāt*). This internal modification involves a close relationship between the motion of beings and their nature. "Nature is the principle (*ibtidāʾ*) of motion, and of rest after motion". Al-Kindī defines the efficient cause thus: "the principle of motion of a thing of which it is the cause". Nature is thus the way that leads to rest (*al-ṭarīḳ ila 'l-sukūn*), and rest coincides with the final state, the realization of actuality or the last fulfilment. It is here a question of natural motion, as Ibn Rushd states, when commenting on the definition of nature: ὅθεν ἡ κίνησις ἡ πρώτη (*alladhī minhu 'l-ḥaraka al-ūlā*), in these words: "the name of nature is applied first to the substance (*djawhar*) that is the form (*ṣūra*) and is the principle of motion in things that are essentially and fundamentally natural" (*Tafsīr*, ii, 514-5).

As in Aristotle, *ḥaraka* is used of local motion (*ḥaraka makāniyya, ayniyya, naḳl*, φορά = change of position, *tabaddul makān*); of increase and decrease (*rubuwwiyya* and *iḍmiḥlāliyya*, or again *tabaddul makān*, but in so far as the limit of the motion is a coming towards, or a drawing away from, the centre of the being in question; Aristotle (*Phys.* IV, 213b 4) already thought that motion with respect to place could be either a change of position or an increase); of alteration (*ḥaraka istiḥāliyya, tabaddul kayfiyyāt*); and finally of generation and corruption (*al-kawn wa- 'l-fasād, tabaddul djawhar*). These different types of motion can be related to nature: "It is said of the motion of generation and of the motion of growth (*numū*) that they are a type of nature, for they are the way that leads to this nature, that is to say, form, and they are its principle. Form exists in them in an intermediate manner: it is, in motion, between pure potentiality and pure actuality, or again, it is partly potential and partly actual" (Ibn Rushd, *Tafsīr*, ii, 515). Averroes refers to another current definition: motion, in general, is a gradual transition of that which is potential to actuality (*khurūdj mā bi-'l-ḳuwwa ila 'l-fiʿl ʿalā tadrīdj*). Al-Djurdjānī states that "gradual" is added in order to exclude generation (*kawn*) from the definition of motion. *Kawn* here signifies, not generation in time, such as a gestation or a maturation that amount to alterations and changes of form and size, but creation, the act that causes a being to enter instantaneously upon existence. Such is the opinion of Ibn Sīnā; on the subject of the active cause considered metaphysically he writes: "Metaphysicians do not understand by *agent* simply the principle of setting in motion (*mabdaʾ al-taḥrīk*), as do physicists, but the principle that gives existence, as the Creator does to the world. As for the efficient physical cause, it causes to exist only the actual setting in motion, according to one of the types of motion; that is why, in the physical realities, that which gives existence is the principle of motion" (*Shifāʾ, al-Ilāhiyyāt*). This distinction is important; cf. Aristotle, *Phys.*, V., 225a 26: "It is impossible for the non-being to be moved. If this is so, generation (leaving non-being) is not a motion ..., nor is corruption (returning to non-being)". On this subject al-Tahānawī writes: "The Moderns have deviated from this definition, since the gradual process is the fact that a thing arrives at one time after another time. Consequently time enters into the definition of motion. Now, time is understood as being the measure (*miḳdār*) of motion, and this necessarily involves a vicious circle ... They say then that motion is the first fulfilment (*kamāl*) of that which exists potentially, in so far as it exists potentially (they thus reproduce Aristotle's expression, *Phys.* III, 201 a 11). The explanation is this: when, for example, a body is in one place and it can arrive at another place, it has two possibilities, that of arriving at the second place, and that of directing itself towards it (*tawadjdjuh*). Each time that it is possible for it to arrive there, it receives a (new) fulfilment in arriving. There is, then, perfection in both cases: orientation towards a second place and arrival at that place. But the orientation necessarily precedes the arrival; as long as the orientation exists actually, the arrival exists potentially. The orientation is, then, a first fulfilment for this body, which necessarily exists potentially with respect to its second fulfilment, that is to say, with respect to its arrival". This passage shows that in the definition of time as the "measure" of motion confusion is caused by forgetting that time is not a number that counts but a number that is counted. It is this confusion that causes a vicious circle. Besides, *tawadjdjuh* is not enough; it is potential motion, but not yet a real motion, the actuality of a potentiality. Al-Kindī's *tabaddul*, because of its root meaning and the shade of meaning of the *maṣdar* of the Vth form, more accurately renders the reality.

Precise details of the types of motion are given. Thus it is pointed out that quantitative (*min kam ilā kam ākhar*) motion affects both matter and form, and that rarefaction (*takhalkhul*) and condensation (*takāthuf*), growth (*numū*) and shrinking (*dhubūl*), becoming fat (*siman*) and becoming thin (*huzāl*) must be distinguished. Change of position is distinguished from movement on the spot (*waḍʿiyya*), in the motion of rotation (*ʿala 'l-istidāra*): "each part of the moveable object leaves each one of the parts of its position—in a case where there is a position—, but the whole remains attached to its position. We add "in a case where there is a position", in order to include in the definition of motion the encompassing Sphere (which, properly speaking, has no position)" (al-Tahānawī).

The theory of motion is linked, as it is for the Greeks, with the organization of the *cosmos*. The circular motion of the celestial spheres, the most perfect motion, is eternal because its limit coincides with its origin, and there exists no time outside it; time cannot preexist the motion of the encompassing Sphere. The motion of the spheres determines the various motions in the time of the beings of the sublunary world, in particular that of the elements upwards (*al-ḥaraka al-ṣāʿida*) or downwards (*al-hābiṭa*). The composition of the elements is thus considered as motion: a change in the manner of being of that which is not compound (*al-tarkīb ḥaraka, wa-in lam yakun ḥaraka lam yakun tarkīb*) (al-Kindī).

A distinction is also drawn between essential (*dhātiyya*) motion, which moves a body without the intervention of the motion of another, and accidental

(*ʿaraḍiyya*) motion, like that of a man who is on a ship under way; and between natural motion and forced motion (βία, *al-ḥaraka al-ḳasriyya*), in which the motive force (*al-ḳuwwa al-muḥarrika*) is external to the object moved (*al-mutaḥarrik*); this applies to artificial motions. A being can receive the principle of its motion from another being (*min ghayrihi*: God, Nature), but have it in itself and move with a natural motion. Forced motion occurs when its principle remains external to the body: "When the principle of motion in a body comes from outside (*min khāridj, min ghayrihi*) . . ., that which results from this motion is an artificial (*ṣināʿī*) product of the same type as the art" (*Shifāʾ*, *Ilāhiyyāt*, 282). Motion is simple or compound. Simple (*bāsiṭa*) motion is voluntary (*bi-'l-irāda*)—that of the stars, or involuntary—that of physical nature, that is to say, of the elements. Compound (*murakkaba*) motion stems from animal (*al-ḳuwwa al-ḥayawāniyya*) or non-animal force. In the latter case, we have vegetative (*nabātiyya*) motion; in the former, voluntary animal (*irādiyya ḥayawāniyya*) motion, if it is accompanied by conscience (*maʿa shuʿūr*), or imposed (*taskhīriyya*) motion, without conscience, such as the motion of the pulse. "Voluntary motion has a proximate principle, a more distant principle and a most distant principle. The proximate principle is the motive force that is in the muscles of the organs; then comes the consent which gives the faculty of desiring (*al-ḳuwwa al-shawḳiyya*). The most distant is the imagination (*takhayyul*) and the reflexion (*tafakkur*). When a form is sketched in the imagination or the reflexion, the faculty of desiring mobilizes itself to consent to it, and the motive force that is in the limbs puts itself at its service" (*Shifāʾ*, *ibid.*, 284).

As for speed, rapid (*sarīʿa*) motion and slow (*baṭīʾa*) motion are distinguished. "Rapid motion is that which covers a distance equal to another in a time shorter than that in which the other distance is covered; if one assumes the equality of the two motions with respect to the distance covered, the time of the rapid motion is less; if one assumes this equality with respect to the time, the distance covered by the rapid motion is greater" (al-Tahānawī). The cause of speed or slowness is in the hindrance offered by the medium traversed: for example, the resistance of water or air, if it is a question of a natural motion. If it is a question of a forced or a voluntary motion, they are the slower as the body displaced is greater (*akbar*). The initial force is taken into consideration only in the case of unnatural motions, such as the force with which an arrow is shot.

Rest is presented at the limit of motion as a second fulfilment, following the pattern of the immutability proper to that which is perfect. There is also a type of rest closer to the inertia of matter, from which motion is unleashed. This idea is in Ibn Rushd: every agent that acts "goes back to a cause which is the principle of a change (*taghyīr*) following a state of stability (*thabāt*) and rest (*sukūn*); this is what is called motion" (*Tafsīr*, ii, 491). The commentator does not exactly follow Aristotle, who makes of the agent a principle of both change and stopping (*Metaphys.* 1013 a 29 and 1013 b 24). The idea of a rest before motion is clearly expressed by the Ikhwān al-Ṣafāʾ. The body is not moveable because of its corporeity (*djismiyya*), even though the Spheres exist only with their motion. The mover of the body is another substance, the soul (i, 228). The act of the universal soul is to impart to them their revolutions (*idārāt*), and to this end to keep at rest (*taskīn*) the individual centre of each of them. The soul is alive by itself. Thus motion is life. In certain bodies it is essential, as in fire; when its motion ceases and it is at rest, it is extinguished. Elsewhere it is accidental, as in water, air and earth, which continue to exist if their motion stops. Motion is a form which the soul puts into the body *after* having given it its shape (*shakl*). Rest is the absence (*ʿadam*) of this form; it is better suited (*awlā*) to the body than motion, since the body has dimensions and cannot be moved in all these directions at once. Its motion in one of these directions suits it no better than motion in another. In itself motion is a spiritual form which penetrates all parts of the body and withdraws from them instantaneously; in the same way light penetrates a translucent body in one instant. But once the motion of the body has penetrated it completely in one instant, it spreads little by little after the fashion of heat.

2.—*Kalām.*—The speculation of the Ikhwān al-Ṣafāʾ is akin to that of the *Mutakallimūn* in the questions that it raises. For theologians motion is a proof of the existence of God (cf. Ibn Ḥazm, *Fiṣal*, i, 22). They take *ḥaraka* only in the sense of local motion, the sense of the lexicographers. They define it as the integration of two arrivals (*madjmūʿ al-ḥuṣūlayn*), when a body arrives at a place after having arrived at another. But this is not simple succession, in which one takes each isolated point in the trajectory, one after the other; motion would then be a succession of rests. In reality it is "the double act of being in two different places at two different instants" (*kawnāni fī ānayni fī makānayni*). The force of these duals is important here; it consists not in enumerating two things, but in encompassing two separate terms in the unity that binds them together, that is to say, in their continuity. Most interesting too is this other problem: the point of departure at which the body is at rest and from which it is set in motion partakes at the same time of rest and motion; but then we cannot clearly distinguish between motion and rest; the object at rest, at the time when it is at rest, begins to tend (*shāriʿ*) towards motion. These speculations border on what we call dynamics, continuity and integration of motion. Unfortunately the solution offered is purely verbal and is expressed by rhetorical juggling which cannot be translated: *al-ḥaraka kawn awwal fī makān thānī, wa-'l-sukūn kawn thānī fī makān awwal*, that is to say that motion consists in being in a second place from the first time onwards, and that rest consists in being in the first place of origin at a second time. Be that as it may, this rhetorical form meets as best it can the demands of the dialectic of motion (cf. al-Tahānawī).

Another problem: at the first moment of its creation in becoming (*ḥudūth*), a being is neither in motion nor at rest. The Ashʿarīs think that beings and accidents are renewed at each instant; this leads to the atomicity of time and motion (cf. al-Bāḳillānī). The Muʿtazilīs all admit that rest lasts, that it has duration and is not ceaselessly renewed by an act of immobilization; but they diverge on the question of knowing if the same is true of motion, a question which relates to our modern principle of inertia. If motion has no duration as such, it is a succession of rests, when one believes with Abū Hāshim al-Djubbāʾī that the creation of a substance localizes it, sets it in a determined place in a state of rest. But how can one conceive of a being's being in a place without having arrived there? Creation would then be a motion that culminated in the localization of the being created, except that this motion would be preceded by no localization either in the same place

or in another. But this restriction (*ḥaṣr*), which consists in speaking of a motion or a rest divorced from that which fundamentally defines them, the relation of anteriority and posteriority, leads to denying both motion and rest. Thus Abu 'l-Hudhayl postulates, for the first moment when creatures come into being, a situation intermediate (*wāsiṭa*) between motion and rest. It is from similar problems that Leibnitz's metaphysics sprang, in the West, as the foundation of modern dynamics.

3.—*Ḳur'ān and Tafsīr*.—The Ḳur'ān exhibits no uses of *ḥaraka* and *sukūn* that lend themselves to a commentary on the physical reality of motion and rest. The ingenuity of the commentators makes up for this. Thus Fakhr al-Dīn al-Rāzī, on XL, 61 ("God has made for you the night that you may rest in it"), writes: "Motions produce fatigue, because they necessarily develop heat and dryness which give rise to a distressing irritation". Furthermore, the great number of motions disperses the animal spirits which participate in sensation, and the acuity of the senses is blunted; from this comes sleep. Everything serves al-Rāzī as an excuse for giving scientific accounts of the motions of the heavens and the beings of this world: the fastening down of the earth by the mountains, the *tasbīḥ* of the stars, the separation of heaven and earth when they emerged from chaos, and in particular the verses in which occurs the verb *sakhkhara*, signifying that God imposes on such and such a being a function to fulfil in creation. Al-Kindī does the same in a *risāla*, in which, while dealing with the prostration of creatures, in connexion with Sūra LV, 6, he makes a study of celestial motions.

ii. — GRAMMAR

A kind of primary datum of experience reveals to the Arab grammarian the existence of the *ḥarf* [*q.v.*] in one of the two states *mutaḥarrik* and *sākin*. When *mutaḥarrik*, the *ḥarf* is followed by one of the three *ḥarakas*; when *sākin*, the *ḥarf* is not followed by a *ḥaraka*; this is *sukūn*, "rest, quiescence". This division *mutaḥarrik-sākin* admits of no exceptions; for this reason *alif*, *wāw*, *yā'* had to be subjected to it, with the following result: *mutaḥarrika* [see ḤURŪF AL-HIDJĀ', production of the *ḥurūf*]; *sākina* (and even *sākina* by nature), *alif*, *wāw*, *yā'* are *al-ḥurūf al-mu'talla* "the weak", the *ḥurūf al-madd*. These *ḥurūf al-madd* signify the utterance of a vocalic element, with the tone *a* for *alif*, the tone *u* for *wāw* and the tone *i* for *yā'*. But in this utterance what is considered is not at all the *quantitative* prolongation but a *quality* of the latter, its continuum.

The *ḥarakas* are not *ḥurūf*, and therefore cannot be affected by the production of the *ḥurūf*, as set out in the article cited above. They are thought functions of the *ḥurūf al-madd*; as Ibn Djinnī explains, "the *ḥarakāt* are a part of the *ḥurūf al-madd wa 'l-līn*, which are *al-alif*, *al-yā'*, *al-wāw*, and just as these *ḥurūf* are three in number, so there are three *ḥarakāt*: the *fatḥa*, the *kasra*, the *ḍamma*. The *fatḥa* is a part of the *alif*, the *kasra* is a part of the *yā'*, the *ḍamma* is a part of the *wāw*" (*Sirr al-ṣinā'a* i, 19, lines 8-11). But which part? Their beginning' their first part; *al-ḥarakāt awā'il li-ḥurūf al-madd* (*ibid.*, 20, line 14, 27, line 1, 35, line 3). The proof of this is that if a *ḥaraka* is increased by *ishbā'* it acquires a *madda*, of the same nature as itself, and achieves the dimensions of a complete *ḥarf*, the corresponding *ḥarf al-madd*, so that the *alif* is a *fatḥa mushba'a*, etc. (*ibid.*, 27, lines 1-2). Thus, in view of the relation of the *ḥaraka* to the *ḥarf al-madd*, Ibn Djinnī (19, lines 11-3) considers "little *ḥarf*" as a suitable appellation of the *ḥaraka*; *al-fatḥa* is *al-alif al-ṣaghīra*, etc.

The *ḥarakas* are deficient by their nature: as regards their content, as we have just seen, they are part of another,as regards their existence they cannot maintain themselves by themselves, but need the support of a *ḥarf ṣaḥīḥ* or one acting as if it were *ṣaḥīḥ*; and their place on this support, *fi 'l-martaba* "according to rank" (that is, in accordance with the natural order), is "after the *ḥarf*" (*ibid.*, 32-7). But the latter also needs the *ḥaraka* in order to exist. When there is a *ḥaraka* after the *ḥarf*, it is a *ḥarf mutaḥarrik*, it *possesses* its *ḥaraka*; in *iskān* the *ḥarf* is *bereft* of its natural appurtenance. It can manage without this if it can rely on the *ḥaraka* of a preceding *ḥarf mutaḥarrik*. But, without a *ḥaraka* either after or before it (which would be the case of the first consonant in an initial group), *iskān*, for the Arab grammarians, is inconceivable in the Arabic language. Thus there is a necessary association between *ḥarf* and *ḥaraka*. Thus the *ḥarf* continues to be conceived within syllabism. This may be called "implicit syllabism" (as in the case of the Canaanite alphabet), in contrast to the "explicit syllabism" of Akkadian cuneiform and the Ethiopic script.

The dipththong exists in Arabic: *aw* and *ay* (see H. Fleisch, *Traité*, § 7), but it has no name in Arabic grammatical nomenclature, extensive though this is. Nowhere else is it discussed. Now in Arab phonetical theory it comes in here quite naturally, as Ibn Djinnī shows (*ibid.*, 21-30), that is, in the manner in which the *ḥurūf sākina*, *alif*, *wāw*, *yā'*, may come after a *ḥaraka*. Every *ḥarf ṣaḥīḥ*, whether *mutaḥarrik* or *sākin* (including *wāw mutaḥarrika* and *yā' mutaḥarrika*), can come after any *ḥaraka*. But it is not so with these three *ḥurūf sākina*. There are impossible cases: these are *alif* after *kasra* or *ḍamma*, that is *ia*, *ua*. There are cases of difficulty or repugnance which demand a corrective; these are *wāw* after *kasra* or *yā'* after *ḍamma*, that is *iu*, *ui*; in the first case the *wāw* is made by *ḳalb* into *yā'*, and in the second, the *ya* is made by *ḳalb* into *wāw*,that is, *iu* > *ī*, as in *mīzān*, and *ui* > *ū*, as in *mūḳin*. But *wāw* or *yā'* after *fatḥa* presents no difficulty for the language. This is the case of the diphthongs *aw* and *ay*, which ought to have deserved special attention, but, from the Arab viewpoint, it was simply that *wāw* and *yā'* came after *fatḥa* and remained unchanged—though this was in contradiction with the theory of the *ḥaraka* as a part of the *ḥarf al-madd*, its *awā'il*, which announces and requires its completion, and Ibn Djinnī's efforts were directed to demonstrating that this theory held good. Some authors reserved the name of *ḥarf al-līn* for the *ḥarf al-madd* in this position; but this has remained a special usage.

The name *ḥaraka* cannot be disassociated from its sub-divisions, *fatḥa*, *kasra*, *ḍamma*. These latter terms are purely Arabic, and have some relation to the physiology of the mouth during the emission of the sounds to which they refer, notwithstanding the legendary part in their creation attributed to Abu

'l-Aswad al-Du'alī (al-Sīrāfī, *Akhbār al-naḥwiyyīn*, 16, lines 8-10). As regards the term *ḥaraka* "movement", *i.e.*, the movement of the articulatory organs, obtained through a certain connected sound to which the term was transferred, a very simple observation might have led to the idea; and this would naturally lead to its opposite *sukūn*, "rest, quiescence". In our view, all these terms, *ḥaraka*, *sukūn*, *fatḥa*, *kasra*, *ḍamma*, represent an Arab creation, expressing one of the first insights of the Arabs as they pondered over their language. Thus they soon spread in the grammatical science of the Arabs and there is no need to seek the origin of the concept of *ḥaraka* in the philosophy and the musical science of the Greeks, as M. Bravmann seeks to do (*Materialien*, 12).

The signs representing the *ḥaraka*s and the *sukūn* belong to the supplementary elements added to the Ḳur'ānic script without affecting the ductus of the word, and constitute what is known as the *scriptio plena* (R. Blachère, *Introduction*[2], 79, 92-102). To denote the *ḥaraka*s a dot was used at first, above the *ḥarf* for *fatḥa*, below for *kasra*, and in the middle to the left for *ḍamma*, with two points in the case of *tanwīn*, not in black like the ductus of the word, but coloured, usually red, in order to distinguish them and to change nothing of the true body of the word (al-Dānī, *K. al-Nuḳaṭ*, 134, line 1). R. Blachère (*ibid.*, 95-6) describes this insertion of vowel-points, in which at first only the vowels of *iʿrāb* were indicated, the vowels of inflexion, which were especially important since they determined the function of the word in the sentence. He says nothing about *sukūn*. As al-Dānī reports (*ibid.*, 137, lines 5-7) it was first marked by a little red horizontal line (*djarra*) above the *ḥarf*. Other signs were subsequently employed before the current little circle came into use (see Wright, *Ar.Gr.*[3], i, 13C).

A particular case of *sukūn* is the *djazm*, quiescence of the final *ḥarf* of the *muḍāriʿ*, which is then *al-madjzūm*, the apocopated.

(H. FLEISCH)

HARAM (plur. *ahrām*, *ahrāmāt*, and in the popular dialect of Egypt, *ihrām*, the latter also used as a singular), a word of doubtful origin = pyramid. In Muslim literature, although the pyramids of Saḳḳāra (*al-haram, al-mudarradj*) as well as those of Abūṣīr, Dahshūr, Maydūm, etc., are well known, the *ahrām* are pre-eminently the pyramids of Cheops and Chephren, or sometimes also of Mycerinos, west of Djīza (Giza). They have been mentioned and described times without number by the geographers, but as a rule their accounts have little value as original documents. The most important sources are collected in al-Maḳrīzī's chapter on pyramids. In these we find it repeatedly stated that the ʿAbbāsid al-Ma'mūn was the first to try to have the Great Pyramid opened, which was done only after incredible trouble. But in spite of the detailed accounts on this point, it is improbable for reasons already set forth by De Sacy that this Caliph could have undertaken this task himself, especially when we remember how brief his stay in Egypt was. We also know that the pyramids had already been broken into in ancient times. Nevertheless, it may be presumed that it was about that time that further progress into the interior of the Pyramid of Cheops was made for the first time in the Muslim period and that the tomb-chamber, of which we have numerous more or less clear accounts, was gradually reached. The belief generally current that rich treasures were concealed there was no doubt a stimulus to this work. In later times we learn of an unsuccessful attempt by al-Malik al-ʿAzīz to destroy the Little Pyramid (593/1196-7). Ḳarāḳūsh had previously by Saladin's orders removed a series of the smaller pyramids of Djīza to use the stone to build walls and bridges at Djīza (cf. also *Khiṭaṭ*, ii, 151). Furthermore, in all the stories about these colossal erections, whose original significance was the object of the most fantastic speculations, the kernel of fact is enveloped in fairy-tales such as are associated with no other ancient monuments in Egypt. Some of them even go back to Herodotus, like the story of the woman, the spirit of the pyramid of Mycerinos, who destroys the reason of any one approaching it by her beauty and her smile; this is apparently a survival of the story of Rhodopis, the traditional builder of this pyramid (Wiedemann, 485 ff.). Herodotus likewise already mentions subterranean canals connecting the Nile and the pyramids (*ibid.*, 466). In other cases, as Maspero has shown, distinct recollections of Old Egyptian ideas have survived; for example, in the description of the guardians of the western and eastern pyramids, there is reflected the impression made on later ages by the monuments of the period of the Pharaohs. But it is legends from the sphere of Coptic-gnostic ideas that have become most strongly associated with these buildings. The two great pyramids there became the tombs of the prophets Hermes and Agathodaemon, and with this was combined the tradition that they were built to conceal treasures and prevent the wisdom of the first generations of mankind from being destroyed by the inundation of the deluge prophesied by the astrologers. Another tradition is that which is associated with the legendary figure of Shaddād b. ʿĀd [*q.v.*].

Isl.*, ii (1954), 45-60; De Sacy, *Observations sur l'origine du nom donné par les Grecs et les Arabes aux Pyramides d'Aegypte*, in *Magasin Encyclopédique*, 1801, vi, 456-503; Wiedemann, *Herodot's zweites Buch, passim*; Ebers, *Ägyptische Studien*, 153 f., where further literature is given; Vollers, in *ZDMG*, 1 (1847), 654; Carra de Vaux, *L'Abrégé des Merveilles* (= Ps.-Masʿūdī, *Akhbār al-zamān*, 1938), and Maspéro's researches on it in *Journal des Savants*, 1899, 99 f., 154 f.; cf. the latter's *Études de mythologie et d'archéologie égyptiennes*, i; Berthelot, *Les merveilles de l'Égypte et les savants Alexandrins*, *ibid.*, 242 f., 271 f.; von Bissing, *Der Bericht des Diodor über die Pyramiden*; Baedeker's *Egypt*.

(E. GRAEFE-[M. PLESSNER])

ḤARĀM [see SHARĪʿA].

AL-ḤARAM AL-SHARĪF, "the Noble Sanctuary",

after Mecca and Medina the acknowledged third holiest Muslim sanctuary, is located in the south-eastern part of the present Old (*i.e.*, walled) City of Jerusalem. An understanding of the history and significance of the Ḥaram has been complicated by two factors: first, the contrast between an extreme paucity of early sources (written or archaeological) and a systematized explanation of the Ḥaram's significance in the *faḍāʾil* or holy guidebooks of the late Mamlūk period; and, second, the lack of any complete archaeological survey of the area (with the single exception of *al-Masdjid al-Aḳṣā* [*q.v.*]) coupled with centuries of reconstructions and repairs which have often obliterated the original character and purpose of many buildings. In addition, as we shall try to show, the very concept of the Ḥaram al-Sharīf developed slowly over the centuries, as the character of the city of Jerusalem changed. Because of these limitations, a full account of the history and of the problems of the Ḥaram as a whole can best be given in connexion with the development of the whole city (al-Ḳuds [*q.v.*]). We limit ourselves here to a brief description of its more salient features and to a definition of the problems which are peculiar to it alone.

As it is visible to-day the Ḥaram is a large trapezoidal platform (southern end: 281 metres; northern end: 310 metres; eastern end: 462 metres; western end: 491 metres), whose eastern border and parts of the southern one coincide with the walls of the present city. Its size remained constant throughout the Muslim Middle Ages, since an inscription to that effect (Max van Berchem, no. 163, with important commentaries) still exists and was seen as early as the 4th/10th century. This platform is totally artificial; its northern side was cut out of the natural rock, while its southern end was raised over rocks and valleys, including, in the southeastern corner, the Tyropaeon valley, now 28.50 metres below the surface. The underground parts of the Ḥaram include 37 cisterns and, at the southern end, a vast complex known as Solomon's Stables consisting of vaults on thick piers and the so-called Double Gate just under the Aḳṣā mosque. Although much repaired and restored by the Romans, throughout the Middle Ages, and in the modern period, this platform can be assumed to have been a Herodian creation for the Jewish Temple. While this seems clear for the size of the platform, it is less so for its present level above the ground. The ruined state of the Temple area at the time of the Muslim conquest is attested by the more or less legendary accounts of ʿUmar's visit, by Christian sources, and by the character of the outer masonry of the walls. It would follow that the existing pavements and in general the surface planning of the Ḥaram were for the most part Muslim creations.

The Ḥaram is to-day surrounded with walls on its southern and eastern ends. These are Ayyūbid, Mamlūk, and Ottoman. From the evidence of Nāṣir-i Khusraw and of Eutychius it appears that sizeable walls were erected in Fāṭimid times. Earlier walls existed, as we know from inscriptions and from al-Muḳaddasī, but they do not seem to have been as spectacular. Walls existed also on the western side, but the growth of the city over the Tyropaeon valley after the Crusades has all but obliterated their traces (one exception being the Herodian Wailing Wall) and replaced them with façades of various religious and secular buildings.

A series of gates led from the Ḥaram to the outside. To-day there are 15 of them: East: Golden Gate (now blocked); South: Single, Double, and Triple Gates; West: *bāb* al-Mughāriba (on top of an older gate known as *bāb* al-Nabī), *bāb* al-Silsila, *bāb* al-Mutawaḍḍā, *bāb* al-Ḳaṭṭānīn, *bāb* al-Ḥadīd, *bāb* al-Nāẓir, *bāb* al-Sarāy, *bāb* al-Ghawānima; North: *bāb* al-ʿAṭm, *bāb* Ḥiṭṭa, *bāb* Asbāṭ. With the exception of *bāb* al-Sarāy, this list is already found in Mudjīr al-Dīn in the 9th/15th century and can be assumed to represent the last stage of major developments on the Ḥaram, *i.e.*, the Mamlūk period. For earlier times, especially before the Crusades, the question of the gates is far more complex and has been the subject of numerous controversies (summary and bibliography in O. Grabar, *A new inscription from the Ḥaram*, in *Studies . . . in honour of Professor K. A. C. Creswell*, London 1965). All problems concerning the gates have not yet been solved but the following points can be justified. First, from the Mamlūk period onwards, only northern and western gates were open, but in Fāṭimid times southern ones were still used and both these and the Golden Gate to the East were built in their present shape in Umayyad times, although based on Herodian plans. Second, as the character and shape of the city changed, emphases on more or less significant gates shifted as well, but certain names of gates (Ḥiṭṭa, Nabī, Asbāṭ, etc.) had acquired a permanent religious value and shifted from one place to the other. Third, while all early gates were entrances *to* the Ḥaram, some of the later ones (*bāb* al-Ḳaṭṭānīn, for instance) were entrances *from* the Ḥaram to institutions which bordered it.

Approximately in its centre the Ḥaram is provided with a smaller platform reached by eight sets of stairs; on it are found the Ḳubbat al-Ṣakhra [*q.v.*] and a number of smaller sanctuaries. This second platform was almost certainly a Muslim creation, but its peculiarly asymmetrical character suggests that older buildings or ruins influenced the size and location of the Muslim work.

A large number of sanctuaries are found on the Ḥaram. The most important ones are the Ḳubbat al-Ṣakhra and the Aḳṣā mosque, whose architectural history and religious significance have been fairly well established. Other sanctuaries still await proper study and it may suffice to mention their purposes. A first group comprises monuments attached to the events surrounding the Ascension of the Prophet: dome of the Ascension (*miʿrādj*, [*q.v.*]), place of Burāḳ [*q.v.*], etc. A second group commemorates Prophets whose lives were associated with Jerusalem: Abraham, Joseph, Jacob, Jesus. Finally there is a number of *minbars*, *miḥrāb*s, *dikka*s for prayer, and fountains, most of which illustrate the characteristically Mamlūk concern for small constructions dedicated to precise religious functions. Many of these are now disused, but some, like the fountain of Ḳāytbāy, are exquisite works of art.

There is no doubt that all these sanctuaries did not appear at one time. If we are better informed on the later ones, the reason is that so many memories and monuments were obliterated during the Crusades. For earlier times we possess only lists (Ibn al-Faḳīh, al-Muḳaddasī, Ibn ʿAbd Rabbih) of monuments. It seems, however, that the growth of individual small sanctuaries on the Ḥaram took several centuries and that it was not before the Fāṭimid period that the whole area had acquired its full complement of religious associations and of monumental expressions of these associations. The reasons for this are to be found primarily in the peculiarities of the history of Muslim Jerusalem. The former Temple area became first of all the site of the Muslim congregational

mosque in the city, then that of the monumental Dome of the Rock expressing Umayyad power and ambitions, and only later a complete ensemble with precise religious meanings and with an attempt at architectural organization. It is the accidental inheritance by the Muslims of such a vast area and precise developments in the history of the Muslim faith that made it a unique sanctuary; it was not, as in Mecca, a pre-established body of beliefs and practices which so transformed it, nor as in Medina, the desire to commemorate the earliest years of the faith. Mediaeval Muslims themselves seem to have been conscious of the anomalous position of the Ḥaram. In early centuries it was called *al-masdjid al-ḥarām*, "the sacred mosque", or *al-masdjid al-aḳṣā*, "the farthest mosque", the first term being canonical for Mecca only, the second one being more precisely the name of the congregational mosque of Jerusalem. Still in the 8th/14th century the term *al-ḥaram al-sharīf* was not considered proper and it would seem to have been imposed in Ottoman times by popular usage rather than by full agreement on the unified holiness of the area. Still to-day a confusion exists between the Ḥaram area as merely the "mosque" of the city of Jerusalem and the Ḥaram as the unique place of a number of holy events. In spite of these confusions and of the complicated history of the area, the depth of its religious and symbolic significance is proved by the vast literature which grew around it and by the facts that it contains the first masterpiece of Islamic architecture and that princes and laymen over many centuries lavished money and efforts on its beautification.

Bibliography: A full bibliography will be found in the articles AL-ḲUDS and ḲUBBAT AL-ṢAKHRA. In addition to references in the text, the most important guides to the problems of the Ḥaram are Mudjīr al-Dīn, *Taʾrīkh al-Ḳuds wa ʾl-Khalīl*, 2 vols., Cairo 1283 (partial translation by H. Sauvaire, *Histoire de Jérusalem et d'Hébron*, Paris 1876), and the second volume of Max van Berchem's *Matériaux pour un Corpus Inscriptionum Arabicarum: Jérusalem*, Cairo 1925.

(O. GRABAR)

AL-ḤARAMAYN, the two holy places, usually referring to Mecca and Medina, occasionally, in both Mamlūk and Ottoman usage, to Jerusalem and Hebron [see AL-ḤARAM AL-SHARĪF, AL-KHALĪL, AL-ḲUDS, AL-MADĪNA, MAKKA. On the title Servant (or Protector) of the two holy places see KHĀDIM AL-ḤARAMAYN]. The following article deals with the administration of Ottoman *waḳf*s in favour of the Holy Places.

Such *waḳf*s were established from early times by the Ottoman Sultans and by members of their household and court, and in the 9th/15th century were already administered by special departments. The oldest of these appears to be the *Ewḳāf-i ḥaremeyn muḳāṭaʿadjilighi*, the records of which, preserved in the state archives [see BAŞVEKÂLET ARŞIVI], run from 884/1479 to 1280/1863-4. This was followed by the *Ewḳāf-i ḥaremeyn muḥāsebedjiliği*, with records from 905/1499-50 to 1255/1839-40. Its original purpose was apparently to deal with those revenues—a much smaller group—received directly instead of by *muḳāṭaʿa* [*q.v.*], but its functions were later greatly extended.

Probably as a result of the practice by ladies and princes of the Household of appointing the Chief Eunuch as administrator of the *waḳf*s they established for the Holy Places, he acquired control of a group of pious *waḳf*s. During the reign of Murād III, with the rise in influence of the black at the expense of the white eunuchs, this control passed from the Chief White Eunuch to the Chief Black Eunuch, the *Kızlar Aghası* [*q.v.*]. In Muḥarram 995/December 1586, according to the historian of the Ministry of *Waḳf*s, a decree of the Sultan appointed the *Kızlar Aghası* Ḥabeshī Meḥmed Agha superintendan (*nāẓir*) of the *waḳf*s in favour of the *ḥaramayn*, thus establishing a system which, with some changes, lasted until the 19th century. Two other functionaries, under the *Kızlar Aghası*, dealt with these *waḳf*s. They were 1) his chief secretary (*yazıdjı* [*q.v.*]), 2) an inspector (*müfettish* [*q.v.*]). The first such inspector, Amasyalı Meḥmed Efendi, known as Memek Čelebi (d. 1009/1600-1; cf. ʿAṭāʾī, *Dheyl*, ii, 448, who calls him Memekzāde, and remarks that his relationship with the *Kızlar Aghası* brought him great wealth and influence) was appointed in Muḥarram 995, at the same time as the transfer of these *waḳf*s to the *Kızlar Aghası* (*Taʾrīkhče*, 16).

The *Kızlar Aghası*'s jurisdiction in matters of *waḳf* was in time greatly extended. In Ramaḍān 1006/May 1598 a number of *waḳf*s established for imperial mosques in Istanbul were, because of peculation and maladministration, placed under his authority (Uzunçarşılı, 178). Others in the capital and provinces followed, and the *Kızlar Aghası* thus came to control a great mass of *waḳf*s all over the Empire—an important source of power and profit. Though the two main accounting departments still bore the name of *ḥaramayn*, they came to deal with many other *waḳf*s established for mosques and other pious purposes and, consequently, with the pay and appointment of mosque functionaries, as well as with transfers, appointments, dismissals, promotions etc. directly dependent on the *ḥaramayn* departments. *Waḳf*s called 'of the *ḥaramayn*', enjoying fiscal privileges, are found all over the Empire (as for example in Hungary, L. Fekete, *Die Siyāḳat-Schrift*, i, Buda-Pest 1955, 74, 100, 755 ff., and in Palestine, U. Heyd, *Ottoman documents on Palestine ..*, Oxford 1960, 145). The revenues came to a separate treasury in the palace, known as the *ḥaremeyn dolabı*. The *Kızlar Aghası* held a weekly *dīwān*, at which the affairs of the *waḳf*s under his control were examined, with the benefices and offices supported by them. In the late 18th century, according to d'Ohsson, the *Ḥaremeyn muḥāsebesi ḳalemi* dealt with all the imperial mosques, as also all those of the capital and the European provinces, the *Ḥaremeyn muḳāṭaʿası ḳalemi* with *waḳf*s in all the provinces of Asia and Africa (*Tableau*, ii, 528). According to Hammer (*Staatsverfassung*, ii, 150, 160), the *muḥāsebe* issued nomination certificates for religious functionaries in the capital and European provinces, the *muḳāṭaʿa* for Anatolia (cf. Gibb-Bowen i/1, 76-7, 131-2, i/2, 92, 97, 171, 176). During the reigns of Muṣṭafā III and ʿAbd al-Ḥamīd I attempts were made to remove these *waḳf*s from the control of the *Kızlar Aghası*, who was, however, able to recover them (d'Ohsson, ii, 535 ff.; *Taʾrīkhče*, 21 ff.). He finally lost them in the course of the reforms of the eighteen twenties and thirties, when they were entrusted to a newly created special department, which was merged into the Ministry of *Waḳf* in 1836.

(See further KHAZĪNE; KIZLAR AGHASĪ; WAḲF, Ottoman. On the sending of funds and gifts to the holy places see ṢURRA).

(B. Lewis)

HARAR, capital of Ethiopia's largest province, an important commercial centre, and one of the main Muslim cities in East Africa. Since the governorship of Ras Makonnen, Emperor Hayla Sellassie's father, Harar has played an increasingly important part in the life of Eastern Ethiopia and is at present the seat of the Imperial Military Academy and an agricultural college. Its famous market, favourable climate (with an annual mean temperature of 20° C), and turbulent history, together with its picturesque setting as a mediaeval walled city, have made Harar one of the principal tourist attractions of modern Ethiopia. Its cosmopolitan population, estimated at some 60,000, consists of Gallas, Somalis, Monophysite Amharas, Levantines, and Europeans, but somewhat less than half can be described as genuine Hararis and speakers of the indigenous Semitic language. The principal name associated with the study of the history, Islamization, and language of Harar is that of Enrico Cerulli.

The history of Harar is very largely identical with that of Islam in Ethiopia in general and has as such been discussed under AL-ḤABASH.

At a later period the Walasma sultans transferred their capital to Harar, possibly to extricate themselves from the pressure exerted by their generals who drew support from the Danākil [see DANKALĪ] and Somalis [*q.v.*]. Chief among those forceful military commanders was Aḥmad ibn Ibrāhīm (nicknamed Grañ [see AḤMAD GRAÑ] 'the lefthanded'), who soon became the effective master of all the newly conquered Muslim possessions in Ethiopia and assumed the title of Imām. In the middle of the 11th/17th century a new Muslim state was established as the independent Emirate of Harar which continued until Menelik's conquests at the end of the 19th century when, in 1887, Harar was incorporated in the Christian Ethiopian Empire.

The Ḳādiriyya is the foremost Islamic order in East Africa and is particularly strong in the Harar region. In *madhhab*, the people of Harar belong overwhelmingly to the Shāfiʿite rite.

Harari (or Adareñña) is the Semitic language spoken in the town of Harar.

ḤARAS [see ḲAṢR].

AL-**ḤARĀSĪS** (Ḥarsūsī; in their own speech: Ḥarséh (Ḥarsáy)) a bilingual, nomadic Arabian tribe of 400 or fewer arms-bearing males, Shāfiʿī Sunnīs in religion and Hināwīs in regional political faction; identified as to *dīra* with the barren steppe called Djiddat al-Ḥarāsīs—below the south-east corner of *al-Rimāl*, "The Sands" (al-Rubʿ al-Khālī [*q.v.*])—but usually ranging in the area of seaward-trending, forage-filled *wādīs* towards the coasts of al-Baṭāḥira and the southern al-Djanaba [*qq.v.*]. Their eponymous tribal area, called by them and by al-Mahra [*q.v.*] simply *a-Giddét*, extends east-north-east and east from the (inland) terminal basins of Wādī Muḳshin and Wādī ʿĀra [*qq.v.*]—the latter in Ḥarsūsī and Mahrī: ḥa-Wōdī dhŌreh—to Sayḥ al-Uḥaymir (a smaller portion of the south-east Arabian steppe desert) and the rough north-south strip of al-Ḥuḳf or al-Ḥiḳf. From Ramlat al-Saḥma (a marginal district of "The Sands") it extends south across the small, land-locked drainage of a-Ṣighōt and its terminal sand-district, a-Baṭḥāt, to the group of *wādīs* which, through Sāḥil al-Djāzir, enter Ghubbat Ṣawḳirah of the Arabian Sea. (Of these the chief, north-east to south-west, are: Haytām (Hītōm), Arōnib, Ghadān (or the eastern Ghadūn), Wōṭif, and south of al-Djāzir, ʿAynína—the upper portion of which, among multilingual southern Arabs, goes under variations, some of them with *ḥa-*, of the Djunaybī (and Baṭḥarī) toponym ha-Rikāt, "the rāk (arāk) tree").

The Ḥarsūsī country is touched to the north-east by a motor track from east coastal Raʾs al-Daḳm, and is crossed from south-west to north-east by a motor track from southern coastal Salāla [*q.v.*]; Mahrī, etc.: Ṯsalōlet; but Shaḥrī-Ḳarāwī: Ṯsalúlt), the two joining and continuing north through the *sayḥ* or steppe of al-Durūʿ to ʿIbrī and al-Buraymī [*qq.v.*]. Without a single permanent water source (except potential *ḳalamas* drilled and usually capped by oil explorers), al-Ḥarāsīs at times, even in summer, pasture their animals without watering, while themselves subsisting on milk (*djazaʾa*, *yadjzaʾu*; see AL-DAHNĀʾ).

Bertram Thomas (*Alarms and excursions*—note typographical error on p. 283: "Hasaris") was much attracted by the intelligence and friendly spirit of those from the tribe who aided him as guides and linguistic informants. To this association is owed the first Western study of Ḥarsūsī speech. Like the other southern tribal tongues from old South Semitic which have long outlived the related Ancient South Arabian, this one deserves further investigation. For the oft-occurring *bāl* of Mahrī and Ḥarsūsī (= Ar. *baʿl*, "lord or owner of; having, characterized by, located at or near") Ḥarsūsī has also a variant *bōl*. (*Cf.* Baṭḥarī: *baʿal*, with *ʿayn*, and Shaḥrī-Ḳarāwī: *baʾl*, with reduction to *hamza* (beside occas. Shaḥrī-Ḳarāwī *bāl*). For fem., Ar. *baʿla*, Ḥarsūsī and Mahrī have *bālit*, contra Baṭḥari *baʿlet*, Shaḥrī-Ḳarāwī *baʾlit*. For Ar. *ilāhī* (*rabbī*), Ḥarsūsī has *a-belī*, contra Mahrī *a-bālī*, both doubly determined by definite article and by possessive pronoun.

Ḥarsūsī, with considerable speech variation between individuals, appears to be more deeply influenced by Arabic than the others of the "four strange tongues" of the tribes *down-country* (from ʿUmān)—which is what Ḥadara, with *ḥ*, means, having despite Thomas nothing to do with Hadoram, with *h*, of Genesis, x, 27. Yet Ḥarsūsī staunchly retains many old and interesting vocables, which at the same time make it, if it be only a branch of Mahrī, a quite distinctive one.

The tribe has these main sections (names in Arabic): (1) Bayt ʿAksīt, (2) Bayt Muṭayra, (3) Bayt ʿAfarrī, (4) Bayt Ḳadharān, and (5) Bayt Barḥāh, besides, as one of the largest groups, Bayt Shaʿla, which is either a section or a subsection of (1) or of (2). The shaykhly authority rests in (1), the principal leader (Ḥarsūsī *muḳaddam*, pl. *muḳad-(d)amat*) in 1962 being Sharḳī b. ʿAks (Ḥarsūsī

ʿakis and *ʾakis*). The second in rank is Sh. Sālim b. Huwayla of (2), which was formerly the shaykhly clan.

Thesiger, *Arabian sands*, London 1960 (from his exploration accounts, mainly in *GJ*, London 1946-50); Arabian American Oil Company, *Oman and the southern shore of the Persian Gulf*, Cairo 1952 (in Engl. and Arabic); Charles D. Matthews, papers on southern non-Arabic and mixed place names in Proceedings of Int. Cong. Or., Munich, 1957, and Moscow, 1960, and in *MEJ*, xiii/2, 1959 (in Readers' Commentary), and monograph (in preparation), *The southern borderlands of the Arabian Empty Quarter*.

Maps: Bartholomew's "Southern Arabia" (Pl. 33) in *The Times Atlas of the World, Mid-Century Edition*, ii (1960) (this excellent map has among some defects the erroneous correction of Sayḥ al-Uḥaymir to conform with unimportant "Haima"—near, to the south-west—which, however, should have been Hadjma or Hadjlat Hadjma); "The Arabian peninsula", 2nd edn., 1962, of a 1: 2,000,000 map (1st edn., 1958) in a series by the U.S. Geological Survey and Arabian American Oil Company (this sheet separate in Eng. and in Ar.). Area maps are to be published in an official British series. (C. D. MATTHEWS)

HARĀT (HERĀT), a city and district on the Harī Rūd in western Afghānistān, altitude: 3,030 feet, 34° 22′ N., 62° 9′ E. Among the forms of the name preserved in Arabic and Persian literature we find Harā, Harāh and older Harē from Harēv. Armenian has Hrev.

The city is mentioned in the Old Persian inscriptions (Haraiva), in the Avesta, and in Greek as Ἀρία or Ἀρεία. Alexander the Great built a city here called Alexandria in Aria. Other towns on the Harī Rūd are mentioned by Ptolemy, Isidore of Charax, and others, an indication of the fertility of the river valley. In the trilingual inscription of Shāpūr I at Naḳsh-i Rustām the province of Harāt is called in Parthian *ḥryw* (line 2) and in Greek PHN (the Middle Persian form is illegible). The Middle Persian form of the name Harēv later became Harē. In the Pahlavi list of the cities of Īrānshahr (see Markwart, below) we find the name written *ḥrʾy* to which the Arabs added a feminine ending. Under the Sāsānids Harāt was an important military centre on the frontier against the Hephthalites, although at times it was under Hephthalite rule [see HAYĀṬILA].

The Arab army under al-Aḥnaf b. Ḳays in its conquest of Khurāsān in 31/652 seems to have avoided Harāt, but we may assume that the city submitted to the Arabs, since shortly afterwards an Arab governor is mentioned there. Nothing is known of events in Harāt during the civil war and under the early Umayyad Caliphate, but apparently Harāt revolted and was reconquered in 41/661. In 83/702 Yazīd b. al-Muhallab defeated certain Arab rebels, followers of Ibn al-Ashʿath, and forced them out of Harāt. The city was the scene of conflicts between different groups of Muslims and Arab tribes in the disorders leading to the establishment of the ʿAbbāsid Caliphate. Harāt was also a centre of the followers of Ustādhsīs [*q.v.*.]

Harāt was a great trading centre strategically located on trade routes from the Mediterranean Sea to India or to China. The city was noted for its textiles during the ʿAbbāsid Caliphate, according to many references in the geographers. Harāt also had many learned sons as one may see in al-Samʿānī s.v. al-Harawī. The city is described by al-Iṣṭakhrī (263), and Ibn Ḥawḳal (437) as having four gates, a strong inner citadel and extensive suburbs. There is much information in the Arabic and Persian geographers about the city in the 4th/10th century. According to the account of Ḥamd Allāh Mustawfī (152) Harāt flourished especially under the Ghūrid dynasty in the 6th/12th century. The great mosque of Harāt was built by Ghiyāth al-Dīn the Ghūrid in 598/1201. During the Ghaznawid and early Ghūrid periods of the 5th/11th century the heretical sect of the Karāmiyya was strong in Harāt, but Ghiyāth al-Dīn, after first supporting them, later turned to the Shāfiʿī rite of Sunnism.

Harāt was captured by the Mongols in 618/1221 and the pillage and slaughter is described by Sayf al-Harawī (66-72, see *bibl.*). The city was destroyed a second time and remained in ruins from 619/1222 to about 634/1236, but people returned to the city, including some who had been captured by the Mongols, and much of the city was rebuilt. In 642/1244 a local prince Shams al-Dīn Kurt (or Kart) was named ruler of Harāt by the Mongol governor of Khurāsān and in 653/1255 he was confirmed in his rule by the founder of the Il-Khān dynasty Hülegü. Shams al-Dīn founded a new dynasty and his successors, especially Fakhr al-Dīn and Ghiyāth al-Dīn, built many mosques and other buildings. The members of this dynasty were great patrons of literature and the arts. The history of the dynasty is given by Spuler (below).

Tīmūr took Harāt in 782/1380 and he brought the Kurt dynasty to an end a few years later, but the city reached its greatest glory under the Tīmūrid princes, especially Sultan Ḥusayn Bayḳara [*q.v.*] who ruled Harāt from 874/1469 to 912/1506. His chief minister, the poet and author in Persian and Turkish, Mīr ʿAlī Shīr Nawāʾī [*q.v.*] was a great builder and patron of the arts. The present Muṣallā area, and many buildings such as the *madrasa* of Gawharshād, ʿAlī Shīr *maḥāl*, many gardens, and others, date from this time (see Togan, below).

The village of Gāzirgāh, over two km northeast of Harāt, contained a shrine which was enlarged and embellished under the Tīmūrids. The tomb of the poet and mystic Khwādja ʿAbd ʿAllāh Anṣārī (d. 481/1088), was first rebuilt by Shāh Rukh about 829/1425, and other famous men were buried in the shrine area.

In 913/1507 Harāt was occupied by the Özbeks but after much fighting the city was taken by Shāh Ismaʿīl in 916/1510 and the Shāmlū Turkomans assumed the governorship of the area. At the death of Shāh Ismaʿīl the Özbeks again took Harāt and held it until Shāh Ṭahmāsp retook it in 934/1528. Several times later for brief periods the Özbeks held the city but the Ṣafawids ruled it most of the time until the revolt of the ʿAbdālī Afghāns in 1128/1716. Several Ṣafawid expeditions to retake the city failed, and the Afghāns remained in possession of the city until 1142/1729 when they submitted to Nādir Shāh. Another revolt of the Afghāns was suppressed by Nādir Shāh in 1732. In 1160/1747 the nephew of Nādir Shāh, one ʿAlī Ḳulī Khān, revolted in Harāt but after Nādir's death in that year Harāt fell under Afghān rule.

In 1837 the Persians laid siege to Harāt but failed to take it. In 1856 they captured the city but were forced to evacuate it the next year as a result of a peace treaty in Paris between Great Britain and Persia. Since that time the city has been part of Afghānistān, the capital of a province.

The histories of Harāt, both those preserved and those lost, are listed in Sayf al-Harawī (pp. vii-x; see below) and in Togan (442, *Bibliografya*). The present city has a population of ca. 100,000. The climate is mild, and in summer there is a west wind of "one hundred and twenty days".

Yate, *Northern Afghanistan*, London 1888, 23-43. Nineteenth century Harāt is described in G. Malleson, *Herat*, London 1880. For a tourist guide to the sights of Harāt see E. Caspani and E. Cagnacci, *Afghanistan crocevia dell'Asia*, Milan 1951, 260-4; Mohamed Ali, *A new guide to Afghanistan*, Kabul 1958, 216-22. A. Khalīlī, *Āthār-i Harāt*, 3 vols., Harāt 1930-1, is an account of the monuments and tombs of Harāt (in Persian). See also A. Lézine, *Herat, notes de voyage*, in *BEO*, xviii (1963-4), 127-45. (R. N. Frye)

ḤARĀṬĪN [see ḤARṬĀNĪ].

AL-**HARAWĪ** [see AL-ANṢĀRĪ AL-HARAWĪ].

AL-**HARAWĪ** AL-**MAWṢILĪ**, *shaykh* Taḳī al-Dīn Abu 'l-Ḥasan ʿAlī b. Abī Bakr, a Syrian author of the 6th/12th century and celebrated ascetic and pilgrim who, after a life of travelling, spent his last days at Aleppo, at the court of the Ayyūbid ruler al-Malik al-Ẓāhir Ghāzī [*q.v.*]. This ruler held him in high regard and built for him, at the gates of the town, the Shāfiʿī *madrasa* in which he taught and which still houses the remains of his tomb.

The Arabic sources mention this "wandering ascetic" (*al-zāhid al-sā'iḥ*) and devote varying biographical notes to him, though without describing in any detail his education, tastes or the activities that won him the appreciation of the caliph al-Nāṣir and several Ayyūbids. They reveal only that, having been born in al-Mawṣil of a family originating in Harāt, he left that town in order to lead a wandering existence, became known as a preacher in Baghdād and Aleppo, acquired a reputation as a mystic and conjuror and even as a magician, and to these varied talents owed the influence that he held over the master of Northern Syria; he died in 611/1215, after having had inscribed on his mausoleum, built in imitation of the Kaʿba, certain gnomic maxims and an epitaph with a text of somewhat lyrical character. But his writings, which reveal his immense interests as well as a true originality of mind, allow us to suppose further that in Syria, then so disturbed through the Crusades, he was on various occasions entrusted with missions to obtain information and undertake secret political negotiations, and that these later permitted him, on the strength of his experiences, to play the part of a more or less occult counsellor to those in power at the moment. Certain references to his travels and to the eminent personages whom he met make it possible to fix a number of precise dates in his life, between 569/1173 and 588/1189, and to establish the routes of his principal journeys in Palestine, Egypt and Sicily, as well as to Rūm, in the reign of sultan Ṣalāḥ al-Dīn, whom he also accompanied on some of his military expeditions.

His religious preoccupations, tinged with Shīʿī sympathies, and the place which, in a revival of Islam, he accorded to the veneration of local sanctuaries, appear through his *K. al-Ishārāt ilā maʿrifat al-ziyārāt* or "Guide des lieux de pèlerinage" (ed. with French tr. J. Sourdel-Thomine, Damascus 1952-57), written with constant attention to accuracy and concision. But his recollections as a courtier and envoy, his knowledge of warfare and government as well as his inclinations as a moralist not devoid of secular culture are the main themes of his *Tadhkira Harawiyya fī 'l-ḥiyal al-ḥarbiyya*, Memoir of al-Harawī on ruses of war (ed. with French tr. J. Sourdel-Thomine, *Les conseils du šayḫ al-Harawī à un prince ayyūbide*, in *BEO*, xvii (1961-2), 205-66), and they recur in the *Waṣiyya Harawiyya*, last counsels of al-Harawī (ed. with French tr. J. Sourdel-Thomine, *Le testament politique du Shaykh ʿAlī al-Harawī*, in *Islamic and Arabic studies in honor of Hamilton A. R. Gibb*, Leiden 1965), which, before his death, he dedicated to his patron at Aleppo. Moreover, this last work is unique in providing us with clear information about the nature of his relations with this sovereign: these were based on an essentially political foundation, misunderstood in the accounts of contemporary biographers.

Bibliography: For the life and personality of al-Harawī, see particularly the introductions to the French translations of the three works mentioned above. Cf. also Brockelmann, I, 629-30, and S I, 879; Ibn Khallikān, no. 432 (tr. de Slane ii, 286-8); Ibn Wāṣil, *Mufarridj al-kurūb*, ed. G. al-Shayyāl, iii, 224-5. For al-Harawī's tomb and its inscriptions, see *RCEA*, nos. 3609-3614 and 3614 A-B; E. Herzfeld, in *CIA*, *Alep*, i, 262-8, and ii, pl. CXI-CXIV; cf. J. Sauvaget, *Les "Perles Choisies" d'Ibn ach-Chihna*, Beirut 1933, 116, n. 1. (J. Sourdel-Thomine)

ḤARĀZ, a mountain complex and district in the Yemen, situated between the Wādī Surdud and the Wādī Sihām, with the Tihāma districts of Liʿsān and the Banū Saʿd to the west and Ḥaymat al-Khāridjiyya [*q.v.*] to the east. Apparently composed of rocks of the trap series (basalt) and of granite, it has the shape of an irregular star with Djabal Shibām or Ḥarāz (2930 m.) at the centre. A northern projection consists of Djabal Banī ʿAytharī (2450 m.), Djabal Ḥaṣabān (2600 m.), Djabal Banī Luʿf (2300 m.) and Djabal Maghāriba. To the west lie Djabal Masār (2800 m.) and Djabal Ṣaʿfān (2000 m.), to the south Djabal Lahāb (2400 m.), and to the south-east Djabal Hadād. Between Djabal Ḥaṣabān and Djabal Masār is the Wādī Shadhb, a tributary of the Wādī Surdud, and between Djabal Ṣaʿfān and Djabal

Lahāb the Wādī Birār or Ḥidjān, whose steep course is followed by a branch of the Ṭarīḳ al-Shām between Ḥudayda and Ṣanʿā [*q.v.*], though it is not suitable for motor traffic. The massif is very steep and precipitous at its edges but the area on top, between 2200 and 2500 m., has the character of undulating hill land, split up by innumerable valleys and gullies and with the aforementioned peaks rising in isolation out of it. All of the upper reaches is inhabited and there are countless villages and castles, even to within a short distance of the summits of the mountains. The chief town of the district is Manākha with 200-300 houses, lying at 2322 m. just northeast of Djabal Shibām and formerly the residence of the Ḳāʾimmaḳām of Ḥarāz, Ḥayma and Djabal ʿĀniz (southeast of Ḥarāz). Manākha had become the main trading centre of Ḥarāz by Niebuhr's day, having supplanted al-Mawza on Djabal Lahāb, which is noted by Hamdānī as the *sūḳ* of the area. Five miles west of Manākha lies al-ʿAttāra (1900 m.) where the Dāʿī of Yām (Nadjrān) [*q.v.*] used to reside. Other towns of note are Masār, almost on top of the Djabal, Mitwaḥ and Djirwāh on Djabal Ṣaʿfān, Lakama on Djabal Shibām, Usil west of al-ʿAttāra, and ʿAmḳa on Djabal Ḳuṣayba in Hawzan, just south of al-ʿAttāra. Closely associated with Ḥarāz is the Tihāma town of Ḥadjayla in the Wādī Birār.

The climate of the district is unusually wet and subject to sudden temperature changes. Frequent rain storms associated with south-westerly winds and a mist, known locally as *sukhaymānī* or *ʿumma*, combine to make this one of the most fertile parts of Arabia with very varied flora and fauna. Agricultural activity is intense. After a belt of thorn bushes and myrrh trees, coffee cultivation begins at 1300 m. near Usil and continues to 2100 m., mainly on the western slopes. It is carried out on a fantastic system of terracing which covers almost all parts of the mountain slopes, often extending for 2000 feet or more without a break, irrigation being provided by a network of canals and cisterns. Above the coffee belt, *ḳāt* is extensively grown and, in the vicinity of permanent water sources, there flourish many types of fruits, including pears, peaches, apricots, plums, figs and grapes, even bananas. Wheat, barley, and leguminous crops are also found. The broken terrain of the mountains, however, provides little opportunity for rearing livestock other than sheep and goats. Outlets for trade in these commodities are found in Ṣanʿā, and also in the Tihāma through various markets, notably Ḥadjayla, Sūḳ al-Khamīs, Sūḳ al-Rabūʿ, Sūḳ al-Ithnayn and Sūḳ al-Djummāʿ.

The inhabitants of Ḥarāz stand in marked contrast to those of the Tihāma in physical characteristics, religion, customs and practices. Most tribes are Shīʿa Zaydīs but the divided nature of the mountain encourages the existence of numerous sects. Thus there are Dāwūdīs among the Banū Muḳātil and on Djabal Ṣaʿfān, Sulaymānīs on Djabal Maghāriba, other Ismāʿīlīs in Hawzan, Lahāb and al-ʿAttāra. In Manākha there are Yaʿḳūbīs, while a few Shāfiʿīs, more typical of the Tihāma, are to be found on Djabal Ṣaʿfān. There used to be many Jews also, particularly in Manākha, Hadjara and Hawzan. In Manākha they owned land and virtually controlled the coffee trade. Tribal divisions are equally numerous, almost every valley forming the boundary between two tribes. Hamdānī described Ḥarāz and Hawzan as two Himyarite stocks. In the former there were also Ḥanātila, Luʿf and Nashū of the Banū Hamdān. According to Glaser (1885) the district was divided as follows: 1. Banū ʿArrāf on Ṣaʿfān; 2. Ṣaʿfān proper; 3. Masār; 4. al-Maghāriba; 5. Banū Ismāʿīl northwest of Masār; 6. Ḥaṣabān; 7. Hawzan; 8. Thuluth east of Lahāb; 9. Lahāb; 10. Banū Muḳātil; 11. al-Yaʿābir south of Manākha; and 12. al-ʿUḳmur between Manākha and Ḥayma.

The history of the district in ancient times is hardly known, though *CIH* 343 briefly alludes to *hwzn* (Hawzan). Hamdānī's description of the Mikhlāf Ḥarāz agrees substantially with what we know today. He mentions its fertility, that it produced corn, honey and sesame (*wars*), and that its dialect was midway between good and bad Arabic. His data on the towns, many of which are no longer attested, are discussed by Glaser. In more recent times, whenever the power of the Imāms of Ṣanʿā was weak, the more fertile parts of western Yemen tended to come under the control of various northeastern tribes. Thus in 1763 Ḥarāz had become subject to the newly founded Makramī dynasty of Nadjrān and remained so until 1872 when the Turks destroyed the citadel of the Dāʿī of Yām, Aḥmad al-Shibāmī, at al-ʿAttāra, whereupon the Yām made peace and retired to Nadjrān. The Turks themselves placed great importance on controlling Ḥarāz, making Manākha their headquarters, and it became the scene of bitter struggles between them and the Yemenīs.

ḤARĀZEM, SĪDĪ [see IBN ḤIRZIHIM].

ḤARB, a powerful Arab tribe of Yemenī origin in the Ḥidjāz between Mecca and Medina. They are divided into two great bodies, the Banū Sālim and B. Muṣrūḥ. To the B. Sālim belong amongst other clans, al-Ḥamda, al-Ṣubḥ, ʿAmr, Muʿara, Walād Salīm, Tamīm (not the celebrated great tribe of this name), Muzayna, al-Hawāzim (Awāzim, Hāzim), and Saʿdīn (Saadīn, sing. Saadanī); to the Muṣrūḥ, amongst others: Saʿdī (Saʿadī), Laḥabba, Bishr, al-Ḥumrān, ʿAlī, al-Djahm, Banū ʿAmr.

Doughty gives amongst others the following villages of the B. Sālim (between Medina and Yanbuʿ and on the great Wādī Ferrā (probably Ferraʿa)), Djadayda, Umm Thayyān (Dayyān), Kayf, Dār al-Ḥamra, al-Kissa, al-Khurma, al-Wāsiṭa, al-Massāniyya, al-Ṣafra (with extensive date-palm groves and a large market; besides the chief article of commerce, the date, which is here sold very cheaply, and the excellent honey from the adjoining mountains, genuine Mecca balsam is sold here, and is found genuine nowhere else in Arabia except at Badr), al-ʿAlī, Djadīd, Baddur (Badr?), Madsūs, Shātha (Swayka); of Muṣrūḥ: al-Kharaybi (near Mecca), Klays, Rābuḳ (not far from here the traveller Charles Huber was murdered by his retinue, the Ḥarb), al-Swarḳiyya. A portion of the Ḥarb also live in the great Wādī al-Ḥumḍ (al-Ḥamḍ near Wādī Rumma), the small harbour of Līth and the Djabal Figgara (Fiḳḳara between Medina and Yanbuʿ, belonging to the B. Sālim).

The Ḥarb came from Yemen to the Ḥidjāz (a clan of the Wādiʿa of the Ḥāshid [*q.v.*] bears the same name) in the Muslim period. At the beginning of the last century the Wahhābīs [*q.v.*] succeeded only after

hard fighting in overcoming them. During Palgrave's stay in Nadjd, in 1862, the Shammar chief Ṭalāl b. Rashīd in person led an expedition against the Ḥarb tribes and conquered a portion of them. Palgrave gives the number of the Ḥarb who were under the Shammar chiefs as 14,000, Doughty on the other hand only 2000.

In his *Djazīra* al-Hamdānī mentions the Ḥarb as neighbours of the Balī and the Djuhayna in the country between Khaybar and Medina and near Mecca.

[Owing to circumstances beyond their control, the Editors are unable to supply, as they had planned to do, a revised text of this article. For the convenience of readers they re-print the article which appeared in the first edition. A new article will, it is hoped, be included in the Supplement.]

ḤARB, war.

i. — Legal Aspect

Ḥarb may mean either fighting (*ḳitāl*) in the material sense or a "state of war" between two or more groups; both meanings were implied in the legal order of pre-Islamic Arabia. Owing to lack of organized authority, war became the basis of inter-tribal relationship. Peace reigned only when agreed upon between two or more tribes. Moreover, war fulfilled such purposes as vendetta and retaliation. The desert, adapted to distant raids and without natural frontiers, rendered the Arabs habituated to warfare and fighting became a function of society.

Islam, prohibiting the shedding of blood by one Muslim against another, prohibited all kinds of war (*ḥarb*) except a holy war (*djihād* [*q.v.*]). Only a war having an ultimate religious purpose, that is, to enforce the sacred law (*sharīʿa*) or to check transgression against it, was lawful. No other form was legal within or without the Islamic state.

Thus, Islam prohibited the inter-tribal warfare of the Arabs, because such wars were regarded as too ungodly and brutal, motivated by earthly interests, and permitted only a war which fulfilled a religious purpose. Thus, only one kind of war was lawful—the *djihād*—invoked for the purpose of expanding or consolidating the area of the validity of Islamic law.

As in the *jus fetiale*, *ḥarb* must be declared and prosecuted in accordance with certain prescribed rules. In the first place *ḥarb*, in the sense of fighting, must be distinguished from such duties as prayer or fasting, defined as individual duties; *ḥarb* is a collective duty (*farḍ al-kifāya*), binding on the community as a whole. Since a permanent state of war existed between the Islamic state (*dār al-Islām*) and other countries (*dār al-ḥarb*), Muslims were permanently in a state of hostilities with non-Muslims. But in fulfilling the collective duty of war not all Muslims were under an obligation to fight; only a few were called upon to fulfil the duty on behalf of the community. If no one fulfilled the duty at all, the whole community was liable to punishment. Only when Islam was threatened by a sudden attack did the duty become obligatory on all, including women, children and slaves.

As a collective duty war was a state instrument. Thus, only the *imām* (or his deputies in the provinces) was charged with the duty of prosecuting the war. In order to be lawful war was not only declared by the *imām*, but he was also charged with calling the believers to battle. Since in legal theory a state of war was always in existence (except when a peace treaty was still binding), the declaration of war by the *imām* merely meant that the circumstances in which the believer can fulfil the duty of *ḳitāl* had arisen. Calling the believers to battle was merely to summon to the duty of fighting those who were under an obligation to take up arms.

Nor was the prosecution of war lawful unless preceded by an invitation addressed to the enemy to accept Islam. Since *ḥarb* meant in theory the litigation between belief in Allāh and His prophet and misbelief, the unbelievers were first offered Islam before fighting took place. Followers of the recognized revealed religions were given the choice between Islam, submitting to Muslim rule and payment of the *djizya*, and fighting. An invitation to Islam was first forwarded to the enemy, and only refusal to accept it rendered fighting lawful. This rule was based on the Ḳur'ānic communication: "We never punish until we have first sent an apostle" (XVII, 18); and a *ḥadīth* in which the Prophet said: "I have been ordered to fight the polytheists until they say there is no god but Allāh; if they say it, they are secured in their blood and property" (Bukhārī, *Ṣaḥīḥ*, ii, 236). The jurists differed as to whether the invitation should be renewed if war broke out again with an enemy. The Mālikī and Ḥanafī jurists maintained that renewal of the invitation was commendable (*mandūb*); the Shāfiʿī jurists left it to the *imām* to make a choice, depending on the merit of the situation; and the Ḥanbalī jurists insisted that only those who had not received an invitation should be notified.

In the prosecution of war, the Muslim warriors were under an obligation to refrain from unnecessary shedding of blood or the destruction of property. Non-combatants, such as women, children, monks, the aged, blind and insane, unless they helped in the war, were excluded from molestation. If combatants were captured, they were liable to be killed or enslaved and their property taken as spoil. However, the detailed rules concerning the treatment of enemy persons and property varied in accordance with the various schools of law (see *corpus juris* of each school of law under such headings as *djihād*, *siyar* or *ghanīma*).

Hostilities came to an end either by Islam's victory over the enemy, agreement to submit to Muslim rule at the expense of paying the *djizya* in the case of *dhimmī*s, or peace with the enemy for a limited period, if the *imām* decided that fighting was harmful to Islam. Such peace was of a limited duration, not exceeding ten years, until the *imām* could resume the war. The *imām* should not terminate the fighting if the number of Muslim warriors was not less than half the number of enemy warriors (Sūra VIII, 66-7), until victory was attained.

ii. — THE CALIPHATE

We shall not provide here a history of wars nor even a study of the place of war in the life of Muslim societies. We shall merely give some notes on the art of war itself, which may be supplemented by the articles DĀR AL-ḤARB (on the concept of the theoretical state of war between Islam and all neighbouring non-Muslim lands), DJIHĀD (concerning the Holy War), DJAYSH (on armies and military organization), and ḤIṢĀR (for siege operations), in addition to other more specialized articles which will be mentioned in their place. In addition we shall not encroach on the period of fire-arms for which reference should be made to the article BĀRŪD.

The theoretical literature on the art of war continues, despite a certain evolution in practice, the traditions of the early Arabs, the Greeks and above all the Sāsānids. Translations of Greek, Persian and even (indirectly) Indian works had been made before the *Fihrist*, and there survives one part of the translation of the *Tactica* of Aelianus, the author of classical antiquity who also in Byzantium was the most consulted on these matters. But, in general, we have to deal with more popular traditions, accounts of the actions of early Arab heroes, of victorious generals and of the first caliphs, and especially of Alexander and of the great rulers of Persian history. These materials are incorporated in works of *adab* such as the *ʿUyūn al-akhbār* of Ibn Ḳutayba or *al-ʿIḳd al-farīd* of Ibn ʿAbd Rabbihi, and the later encyclopaedias; and they are found more particularly in the literary genre of the Mirrors for Princes [see SIYĀSA] such as, for example, the *Sirādj al-mulūk* of al-Ṭurṭūshī which, among many other instructive anecdotes for princes, include some concerning the conduct of armies and of war operations. The experience of later generations however is also added, and it is this which, though without any rupture with tradition, is the more direct inspiration for the works written under the influence of the reigning military aristocracies, in Central Asia, during the period of the Crusades, and later under the Mamlūks, from which last period a great number survive, written for the most part from the point of view of military exercises (lists in L. Mercier, *La parure des Cavaliers*, Fr. tr., 1924, 432-59; H. Ritter, in *Isl.*, xvii (1929), 116-54, and George T. Scanlon, *A Muslim manual of war*, 1961, 6-20). We shall mention here only the earliest which have survived: the Ghaznawid and Ghūrid *Kitāb al-Ḥarb wa'l-shadjāʿa* published by I. and M. Shafīʿ in *IC*, 1957 (the military section of the treatise, belonging to the genre Mirror for Princes, entitled *Adab al-mulūk* by Fakhr-i Mudabbir Mubārakshāh, beginning of the 7th/13th century), and the *Tadhkira fi 'l-ḥiyal al-ḥarbiyya* of ʿAlī al-Harawī, ed. and Fr. tr. J. Sourdel-Thomine, in *BEO*, xvii (1962) (to be compared with a paragraph of the *Traité d'Armurerie . . . pour Saladin*, ed. and Fr. tr. Cl. Cahen, in *BEO*, xii (1948), 23-4, 148-9 and 159-60) for the Ayyūbids; also two published works written in the Mamlūk state, that of ʿĪsā b. Ismāʿīl al-Aḳsarāʾī (in which are found the extracts from Aelianus), ed. and German tr. Wüstenfeld, *Das Heerwesen der Muhammedaner*, in *Abh. d. K. Ges. d. Wiss. Göttingen*, xxvi (1880), and the *Tafrīdj al-kurūb fī tadbīr al-ḥurūb* of ʿUmar b. Ibrāhīm al-Awsī al-Anṣarī, ed. and Eng. tr. George T. Scanlon in the recent work cited above. There is also some information in the *Muḳaddima* of Ibn Khaldūn and in the jurists such as al-Māwardī or al-Ḥasan b. ʿAbd Allāh al-ʿAbbāsī (*Āthār al-uwal fī tartīb al-duwal*, beginning of the 8th/14th century), even in ordinary *fiḳh* (cf. the example given by M. Talbi in the *Cahiers de Tunisie*, iv (1956)). Naturally a history of war would begin primarily with the combing (which has never been done from this angle) of the chronicles and even of the popular romances of chivalry, which abound in accounts of battles, of varying precision and reliability. Finally there should be remembered the useful information to be extracted from some passages of two Byzantine works: the *Taktikon* of Leo VI and the *Strategikon* of Kekaumenos (beginning of the 10th and middle of the 11th century A.D. respectively).

In theory, war is justified only when it is for the faith, the *djihād*, and ordinary war, *ḥarb*, between Muslims is condemned, whence the efforts made by rulers to represent their adversary as having at least in some respect contravened the commandments of the faith or infringed orthodoxy. However Ibn Khaldūn, as a sociologist, considers war to have been an integral part of human society from the tribal state onwards—though he adds that according to the Law the Holy War and the suppression of revolts are the only form of war justified.

Except in cases of a formal *djihād* against unbelievers, no regular and legally valid "declaration of war" is provided for but quite often two adversaries send each other challenges, announcing that the only solution possible between them is the sword, showing the judgement of Allāh. Nor is there legally a state of war for any except the combatants, and although of course "civilians" may be pillaged, taken prisoner, etc., it can also happen, even in the *djihād*, to the great scandal of the strict Muslims, that trading caravans pass unmolested between the armies, indifferent to the quarrels of the rulers (see, *e.g.*, Ibn Djubayr, *Riḥla*, 281).

Nowhere more than in these works is one conscious of the connexion between war and policy and of the fact that the success of the first depends in large part on the quality of the second. The Prince is therefore recommended to seek to gain the goodwill of his subjects, and more particularly of his troops, by his conduct towards them and especially by paying them regularly and well—which presupposes a sound financial situation; when troops are reviewed he must of course inform himself of their condition, or verify this personally. In addition, he must keep himself informed on the general situation of the enemy state, or the state which is virtually so, its material resources and the state of its morale, in order when possible to make contact with dissident elements, especially within the army itself. Hence the necessity of maintaining a system of espionage [see DJĀSŪS] in which use may be made of the entourage of ambassadors (who must be changed frequently to avoid the danger of their forming friendships in the enemy country), and also of merchants and pilgrims, real or pretended (ʿAlī al-Harawī was one of these). Naturally, as it is known that the enemy can do the same, it is necessary to have a system of counter-espionage, especially within the army, while avoiding taking measures against men who have received letters from the enemy so long as they have not actually succumbed to temptation. It is advisable all the same to make them renew their oath of loyalty. All this produced an atmosphere of petty and almost puerile ruses and of general suspicion which was typical of the warfare

and even of the whole of "political" life of that time.

To this information there is added, in the case of war or the threat of war, information on the movements of the enemy, one means for acquiring which is the *barīd* [*q.v.*]; there are sometimes even services for rapid communication (watchtowers, particularly on the coast, visual signalling and pigeon post); on all this see J. Sauvaget, *La Poste aux Chevaux dans l'Empire des Mamluks*, 1941.

In the actual military operations morale is important. It is encouraged at first by gifts and promises on setting off, by the hope of booty, and is renewed before battle is joined by accounts of the exploits of ancestors and,in the case of *d̲j̲ihād*, pious exhortations —the equivalent of those heard for example by the Christian enemies who followed the Cross.

Obviously the military teaching and practices of the classical Muslim armies have little in common with the raids and single combats of pre- and proto-Islamic times (on which see D̲J̲AYS̲H̲ and G̲H̲AZW). The specialists, as with *fiḳh*, distinguish the *uṣūl* and *furūʿ*. The *uṣūl* are primarily the theoretical division of the army into five elements (*k̲h̲amīs*): the centre or heart (*ḳalb*), the right wing (*maymana*), and the left wing (*maysara*), the vanguard (*muḳaddama*) and the rear-guard (*sāḳa*), which, *mutatis mutandis*, apply when the army is on the march or in camp as well as in battle. The *furūʿ* are the operations by the irregulars, who do not form part of the army proper but who may play a part in the preliminaries and on the fringes of the battle.

When the campaign has been decided upon, the necessary forces are mustered, the arms are distributed (other than the individual weapons always carried by the soldiers) and the command is allotted, if the Prince is not leading the army himself. Women and children (who, among the nomads, go with the fighters and encourage them, risking capture in the case of defeat) are excluded from the regular armies of organized states. The baggage may be either at the head or the rear of the marching column. The route should have been studied with regard to the nature of the terrain, the provision of supplies and the enemy's movements; unless the safety of the situation is certain, the country must be explored from all sides by scouts and small reconnaissance parties and a signal given at any indication of an approach by the enemy. It may happen that the vanguard travels several hours ahead of the centre and, if precautions are insufficient, is taken by surprise and outnumbered. While on the march, the army halts in camps whose sites must similarly be chosen to ensure security, and particularly supplies of water, etc. If the halt is long, the camp is made roughly in a square surrounded by ditches, the troops being arranged within it in such a way as to preserve the separation of the five corps and the headquarters, with transverse lanes between the sections roughly on the model of Greco-Roman camps.

When battle is imminent, it is important to choose its ground so as to be incommoded as little as possible by sun and wind, avoid the risk of flood, and to escape being dominated by an enemy occupying higher positions; if the enemy on his side has taken similar precautions, an attempt must be made to manœuvre, so that as the battle develops the desired disposition may be achieved. Astrologers are often consulted on the most propitious time to give battle and sometimes a "council of war" is held.

During the battle each of the five theoretical *k̲h̲amīs* enjoys a certain autonomy of command, although naturally the commander-in-chief can give orders for the manoeuvre of one section for the benefit of the others or take from one group reinforcements for others. In principle each *k̲h̲amīs* forms a continuous line, although it may sometimes be divided into little groups, *kardūs* (squadrons) plur. *karādīs* (an innovation which is said to have been introduced, in imitation of Byzantine practice, by Marwān II). There are usually three ranks. The first consists of the archers and cross-bowmen, the second of infantry, protected by their shields and armed with lances or swords, the third of the heavy cavalry (light cavalry were normally found only among the irregulars). In the centre the leader's standard should be seen unfurled; battles have been lost because its fall had been taken as a signal of defeat. The battle consists basically of a cavalry charge, which may be repeated about three times if the enemy line has not been broken before this. The rôle of the infantry and archers consists of breaking from a distance, and then from close at hand, the enemy assault, which however the cavalry engages on the spot if it has been able to get through to it. When the cavalry is attacking, spaces are left between the infantry, or they stand aside, to make way for the charge by their cavalry. If the charge has not been broken by the counter-charge, it may lead rapidly to the retreat of the enemy cavalry, producing disorder in the enemy ranks. In the case of great numerical or other inferiority, the lines may be replaced by a formation in solid squares to withstand the shock of attack. A charge is not usually made simultaneously in the centre and on the flanks, although there may be an attack from one section of the enemy at one point and from another elsewhere; as a result one part of the army may be defeated while another is victorious, and there have been cases when each side has thought itself to be victorious or to be vanquished. In general, however, one of the two cavalry detachments which have been victorious in their sectors proceeds before the other to fall upon the other sections of the enemy army. In fact the great danger is that as soon as victory seems certain they hurl themselves on the enemy's baggage etc. to seize booty and from then on are incapable of offering resistence if the enemy unexpectedly returns to the attack.

Frequently attempts are made to organize ambushes, either by taking advantage of a mountain pass on the route of the enemy army or by trying through manœuvres during the course of the battle itself to lure the enemy into positions prepared in advance. This preparation of ambushes was often combined with cavalry action in the tactics of simulated flight, in which the Turks in particular excelled. Whereas the Arabs, although much lighter and more rapid than the Crusaders must have been (relying as they did on massive shock tactics), generally attacked in one single line, the Turks attacked, shooting as they went, in such a formation as to shower the enemy with arrows from all directions; they did not persist in an effort to break the enemy lines, but, having made contact, attempted to draw them in pursuit, thus disorganizing their lines, and then to make a sudden turn, with the eventual help of fresh forces who had been placed in ambush. It is strange that the successive semi-nomad peoples who had owed their success partly to these tactics, once they became more settled and in possession of empires whose armies were of the more traditional and heavier type, one by one forgot their primitive method of fighting and were beaten by newcomers who still practised it.

During the battle, the leader replaces as far as possible the soldiers' mounts which have been killed

and arms which have been lost or rendered useless. *Fiḳh* debates, but in general disapproves of, the killing of non-combatants, women, children, old men and also men of religion. During sieges in particular, but occasionally also in battles in open country, individuals or groups may obtain *amān* [*q.v.*] even from an ordinary individual. It is a great misfortune if the defeat is such as to prevent the burial of those killed, who are often left by the enemy lying where they are after having been robbed. But in general the aim is less to kill than to capture and, once the battle has been fought and won, the enemy camp is pillaged [see GHANĪMA]. In principle the Prince reserves for himself the legal fifth, but more often the pillage was completely unorganized, and during it the troops observed neither the basic rules concerning the sharing of booty nor indeed any discipline at all. In particular, each one seized for himself all the male and female prisoners he could capture and later either sold them as slaves (causing a fall in prices if they were numerous) or kept them for himself. The peasants, whenever possible, robbed the fugitives belonging to either side.

Once victory has been gained, the conqueror or his vizier sends letters of victory (usually *fatḥ*) which as the centuries progress become increasingly the occasion for stylistic exercises by the heads of the *Dīwān al-rasāʾil* (see, *e.g.*, the correspondence written by the *ḳāḍī* al-Fāḍil for Saladin and the letters on the capture of Jerusalem). These "communiqués" naturally exaggerate the strength of the enemy and the importance of the victory won, and minimize the losses. In the case of war against infidels and heretics, a special report is submitted to the caliph, who sends congratulations and awards honours. The victorious general may also be awarded honours by his prince; and if it is the prince himself who has conducted the war, he provides celebrations, games, banquets and donatives, although these were neither regular nor obligatory.

The prisoners who were the Prince's share were employed by him on heavy work for which he would have had difficulty in finding native labour (the building of fortresses, etc.). For the wealthy prisoners of course a ransom (*fidāʾ*) was expected, and often received, from either the prisoner's family or the enemy prince. There might also take place an exchange of prisoners if there was a peace treaty or a truce. Finally—but especially in the case of war against the infidel—money was given or bequeathed by devout persons to be used for the freeing of Muslim prisoners (and correspondingly on the other side for the ransoming of Christian prisoners). When, in a town for example, civilians were captured who might not be Muslims, they were ransomed by their co-religionists, and the documents of the Geniza [*q.v.*] for example have preserved letters concerning the ransoming of Jews. The ransom of an ordinary prisoner naturally corresponded roughly with the price of a slave.

Muslim law does not appear to have concerned itself with the condition of prisoners as such while in Islamic territory (they were slaves); it did on the other hand consider the way in which Muslims who had fallen into the hands of unbelievers in foreign lands should behave in order to safeguard their faith (Erwin Graef, *Religiöse und rechtliche Vorstellung über Kriegsgefangenen in Islam und Christentum*, in *WI*, viii (1963), 89-139).

A war, especially if there was no siege, rarely lasted for long, and there were seldom more than a few thousand actual fighting troops engaged, even although the total army of the state in question consisted of more than this. This was because it was difficult to obtain food supplies while on a campaign. Furthermore, because of the climate, it was not possible in general to plan a campaign in winter and, after the officers had become farmers or tax-collectors, it was no longer possible to detain them on a campaign during the time of the harvest; in any case they were reluctant to remain under arms for more than a few weeks, their ordinary means being insufficient to maintain them for longer, and they also disliked the absence from their family. Very often the war is decided in a single battle, which may be followed by several sieges of strongholds.

War is often ended by a peace in the form of a capitulation or a treaty negotiated after an exchange of embassies; on other occasions, especially in wars with infidels, the peace is limited to a truce of a set time and over a limited area; often also the war can cease without there being any official peace.

The above remarks do not apply indifferently to all periods, to all peoples (the exception of the Turks has already been pointed out), or to all places. The semi-heavy cavalry, which at first played only an insignificant rôle, increased in importance from the 8th/14th century onwards. The tactics of classical warfare are impossible in mountain fighting, in which cavalry can play only a minor part, and in marshes such as those of the *Baṭīḥa* of ʿIrāḳ. This was one of the reasons why, during the last years of the autonomous caliphate, there were mixed with the Turkish cavalry Daylamīs, mountain dwellers fighting on foot. It could happen that if each of the two rival armies was unable to fight on the terrain of the other, then neither could win or be defeated: for example the early Almohad infantry were unable to attack the Almoravid cavalry on the plain, but equally could not be attacked by them in their mountains. In the east of the Muslim world elephants [see FĪL] terrified the horses of an enemy who was unused to them. We have not dealt here with naval warfare [see BAḤRIYYA] but we must emphasize the rôle which a navy could play in transporting land troops: across the Straits of Gibraltar for example, or from Egypt to the Syrian ports which the Crusaders were attacking from the land.

On the frontiers, the *ghāzī*s and *murābiṭūn* inflicted on the enemy not battles but sudden raids (delayed on the way back by their booty, which included many animals), which were answered by counter-raids. This did not, however, exclude various forms of peaceful relationships between the frontier populations in the intervals between raids, such as are described in the Greek and Arabic romances of chivalry (Digenis Akritas, Dhu 'l-Himma [*q.v.*], Sayyid Baṭṭāl [see AL-BAṬṬĀL], etc.); the romances of the Turks of the *ūdj*, the followers of the Arab *ghāzī*s and the Byzantine *akritai*, are more uncompromisingly warlike.

The resounding victories of the Mongols raise the question whether they possessed a clear technical superiority over their adversaries. The matter has not been sufficiently studied, but it would seem that this was not so. Their successes appear to have been due to their discipline; to the speed of their movements and to the art of concealing them; to the excellence of their system of espionage and intelligence; to the combined use on a large scale of traditional siege weapons, transported by means of prisoners, and of the ruses practised by nomads in open country; to the terror inspired by their appearance, their distant and unknown origin, their exceptional readiness to

massacre and, as a result of this terror, the ready co-operation and the voluntary capitulations which they obtained—to the fact in short that success breeds success. But the relatively minor battle of ʿAyn Djālūt [*q.v.*] was enough to break the spell and to reduce them to the status of ordinary adversaries.

In the first generations following the Arab conquest, the governor of a province, who was still essentially the general of an army of occupation, was called *wāli 'l-ḥarb*, although his authority in fact considerably exceeded the conduct of war, if there was one, and even the maintenance of the army.

Bibliography: In addition to the works cited, see DJIHĀD and DJAYSH. The general histories of war and of military art have nothing of interest in the Muslim field; the only useful general presentations are those of A. v. Kremer, *Kulturgeschichte des Islam*, i, and Reuben Levy, *The social structure of Islam*, ch. ix. Among the important battles (apart from sieges) of which we possess circumstantial accounts are *e.g.*, that of Ḥiṭṭīn [*q.v.*] and that of Malazgirt [*q.v.*] studied by Cl. Cahen in *Byzantion*, ix (1934), 613-42.

(CL. CAHEN)

iii. — THE MAMLŪK SULTANATE

This article will deal with Mamlūk expeditions from their departure from Cairo, where the main body of the army was garrisoned, until their return to the Egyptian capital. Expeditions in the direction of Syria will be discussed, for this was the chief theatre of operations. The passages dealing with the actual fighting will be confined to field battles; for siege warfare, see ḤISĀR.

From mobilization up to arrival at the place of assembly.

A decision to dispatch a large expedition against a strong enemy was usually made known by the hoisting, some time in advance, of a special flag called *djālish* or *shālish* [*q.v.*] over the *ṭablkhāna* [*q.v.*], accompanied by the beating of special drums (*kūs* [*q.v.*]). Shortly after this ceremony the army was passed in review, and a few days later the *nafaḳat al-safar* (on which see D. Ayalon in *JESHO*, i (1950), 56 ff.) would be distributed, in time for the soldier to replenish his equipment and stores.

The mobilization of the expeditionary force on the eve of their move from Cairo was called "the general muster" (*al-nafīr al-ʿāmm*). Troops detailed to take part in the campaign received written orders (*awrāḳ* or *awrāḳ al-tadjrīd*) to this effect. The military police (*nuḳabāʾ al-mamālīk al-sulṭāniyya* and *nuḳabāʾ al-ḥalḳa*: see NAḲĪB) were responsible for seeing that the members of the expeditionary force presented themselves on time and in the appointed place (Baybars al-Manṣūrī, *Zubdat al-fikra*, British Museum, Ms Add. 23,325, fol. 186a, fol. 268; Zetterstéen, *Beiträge*, 193, 210, 222; *Sulūk*, i, 544; ii, 260, 518, 520; *Nudjūm*, v, 17, 76, 411).

Shortly before the army set out, various supplies were prepared in the stations lying along its route. These stocks (*iḳāmāt*, sing. *iḳāma*, or *iḳāmāt wa-anzāl*) consisted of barley, wheat, chickens, pigeons, geese, sweets, melons and various other kinds of food, as well as fire-wood, horses, riding-camels and camels of burden.

Except when, as in some of the great Syrian battles, an enemy aggressor dictated the time, military campaigns were undertaken by the Mamlūks mainly during the spring, when the weather was mild. Winter campaigns, especially towards Syria, were rare, and provoked bitterness and complaints.

The army's departure from Cairo to the nearby place of assembly was called *tabrīz*. The Sultan and *amīrs* went there one after the other, each heading his *ṭulb* (see below). Usually this procedure lasted from morning till noon. Only very rarely did it take several days (for two typical instances of such departure see Ibn al-Furāt, ix, 14, 131; *Badāʾiʿ*, v, 37).

The expeditionary force was called *tadjrīda* (pl. *tadjārīd*). When the Sultan himself went to battle he was always the commander of the *tadjrīda*. Otherwise it was the highest ranking *amīr* taking part, *i.e.*, the *amīr* who, by his rank and office, was entitled to sit nearest the Sultan in the official ceremonies. The usual title of this commander, up to about the middle of the 9th/15th century, was *muḳaddam al-ʿaskar* (or *al-ʿasākir*). Very rarely he was called *muḳaddam al-djaysh* (or *al-djuyūsh*). Sometimes his title was abbreviated to *muḳaddam* [*q.v.*]. In campaigns entailing sea voyages, two commanders were sometimes appointed, one on sea (*muḳaddam al-ʿaskar fi 'l-baḥr*) and one on land (*muḳaddam al-ʿaskar fi 'l-barr*) (*Nudjūm*, vii, 548). On religious functionaries accompanying the army, see ḲĀḌĪ AL-ʿASKAR.

The place of the army's assembly. With the exception of the first few years of their rule the Mamlūks always assembled their campaigning armies near Cairo. Sultan al-Ṣāliḥ Nadjm al-Dīn Ayyūb (637/1240-647/1249) built in 676/1248 the town of al-Ṣāliḥiyya, in the north-eastern part of Lower Egypt, with a double purpose: to serve as a resting place for the incoming armies after their crossing of the Sinai desert and as a point of concentration for the outgoing armies before starting their organized march into Syria. The second of these functions was discarded by the Mamlūks shortly after their coming to power. Sultan Ḳuṭuz, on his march to ʿAyn Djālūt, was probably the last to use it for this purpose (*Sulūk*, i, 330_{4-6}, 373_{15-17}, 381_{6-21}, 382_{15-16}, 411_{4-5}, 429_{13-14}; *al-Nahdj al-sadīd*, xx, 18_{18}; *Khiṭaṭ*, i, 184_{22-4}, 232_{8-11}). Thenceforward the Mamlūks used to assemble their armies near Cairo. At first the place of assembly was by Masdjid al-Tibr (frequently distorted into al-Tibn), but from the end of the 7th/13th century onwards it was al-Raydāniyya [*q.v.*] which served in the same capacity (the pilgrims' Caravan to Mecca used also to assemble in that place).

The Sultan at al-Raydāniyya. The focal point of the army's camp at al-Raydāniyya was, quite naturally, the sultan's tent. It was placed at the end of the row of the *amīrs*' tents, which were arranged according to the principle that the less important ones came first, while the more important ones came last (Ẓāhirī, *Zubda*, 136-7) [see KHAYMA, MUDAWWARA]. The system of guarding the Sultan's tent was, according to the Mamlūk sources, very similar to that employed in the Cairo citadel, especially the guarding inside the tent (*Ṣubḥ*, iv, 48_{2}-49_{13}, 56_{15-17}; *Ḍawʾ al-ṣubḥ*, 258_{1-4}; *Khiṭaṭ*, ii, 210_{30-36}; *Ḥawādith*, 680_{11-12}). The whole of the Sultan's *cortège* was called *al-rikāb al-sharīf* (or *al-sulṭānī*).

The army in the field did not carry with it any special structures for performing the daily prayers. This might imply that when in the field the army prayed under the open skies. The sole exception seems to have been that of Baybars I, who, in 661/1262-3, ordered the making of a tent-mosque (*djāmiʿ khām*), which had to be pitched on the right of the Royal tent. This mosque had *miḥrāb*s and a *maḳṣūra* in it (Ibn ʿAbd al-Ẓāhir, ed. Sadeque, pp. 89-90; British Museum, MS Add. 23,331, fol. $71b_{3-7}$). In all probability Baybars followed here, as in other

matters, the example of the Mongols. Of their employment of tent-churches we are informed by William of Rubrouck (London 1900, xxix, xxxi, 29). Berke Khān, the ruler of the Golden Horde and Baybars' ally, had tent mosques (*masādjid khām!*), where the five daily prayers were performed (Yunīnī, ii, 365_{6-7}). Ibn Baṭṭūṭa (ii, 380 = Gibb, ii, 482) saw these mosques in the Golden Horde at a much later date. For the strict performance of the prayers by soldiers on campaign, as a habit, under Baybars I, see Ibn ʿAbd al-Ẓāhir, fol. $63b_{13-16}$.

From al-Raydāniyya to Damascus (or Aleppo). The army always departed from al-Raydāniyya in separate groups, and entered the Syrian capital in the same way (*arsālan, afwādjan, ʿalā dafaʿāt*). Thus the expeditionary force stretched over a long distance during its advance. On some occasions we are told that the left wing (*al-maysara*), the right wing (*al-maymana*), and the centre (*al-ḳalb*) of the Egyptian army entered Damascus on three successive days (*al-Nahdj al-sadīd*, xx, 22_{3-6}; Ibn al-Dawādārī, *Kanz al-durar* (ed. Roemer), ix, 32_{10-13}). Only further evidence will show whether the Mamlūk army always advanced in the same formations which it used in the field of battle.

One of the most common measures of protection taken by the advancing army was the sending out of special scouts (*kashshāfa*) in various directions.

The military expedition was accompanied by a very large camel caravan, which carried its baggage (*thaḳal*, pl. *athḳāl*). Each Mamlūk participating in a campaign received at least one camel. Sometimes the Mamlūk received two camels, while the non-Mamlūk soldiers of the *ḥalḳa* [*q.v.*] received 3 camels per two men (see D. Ayalon, in *JESHO*, i (1958), 270-1). Sultan Barḳūḳ gave his Mamlūks 7,000 camels and 5,000 horses when he planned in 796/1394 his campaign against Timurlang (Ibn al-Furāt, 380_{13-16}; *Nudjūm*, v, 562_{6-8}). In the biggest *tadjrīda*s 800 to 1,000 camels were needed to carry the light armament alone (Ibn al-Furāt, 371_{8-11}; Ibn Ḳāḍī Shuhba, fol. $99a_{6-7}$). Mules were very rarely employed for carrying the baggage. They were used in 691/1292 by the Sultan's army in the region of Aleppo because most of the camels died in an epidemic (Baybars al-Manṣūrī, fol. $177a_{6-9}$). The employment of wheeled vehicles (*ʿadjal*), mainly for carrying siege machines, was also extremely rare.

Though the advancing army was always accompanied by numerous physicians, surgeons, chemists and great quantities of drugs (see, *e.g.*, *Ṣubḥ*, iv, 49_{6-7}), it would appear that its numerical strength was often reduced as a result of maladies which attacked its members during the march (this is quite apart from epidemics, which always took a heavy toll of the Mamlūks, and particularly of the younger ones amongst them; see D. Ayalon, in *JRAS*, 1946, 62-73. The sources do not inform us how and where the sick were treated. The weak and those who lagged behind were often sent back to Egypt.

The Mamlūk sources furnish rich and reliable information on the time-table of the army along its main route of advance: Cairo-Gaza-Damascus-Ḥamāt-Ḥimṣ-Aleppo (for a detailed list of the stations along this route see W. Popper, *Egypt and Syria under the Circassian Sultans*, 47, 48-9). This information is not spread, however, evenly over the whole Mamlūk period, for the sources mention the time-table only when the Sultan himself headed the military expedition. Data on regions lying outside the line Cairo-Aleppo, viz., the Delta area, Central and Upper Egypt and the Ḥidjāz is sparse.

The march from Cairo to Aleppo took 30 to 40 days; from Cairo to Damascus 20 to 25 days; from Cairo to Gaza 10 to 12 days; from Gaza to Baysān 5 to 6 days; from Baysān to Damascus 3 to 4 days; from Damascus to Ḥimṣ 2 to 3 days; from Ḥamā to Aleppo 2 to 3 days. The above figures sometimes include the resting days in the intermediate stations and sometimes not. The average lengths of rests in the main stations were: in Gaza—3 to 5 days; in Baysān—2 to 3 days; in Damascus—5 to 7 days; in Ḥamā—2 to 3 days. The length of the resting time in Ḥimṣ as well as the length of time needed to cover the distance between Ḥimṣ and Ḥamā has not been established.

A fundamental aspect of the Mamlūk military expedition was that, at least for most of the period, there was, in effect, no fixed ratio of officers to men. True, according to rule, the *Amīr* of a Thousand had to have under his command a thousand *ḥalḳa* soldiers and an unspecified number of *Amīrs* of Forty and *Amīrs* of Ten, while the *muḳaddam ḥalḳa* had to command forty *ḥalḳa* soldiers during a campaign (see D. Ayalon, in *BSOAS*, xv (1953), 450-1). It is not clear how far this was in fact applied in the early Mamlūk period, when the *ḥalḳa* was still strong and numerous. But for most of the period the *ḥalḳa* was in steady decline, and under the Circassians had stopped going to battle almost completely. When the *ḥalḳa* did go to war, their numbers never exceeded a few hundred. The very name *muḳaddam ḥalḳa*, so frequent in the Baḥrī period, disappears altogether under the Circassians (see *BSOAS*, xv, 448 ff. and ḤALḲA). This implies that the above-mentioned proportion between the simple soldiers and their superiors in the campaign had only paper value.

As for the Royal Mamlūks (*al-mamālīk al-sulṭāniyya*, see *BSOAS*, xv, 204 ff.), who constituted the backbone of the army, and who bore the brunt of the fighting, we do not know even the theoretical ratio of their officers and men in the campaign. It is stated that during the cadastral survey (*al-rawk al-Nāṣirī*) of 715/1315 the number of the Royal Mamlūks was 2,000 and the number of their commanders (*muḳaddamū al-mamālīk al-sulṭāniyya*) was 40. But we do not know whether the same proportion existed before or after that year, and especially whether it had ever been adopted in the field of battle.

In the present state of our knowledge there is only one formation participating in battle which can be adequately described. This formation, which was called *ṭulb* (pl. *aṭlāb*), and which is mentioned most frequently in the sources, was of a very loose character and the number of soldiers included in it might vary considerably. The formation which went out to war under the command of an *amīr* constituted a *ṭulb*. At the same time, all the Royal Mamlūks taking part in a campaign, whose number far exceeded that of the soldiers of all the other *aṭlāb* put together, formed only one *ṭulb* (for further details see ṬULB).

Secrecy and military ruses. Little or no attempt was made to hide or disguise the preparations for a Mamlūk campaign. The hoisting of the war-flag, the muster, inspection, and pay-parade long befoie the departure of the expeditionary force gave ample warning to the enemy of the impending attack. Since the Mamlūks hardly ever used the sea-route in order to transport their armies or equipment to Syria, they had to confine themselves to a single land-route from Cairo to Gaza, a fact which greatly facilitated the enemy's task of watching their movements. In Syria the situation, though somewhat better, was not fundamentally different. Though there were two

routes from Gaza to Damascus, the one following the coast, then turning right through the valley of Esdraelon to Baysān, and the other passing through Karak in Transjordan, it was the first route which was mainly used, because it was far better than the second. Besides, the supplies prepared along the army's route of advance long before its departure, without any attempt of disguise, told the enemy from exactly what quarter to expect the attack.

One can find, however, some instances of attempts to mislead the enemy. Once, when Baybars I set out at the head of a group of horsemen, he forbade his men to buy food and fodder in order to conceal their identity (*Sulūk*, i, 598). Sultan Ṭaṭar (824/1421)was considered one of the greatest experts among the Mamlūk Sultans in the employment of ruses. When he set out against his rival *amīrs* in Syria he did not hoist the *djālīsh* (*Nudjūm*, vi, 490-8). He also cut all communications between Egypt and Syria. These acts, which are called "the concealment of news" (*ta*ʿ*miyat al-akhbār*) (*Nudjūm*, vi, 494-5; Ibn al-Furāt, ix, 72_{5-7}; *Nudjūm* (Cairo), viii, 152-3), are praised by the historian, who says that in this respect Ṭaṭar followed the example of the early Mamlūk Sultans (*Nudjūm*, vi, 494-6). There are other instances of cutting the communications between various parts of the realm in order to disguise the army's movements. Other ruses employed by the Mamlūk Sultans are recorded. Sultan Barsbāy distributed the *nafaḳat al-safar* to make Ḳarā Yuluk believe that he (*i.e.*, Barsbāy) intended to attack him. Fearing, however, that he would not be able to get his money back, he distributed the *nafaḳa* to the *amīrs* only and not to the Royal Mamlūks (*Nudjūm*, vi, 685-7). Sultan al-Muʾayyad Shaykh employed many ruses against the *amīr* Nawrūz al-Ḥāfiẓī (*Nudjūm*, vi, 336-7). One of these was lighting many fires in the camp which he had already left, thus making Nawrūz believe that his adversary was still there together with his army (*ibid.*, 147_{5-7}). In their battles agains the Mongols, soldiers of the Mamlūk army sometimes wore *sarāḳūdj* hats in order to mislead their enemy about their identity. Armenian soldiers in the Mongol camp also wore the same head-gear so as to pass as Mongols (*Sulūk*, i, 511_{10-11}, 783_{14-15}; *ibid.* (Quatremère's translation), i/1, 235; Ibn ʿAbd al-Ẓāhir, fol. $78b_{2-3}$, $80b_{7-8}$; Dozy, *Supplément*, s.v.; L. A. Mayer, *Mamluk Costume*, index, s.v. *sarâqûj*).

Discipline. Mamlūk army discipline had greatly deteriorated in the Circassian period in comparison with the Baḥrī period and reached its lowest ebb in the closing decades of Mamlūk rule (for the state of Mamlūk discipline in peace-time. see *BSOAS*, xv, 211-3).

In the Baḥrī period there were few instances of insubordination in connexion with a campaign, and when these did occur they were severely punished (see, *e.g.*, *Sulūk*, i, 544_{13-15}; Ibn Kathīr, xiv, 2). Under the Circassians a wholly different situation prevailed. Shirking from participation in an expedition became more and more frequent among the Royal Mamlūks, the only military body worthy of its name in that period; and threats of capital punishment (mainly by strangling, *shanḳ*) were totally unheeded. It even happened that a whole expeditionary force, with the exception of its commanders, failed to report for duty in spite of being repeatedly summoned. Such instances of total disobedience occurred, however, from time to time only with the smaller expeditions which were sent to Upper or Lower Egypt, the Ḥidjāz, etc. (*Nudjūm*, v, 28, vii, 756_{9-13}, 755_{2-5}; *Ḥawādith*, 6_{14}-7_{21}, 553_{14-19}). Sometimes the members of the expedition, having gathered at the place of assembly, set out for the field of battle without waiting for the order to move (*Nudjūm*, vi, 259_{1-19}, vii, 264_{8-9}). When a certain expedition did go to war with determination and without being prodded, the historian considers it to be "a very grand thing" (*shayʾ* ʿ*aẓīm ila 'l-ghāya*) (*Nudjūm*, vii, 408_{1-3}). A unique case of real enthusiasm for war which seized the whole Mamlūk army in the Circassian period was the expedition against Cyprus in 829/1426 (*Nudjūm*, vi, 600).

Another form of insubordination was the return of big sections of the expeditionary force, or even the whole of it, from the battlefield or from one of the stations en route to Cairo without the Sultan's permission. This phenomenon became common from the start of the long series of battles between the Mamlūks and the Turkoman chieftain Shāh Suwār and his Ottoman allies during the reign of Sultan Ḳāitbāy, but the first signs of it had already appeared at an earlier date (Ibn Khaldūn, v, 483_{13-15}). The number of soldiers returning to Cairo against orders was particularly great when the campaign was long and hard. Scarcity of food and fodder and high prices forced many of them to sell their horses, arms and field-dresses (on the field-dress of the mamlūk, see L. A. Mayer, *Mamluk Costume*, 19-20) and return home. The Sultan's anger was of no avail, for "his only choice was to keep silent". The deserters usually came back secretly and kept in hiding, until the Sultan's wrath subsided, but it did happen that they entered Cairo openly and impudently demanded additional pay. The Sultan never succeeded in sending them back to the front which they deserted (*Nudjūm*, vii, 487_{5}-8_{8}; *Ḥawādith*, 602_{21}-3_{13}, 672_{20-23}; *Badāʾi*ʿ, iii, 88_{12-14}, 89_{2-3}, 227_{22}-8_{2}, 229_{14-22}, 254_{22-23}, 255_{12-14}, 269_{11-16}, iv, 116_{8-23}, 437_{3-6}, v, 68_{12-13}). One of the main reasons for the Mamlūks' failure to maintain their hold over Cyprus was that the garrison stationed there frequently returned to Cairo, in utter disregard of the orders of the Sultan, whose attempts to send them back usually ended in complete failure (*Nudjūm*, vii, 724_{6-8}; *Ḥawādith*, 435-7, 448_{5-19}, 454_{5}).

A legal release from a campaign was called *dustūr*. This term, very frequent in the Ayyūbid period, gradually died out in the period of the Mamlūks.

The battle order in the field. The arrangement of the army in battle order was called *tartīb* or *ta*ʿ*biya* (*Nudjūm*, vi, 444_{3}, 493; *Ḥawādith*, 646) or *muṣāfafa* (*Nudjūm*, vii, 67) or *ṣaff* (*Nudjūm*, vi, 493), while the battle itself was called *maṣāff* [*q.v.*] (Zetterstéen, *Beiträge*, 113_{24}; *Nudjūm* (C), vi, 10_{8}; Ibn al-Furāt, vii, 170_{9}, 172_{22}). In almost every important field battle of the Mamlūks the Mamlūk army and the enemy's army were divided into three main bodies when they faced each other. These were the centre (*al-ḳalb*), the right wing (*al-maymana*) and the left wing (*al-maysara*). The strongest of these three was always the centre. It included the choicest troops, who fought under the Royal banners (*al-sanādjiḳ* or *al-a*ʿ*lām al-Sulṭāniyya*) and were commanded by the Sultan himself. The Royal banners betrayed the Sultan's position, a fact which endangered his personal safety in an emergency. When the Ayyūbid Sultan al-Nāṣir Yūsuf fought the Baḥrī Mamlūks he got away from underneath the banners, and thus escaped capture (*Sulūk*, i, 375_{5-8}). Sultan Ḳalāūn, in his battle against the Mongols, gave orders to furl the Royal banners, in order to avoid being identified by the enemy (*al-Nahdj al-sadīd*, xiv, 492_{1-3}). In another battle the Royal banners were moved backwards, while the Sultan remained on the

same spot (*Manhal*, i, $154b_{22}$). On the Royal Banners see also Ibn K͟haldūn, *Muḳaddima* (ed. Quatremère), ii, 46 = tr. Rosenthal, ii, 52.

Close by the two wings were placed the auxiliary forces (the Bedouin horsemen near one wing, and the Turcoman horsemen near the other). Occasionally infrantrymen (*mus͟hāt, rad̲j̲d̲j̲āla*) were posted in front of the battle-array described above (Ibn Iyās, iv, 448, 451, v, 8). The use of infantry seems to have increased in the later years of Mamlūk rule (see Ibn Ṭūlūn, ed. R. Hartmann; al-Anṣārī, *Ḥawādit͟h al-zamān*, Cambridge Un. Lib., MS Dd, 11, 2). This may have been the result of the growing use of fire-arms. The infantrymen employed in the field of battle were mainly recruited from amongst the peasants and semi-nomads of D̲j̲abal Nābulus and other parts of Syria (Zetterstéen, *Beiträge*, 81; *Nud̲j̲ūm* (Cairo), vii, 303_{17}; *Sulūk*, i, 388_{5-6}; ii, 93_7; Ibn al-Furāt, vii, 41, 169_{16}; *Ḥawādit͟h*, 701_{7-8}; *Badāʾiʿ*, iii, 51_{5-7}; iv, 408-9, 448_{12-18}, 451_{17-18}; v, 8_{2-3}, 63_{2-3}).

Sometimes the battle-array was rather more elaborate. Amīr Minṭās͟h, in his fight against Barḳūḳ, arranged his army thus: *ḳalb, maymana, maysara,* and two additional wings (*d̲j̲anāḥān*). In addition, he posted at the rear of both the *maymana* and *maysara* a reserve unit or rearguard (*radīf*). Barḳūḳ could not do the same, because his army was too small (*Nud̲j̲ūm*, v, 493_{10-13}). In 802/1400 the army of Sultan Farad̲j̲, which numbered 5,000 horsemen and 6,000 infantrymen, was arranged in his battle against Amīr Tanam between Ramla and Gaza in the following manner: right wing, left wing and "centre within a centre within a centre" (*ḳalb fī ḳalb fī ḳalb*); each of these formations had its own rearguard (*radīf*) (*Nud̲j̲ūm*, vi, 35_{10-13}). In 820/1417 al-Muʾayyad S͟hayk͟h, who was stated to have been a great military reformer and an expert in warfare and in the arrangement of troops in the field of battle (*wa-kāna imāmᵃⁿ fī . . . maʿrifat taʿbiyat al-ʿasākir*) paraded his army in battle array by Tall al-Sulṭān (near Aleppo). He decided not to leave the arrangement of the *ṭulb*s of the *amīr*s to anybody else, but to do it himself. He arranged them not according to the order in which the *amīr*s used to sit in the Sultan's presence during official ceremonies, but according to their offices or functions (*bi-ḥasab waẓīfatihi*) (*Nud̲j̲ūm*, vi, 363_{6-12}. See also *Manhal*, iii, $168a_{2-8}$; *Badāʾiʿ*, ii, 8_{23-5}; *JAOS*, 1949, 142; *BSOAS*, xv, 454-5). This would seem to imply that the order of the *amīrs*' *ṭulb*s in the battlefield was then normally an exact copy of the order of their sitting at official ceremonies. In 842/1438 the *amīr* Āḳbug͟hā al-Timrāzī arrayed Sultan D̲j̲aḳmaḳ's army against *amīr* Ḳurḳmās as follows: *maymana, maysara, ḳalb, d̲j̲anāḥān*. This battle array was called *taʿbiyat al-mud̲j̲annaḥ* (*Nud̲j̲ūm*, vii, 46_{6-8}). A vanguard placed before the centre was called *d̲j̲ālīs͟h al-ḳalb* (Abu 'l-Fidāʾ, iv, 15_6). Occasionally the centre itself seems to have been divided into several sections, including wings, as may be deduced from the expression *d̲j̲anāḥ al-ḳalb al-aysar* (*Nud̲j̲ūm* (C), vii, 303_{13-14}).

The sources furnish very little information about the places occupied by the armies of the various Egyptian *amīr*s and the governors of the Syrian provinces within the left and right wings and the centre. Concerning the army of the province of Ḥamāt, it is explicitly stated that it had customarily been placed at the hand of the right wing since the days of Saladin (*Sulūk*, i, 201_{3-6}; Abu 'l-Fidāʾ, iv, 24_{28-9}).

The actual fighting. A recurrent phenomenon in the main battles fought out between the Mamlūks and their adversaries was that the wings were usually defeated first, sometimes at the very start of the fighting, whereas the centre held out much longer. Very shortly after the opening of the fighting, the whole elaborate array would be greatly upset, for a wing of one of the opposing armies would soon crumble under the impact of the enemy's onslaught, and its soldiers take to flight, while the victorious wing on the opposite side would pursue it at full speed. It is noteworthy that even the side that was ultimately defeated succeeded quite often, during the initial stages of the fighting, in routing one of the enemy's wings and pursuing it. Both the pursued and the pursuing wings would get very far away from the main scene of the battle, and thus would be kept in complete ignorance of the progress of the fighting (this occurs in the battle of Gaza against the Franks in 642/1244 (Sibṭ, 494_{8-16}) in the battle of al-Nāṣir Yūsuf against Aybak in 648/1251 (Makīn, 53-5; *Sulūk*, i, 324-7; *Nud̲j̲ūm* (Cairo), vii, 6_{16}-7_2) in the battle of ʿAyn D̲j̲ālūt and in the battle of Barḳūḳ against his rivals at S͟haḳḥab in 792/1390 (Ibn al-Furāt, ix, 185-7; Ibn Ḳāḍī S͟huhba, fol. $59b_{20-25}$; *Manhal*, fol. $47b_{5-6}$). It happened more than once that the pursuing wing, on returning to the field of battle, discovered that the army to which it belonged had already been utterly routed.

The great field battles which the Mamlūks fought were usually short, and only rarely lasted more than one day. One of their most protracted battles was against Timurlang, but this was a combination of a field battle and a siege of the town of Damascus, and sieges were usually very long in the Middle Ages. In those very few cases when the battle continued into the next day, fighting would stop during the intervening night. The Mamlūks never fought a night battle against a foreign enemy.

One of the classical tactics employed by the Turkish and Mongol tribes in the field of battle was, as is well known, the encirclement of the enemy, and his annihilation within the tightening ring. The making of a ring (*ḥalḳa*) around the opponent is mentioned very frequently in the *furūsiyya* [*q.v.*] training-books composed during the Mamlūk period, and very rarely in actual military exercises. The same tactics were also very common in hunting (*ḍarb ḥalḳat ṣayd*), especially in the early decades of Mamlūk rule (*Sulūk*, i, 498_7, 520_{1-6}, 549_{9-11}, 584_{1-8}, 789_{5-6}, 859_{20-21}, 421_{10-14}; Ibn ʿAbd al-Ẓāhir, fol. $52a_{7-10}$, $93b_{11-16}$; Quatremère, *Sultan Mamlouks*, i/2, 147 ff.). As far as can be learnt, however, from the available sources, the Mamlūks did not employ this method of warfare in any of their great battles, *i.e.*, they never encircled the enemy *in the battlefield* and annihilated him after encirclement (they did so to certain sections of the defeated and pursued enemy, usually far away from the scene of the main battle. In the case of ʿAyn D̲j̲ālūt the picture is not clear). One possible explanation for this fact is that neither of these two adversaries could employ the tactics of encirclement successfully against the other, because both of them were well versed in it (the K͟hʷārizmians employed it with great success against the Franks in the battle of Gaza in 642/October 1244, see Sibṭ Ibn al-D̲j̲awzī, 494_{3-16}. In 701/1302 the Mamlūks quelled a great rising by the Bedouins in Upper Egypt by encircling them in a "*ḥalḳa* like the hunting *ḥalḳa*"—al-Manṣūrī, fol. 231a-232a). Another possible explanation is that the Mamlūk art of war might have gradually diverged from that of their Turco-Mongol nomad brethren under the influence both of sedentary

living and of Muslim military precedent. The same might be true, though to a lesser degree, of the Mongol armies of Iran. As is well known, hunting was one of the main means of training for real war of the nomads of the steppe. In the reign of Baybars I the use of *ḥalḳat ṣayd* is mentioned much more frequently than in the reigns of later sultans. This might indicate the deterioration of nomad war usages amongst the Mamlūks with the passing of time (for Mamlūk military training see D. Ayalon, *Notes on the* Furūsiyya *exercises and games in the Mamluk Sultanate*, in *Scripta Hierosolymitana*, ix, 31-62; T. Scanlon, *A Muslim Manual of War*, Cairo 1961).

Of the practices employed in Mamlūk battles, the two following are worthy of note.

(a) In the battle of Abulustayn (675/April 1277) the Mongols dismounted from their horses and fought "to the death" (*Nahdj*, xiv, 424_{5-6}; Ibn Kathīr, xiii, 271-2; *Nudjūm* (C), vii, 168). This kind of warfare seems to have been quite common with the Mongols (for its repeated use in their war against the Khwārizmshāh see Sibṭ Ibn al-Djawzī, 443_{18}-44_{7}). The Mamlūks do not seem to have used it at all. In the early Muslim period, however, this practice is often mentioned in the sources as having been employed in critical or desperate conditions (see, *e.g.*, Dīnawarī, *al-Akhbār al-ṭiwāl*, 288; Ibn Saʿd, *Ṭabaḳāt*, ii/1, 93_{14-19}; Ṭabarī, i, 1614_{8f}; iii, 853_{21}-54_{11}; Ibn Khaldūn, *ʿIbar*, iii, 338).

(b) Authors of Mamlūk military treatises mention the employment of a tremendous noise as a means of frightening the enemy, and indeed the Mamlūks did use this method quite frequently, and with considerable success. According to Mamlūk sources it was particularly successful in the siege of Acre (690/1291). During the final assault on the town the Mamlūks used a huge quantity of drums (*kūsāt*) carried on the backs of 300 camels, which produced a terrible thunder, so that "the world turned upside down". The Bedouin adversaries of the Mamlūks were particularly sensitive to the use of drums (*Duwal al-Islām*, ii, 147_{5-7}; Ibn Kathīr, xiii, 321_{3}; *Nudjūm* (Cairo), vii, 6_{7-9}; *Sulūk*, i, 765_{1-2}; ii, 162_{8}; Ibn al-Furāt, viii, 112_{10-11}).

When the Mamlūks were forced to fight their major battles on Egyptian soil, they usually preferred the vicinity of Cairo as the field of battle. On several occasions the boundary between the Sinai desert and Egypt proper, which was called "the head (or the beginning) of the sand" (*raʾs al-raml* or *awwal al-raml*) was recommended as more suitable for the defender, on the ground that the attacker would be exhausted immediately after crossing the desert. Both Barḳūḳ, when he fought Minṭāsh and Yalbughā al-Nāṣirī, and Ṭūmānbāy, when he fought the Ottomans, rejected the suggestion, and chose the vicinity of Cairo instead (*Nudjūm*, v, 409_{8-9}, 411; Ibn Ḳāḍī Shuhba, fol. $38b_{5-8}$; Ibn al-Furāt, vii, 114_{8}; ix, 80_{24-7}; *Badāʾiʿ*, v, 136_{6-9}, $_{23-4}$, 139). Apparently the fact that Sultan Aybak defeated al-Nāṣir Yūsuf at al-ʿAbbāsa (648/February 1251) soon after the last-named had crossed the desert, thus removing for ever the Ayyūbid menace to Mamlūk rule, did not induce his successors to follow in his footsteps.

The Kerchief of Safe Conduct. When one of the rival parties wanted to negotiate a truce, a peace or a surrender, an envoy or envoys would be sent to the enemy's camp carrying a special cloth or kerchief called "the kerchief of safe conduct" (*mandīl al-amān*). This kerchief, the colour of which is not specified, was usually worn round the neck, or put on the head (it was rarely tied round the waist or held in the hand). Such a kerchief could also be sent by the victorious side as a sign of acceptance of the offer of negotiations (Zetterstéen, *Beiträge*, 145_{12}; *Manhal*, v, fol. $20a_{18}$; *Nudjūm*, v, 309_{7}; vii, 415_{10-11}, 439_{3-4}; *Badāʾiʿ*, ii, 11_{20-26}; iii, 109_{13}, 306_{6}, 353_{10f}; Ibn ʿArabshāh, *al-Taʾlīf al-ṭāhir*, British Museum, MS Or. 3026, fol. $86a_{14-16}$, fol. $97a_{18-19}$. See also L. A. Mayer, *Mamluk Costume*, 63, note 4, and Dozy, under *Mandīl*). Rarely a shirt (*ḳamīṣ al-amān*) was used for the same purpose as the kerchief (Ibn al-Furāt, vii, 228_{7}; see also Manṣūrī, fol. $123a_{13}$).

Casualties. The figures quoted by the Mamlūk sources for their own and enemy casualties are, on the whole, quite moderate, though by no means free from exaggeration. Very illuminating in this context is the view expressed by the Mamlūk historian Ibn Taghrībirdī. He, and his near contemporary Ibn Khaldūn (see *Muḳaddima*, ed. Quatremère, i, 9 f. = tr. Rosenthal, i, 16), who spent many years in the Mamlūk Sultanate, belong to the very few Muslim historians who question the veracity of figures mentioned in the historical sources. But while both of them criticize the figures pertaining to the sizes of the armies, only Ibn Taghrībirdī includes in his criticism the figures of those killed in action. The same author, who states on several occasions that the numbers quoted in the sources of those carried off by the plague are extremely exaggerated, adds on one of these occasions that the same is true of those killed in earlier battles (*al-waḳāʾiʿ al-mutaḳaddima*), when the sources spoke of one hundred thousand persons, or less, down to one thousand or even to one hundred, slain in a single battle. Our historian argues that even when the number of the slain does not exceed one thousand, their bodies are scattered over a wide area, and in order to count them one has to engage many thousands of those who remained alive, and even then it would take a long time to establish the exact number of the dead. Then he adds: "And we have not seen and we have not heard that any king had ever appointed anybody to count the numbers of those killed in any battle conducted between himself and his enemy, unless the number of the slain was one thousand or less. As for those killed in the battles of Hūlākū, Ghāzān and Timur, the establishment of their exact numbers is sheer madness, and whoever believes in these numbers is nothing but a madman". Then our chronicler concludes that he mentioned the battles of these three Khāns specifically only because they lived nearer his own time, but he meant any battle which took place either in the Muslim period or before it (*Ḥawādith*, 337_{14}-8_{13}. For the author's view of the exaggerations of the historian concerning the sizes of expeditionary forces, etc., see *Nudjūm*, vi, 603_{14-16} and also *Nudjūm* (Cairo), viii, 131_{6-8}, ix, 20_{9-14}. For his carefulness in quoting the numbers of Mamlūks cf. *ibid.*, vi, 687_{7-10}).

In spite of the quite numerous great battles of the Baḥrī period and the constant expeditions against the Bedouins in the Circassian period, Mamlūk sources do not furnish very rich information about the numbers of those killed in action. Data about the number of the wounded are scant. Very meagre are also the data about the prisoners of war.

The casualties suffered by the Mamlūks in the 9th/15th century were, in most cases, slight, if their encounters with Timur at the opening of this century and with the Turkoman Shāh Suwār and the Ottomans in its closing decades are excepted. The small number of casualties resulted from the lack of real fighting in the period, a fact which, amongst other causes,

greatly contributed to the accelerated decline of the Mamlūk army. Two statements by Ibn Taghrībirdī, the greatest authority on Circassian Mamlūk military society, about the intimate connexion between the scarcity of fighting, the lightness of casualties and the degeneration of the army, are of great importance (the author, who died in 874/1470, knew only of the very first battles against Shāh Suwār). In his first statement he says that the Mamlūks of his time "are a people who eat unearned bread", for they owe everything they have to the feats of the Mamlūks of past generations. There were no real wars in the 9th century A.H. after the war against Timur. The battles fought during the reigns of al-Nāṣir Faradj, al-Muʾayyad Shaykh and al-ʿAzīz Yūsuf were only substitutes for war. The greatest battle of the century was that of Shakḥab (792/1390), yet the number of those killed on both sides was under 50. After Shakḥab there were battles in which not a single soldier lost his life (*Nudjūm*, vi, 688). In his second statement, which he makes on summing up Sultan Ḳalāūn's rule, our author says that had Ḳalāūn's only positive act been the good upbringing he gave his Mamlūks, this alone would have justified his claim to greatness. Their good behaviour and discipline were in complete contrast to those of the Mamlūks of his own time. This should be coupled with the fact that, except for the war with Timur, there was no real war in the ninth century. The biggest military operation of that century was the conquest of Cyprus, but even this operation did not constitute a real battle, for the Cypriots surrendered to a small contingent, before the main body of the Mamlūk army reached the battlefield. The rest of the Mamlūk naval campaigns were no more than "sea voyages there and back" (*safar fi 'l-baḥr dhahāb^{an} wa-ayāb^{an}*). This, according to Ibn Taghrībirdī, is in glaring contrast to the big and constant battles and to the fighting fervour which marked the period between the reigns of Salāḥ al-Dīn and al-Ashraf Khalīl. It is remarkable, he adds, that the Mamlūk soldiers of earlier generations were modest and shy, in spite of their victories and achievements. They effaced themselves in the presence of the great and of the veterans, and did not despise those who occupied lower positions than themselves. The Mamlūks of his own time were, in contrast, holding "their buttocks in the water and their nose in the sky (*ist fi 'l-māʾ wa-anf fi 'l-samāʾ*). None of them is capable of holding the horse's rein properly. They are experts in overcoming the weak and the powerless. Their *djihād* is the humiliation of their commander. Their *ghazwa*s are the looting of the hay and the dried clover" (*Nudjūm* (Cairo), vii, 328_3-9_{15}. On the breakdown of the discipline of the Mamlūks under the Circassians, see *BSOAS*, xv, 206-13. There is a marked tendency in the Circassian period to idealize the Baḥrī period, but this tendency is by no means without solid foundation).

The dead soldier's inheritance. The death of a soldier during a campaign often caused serious complications. One of the greatest difficulties was to obtain reliable testimony concerning the will he made before he died. The testimony of his fellow-soldiers was not considered good enough. In the meantime the deceased's property would be squandered. In order to safeguard the interests of the deceased's legal heirs, Sultan Baybars I decreed in Shaʿbān 663/May 1265, with the approval of the Chief Ḳāḍī, that every field commander would appoint a certain number of upright and devout persons, who would be authorized to testify to the dead soldier's last will. This decree had a welcome from the army. Earlier, in Radjab 662/April 1264, Baybars promulgated another decree safeguarding the interests of the deceased soldier's orphans. This one does not seem to have been confined to soldiers participating in a campaign (*Sulūk*, i, 512_{1-7}, 536_{10-16}; *Khiṭaṭ*, ii, $206_{11-16, 19-28}$).

The return of the victorious army to the capital. The announcement of a victory in the capital was accompanied by the playing of bands and particularly by the beating of drums in the Cairo citadel and at the gates of the houses of the *Amīr*s of a Thousand. This way of announcing the victory was called *duḳḳat al-bashāʾir* (or *al-kūsāt*, etc.). Sometimes the drums would not stop beating for seven days running. The town was decorated for many days. The decoration usually included the construction of wooden "towers" (*ḳilāʿ*) in the streets, the repainting of the city's gates and the drawing of gilt coats of arms (*runūk*, sing. *rank*) on them. The returning army used to march through Cairo (*shaḳḳa al-Ḳāhira*) in a magnificent procession. Shackled prisoners, severed heads, torn, broken and reversed banners, cleft and sometimes also reversed drums formed part of the procession. The chief commanders of the expeditionary force received sumptuous robes of honour (*khilaʿ*, sing. *khilʿa*) and other gifts.

The behaviour of the Mamlūk army during a defeat. The behaviour of an army in a defeat or during a retreat is one of the best criteria for judging its efficiency and morale. Judged by this criterion alone, the Mamlūk army would not have justified its great reputation. That it would be easily dispirited as a result of a military setback in the years of its decline is to be expected. The extraordinary thing is that, as far as one can judge from a single important instance, its behaviour was not fundamentally different when it was at, or near, the peak of its power. The only major defeat suffered by this army in the Baḥrī period was in the first battle against Īlkhān Ghāzān (699/1299). The retreat soon turned into a panic flight. Even the grand *amīrs* abandoned the soldiers under their command and fled for their lives. In order to facilitate their flight the soldiers threw away their helmets and wore kerchiefs instead. Many of them took off their field-dresses and went into hiding in Damascus from fear of the wrath of the mob. Others tried to disguise their identity by cutting their beards. Both the Egyptian and Syrian armies withdrew to Egypt. Their soldiers reached Cairo in tiny isolated groups or even singly (*mutafarriḳīn furadāʾ*), most of them half-naked and horseless. According to one historian the number of those killed in the actual fighting was quite small; many found their death during the flight. It took several months to re-organize and re-equip the army, but Sultan al-Nāṣir Muḥammad rose to the occasion in spite of his youth. The maintenance and reorganization of such huge armies could be carried out in Egypt because of the great prosperity of that country in that time, as explicitly stated by the sources (*Nudjūm* (Cairo), viii, 122_{18-19}, $124_{1-8, 13-14}$, 128_{13}-9_3; *al-Nahdj al-sadīd* (in *Patrologia Orientalis*), xiv, 637_8-8_3, 670_8-71_3; Zetterstéen, *Beiträge*, 60_{23}-61_2, 80_{1-5}; Ibn al-Dawādārī, ix, 17-18, 37-40).

In the battle against Timurlang (Djumādā I 803/January 1401) the Mamlūk defeat was not severe, and therefore the retreat was very orderly at the beginning; but as soon as the *amīrs* learnt of Sultan Faradj's departure, they also departed hastily without taking leave, and each of them reached Egypt with not more than one or two Mamlūks

(*Nudjūm*, vi, 61_{14-17}).

A most striking proof of the deterioration of the Mamlūk army's discipline early in the 9th/15th century is afforded by its attitude immediately after Sultan Barsbāy raised the siege of the fortress of Āmid in 836/1433. Failing to capture it, Sultan Barsbāy decided to make a treaty with its defender, Ḳarā Yuluk, and return to Egypt. The besieging army remained intact throughout the long siege, and suffered only few losses. There was, of course, no question of any defeat. Yet as soon as the news of the treaty spread in the camp, the whole army did not bother to wait for the order of retreat, but turned its back on the fort and started a headlong stampede towards Egypt. In this chaotic flight each made his own way, and the huge army soon disintegrated into tiny groups which rushed towards Egypt in different ways, unbeknown to one another. The *amīrs* fled in one direction, whereas their Mamlūks, together with their *ṭulb*s, ran away in another. The Sultan himself was left with a few followers, and was exposed during the whole night to great danger. The contemporary historian believes that Ḳarā Yuluk could have inflicted heavy losses on the retreating army had he possessed sufficient courage to pursue it (*Nudjūm*, vi, 206-9).

In the numerous defeats which the Mamlūk army suffered at later dates all its retreats were most disorderly. The soldiers returned home hungry, naked and barefoot. Some of them came back on foot, others riding donkeys and yet others riding camels (see *e.g.*, *Badāʾiʿ*, ii, 112_{6-8}, iii, 12_{5-6}, 34_{13-16},; v, 72_{6-8}, 128_{8-11}).

Battles within Mamlūk military society. Whereas the Mamlūks fought against their external enemies with considerable zeal and determination, at least until the early decades of Circassian rule, their internal battles were in most cases conducted with little determination and ferocity, and in a rather leisurely manner. The number of casualties was usually very small. The expression "insignificant fighting" (*ḳitāl hayyin*) is very frequent in connexion with this kind of warfare. It was almost impossible to foresee the results of these battles, for the two rival camps were always in a fluctuating state, with Mamlūks constantly going over from one side to the other. When the scales were definitely tipped in favour of one rival, it often happened that most of the Mamlūks of the losing side would go over *en bloc* to the winning side (see, *e.g.*, *Nahdj*, xiv, 579_5-80_3; *Manhal*, iv, fol. $216a_{18-20}$; *Nudjūm*, vi, 35-6). Even in the battles between Barḳūḳ and his rivals, which were much fiercer than the ordinary Mamlūk skirmishes, and later in the battles which these rivals conducted amongst themselves, there was a constant flow of Mamlūks from one camp to the other. Because of this flow and because the combatants on both sides wore more or less the same dress, the supporters of one rival had sometimes to bear distinguishing marks (see, *e.g.*, Ibn al-Furāt, vii, 170_{22-3}). Only the battles between Sultan Faradj and his Circassians were distinguished by their particular ferocity (see *JAOS*, lxix (1949), 141-2).

The Cairo citadel (*ḳalʿat al-djabal*) occupied a most central place in the Mamlūk internal strifes. In spite of its being strongly fortified, its sieges usually were of short duration, for it passed from hand to hand without much struggle. Sieges which lasted seven days were quite rare (*Sulūk*, i, 800_{20}; *Ḥawādith*, 179_{18-21}, 233_{8-9}; Ibn al-Furāt, vii, 147_3, 181_{18}; *Badāʾiʿ*, iii, 455_3). The longest siege of the citadel under the Mamlūks lasted 31 days (*Badāʾiʿ*, iii, 362_1-363_2). The Madrasat al-Sulṭān Ḥasan, which is situated opposite the citadel, always played an important rôle in these sieges.

Though inter-Mamlūk fighting caused considerable damage to the civilian population, many inhabitants of the capital enjoyed witnessing it in the same way that they enjoyed witnessing the spectacle of the *maḥmal* procession. Sometimes the spectators suffered heavier casualties than the Mamlūks (*Ḥawādith*, 171_{21-3}; *Nudjūm*, vii, 405, 417_{14}-18_4).

It was only very rarely that the Mamlūk rival factions called the Egyptian Bedouins to help them against each other. When in 902/1497 they did call them, the Mamlūks fought the Mamlūks, while the Bedouins fought the Bedouins (*Badāʾiʿ*, iii, 356_{7-9}, 357_{19}-58_2). A few years later, in 906/1501, the Mamlūk factions again contemplated calling the Bedouins for help, but then discarded the idea on the grounds that such a step was too humiliating (*Badāʾiʿ*, iii, 450_{8-10}). As for the Bedouins, they showed little enthusiasm for a trial of arms with the Mamlūks, as long as they were not attacked by them. Once Barḳūḳ asked the Bedouins to help him against his rivals, but they excused themselves, saying that they were not able to fight the Mamlūks (Ibn al-Furāt, ix, 72_{11-19}).

See further the articles on the individual battles—ʿAYN DJĀLŪT, ḤIMṢ, MARDJ DĀBIḲ, SHAḲḤAB, WĀDĪ AL-KHAZINDĀR etc.; for siege-warfare see ḤIṢĀR.

(D. AYALON)

iv. — OTTOMAN EMPIRE.

A major field campaign was perforce an enterprise involving the Ottomans in a long and complicated process of preparation. News from abroad—espionage reports, in fact—had an obvious relevance to operations in the field and the Ottomans strove to be well informed about the international scene (*e.g.*, through Ragusa: cf. N. H. Biegman in *Belleten*, xxvii (1963), 237-55 ; on Jewish spies in the Ottoman service see A. Arce, *Espionaje y última aventura de José Nasi* . . ., in *Sefarad*, xiii (1953), 257-86). Routes followed in earlier wars sometimes came under renewed consideration at a later date—Meḥemmed II would seem to have studied some of the campaigns of Bāyazīd I and Murād II as a guide to his own action (cf. H. İnalcık, in *X. Bizans Tetkikleri Kongresi Tebliğleri*, Istanbul 1957, 220). Moreover, advice about the best routes available might also be sought from soldiers and officials well acquainted with a particular theatre of war (cf. Hurmuzaki, *Documente*, ii/1, 521).

The great campaigns stood in close relation to a number of geographical zones. In time of war against Persia, Erzurum (reached from Istanbul either along the sea route to Trebizond or overland) was a base area of vast importance for the Ottoman armies. So, too, the region of Diyarbekir, Van and Mosul, with Aleppo as a rear base—fortress towns which also fulfilled a similar rôle in relation to ʿIrāḳ, when that land was the theatre of war. Against Russia the Ottomans made much use of the sea routes from Istanbul to the Crimea and to the fortresses located on the rivers flowing into the Black Sea—*e.g.*, Azov and Yenikale (Don and the Strait of Kerch), Ochakov and Kilburun (Dnepr and Bug), Akkerman (Dnestr) and Kilya, Ismail, Tulcea, Braila, Silistra and Ruschuk (Danube), to all of which must be added the fortresses guarding Moldavia (*e.g.*, Bender, Iasi, Kaminiec and Khotin). As for campaigns on the middle Danube, here the main line of advance was from Istanbul through Edirne, Plovdiv, Sofia and Nish towards Belgrade, beyond which the

Danube itself and the Tisza offered access into the Hungarian lands, the Sava and the Drava into the regions of Hercegovina, Dalmatia and Bosnia. The great centre of Salonika was well situated to act as a base area for operations directed against Greece and Albania (cf., on communications in the Ottoman Empire, the works of Jireček and Taeschner).

The vast extent of the empire, the great distances to be overcome meant that full mobilization was, in general, a slow and laborious affair. It was the custom to send out in December orders calling the *sipāhīs*, *i.e.*, the "feudal" horsemen in the provinces, to a campaign envisaged for the following year (cf. Hurmuzaki, *Documente*, ii/1, 521; J. Cuspinianus, *De Turcorum origine*, 63r-v; I. Dujčev, *Avvisi*, 43; Sutton, ed. A. N. Kurat, 35-7, 90-1, 151-3). Marsigli (*Stato militare*, ii, 106) indicates how, for a campaign in Europe, the troops from Asia Minor and the Arab lands passed over into the Balkans at Istanbul and Gallipoli or straight to Salonika from the ports of Syria and Egypt, the various contingents joining the main line of march thereafter at Philippopolis (Filibe [*q.v.*]), Sofia and Nish. Of the troops from Europe the Bosnians made for Eszék, the Albanians for Nish, the men of Transylvania for Pest via Szolnok and the Wallachians, Moldavians and Krim Tatars for Belgrade via Temesvár (Marsigli, *op. cit.*, ii, 106). It was seldom possible, in time of conflict with Austria or Persia, to concentrate the imperial forces in the actual theatre of war until the summer was far advanced, with the result that major field operations often had to be compressed into the months of August, September and October. The diminution, in the late summer, of natural sources of fodder in the area of operations tended to restrict the length of the campaign season, since the Ottomans took with them to war—and therefore had to feed—a large number of transport animals (cf. de Warnery, *Remarques*, 37-8). With the onset of winter (often harsh in the Balkans and as a rule severe in Armenia and the adjacent regions) the time for withdrawal to winter-quarters was almost at hand.

The preparations for a new campaign included the bringing together of vast supplies of war material. Orders would go out to the cannon foundries (Ṭop-k͟hāne) at Istanbul and elsewhere for the casting of new guns and to the mines of the empire for supplies of metal (lead, copper, iron) and for the fabrication of picks, shovels, crowbars, axes, nails, horse-shoes, axles for gun-carriages and waggons, etc. (cf. art. BĀRŪD, 1063; also J. Grzegorzewski, in *Archiwum Naukowe*, vi (1912), *passim*; Gökbilgin, *Yürükler*, 169). Austrian accounts of material captured from the Ottomans during the long war of 1094/1683-1110/1699 embrace a wide range of articles and equipment—*e.g.*, cramps, shovels, scythes, sickles, anvils, bellows, iron, lead, horse-shoes, nails, slow-match, linseed-oil, resin, pitch, cauldrons, camel-hair and horse-hair, ropes, cord and cables, cotton-wool, sacks, sheep-skins, grease, tallow, waggon-jacks, etc. (cf. Boethius, *Kriegs-Helm*, i, 153; *Archiv f. Kunde österreich. Gesch.-Quellen*, iv, 444; Veress, *Gyula Város*, 452; also (for Peterwardein, 1716) *Mon. Hung. Hist., Scriptores*, xxvii, 585). These inventories include the guns, fire-arms and other weapons taken from the Ottomans and, in addition, list the amounts of captured gun-powder, sulphur and saltpetre (essential items that the Porte drew both from inside the empire and from foreign sources: cf. the references in BĀRŪD iv (1063) and D͟JIZYA ii).

Of the first importance also was the obligation to make available adequate supplies of food for the troops in the field. The Ottomans, on campaign, led a frugal and sober life, a little bread (or biscuit), mutton and rice (pilav), dried beef, onions and the like forming, with water, the main ingredients of their diet. This temperate approach to eating and drinking tended, as some of the Western sources indicate, to make the Ottoman soldier more resistant to disease and of greater endurance than his Christian foe (cf. Menavino, in Sansovino, *Historia Universale*, 73r; Georgieviz, *Epitome*, 52-53; d'Arvieux, *Mémoires*, iv, 518; de Courmenin, *Voiage*, 261; de Warnery, *Remarques*, 23). The central government took elaborate measures to meet the need for supplies and provisions. Large herds of cattle and flocks of sheep accompanied the Ottomans to war as sustenance for the troops in the field (cf. Magni, *Turchia*, i, 290). On the local population dwelling close to the line of advance would fall the burden—against payment, however—of bringing to the troops on the march grain and victuals of various kinds (cf. da Lezze, *Historia Turchesca*, 48-9; Spandugino, in Sathas, *Documents Inédits*, ix, 230-1; de Courmenin, *Voiage*, 255-6). At times, indeed, when a major campaign was in view, an edict might be issued, forbidding the export of supplies from a given area (cf. Hurmuzaki, *Documente*, ii/1, 525). The government—with the armed forces in mind—promoted the cultivation of rice in the Balkan lands, *e.g.*, along the rivers Maritsa and Vardar (cf. FILĀḤA iv, 907).

A great campaign meant the gathering together of vast numbers of transport animals, waggons and carts. Oxen and buffalo (some of them bred under government control, *e.g.*, in Cilicia: cf. Ewliyā Čelebi, *Seyāḥat-nāme*, iii, 40) hauled the large guns, while camels (drawn from Asia Minor and the Fertile Crescent), mules and draught horses ("*bārgīr*", levied from the lands along the lower Danube) acted as beasts of burden. The *sipāhīs*, *i.e.*, the "feudal" warriors, and also the "*Altī bölük*", or mounted regiments of the imperial household, came to war with their own horses, more swift and more light in physique than the heavier "*bārgīr*". It was, in addition, the custom, for purposes of transport, to requisition waggons and animals, together with personal labour service, from the rural population on or near the line of march (cf. Menavino, in Sansovino, *Historia Universale*, 43r, 105r-106v; Spandugino, in Sathas, *Documents Inédits*, ix, 218; Hurmuzaki, *Documente*, ii/1, 230; I. Dujčev, *Avvisi*, 203; Montecuculi-Crissé, iii, 294, 295, 305-306; L. Barbar, in *Wiener Staatswissenschaftliche Studien*, xiii/1, 43 ff.; B. A. Cvetkova, *Impôts extraordinaires*, 225).

The opening of a campaign was attended with elaborate ceremonies. Of the six *tūg͟hs* [*q.v.*] or horse-tails marking the exalted rank of the Sultan two would be erected in the first courtyard of the imperial palace at Istanbul. Should the Grand Vizier—and not the Sultan—be in charge of the campaign, then one of the three *tūg͟hs* assigned to him was exposed to public view. After six weeks this *tūg͟h* (known as "*ḳonak tūg͟hī*", *i.e.*, "tough de station", because it travelled and halted one day's march ahead of the main forces) was moved to the first encampment of the campaign located at Dāwūd Pās͟hā near Istanbul, the war being in Europe, or else sited close to Üsküdar (Skutari), hostilities being in Asia. On the following day contingents drawn from the crafts of Istanbul and destined to practise their trades on campaign for the benefit of the troops—millers, bakers, butchers, saddlers, etc.—went out in ceremonial procession to the encampment. Two days

later the Janissaries and, in succession after them, the other corps and regiments of the central government moved to the camp, where the Grand Vizier, as *Serdār*, or commander-in-chief, now joined them, having taken formal leave of the Sultan (cf. I. Dujčev, *Avvisi*, 215; Galland, *Journal*, i, 177 ff.; de la Croix, *Mémoires*, i, 266 ff., 295 ff.; Kéralio, *Histoire*, i, 52 ff., ii, 73 ff., 82 ff., 88 ff.; de Warnery, *Remarques*, 21 ff.; Montecuculi-Crissé, iii, 289; d'Ohsson, *Tableau général*, vii, 387 ff.; Hammer-Purgstall, *Staatsverfassung*, i, 488 ff.).

Much care was taken to make the line of march, at least within the confines of the empire, as smooth and as practicable as possible. Orders would be sent to the authorities in the provinces, bidding them repair the relevant routes in order to facilitate the passage of waggons and guns. Piles of stones and wooden stakes served to mark out the actual line of advance that the troops had to follow (cf. *Trésor politique*, iii, 861; I. Dujčev, *Avvisi*, 69, 264; Magni, *Turchia*, i, 288; Auer, ed. Lukinich, 50; L. Barbar, *op. cit.*, 22, 27, 28). The crossing of rivers (*e.g.*, in Europe, the Sava, the Drava, the Danube or the Tisza) was a problem of particular importance. Supplies of tools, chains, timber, cables, nails, etc. had to be assembled for the building of great pontoon bridges. Sometimes pre-fabricated parts of the structure would be carried to the designated site in boats or on waggons and carts. Moreover, to ensure that the work went ahead with despatch, orders might be issued requisitioning the services of local skilled craftsmen, *e.g.*, carpenters and smiths (cf. Barovius, *De rebus Ungaricis*, 134-5; Szamosközy, *Történeti Maradványai*, 147-8; Hurmuzaki, *Documente*, ii/1, 521, 525, 543; Auer, ed. Lukinich, 80; Magni, *Turchia*, 391-3; de la Croix, *Mémoires*, 298-300; Molnar, in *Müvészettörténeti Értesitö*, vii/4, 259-63).

The Ottomans, in the time of their splendour, observed a strict discipline on the march. Even the slightest damage to orchards, gardens and cultivated fields along the route was visited with severe punishment (cf. Menavino, in Sansovino, *Historia Universale*, 73r; Georgieviz, *Epitome*, 53-4; Chesneau, *Voyage*, 108-9). Such discipline seems, however, to have been far less good, when the empire was in decline (cf. de Warnery, *Remarques*, 89). Written commands transmitted from the *serdār*, through the *Čawush-bashî* and his subordinates, to the various corps and regiments made known the order of march, the chief elements of which—in the actual theatre of war—included an advanced screen of raiding and reconnaissance horsemen (*e.g.*, *akindjîlar* and Tatars), a vanguard of picked cavalry under the *Čarkhadjî-bashî*, a main force embracing the Janissaries, the *Altî bölük*, the specialist troops (*e.g.*, armourers, artillerists, etc.), together with the mass of the "feudal" *sipāhīs* on either flank, and a rearguard covering the baggage and supplies (cf. de Promontorio-de Campis, ed. Babinger, 49, 61; *Ordo Portae*, ed. Şerif Baştav, 8-11; Marsigli, *op. cit.*, ii, 112-7; Hammer-Purgstall, *Staatsverfassung*, i, 493 ff.).

The movement from one camping site to the next began in the small hours of the morning. It was now that the personnel entrusted with the choice and delimitation of a new site went forward, under suitable escort and with tents, baggage and equipment, to fulfil their duties. Access to pasture for the animals and to water for beasts and men alike was a factor of much importance in the selection of the next site. Experience from earlier campaigns, expert local advice and careful reconnaissance meant of course that the choice could often be made, in principle at least, well before the actual moment of need. With the forward movement thus begun, the various corps and regiments set out in succession, marching until about the hour of noon, when the new camp, in normal circumstances, would be at hand. The centre of the encampment was reserved for the tents of the Sultan, the Grand Vizier and the high dignitaries of the Porte. Around them would lie the Janissaries, the *Altî bölük*, the artillerists with their cannon—in short, the troops belonging to the imperial household. Beyond this central nucleus stood the *Beglerbegs*, the *Sandjak begs* and the *sipāhīs* of the provinces, each corps having its own quarters. Much colourful detail can be gleaned about such encampments from the European sources—*e.g.*, on the lanterns used for marching in the hours of darkness, the water-carrier (*sakkā*) with his buffalo skins, the "baraques" of the artisans and craftsmen (each with a small pennant above it, pointing to a particular trade or occupation), the enclosure where strayed animals waited for their owners to reclaim them or the canvas barriers erected around the quarters of the Sultan and painted to look like walls. The deepest impressions left on the Christian mind would seem to have come, however, from the frugal and sober habits of the Ottoman soldier, the absence of drunkenness, the wonderful silence prevailing in such encampments and from the care taken to maintain a high standard of personal and public cleanliness amongst the troops (*e.g.*, regular visits to the barber, frequent washing of clothes, lavish provision of latrines both within the quarters of each individual unit and within the camp as a whole)—all of which stood in marked and favourable contrast to the practices normal in the armies of Christendom (cf. Spandugino, in Sathas, *Documents Inédits*, ix, 230; *Trésor politique*, iii, 865 ff.; de Courmenin, *Voiage*, 258-9; de la Croix, *Mémoires*, i, 289 ff., 301 ff.; Galland, *Journal*, i, 113 ff., ii, 113 ff.; d'Arvieux, *Mémoires*, iv, 516 ff.; Magni, *Turchia*, i, 288 ff., 301 ff., 336-7, 348-9; Guilleragues, *Ambassades*, 323 ff.; Benaglia, *Relatione*, 101 ff.; Marsigli, *op. cit.*, i, 81, ii, 56 ff.; de La Motraye, *Voyages*, ii, 5 ff.; Villars, ed. Vogüé, i, 77 ff.; de Warnery, *Remarques*, 13, 22, 27-8). There is often mention, too, of the pomp and circumstance of Ottoman warfare—*e.g.*, of the uniform and equipment of the Janissaries, of the respect accorded to meritorious conduct in the field (the granting of aigrettes, of honorific robes and of gratifications in cash) or of the brilliant-hued pennants used to distinguish one from the other the various regiments and corps and also the personal retinues of the great dignitaries (cf. *Trésor politique*, iii, 841, 843, 853; de Germigny, in *L'Illustre Orbandale*, i, 109; Hurmuzaki, *Documente*, Supl. I, i, 86-7; Benaglia, *Relatione*, 234; Magni, *Turchia*, i, 339; Brue, *Journal*, 24, 27, 58-9; Perry, *View of the Levant*, 42).

An assessment of Ottoman tactics in the field demands some degree of caution. The rôle, in warfare, of the Janissaries, the *Altî bölük* and the specialist corps of the imperial household was a most important one, but it can be given too much emphasis. The main weight of the Ottoman forces—and this fact determined in large measure their system of tactics—was to be found in the *sipāhīs*, the "feudal" warriors from the provinces, who far out-numbered the troops of the central government. On the battlefield, subject of course to variations imposed by the terrain, the normal order consisted of a firm centre embracing the Janissaries and other élite elements

with trenches, cannon and waggons as protection (in short, a "Wagenburg" arrangement) and on each side a powerful wing of *sipāhī* horsemen. The tactics appropriate to such forces aligned in such an order are not hard to define: harassment of the foe, skirmishes, sudden thrusts, feigned retreats, infiltration toward the flank and rear of the opposing troops and at last a general onset of horsemen, with the foe, should all go well, overrun and cut down in flight and relentless pursuit. To considerations of this kind must be added factors of a strategical nature: time and distance (in relation to war against Austria and Persia), climate (the approach of winter) and logistics (food and munitions for the men, fodder for the animals). The influence of these factors was such that, in the golden age, a major Ottoman campaign assumed the form of an offensive brief in duration, but waged with vigour to ensure, if possible, a rapid and decisive result—the emphasis resting, of course, in the tactical sense, on warfare highly mobile and fluid in character.

As the art of war changed and became more elaborate in Europe, so, in the course of time, new tactics, indeed a distinctive system of warfare was evolved, first in Austria and then in Russia, to meet the Ottoman armies in the field. Raimondo di Montecucculi, one of the greatest theoreticians of war and himself victor over the Turks at St. Gotthard in 1075/1664, laid down in his famous memoirs the principles of action destined to govern all the campaigns of Austria and Russia against the Ottomans in the late 11th/17th and the 12th/18th centuries: "... Attaquer avec les cuirassiers l'infanterie de l'ennemi ... soutenir et repousser sa cavalerie avec nos piques et notre mousqueterie, et battre sans relâche l'une et l'autre avec l'artillerie, et toutes sortes de bouches à feu ..." (Montecuculi-Crissé, iii, 302). The tactical formation which embodied these principles was the square or rectangle, each side (two or three lines deep) consisting of alternate groups of foot and horse with chevaux de frise in front of them, the guns being at the corners of the square, the reserve troops and baggage inside it. Modifications of later date involved the disappearance of the pikes and the chevaux de frise, the diminution in the size of the squares and an increase in their number—changes designed, in short, to obtain greater freedom of movement (cf. Montecucculi, *Mémoires*, ii, *passim*; Röder von Diersburg, ii, 33; Eugen, *Feldzüge*, ii, 552 ff., *passim*; Vauban, ii, 281 ff.; de Warnery, *Remarques*, 63 ff., 74 ff., 90 ff., 109 ff.; Marsigli, *op. cit.*, ii, 86; Bruce, *Memoirs*, 43, 46; Poniatowski, *Remarques*, 103; Manstein, *Mémoires*, 124, 178 ff.; F. Ley, *Münnich*, 62-3; Anthing, *Campagnes*, i, 142-3, ii, 78-9; Smitt, *Suworow*, 157 ff., 431; de Volney, *Considérations*, 19-20, 47; von Berenhorst, *Betrachtungen*, 362 ff.; Criste, *Kriege*, 272 ff.).

The Ottoman armies still contained much sound material, both in respect of equipment and of men. Praise is given in the European sources to their muskets, mortars and mines (see above, BĀRŪD, 1064). On favourable ground the Janissaries still fought well, as at Gročka in 1152/1739 (cf. Criste, *op. cit.*, 272-3). Nevertheless, the old Ottoman tactics met with little success against the co-ordination of all arms and all categories of troops practised in Austria and Russia, the increasing reliance of the Christians on massed gun-fire and musket-fire, and their conviction that the best means to overcome the Muslim foe was to force him into a major battle. The Ottomans, during the war of 1683-99, began, in 1687, to entrench themselves in elaborate fashion, renouncing to some extent the open and mobile order of battle normal to them before this time. Such a change—itself a consequence of the severe defeats endured at the hands of the Austrians since 1683—was soon shown to be of doubtful advantage. At Zenta in 1109/1697 the Ottomans, unable to hold their entrenchments under the efficient fire of the Austrian guns, suffered yet another formidable reverse (cf. Röder von Diersburg, ii, 22; Marsigli, *op. cit.*, ii, 125; de Warnery, *Remarques*, 122 ff.).

Much information, often of great detail, is to be found in the European sources of the late 17th and of the 18th centuries, *e.g.*, on the incompetence of Ottoman generals, the tactics of the *sipāhīs*, the skill of the Ottomans with the sabre, the use of smoke signals to launch an attack, the wild rush of the Janissaries towards the foe and on the unwieldiness of the Ottoman guns (cf. Villars, ed. Vogüé, i, 367, 368; Vauban, ii, 283; Eugen, *Feldzüge*, ii, 568 ff.; Röder von Diersburg, ii, 107 ff.; Poniatowski, *Remarques*, 104-5; de Warnery, *Remarques*, 24, 60 ff., 77-78, 114; Kéralio, *Histoire*, i, 113 ff.; Smitt, *Suworow*, 162 ff.; Criste, *Kriege*, 273 ff.). The resultant picture—even when all allowances have been made—is of a war machine outmoded beyond hope of renovation. Soldiers of such great reputation as Lorraine and Villars and authors of genuine insight like de Warnery and Kéralio underline the basic defects of Ottoman warfare—incompetence in the high command, lack of an efficient artillery, ignorance of tactics and of the art of manœuvre (cf. Villars, ed. Vogüé, i, 79-80, 368, 380; de Warnery, *Remarques*, 114; Kéralio, *Histoire*, i, 114-5). Reform on European lines had in fact become for the Ottomans a most urgent and unavoidable need. The last word on their traditional style of warfare can be left to Maurice de Saxe, who wrote that neither valour, nor number, nor wealth was lacking to them—but order, discipline and "la manière de combattre" (*Rêveries*, i, 87).

V.—PERSIA

The conduct of war in the early centuries of Islamic Persia was based essentially on the military heritage of earlier Persian empires, but it also contained elements from the Arab desert tradition of warfare and the Turkish steppe tradition of raiding.

We first hear of Persian military methods in the Islamic period from the accounts of the Arab conquest of al-ʿIrāḳ and Persia under Abū Bakr and ʿUmar. The mailed cavalryman, armed with sword, lance, mace or bow, was characteristic of the Sāsānid army, and the deployment and tactics of such cavalrymen must have been similar to the type of heroic warfare depicted in the *Shāh-nāma* (on which see Nöldeke, *Das iranische Nationalepos*², Berlin and Leipzig 1920, 53 ff.). War elephants were also used, and their use later passed to several of the Islamic dynasties of Persia (for the military use of elephants, see FĪL). At the battle of Buwayb on the Euphrates banks in 13/634, the Persians advanced against al-Muthannā's Arabs in three cavalry columns, each headed by an elephant protected by a group of infantrymen. At al-Ḳādisiyya in the following year,

Rustum's troops (allegedly numbering 120,000, of whom a large proportion must have been infantry conscripts and camp followers) advanced on the first day of battle in thirteen ranks, each behind the other, and rained arrows on the Arabs. Being without adequate protective clothing or helmets, the latter suffered considerably, but nevertheless stood firm and were able to advance and use their lances and swords at close quarters (Ṭabarī, in Sir W. Muir, *The Caliphate, its rise, decline and fall*[4], Edinburgh 1915, 104 ff., and R. Levy, *The social structure of Islam*, Cambridge 1957, 431-2).

With the decline of direct Caliphal authority in Persia and the rise of virtually independent dynasties (sc. in the 3rd/9th century and after), two trends of military significance may be noted. Firstly, the emphasis on the cavalry arm increased with the popularity in armies of Turkish military slaves (*g̲h̲ulāms* [*q.v.*]), for these were primarily cavalrymen, using the weapon of the steppes, the bow. Secondly, multi-national, professional armies became the norm, and the supreme commander or ruler had a problem in wielding together for action the disparate elements composing his forces. According to Niẓām al-Mulk, Maḥmūd of G̲h̲azna drew advantage from this diversity. He kept the various nationalities, Turks, Indians, K̲h̲urāsānīs, Arabs, etc., in their ethnic groups, and encamped thus when the army was on the march; on the battlefield, the spirit of emulation spurred them all on to prodigies of valour (*Siyāsat-nāma*, ch. xxiv). But on more than one occasion, the Great Sald̲j̲ūḳs had difficulty in holding their forces together on the battlefield. In 465/1073, for instance, Malik S̲h̲āh had to defend his throne against his uncle Ḳāwurd, the representative of conservative Turkmen feeling. In a battle outside Hamad̲h̲ān, Malik S̲h̲āh's own Turkish troops turned against the Kurdish and Arab contingents of his army, because these last had played the decisive rôle in crumpling and routing Ḳāwurd's right wing and had thus outraged the feelings of Turkish solidarity amongst the Sultan's own Turks (Bundārī, *Zubdat al-nuṣra*, 48). However, where the ruler or commander had at his disposal a force of dependable *g̲h̲ulāms*, these could be moved along the front to whichever part needed strengthening or watching (cf. Bayhaḳī, *Ta'rīk̲h̲-i Mas'ūdī*, cited in C. E. Bosworth, *Ghaznevid military organisation*, in *Isl.*, xxxvi/1-2 (1960), 47).

The Arab raiders, like the Turkmen marauders from the steppes in later centuries, had travelled with a minimum of baggage. But in a settled land like Persia, the large-scale movement of troops was bound to be a complicated affair. The reduction of fortresses and walled towns demanded siege machinery; if agriculture was to flourish and the taxable capacity of the land to be maintained, an army could not expect to live off the countryside, so supplies had to be taken along; and such non-combatant bodies as the court and harem and the *dīwān*s of the administration frequently accompanied the army on its campaigns. When in 420/1029 Maḥmūd of G̲h̲azna marched against the Būyids of Ray and D̲j̲ibāl, his full expedition comprised, besides the fighting men, 12,000 camels carrying the armoury, 4,000 camels for the treasury, wardrobe and domestic equipment, 300 elephants for transporting the tents and 2,000 horses for conveying the harem and courtiers (S̲h̲abānkāra'ī, *Mad̲j̲ma' al-ansāb fī 'l-tawārīk̲h̲*, MS Yeni Cami 909, ff. 178b-179a). In the 6th/12th century under Sultan Maḥmūd b. Muḥammad, the Sald̲j̲ūḳ army also had with it on the march a travelling hospital (*māristān*) mounted on 40 camels (Bundārī, 136-7; Ibn al-Ḳifṭī, *Ta'rīk̲h̲ al-ḥukamā'*, ed. Lippert, 404-5; Ibn K̲h̲allikān, tr. de Slane, ii, 82-3). Naturally, the speed at which such armies could move was slow, and the successes of the indifferently-armed but highly mobile Sald̲j̲ūḳ raiders in K̲h̲urāsān are in large part explicable by their advantages over the heavily-burdened and less manoeuvrable G̲h̲aznavid professional armies.

In addition to such impedimenta as these, an army on the march might have to take with it equipment for coping with particular types of terrain or climatic conditions. In 430/1039 Mas'ūd I of G̲h̲azna sent back to his capital for equipment suitable for steppe and desert warfare (*ālat-i d̲j̲ang-i biyābān*) so that his forces in K̲h̲urāsān might meet the Turkmens on more equal terms (Bayhaḳī, ed. G̲h̲anī and Fayyāḍ, Tehrān 1324/1945, 588). Beasts of burden were used to trample ways through snow, or else peasant corvées were impressed for the task. As a protection against rain, troops of the G̲h̲aznavids are mentioned as wearing oiled cotton coats (*bārānihā-yi kirbāsīn*) (Bayhaḳī, 134, 534). Thus when an army was campaigning outside its normal sphere of action, local conditions had to be provided for if the army was to function at optimum efficiency; the sources often note the effect of the damp climate of the Caspian coast region in rusting weapons, and the Turkish archers of Ibn Rā'iḳ's general Bačkam were in 326/938 routed in K̲h̲ūzistān by the Būyid Mu'izz al-Dawla because continuous rain had ruined their bowstrings (Ibn al-At̲h̲īr, viii, 254-5).

The plundering of the countryside by a passing army was an age-old custom in Persia (cf. Christensen, *L'Iran sous les Sassanides*[2], 213, on the scorched-earth tactics of Sāsānid troops). Certain troops and commanders acquired particularly bad reputations for their plunderings and excesses against the civilian populations, such as the Daylamīs of Mardāwīd̲j̲ b. Ziyār (Mas'ūdī, *Murūd̲j̲*, ix, 22-4), and the Turkmens—many of them fresh from the Ḳipčaḳ steppes and still pagan—of the K̲h̲ʷārizm-S̲h̲āh 'Alā' al-Dīn Muḥammad. A G̲h̲aznavid commander in K̲h̲urāsān cut down all the pistachio-nut trees in the Bayhaḳ oasis and sent some of the trunks off to G̲h̲azna for fuel (*Ta'rīk̲h̲-i Bayhaḳ*, 273). Other commanders had a good reputation for the discipline which they kept over their soldiers whilst on the march, *e.g.*, Ya'ḳūb b. Layt̲h̲ (*Murūd̲j̲*, viii, 46 ff.). It was recognised that violent behaviour was morally indefensible and contrary to the *S̲h̲arī'a*, but it was sometimes excused on the grounds of necessity (see the apologia of Sulaymān b. Ḳutalmis̲h̲ for his ravaging of the region of Aleppo in 477/1084-5, in Ibn al-At̲h̲īr, x, 90). Not infrequently the civilian population of a whole region might be evacuated in face of an advancing enemy, as is said to have been done by 'Alā' al-Dīn Muḥammad in the Sīr Daryā valley when the Mongols were approaching (*ibid.*, xii, 179).

The commander of an advancing army had to plan his strategy with regard to such considerations as the availability of supplies, the maintenance of his communications and the type of terrain and natural conditions which he would have to face when giving battle. In a land of hydraulic constructions like Persia, it was often possible to divert rivers and irrigation channels to flood the land in face of an approaching enemy. In 456/1064 Ḳutalmis̲h̲ b. Arslan Isrā'īl rebelled against Alp Arslan; he shut himself up in Ray and made the roads thither impassable by diverting water over the salt flats and

into the *wādīs* (Ibn al-Athīr, x, 23-4). But the *locus classicus* for this tactic was Khwārizm, where an army advancing north-westwards along the Oxus could be halted by the flooding of the very complex irrigation system of that region (for examples from the 6th/12th century, see Barthold, *Turkestan*, 154, 325, 337, 339, 349). On the other hand, such a decision to flood territory might affect both sides. When the Ghūrid ʿAlāʾ al-Dīn Ḥusayn faced Sandjar at Nāb in the Harī Rūd valley in 547/1152, he decided to flood his own rear to prevent his soldiers yielding; this manoeuvre recoiled upon him disastrously, for the Turkish troops in the Ghūrid army deserted to the Saldjūḳs, and the Ghūrīs were pushed back into the flooded lands and swamps (Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, tr. Raverty, 358-60).

When the army halted and prepared for battle, guards were posted and scouts sent out to investigate the terrain and the enemy positions (Fakhr-i Mudabbir, *Ādāb al-mulūk*, ch. xx; on this work, see *Bibliography*). According to this author, the ʿĀriḍ or head of the military branch of the administration then inspected the whole of the army, from the officers downwards, their weapons and their mounts, and passed them as fit for battle. Commanders exhorted their troops, often promising special rewards for outstanding feats of bravery (cf. Bosworth, in *Isl.*, xxxvi/1-2, 69-70, 74). If the enemy were infidels, religious enthusiasms could be roused, and Fakhr-i Mudabbir has a section on the *lashkar-i ṣalāḥ* "those who support the soldiers by their prayers and intercessions" (ch. xxxiv). During Alp Arslan's Anatolian campaign of 463/1071, the Caliph al-Ḳāʾim composed special prayers for the Muslim forces; copies were sent to the *khaṭībs* attached to the Saldjūḳ army and the prayers were read out before the battle of Malāzgird (Mantzikert) (Ḥusaynī, *Akhbār al-dawla al-Saldjūḳiyya*, 47-8; Cahen, *La campagne de Mantzikert d'après les sources musulmanes*, in *Byzantion*, ix (1934), 633). The armies which campaigned against the Greeks and Georgians in eastern Anatolia and the Caucasus usually included religious elements, to be equated here with the *ghāzīs* [*q.v.*], who not only exhorted the faithful but who might themselves join in the fray. For the coalition of 570/1174-5 of the Muslim rulers of north-west Persia against the Georgians, the mother of the Saldjūḳ Sultan Arslan b. Toghrïl fitted out a group of ten such men under the Imām of Hamadhān, and when the Muslim troops flagged, the Imām led his little group into battle with a charge of such vehemence that the day was saved for Islam (Rāwandī, *Rāḥat al-ṣudūr*, 299-300).

In an age when belief in the influence of the stars on human affairs was all but universal, the decision to give battle might be made on such irrational grounds as the prognostication of the commander's personal astrologer, an important figure in his entourage (cf. Ibn al-Athīr, ix, 328). The old Arab practice of personal combats between the champions of each army before the signal for a general engagement was given, was still common, and Fakhr-i Mudabbir devotes a section to the *mubārizān* (ch. xxvii). The outcome of these combats might well affect the morale of the onlooking armies and thus influence the subsequent fighting. In the third battle between the rival Saldjūḳs Bark-yāruḳ and Muḥammad at Rūdhrawār in 495/1102, the personal combats were indecisive, so the two armies disengaged and peace was arranged (Ibn al-Athīr, x, 224-7).

We pass now to the arrangement of forces on the battlefield itself. Pre-Islamic Persian commanders sometimes deployed their troops in long, unbroken lines (Arabic, *ṣufūf*), which then advanced on the enemy (as at al-Ḳādisiyya, see above), but this was usually modified by breaking the troops up into fighting groups. The classic formation resulting from this was a quinquepartite one (*taʿbiya*), called by Fakhr-i Mudabbir the "Persian" method, as used by the Sāsānids, as opposed to the "Turkish" one. It was used both for the army on the march and as arranged for battle, provided in this latter case that the ground was reasonably level and open. It comprised a vanguard (*muḳaddam*), a left wing (*maysara*), a centre (*ḳalb*), and right wing (*maymana*) and a rearguard (*sāḳa*, *khalīfa*) containing the reserves, the whole body being preceded on the march by a screen of scouts (*ṭalāʾiʿ*). Fakhr-i Mudabbir says that the general in charge should place his archers on the left wing, the men with javelins on the right and the men armed with maces, clubs, swords and battleaxes in the centre; action should then start with the movement forward of the left wing, followed by the centre and right wing (ch. xxiv).

The historical sources give plentiful examples of the use of this quinquepartite formation, although when the armies actually engaged, the vanguard had normally dropped back to merge with the three component blocks of the front line. When in 389/999 Maḥmūd of Ghazna defeated the Sāmānid Amīr Abu 'l-Fawāris ʿAbd al-Malik and his amīrs near Marw, the Sultan himself held the centre with 10,000 cavalry and 70 elephants, his brother Abu 'l-Muẓaffar Naṣr had the right wing with 10,000 cavalry and 30 elephants and the former commanders of his father Sebüktigin had the left wing with 12,000 cavalry and 40 elephants (Hilāl al-Ṣābiʾ in *Eclipse of the ʿAbbasid Caliphate*, iii, 342-3, tr. vi, 367-8). In 526/1131 the Saldjūḳs Masʿūd b. Muḥammad and his brother Saldjūḳ Shāh faced Sandjar and his protégé Toghrïl b. Muḥammad at Dīnawar. Both sides employed this formation and, like Maḥmūd of Ghazna, Sandjar placed a protective screen of elephants before his lines. Masʿūd b. Muḥammad took the centre himself, placing the Amīrs Ḳarāča Sāḳī and Ḳïzïl on his left and the Amīrs Yürünḳush Bāzdār and Yūsuf Čāʾūsh on his right. Facing him, Sandjar held his own centre with 10,000 troops; his nephew Toghrïl, the Amīr Ḳamāč and another commander, the Amīr-i Amīrān, were on the left; and the Khwārizm-Shāh Atsïz and other commanders were on the right. Masʿūd's army was defeated by a tactic frequently practised on such occasions and reminiscent of the classic enveloping movement employed with such success by Hannibal against the Romans at Cannae: Ḳarāča Sāḳī drove into Sandjar's centre, but Toghrïl and Atsïz dropped back from the wings and enveloped and annihilated Ḳarāča's forces (Ibn al-Athīr, x, 476). It was possible in battle, however, for one wing of each army to push back the opposing wing so that a circular formation resulted. This occurred during the first engagement of the Khwārizm-Shāh ʿAlāʾ al-Dīn Muḥammad and his son Djalāl al-Dīn with the Mongol Djoči. The only way out of this impasse was for the Mongols to launch an attack on the centre, but Djalāl al-Dīn stood firm, and the two armies disengaged when night fell (Djūzdjānī, tr. 268-70; other examples of this pattern of battle in Djuwaynī-Boyle, 351-2, 360).

The use of elephants to form a screen before the front ranks of the *taʿbiya* was especially favoured by such dynasties as the Ghaznavids, Saldjūḳs and Ghūrids (for details, see FĪL), but other means might be used to protect the front line. At the battle of

Bazimdjā near Baghdād in 549/1154 between the Caliph al-Muḳtafī and a Turkish army under the Amīr Masʿūd Bilālī, the latter army had with it great numbers of Turkmens, together with their tents, flocks, families and other baggage. The Turkish *amīrs* placed these thousands of horses and sheep before their front rank as a barrier, stationing armoured troops behind them; the Caliphal forces nevertheless broke through (Bundārī, 236-9).

In confused fighting, when the troops were densely packed together, the army's standard (*ʿalam* [*q.v.*]) was important as a rallying-point. Under the Ghaznavids and Saldjūḳs, the office of standard-bearer (*ʿalam-dār*) was usually given to a trusted *ghulām*. The capture of an army's standard had a dispiritng effect on the troops, and might well decide the outcome of the battle. When the Khʷārizmian prince Ḳuṭb al-Dīn b. Tekish (the later ʿAlāʾ al-Dīn Muḥammad) was campaigning against the Ismāʿīlīs of Ḳūhistān, his standard mysteriously drooped and snapped; this was taken as an ill omen, and he made peace and withdrew his forces (Djuwaynī-Boyle, 315). The waving of flags, in addition to the use of drums and trumpets, was one of the chief means by which a commander could pass instructions to a distant part of the battlefield (cf. *Ādāb al-mulūk*, ch. xxviii); and as an aid to the directing of the fighting, the commanders of the Ghaznavids were often given personal elephants to use as vantage-points (Bayhaḳī, 483).

Fakhr-i Mudabbir regards the use of ambushes and secret attacks, launched at such unguarded times as the midday siesta and in the early morning when guards are changing duties, as a most important aspect of the art of war (ch. xxii). The old raiding tactic, common to both the desert Arabs and the Turkish nomads, of an impetuous attack, a feigned flight and a return to the onslaught (*karr wa farr*), could still be made to work in certain conditions. The local chiefs of Ṭabaristān used it with effect against the invading Ghaznavids in 426/1035 (Bayhaḳī, 458). At Malāzgird, Alp Arslan successfully drew the Greek army into an ambush by means of a feigned retreat (Cahen in *Byzantion*, ix, 634-5). For a battle outside Baghdād in 621/1224, Djalāl al-Dīn Khʷārizm-Shāh had inferior numbers; he therefore posted a detachment of men in an ambush, made two or three assaults on the forces of the Caliphal general Ḳushtemür, and then a feigned flight and return (Djuwaynī-Boyle, 422-3).

During his Indian campaigns, Sebüktigin is said to have used a technique of successive attacks. He separated his *ghulāms*, who were armed with clubs and maces, into groups of 500 men, and each group attacked in turn, falling back to allow another group to move up (ʿUtbī-Manīnī, *Yamīnī*, i, 85-6).

Whilst the flexibility of cavalry made it very useful in open conditions, where the opposing forces might be spread over a wide front, infantry often came into its own in broken or precipitous terrain or where the fighting was close and confused. The Daylamīs were famed as tough infantrymen, and at times they were mounted on camels or mules and rushed to the battlefield. In a battle of 322/934 with Yāḳūt, governor of Fārs, ʿAlī b. Būya's Daylamīs dismounted and advanced on the enemy behind a solid wall of shields, from which they employed their characteristic weapons of the *zhūpīn*, a pronged javelin which could be used either for thrusting or throwing, and the battleaxe (Miskawayh and Hilāl al-Ṣābiʾ, in *Eclipse of the ʿAbbasid Caliphate*, i, 297-8, iii, 423, tr. iv, 336-7, vi, 449). Similarly, the Ghaznavids had a permanent force of crack palace infantry (*piyādagān-i dargāhī*) who were carried on swift camels to distant battlefields and then dismounted to fight (Bayhaḳī, 603-4). When in 501/1107-8 the Saldjūḳ Sultan Muḥammad b. Malik Shāh faced the Mazyadid "King of the Arabs", Sayf al-Dawla Ṣadaḳa, the ground at al-Nuʿmāniyya between Baghdād and Wāsiṭ was too swampy for horses to manoeuvre, so Muḥammad's Turks dismounted and fought on foot (Ḥusaynī, 80). The Ghūrīs of central Afghanistan were, like the Daylamīs, a race of mountaineers and were famed as infantrymen. Djūzdjānī mentions a peculiar tactic of theirs, the use of the *kārwa*, a protective screen of cowhide padded with cotton; this was placed over the shoulders and formed a defence for advancing soldiers (*Ṭabaḳāt-i Nāṣirī*, tr. 352-3; according to Raverty, the *kārwa* was used in Afghanistan until the introduction of firearms).

Since Persia is a land of predominantly land-locked rivers, few of which are in any case perennial, amphibious operations are only rarely mentioned in the sources. The Oxus was unsuitable for large-scale navigation, and armies attacking Khʷārizm marched along its banks rather than sailed down it. Only on the edge of the Persian world, in the Indus valley, do we hear of extensive river warfare. In 418/1027 Maḥmūd of Ghazna led an expedition against the pagan Djāts of the lower Indus region, employing 1,400 ships armoured with spikes and carrying fighting men. When battle was joined, the Muslim troops rammed the Djāts' ships and hurled *nafṭ* at them; soldiers waiting on the river banks then finished off the undrowned survivors (Gardīzī, *Zayn al-akhbār*, ed. Nazim, Berlin 1928, 88-9; M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 121-2).

The conventions of warfare included the ones that quarter, *amān*, should be freely given and that prisoners-of-war should not be slaughtered or ill-treated (*Ādāb al-mulūk*, ch. xxiv). The sources usually therefore mention breaches of these conventions, as in Kirmān during the time of the Saldjūḳ Arslan Shāh b. Toghrïl Shāh (d. 572/1176-7), when inexperienced soldiers and *ghulāms* of his killed captives from an invading army (Muḥammad b. Ibrāhīm, *Taʾrīkh-i Saldjūḳiyān-i Kirmān*, 46). It was not, however, regarded as unethical to masquerade in the characteristic dress of the enemy; it is recorded that the Khʷārizm-Shāh ʿAlāʾ al-Dīn Muḥammad was fond of the tactic of donning in battle the distinguishing garb of the enemy in order to confuse him (Djuwaynī-Boyle, 352).

After the battle, the victorious army divided up the captured booty [see GHANĪMA]. In the absence of the ruler himself, the *ʿĀriḍ* often supervised this procedure, taking out the ruler's fifth and those items specifically reserved for him, such as precious metals, weapons and elephants. The remainder was then divided out amongst the fighting personnel though not, according to the *Ādāb al-mulūk*, ch. xxxii, amongst the camp following (cf. Bosworth in *Isl.*, xxxvi/1-2, 62, 74).

The Mongols and Tīmūrids brought into the Persian world fresh military ways. During the period of their dominance (sc. the 7th-9th/13th-15th centuries), the older techniques of warfare, based essentially on slow-moving, heavily-armed professional armies, were temporarily eclipsed; they re-emerged under the Ṣafawids and their successors, but were then revolutionized by the introduction of firearms. The Mongol armies were composed almost

wholly of cavalrymen, with the bow as their basic weapon; these armies have therefore been cited by military historians as showing that cavalry need not depend on a stable infantry base, as was usual in earlier times in the classical and Near Eastern worlds (cf. D. Martin, *The Mongol army*, in *JRAS*, 1943, 49). Before embarking on a campaign, such commanders as Čingiz and Tīmūr carefully mapped out their operations; this attention to planning and detail gives a striking impression of modernity compared with the more empirical and haphazard methods of earlier conquerors and commanders. Spies would be sent out, and before the Manchurian campaign of 1211 and the Khwārizmian one of 616/1219, Čingiz obtained information on local conditions from traders and others familiar with those lands. According to Sayfī Harawī, Čingiz had maps of Afghanistan prepared for himself, and Ibn ʿArabshāh likewise mentions Tīmūr's interest in maps. By such means as these, Čingiz learnt about the topography of Sīstān and Balūčistān and was able to send the minimum force necessary with his son Čaghatay to try and intercept Djalāl al-Dīn Khwārizm-Shāh on his return from India (A. Z. V. Togan, *Umumî türk tarihine giriş*, Istanbul 1946, 109-10, 425). The Mongols also spread rumours about the enormous size of their forces and sent secret agents to provoke dissension and treachery. On the battlefield, captives were used to swell the apparent numbers of the Mongols, and dummies mounted on horses were even used (Martin, *op. cit.*, 59). These tricks doubtless contributed to the obviously exaggerated numbers for the Mongol armies given in the sources.

The basic formation of the Mongol army was a tripartite one, comprising a centre (where the Khān's personal bodyguard of picked men, *baʾatur* [see BAHĀDUR], was usually stationed) and two wings, any of which components could function as separate military units. The Mongols entered a new territory in widely separated colums, with screens of scouts and with couriers to maintain contact with the other columns. Čingiz usually endeavoured to defeat the enemy in a pitched battle before penetrating far into unfamiliar ground, and his great enemy the Khwārizm-Shāh ʿAlāʾ al-Dīn Muḥammad sought by all means possible to avoid such an engagement, compelling the Mongols to reduce the countryside of Transoxania and thus isolate Bukhārā and Samarḳand. On the battlefield, the Mongol light cavalry would gallop forward showering arrows whilst one or both of the wings began an enveloping movement against the enemy's flanks or rear. At times, riders would dismount in order to shoot in a more accurate or concentrated way, as did the troops of Ghāzān Khān in his battle of 699/1299 with the Mamlūks at Madjmaʿ al-Murūdj near Salamiyya in Syria. However, surprise was a great feature of both the strategy and tactics of the Mongols; such stratagems as the feigned retreat were highly favoured, and proved successful on a remarkable number of occasions. The Mongols also pursued fugitives relentlessly, to prevent the defeated forces from regrouping; after the defeat of the Mamlūks mentioned above, Mongol soldiers appeared as far south as Jerusalem and Ghazza (Martin, *op. cit.*, 59-76).

In the military sphere as elsewhere, the Mongols and Tīmūrids left a lasting imprint on the Persian world. It was not surprising that the Özbek army of Shaybānī Khān, of which Bābur was originally a member, should still follow the Mongol pattern of battle-array, with the positions in the battle-line handed down hereditarily and the warriors of greatest trust stationed on the extremities of the two wings (*Bābur-nāma*, tr. Beveridge, 154-5). The army of the Turkmen Aḳ Ḳoyunlu dynasty was divided in the Turco-Mongol fashion into the three divisions of a centre (called by the Mongol term *manḳalay* "forehead", "front"), a left wing (*sol*) and a right wing (*sagh*) (Minorsky, *A civil and military review in Fārs in 881/1476*, in *BSOS*, x (1939-42), 154 ff.).

With the advent of the Ṣafawids, artillery and firearms came into prominence and wrought a fundamental change in the art of war; for a consideration of military techniques in this later period see BĀRŪD V.—THE ṢAFAWIDS.

Bibliography: (in addition to the references given in the text): There has been little systematic study of the military history of mediaeval Persia. Some of the strategic and tactical aspects of the Ghaznavid-Saldjūḳ fighting are considered in Bosworth, *The Ghaznavids: their empire in Afghanistan and eastern Iran 994-1040*, Edinburgh 1963, 241 ff., and there exists a study of the battle of Dandānḳān, based on Bayhaḳī's account, by B. N. Zakhoder in *Russkiy Istoričeskiy Žurnal*, 1943, Turkish tr. in *Belleten*, xviii (1954), 581-7. There is a general survey of the art of war in Persia up to the coming of the Saldjūḳs by Spuler in his *Iran in früh-islamischer Zeit*, 494-9; in his bibliography (Nos. 365 and 366) are cited two general works on the military history of Persia, Dj. Ḳūzānlū, *Taʾrīkh-i niẓāmiyya-yi Īrān*, Tehrān 1310/1932, and Gh. Ḥ. Muḳtadir, *Taʾrīkh-i niẓāmī-yi Īrān*, Tehrān 1319/1940. The Mongols as soldiers have attracted rather more attention; see Spuler, *Die Mongolen in Iran*², 413-6, and D. Martin, *The Mongol army*, in *JRAS*, 1943, 46-85 (the same author's article *Chinghiz Khan's first invasion of the Chin empire*, in *ibid.*, 182-216, illustrates Mongol strategy and tactics but in a non-Persian context). Quatremère's notes to his *Histoire des Mongols de la Perse*, i, Paris 1836, still contain valuable material on the art of war in this period. Of the Persian Mirrors for Princes, chs. xx and xli of the *Ḳābūs-nāma* of Kay Kāʾūs are relevant, but of outstanding value is the *Ādāb al-mulūk wa kifāyat al-mamlūk* or *Ādāb al-ḥarb wa 'l-shadjāʿa* of Fakhr-i Mudabbir Mubārakshāh, written under Sultan Iletmish of Delhi in the early 7th/13th century. The greater part of it deals specifically with the art of war, and its information seems to be based primarily on Ghaznavid and Ghūrid practice (see on it I. M. Shafi, *Fresh light on the Ghaznavīds*, in *IC*, xii (1938), 189-234, and Bosworth, *Early sources for the history of the first four Ghaznavid Sultans (977-1041)*, in *IQ*, vii (1963), 16; Cl. Cahen has used material from it for his appendix on the weapons of the Ghūrids in *Un traité d'armurerie composé pour Saladin*, in *BÉt.Or.*, xii (1947-8), 160-2).

(C. E. BOSWORTH)

vi. — INDIA

1. General.—The army in India (for its composition, organization, training and pay, see LASHKAR) was distributed in various places of a ruler's dominions according to their strategic importance, in order to avoid difficulties of transport; for example, the north-west frontier provinces, where there was the continual threat of Mughal raids, were always well provided with experienced troops under able and loyal commanders during the Dihlī sultanate period. The main army was concentrated in the capital, or

in a city or camp where the ruler was residing, with detachments and garrisons at many provincial headquarters under the command of *kōtwāls* [*q.v.*]. The garrison system, which the Indian sultans seem to have inherited from the ʿAbbāsids through the Gh̲aznawids, was always well maintained, many rulers attaching great importance to keeping old forts in good repair and building others as the dominions were enlarged, modifying them for artillery as this became available [see ḤIṢN]. When the need for war arose, the first attempts to meet the situation would be made by local troops; if these were inadequate, reinforcements would be called for from neighbouring areas before aid was requested from the capital. The forces at the capital (*ḥas̲h̲m-i ḳalb*) had as their main component the cavalry, well accoutred and mounted on Arab or Turkoman horses; and this branch was of course fully mobile and could easily be sent to a distant part of the dominions. The other fighting branches, however, the elephants and the infantry, were less mobile; elephants were maintained especially in the capital, since possession of them was a royal prerogative and no sultan would permit them to be concentrated in a town away from the capital, where they might be used against him in the event of rebellion. The infantry (*pāyak*) maintained in the capital were employed as bodyguards and for local defence; Ḍiyāʾ al-Dīn Baranī comments on their skill with the bow, and mentions that the best *pāyaks* came from Bengal. Obviously they were not readily transportable on distant campaigns, although on major expeditions they could march with the baggage train, for which they would provide a continual escort; but a class of infantry (*pāyak bā asp*) is mentioned which seems to have been provided with horses maintained by the government. On remoter campaigns infantry could be drawn from standing local troops, locally conscripted, or provided by feudatory rulers; and local arrangements were similarly necessary to facilitate the passage of the army on its line of march.

2.—The army on the march. Armies would commence the march at an auspicious moment fixed by the astrologers, and before leaving, rulers, commanders and troops would visit saints and shrines for protection and blessing—indeed, holy men were called *las̲h̲kar-i duʿāʾ*. The army would be led by an advance party, including the scouts, standard bearers and musicians—importance was given to the spectacular side, cf. Amīr K̲h̲usraw, *K̲h̲azāʾin al-futūḥ*, ʿAlīgaṛh 1927, 101-2; S̲h̲ams-i Sirād̲j̲ ʿAfīf, *Taʾrīk̲h̲-i Fīrūz S̲h̲āhī*, Bibl. Ind., 1890, 369-70—and officers of the commissariat who would ensure that adequate stores were available along the route. The sultan moved in the main party, accompanied on major expeditions by the *ʿulamāʾ* and the *ḥaram*—a practice continued by the Mug̲h̲als, in Humāyūn's time the Mug̲h̲al camp assuming the dimensions of a city under canvas moving from place to place, while by the time of Awrangzīb the march had become very cumbrous, with its heavy artillery, baggage train, the imperial treasure on several hundred camels, the imperial archives, fresh water for the court (Ganges water was favoured; cf. GANGĀ *ad fin.*), the imperial kitchen and provisions, the imperial wardrobe, presents for use as diplomatic gifts, and the imperial tents and other appurtenances of the camp, as well as the tools of war: besides projectile engines, saps and mines for use in sieges [see ḤIṢĀR], armouries for the supply of missiles and replacement of broken weapons (*zarrād-k̲h̲āna*; cf. Abu'l-Faḍl Bayhaḳī, *Taʾrīk̲h̲*, Bibl. Ind., 1862, 6), and the royal armoury (*ḳūr-k̲h̲āna*). The march was also attended by large numbers of imperial and other servants.

Transport was provided by draught- or pack-buffaloes, camels, ponies and elephants. The latter were also used in river-crossings, either by fording or, in deeper water, to break the force of the current to enable troops to cross (ʿAfīf, *op. cit.*, 111). But pontoon bridges were also used, as well as river boats when these were available—as they would have been in the sultan's territory, cf. Ahl Allāh Mus̲h̲tāḳī, *Wāḳiʿāt-i Mus̲h̲tāḳī*, B.M. Add. 11633, fol. 49 r.; and the large force of woodcutters used, *e.g.*, by Islām S̲h̲āh Sūr against Humāyūn (ʿAbd Allāh, *Taʾrīk̲h̲-i Dāʾūdī*, B. M. Or. 197, fol. 114 r.), must have been employed for river crossings *inter alia*.

Stores were available to a marching army within its own frontiers from the various state granaries as well as from local tributary chiefs, who demonstrated their loyalty by gifts of provisions, and from landholders under the sultanate who were required to supply grain as well as transport and boats—often, indeed, also to join the marching army or to supply some member of their family for that purpose. Grain was also brought to the army, on the march or on the battlefield, by corn-merchants (*band̲j̲ārās*), often nomads, who were encouraged by good prices (Ḍiyāʾ al-Dīn Baranī, *Taʾrīk̲h̲-i Fīrūz S̲h̲āhī*, Bibl. Ind., 1862, 304 ff.); it was often provided by the local population on payment—the *kotwāl* of the camp ensured that grain was available at reasonable rates—or, in the last resort, was obtained by plunder; but since this alienated the local population, who might flee, in which case supplies would of course fail, this was seldom resorted to. In any case, compensation would later be paid for stores taken or for land or crops damaged, the rate being assessed by the local *amīn* (called also *munṣif*, *mus̲h̲rif* in the Sūrī period), cf. ʿAbbās Sarwānī, *Tuḥfa-yi Akbar S̲h̲āhī*, B.M. Or. 164, 73 v.

Although rapidity of movement sometimes permitted little halting—forced marches were not unknown—the army on the march generally encamped at night. The site was when possible carefully chosen, as adequate water, forage and firewood had to be available, and for preference a locality defended by river or hill was selected. The fighting arms were naturally in the forward and flanking positions, corresponding to their places in the order of battle (see below), the sultan's personal party was in the middle of the camp, and behind were the armouries, transport and camp-followers. If the camp was in the vicinity of the enemy's forces, and hence in danger of attack by skirmishing parties or patrols, it would be defended by a ditch and parapet, certainly from K̲h̲ald̲j̲ī times (cf. Baranī, *op. cit.*, 301); in Tīmūr's campaign against Maḥmūd Tug̲h̲luḳ it is recorded that trees were felled to form an abatis within the ditch (*Malfūẓāt-i Tīmūrī*, tr. Elliot, iii, 437), and that lines of tethered buffaloes were placed in front of the first rank of troops as a defence against elephants, which could be further impeded by caltrops; Bābur at the battle of Pānīpat also used the abatis to protect a flank, guarding his front by picketed carts (although this device is referred to in India in the 7th/13th century, see Fak̲h̲r al-Dīn Mubārak, *Ādāb al-mulūk wa kifāyat al-mamlūk*, India Office MS 647, f. 87 v.; in the battle between Humāyūn and Sultan Bahādur of Gud̲j̲arāt in 942/1535 gun-carriages were so used by both sides); and a little later, in the time of S̲h̲īr S̲h̲āh Sūr, the parapets were formed of sandbags. The same defences were applied to the last

camping-ground, *i.e.*, the camp at the battlefield, with such additional protection as the exigencies of the campaign seemed to call for. This was certainly continued until late in the Mug͟hal period, for in the campaign of D̲j̲ahāndār S̲h̲āh's son ʿIzz al-Dīn against Farruk̲h̲siyar in 1124/1712 we read of his throwing up a parapet about 2 m. high inside a wide ditch around his camp, on which he mounted guns and mortars (K̲h̲ʷāfī K̲h̲ān, *Muntak̲h̲ab al-lubāb*, Bibl. Ind., 1869, ii, 699).

3.—Battle-ground. In addition to the requirements of the encamped army (see above) the actual terrain of combat was selected with great care: the presence of a hill or some other natural defence at the rear or on the flanks would relieve the commander from making extensive arrangements for the protection of that quarter. The ideal ground had, in addition to these natural defences, an extensive plain of hard or smooth ground—stony ground was when possible avoided as it damaged the horses' hoofs—free from dust, sand or mire, neither too near nor too remote from habitation, and with an independent water-supply. The battle-field itself might be further defended by entrenchment, abatis or stockade, as in the case of the camp; in later periods such defence might be provided also for individual pieces of artillery.

These requisites seem to have been sought at all periods of the Muslim power in India. Tīmūr thoughtfully adds (*Tūzuk*, 191) that the sun should not be in front of the battle-ground, lest the eyes of the troops be dazzled.

4. Order of battle.—The general order of filing an army in the field—vanguard, right wing, left wing, centre and rear—persisted in Muslim India with little variation, but with bewildering changes of terminology, from the days of the G̲h̲aznawids; the composition of the various elements was, however, never firmly established, and at different times places were found for elephants or for artillery in one or more of these traditional elements. The main arm in terms of which all dispositions were conceived was invariably the cavalry.

In advance of the vanguard were the scouts and skirmishers (*ṭalāya*, *muḳaddama-i pīs̲h̲*, *yazkī* in Sultanate times; under Tīmūr and Bābur *ḳarāwal*; under the later Mug̲h̲als *muḳaddamat al-d̲j̲ays̲h̲*, *manḳala* and *ṭalīʿa* are used besides *ṭalāya*), light squadrons trained to reconnoitre the roads and the enemy's positions and to bring back quick information; they were instructed not to move in a body yet to maintain touch with one another, not to engage the enemy unless they were attacked, and to retreat with caution lest their withdrawal be interpreted as flight and thus cause a general stampede (*Ādāb al-mulūk*, fols. 84 v.-86 v.). They might be divided into left and right sections (*Ḳarāwal-i dast-i čap*, *ḳarāwal-i dast-i rāst*), as with Tīmūr.

The vanguard proper was called *muḳaddama* under the Dihlī sultans, *harāwal* under Tīmūr and the Mug̲h̲als. With Tīmūr the *harāwal* had its own van, the *harāwal-i harāwal*, the main body being the *harāwal-i buzurg*; Bābur in the battle of Pānīpat added to this a vanguard reserve, *ṭarḥ-i harāwal*.

The wings (*d̲j̲ināḥ* < Ar. *d̲j̲anāḥ*) were in Sultanate times called *maysara* (left) and *maymana* (right), each divisible into left and right sections; under Tīmūr the right and left wings were called *baranghar* and *d̲j̲aranghar* respectively, with the possibility of much subdivision: *e.g.*, for the right wing the *harāwal-i barang̲h̲ar* (van of the right wing), *čapāwal-i barang̲h̲ar* (left section of the right wing), *s̲h̲aḳāwal-i barang̲h̲ar* (right section of the right wing), possibly also *harāwal-i čapāwal-i barang̲h̲ar* (van of the right section of the right wing); and so similarly for the left wing. Bābur's army was disposed in much the same way, the terms *yamīn-i barang̲h̲ar* and *yasār-i barang̲h̲ar* being used for the right and left sides of the right wing (corresponding terms also for the left wing); each wing had in addition a flanking party (*tulg̲h̲uma*, *tulḳuma*) of light cavalry to encircle the enemy's flank and take him in the rear; and each wing had also its own reserve (*ṭarḥ*).

The centre was known in Sultanate times as *ḳalb*, with its two sections, *dast-i čap-i ḳalb* and *dast-i rāst-i ḳalb*, to left and right respectively; it was followed by the rearguard, *suḳḳa* or *k̲h̲alf*. In Tīmūr's accounts the centre is *ḳol* or *g̲h̲ol*, the rearguard *ʿaḳab*; Bābur uses similar terms, though the later Mug̲h̲als sometimes reverted to the earlier terms, and used in addition *čandāwal* or *čag̲h̲dul* for the rearguard. The term *ilatmas̲h̲* is used in the accounts of Akbar's campaigns for units filed between vanguard and centre, but apparently sometimes posted on the flanks of the centre just clear of the rear of the right and left wings, or in front of them; in such cases their function must have been similar to that of the *tulg̲h̲uma*.

At all times the centre was where the ruler or his deputy took his station, accompanied by the *ʿulamāʾ*, physicians, astrologers, etc., and the personal bodyguard; and this was the usual station for the elephants, certainly at least the ceremonial elephants carrying the standards and the *čhatra* and those carrying bands of musicians. Wives or favourite children not infrequently accompanied the royal commander in the *hawda* of his elephant, although Awrangzīb deprecated this practice, declaring that unnecessary persons round the commander hindered efficient leadership and organization. The chain of command was passed from the commander to all branches of the army through adjutants (*tawāčī*, *yasāwal*, *sazāwal*), who were also responsible for ensuring that proper battle array and battle discipline were maintained; the orders might be communicated through flag signals, drum-beat or trumpet-blast, as well as by couriers.

The composition of the other divisions of the army varied greatly throughout the Muslim period, except perhaps for the rearguard, which at all times comprised the kitchens, armouries, wardrobes, treasury, spare animals, prisoners, wounded, and a fighting contingent for the defence of the centre from any attack from behind. For the rest, at least a few general principles can be enumerated. In Sultanate times there were three ways of drawing up: infantry, cavalry or elephants could form the front line, according to the exigencies of the situation. When the infantry led, four lines of foot-soldiers, their accoutrements somewhat different for each line, were arrayed with wide gaps left in their ranks so that the cavalry behind them could observe the situation, and charge or retreat through them. A mobile cavalry force was kept on the right wing, a company of archers on the left wing; operators of *mand̲j̲anīḳ*s and *ʿarrāda*s [*qq.v.*, see also SILĀḤ] were placed on the right of the centre, archers and naphtha-throwers on the left of the centre. These conventional dispositions were in fact no impediment to the battle-situation, as there was also a conventional and disciplined order of the use of these auxiliary forces (see below, Strategy and tactics).

When the cavalry led, their front rank was drawn up similarly to the method described above for the

front line of infantry; the foot-soldiers would then form the second line, and, as was the case also when the infantry led, the elephants would for the most part be stationed in the centre, although selected beasts might be deployed to support either flank.

The third possible order was when the elephants led, followed immediately by the cavalry, as in Ghiyāth al-Dīn Tughluḳ's battle against the usurper Khusraw Khān in 720/1320 (Amīr Khusraw, *Tughluḳ-nāma*, Ḥaydarābād 1352/1933, 92-3); or when they were placed in front of each wing, as in ʿAlāʾ al-Dīn Khaldjī's battle against the Mongols at Kīlī in 699/1299. The usual place of the elephants, however, was in the centre protecting the king. They were armoured with iron sheets, and carried *hawdas* in the form of armoured turrets in which sat archers, naphtha-throwers and operators of projectile engines —an Indian device adopted by the Muslims which goes back in time to the 4th or 3rd century B.C. (cf. Sarva Daman Singh, *Ancient Indian warfare* . . ., Leiden 1965, 82 ff.) and persisted certainly into Mughal times, cf. Barbosa, *Travels*, tr. and ed. M. L. Dames, Hakluyt Socy. London 1918, i, 118.

It is less easy to determine the manner of drawing up under the Mughals. Artillery became increasingly important, and often occupied the first line of the vanguard on heavy carts chained or roped together, so that they might serve also as a barrier to a sudden enemy onslaught; between the carts gabions and mantlets formed a protection for the supporting matchlockmen; and in front of them an entrenchment might be formed. Lighter pieces of ordnance followed, swivel-guns (*zanbūrak*, *shuturnāl*) on camels, and small cannon (*gadjnāl*, *hathnāl*) in the *hawdas* of elephants. The cavalry followed. In the vanguard there were also mortarmen (*dīgandāz*), grenadiers (*raʿdandāz*) and rocketmen (*takhshandāz*). Artillery might be stationed also in the front rank of the two wings and of the centre, with elephants also in front of each body of troops.

The size of the various branches of the field force is also difficult to ascertain in most periods; but in a Mughal account of a force of 40,000 cavalry the vanguard is said to have 8,000, the centre 12,000, the two wings 11,000 between them, the reserves 4000, and the rearguard 4,500. If, say, 40 elephants were available for a particular campaign, seven were placed in front of the vanguard, fifteen in front of the centre, six in front of each of the two reserves, two in front of each wing, and two in the rearguard.

The field force was under the command of the ruler or his deputy—a prince of the royal blood, or the *wazīr*, or some other favoured noble—who as *sar-i lashkar* took command of the centre also. In the army of the Dihlī sultanate, the vanguard was commanded by the *muḳaddam* or *sar-i lashkar-i muḳaddama*, and the left and right wings by the *sar-i fawdj-i maysara* and *sar-i fawdj-i maymana* respectively. The ruler's special cavalry contingent in the left and right wings of the centre (the *khāṣṣa-yi khayl*) was commanded by the *sar-i djandar*, with its two divisions under a *sar-i djandar-i maysara* and *sar-i djandar-i maymana* respectively (Yaḥyā b. Aḥmad, *Taʾrīkh-i Mubārakshāhī*, Bibl. Ind., 1931, 62). These officers were mostly in command of the cavalry; the terms for commanders of infantry are uncertain, although the *sahm al-ḥashm*, *nāʾib sahm al-ḥashm* and *shimla al-ḥashm* all seem to be concerned particularly with infantry (Yaḥya b. Aḥmad, *ibid*; Baranī, *op. cit.*, 30). The horses were under the supervision of an *ākhur bak*, the elephants under a *shaḥna-yi pīl*, the camels under a *shaḥna-yi nafar* (Baranī, *op. cit.*, 24), while the armouries were in charge of the *sar-i silāḥdār*. The Mughal terms seem less stereotyped, and the force commanders are often called by their offices in the static army establishment [see LASHKAR] with its decimal organization. In the time of Akbar the *manṣabdārs* [*q.v.*] were deputed to various commands, and in his multiracial army a Rādjpūt section would be commanded by a Rādjpūt *manṣabdār*, the Afghān section by an Afghān *manṣabdār*, etc. The horses were under the supervision of an *akhtabegī*, the artillery and other firearms under a *mīr ātish*, and other armament, and the standards, under a *dārogha-yi ḳurkhāna*.

5. Strategy and tactics.—The following account does not include the tactics of siegecraft, for which see ḤIṢĀR.

Before a battle took place an appreciation of the situation was made by the ruler, the *sar-i lashkar*, generals of wide experience, and officials of the *dīwān-i ʿarḍ*, and the campaign was carefully planned. This war council was usual in the Sultanate period (*e.g.*, Amīr Khusraw, *Tughluḳ-nāma*, 48, 84; ʿIṣāmī, *Futūḥ al-salāṭīn*, ed. Mahdi Husain, Agra 1938, 254), and was considered equally valuable by Tīmūr (*Tūzuk*, 5 ff.) and by the Mughals (*e.g.*, Niẓām al-Dīn Aḥmad, *Ṭabaḳāt-i Akbarī*, Bibl. Ind., 1935, iii, 25 ff.; Abu 'l-Faḍl ʿAllāmī, *Akbar-nāma*, Bibl. Ind., 1886, ii, 48, 482). An impassioned oration by the ruler or commander-in-chief to his subordinates was often a feature of such an *andjuman*, and this was extended into a direct appeal to the soldiery by Shīr Shāh, Akbar and the later Mughals, usually on the eve of battle but on occasions during its course.

A battle was usually begun in the morning and would be suspended in the evening, although the defenders endeavoured to delay engagement as long as possible so that they could retreat under cover of darkness if defeated. The commencement was signalled by drum-beat and by the war-horns blown by *čāwūshes*, and engagement would begin to the accompaniment of war-cries; secret passwords were also in use to establish identities in the event of hand-to-hand fighting.

In the usual pattern of the assault, in the Sultanate period, battle was first joined by the vanguard (cf. Baranī, *op. cit.*, 260), followed by the movement of the right wing; the centre then made its advance, and finally the left wing. A force would aim to create panic among its opponents first by an incessant rain of arrows, from cavalry, infantry, and from the *hawdas* of the elephants; these included poisoned and incendiary arrows. *Mandjanīḳs* carried in the *hawdas* were similarly used to discharge large stones and naphtha-containers at the enemy. An early elephant-charge was also employed with the intention of spreading panic, after which the other arms would engage. The chief target was always the enemy centre where their commander would be stationed. In the event of the vanguard or a wing suffering a reverse it would receive reinforcements from reserves or from other wings—but with caution, lest the enemy seeing a wing being reinforced by troops moving from the centre should conclude that the centre also was broken.

Tīmūr's keen tactical insight is reflected in a long and detailed statement of the principles of field engagement in different situations in the *Tūzuk* (Bombay ed., 191-207), emphasizing the need for continual appreciations of the situation throughout the course of a battle. He advocates delaying the attack until the enemy has begun the aggression, then—with a force of between 9000 and 12,000—

moving first the vanguard against them, followed by the van of the right wing in support, closely followed by the van of the left wing; if this was insufficient, the first corps of the right wing was to proceed, followed by the second corps of the left wing, the second corps of the right wing, and then the first corps of the left wing; if the assault from none of these units resulted in victory, further action—presumably by the centre—was to await Tīmūr's order as commander. A more complicated order of attack is given for field forces of from 12,000 to 40,000.

Tīmūr's descendants profited from his scientific approach to warfare, and his principles were generally maintained, although of course the pattern of battles changed considerably after the introduction of artillery. Thus at the battle of Khanuwā, near Āgra, in 933/1527, the battle was commenced by the fire of small-calibre matchlocks and culverins from the right wing of Bābur's army under Muṣṭafā Rūmī, after which the heavy artillery of the centre, under the *mīr ātish* Ustād ʿAlī Ḳulī, opened fire slowly at the ironclad elephants of the enemy; when the artillery battle was well under way Bābur ordered the charge of his flanking parties (*tulghuma*), the heavy artillery was moved forward, and the cavalry moved around the advanced light artillery (*Bābur-nāma*, ed. Beveridge, 568-9). Generally, however, the heavy artillery was unable to move up after the cavalry had advanced beyond the forward entrenchments, and in the event of a retreat the guns could hardly be saved: they had to be spiked and abandoned. In Akbar's reign the guns were given greater mobility by being mounted on individual gun-carriages, instead of being manhandled from carts as before, drawn by bullocks and often pushed into position from behind by elephants. This increased mobility is seen, for example, in the battle of Dharmat, near Udjdjayn, of 1068/1658 between Awrangzīb and Mahārādjā Djaswant Singh, which began with the usual long-range fire of rockets and cannon; the Rādjpūts, in spite of the casualties caused by Awrangzīb's forward guns, wheeled and attacked this artillery and temporarily silenced it, but the gunners managed to recover, and mounted their guns on high ground where it was less prone to attack and could more easily bombard the enemy's centre. The artillery barrage might, however, be withheld, as in the battle of Sāmogaṛh later the same year when Dārā Shikōh was misled by the silence of Awrangzīb's heavy ordnance and launched a premature attack; at last Awrangzīb's heavy guns replied, causing appalling carnage.

The cavalry was still a paramount arm even after the great improvement in small arms and artillery—often handled by European mercenaries—in the 11th/17th century. After the initial softening-up by fire, the cavalry would attack, discharging arrows as they did so, eventually coming to close quarters and fighting with the sword (the principal weapon of the Mughal cavalryman) or lance (the favoured weapon of Rādjpūt cavalry). The cavalry appear not to have used firearms from horseback until the Durrānī [*q.v.*] troops did so in the late 12th/18th century. In the thick of battle Indian horsemen, especially the Rādjpūts, would often dismount, bind themselves together by their shirt-tails, and fight to the death with maces, clubs, axes and daggers [for the weapons in use see SILĀḤ, India].

The fiercest fighting took place around the elephant of the rival commander, who considered it dishonourable to retreat if merely wounded by arrows. The death or disappearance of the leader usually meant the loss of the campaign; thus in the battle of Sāmōgaṛh, already mentioned above, Dārā lost the day after the *hawda* of his elephant had been struck by a rocket and he mounted a horse instead: his troops saw the empty *hawda* and believed their commander to have fallen. The importance attached by both sides to the death of the commander is shown earlier in the suppression of Kishlū Khān's revolt by Muḥammad b. Tughluḳ in 728/1328: Muḥammad placed one Shaykh ʿImād al-Dīn, who resembled him personally, in the centre under the royal umbrella, and lay in ambush himself with 4000 horse; the rebels attacked the centre and killed the Shaykh, and confident of their victory dispersed to plunder the camp when Muḥammad emerged and broke Kishlū and his unsuspecting forces.

These tactics were suited in particular to the plains of northern India, and the northern powers—the rulers of the Dihlī sultanate and the imperial Mughals alike—found difficulty in devising others suitable to the swamps of Bengal or the broken ravines of the Deccan. The Marāṭhās under Shivādjī and his successors had brought guerilla warfare to a fine art, and on many occasions used it to harass the armies of the Mughals and of the Deccan sultanates. The qualities of Marāṭhā warfare were appreciated by Malik ʿAnbar [*q.v.*], who organized a corps of guerilla fighters for the Niẓām Shāhī [*q.v.*] sultanate.

It was long before the rulers of Muslim India realized the potentialities of naval warfare, although individual men-of-war were certainly commissioned as escorts for the pilgrim traffic by sea; after the Mughal conquest of Gudjarāt and the Konkan coast, however, they came to appreciate the possibilities of sea and land cooperation, as in some battles fought along these coasts, and eventually the hereditary admirals of Djandjīra [see ḤABSHĪ] were appointed as admirals of the Mughal fleet. For the navies of Muslim powers in India, and their naval strategy and tactics, see BAḤRIYYA, India (in Supplement).

6. Tricks and stratagems.—One device to deceive the enemy as to the strength of the attacking army was the simulated arrival of fresh reinforcements: squadrons of the army would be sent away under cover of night to return in the morning, beating drums and flying colours as though they were a new army approaching; similarly, Muḥammad b. Tughluḳ is reported as sending 1000 men to receive a mere force of 100 joining his army. A simulated flight often won an advantage, as in Fīrūz Shāh Tughluḳ's battle against Shams al-Dīn Ilyās Shāh of Bengal in 754/1353 near Lakhnawtī: the Bengali forces, thinking Fīrūz to be in full retreat, emerged from their stronghold in pursuit, and in consequence suffered a severe reverse (ʿAfīf, *op. cit.*, 114). But the device was a familiar one, and mistakes arose: thus in the battle of Tukarōʾī [*q.v.*; see also DĀWŪD KHĀN KARARĀNĪ] in 982/1574 Dāwūd put to flight Akbar's vanguard, *ilatmash* and centre, but did not follow up, thinking their flight to be a ruse; but the Mughal right wing counterattacked strongly, and Dāwūd lost the day. This simulated flight was often the occasion for ambuscade (*kamīn*) by a detachment of the army drawn up in a carefully chosen position near the rear-guard; although the *kamīn* might be posted for other purposes, for surprise marauding raids on the enemy or his line of communications, or merely to keep fresh in case of being needed at any point for reinforcement. The Mughal armies, however, despised this form of warfare and did not employ it.

Also despised by the Mughals, and never carried

out with much enthusiasm even in Sultanate times, was the night attack (*shab-khūn*), which Abu 'l-Faḍl calls 'the trade of cowards, disdained by heroes' (*Akbar-nāma*, iii, 51). It was often used against the Muslim armies, however, who were instructed to be prepared for it; the *Ādāb al-ḥarb* prescribes the division of the camp into four groups for the purpose: foot-soldiers, well accoutred, were to guard all entrances, the right wing and centre remained alert in their proper positions with lights extinguished, or lighted in different places to mislead the invaders, the left wing prepared for battle with the invaders, while a fourth group left the camp in order to guard and patrol the approaches. The attackers would have blocked the roads to the camp, and might cry out deliberately that such-and-such a general had been captured or killed, in order to spread despondency among those encamped.

Not indeed part of the army in the field, although vital to its commanders, were the spies—from whom would have come the information necessary to effect the *shab-khūn*; but their intelligence was valued at all stages of the campaign. See further DJĀSŪS.

Bibliography: In addition to the references in the text, see S. Sabahuddin, *Conduct of strategy and tactics of war during the Muslim rule in India*, in *IC*, xx (1946), 154-64, 291-6, 345-52; xxi (1947), 7-15, 123-4: extended treatment with constant reference to and quotation of campaigns. Almost all the Indian historical chronicles give descriptions of battles in detail; for these see Bibliographies to articles on the major Indian dynasties, especially DIHLĪ SULTANATE and MUGHALS, also Storey, 92-157, 433-780. For the Mughal period see especially W. Irvine, *The army of the Indian Moguls*, London 1903, and references quoted there; also Abdul Aziz, *The mansabdari system and the Mughal army*, Lahore 1946. Some useful information on *ḥarb* in the Dihlī Sultanate period, as well as information on the Sultanate army and its administration, in I. H. Qureshi, *The administration of the Sultanate of Dehlī*, Lahore 1942 (⁴Karachi 1958), ch. VII 'The Army'.

ḤARB B. UMAYYA B. 'ABD SHAMS, the father of Abū Sufyān and father-in-law of Abū Lahb [*qq.v.*], one of the leading figures of Mecca in his day. He is said to have been the first to use Arabic writing, and one of the first to renounce wine. A companion of 'Abd al-Muṭṭalib, he succeeded him as war-leader, and led the clan of 'Abd Shams and, according to some traditions, all Ḳuraysh in the so-called sacrilegious war [see FIDJĀR]. After his death the leadership is said to have passed to the Banū Hāshim. The story of his contest of merits and subsequent quarrel with 'Abd al-Muṭṭalib is no doubt a projection backwards of the later conflict between the houses of Umayya and Hāshim.

ḤARBA, spear [see 'ANAZA, 'AṢĀ, ḲAḌĪB, SILĀḤ].

ḤARBĀ', a ruined city in 'Irāḳ, pre-Muslim (and possibly Babylonian) in origin, and situated south-west of Balad on the west bank of the Shuṭayṭ which is a former bed of the river Tigris: 34° 3′ N., 44° 10′ E. It was known to the Sāsānids and their Arab successors in 'Irāḳ, as also to the Arab geographers—Ya'ḳūbī, Mas'ūdī, Yāḳūt—and to Ṭabarī. The crossing of the Tigris by troops of the Khāridjī leader Shabīb in 76/696, operating against al-Ḥadjdjādj, was near this spot. The city at that period or later was known for its textile and (probably) pottery manufacture. A great irrigation or river-reclamation work was carried out here by the caliph al-Mustanṣir in 629/1232, and the existing Dudjayl channel, and the great four-arch Ḥarbā' bridge, 24 m. long and 12 m. broad, (from which the place is now called Djisr Ḥarbā') survive from this enterprise. The 90-metre-long inscription on the bridge gives details of the construction, and heaps praises on its builder. The remains are rendered conspicuous by the cupola of the tomb of a Shaykh (or Sayyid) Sa'd, which is visible from far off.

ḤARBĪ [see AMĀN, DĀR AL-ḤARB, MUSTA'MIN].

ḤARBIYE, (< Ar. *ḥarbiyya*) the Ottoman and Turkish war college. Ottoman reforms in the 12th/18th century included some innovations in military training, notably the opening of the Hendesekhāne by the Comte de Bonneval in 1734 and the opening of the Mühendiskhāne-i Berrī-i Hümayūn in 1791-95. A number of military training centres for Maḥmūd II's new army were set up in various parts of Istanbul in the 1830's, including the Alay Mekteb-i Ḥarbiyesi (Rami, 1832), the Mekteb-i Fünūn-i Ḥarbiye (or 'Asākir-i Khāṣṣa-i Shāhāne Ḥarbiye Mektebi, founded by Meḥmed Nāmiḳ Pasha, the Mekteb-i Ḥarbiye Nāẓirī, at Mačka in 1834), the Topkhāne-i 'Āmire Mektebi, and the Mekteb-i Ḥarbiye-i Shāhāne (Selīmiye barracks, Üsküdar, 1835). In 1846, these were centralized in a single Mekteb-i Ḥarbiye in the Pangaltí quarter of Istanbul, which drew most of its students from a network of military secondary schools founded during the same period in Istanbul and other towns, mainly in the European parts of the empire. The curriculum of the Ḥarbiye emphasized mathematics and foreign languages (at first French, from the 1880's also German) in addition to technical military subjects. In 1848, the two-year course was supplemented with a second two-year course for general staff officers, extended to three years in 1881. Colmar von der Goltz-Pasha, inspector of imperial military schools from 1884 to 1895, added participation in manœuvres to classroom instruction. In 1909, the Ḥarbiye's teaching staff consisted of nine Germans, eight Turks, and two Armenians. From 1909, staff officers were trained in a separate military staff college (Erkān-i Ḥarbiye Mektebi) located at Yíldíz Palace, to which lieutenants and captains were competitively admitted after a regular tour of troop service. With

the outbreak of the First World War, the staff and students of both schools were transferred to active service, and the schools therefore ceased to function; their reopening after the armistice was impeded by the successive requisitioning by the Allied authorities of suitable buildings. A temporary military school was opened under the aegis of Muṣṭafā Kemāl at Djebedji near Ankara in 1920. In 1923 the Ḥarbiye reopened at Pangaltı, and in 1936 (now renamed Harp Okulu) it was transferred to a new building in the government quarter of Ankara. The staff college reopened as Mekteb-i ʿĀlī-i ʿAskerī in the old war ministry building at Bāyezīd in 1923, and as Ḥarb Akademisi back at Yıldız in 1927. Between 1847 and 1945, the Ḥarbiye graduated 32,799 lieutenants, the yearly average rising from about 25 to about 100 in the 1870's, and over 500 at the turn of the century, and from 114 under the early Republic to nearly 1,000 in the 1940's. Between 1851 and 1930, a total of 967 of these graduated from the staff course or staff college as staff captains. Even during the Ottoman period most of the officers were Turks—a majority of them from Istanbul and the European provinces; the proportion of Syrians and Iraqis among the staff officers, for example, was about 6% before 1900 and 14% between 1900 and 1914.

The founding of the Ḥarbiye was one of the first durable Ottoman measures of Westernizing reform, preceding that of the Mülkiye [*q.v.*] by twenty-five years, and almost from the start, its students and graduates have been in the forefront of political change. The Ittiḥād we Teraḳḳī [*q.v.*] Djemʿiyyeti was secretly founded in 1889 at the separate military medical college, but in 1897 a special court martial held a mass trial of Ḥarbiye students for subversive activities, of whom 78 were deported to Libya. In 1920, 250 Ḥarbiye students made their way from occupied Istanbul to Anatolia. A silent march by the Harbiye students on 21 May 1960 was one of the preludes of the military coup six days later. Harbiye staff and students were prominently involved in the two abortive coups (February 1962 and May 1963) under Colonel Talât Aydemir; the suppression of the second of these led to wholesale forced resignations from the student body.

ḤAREKET ORDUSU, literally "action army", the name usually given to the striking force sent from Salonica on 17 April 1909, under the command of Maḥmūd Shewket Pasha [*q.v.*], to quell the counter-revolutionary mutiny in the First Army Corps in Istanbul. The striking force also known as the Army of Deliverance, reached the capital on 23 April (n.s.) and, after some clashes with the mutineers, occupied the city on the following day.

(Ed.)

HAREM [see ḤARĪM, SARĀY].

ḤARF, letter of the alphabet, word; Ibn Djinnī (*Sirr al-ṣināʿa*, i, 15-19), examining the etymology of the word, finds an original meaning of *ḥadd*, "limit": *innamā ḥarf al-shayʾ ḥadduh wa-nāḥiyatuh*; and, in speaking of the *ḥurūf al-hidjāʾ*: *ḥadd munḳaṭaʿ al-ṣawt wa-ghāyatuh wa-ṭarafuh* (16, lines 6-7), "the limit where the cutting of the *ṣawt* occurs, its end, its extremity." This explanation introduces an element from a system which was elaborated much later: the *maḳṭaʿ*, but it is important because of the use of the word *ḥadd*, "limit." The *LA* contains a long article on *ḥarf* (x, 385/ix, 41a). It retains as the primary meaning of *ḥarf*: *al-ṭaraf wa 'l-djānib*, "the extremity, the side", whence it derives the name *ḥarf* for the letters of the alphabet. Ibn Hishām al-Anṣārī, in the *Sharḥ* of his *Shudhūr al-dhahab* (Cairo 1951/1371) indicates only (p. 14, l. 13): *ṭaraf al-shayʾ*. With regard to the ancient Semitic languages, Arabic *ḥarf* "extremity, side" is related to Syriac *ḥarpā* and *ḥerpā* "edge, point" (Payne Smith, *Thesaurus syriacus*, s.v.). In Hebrew, the relation is more remote: *ḥerpā(h)* "invective, reviling", which can be explained by "stinging, sharp words" (see Koehler-Baumgartner, *Lexicon*, under *ḥ r f*).

The *Kitāb* of Sībawayhi begins with the broad tripartite division: "*ism*, *fiʿl*, *ḥarf*, the last meaning what is neither *ism* nor *fiʿl*." This division came to the Arabs from Aristotelian logic [see FIʿL]. Fr. Prätorius (in *ZDMG*, lxiii (1909), 504-5) has related *ḥarf* to the term *hóros* which is used in Aristotelian logic. M. Bravmann (*Materialien*, 8-9) accepted this and rejected the criticism of J. Weiss (in *ZDMG*, lxiv (1910), 349-82). *Hóros*, too, signified "limit", thence, among its derived meanings, "determination of the meaning of a word", whence, "definition". In Arabic, *ḥadd*, "limit, definition", has followed the same path; as for *ḥarf*, it has three derived meanings: (1) "word", (2) "letter of the alphabet", (3) the designation of the third term in the broad tripartite division.

It is difficult fully to clear up the processes by which these meanings are derived; for if, on the one hand, there was Greek influence on the development of meanings of an Arabic term (*ḥarf*), the primary meaning of which corresponded with that of the Greek term (*hóros*), the Arab world, on the other hand, offered for the possibilities of semantic derivation a completely different milieu of thought. The following is a possible explanation: from *ḥarf*, "extremity, side" (*LA*), "limit" (Ibn Djinnī), might have derived the meaning of "word" (recorded in Lane's *Lexicon*, s.v.). Then, in a very simple analysis of the phonic components of the word, it was enough for the first specialists on the Arabic language to pronounce a word slowly in order to divide it into what we call syllables and where they found "limits", *i.e.*, *ḥurūf*. The short vowel gave them no difficulty, since for them it had no autonomy but was a sort of accident of the stable element [see ḤARAKA WA-SUKŪN]. The *ḥarf* of the *ḥurūf al-hidjāʾ* was taking shape. Finally, in that which was neither *ism*, nor *fiʿl*, it was easy to notice that many of these units, and some of the most common of them, had only one *ḥarf*: one has only to think of *wa-* the very common conjunction, *fa-*, *bi-* "in", *li-* (conj. and prep.), the interrogative

ʾa; or only a single *ḥarf ṣaḥīḥ*: the negatives *lā, mā*; *fī* "in", the vocative *yā*; or two *ḥarf*: *min, ʿan*, etc. (see below); and this without being subject to any *iʿrāb*, inflexion. It was the domain of the *ḥarf*.

This presentation has the advantage of following a natural order in the analysis of the primary linguistic datum: the sentence. But it reduces heavily the extent of Greek influence: it takes it back to the suggestion of a point of departure, the choice of a word (*ḥarf*) meaning, like the Greek *hóros*, "limit".

The Arab grammarians tried to find a precise definition of *ḥarf*, the third term in the division given in the *Kitāb* of Sībawayhi, and in its comprehension and extension. Already in the *Djumal* of al-Zadjdjādjī (d. about 340/951), p. 17, l. 11, is found the definition which was to be accepted later by the great grammarians and, without essential change, even in some modern grammars, *e.g.*, *al-Ḳawāʾid al-djaliyya, al-k. al-thālith*, of Eddé (2nd ed. Beirut 1911, 111): *al-ḥarf mā dalla ʿalā maʿnan fī ghayrih*, "the *ḥarf* is that which indicates a meaning in something else". It cannot do without this something else—verb, noun or pronoun, and determines a meaning in it. This is why these *ḥurūf* are called also: *ḥurūf al-maʿānī*, *e.g.*, al-Zadjdjādjī, *al-Īḍāḥ fī ʿilal al-naḥw* (Cairo 1959/1378, 54). On the discussion of the definition indicated above, see Ibn Yaʿīsh, pp. 1066-1071 (for § 497 of the *Mufaṣṣal*) and Raḍī al-Dīn al-Astarābādhī, *Sharḥ al-Kāfiya*, ii, 297, l. 8 (with reference to i, 8, lines 14 ff., where *ism* is discussed) (Istanbul ed. 1275, with marginal *Sharḥ*).

When thus defined, *ḥarf* is usually translated by "particle". But how far had this concept of *ḥarf* to be extended? Many "grammatical instruments" (*adawāt*, sing. *adāt*), the term of al-Farrāʾ (see *ZDMG*, lxiv, 381-2 and Ibn Yaʿīsh, 187, lines 17 and 19) came of themselves. Other cases were less clear: Ibn al-Sarrādj saw a *ḥarf* in *ʿasā* and *laysa*; Thaʿlab agreed for the first, Abū ʿAlī al-Fārisī for the second; al-Zadjdjādjī (*al-Djumal*, 53 f.) placed *kāna* and its "sisters" among the *ḥurūf*; al-Suyūṭī (*Hamʿ al-hawāmiʿ*, Cairo 1327, i, 10, l. 7 f.) examined the question and reaffirmed the general opinion that these were verbs.

Al-Zamakhsharī (*Mufaṣṣal*[2], § 497-624; Ibn Yaʿīsh, 1066-1250) presents all the different *ḥurūf* grouped according to their grammatical use, *e.g.*: *ḥurūf al-ʿaṭf* (of co-ordination), *ḥurūf al-nafy* (of negation); so more briefly in Eddé, *op. cit.*, 111-4. These *ḥurūf* re-appear amongst the 'Particles' of the European grammars, *e.g.*, S. de Sacy, *Gr. Ar.*[2], i, 466 f.; Wright, *Ar. Gr.*[3], i, 278 f.; but without the systematic presentation given by the Arabs. Ibn Hishām [*q.v.*] arranged his *K. Mughnī 'l-labīb ʿan kutub al-aʿārīb* alphabetically, starting from the *ḥurūf*, the particles. It is not a classification of the *ḥurūf*: to him they were a means to present his great study of Arabic syntax. He had to insert, though, words like *kull* which do not belong to the *ḥurūf*.

The *Ashbāh wa 'l-naẓāʾir fi 'l-naḥw* of al-Suyūṭī (ii, 2nd ed., Ḥaydarābād 1360, 11) enumerates all the *ḥurūf*: uniliterals: 13; biliterals: 24, triliterals: 19, quadriliterals: 13; quinquiliterals: 1; total 70. Expressions such as: *khalfa, warāʾa*, "behind"; *amāma, ḳuddāma*, "in front of"; *bayna*, "between", are not included. These expressions, which the European grammarians regard as prepositions, were placed by the Arab grammarians among the *ẓurūf* (sing. *ẓarf*), see, *e.g.*: al-Zadjdjādjī, *al-Djumal*, 44, l. 8-9; 72, l. 7-8; 74, l. 1-2. In the same work of al-Suyūṭī (ii, 11-4) are to be found all the grammatical classifications of *ḥurūf*, according to every possible way of regarding them.

The *Dict. of Tech. Terms* (i, 320-4) mentions 18 separate meanings of the term *ḥarf*. Two (2 and 3) concern the usage of the *ahl al-djafr* [see DJAFR]. Three refer to the script: nos. 1, 4, 5; no. 1 is useful to recall: *muʿdjama* — *muhmala* [see ḤURŪF AL-HIDJĀʾ]. The others (apart from the last one) repeat phonetic divisions: they are to be found, as far as they are worth mentioning (except no. 6), under ḤURŪF AL-HIDJĀʾ. The last one refers to *ṣarf*: *aṣliyya* — *zāʾida* [see ṢARF]. No. 6: *muṣawwita* — *ṣāmita*, comprises two groups: the *ḥurūf al-madd wa 'l-līn*, and the other *ḥurūf*, *mutaḥarrika* or *sākina* respectively. This division is useful, for it can provide the means of expressing 'vowel' and 'consonant' in Arabic. The first term is already ancient: in fact *al-muṣawwitāt* occurs in the *Fihrist* of Ibn al-Nadīm (compiled in 377/987), 16, line 12, to designate the vowels of the Greek alphabet. After these 18 divisions come *al-ḥurūf fī 'ṣṭilāḥ al-ṣūfiyya* [see ḤURŪFĪ].

Ḥarf has also assumed the meaning of 'Ḳurʾānic reading', *i.e.*, a word with various readings, *e.g.*, *hādhā fī ḥarf Ibn Masʿūd ay fī ḳirāʾat Ibn Masʿūd* (*LA*, x, 385/ix, 41a). But what is the meaning of *aḥruf* in the *ḥadīth*: *nazala 'l-Ḳurʾān alā sabʿat aḥruf kulluhā shāfin kāfin* "The Ḳurʾān has been revealed according to seven *aḥruf*, each effective, sufficient"? The most widespread explanation (Abū ʿUbayd, al-Azharī, Ibn Athīr Madjd al-Dīn, *Ḳāmūs*) is that which attributes to *aḥruf* the sense of *lughāt* 'dialects' (see Lane, *Lexicon*, s.v.); reference may be made also to the *K. al-lughāt fi 'l-Ḳurʾān*, published by Ṣalāḥ al-Dīn al-Munadjdjid, Cairo 1365/1946 and chapter 37 of al-Suyūṭī's *Itḳān, Fīmā waḳaʿa fīhi bi-ghayr lughat al-Ḥidjāz*. According to the notice given by Abū ʿUbayd in *LA* (x, 385/ix, 41b), this *ḥadīth* does not refer to words with seven *ḳirāʾāt*, but to *lughāt*, "dialectical words or expressions" found at various points of the Ḳurʾān, some from the dialect of the Ḳuraysh, others from that of Ahl al-Yaman, or of the Hawāzin or the Hudhayl, etc.; it continues: *wa maʿānīhā fī hādhā kullihi wāḥid* (*wāḥida*, in *TA*, vi, 68, line 18), "and their meanings in this are a single [meaning]", *i.e.*, they do not add a further meaning to that of the Ḳurʾānic text.

Bibliography: In the text; see also ḤURŪF AL-HIDJĀʾ. (H. FLEISCH)

ḤARFŪSH, family name of the Shīʿī amīrs of the Baalbek region in Ottoman times. Technically a part of the *vilayet* of Damascus, the region of Baalbek was historically more closely associated with Mount Lebanon, and the Ḥarfūsh amīrs were frequently the virtual vassals of the Lebanese amīrs of the Maʿn and Shihāb dynasties. The origins of the Ḥarfūsh family are not clear; but it was already well-established in the Baalbek region in the latter half of the 10th/16th century, when Mūsā Ḥarfūsh conspired with other neighbouring chieftains against Ḳorḳmaz Maʿn of the Shūf in 992/1584-5 (see FAKHR AL-DĪN). His successor Yūnis Ḥarfūsh later became an ally of Fakhr al-Dīn Maʿn II, acting as his vassal. The Ḥarfūsh amīrs continued to control the Baalbek region, imposing on it their oppressive rule, until the Ottoman system of provincial administration was reorganized in 1864. Earlier on, in 1850, Muḥammad Ḥarfūsh had led a rebellion against the Ottomans, who retaliated strongly. The Ḥarfūsh amīrs were overthrown and hunted down until their power was completely destroyed in 1866, and the remnants of the family were reduced to pauperism.

ḤARFŪSH (a.; sometimes also Kharfūsh), "vagabond, ne'er-do-well", often used in the sense of "ruffians, rascals, scamps"; plural *ḥarāfīsh*, *ḥarāfīsha*. From the 7th/13th to the 10th/16th century the term appears in chronicles and other works dealing with the Mamlūk domains of Egypt and Syria. The last author to make relatively frequent use of the term seems to be the chronicler Ibn Iyās (d. 930/1524), and a final reference, obviously in a period when the term had disappeared from common use, occurs in al-Muḥibbī's 11th/17th-century biographical dictionary *Khulāṣat al-athar* (see below).

The *ḥarāfīsh* represent the lowest element in the strata of Mamlūk society, forming groups in the urban centres of Cairo and Damascus and, at least temporarily, also in Homs, Hama, and Aleppo. Made up of professional beggars, able-bodied as well as infirm, street-entertainers, and the unemployed, the *ḥarāfīsh* seem to have developed a guild-like organization headed by a *shaykh* who bore the title *sulṭān al-ḥarāfīsh*. Often attacked by the orthodox writers for their barbarous speech and dress as well as for their heretical religious tendencies, the *ḥarāfīsh* were a despised and feared group given to rioting and plundering on occasion. To pacify and control this unruly but organized element, the sultan and the chief *amīrs* gave them alms and, in times of famine, numbers of *ḥarāfīsh* were assigned to the more affluent *amīrs* and to wealthy merchants and other non-governmental figures, who then became responsible for feeding them.

The development of the organization of the group (called a *ṭāʾifa* by some contemporary writers) is seen in the rise of the office of the *sulṭān al-ḥarāfīsh*, which first appears in the late 8th/14th century and persists until the end of the Mamlūk rule. The "*sulṭān*", who was the head of the guild-like organization, was responsible to the state for the discipline of his followers. Ibn Iyās (*Die Chronik des Ibn Iyās*, Bibliotheca Islamica, Band 5e, 41) mentions the *sulṭān al-ḥarāfīsh* along with the heads of artisan guilds who accompanied the last Mamlūk sultan in the ceremonial procession on his departure for Syria to fight the Ottoman Turks.

During the Ottoman period the term disappears and is replaced by *djuʿaydī* as a general term for "vagabond, beggar". However, in a notice regarding the head of the artisan guilds in Damascus, the *shaykh al-mashāyikh*, in the 11th/17th century, we are told that he was "formerly known as *sulṭān al-ḥarāfīsh*, then he was called, out of respect, *shaykh al-mashāyikh*" (al-Muḥibbī, *Khulāṣat al-athar*, iv, 144). From the 10th/16th century until it fell into disuse at the end of the 19th century, the title of *shaykh al-mashāyikh* was handed down in the Damascene family of the Banū ʿAdjlān.

The connexion between the lowly *ḥarāfīsh* on the one hand and the respectable guild organizations on the other is not clear. Nor is their connexion with Ṣūfism—in its folk manifestations—easily explicable. The clearest indication of a relationship of the latter sort is in the figure of a popular saint known as ʿUbayd al-Ḥarfūsh or al-Ḥurayfīsh (d. 801/1399) whose work of pious devotions *al-Rawḍ al-fāʾiḳ* is still printed, most recently in 1949 (cf. Brockelmann, S. II, 229). In a verse cited by al-Sakhāwī (*al-Tibr al-masbūk*, 349), ʿUbayd wrote that the *ḥarāfīsh*, although poor, substisting on a morsel and in rags in a deserted mosque, will be forgiven their sins because they are neither liars nor hypocrites.

Undoubtedly the *ḥarāfīsh* represent one of those urban groups in the Muslim world that appeared periodically under different names, made up of impoverished, uprooted former artisans and peasants as well as professional beggars, who robbed and looted as well as begged for a livelihood, and who, in different periods, allied themselves with various elements in the government—at times with the sultan, at others with the *amīrs*. They should be compared—for differences as well as similarities—with the earlier *ʿayyārūn* [*q.v.*] and *aḥdāth* [*q.v.*], as well as with the later *zuʿar*.

A single literary reference to this group occurs in the *Alf layla* in the story of "The Ḥarfūsh and the Cook" (cf. Habicht, *Tausend und eine Nacht*, iv, 138-40, translated in Payne, *Tales from the Arabic*, i, 9; R. Burton, *A Thousand and One Nights' entertainment*, Suppl. i, 4).

Bibliography: For a discussion of the word itself cf. *TA*, iv, 297 (*ḥ r n f sh*) and *ibid.*, 305 (*ḥ r f sh*); Dozy, i, 374; Quatremère, *Histoire des Sultans Mamlouks*, i b, 195-7. Additional material, both on the term and on the history of the group will be found in the article by W. M. Brinner, *The significance of the Ḥarāfīsh and their 'Sultan'*, in *JESHO*, vi (1963), 190-215. A study by Ira M. Lapidus, *The Muslim city in Mamlūk times* (in the press), adds further citations and discussion of the *ḥarāfīsh*.

(W. M. Brinner)

HARGEISA, administrative headquarters and capital of the former British Somaliland Protectorate, now of the northern region of the Somali Republic, lying in 9° 33′ N. lat. and 44° 04′ E. long. With a population of some 35,000 Somali and lying in territory normally grazed by the Habar Awal clan, the town is of recent formation. It has developed from the cultivating *ṭarīḳa* community (of the Ḳādiriyya) established by Shaykh Maḍḍar (Habar Awal, Ḥüseyn Abokor, Rēr Ḥosh, 1241-1336/1825-1918) in the second half of the nineteenth century. Under the Shaykh, who enjoyed a considerable reputation for piety and miraculous works, the community grew and prospered, attracting members of many different Somali clans. The main crop was sorghum, and the *ṭarīḳa* which straddled the caravan routes from Harar and the Ogaden was well-placed to be an important trading centre. Swayne, who visited the *ṭarīḳa* at the end of the nineteenth century, describes it as comprising a few hundred mud and wattle huts surrounded by a high mat fence enclosing a square mile or two of cultivated fields and subject to attack from surrounding Somali and Ethiopian raiders. During their rule on the coast, the Egyptians gave the Shaykh arms; and under the British he at first received a stipend. Later, after his death, and the development of Hargeisa as an administrative centre, especially when the town became the capital of the Protectorate, the *ṭarīḳa* declined and is no longer the tightly-knit theocratic unit which it was formerly. Shaykh Maḍḍar is buried beside the stone house given him by Lord Delamere in recognition of the Shaykh's kindness on a hunting expedition and his shrine is frequently visited, especially by women in search of blessing. The Shaykh's staunch support of British interests was recognized by the appointment of the local Ḳāḍī from amongst his descendants.

After the transfer of the Protectorate capital from

Berbera, Hargeisa began to assume its present character. As befits the main centre of trade in the interior of northern Somaliland it now boasts a modern hospital, some cinemas, a power station and broadcasting service, an aerodrome and most of the appurtances of modern government. A local government council was opened in 1953, and a legislative council in 1957. The latter merged with the Somalia legislative assembly at Maḳdis̲h̲u when the Protectorate and U.N. Trust Territory of Somalia joined to form the independent Somali Republic on 1 July 1960.

HARG̲H̲A, the Arabic form of the Berber name of the tribe to which Ibn Tūmart [*q.v.*] belonged, the Arg̲h̲en (the prosthetic *hā'* is general in Arabic transcriptions of the names of Berber tribes, and the suffix *a* [< *at*] in the plural has been substituted for the *-ən* of the Berber plural). The original home of this tribe is not known with any certainty. H. Basset and H. Terrasse (*Sanctuaires et forteresses almohades*, in *Hespéris*, 1924/1, 19) identify the Harg̲h̲a with the G̲h̲eg̲h̲āya (Ig̲h̲ig̲h̲ayən), who are also referred to by historians as belonging to the confederation of the Harg̲h̲a. But E. Lévi-Provençal (*Doc. inéd. d'histoire almohade*, Paris 1928, 55, n. 2) and R. Montagne (*Les Berbères et le Makhzen*, 64) consider on the contrary that the latter were natives of the Anti-Atlas, south-east of Taroudant, where some of the Arg̲h̲ən still exist, surrounded by other tribes bearing the names of particular elements of the confederation of the Harg̲h̲a, as given by al-Bayd̲h̲aḳ. A little above Tinmel there still exists a village with the name Arg̲h̲an, whose inhabitants maintain that their ancestors came from Sūs (E. Doutté, *En tribu*, 120-1). It is therefore possible that one fraction of the Arg̲h̲ən, whose original home was in the Anti-Atlas, may have settled on the northern slopes of the Great Atlas. E. Lévi-Provençal (*Six fragments inédits*, 8) records among the Harg̲h̲a a *ribāṭ* (*rabṭa*) which Ibn Tūmart had built, and gives its name as Īgīllīz (Īgīlīz in al-Bayd̲h̲aḳ); now, among the G̲h̲eg̲h̲āya (see E. Laoust, *Contribution à une étude de la toponomie du Haut Atlas*, in *REI*, 1942, 117) there still exists a village named Glīz which must be the same one; at the foot of the mountain a number of grottoes had been excavated, and one of them which the Almohads had venerated was called in Arabic *al-g̲h̲ār al-muḳaddas* because Ibn Tūmart was accustomed to retreat there to pray and meditate. (It is perhaps not by chance that ʿAbd al-Muʾmin gave the name Īgīlīz to the obsidional town which he founded to the north of Almoravid Marrākus̲h̲, the modern Gīlīz).

Before the appearance of Ibn Tūmart, the Harg̲h̲a were a branch of the main confederation of the Maṣmūda [*q.v.*], from among whom seven fractions in all adopted the Mahdī's cause immediately after his return to the Atlas—the Harg̲h̲a, Hīntāta, Tinmel[lel], Gedmīwa, Genfīsa, Urīka and Hazraga (Ibn K̲h̲aldūn, *ʿIbar*, Būlāḳ, vi, 225; H. Basset and H. Terrasse, *op. cit.*, 16-9).

After the recognition of Ibn Tūmart by the Harg̲h̲a, the Almoravids tried to seize the Mahdī while he was in Īgīlīz, by taking the tribe from the rear, but their attempt failed (516/1122): after a second attempt by the Almoravids against Īgīlīz (517/1123), Ibn Tūmart finally abandoned his *ribāṭ* in order to settle at Tinmel[lel] [*q.v.*] which he made the capital and bastion of his movement (518/1124). Thenceforward, Īgīlīz was no more than a sanctuary and place of pilgrimage which the Almohad caliphs visited from time to time, until the day when the dogma of the Mahdī was officially repudiated by Idrīs al-Maʾmūn, the ninth Almohad caliph (626/1229-629/1232).

The Harg̲h̲a comprised one of the least powerful fractions, but Ibn Tūmart had endeavoured to bring them into prominence. On the one hand, he had incorporated with them the members of the tribes who came from the Anti-Atlas (see R. Montagne, *op. cit.*, 64), on the other hand he had attached several of his principal companions, especially ʿAbd al-Muʾmin [*q.v.*], Abū ʿAbd Allāh b. Muḥsin al-Bas̲h̲īr and others to them; but the Harg̲h̲a, fearing to be dispossessed of their rights as relatives and heirs of Ibn Tūmart, were utterly opposed to all such adoptions, and from the times of the Mahdī's death tried to reject them. The members of his family, led by his two brothers, did not indeed approve of the nomination of ʿAbd al-Muʾmin as caliph; on being condemned to live under surveillance in Marrākus̲h̲, they escaped and tried to rebel, but failed and were executed. In this way the part played by the Harg̲h̲a in the history of the Almohads came to an end, and they sank back into obscurity.

HARĪ RŪD, the river of Harāt, which flows for almost 350 miles from the Dai Zangī mountains, west of the Kūh-i Bābā range in central Afg̲h̲ānistān to the oasis of Marw. The river flows south of Harāt, and some thirty miles west of the city it changes direction and flows north. For about sixty miles it forms the boundary between Īrān and Afg̲h̲ānistān before flowing into the Soviet Union. It irrigates the Tad̲j̲and oasis and then is lost in the sands. In the early spring the river is swift and deep at Harāt but in the late autumn it is low and passable.

ḤARĪB, a district of South Arabia on the *wādī* of the same name and lying immediately to the west of Bayḥān [*q.v.*]. The Wādī Ḥarīb rises under the name of Wādī ʿAyn in Bilād al-D̲j̲uraybāt in the highlands of Murād [*q.v.*] and runs northeastwards for about 30 miles through rugged and barren hills to disappear into the desert of Ramlat Sabatayn. About halfway along its course it is joined from the east by the Wādī Mablaḳa and widens into a broad silt plain. Some ten miles further north it unites

with the Wādī Muḳbal which runs almost parallel to it a short distance to the west. Finally, just before its entry into the desert, it receives, also from the west, the Wādī Ablaḥ, which is separated from the main area of Ḥarīb by the Ḳaran mountains and an isolated spur thereof, Dj̲abal Ḥas̲h̲fa. At present the boundary between the Yemen and Bayḥān traverses Ḥarīb so that the upper reaches of Wādī ʿAyn and the plain at its confluence with Wādī Mablaḳa belong to Bayḥān, while Wādī Ḥarīb proper lies in the Yemen, coming under the jurisdiction of the Governor of Mārib [*q.v.*]. It is interesting to note that at some time in antiquity Ḥarīb may have constituted the westernmost region of Ḳatabān [*q.v.*], for across the gap between Dj̲abal Ḳaran and Dj̲abal Ḥas̲h̲fa there is found an ancient stone wall, al-Ḳayd, whose defence-works are directed westwards. Just west of Ḥarīb lie the lands of Murād which may have been independent or belonged to Sabaʾ [*q.v.*] before being incorporated into Ḳatabān. In the 6th century A. D. Ḥarīb formed part of Ḥaḍramawt [*q.v.*].

At present the chief town of the district is Darb Āl ʿAlī which is situated within the Yemen between Wādī Muḳbal and Wādī Ḥarīb. Landberg described it as inhabited by about 250 *as̲h̲rāf*, drawn from four families, who own most of the land of Ḥarīb. The most important was the Āl ʿAlī b. Ṭālib, the family of the *Amīr* of Ḥarīb. There were also resident there several families of merchants and artisans (*ḳarawī*, pl. *ḳirwān*), each with its own hereditary profession. About five miles further north, at the confluence of the two *wādī*s, lies Darb Bū Ṭuḥayf, which belongs to the Āl Abū Ṭuḥayf who claim descent from the Hilāl [*q.v.*]. The Banū ʿAbd (of Murād) occupy parts of the *wādī*, including the town of Darb Āl ʿAmr in Wādī ʿAyn and the hills of Dj̲abal Ḳaran. On the latter is the tomb of a saint, Abū ʿĀmir Uways b. al-Murādī al-Ḳaranī, a contemporary of the Prophet. The village of al-Sāḥa, near Darb Āl ʿAmr, also belongs to a clan of Banū ʿAbd, the Āl G̲h̲ut̲h̲aym, who are noted locksmiths. Some members of this clan emigrated to Ṣanʿā [*q.v.*] and practised their profession there. Hamdānī also gives the inhabitants of Ḥarīb as the Murādī tribes of Rabīʿ, K̲h̲alaf and ʿUd̲h̲r. The Āl Rabīʿ, who are *mas̲h̲āʾik̲h̲*, still lead a nomadic life in Ḥarīb, Bayḥān, and also in al-Dj̲ūba in Murād. As is often the case in this part of Arabia, many of the towns are occupied by *raʿiyya* or dependent classes, while their patrons live outside the towns in tents.

The identification of Ḥarīb with Pliny's Caripeta can no longer be regarded as sound. Nevertheless the area is covered with evidence of ancient occupation in the form of ruined towns and the remains of irrigational systems. A particularly important site is Had̲j̲ar Ḥinū al-Zarīr, just across the frontier from Darb Āl ʿAlī and north of the isolated Dj̲abal Ḳarn ʿUbayd. It was briefly visited by an American archaeological mission in 1951, though not excavated, and is reported as having several buildings still largely intact and many inscriptions. According to tradition it was named after one al-Zarīr b. Ṣaʿaḳ, who once ruled there, and inhabited by smiths who were *raʿiyya* of the Ḥimyarites. There may be some truth in the latter tradition since there is abundant evidence of the existence of an iron-smelting industry in the general area. Landberg also mentions a site called Timnaʿ, with associated ruins, in the plain of al-Dj̲ufra on Wādī Ablaḥ, which he supposed to have been the ancient capital of Ḳatabān, but it has now been demonstrated that the latter actually lies elsewhere [see BAYḤĀN]. There are also reports of a ruin field called Had̲j̲ar Ḥarīb north of Darb Bū Ṭuḥayf but little information is available on it.

Although the main caravan route from Bayḥān to Mārib by-passes Ḥarīb to the north, there is an alternative road from Wādī Bayḥān which takes advantage of an impressive stepped pass leading through the mountains into Wādī Mablaḳa. Traditionally cut by a certain Bārg̲h̲āl, it is called *MBLQT* in a Ḳatabanian inscription at the pass, which records that it was built by a *mukarrib* of Ḳatabān, Yadaʿ ʾab D̲h̲ubyān b. S̲h̲ahr, who probably reigned about 200 B.C. From there the road runs past Darb Āl ʿAlī and through the wall, al-Ḳayd, whereafter there is a choice of three mountain roads into the Wādī al-Dj̲ūba.

Several other places with the name of Ḥarīb or *ḤRB* are known from Hamdānī and the inscriptions.

(A. K. IRVINE).

ḤĀRIM, small town in northern Syria dominated by a fortress of the same name and situated in 34° 10′ E. and 36° 11′ N., 88 km. west of Aleppo, 39 km. east of Anṭākiya and 21 km. south of the lake of ʿAmḳ [*q.v.*]. Its site, at the foot of the western slope of the Dj̲abal al-ʿAlā, makes it into a point of remarkable strategic importance. Situated slightly off the road from Anṭākiya to Aleppo, yet sufficiently close to control it, it guards the entry to the massifs of the Dj̲abal al-ʿAlā and the Dj̲abal Barīs̲h̲a.

Consisting at first simply of an enclosure of sheep-folds (whence probably the origin of the name Ḥārim, from the Semitic root *ḤRM*, with its connotations of prohibition, exclusion, etc.), then, under the Byzantines, a small castle, Ḥārim was occupied by the Arabs at the time of the conquest, then re-taken by the Byzantines, and finally conquered by the Sald̲j̲ūḳ sultan Sulayman b. Ḳutulmis̲h̲ in 477/1084. Malik-S̲h̲āh occupied it in 479/1086. Then, after the Frankish conquest in 491/1098, it became an important fortress. The Crusaders made it into a strong castle which commanded the route out to Dj̲isr al-Ḥadīd [*q.v.*] and ensured the safety of Anṭākiya. After several attempts, Nūr al-Dīn succeeded in taking Ḥārim in 559/1164 and granted it as a fief to the *amīr* Mad̲j̲d al-Dīn Abū Bakr b. al-Dāya. In 579/1183, Ṣalāḥ al-Dīn seized it from the Zangids and gave it to one of his followers, Ibrāhīm b. S̲h̲irwa. The attacks made by the Crusaders to recover Ḥārim were all unsuccessful and the fortress remained in the hands of the Ayyūbids. Al-Malik al-Ẓāhir G̲h̲āzī, the son of Ṣalāḥ al-Dīn, rebuilt it entirely, as is indicated by an inscription of 595/1199 engraved above the lintel of the entrance gate. In 658/1260, the Mongol Hūlāgū occupied Ḥārim, which from then on played only a minor rôle in the military history of northern Syria.

Nowadays, Ḥārim, the site of which is still marked by the ruins of its fortress, has a permanent market in which the agricultural products of the region are sold. Its gardens have always been famous, as is witnessed by various Arab writers, and its olive groves occupy the lower slopes of the Dj̲abal al-ʿAlā.

(S. Ory)

ḤARĪM (also *ḥaramgāh*, *zanāna*, etc.), a term applied to those parts of a house to which access is forbidden, and hence more particularly to the women's quarters. In ancient Arabia women seem to have enjoyed some measure of personal freedom, though the use of the veil was not unknown, especially in towns. It became commoner after the advent of Islam, with the adoption, on the one hand of a stricter code of sexual morality, on the other of a more urban way of life. The provisions of the Ḳur'ān on the veiling and seclusion of women (XXXIII, 53-9) were elaborated and made severer by jurists and commentators, and used to justify a system that owed more to the earlier city civilizations of the Middle East than to Islam. In the great houses, in the cities of the Islamic Empire, the free Arab lady known to us from early poetry disappears. While the lower and middle classes seem generally to have practiced a form of monogamy, the wealthier classes maintained elaborate gynaecea, in which, besides their legal quota of wives, there were establishments of concubines, attendants, eunuchs and guards. So normal did this become in medieval Muslim society that Muslim travellers are shocked when they visit other societies in which women enjoy greater social freedom. The system survived into comparatively modern times, and has not entirely died out even at the present day. In its Turkish form, *harem*, the word has passed into many European languages.

(Ed.)

ḤARĪR, silk. The etymology of the word is obscure; its synonyms *ibrīsam* and *ḳazz*, as well as *dībād̲j̲* which more particularly denotes silk brocade, are Persian loanwords; *k̲h̲azz*, properly speaking a mixture of silk and wool, but sometimes also used for silk, is etymologically isolated in Arabic, and perhaps connected with *ḳazz*. *Ḥarīr* occurs in the Ḳur'ān, sūras XXII, 23 = XXXV, 33, and LXXVI, 12, where it is said that the raiment of the people of Paradise will be silk. A group of traditions which, together with others, express an ascetic tendency in early Islam, forbids the use of silk to men but allows it to women. The prohibition is often expressed in the form that he who wears silk in this world, shall not wear it in the next. (Another version forbids it to men only if it is worn for ostentation. On the other hand, the wearing of silk is occasionally not recommended even for women.) The use of silk in garments by men is allowed only as appliqué work, as a border not more than two fingers broad, etc. When the Prophet was presented with a silken robe, he wore it once during the ritual prayer, but then expressed strong repugnance for it. The traditions declare that the use of silk for upholstery is like its use for clothing, and they explicitly forbid its use in saddle-cushions and the like. Sufferers from itch, however, may use silk garments, and the Prophet allowed their use to ʿAbd al-Raḥmān b. ʿAwf and al-Zubayr b. al-ʿAwwām, who complained of lice. A contrary tendency is attested by traditions according to which some ancient authorities used to wear silk, and by counter-traditions which threaten those who regard silk and *k̲h̲azz* as allowed, with punishment. On the details of the traditions, see A. J. Wensinck, *Handbook*, s.v. clothes; the same, *Concordance*, s.v. *ḥarīr*. As a result of these traditions, all schools of religious law forbid to men the wearing of garments made completely of silk next to the skin, and they differ on many questions of detail which do not fall exactly under this close definition. The S̲h̲āfiʿīs and the Ḥanbalīs, in addition, forbid sitting or leaning on silk (as material of cushions, etc.), or using it as hangings on walls, except for the Kaʿba, but they allow the wearing of garments made partly of silk if its quantity is not greater than that of the other material. The Mālikīs forbid the use of silk garments even to sufferers from itch, lice, etc.; they also forbid sitting on silk but allow its use for hangings. The Ḥanafīs permit lying or sleeping on silk, also the use of silk cushions and of silk prayer mats; according to Abū Ḥanīfa (against the *mas̲h̲hūr*

of the school) it is permitted to wear outer garments of silk provided they do not touch the body. All these prohibitions apply to men only. If a man performs the ritual prayer in a garment of silk, he commits a sin but his prayer does not become invalid. Different from the question of wearing silk garments is the question of wearing silk material in order to fulfil the minimum requirement of covering one's "nakedness" (*ʿawra*), particularly during the ritual prayer; in this last case, if one must chose between silk and material which has become ritually unclean, the use of silk is generally preferred. The unlawful use of silk at a wedding dinner-party (*walīma*) cancels the religious obligation of accepting a personal invitation to it [see ʿURS]. The works of *fiḳh* treat of the rules regarding the use of silk either in a special section on clothing or in the chapters on ritual prayer and/or on the *walīma*; the doctrines of the four *sunnī* schools of religious law are conveniently set out in ʿAbd al-Raḥmān al-Djazīrī, *K. al-fiḳh ʿala 'l-madhāhib al-arbaʿa*, ii (*ḳism al-muʿāmalāt*), 2nd ed., Cairo 1933, 12 ff. See also Juynboll, *Handleiding*[3,4], 157; Guidi and Santillana, *Sommario del diritto malechita*, i, 57 f., ii, 63; A. Querry, *Droit musulman*, i, 60 f. (for the Shāfiʿīs, the Mālikīs, and the "Twelver" Shīʿīs respectively).

Circumstances beyond our control have obliged us to refer the reader to the Supplement for articles on the silk trade and industry in mediaeval Islam and post-Mongol Persia. What follows here is divided into four sections:

i. A brief general survey of the silk industry and trade, especially with Europe, from the point of view of the European economic historian;

ii. A detailed examination of the Ottoman silk industry;

iii. A survey of the silk industry in the Arab lands;

iv. A contribution by an art historian, reviewing the products of the Islamic silk industry particularly as they are represented in the museum collections of the Western world.

For some information on silk cultivation and the mediaeval silk trade, see FILĀḤA, TIDJĀRA, TŪT.

(ED.)

i. — SURVEY OF THE TRADE AND INDUSTRY

In the mediaeval and early modern period silk ranked among the three or four most important commodities of intercontinental trade. At least until the beginning of the 19th century silk and silk textiles were the most important exports from Muslim countries. Within this long period the most striking fact is the gradual transfer of silk culture from east to west. While Muslim demand and technique remained, so far as we can judge, practically static in the centuries following the Mongol invasions, silk weaving and the breeding of silkworms were steadily spreading in Europe.

The growth of the European silk industry influenced Muslim production in two ways, negatively by increasing the competition in the highly specialized field of silk weaving, positively by raising the demand for raw silk. The mechanization of European sericulture and silk weaving in the 19th century was the final blow to the traditional Muslim crafts; it is clear, however, that this was not a completely new point of departure, but the result of a development that had begun several centuries before.

It is at present impossible to point to any decisive moment in this long development. In the 7th/13th century the near monopoly of the Muslim weavers on the European market had first been broken by the weavers of Lucca. In the 9th/15th century Italian silk fabrics figured among the Venetian exports to the Levant, and at the time of the Portuguese discoveries they had reached the Central Asian and Indian markets. In the factories of the Levant they were met by a counter-current of Muslim silk fabrics on their way to Europe, but this counter-current grew steadily weaker. What once had constituted the bulk of Muslim exports to Europe had, by the middle of the 11th/17th century, become limited to a few specialized qualities. It was not a question of quantity and price only. As early as 979/1571 a Venetian traveller in Persia noted that the finish of the Persian smooth stuffs and damask was inferior to the Italian. Around 1153/1740 an English merchant (J. Hanway) stated that Persia in good years would be a promising market for "rich silks, gold and silver lace, velvets and other rich manufactures". Even at that time it might seem like carrying coals to Newcastle, but a century later the German expert, Blau, found that the Persian weavers were working for the home market only, their products being too coarse to be exported. In 1889 some 15% of the total imports into Persia were English, Austrian, French and Russian silk fabrics (Curzon).

The towns which were admired by the mediaeval and early modern travellers for their flourishing silk industry, Yazd, Kāshān, Iṣfahān, Damascus and others, maintained their traditional crafts into the present century. Without statistical data it is impossible to decide when they passed from stagnation to decline. It is interesting to note, however, that the movement towards the west took place within Islam as well as from Islam to Europe. In Bursa, conveniently situated both in relation to the caravan routes from Persia and to the important market constituted by the Ottoman court, silk weaving expanded spectacularly in the 9th/15th century and maintained its prosperity at least to the end of the 12th/18th century. The prosperity of the silk industry in Izmir and on Chios belongs to an even later date and reached its highest level at the end of the 12th/18th century, when the fabrics of Izmir competed successfully with local products in the market of Bursa. In this case, at least, decline did not begin before the industrialization of European production.

These developments in the weaving industry necessarily influenced the localization of sericulture. Until *ca.* 900/1500 the Caspian provinces, Māzandarān, Gīlān, and Shīrwān, were by far the most important districts from the point of view of international trade. The production of other regions, such as Syria or Khurāsān, was mostly manufactured locally. The earliest reasonably reliable estimates of the production of raw silk in Persia date from the first half of the 11th/17th century, when the firm rule and active commercial policy of ʿAbbās I [*q.v.*] had brought the sericulture of the Caspian provinces to a peak of prosperity. The often quoted estimate of Olearius from 1047/1637, who put the average "harvest" at 20,000 bales (roughly 2,000 tons), was, however, considerably higher than the contemporary estimates of Dutch and English merchants, who presumably had a better knowledge of local conditions. Though the estimates which were sent to the Dutch and English East India Companies vary, 1,000 tons would probably be a realistic figure for the annual production of raw silk in Persia at the death of ʿAbbās I. Two-thirds of the annual production was exported to Europe, and the most important district

was Gīlān, which alone accounted for half the total production.

The 11th/17th century was to all appearances a prosperous one for the Persian producers and for their middlemen, the Armenian merchants. This prosperity came to a sudden end with the political break-down of the early 12th/18th century. Around 1153/1740, according to Hanway, the production of Gīlān had fallen to *ca.* 160 tons annually, while the breeding of silkworms had come to a complete stop in S̲h̲īrwān.

Political stability in the second half of the 12th/18th century brought renewed prosperity to Gīlān, which from this time on completely overshadowed the other Persian silk-producing regions. The highest production figures in the whole history of Gīlān were probably reached shortly after the middle of the 19th century, when the mechanization of the European silk industry and better means of access to the Caspian provinces brought the demand to unprecedented heights. Around 1850 Blau estimated the annual production of Gīlān at 350-420 tons; in 1864 it was more than 1,000 tons. This was the peak, however. The same year disease (*pebrine*) appeared among the silkworms, probably (as in France) the result of unlimited expansion without change of technique.

Persian sericulture never recovered fully from this blow. At the very moment when heavy investments were necessary to exterminate the *pebrine* and to mechanize silk-winding, prices of raw silk took a downward turn, partly as a result of the long depression in Europe, partly because of Japanese competition. After 1890 conditions improved to some extent, but the highest production figure reached before 1914 was *ca.* 550 tons.

Syrian silk appears among the European imports from Syria in the middle ages, but primarily it was manufactured locally, particularly in Damascus. It was probably during the wars between the Ottoman Empire and Persia in the late 10th/16th and early 11th/17th centuries that it first came into prominence as a substitute for the Persian raw silk. The French specialized in the silk of Lebanon, while the other nations seem to have preferred the qualities from northern Syria.

In spite of some expansion, mostly in Lebanon, the Syrian production of raw silk was much smaller than the production of Persia until the last decades of the 19th century. The earliest reliable statistics show an annual average of *ca.* 110 tons between 1861 and 1870. The Syrian silkworms were hit by disease like those of Persia, but the consequences were less serious. The more intimate connections with Europe and a considerable import of French capital facilitated a rapid change of technique. The *pebrine* was exterminated within a few years and the mechanization of silk-winding got under way. Before the first world war the production of Syria and Lebanon equalled that of Persia.

The prosperity of the sericulture of western Anatolia dates from the beginning of the 11th/17th century. Before the 19th century it produced mainly for the silkweavers of Izmir, Chios and Bursa, but as early as 1837 steam-power was used in the winding of silk in Bursa. This is probably the main reason why this region was able to expand far beyond the older producers of Persia and Syria in the late 13th/19th century. On the eve of the first world war production had reached 1000 tons annually [see BURSA].

With a total of a little more than 2000 tons annually around 1914 the Muslim countries accounted for less than 10% of the world production of raw silk. The war caused a serious decline and recovery was delayed by the low prices of raw silk during the depression and later by the introduction of artificial fibres. At present the economic importance of sericulture in the Muslim countries is negligible. Including exported fresh cocoons the production amounted in 1962 to *ca.* 320 tons of raw silk, or little more than 1% of the world production.

Bibliography: Information on the silk industry and sericulture is extremely scattered—as on most other aspects of the economic history of Islam. W. Heyd, *Histoire du commerce du Levant au moyen âge*, Leipzig 1886, is fairly complete on the period up to ca. 900/1500. Not quite so useful are Paul Masson, *Histoire du commerce français dans le Levant au XVII*e *siècle*, Paris 1896 and idem, *Histoire du commerce français dans le Levant au XVIII*e *siècle*, Paris 1911. For recent statistics see *Statistique de la production de la soie en France et à l'étranger*, Syndicat de l'Union des Marchands de Soie, Lyon 1872—and the *Production Yearbook* of FAO. Otto Blau, *Die commercielle Zustände Persiens*, Berlin 1858; G. N. Curzon, *Persia and the Persian question*, 2 vols., London 1892 (with list of the most important travellers in Persia); G. Ducousso, *L'industrie de la soie en Syrie*, Paris-Beirut 1913; *Bronnen tot de geschiedenis der oostindische compagnie in Perzië*, ed. H. Dunlop = *Rijks geschiedkundige publicatiën vol. 72*, The Hague 1930 (important on the 11th/17th century); D. Chevallier, *Lyon et la Syrie en 1919*, in *Revue historique*, ccxxiv, Paris 1960.

(N. Steensgaard)

ii. — The Ottoman Empire

The word for "silk" in Ottoman Turkish is *ipek*, in Kïpčak Turkish *yipek*; in Eastern Turkish the word *torḳu*, *torg̲h̲u* means silk or silk stuff; the word *ag̲h̲ï*, found in the inscription of Kültegin (S 5) means rich silk stuff, valuable goods (see Maḥmūd Kās̲h̲g̲h̲arī, *Dīwān Lug̲h̲āt al-Turk*, s.v.); in old Ottoman the expression *aḳ ḳumās̲h̲* is occasionally found for silk stuff.

By the end of the 8th/14th century Bursa was one of the principal silk markets of the world, as is evident from the descriptions of J. Schiltberger (*Travels and bondage . . .*, ed. J. B. Telfer, London 1879, 34) and Clavijo (*Narrative of the embassy . . .*, tr. Markham, London 1859, 159; see also Pero Tafur, *Travels and adventures, 1435-39*, tr. M. Letts, New York and London 1926, 149, and B. de La Broquière, *Voyage d'Outremer*, ed. Ch. Schefer, Paris 1892, 134). Just as the silk industry and trade of Byzantium depended in large measure on silk from Persia (R. S. Lopez, *Silk industry in the Byzantine Empire*, in *Speculum* xx (1945)), so the development of the silk trade and industry in the Ottoman Empire is connected with the fact that the Persian silk caravans came increasingly to the Ottoman capital of Bursa.

It is known that the weaving of silk stuffs was carried on in various towns of Seld̲j̲ūḳ Anatolia (see below). In early Ottoman sources it is noted (ʿĀs̲h̲ïḳ Pas̲h̲a-zāde, ed. ʿĀlī, 56; ed. Giese, 52; Gn. tr. R. Kreutel, 87) that during the reign of Murād I, Alas̲h̲ehir (Philadelphia), still in Byzantine hands, was famous for its red silk stuffs, from which banners and robes of honour (*k̲h̲ilʿa*) were made. Pegolotti's mention (early 8th/14th century, *La pratica della mercatura*, ed. A. Evans, Cambridge Mass. 1936, 208, 297, 300; see W. Heyd, *Hist. du commerce du Levant*, ii, 674) of *seta turci* presumably refers to the principality of

Aydīn, so that silk for local needs was apparently produced here. A document of the reign of Meḥemmed II shows that silk was produced in the Tokat-Amasya region in the 9th/15th century (see R. Anhegger and H. Inalcık, *Ḳānūnnāme-i sulṭānī*, Ankara 1956, p. 41, no. 31). The 9th/15th century registers of the *ḳāḍīs* of Bursa contain no indication that silk was then made there or that Anatolian silk was used. The silk production and export of the Morea, on the other hand, had been famous since Byzantine times (see F. Thiriet, *Régestes des délibérations du Sénat de Venise concernant la Romanie*, ii, Paris 1959, docs. 1681, 1859, 2071, 2202; iii, Paris 1961, docs. 2448, 2508). Although the silk of the Morea was not so esteemed as that of Persia, a *ḳāḍī*'s record shows that it was coming to Bursa in 906/1500 (Bursa Şeriye sicilleri, no. 18/17). Silk produced in Albania was exported to Bursa and to Europe in the 10th/16th century (see H. Inalcık, *Sûret-i defter i Sancak-i Arvanid*, Ankara 1954, 126; F. Dalsar, *Bursa'da ipekçilik*, Istanbul 1960, 207; and, in a *defter-i mufaṣṣal* of the reign of Selīm I, Başvekâlet Arşivi, tapu no. 80, *Defter-i resm-i ḥarīr-i wilāyet-i Mora*).

All the same, in both the Seldjūḳ and the Ottoman periods, the raw material for international trade and for local silk manufacture in Anatolia came mainly from the districts south of the Caspian Sea. In the time of the Ilkhāns, the Persian silk caravans followed the *Shāhrāh-i Gharbī*, which led via Sulṭāniyye, Erzurum, Erzindjan and Sivas to Konya; two minor routes branched off at Sivas for Constantinople (Z. V. Togan, in *Ikt. Fak. Mecm.*, xv (1954), 45). With the establishment of the Ottoman state, some of these caravans began to come by these routes to Bursa, instead of continuing to Constantinople or Foča; yet even in the 8th/14th century a shorter route, Erzurum—Erzindjan—Tokat—Amasya—Bursa, had surpassed them in importance, and the old sea-route from Trebizond to Constantinople, formerly very active, thenceforward declined. At Bursa, now a Muslim city, Persian merchants could easily and safely establish direct contacts with Italian merchants. Orkhān granted trading concessions to the Genoese and built a *bezzāzistān* at Bursa; later references in *waḳf*-registers to this *bezzāzistān* mention a *mīzān* (balance) for silk in it.

It may justly be claimed that the Ottomans consciously followed a policy of making their new capital a principal entrepôt for Persian silk, of gaining control of the silk-routes, and, in the 10th/16th century, of occupying the Persian centres of silk-production. The factors prompting this policy were the rich revenues which silk brought to the Treasury, the great demand for silk stuffs in the palace and among the wealthy classes, and the increasing dependence of the fortunes of the industry on such a policy (see H. Inalcık, *Türkiye'nin iktisadî vaziyeti*, in *Belleten*, xv/60 (1951), 664-75); the acquisition of silk and silkstuffs was also regarded as a means of amassing wealth (see H. Inalcık, *15. asır Türkiye iktisadî ve içtimaî tarihi kaynakları*, in *Ikt. Fak. Mecm.*, xv (1953-4), 55-65).

As early as the reign of Bāyezīd I, Ottoman conquests extended control over the silk-routes, in the north towards Amasya, Tokat and Erzindjan, and in the south towards Malatya. When the attempts in the 10th/16th century to control Tabrīz and to establish close relations with Gīlān and Shirwān are being considered, the economic motive must not be overlooked; from the time of the submission of Amīr Dūbādj (Muẓaffar Sulṭān) to Süleymān I in 940/1533, the Ottomans regarded the rulers of Gīlān as their vassals (Ferīdūn, *Munshaʾāt*², ii, 163).

The Persian silk exported to Anatolia came principally from Māzandarān, Gīlān and Shirwān. The products of the first two districts were collected first at Sulṭāniyya, and in later years mainly at Tabrīz; as early as 741/1340, the *tamghā* [*q.v.*] on silk at Tabrīz amounted to 300,000 *dīnārs* (ʿAbd Allāh al-Māzandarānī, *Resālā-ye Falakiyyā*, ed. W. Hinz, Wiesbaden 1952, p. 59). Here the silk was bought by the great merchants and the caravans were assembled; these caravans reached Erzurum by the middle valley of the Aras, known as Čuḳūr-i Saʿd (or Sāʿat). The caravans of silk from Shirwān and Gandja reached Erzurum via Shamākhī and Tiflīs. The caravans bound for Aleppo, also an international silk-market, went via Tabrīz, Van, Bidlīs and Diyārbakr, or along the valley of the Euphrates via Erzindjan and Kemakh. The sea-route from Trebizond was also used (Dalsar, *op. cit.*, p. 195, doc. 81, of 1016/1607). From the 8th/14th century onwards, Bursa began to rival Aleppo as a destination for Persian silk-caravans (the statement of W. Heyd, ii, 673, that the Ottomans obstructed the silk-routes is baseless). The caravans depended largely on the supply of horses and camels by the Türkmen nomads; at the end of the 9th/15th century a horse was hired for the journey Tabrīz-Bursa-Tabrīz at 400 *aḳčes* (about 9 ducats). Several caravans came to Bursa each year; an average caravan consisted of 300-400 beasts and carried 200 *yük*s of silk (a *yük* consisted of 400 or—according to another note—550 *lidre*s; the *lidre* of silk was 120 *dirhams*, so that one *yük* was the equivalent of *ca.* 154 Kg.); a caravan of 919/1513 brought 400 *yük*s of silk (Dalsar, p. 168, doc. 41). The Persian silk-merchants resident at Bursa in the 9th/15th century were mainly from Tabrīz, Gīlān, Čuḳūr-i Saʿd and Shirwān (on them see *Ikt. Fak. Mecm.*, xv (1953-4), 62-4). At this period Armenian merchants were in the minority. Most of the silk brought to Bursa was the highly-prized fine silk of Astarābād (*setta stravai*). The *ḳāḍīs*' registers of Bursa contain records that silk was sold there on behalf of the Aḳ-Ḳoyunlu ruler Yaʿḳūb and the Ṣafawid shāhs Ismāʿīl, Ṭahmāsb and ʿAbbās (Dalsar, docs. 40, 62, 67, 240). Of these merchants, called indiscriminately ʿAdjam in Ottoman sources, some were certainly Ādharī Turks; the records distinguish the 'resident' (*mutamakkin*) from the 'travelling' (*saffār*) merchants.

Government regulations provided that the silk must be unloaded at the *bezzāzistān* (R. Anhegger and H. Inalcık, *Ḳānūnnāme-i sulṭānī*, p. 41, no. 31). There the silk was weighed on a scales (*mīzān*) set aside for it (in the 11th/17th century the *mīzān* at Bursa was in the ʿAdjem khānī, later called the Ḳoza khānī, see Ewliyā Čelebi, *Seyāḥatnāme*, ii, 19), the dues on it were collected, and the owner was given a *tedhkire* stating the weight of the silk and certifying that the dues had been paid : these details were also entered in the *mīzān defteri*. In the 11th/17th century, on every *wazna* (*vezne*), that is 30 *lidre* (4500 gr.), of silk a *mīzān resmi* or *terāzū resmi* of 52 *aḳčes* each was collected from seller and buyer (see H. Inalcık, *Bursa*, in *Belleten*, xxix/93 (1960), 58). Meḥemmed II introduced another *mīzān resmi* on the frontier at Tokat. This second tax annoyed the Persians, and in 877/1472 Uzun Ḥasan took and sacked Tokat. Silk in transit through Uzun Ḥasan's realm paid fairly high dues at Erzindjan and Kharput or (on the other route) at Diyārbakr and Mardin (W. Hinz, *Das Steuerwesen Ostanatoliens im 15. und 16. Jahrhundert*, in *ZDMG*, c (1950), 197). The Ottomans later

established another *mīzān* at Erzurum (on measures to counter-act tax-avoidance see below, p. 214). Whatever its destination, all imported silk had to be brought to the Bursa *mīzān*. Sales were carried out in the *bezzāzistān*, after the *mīzān resmi* had been paid, by brokers (*dellāl*) under the control of the *simsār* [*q.v.*]. The broker took a fixed due (*dellāliyye*) (see Anhegger and Inalcık, *op. cit.*, 41-3; for a *ḳānūn* controlling brokers, *op. cit.*, 57-9; for their malpractices, Dalsar, *op. cit.*, pp. 93-5, 224, 285). The activities of the *simsār* were supervised by the sultan's *khāṣṣa ketkhudāsī* in Bursa, who took charge of the revenues raised. Silk-merchants could not leave the *khān* before obtaining the permission of its supervisor and the *simsār's* attestation that the dues had been paid.

The following table gives the amounts for which at various dates the three-year farm of the Bursa *ḥarīr mīzānī* was leased:

	million *akčes*	
892/1487	6.0	
914/1508	5.4	
918/1512	7.35	
928/1521	2.1	
930/1523	3.0	
947/1540	2.9	
950/1543	3.8	
965/1557	4.2	
1015/1606	5.2	(including *gümüsh yasaghī* and *ḳaṣṣābiyye*)

The silk trade developed considerably during the reign of Bāyezīd II, who built at Bursa two great 'sulṭānī' khāns, those popularly known as the Koza khānī (or ʿAdjem khānī) and the Pirinč khānī. Under Selīm I, there was a great regression; only towards the end of the reign of Süleymān I do the figures for the silk-trade approach again those of the reign of Bāyezīd II. For comparison it may be noted that the silk *mīzān muḳāṭaʿasī* for Aleppo under Selīm II amounted only to 400,000 *akčes*. It has been calculated that in 978/1570 the total annual silk production of Persia was 22,000 *yüks*, of which 3,000 were exported to Turkey (P. Masson, *Hist. du commerce français dans le Levant au XVII^e siècle*, Paris 1897, 416). In about 905/1500, the Bursa silk industry needed a daily supply of 5 fardellos (1250 Bursa *lidres*) (G. R. B. Richards, *Florentine merchants in the age of the Medici*, Cambridge, Mass., 1932, 110). The silk merchants of Bursa would gather at the *bezzāzistān* and buy the imported silk en bloc at a single price, later distributing it among themselves (Dalsar, p. 221; for the same system under the Byzantines, see Lopez, *op. cit.*, offprint p. 18). Silk brought to Bursa was rapidly sold out; if caravans were delayed, prices rose and there was speculation. The Bursa agents of Italian companies competed to buy and send off silk as quickly as possible (Richards, *op. cit.*, 127; Inalcık, *Bursa*, docs. 10, 18, 32). In the 9th/15th century the principal buyers were Genoese, Venetians, Florentines and Jews. Meḥemmed II encouraged the Florentines during the war with Venice (867/1463-884/1479), and the Medicis took an increasing interest in the trade. Silk prices at Bursa at various dates were as follows:

	price in *akčes* per *lidre* of good quality fine silk	
872/1467	50	
883/1478	67	(one *altīn* = 45 *akčes*)
893/1488	70	(one *altīn* = 49 *akčes*)
899/1494	82	
907/1501	65-70	(one *altīn* = 53 *akčes*)
919/1513	77	
925/1519 Astarābādī	93	
925/1519 Albanian	72-80	
927/1521	62	
981/1573	60.5	(one *altīn* = 60 *akčes*)
989/1581	135-150	

The great increase in price in 989/1581 was due to the war with Persia. The type of silk most in demand was fine silk, because it matured rapidly and took colours well; it was known as *tilānī*. Thick, poor quality silk was called *kenār* and *tisāk*.

Most of the silk brought to Bursa was exported to Europe. In the 9th/15th century European merchants from the *Dār al-ḥarb* paid an *ad valorem* customs duty on goods imported and exported: at different periods the rate was 2%, 4% and 5%; after the end of the 10th/16th century the rate of 3% became established in the capitulations (see H. Inalcık, *Bursa*, 60). Silk in transit, sent by Persian merchants to Europe through Ottoman territory, paid customs dues at Bursa (Dalsar, p. 184, doc. 67). That *dhimmīs* too were subjected to paying these dues gave rise to long disputes (Dalsar, docs. 201-5).

The silk trade between Persia and Turkey was a dominant element in the economies of both countries. The Ottoman silk industry was dependent upon Persian silk; moreover the trade brought an average of 70,000 *altīn* a year into the treasury. In Persia, the currency in circulation was kept supplied by gold and silver earned in the Ottoman markets. The consequent shortage of currency harmed the Ottoman economy (see H. İnalcık, *Türkiyenin iktisadī vaziyeti*, 651-5), so that efforts were made to prevent the movement of large quantities of precious metals, and even copper, into Persia through the dealings in silk; restrictions were imposed, and payment in goods, and especially in cloth, was encouraged (H. Inalcık, *Bursa*, 54).

The wars with Persia in the 10th/16th century seriously affected the silk trade and had profound repercussions upon the economies and finances of the two countries. The first stage begins with Selīm I's imposition, as a weapon of war, of a commercial blockade. His intention was to prevent the Persians from acquiring war materials, silver and iron, and, by forbidding the trade in silk, to reduce the Shāh's income from dues (*bādj*), one of his main sources of revenue (see Saʿd al-Dīn, ii, 257). But the blockade had no effect, since most of the merchants began to use the routes through Aleppo and Iskandarūn. Thereupon Selīm resorted to more violent measures: Arab, Persian or Ottoman merchants with stocks of Persian goods had their goods confiscated (letter to the sultan of Egypt, in Ferīdūn, i, 425). The silks and cloths of all the Persians at Bursa were confiscated and listed, and the merchants themselves were transported to Rumeli and Istanbul (921/1515; see Dalsar, p. 198, doc. 86). The import and sale of Persian silk was forbidden. Anyone proved to have sold silk was fined its value (Dalsar, pp. 195-208, docs. 83-118). When Süleymān came to the throne he released the merchants, and restored their goods or paid them compensation. Nevertheless the ban on the import and trade in silk by Persian merchants was maintained for a time. This blockade had important effects: firstly, it increased the state control of the sale and distribution of silk; the scarcity and high price of silk obliged many merchants and weavers to go out of business; instead of the Persian and Ādharī Turkish merchants, known collectively as ʿAdjem, Armenians began to gain control of the

trade; and finally the government encouraged the production of silk within the Ottoman empire—it is at this period that silk from Albania and Rumeli is mentioned on the Bursa market. Nevertheless when the silk-routes were re-opened under Süleymān, the industry again became dependent on Persian silk and there was a new expansion in the trade and manufacture of silk. Yet in this reign too, during the wars with Persia (for example in 953/1546), the Ottoman government imposed restrictions on the movement of gold and silver currency into Persia: the consequent shortage of silk harmed the Bursa industry and led to a fall in the state-revenue derived from it (Dalsar, p. 171, doc. 48; p. 173, docs. 50-1; p. 219, doc. 149). In the ensuing period of peace the silk trade flourished again, and we find Shāh Ṭahmāsb himself employing an agent in 983/1575 to buy cloth for him at Bursa from the proceeds of six *yük* of silk (Dalsar, p. 181, doc. 62). But in the long period of war from 986/1578 to 1049/1639, silk became an important political weapon for each side. As early as 987/1579 the Ottoman state revenue from the trade had been halved (Dalsar, p. 173), and the Ottomans again imposed a strict control on the export of gold and silver. In 994/1586 the shortage of silk had left three-quarters of the looms of Bursa idle, and the quality of the fabrics produced had begun to decline (Dalsar, p. 335, doc. 273). The peace of 998/1590 extended Ottoman sovereignty over the silk-producing regions of Gandja and Shirwān north of the river Kur [*qq.v.*]. Next year the ruler of Gīlān, Aḥmad, attempted to exchange Persian for Ottoman protection, but was later obliged to flee to Ottoman territory (Ferīdūn, ii, 162-4; Selānīkī, 250-2). One of the terms of peace was that the Shāh should send to the Ottoman government 200 *yük* of silk annually, later reduced to 100 *yük* (Ferīdūn, i, 172). The restrictions on the export of gold and silver caused an acute shortage of currency in Persia (CSP Col., *East Indies, China and Japan 1617-1721*, London 1870, doc. 446). Before Shāh ʿAbbās [*q.v.*] launched his counter-attack in 1012/1603, he sought means (no doubt at the suggestion of the Sherley brothers) to export Persian silk direct to Europe, via the Indian Ocean; the English would thus escape the obligation to pay customs-dues in Turkey and the Shāh would deprive his enemy of a rich source of revenue. In 1019/1610 he sent an embassy to Lisbon and exported 200 *yük*s of silk by sea, hoping to prove that this route was cheaper. When the attempt to make an agreement with Spain failed, the Shāh turned to England, and in 1026/1617 Sir Thomas Roe opened negotiations with the Shāh. Of the 3-4 million gold pieces which Persian silk cost annually, England undertook to pay two-thirds in goods and one third in coin (see H. Inalcık, *Türkiye'nin iktisadî vaziyeti*, 666). In order to maintain control of it, the Shāh made the silk trade a state monopoly and forbade the export of silk to Turkey. The Ottomans and Venice—the two states most affected—watched these developments with anxiety. In 1028/1619 and 1031/1622 consignments of Persian silk were indeed sent to England by sea. The English were hoping also to establish another export route via Russia; this prompted the Ottomans to make threats to England (*op. cit.*, 669-79). After the Ottoman-Persian peace of 1027/1618, Persian silk was again exported to Aleppo, Bursa and Foča. Shāh ʿAbbās's policy was not followed by his successor, who abolished the state monopoly of silk; and the use of the Indian Ocean route did not develop, mainly because England was reluctant to provide the gold and silver currency required for it. Nevertheless in 1043/1633 the Venetians were concerned at learning that English merchants were buying large quantities of silk at Bandar ʿAbbās (CSP, Venetian, xxiii, doc. 101). In 1075/1664 the French too were attempting to divert the Persian silk-trade through the Persian Gulf and Surat (P. Masson, *op. cit.*, 326-7).

During the period 986/1578 to 1027/1618 some tendencies which had begun earlier became more apparent. Firstly, silk production within Turkey increased, the earliest records of silk-production at Bursa dating from 996/1587 (Dalsar, p. 386, docs. 299-301). In the years after 1000/1590, the annual *mīzān resmi* levied on silk produced at Bursa amounted to 40-50,000 *aḳčes* (Başvekâlet Arşivi, Fekete tasnifi no. 1796). Secondly, in the 10th/16th century Foča, further to the west, began to rival Bursa as a trade centre frequented by Eastern merchants; Persian silk-merchants, in order to evade the dues levied at Bursa, increasingly came to Foča, and later to Izmir/Smyrna (Dalsar, p. 178, doc. 58; p. 271, docs. 200-1). Armenian merchants, progressively extending their hold over the trade, began to export silk direct to Europe, so that Leghorn became a great European silk-mart. The Ottoman state retaliated by exacting the double of the *mīzān resmi* from silk which did not pass through Bursa (Dalsar, docs. 200-205) and by levying customs dues on all silks destined for Europe, even if they were the property of *dhimmī*s (Dalsar, p. 184, doc. 67; the latter regulation had been applied to Jewish *dhimmī*s so early as 928/1521 : p. 271, doc. 202). Some Muslim merchants employed Muslim slaves and agents to carry silk to Italy (Dalsar, p. 171, doc. 47).

In the second half of the 11th/17th century, Izmir gained in importance, as being the port where European merchants could most easily buy Persian silk, and began to rival Aleppo and Ṣaydā/Sidon. In 1201/1787 the value of the silk exported that year from Izmir was 1,865,000 gold pounds, representing 4% of the total exports. The most important purchasers there were the British, the Dutch and the French. The most active caravan route in the 12th/18th century was that from Erzurum via Tokat to Izmir (P. Masson, *Commerce... XVIIIe siècle*, 552); for a detailed description of the route in the preceding century see J. B. Tavernier, *Les six voyages ...*, i, Paris 1679, 5-70). From January to October a continual succession of caravans brought silk to Izmir. The hire of a baggage-camel was 40 *ḳurush*; the various customs and dues levied along the route amounted to 122 *ḳurush* per *yük*; the customs dues on entering Izmir were 46 *ḳurush*. In about 1081/1670, of the total Persian silk production of 22,000 *yük*s, 3000 *yük*s came to Izmir (Masson, i, 421: here a *yük* is defined as 276 *libre*). A new customs-post had been set up at Erzurum in the 10th/16th century; here, in the middle of the 11th/17th century, a due of two *ḳurush* (*écu*) was levied on each *batman* of silk from Shamākhī, Gandja and Tiflīs, and a lower rate, 1½ *ḳurush*, on the finer and more costly silk of Gīlān (with the aim of attracting Gīlān silk to the Erzurum route). Each camel-load (800 *lidre*) of silk paid a tax of 80 *ḳurush* (J. B. Tavernier, *Les six voyages ...*, Paris 1679, 20). Again according to Tavernier (i, 21), Gīlān silk was of three types, which he calls *charbasi*, *carvari* and *loge*; while from Shamākhī, Gandja and Tiflīs there came only two types, *charbasi* and *ardache* (sometimes *ardasse*).

It has been suggested (Dalsar, 161, 306) that in the 11th/17th century the import of cheaper silk-stuffs from Europe led to a decline in local silk-weaving

and that it became more profitable to produce raw silk for sale to Europe. This suggestion seems to be incorrect, the change not occurring until the 19th century; until that time European silk-stuffs could not compete with the products woven at Damascus, Aleppo, Istanbul and Chios to suit Turkish taste, and imports from Europe remained at the earlier limited level. Even so late as 1202/1788, the value of all kinds of silk imports from France did not exceed 400,000 gold pounds. The silk-stuffs most appreciated in Turkey came from Venice (Masson, *op. cit.*, ii, 446-7). All the same, the progressive increase in the demand for raw silk in the West which accompanied the expansion of the silk industry there and the consequent rise in price had its effect upon the increase of silk production in Turkey. As early as the mid-11th/17th century, Bursa was famous for silk production (Ewliyā Čelebi, *Seyāḥatnāme*, ii, 35). In 1091/1680 G. Wheler noted (*A journey in Greece*, London 1682, 209) that the plain of Bursa was covered with mulberry-orchards and that much silk was produced in the whole area between Bilediik, Izmid and Bandirma. Velvet was woven at Bilediik in 982/1574 (T. Dağlıoğlu, *Onaltıncı asırda Bursa*, Bursa 1940, p. 83, doc. 115). Bursa silk was exported to the industrial centres of Aleppo, Damascus, Diyārbakr, Tokat and Istanbul (Dalsar, 387-9); Amasya, an old centre of silk-weaving, later became important for silk manufacture (for the activities of a Swiss who established a spinning-mill here see G. Perrot, *Souvenirs d'un voyage en Asie Mineure*, Paris 1867, 449-51). In about 1040/1630, ʿAlāʾiyya and Alashehir are also mentioned as producing silk. That silk production continued in the Morea in the Ottoman period has been noted above: in the 12th/18th century raw silk was exported to Western Europe from the Morea (Masson, *op. cit.*, ii, 626) and from the neighbourhood of Salonica (for the silk of Zagora near Salonica and of Southern Macedonia, see N. Svoronos, *Le commerce de Salonique au XVIIIe siècle*, Paris 1956, 257-60).

In the 12th/18th century, Turkish-produced raw silk so increased both in quantity and in quality as to compete with Persian silk. Skilled artisans were brought from France to the Morea to improve the technique of silk-reeling (Masson, *op. cit.*, ii, 446). Bursa and the surrounding region surpassed all other areas. In the 12th/18th century the demand in Europe for Bursa silk led to the danger that the Turkish weaving industry would be deprived of raw material, so that the government set limits to the quantity exported. By a regulation (*niẓāmnāme*) of 1806, a quota of Bursa silk was set aside for sale at a fixed price to the tradesmen of Istanbul; the rest could be sold, when the Sultan had authorized it, to Europe (Dalsar, pp. 393-4, doc. 308). The annual demand of European merchants for Bursa silk was 21,750 okes (*ca.* 27,900 kgs.). Since they were ready to pay 29-30 *ḳurush* for 350 *dirhams* instead of the fixed price (*narkh* [*q.v.*])of 21.5 *ḳurush* at Bursa or 23.5 at Istanbul, illegal sales could not be prevented.

In the 19th century, as the weaving industry declined in the Ottoman Empire (see below), the production of raw silk expanded greatly. In order to assure the production of silk to the quality which the mechanized European industry demanded, from 1830 onwards the government published instruction manuals entitled *Taʿlīmnāme-i ḥarīr* (*e.g.*, the *Taʿlīmnāme-i ḥarīr*, Istanbul 1269, written in Armenian by Khwādja Agob and translated into Turkish by him and Djewdet). From 1838 onwards special steam-machines (Fr. *filature*, Turkish *mandjilnik*) were installed at Bursa for the extraction of silk from the cocoon; there were 3,000 of them by 1856, at which date it was estimated that there were, installed in the houses, 8,000 such machines worked by pedals. According to Sandison's *Report on the trade of Brussa for the year 1846* (PRO, FO 78, 701), in that year 215,000 okes of silk (*ca.* 267,600 kgs.) were produced in Bursa; he writes also "Brusa silk and cotton stuffs are always falling more into disuse". It is noticeable indeed that raw silk was increasingly being exported to Europe. In 1855 some four million kgs. of cocoons were raised, producing 400,000 kgs. of raw silk. In 1888 a school, the Dār al-Ḥarīr, was opened at Bursa with the aim of teaching the scientific principles of silkworm rearing. After a great fall between the years 1860 and 1880 as a result of disease, production rapidly increased again: the tax-revenues on silk cocoons allocated to the administration of the Ottoman Public Debt [*see* DÜYŪN-I ʿUMŪMIYYE] in 1881 amounted to 14,695 gold pounds, but in later years the figure rose to 200,000 (Dalsar, 209); silk production, having been half a million kgs. in 1885, increased to 1½ million kgs. in 1901 (see the *Sālnāmes* of Bursa for this period). All the same, half the silk exported from Turkey to Europe in 1881 had originated in Persia, the Caucasus region and Turkestan.

THE SILK-WEAVING INDUSTRY

A silk-weaving industry existed in Anatolia, before the period of the Ottomans, under the Seldjūḳs. Among the 'gifts' (*multamasāt*) sent from Anatolia to Rashīd al-Dīn [*q.v.*] as vizier of the Il-khānid sultan, were 2,000 rolls of *kamkhā* (T. *kemkhā*) and 10,000 cubits of velvet from Erzindjan and 4,000 rolls of *kamkhā* from other cities of Anatolia (Z. V. Togan, in *Iktisat Fakültesi Mecmuası*, xv (1954), 42, n. 5). Among the tribute sent to the Il-khānid ruler in 657/1258 there figure *nakh* and *kamkhā-i Anṭālī* (*i.e.*, of Antalya) (see Aḳserāyī, *Musāmarat al-akhbār*, ed. O. Turan, Ankara 1944, 62). A few silk fabrics woven in Seldjūḳ Anatolia are to be found in museum collections (a fragment bearing the name of ʿAlāʾ al-Dīn Kayḳubād I is in the Musée des Tissus at Lyons, see E. Diez and O. Arslanapa, *Türk sanatı*, Istanbul 1956, 259-60). Favourite types of material imported into Seldjūḳ Anatolia were *atlās-i Istanbūlī*, *zarbāft-i Rūmī*, various types of *Rūmī dībā*, *Shushterī* and *ʿAttābī* garments, gold *Iskandarānī* brocades and *ḳuṭnī* handkerchiefs (Ibn Bībī, *El-Evāmirü 'l-ʿalāʾiyye* . . ., facs. of MS Aya Sofya 2985, Ankara 1956, 32, 49, 56, 155, 436). Al-ʿUmarī (*ca.* 730/1330) says of Akīra, adjacent to the Ottoman principality, that "its silk is quite equal to Byzantine (*Rūmī*) brocade and cloth (*ḳumāsh*) of Constantinople. Most of it is exported" (R. B. Serjeant, *Material for a history of Islamic textiles up to the Mongol conquest*, in *Ars Islamica*, xv-xvi (1951), 59). In the *Čengnāme* which he wrote for the Ottoman ruler Emir Süleymān (early 9th/15th century), Aḥmad-i Dāʿī lists the following types of material: embroidered *dībādj-i Shushdar* from which robes of honour [see KHILʿA] were made for sovereigns (for Shushdar brocade see Rāwandī, *K. Rāḥat al-ṣudūr*, ed. M. Ikbal, *GMS* n.s. ii, London 1921, 513-4), *nakh*, *zarbāft*, *Dimishḳī kamkhā*, *ḳaṭīfa*, *wālā-yi Khaṭāʾī*, *ʿAttābī* of ʿAdjam (for this see R. B. Serjeant, *op. cit.*, in *Ars Isl.*, x (1943), 99, and A. U. Pope, *A survey of Persian art*, iii, London and New York 1937, 1996, n. 1), *Khwārizm shālī*, *aladja Iskandarānī* for making *djubbas* (R. B. Serjeant, in *Ars Isl.*, xiii-xiv (1948), 100-6; *Resālä-ye Falakiyyä*, ed. W. Hinz, Wiesbaden 1952, 14-5, 242-3, 247), *sundūs* (for

this green brocade made in Yazd, see Serjeant, *op. cit.*, 87, 94), *khāṣṣ al-khāṣṣ-i Ḳirimī* (for *khāṣṣ al-khāṣṣ* see T. Öz, *Türk kumaş ve kadifeleri*, i, Istanbul 1946, 62), *sharb-i Shāmī* and crimson *wālā* of Yazd.

It is a point worthy of note that the silk industry of the Ottoman Empire developed in cities lying on the caravan-routes from Persia, *i.e.*, Erzindjan, Tokat, Amasya and Bursa, on the one route, and Mardin, Marʿash and Aleppo on the other. The silk industry of Istanbul was introduced from Bursa. As early as the end of the 8th/14th century, Bursa, the Ottoman capital, possessed an industry in silk fabrics, whose products were exported to Europe and to Eastern countries (H. Inalcık, *Bursa* ..., 50-1). This industry gradually expanded. At Bursa, Persian merchants who had brought in supplies of raw silk exchanged them mostly for European woollens and for Bursa silk fabrics. Under the names *Bursa ḳumāshī* or *Rūmī aḳmisha, tāfta, wālā, kamkhā* and *ḳaṭīfa* were imported into Uzun Ḥasan's territories; and we have noticed the record of Shāh Ṭahmāsb buying fabrics in Bursa. When Selīm I seized Shāh Ismāʿīl's treasury, he found in it 91 vestments of Bursa fabric (T. Öz, *Türk kumaş ve kadifeleri*, i, Istanbul 1946, 42). For the trade in Bursa fabrics in the bazaars of Tabrīz, see *A narrative of Italian travels in Persia*, ed. M. Grey, London (Hakluyt Soc.) 1873, 173. Bursa fabrics were prized also in Italy (G. R. B. Richards, *op. cit.*, 88, 156). The customs' registers for Kili, Aḳkermān and Kefe of the end of the 9th/15th century show that Bursa fabrics were then being exported to Northern Europe; Russian merchants had bought silk and taffeta in Bursa in 918/1512 (Dalsar, docs. 36, 76); the kings of Poland had Turkish silk-stuffs bought for them at Bursa (Dağlıoğlu, doc. 46; Dalsar, docs. 73, 190; A. Refik, *Onaltıncı asırda Istanbul hayatı*[2], Istanbul 1935, 108); and Turkish silk fabrics were used in Sweden for the making of ecclesiastical vestments (T. Öz, *loc. cit.*; A.J. B. Wace *apud* T. Öz, introd., p. 3). All the same, the products of the Bursa industry were mostly consumed locally: the Bursa registers of the effects of deceased persons (*tereke defterleri*) show clearly that the rich used great quantities of silk fabrics for clothes and for house-furnishings: from brocade and velvet were made *ḳaftān*s [*q.v.*], *dolama*s (a kind of under-shirt), *fiston*s (skirts), sashes, shawls, *čarshaf*s and kerchiefs [see LIBĀS], and pillows, bedspreads and cushions [see MAFRŪSHĀT]. Brocades and velvets also provided a means, like precious metals and stones, of accumulating wealth. The Palace bought extensive supplies of silk-stuffs from Bursa: the fabrics needed for clothing the personnel of the palace and for ceremonial occasions (made up by the palace tailors, who in 1018/1609 numbered 319) were ordered by the Chief Tailor (*Terzi-bashī*) and bought by the *khāṣṣa khardj emīni* at Bursa from private firms (R. Anhegger and H. Inalcık, *Ḳānūnnāme-i sulṭānī* ..., 35-6; Inalcik, *Bursa* ..., 64; Dalsar, pp. 226-33, doc. 160; T. Öz, *Türk kumaş ve kadifeleri*, i, Istanbul 1946, and ii, Istanbul 1951; idem, *Turkish textiles and velvets*, Ankara 1950 (with many illustrations of garments); the register of contents of the Inner Treasury (*Enderūn khazīnesi*), dated Shaʿbān 910/January 1505, reproduced in *Topkapı Sarayı Müzesi arşiv kılavuzu*, ii, Istanbul 1940, no. 21; other sources on the ceremonial garments worn on special occasions are the *teshrīfāt* registers, the *inʿām* registers, and the *Sūr-nāme*s, especially the record of the wedding of Khadīdje Sulṭān in 1085/1674: A. Bādī, *Riyāḍ-i belde-i Edirne*, Edirne, MS Selimiye 2315, ii, 270-9; *Sūrnāme-i Wehbī*, Istanbul, MS Ahmed III 3593). The cost of the various fabrics bought for the Palace in 954-5/1547-8 amounted to 12,000 gold pieces (Inalcık, *Bursa* ..., 64). Analysis of the Palace treasury inventories of the early 9th/15th century shows that garments were made from Bursa fabrics, as well as from rich fabrics from Yazd, Europe and India. From the 10th/16th century onwards fabrics manufactured in Istanbul and Chios (Saḳız) are frequently mentioned, and there are records of *ḳutnī* of Baghdād, Damascus and Biledjik, *kemkhā* of Damascus and Amasya, *merre* of Aleppo, fabrics from Mardin and Marʿash, and velvets of Menemen, Aydos, Göynük and Üsküdar.

In about 907/1502 there were over a thousand silk looms working in Bursa (*Ḳānūnnāme-i iḥtisāb-i Bursa*, ed. Ö. L. Barkan, in *Tarih Vesikaları*, ii/7 (1942), 30). The silk-weaving industry of Istanbul developed during the 10th/16th century; the number of looms producing various kinds of brocade (called *serāser, shāhbenek, zerbāft*) rose from a hundred to 318 in 972/1564, at which date a firman was issued ordering their reduction to the former number; at an inspection made in 985/1577, 268 looms making the silver brocade *serāser* were found, and it was ordered that their number be reduced to 100 and that the others turn to making ordinary *serenk* brocade (A. Refik, *op. cit.*, 108, 116-8). According to Ewliyā Čelebi (i, 615-8) there were in Istanbul (in about 1050/1640) 105 sellers of satin, 16 sellers of brocade, 70 weavers of velvet, 100 makers of velvet and *serenk* pillows, 100 weavers of *dārāyī*, 5 makers of *khilʿa*s, 17 makers of sashes and 400 weavers of bath-towels (*peshtemāl*); silk fabrics were sold in the Bezzāzistān-i Djedīd, Chios fabrics at Ghalaṭa. At Istanbul many new types of fabric, known as Istanbulkārī, began to be manufactured (T. Öz, *op. cit.*, ii, 4, 44). In the first half of the 10th/16th century a silk factory attached to the palace was established at Istanbul: it is referred to as the Khāṣṣa Kārkhāne or the Kārkhāne-i ʿĀmire (Dalsar, docs. 22, 23; T. Öz, *op. cit.*, i, 47, with a plan); it employed *kemkhādjı*s under the *Kemkhādjı-bashı* and *ghazzāz*es under the *Ghazzāz-bashı*. According to the registers of the palace craftsmen (*ehl-i ḥiref:* see T. Öz, *op. cit.*, ii, 2; I. H. Uzunçarşılı, *Omanlı devletinin saray teşkilâtı*, Ankara 1945, 463; R. M. Meriç, *Türk nakış sanatı tarihi araştırmaları*, Ankara 1953), in 964/1557 145 weavers were employed, in 1047/1637 32, and in 1098/1687 only four; in the middle of the 12th/18th century, however, the number had risen to eight *ghazzāz* and three *kemkhā-bāf*. Of 268 silk looms functioning on the open market in Istanbul in 985/1577, 88 were run by slaves attached to the Palace (for slaves sent to Bursa in 936/1530 to be attached to master-craftsmen and learn the art of weaving various fabrics, see Dalsar, doc. 245). In 1171/1758, 40 pillow-making workshops, one silk-spinner's workshop and one guild-room were set up in Üsküdar as a *waḳf* for the Ayazma Djāmiʿi (T. Öz, i, 44). In the first half of the 19th century, there were 5000 weavers in Üsküdar, later left unemployed as a result of the competition of the products of Western mechanized industry (C. Hamlin, *Among the Turks*, New York 1878, 59). In 1843 the State founded a modern silk-factory at Hereke, but the Ottoman silk industry remained in general a field for private enterprise.

The numerous types of silk fabrics are classified in the *iḥtisāb* regulation for Bursa (*Tarih Vesikaları*, ii/7, 28-31) into three main groups: velvets (*ḳaṭīfe*), brocades (*kemkhā*) and satins (*tāfta, aṭlas*), the first being fabrics with a nap, the second those with a

design woven in, and the third smooth, light and brightly-coloured fabrics. The various types had different names according to the number of threads in the warp, the use of gold or silver threads, the degree of twisting of the threads, and the patterns woven in. (There is as yet no systematic classification of the very numerous types of Turkish fabrics; see, meanwhile, T. Öz, *Türk kumaş ve kadifeleri*, i-ii, Istanbul 1946-51; A. J. B. Wace, *The dating of Turkish velvets*, in *Burlington Magazine*, lxiv (1934); *Brief guide to Turkish woven fabrics*, Victoria and Albert Museum no. 3, London 1950; *2000 years of silk weaving*, New York 1944; Nurettin Yatman, *Türk kumaşları*, Ankara 1950; O. Ş. Uludağ, *Bursa kumaşları*, in *Belleten*, i/3-4 (1937), 753-60. The principal collection of Turkish silk fabrics is in the museum of Topkapı Sarayı, Istanbul; others are in the Victoria and Albert Museum, London, the Benaki Museum, Athens, the Mevlâna Müzesi, Konya, the Royal Scottish Museum, Edinburgh, the Etnografya Müzesi, Ankara, and in the Kenan Özbel collection of the Ministry of Economics, Ankara).

Specialists have reached the conclusion that in the fields of colour and design Ottoman Turkish fabrics blended diverse influences to create a characteristic style, and that this style had a profound influence in the Near East, in the Mediterranean countries, and in Western Europe (see A. J. B. Wace, *apud* T. Öz, i, 2-5, and idem, *Turkish woven fabrics*, 5-16). In this style are to be detected the influences not only of Persia, Byzantium and Italy, but also the Uyghur tradition of Central Asia which was especially prevalent in Anatolia in the period of the Il-khāns (the "three circles", "tiger stripes" and Buddhist sun medallions commonly used in Ottoman designs are found also in Uyghur pictures, *op. cit.*, 10; for the *dībā-i Turkī* sent to Hārūn al-Rashīd and the changes in Persian textiles under the Seldjūks and the Il-khānids see P. Ackerman, in A. U. Pope, *A survey of Persian art*, iii, London and New York 1937, 2043-4, 2071, 2195); but there were peculiarities of style characteristic of the various Ottoman silk-weaving cities, such as the type connected with the name of Ḥādjdjī ʿAlī at Bursa in about 890/1485. In the 9th/15th century the great majority of the weavers at Bursa were local Muslim Turks. In 906/1501 an Italian weaver resident at Bursa, a certain Tomasino Caviae, is mentioned. In 920/1514 Selīm I transported the best craftsmen from Tabrīz to Istanbul (Ferīdūn, i, 405). In the 11th/17th century the number of Greek weavers at Bursa began to increase. The brocades of Europe, Kefe and Chios were imitated at Bursa.

Organization of the Industry

Those employed in the silk industry were organized into various *ḥirfet*s, trade guilds. The entrepreneurs were in two main groups, the *khāmdjī*s (dealers in raw silk) and the *doḳumadjī*s (weavers). The *khāmdjī* merchants would buy raw silk at the *bezzāzistān* and have it spun by *dolābdjī*s into warp threads (*mashdūd*) and woof threads (*pūd*). The warp threads, called *mashdūd* because they were more tightly twisted, varied in the number of strands according to the type of fabric to be woven, from 1800 (*tāfta*) to 8150 (*gülistānī kemkhā*); the *dolābdjī*s or *ibrīshīm büküdjü*s who performed the spinning worked for the *khāmdjī*s but constituted a separate *ḥirfet*. The *khāmdjī*s then had the warp and woof threads dyed, by the *boyadjī*s (*ṣabbāgh*s). The following list of stock and tools recorded in the effects of a deceased *boyadjī* (Bursa, Şeriye sicilleri A6/6, of 893/1488) throws light on the technique of dyeing: vegetable dye, red dye, indigo, *Hindī* indigo, *ala* indigo, valonia, alum, cauldrons, ladles, trays, sieves, troughs, mallets, work-benches. The dyed silk was sold by the *khāmdjī*s to the *doḳumadjī*s (weavers), who were organized into different *ḥirfet*s: *ḳaṭīfedji*s, *kemkhādjī*s, *wāledjī*s, *fuṭadjī*s. For each type of fabric a distinct type of loom was used, with the appropriate number of teeth (a loom was valued at 3000 *aḳčes*, *i.e.*, some 60 gold pieces, in about 893/1488).

The most numerous and influential *ḥirfet* at Bursa was the *ḳaṭīfedji*s, whose products were world famous; as an example, the organization of their *ḥirfet* may be summarized as follows: the number of *ustas* (*ustādh*, master-craftsmen) was limited; these chose from among themselves a council of control known as the 'Six' (*Altılar*: for the election see Dalsar, pp. 318, 330, 397-8), who were, in descending order, the *shaykh*, the *kahyā* (*ketkhudā*), the *yigit-bashi*, the *ishdji-bashi*, and two *ahl-i khibra*; the *ḳāḍī* would confirm this election, as being to an official body, and register the result. The principal duties of this council were to ensure that regulations concerning the quality and prices of manufactured goods were carried out; to carry out the examinations for promotion from apprentice (*shāgird*) to journeyman (*ḳalfa*) and from journeyman to master, and to issue licences (*idjāza*); to investigate and settle disputes and malpractices in the guild; to represent the guild in dealings with the government; and (most important of all) to prevent competition and underhand practices in the employment of workmen and in the buying of stocks. In the carrying out of these duties the *kahyā* usually acted as the principal officer; the *yigit-bashi*, with his assistant the *ishdji-bashi*, would investigate complaints and make a report to the *ahl-i khibra*, on the basis of which they made the final decision (see *Ḳānūnnāme-i iḥtisāb-i Bursa*, p. 28). The *shaykh* was the spiritual head of the guild and presided at ceremonies. The guild co-operated closely with the government, and if there was any resistance to the decision of the Altılar the latter could call upon the local state officers to enforce it (Dalsar, pp. 111-7). The regulations of the guild were confirmed by the Sultan, so becoming an *iḥtisāb ḳānūnu*; as such, their application became the responsibility of the *ḳāḍī* (see the *Ḳānūnnāme* cited, pp. 28-31). Until it was dyed, the silk was under the control of the *mīzān emīni*, thereafter, until the fabric was finished, of the *muḥtesib* [see ḤISBA]. The woven fabric was inspected for its dimensions by the *tamgha* (*damgha*) *emīni*, who stamped it, a *tamgha resmi* being levied on each *top* (roll) of fabric.

The weaving was in general carried out on looms set up in private houses. According to the *tereke defterleri* of the 9th/15th century, large numbers of slaves were used in the industry, being bought specifically for the purpose and employed on the principle of *mukātaba* [*q.v.*] (see H. Inalcık, in *Iktisat Fakültesi Mecmuası*, xv (1953-4), 57-9). At the same time there were quite big 'factories' (*kārkhāne*): in Istanbul, 400 *peshtamāldjī*s were working in a single large *kārkhāne* near Ḳırḳ-česhme (Ewliyā Čelebi, i, 616 = tr. Hammer, i/2, 222); and in about 995/1587 there is a record of several 'big businessmen' at Bursa owning from 20 to 60 looms (Dalsar, doc. 273). Women, as well as men, were found among the masters and the workpeople (Dalsar, p. 320). The workpeople were divided into three main groups: *ḳul*s, *shāgird*s and *edjīr*s (Dalsar, doc. 241), the last being the true employees, whose daily wage was calculated on the basis of the number of *dhirāʿ* woven (Dalsar, doc. 242). The *shāgird*s were the young apprentices

who worked for a small wage under contract for one year or for three years (in 957/1550 a *shāgird* was engaged for three years, to be paid 600 *aḳčes*, see Dalsar, doc. 246); in the contract the master undertook to teach the craft within a specified time (see *e.g.*, Dalsar, docs. 246, 248). The weavers sold their products at specified shops in the market, and were not permitted to sell their goods elsewhere. When one branch of the industry expanded, its members could easily form themselves into a new *ḥirfet* (Dalsar, doc. 322).

The Ottoman silk industry, under the pressure of economic factors, progressively expanded in output but declined in quality—a tendency already visible at the end of the 9th/15th century (see *Ḳānūnnāme-i iḥtisāb-i Bursa*, 28-31). The widespread demand among the common people for cheaper goods forced the relaxation of the old guild standards of quality and the toleration of a more loosely woven *gülistānī kemkhā*, deemed suitable to their needs (*ibid.*, 29). The establishment of new looms by untrained workers (called *khām-dest*) without the authorization of the guild and the consequent increase in the number of looms working provoked violent resistance on the part of guild-members from the 11th/17th century onwards (Dalsar, docs. 3, 4, 21, 236-8, 240-1, 260), and the intervention of the authorities on behalf of the guilds was fruitless. A decline in quality resulted also from the occasional shortages of silk and of the crimson dye gum-lac (T. *lök*); the number of threads in the warp was reduced and poor dyes were used (in the 9th/15th century the warp was composed of 4500-5000 threads, in the 11th/17th century of only 2400; for the dyes used see N. Baylâv, *Türkiye'nin boya bitkileri ...*, in *Türk Sanatı Tarihi*, i, Istanbul (Güzel Sanatlar Akademisi) 1963, 732-44). At the same time cotton or linen threads were increasingly used in the woof. The fall in quality was encouraged also by the import from Europe of low-grade, cheap and showy materials, which induced the Turkish weavers to compete with them. From the 11th/17th century onwards there was increasing demand for silk-stuffs from Venice and Chios which copied the Ottoman designs.

iii.—THE ARAB LANDS IN THE POST-MONGOL PERIOD.

The Mongol invasion of the Muslim world resulted in the dislocation of many trades and the transfer of artisans, especially those engaged in the silk industry; yet only about one-tenth of Arab territory, including Baghdād and Mawṣil, was adversely affected by the Mongols. Moreover, even those once prosperous centres with thriving silk trades, supposedly destroyed by the Mongols, were reported half a century later by Marco Polo to have maintained or recovered their prosperity. Pedro Teixeira, like Marco Polo, was impressed by the flourishing silk industry in Baghdād and Mawṣil.

The making of silk was almost confined to Syria and Tunisia, where the climate is especially suited to the breeding of silkworms and the growth of mulberry trees. Algeria and Morocco were also silk producing countries but on a limited scale. There was a *mukhattam* [*q.v.*] factory in Tilimsān and a Jewish controlled industry in Fās. The Arabs in North Africa introduced silk into Sicily and Spain and from there it was introduced into the Rhône Valley and Milan. Other Arab countries tried unsuccessfully to make silk; they managed, however, to maintain *ṭirāz* [*q.v.*] factories dependent upon imported raw silk. The *ṭirāz* factory in Cairo goes back to Fāṭimid times and functioned throughout the Mamlūk period. European travellers who visited Egypt in Ottoman times noted a silk industry using Syrian raw material. Muḥammed ʿAlī Pasha planted three million mulberry trees, which grew well, but the climate was not suitable for the breeding of the silkworm.

Syrian silk deserves a more detailed study. Ottoman registers for Syria-Palestine compiled in the 10th/16th century show extensive silk cultivation and manufacture; there is similar evidence of silk exports. Aleppo and Damascus were not only famous for the manufacture of good locally reared silk, but were also great centres for trading in a lower-grade silk imported from Persia. European factors residing in Syria competed for raw silk, Syrian and Persian, to barter it for woollen cloth. Muslim merchants managed to strike hard bargains with the Europeans, forcing them to barter their woollens for large amounts of raw silk, the balance being paid by Europeans in cash-producing commodities such as dyes. Thus woollens were subsidiary to silk in Syria, while the contrary was true in Europe. Russian activities in north-western Persia cut off Persian silk from Syrian markets. Syrian locally-produced silk partly filled the gap, perhaps at the expense of local industry. The price of raw silk rose sharply, thus encouraging greater production in Syria. Volney noted the great number of new mulberry trees along the Syrian coast. Increasing in the nineteenth century, the production of raw silk fell later as a result of the competition of Far Eastern silk and artificial silk.

The silk industry in the Arab countries produced textiles for home consumption only. There seems to have been no appreciable foreign market for textiles, because many countries maintained their own industries. Descriptions of Arab dress in Ottoman times show that silk textiles were more commonly used than woollens, but less than linen or cotton.

iv—PRODUCTS OF THE ISLAMIC SILK INDUSTRY.

The Arabs, for whom, with their nomadic origins, wool was the most important raw material for textiles, were also familiar with silk from the earliest times. Although the Prophet forbade the wearing of silk clothing as a luxury, because it threatened to lead to effeminacy, silk weaving flourished greatly in the Islamic world, and Islamic silk mills dominated world trade from the 9th to the 14th century A.D. The words Atlas (German for satin), damask (Damascus) and muslin (Mosul) are taken from Arabic, and taffeta from Persian. The development of the textile arts in Islam was linked with their last phases in the ancient world whose territories were occupied by the Arabs—those of the ancient

Orient in the time of the Sāsānids in Iran and Mesopotamia, and those of the late Greek and Byzantine civilizations in Syria, Egypt and Asia Minor. In the Carta Cornutiana, a document relating to the founding of a village church near Tivoli, not far from Rome, written in 471 A.D., the excellence of Persian textiles was praised, just as it had been by Herodotus and Xenophon. Under the Sāsānid rulers Sh̲āpūr II (310-379) and Kawād̲h̲ I (488-531), Syrian weavers were transported to Persia. In the rock tomb of King K̲h̲usraw II (590-628) in Ṭāḳ-i-Būstān, clothing woven of Iranian silk is represented. It is probable that in Alexandria, later in Cairo and Tyre, in Damascus and Ctesiphon, and later still in Bag̲h̲dād, Rayy and many other places, the first Caliphs encouraged a new and fruitful development of silk mills and made possible the founding of new silk factories in the conquered territories from India and Bahā al-Dawla, now in the Columbia Textile Museum in Washington, with inscriptions in cuneiform Kūfic (Pl. IIIa). The Būyids in Western Iran considered themselves the legitimate successors of the Sāsānids. There is a remarkable piece of fabric, dating from the same period, in the Louvre in Paris, from a church at St. Josse near Calais, whose Kūfic inscription refers to Maḥmūd of G̲h̲azna (Pl. IIIb). In one instance Dorothy Shepherd was able to classify a particular piece of material as being of a known species of Iranian silk (Pl. IIb). On the back of a piece of silk in the church in Huys (Belgium) she discovered an inscription which was identified by W. B. Henning as being 7th century Sogdian, and which, it is believed, points to Buk̲h̲ārā as its place of origin. According to the inscription, the material in question was known as *Zandaničī*, no doubt named after the place of manufacture. Some of these pieces of silk,

(a) *Ṭirāz* with Kūfic inscription giving the name of the ʿAbbāsid caliph al-Mustanṣir bi ʾllāh.

(b) *Ṭirāz* with floriated Kūfic inscription.

Turkestan in the east to Sicily and Spain in the west. Iran's key position under the Achaemenids and the Sāsānids, between Eastern Asia and Europe, was maintained by the Islamic peoples, and extended and strengthened by their expansion on the trade routes by land and sea. The costly raw material, the silk itself, was at first imported from its land of origin, China. Under the Byzantine Emperor Justinian (527-65) monks brought silkworm chrysalises to Byzantium in their pilgrims' staffs. At that time the breeding of silkworms was also started in the countries of the Near East, which gradually became independent of imports. Just as in Byzantium State factories for silk weaving had been set up in the gynaeceums, employing almost exclusively women, so too the caliphs and other Islamic rulers created court and state factories, the products of which were known as *ṭirāz* [*q.v.*]. They are known particularly on account of the robes bestowed by the rulers upon those they wished to honour [see K̲H̲ILʿA], which were woven in these factories, generally of linen but sometimes also of silk; these often bore an inscription (figs. a and b), usually worked in silk, giving the name of the ruler, the place, the manager of the factory and the year of production. Many remains of such garments, with inscriptions, have come to light in Egyptian tombs, giving proof of how numerous the weaving mills were at that time (Pls. IIa, VIa). A particularly magnificent example is a robe of honour bestowed by the Būyid ruler depicting lions beside a tree of life, found their way, as coverings for relics, into the treasuries of Western churches, as at Rome, Aix, Sens (Pl. Ia) and Nancy. They are in fact early Islamic pictures, executed on a background of Sāsānid silk, depicting the lion-hunts of the Persian Sh̲āhinsh̲āh (Berlin, formerly State Museums), and splendid fragments of these have also found their way into European church treasuries such as those of Passau (Pl. IVa), Trier, Cologne (St. Kunibert) (Pl. Ib), Milan (St. Ambrose) and Prague (Cathedral Treasury). There is one such piece with an Arabic inscription, another from Rayy in which the Kings are portrayed on horseback beside the trees of life and above the lions. Silk weaving flourished particularly in early and mid-mediaeval times in Rayy, where among other things double cloth was made, with different designs on the two sides (Pl. IVb, c). These were sometimes used as palls. There was a considerable exchange of ideas and inspiration between the Byzantine and Islamic weaving industries, just as had existed between Iran and Byzantium in Sāsānid times. One group of Byzantine silk mills, which must be considered as the forerunners of the damask mills, was decisively influenced by the geometric style of stucco decorations at Sāmarrā, which led to the arabesque. These pseudo-damasks, as they are called, are now claimed by Sigrid Müller-Christensen, with some justification, to be Islamic work. The abstract leaf design of the arabesque became increasingly dominant in Islamic

textile ornamentation, and finally asserted itself completely at the same time as cursive Kūfic was replaced by Naskhī [see KHAṬṬ]. When the Mongols overran Western Asia (1256-59), Chinese weavers brought new influences to bear in almost all the Islamic countries. Under the Mongol dynasties in Iran and Turkestan, Chinese motifs such as the Fonghoang, the Dragon, the Ky-lin and others were introduced into Islamic textile designs, even in places such as Egypt and Asia Minor where the Mongols did not penetrate. Chinese damasks encouraged a great flowering of damask weaving in Mamlūk Egypt and in Syria; this is clear from findings in many tombs, among which have been found a remarkably large number of pieces of material bearing inscriptions of the Mamlūk Sultan Muḥammad Nāṣir (Pl. VIc, e). In 723/1323 this Sultan received from the embassy of a Mongol Khān 700 lengths of silk, in some of which his name was woven. A gold brocade of this kind is preserved in the vestments collection of the Marienkirche in Danzig.

In Andalusia there were important silk mills from the time of the Umayyad dynasty, as can be seen from a *ṭirāz* fabric bearing the name of Hishām II, after the model of the Egyptian fabrics. Attempts were made to imitate Baghdād silk textiles, and in at least one case a fabric which was certainly manufactured in Spain was given an Arabic inscription, which, for the sake of advertisement, falsely claimed that it was of Baghdād manufacture. The silk woven in Almeria was considered comparable with Persian textiles. As a result of the discoveries of silk garments in the tombs of Spanish princes in the Cistercian monastery of Las Huelgas near Burgos (Pl. VIIb), which are mainly of Spanish-Moorish silk material, our knowledge of Spanish-Moorish silk weaving has been extended and deepened. In Granada too, where the Alhambra style (Pl. VIIc) was taken over in the textile arts also, and in Murcia, Malaga and other places there were silk mills. In Sicily, at the court of Palermo, Byzantine factories were supplanted by Arab, which continued there even after the conquest by the Normans and under the rule of the Hohenstaufen (Pl. VIIa). The German coronation robe in Vienna bears impressive witness to the high standing of their silk weaving and embroidery.

As early as the end of the 7th/13th century, Marco Polo noticed that there were flourishing silk mills in the parts of Asia Minor, such as Ḳonya, which were under the dominion of the Turks (Pl. VI d). In the Ottoman period, flowers such as carnations, tulips and hyacinths enriched the plant designs. Üsküdar velvet was prized throughout the then known world (Pl. VII d, e).

Islamic silk weaving and embroidery reached its highest fulfilment in Persia with the coming of the Ṣafawids. The chief factories were now in Tabrīz, Ḳazwīn and Iṣfahān. There were many exchanges of inspiration between textile designs (including those of knotted carpets) and china mosaic work and the flourishing art of miniature painting. The pictorial silk and velvet materials are unique. In Sāsānid Iran the mythical big-game hunt of the Shāhinshāh had been depicted in the tombs of Ṭāḳ-i-Būstān, on silver dishes, and on silk materials as well. Now it was figures from the Alexander legend, King Khusraw and the beautiful Shīrīn, the poor poet Madjnūn and the unattainable Princess Leylā, who found their place in the pictures woven in costly silk and velvet brocades. The names of artists, such as Shāh Muḥammad Mūʿizz al-Dīn and, above all, Ghiyāth al-Dīn, are known to us from their signatures (Pl. VIIIa).

Where once the silk textiles of the Near East had made their way into occidental church treasuries, where they were used as wrappings for relics or as vestments, they now came to the courts of European princes; a delegation (1635-1639) led by Olearius was sent by Duke Frederick III of Holstein Gottorp to Shāh Ṣafī (1629-1642) in Iṣfahān, and the velvet brocades which were among the presents Olearius brought back for his sovereign were used as tapestries in the Rosenborg Castle, in Copenhagen. Apart from the Spanish princes and the Kings of Sicily, whose cerements were sometimes of silk of Arab manufacture, it seems that European princes only occasionally used Arab silks for clothing; those who did included Cangrande VII della Scala (d. 1329) in Verona, the confidant of the Emperor Henry VI, and Duke Rudolf IV of Habsburg (1339-65) (Pl. Va). The inspiration given to European textile art by Arab silk materials, particularly apparent at first in Italy and Spain, spread throughout Europe, and can be seen even in Italian, Spanish, French, German and Dutch paintings, which all reveal the influence of Islamic silk textiles in the garments of the people represented.

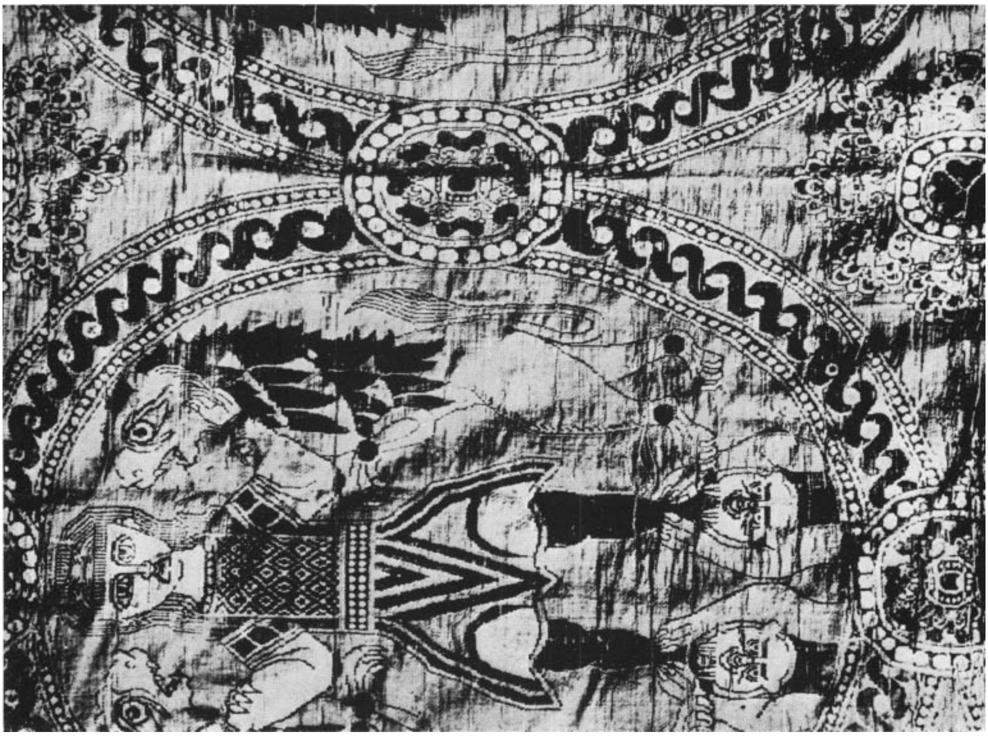
al-ḤARĪRĪ (sometimes Ibn al-Ḥarīrī in Yāḳūt), Abū Muḥammad al-Ḳāsim b. ʿAlī b. Muḥammad b. ʿUthmān b. al-Ḥarīrī al-Baṣrī, Arabic poet and philologist known principally for his *Maḳāmāt*. Born in 446/1054, probably to a landed family living at al-Mashān, near Baṣra, where he spent his childhood, he commenced his studies at Baṣra; his biographers agree that he studied under al-Faḍl b. Muḥammad al-Ḳaṣabānī, but the latter is said to have died in 444/1052 (see Yāḳūt, *Udabāʾ*, xvi, 218; al-Suyūṭī, *Bughya*, 373; al-Ṣafadī, *Nakt*, 227), so that there is a discrepancy here to clear up. He then carried out the duties of *ṣāḥib al-khabar*, that is chief of intelligence [see barīd, khabar], and his descendents still occupied this important post in 556/1161, when ʿImād al-Dīn al-Iṣfahānī (apud Yāḳūt, *Udabāʾ*, xvi, 262) visited Baṣra. Al-Ḥarīrī lived in the district of the Banū Ḥarām, which was to give its name to his first *maḳāma*, but his office was at al-Mashān. His duties left him with sufficient leisure to take part in the serious conversation of the bored bourgeois society of the decadent Baṣra of his day, to apply himself to poetry and to write books.

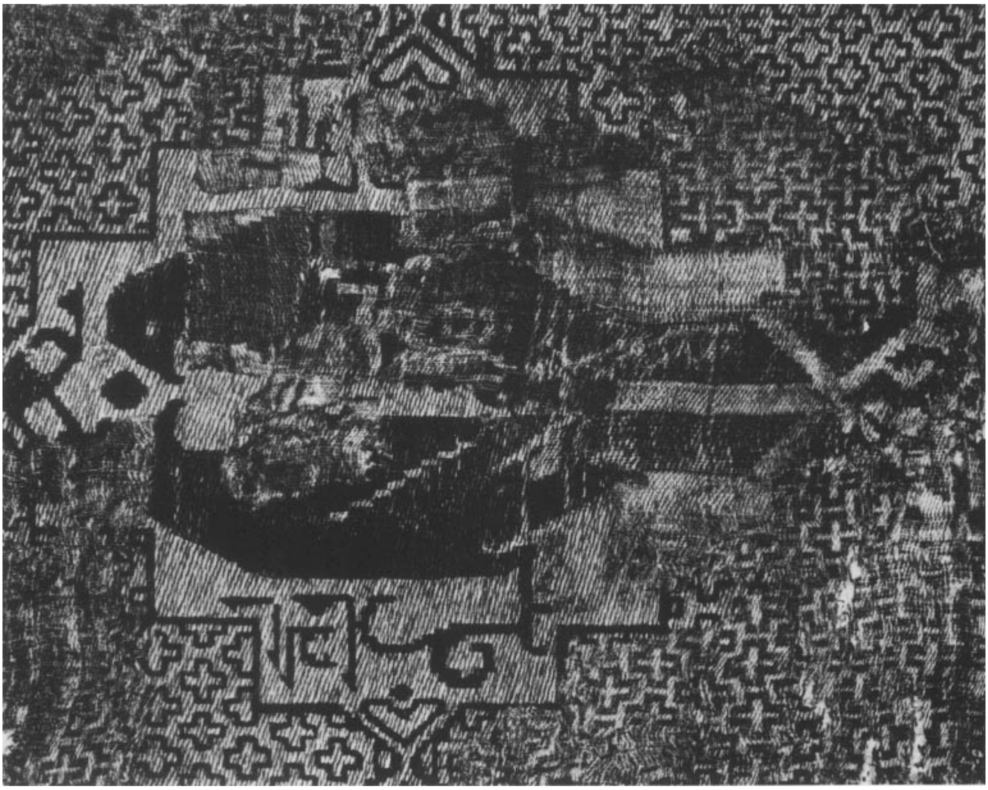


His best-known work is the *Maḳāmāt* or *Sessions*, which imitate very closely those of al-Hamadhānī [*q.v.*]: the narrator, called al-Ḥārith b. Hammām, is like ʿĪsā b. Hishām, while the hero, a quick-tongued rascally Bohemian named Abū Zayd al-Sarūdjī, recalls Abu ʾl-Fatḥ al-Iskandarī. According to al-Ḥarīrī himself (*apud* Yāḳūt, *Udabāʾ*, xvi, 262-3) or his son (*apud* Ibn Khallikān, i, 419), Abū Zayd al-Sarūdjī was a real person and may even on his appearance in Baṣra have inspired the first *maḳāma* of al-Ḥarīrī, *al-Ḥarāmiyya*, which is the 48th of the collection; however, his hero may perhaps be only identical with a Bohemian called Abū Zayd al-Muṭahhar b. Sallām al-Baṣrī, with whom al-Ḥarīrī had some dealings (Yāḳūt, *Udabāʾ*, xvi, 272; Ibn Khallikān, i, 420). According to Ibn al-Tilmīdh (*apud* Yāḳūt, *Udabāʾ*, xvi, 283), the *Maḳāmāt* were begun in 495/1101, which seems to confirm the existence of Abū Zayd al-Sarūdjī, for he might have been driven from Sarūdj when the town was taken by the Crusaders in 494/1100 [see sarūdj] and have taken refuge in Baṣra. Al-Ḥarīrī, whose duties brought him into contact with various high dignitaries of Baghdād, might have been encouraged in his enterprise by the future vizier of al-Mustarshid (512-29/1118-35), Ibn Ṣadaḳa [*q.v.*], to whom he dedicated his *Maḳāmāt*, at any rate if the dedication on the autograph manuscript that Ibn Khallikān happened to see in Cairo in 656/1258 is to be believed; one must then, it seems, reject the version attested by the son of al-Ḥarīrī, who wanted to curry favour with Anūshirwān b. Khālid [*q.v.*], that it was dedicated to this latter, the minister only from 521/1127. The date of completion of the *Sessions*—the editing of which was sometimes laborious—is not known with certainty, but from 502/1108 the Andalusian Yūsuf b. ʿAlī al-Ḳuḍāʿī, who had studied them under the author, made them known in Spain and explained them some years later to Ibn Khayr al-Ishbīlī [*q.v.*]; from the beginning of the 6th/12th century they were part of the curriculum of literary Andalusians (see for example al-Ruʿaynī, *Barnāmadj*, Damascus 1962, 32, 33, 44, 51, 60, 79).

They were already classics in the lifetime of the author, who died on 6 Radjab 516/10 September 1122, and he himself boasts of having personally authorized 700 copies (Yāḳūt, *Udabāʾ*, xvi, 267); they never afterwards ceased to be popular with the literary public, in spite of the criticisms of various detractors, such as Ḍiyāʾ al-Dīn Ibn al-Athīr and the author of the *Fakhrī*; (al-)Shumaym al-Ḥillī [*q.v.*] himself, who claimed to be able to surpass all literary works, admits that despite several attempts he did not succeed in writing *maḳāmāt* better than those of al-Ḥarīrī, which decided him to write a commentary, one of the twenty which are known and of which the most famous and the most complete is that of al-Sharīshī (d. 619/1222 [*q.v.*]).

The reasons for this extraordinary success, which gave rise to countless imitations in Arabic, in Persian, and even in Hebrew and in Syriac [see maḳāma], are somewhat difficult to understand and must be accounted for by the decline of literary taste. Indeed, the *Maḳāmāt* of al-Ḥarīrī are no more than a pale reflection of those of al-Hamadhānī; it is not merely the number of the *Sessions* which shows the constant concern with imitation (for at the end of the 5th/11th century there survived probably only the 50 sessions of Badīʿ al-Zamān, of the 400 which he wrote); this concern moreover is quite superficial, for al-Ḥarīrī, by confining himself to relating the meetings of al-Ḥārith b. Hammām and Abū Zayd al-Sarūdjī, restricts the scope of the *Sessions* and, neglecting depth, puts all his effort into form. What he had in great measure certainly is an unequalled mastery of the Arabic language and a perfect command of its inexhaustible vocabulary; verbal exuberance leads to acrobatics which the followers of al-Ḥarīrī, who regarded him as the most perfect representative of the genre, delighted in, whereas he merely set the style.

The *Maḳāmāt* first became known in the West through partial translations: in 1656, Latin tr. of the first *Maḳāma* by Golius (following on a new edition of Erpenius's grammar); in 1731, edition of the first *Maḳāmāt* by Schultens, who in 1731 and 1740 translated six of them; in 1737, Reiske published the tr. of no. 26. The first extended tr. (extracts from 17 *maḳāmāt*) is that of Venture de Paradis: made between 1786 and 1795, it was not published until 1964 by A. Amer (*Acta Universitatis Stockholmiensis*, v). The first complete edition is the work of Caussin de Perceval (1819), but it is the authoritative edition of S. de Sacy (1822; 2nd ed. revised by Reinaud and Derenbourg, Paris 1847-53) which made al-Ḥarīrī best-known—even to the Orientals, who had forgotten him; it was followed by other oriental and European editions and by translations into various languages: German, by Rückert, Frankfurt 1826, 1837 (43 *maḳāmāt*; 2nd ed. of 24 *maḳāmāt* by Annemarie Schimmel, Stuttgart [1966]); English, by Chenery, London 1867 and by Steingass, London 1898; French (partial), by Raux, Paris 1909. A Hebrew translation of the *Maḳāmāt*, by the Spanish Jewish poet Judah al-Ḥarīzī (ca. 1170-1230), entitled *Maḥbĕrôth Ithiēl*, was first published in London in 1872 and re-edited in Tel Aviv, by I. Perez, in 1951. See further A. Percikowitsch, *Al-Harizi als Übersetzer der Makamen Al-Hariris*, Munich 1931; I. Schirmann, *Die hebr. Übersetzung der Makamen des Hariri*, Frankfurt 1931.



Al-Ḥarīrī is also the author of the *Durrat al-ghawwāṣ fī awhām al-khawaṣṣ*, a collection of critical notes on the incorrect use of certain expressions; after S. de Sacy had published an extract from it in

his *Anthologie grammaticale* (Paris 1828-9, Arabic text, 25 ff. = trans., 63 ff.), Thorbecke produced a complete edition of it in Leipzig in 1871. To the Istanbul edition (1299) is appended a commentary by Shihāb al-Dīn al-Khafādjī, who disputes many assertions made by the author.

His letters (*rasāʾil*) have been collected; ʿImād al-Dīn al-Iṣfahānī has preserved some in his *Kharīda*, and Yāḳūt has included a few in his biography of al-Ḥarīrī; two among these in which all the words contain a *sīn* and a *shīn* respectively (hence their names of *sīniyya* and *shīniyya*) are typical examples of al-Ḥarīrī's taste for mere virtuosity without content.

He is also the author of a *Dīwān*, which has not survived, and of a didactic *urdjūza* on grammar, the *Mulḥat al-iʿrāb*, written at the prompting of Ibn al-Tilmīdh and accompanied by a commentary, of which Yāḳūt gives some idea.

ḤARĪRIYYA, sect of Rifāʿiyya in the region of Damascus, founded by ʿAlī b. Abi 'l-Ḥasan al-Ḥarīrī al-Marwazī, d. 645/1247 at Baṣar (Ḥawrān). Its excessive pantheism, apparent in the works of its poet Nadjm al-Dīn b. Isrāʾīl, was repudiated by Ibn Taymiyya in a very important *fatwā* (xxvi, n. 2 in the collection made by Ibn ʿUrwa, *Tafsīr al-kawākib al-darārī*, MS Damascus, *tafsīr*, no. 151). Cf. al-Fārūthī (d. 694/1294) *apud* Abu 'l-Hudā, *Kitābat al-djawāhir* Istanbul 1302, 326. (L. MASSIGNON)

AL-**ḤĀRITH, DJABAL** [see DJŪDĪ].

AL-**ḤĀRITH** B. **DJABALA**, A.D. 529-569, the most famous of all the kings of Ghassān [*q.v.*] in the military annals of Arabia, and in the history of Byzantium and of Monophysitism in the sixth century.

As the phylarch and ally of Byzantium he led his mounted contingent against the Persians and their Arab allies, the Lakhmids, in the wars of Justinian's reign and distinguished himself in two of its military operations: the battle of Callinicum, A.D. 531, and the Assyrian campaign, A.D. 541. At Yawm Ḥalīma [*q.v.*] in A.D. 554 he triumphed decisively over the Lakhmid Mundhir.

As a believer in the One Nature of Christ, he revived the Monophysite Church after its disestablishment during the reign of Justin I, A.D. 518-27. Throughout his long reign, he afforded it protection from the hostility of the Chalcedonians and sought to keep its unity intact against divisive and schismatic movements, such as the Tritheistic heresy of Eugenius and Conon.

Byzantium recognized his services and worth and bestowed on him its highest honours and titles: he became *patricius*, *biṭrīḳ* [*q.v.*] and *gloriosissimus*.

Chabot, Paris 1901, ii, 245-8, 269; R. Aigrain, *Arabie*, in *Dictionnaire d'histoire et de géographie ecclésiastiques*, iii, cols. 1203-13; Irfan Kawar, *Procopius and Arethas*, in *BZ* l, (1957); idem, *The Patriciate of Arethas*, in *BZ* lii, (1959). (IRFAN SHAHĪD)

AL-**ḤĀRITH** B. **ḤILLIZA** AL-YASHKURĪ, a pre-Islamic Arab poet to whom is attributed principally a *ḳaṣīda* which mediaeval critics regarded as the seventh of the *muʿallaḳāt* [*q.v.*]. The information that we possess in respect of his life deserves no credence, and the poem that is the cause of his renown is in itself so suspect that Ṭāhā Ḥusayn considers it to be totally apocryphal (cf. also al-Djāḥiẓ, *Ḥayawān*, iii, 449, on the questions of other verses). This *ḳaṣīda*, in *khafīf* metre and with *-āʾū* rhyme (with an *iḳwāʾ* in one verse in *-āʾi*), is said by legendary tradition to have been improvised (though it has none of the signs of improvisation) in the following circumstances: after the king of al-Ḥīra al-Mundhir b. Māʾ al-Samāʾ had restored peace between the tribes of Bakr [*q.v.*] and Taghlib [*q.v.*] which the war of al-Basūs [*q.v.*] had broken, hostages from the two tribes were compelled to remain with the sovereign; during the reign of ʿAmr b. Hind (554-570 [*q.v.*]) the Taghlabī hostages having died by accident, their tribe asked for recompense from the Bakr, who refused, and then complained to the king; it was then that al-Ḥārith, who had the task of pleading the case for his tribe against the Taghlib (whose spokesman was ʿAmr b. Kulthūm [*q.v.*]), recited his poem in the *madjlis* of the king, who had ordered hangings to be set up to keep him apart from the poet, since the latter suffered from tubercular leprosy (*baraṣ*); overcome by al-Ḥārith's talent, ʿAmr b. Hind is said to have had the hangings drawn up, one after another, and to have treated the poet with singular marks of esteem, although in general he inclined towards the Taghlib.

The political aim of this *muʿallaḳa* is undeniable; the section reserved for *nasīb* and descriptions is cut short, while the plea on behalf of the Bakr is more highly developed and is accompanied by criticisms of the Taghlib who are invited to put an end to their recriminations. The poem, an eloquent fragment, would be of documentary interest if it could be regarded as authentic.

Bibliography: it is possible that the lines attributed to al-Ḥārith were put together by Sukkarī from the works of the Banū Yashkur (cf. *Fihrist*, Cairo ed., 226), but indeed it seems clear that the poet's *dīwān* has never been separately established; a short *Dīwān*, accompanied by that of ʿAmr b. Kulthūm, has, however, been published by F. Krenkow in *Machriq*, and then separately, Beirut 1922; the *muʿallaḳa* had previously been published twice, with the commentary of Zawzanī and Latin translation, first by W. Knatchbull, Oxford 1820, later by J. Vullers, Bonn 1827; a French translation was given by Caussin de Perceval in his *Essai*, ii, 366-73 (reproduced in L. Machuel, *Auteurs arabes*, Paris 1924, 80-6); finally, the English translation by A. J. Arberry, *The seven odes*, London-New York 1957, 222-7, is preceded by a study on the poet and a comparison of the earlier translations (210-21). Comments and lines of verse will also be found in Ibn Ḳutayba, *Shiʿr*, 151-2 and index; Buḥturī, *Ḥamāsa*, index; Djāḥiẓ, *Ḥayawān* and *Bayān*, index; Ibn Sallām, *Ṭabaḳāt*, 127 (al-Ḥārith is placed in the sixth class of pre-Islamic poets); *Mufaḍḍaliyāt*, 263-8, 515-8; *Aghānī*, ix, 171-4 (Beirut ed., xi, 37-44); Baghdādī, *Khizāna*, Būlāḳ ed., i, 198 (Cairo ed., i, 295); Abkāryūs, 105-7; L. Cheikho, *Shuʿarāʾ al-Naṣrāniyya*, 416-20; F.

Bustānī, *Rawāʾiʿ*, no. 26; idem, *al-Madjānī al-ḥadītha*, i, 139-50; O. Rescher, *Abriss*, i, 28, 74; C. A. Nallino, *Letteratura*, 26 (French trans., 43); Brockelmann, S I, 51; Ṭ. Ḥusayn, *Fi'l-adab al-djāhilī*, 236-43; R. Blachère, *HLA*, index.

(CH. PELLAT)

BANU 'L-**ḤĀRITH** B. **KAʿB**, usually called Balḥārith, an Arab tribe belonging to the Yemenī group. Their genealogy is: al-Ḥārith b. Kaʿb b. ʿAmr b. ʿUlā b. Djald b. Madhḥidj (Mālik).

They lived in the district of Nadjrān [*q.v.*] and were neighbours of the Hamdān. The following places amongst others belonged to them: al-ʿArsh, al-ʿĀdh, Baṭn al-Dhuhāb, Dhu 'l-Marrūt, al-Furuṭ (pl. Afrāt, between Nadjrān and the Djawf), Ḥadūra (Khadūrā), ʿIyāna, al-Khaṣāṣa (between Ḥidjāz and Tihāma), Ḳurrā, Saḥbal, Ṣamʿar, Sūḥān or Sawḥān, Mīnān or Maynān, Shaṭṭ Ziyād (belonging to the clan Ziyād); wādīs: al-ʿAwhal al-Aʿlā and al-ʿAwhal al-Asfal, al-Nuḍārāt, Thadjr; waters: ʿAynā Dhiʾb, al-Bathrā, al-Djafr, al-Harār, Ḥimā, al-Kawkab, Khaṭma (Khiṭma, a well in the sand), Khulayḳā, al-Malaḥāt, Māwa, al-Shalīla (belonging to the clan Dāʿir), Shisʿā, Yadamāt; mountains: Tukhtum. Sections of the Balḥārith lived also in Raydat al-Ṣayʿar in Ḥaḍramawt, in the town of Radāʿ (inhabited by the ʿAns and Khawlān), in the villages al-Ṣamaʿ and Ḥadaḳān, which belonged to the Bakīl, and in al-Faladja near Damascus.

In the Djāhiliyya a section of the Balḥārith worshipped the idol Yaghūth. Another section professed Christianity. The ʿAbd al-Madān b. al-Dayyān, a prominent family of the Balḥārith, built a large church, Dayr Nadjrān, also called the Kaʿba of Nadjrān (according to many authorities, a tent composed of 300 pieces of hide).

Historical. The idol Yaghūth was the cause of a battle between the Balḥārith and the Murād, who claimed Yaghūth for themselves, at al-Razm (in the south of Nadjrān, in the land of the Murād) on the same day as the battle of Badr (17, 19 or 21 Ramaḍān of the year 2). The Balḥārith, allied with the Hamdān, inflicted a severe defeat on the Murād, and Yaghūth remained in their possession. On the "second day of Kulāb" (in the Dahnā) the Balḥārith (under Nuʿmān b. Djassās) fought against the Tamīm tribes Ribāb and Saʿd b. Zayd-Manāt under Ḳays b. ʿĀṣim). On the side of the Balḥārith were Hamdān, Kinda, Ḳudāʿa and other tribes, in all about 8000 strong, divided into four divisions, with four leaders, who all bore the name Yazīd and were under the supreme command of ʿAbd Yaghūth b. Ṣalāt. In this battle the Balḥārith were defeated. The chiefs of the allied armies fell and ʿAbd Yaghūth was wounded. Of other battles of the Balḥārith we may mention that of Ḥiḍra (in Tihāma) against the Daws, in which the Balḥārith were again defeated, and that of Baṭn al-Dhahāb.

We find the Balḥārith already in possession of Nadjrān when the ʿAzd, with whom they had many disputes, left the Yemen under ʿAmr b. ʿĀmir Muzayḳiyāʾ after the bursting of the dam of Maʾrib. When Muḥammad's call had gone out through all Arabia, the Christians among the Balḥārith (in about 8/630) sent a deputation to the Prophet in Medina, which consisted mainly of ecclesiastics, including a bishop, Abu 'l-Ḥāritha. They arranged an interview with the Prophet at a place near Medina, where they were to undergo a trial by the ordeal called *mubāhala* *q.v.*] or *liʿān* (ceremony of objurgation). But when they were convinced of Muḥammad's mission and feared a defeat, they begged the Prophet to cancel the arrangement. The Prophet agreed on condition that they paid tribute. In Rabīʿ I of the year 10/632 Muḥammad sent Khālid b. Walīd with 480 men to the Balḥārith to demand that they should adopt Islam. Those who were heathen and a number of the Christians submitted and Khālid remained among them to instruct them in the Ḳurʾān and the institutions of Islam. After some time Khālid returned with a deputation of the Balḥārith (among them two members of the Christian family of ʿAbd al-Madān) to the Prophet. Muḥammad gave each member 10 ounces (400 *dirhams*) and appointed one of them, Ḳays b. al-Ḥusayn, *amīr* of the Balḥārith. When in 11/633 the false prophet al-Aswad al-ʿAnsī [*q.v.*] appeared, the Balḥārith, influenced by his emissaries, followed him. They drove out the governor of Nadjrān (ʿAmr b. Ḥazm), and al-Aswad entered the town in triumph. The Muslims remained faithful to Islam under Abū Bakr, and the Christians renewed the treaty.

AL-**ḤĀRITH** B. **SURAYDJ** (or ʿUMAYR) B. YAZĪD B. SAWĀ (or SAWWĀR) B. WARD B. MURRA B. SUFYĀN B. MUDJĀSHIʿ, ABŪ ḤĀTIM, leader of a rebellious movement in Khurāsān against the Umayyad administration. His father, Suraydj, had his abode in the quarter of the Banū Mudjāshiʿ in Baṣra and received a yearly *ʿaṭāʾ* of 700 *dirhams*.

Al-Ḥārith is mentioned as one of the courageous warriors in the battle against the forces of the Khāḳān at Paykand in 111/729. He was flogged on the order of the governor of Khurāsān, al-Djunayd b. ʿAbd al-Raḥmān al-Murrī, having opposed the latter's injustice. The verse referring to this event says that "he refused to be a '*djanība*' (*i.e.*, a horse driven alongside) of the Murra when they went astray and their *imām* committed iniquities". He rebelled in 116/734. Aided by the native forces of Djūzdjān, Fāryāb and Ṭalḳān, al-Ḥārith captured Balkh and marched at the head of a force, which grew to the figure of 60,000, against Marw, defended by the new governor, ʿĀṣim b. ʿAbd Allāh al-Hilālī. The defeat of al-Ḥārith at Marw reduced the number of his followers to 3000. The news that he was being dismissed by the Caliph, Hishām, and replaced by Asad b. ʿAbd Allāh al-Ḳasrī drove ʿĀṣim to negotiate with al-Ḥārith. The basis of their agreement was to be their common call to Hishām to put a stop to iniquity; if he refused, al-Ḥārith and ʿĀṣim would revolt against his rule.

After his arrival the new governor, Asad b. ʿAbd

Allāh al-Ḳasrī [*q.v.*], succeeded by vigorous action in recapturing Balkh and compelled al-Ḥārith to cross the Oxus. Al-Ḥārith, aided by the forces of the local leaders, laid siege to Tirmidh, but failed to conquer the city and was compelled to retreat to the fortress of Tabūshkān in Ṭukhāristān. A force sent by Asad under the command of Djudayʿ al-Kirmānī besieged the fortress; the adherents of al-Ḥārith insisted on leaving and surrendered to the besieging force. Some of them were decapitated; the women were sold as slaves (118/736).

Al-Ḥārith with his force joined the Khāḳān of the Türgesh [*q.v.*]. He fought valiantly on the Khāḳān's side in the encounter of Kharīstān and defended his retreat when his army was defeated (119/737). Al-Ḥārith assisted the Khāḳān in the preparations for a new expedition and received from the Khāḳān 5000 horses. The Khāḳān was, however, murdered and the power of the Türgesh collapsed. Asad died in 120/738.

The new governor, Naṣr b. Sayyār, marched in 122/740 with an army against Shāsh, which served as a base for the forces of al-Ḥārith. There was an encounter between the troops of Naṣr and al-Ḥārith but the battle between the forces of Shāsh and the army of Naṣr was prevented by an agreement between them, by which the ruler of Shāsh would deport al-Ḥārith to Fārāb. The assumption of H. A. R. Gibb that the object of the expedition against Shāsh was the expulsion of al-Ḥārith is plausible. Naṣr apprehended that the dangerous rebel might incite the Turkish rulers to lead a new expedition against him. These fears would seem to be reasonable in view of the instability of the central government after the death of Hishām, the tensions between the Muḍarīs and the Yemenīs in Khurāsān, as well as the dissatisfaction of the native rulers with the policy of Naṣr in Transoxania. This explains why Naṣr pleaded with the Caliph, Yazīd b. al-Walīd, to pardon al-Ḥārith. The letter of safe-conduct granted to al-Ḥārith by the Caliph promised to return the confiscated property of the adherents of al-Ḥārith and to act according to the ordinances of "The Book and the Sunna".

When al-Ḥārith came back to Marw in 127/745 he reiterated the demand to act in accordance with the ordinances of "The Book and the Sunna". He justified his struggle against the administration and his secession from the community by the statement that "the few who obey God are many and the many who disobey God are few". He was welcomed by Naṣr and the people of Marw; his son Muḥammad and his daughter al-Alūf, who were detained, were released. Naṣr offered to appoint him as governor of a district, but he refused. He divided the gifts given to him by Naṣr among his adherents. He demanded of Naṣr that he should appoint as officials only decent and righteous people.

Shortly after his arrival, al-Ḥārith was joined by 3000 Tamīmīs who gave him the oath of allegiance. He encamped outside Marw, and instructed Djahm b. Ṣafwān [*q.v.*] to read his "*sīra*", setting himself up against Naṣr. Djudayʿ al-Kirmānī joined al-Ḥārith for a short time. However they fell out, their forces clashed and al-Ḥārith was killed in 128/746.

Al-Ḥārith is mentioned as a Murdjiʾī. His secretary was Djahm b. Ṣafwān. In his political activity he followed in the steps of Abu 'l-Ṣaydāʾ, who fought for the rights of the *mawālī*; some of the companions of Abu 'l-Ṣaydāʾ fought on the side of al-Ḥārith. Al-Ḥārith and his followers are the only group in early Islam which seceded from the community and aided the unbelievers against their brethren with the aim of establishing a government acting according to the ordinances of the Ḳurʾān and the Sunna. In the force of al-Ḥārith are mentioned "*ahl al-baṣāʾir*", people of a religious conviction, whom al-Ḥārith used to consult. When al-Ḥārith returned he came back with his *ḳāḍī*. The black flags raised by al-Ḥārith seem to have been an imitation of the *sunna* of the Prophet. A special feature of this peculiar group was the habit of appealing to the enemy during the battle to join them by using moral and religious arguments. Al-Ḥārith seems to have had a feeling of mission. He apparently lived an ascetic life and wanted to establish a just government resembling that of the Prophet and the first Caliphs. He demanded that the principle of election of the *Shūrā* [*q.v.*] should be followed. A satirical verse recited after his death claims that he hoped to be a Caliph: "The son of a saddle (Ibn Sardj) hopes to be a Caliph: How remote are the means of the Caliphate from a saddle".

ḤĀRITH AL-MUḤĀSIBĪ [see AL-MUḤĀSIBĪ].

ḤĀRITHA B. BADR AL-GHUDĀNĪ, poet and notable of the Tamīmī clan of the Banū Ghudāna, at Baṣra. Born probably shortly before the Hidjra, he appears while still young to have been a follower of the prophetess Sadjāḥi [*q.v.*] and then, having settled in Baṣra, he fought at the battle of the Camel [see AL-DJAMAL] against ʿAlī, but afterwards joined his cause; however, as soon as Ziyād arrived in ʿIrāḳ in 45/666 he became a fervent supporter of the new governor, who finally entered him on the tribal pay-roll of the Ḳuraysh to increase his emoluments. Some satirical verses of the poet whom Ziyād matched against him, Anas b. Abī Unās, reveal that at some point he was nominated *ʿāmil* of Surraḳ, in Ahwāz, but it was chiefly during the disturbances which followed the death of Yazīd I that he played some part in politics, although this is not made very clear in the sources which allude to it; however, he seems to have taken part in the struggle against the Khāridjīs who were threatening Baṣra, and to have met his death by drowning during a campaign, in 64/684 or 66/686 (I. Goldziher, *Muh. St.*, ii, 158, wrongly gives the date 50).

Ḥāritha is a picturesque figure of the first half of the 1st/7th century. Though well known for his eloquence, wisdom and knowledge of historical traditions and genealogy, the reputation that he has left behind is principally that of an inveterate drinker, whose foibles Ziyād tolerated, whilst his sons were not averse from keeping him company. He may be regarded as one of the first bacchic poets of the Muslim period, but almost nothing of his work survives; some gnomic verses of his are still quoted, and also a funeral oration for Ziyād, part of which has been preserved (see al-Djāḥiẓ, *Ḥayawān*, vii, 159;

al-Ḥuṣrī, *Zahr*, 914; *Aghānī*, xxi, 19; Yāḳūt, s.v. al-Thanawiyya).

(H. LAMMENS-[CH. PELLAT])

HARIYĀNĀ, name given to the tract of country in the Indian Pandjāb to the north-west of Dihlī, surrounding the towns of Hānsī [*q.v.*] and Ḥiṣār Fīrūza [*q.v.*] in the present Ḥiṣār district and extending east into the Rohtak [*q.v.*] district; it lies south of the Ghaggar stream—which partly coincides with the ancient Saraswatī river which once joined the Indus [see SINDHU], now little more than a monsoon drainage channel whose waters are lost in the Rādjāsthān sands—and is traversed by Fīrūz Shāh Tughluḳ's West Djamnā canal [for the history of this see references s.v. DJAMNĀ]. The name seems to mean "green tract", although the region is now semi-desert (for the modern condition see O. H. K. Spate, *India and Pakistan: a general and regional geography*, London 1954, who, however, conflates Hariyānā and Sirhind); a popular etymology connects the name with a legendary king called Hari Čand.

The region was of some strategic importance to the rulers of Dihlī, as it lay on the more southerly route to that city from Khurāsān via Multān and the southern Pandjāb (the northern approach to Dihlī being through Sirhind [*q.v.*]). According to a Sanskrit inscription of the time of Ghiyāth al-Dīn Balban, "Hariyāṇaka" was ruled first by the Tomārs, then by the Čawhāns, then by the "Śaka" kings Sāhavadīna (Shihāb al-Dīn, i.q. Muʿizz al-Dīn Muḥammad b. Sām), Ṣuduvadīna (Ḳuṭb al-Dīn Aybak; at this time the Sanskrit character *ṣa* was generally pronounced in north India as *kha*), etc., down to Gayāsadīna; it bears the date 1337 VS = 680/1281 (*Epigr. Indica*, v, Appendix p. 34; plate in *JASB*, xliii, 104). Certainly it was held by the Čawhān kings of Dihlī immediately before the Ghūrid conquest, its ruler Hammīr being slain at the same time as Prithwī Rādj of Dihlī. The region is frequently mentioned in the chronicles of the Dihlī sultanate as forming an *iḳṭāʿ* of officials at the Dihlī courts. It was sufficiently close to the capital to prevent any attempt at independence by a rebel official, although there was the incident of Sayyid Ibrāhīm, son of Djalāl al-Dīn Aḥsan [*q.v.*], who was governor of Hariyānā when Muḥammad b. Tughluḳ made his expedition to the south of India in 736/1335: on rumours of the sultan's death in the pestilence in Telingānā, Ibrāhīm seized the tribute of treasure on its way to Dihlī from Sindh on the pretext that the roads were unsafe; when the rumours were proved false he allowed the convoy to proceed to the capital, but his acts were reported to the court and he was put to death. His aim seems to have been, however, the Dihlī throne rather than mere independence at Hariyānā, which could not have been sustained once the imperial armies had returned to Dihlī.

Hariyānā was a region in which Fīrūz Shāh Tughluḳ took an especial interest, it being the home of his mother who was of Bhaṭṭī Rādjpūt descent; he was quick to realize its strategic importance, and besides carrying out his scheme of irrigation mentioned above, as part of his policy for the encouragement of agriculture, built there the three minor forts of Muḥammadpur, Ẓafarābād and Rāḍābād (now all disappeared, although villages so named still exist) and the major forts of Ḥiṣār Fīrūza [*q.v.*] and Fatḥābād [*q.v.* in Supplement], besides strengthening that of Hānsī. From this time the administrative centre of Hariyānā shifted from Hānsī to Ḥiṣār Fīrūza.

The Hariyānā district lay on Tīmūr's route of devastation to Dihlī, and indeed a detachment of his troops was attacked there by a Djāṭ tribe. The history of the district thereafter is one of confusion; but it is known to have come, about 814/1411, into the possession of Khiḍr Khān, who subsequently became the first of the Sayyid dynasty of Dihlī, and it certainly remained a possession of the Dihlī sultanate throughout the Sayyid and Lodī periods. It passed naturally to the Mughals after their conquest, and seems to have been peaceful until the early 18th century. It became the scene of much turbulence and confusion after the invasion of Nādir Shāh [*q.v.*], and a contested region between the rising Sikh power, the enfeebled Mughal empire, and the predatory Bhaṭṭī chiefs, Muslim converts from Rādjpūt stock, of Bhaṭnēr and Fatḥābād. As the Sikh power increased the Bhaṭṭīs sought Mughal aid, and a Bhaṭṭī chief was at one time appointed *nāẓim* of Ḥiṣār; but neither he nor subsequent governors of Hānsī and Ḥiṣār could stem Amar Singh's Sikh forces, and the whole district fell into Sikh hands until the Mughal-Sikh treaty of Djind, in 1781, restored Hariyānā to the Mughal empire, Fatḥābād and Sirsā to the Bhaṭṭīs, and assigned the remainder of the conquered districts to the Sikhs. In 1797-8 the English adventurer George Thomas overran Hariyānā and established his capital at Hānsī; he was eventually overcome by Bourquin for Sindhia, and in 1801 Hariyānā passed into Marāthā hands; in 1803 it was ceded by Sindhia to the British government.

The district is well known for cattle breeding, and Hariyānā cattle are much prized in India.

Bibliography: in addition to references in the article, see the bibliographies to HĀNSĪ, ḤIṢĀR FĪRŪZA, and ROHTAK. (J. BURTON-PAGE)

HARKARN, B. MATHURĀDĀS, a Kaṅbōh [*q.v.*] of Multān, known chiefly for his collection of letters (*inshāʾ*), entitled *Irshād al-ṭālibīn* but popularly called *Inshāʾ-i Harkarn*. Nothing is known about his early life or the teachers from whom he learnt Persian, the court language of the day. He was employed for some time as a secretary (*munshī*) by Iʿtibār Khān *khwādja-sarāy*, most probably a Hindu convert to Islam and an influential eunuch, who was from very early years a confidant and retainer of the Mughal emperor Djahāngīr [*q.v.*]. It is not exactly known when Harkarn entered the service of Iʿtibār Khān. In 1032/1622 Iʿtibār Khān was appointed governor of Āgra, where Harkarn got the chance to display his talents as an official secretary, as he had spent a lifetime in the exercise of that profession (cf. preamble to his *Inshāʾ*). After the death of Iʿtibar Khān, later called Mumtāz Khān, Harkarn left Āgra and while in Mathurā, probably on a pilgrimage, he compiled his *Inshāʾ* between 1034/ 1625 and 1040/1631 (cf. Ethé, 2069). Divided into seven *bābs* (sections) it contains model letters of appointment of state officials, besides various kinds of other official documents (ed. with English transl. by Francis Balfour under the title *The Forms of Herkern*, Calcutta 1781, 1804[2], reprinted

1831; lith. Lahore 1869, 1871). The *Inshā'* of Harkarn was used by the British in India, during the days of the East India Company, as a model for diplomatic correspondence with the native princes and potentates. It was also extensively used in *maktabs* (primary schools) and *madrasas* in India to give a good grounding to students in Persian letter-writing. With the discontinuance of Persian as the court language this book fell into disuse.

(A. S. Bazmee Ansari)

ḤARRA, a basalt desert, "a district covered with black broken stones, which looks as if it had been burned by fire". Such *ḥarras*, which owe their origin to subterranean volcanoes which have repeatedly covered the undulating desert with a bed of lava, are found particularly in the east of Ḥawrān and stretch from there to Medina. Al-Samhūdī, *Khulāṣat al-wafā' bi-akhbār dār al-Muṣṭafā*, Mecca ed., 1316, 38 gives a detailed description of a great earthquake at Medina which began on 1 Djumādā II 654/26 June 1256 and lasted several days (see also Wüstenfeld, *Geschichte von Madyna*). There is perhaps, as Wetzstein suggested, an allusion to these fearful stony wastes in Jeremiah xvii 6 (חררים). Yāḳūt, ii, 247 ff., details no less than 29 of these *ḥarras* with their names (see *ZDMG*, xxii (1868), 365-82). An accurate map, with an index of names to the whole territory in which *ḥarras* are found, is published in the *Zeitschr. des Deutsch. Palästinavereins*, xii, in the narrative of A. Stübel's journey to Dīret al-Tulūl and Ḥawrān (1882). The same author has also discussed the supposed origin of such deserts of stones in *Die Vulkanberge von Ecuador* after v. Oppenheim, *Vom Mittelmeer zum Pers. Golf*, i, 90, note 5 (where also, i, 89 ff., bibliographical references are given). See also v. Oppenheim in *Petermanns Geogr. Mitteil.*, 1896 (*Zur Routenkarte meiner Reise von Damaskus nach Baghdād in dem Jahre 1893*); Doughty, *Travels in Arabia Deserta*, Cambridge 1888, 24, 419 f. and index; D. G. Hogarth, *The penetration of Arabia*, London 1904, 4, 81, 168 f., 259, 284, 339; H. Lammens, *Le berceau de l'Islam*, Rome 1914, 72. (Ed.)

AL-ḤARRA, Of all the *ḥarras* dealt with in the preceding article, the one that stretches through the gardens of Medina on the north-eastern side of the town, known as the *Ḥarrat Wāḳim*, became, thanks to a famous battle in 63/683, al-Ḥarra *par excellence*.

The situation in Medina was seriously disturbed some time after the accession to the throne of Muʿāwiya's son Yazīd. It led to a rebellion provoked by the indignation felt by men of piety at Yazīd's scandalous conduct and the conviction that it was impossible to obey an *imām* of such a type. Beneath the religious aspects of the movement, economic motives may have been concealed. For it is certainly possible that the interests of a great part of the local elements had been upset or threatened in a general way by Muʿāwiya's fiscal reforms, which compelled the provinces to contribute towards the expenses of the State, and, in particular, by the reorganization of the system of pensions, which Muʿāwiya had proposed to establish upon the basic principle that pensions must be the reward for services, especially military, rendered to the government (cf. Lammens, *Le califat de Yazīd Ier*, 408-13); in the Holy Cities there was a group of individuals and families, their exact number difficult to define, who, under this principle, could no longer be on the pay-roll in their capacity as heirs of the first beneficiaries of pensions.

The governor of Medina, ʿUthmān b. Muḥammad b. Abī Sufyān, appointed by Yazīd (end of 62/682 or beginning of 63/683), was too young and inexperienced to control the situation (al-Ṭabarī, ii, 402). The caliph himself then proposed (al-Balādhurī, 31) that a Medinese delegation should be sent to him in the hope of being reconciled with the malcontents by means of his generosity, but the delegates, though loaded with gifts and bounties, on their return to the Ḥidjāz incited their fellow-citizens to revolt by their accounts of the caliph's scandalous mode of life.

Alarmed by the situation in the Ḥidjāz, Yazīd once again tried the method of conciliation: he sent, first to Medina, then to Mecca, a mission headed by al-Nuʿmān b. Bashīr [*q.v.*], but it did not succeed in restoring calm. The Medinese malcontents found an opportunity to come out in open revolt when a *mawlā* arrived to supervise the harvests from the lands (*ṣawāfī*) belonging to the caliph. A scene then took place in the chief mosque (beginning of 63/682) that is reminiscent of pre-Islamic customs: the rebels took off their sandals, turbans and burnous which they heaped up in the court-yard, to signify that they were depriving the caliph of his sovereignty, just as they cast off these garments. They ended the meeting by nominating as their chief ʿAbd Allāh b. Hanzala [*q.v.*], "with a view to securing the deposition of Yazīd"; but as the Muhādjirūn were dissatisfied with this choice, which gave predominance to the Anṣār, they also nominated ʿAbd Allāh b. Muṭīʿ al-ʿAdawī as commander of the group of Ḳurayshīs and their *mawlās*, and Maʿḳil b. Sinān al-Ashdjaʿī commander of the non-Ḳurayshī Muhādjirūn. (It should be noted here that the Ṭālibīs and the ʿAbbāsids had refrained from joining the dissidents and continued to hold aloof when the revolt broke out.) Wellhausen observes, we think justly, that in this great revolt the Anṣār did not fight for themselves as a separate party. Lammens, on the other hand, lays stress on the Anṣārī character of the movement; but even if the Anṣār were in a majority in Medina and included the most active agitators there, the presence of groups of Ḳurayshī and non-Ḳurayshī Muhādjirūn, exerting such pressure that it was decided to give them their own chiefs, contradicts his opinion.

After the scene in the mosque, the attitude of the rebels towards the Umayyads became so aggressive that the latter, with their *mawlās*, adherents and servants, gathered together inside the precincts of Marwān's houses (*dār*) outside the town and appealed to the caliph for immediate aid. Though disgusted by their lack of initiative (for in fact they numbered about a thousand men), Yazīd decided to send an army to the Ḥidjāz; but the principal objective was to subdue Ibn al-Zubayr, since it was thought that a military demonstration would suffice to bring the Medinese to heel. The choice of a general presented difficulties. ʿAmr b. Saʿīd al-Ashdaḳ [*q.v.*], a former governor of Medina, refused the mission since he was unwilling to shed the blood "of Ḳurayshīs", and ʿUbayd Allāh b. Ziyād [*q.v.*] certainly had no desire, after the slaughter of the ʿAlids at Karbalā', to undertake a second equally odious campaign. Yazīd then approached Muslim b. ʿUḳba al-Murrī [*q.v.*], an old soldier who was deeply devoted to the Umayyads and who did not trifle in matters of discipline. Since

he was of great age and his infirmities had grown worse during the preparations for the expeditionary force, Muslim set off in a litter.

Although the exact numerical strength of his army cannot be given (estimates vary from 4,000 to 12,000 men), it is at least possible to say that it had been very well equipped, in anticipation of a difficult and detested campaign; each soldier received a bonus of 100 *dīnārs*, in addition to his ordinary full pay.

On the news of Muslim's advance, the rebels tightened their siege of the *dār*; finally the Umayyads were driven out, after swearing that they would not give any assistance to the Syrian army; they met Muslim at Wādī 'l-Ḳurā; a number of them continued their journey towards Syria, but the greater part, with Marwān at their head, joined the expeditionary force.

Reaching the oasis of Medina, Muslim went to pitch his camp on the *ḥarra*. The Medinese had had time to dig and fortify a trench, on the vulnerable side of the town (or to repair the one dug by the Prophet in 5/627), and it was there that a savage battle took place when the three days' respite allowed by Muslim for negotiation had elapsed and when a final appeal for unity had failed. The offer of two annual payments made by Muslim in the caliph's name, and the promise of a marked reduction in the price of corn (al-Bayhaḳī, 65, etc.) provide further, and specific, proof that economic motives also had led the Medinese to revolt. Muslim controlled his troops' movements from the top of a platform (*kursī*) or stretcher (*sarīr*), but it seems that when the Medinese cavalry charged and reached his tent he mounted his horse and took an active part in the battle, at least during the critical moments (al-Ṭabarī, ii, 414-6). At first, the battle went in favour of the rebels, but it ended in the defeat of the Medinese when Marwān obtained permission from the Banū Ḥāritha to pass through their quarter with a detachment of cavalry and took the defenders of the trench from the rear. The Medinese fled "like ostriches"; the Ḳurayshīs were the first to take to flight and seek refuge in Mecca. Ibn Ḥanẓala resisted bravely and fell with his eight sons (or most of them) and a handful of men as resolute as himself. Pursuing the fugitives into the town, the Syrians abandoned themselves to an appalling pillage which continued for three days and which certain sources state had been authorized by Yazīd himself in the event of the army meeting resistance; the Negroes took the opportunity to riot. Wellhausen raises doubts as to the reality of this pillaging, and Lammens shortens its duration, but the sources are unanimous on this point and add details that are difficult to disregard. Estimates of the number of victims differ widely (from 180 to 700 Anṣār and Ḳurayshīs, from 4,000 to 10,000 other insurgents). The date of the battle is fixed as Wednesday, the penultimate (or antepenultimate) day of Dhu 'l-Ḥidjdja 63/27 or 26 August 683. On the following day, in Ḳibā, Muslim compelled the defeated to renew their oath of loyalty to Yazīd and, going beyond the ordinary formula, demanded that they should recognize themselves to be the slaves of the caliph, who was thus free to sell them and their possessions alike. Some individuals who refused to submit to this demand or who stipulated as a condition for their *bayʿa* that Yazīd should undertake to follow the Ḳur'ān and the *Sunna* of the Prophet (according to one account, also that of Abū Bakr and ʿUmar) were executed. Among those whom Muslim did not spare was his old friend Maʿḳil b. Sinān, leader of the Muhādjirūn during the revolt (but he had sworn that, if he met him, he would kill him). One of the caliph ʿUthmān's sons, who was suspected of having wanted to play a double game, had his beard torn out. ʿAlī b. al-Ḥusayn, on the contrary, was treated with the greatest consideration, on the orders of Yazīd himself. The Ḳurayshīs' chief during the revolt, ʿAbd Allāh b. Muṭīʿ, had been one of those who had fled to Mecca. Muslim b. ʿUḳba was given the nickname Musrif, apparently on account of the massacre of al-Ḥarra, since the term has the meaning "prodigal [of human blood]". After a short stay in Medina, he continued on his way to Mecca where he had to fight ʿAbd Allāh b. al-Zubayr.

(L. Veccia Vaglieri)

ḤARRĀN, named Κάῤῥαν by the Greeks, Carrhae by the Romans, and called Hellenopolis—"the heathen city"—by the Fathers of the Church because of the pagan religion of its inhabitants, is situated in Northern Mesopotamia on the small river Djullāb at the intersection of important caravan routes to Asia Minor, Syria and Mesopotamia. To-day it belongs to Turkey. According to Yāḳūt (ii, 331), Ḥarrān is in the Fourth Clime, only one day's march from Urfa and two day's march from Raḳḳa. The town is a very ancient settlement, and is believed to have been the birthplace of Abraham. It was the home of the Moon-God, Sīn, and according to al-Bīrūnī Ḥarrān was dedicated to Sīn; the shape of the town resembles that of the moon (al-Bīrūnī, *al-Āthār al-bāḳiya*, ed. Sachau, Leipzig 1878, 204).

i. — History

For the pre-Islamic history of Ḥarrān reference may be made to A. Mez's monograph (*Die Stadt Harran bis zum Einfall der Araber*, Strassburg 1892) and Weiss-

bach's article in Pauly-Wissowa, s.v. χαῤῥάν (pp. 2009-21). Ḥarrān was peacefully occupied by the Arabs during the Caliphate of ʿUmar in 19/640. At that time it was one of the most important towns of Diyār Muḍar. According to Balā̲d̲h̲urī, who gives a full account of the conquest of the D̲j̲azīra, Ḥarrān capitulated to ʿIyā̲d̲h̲ ibn G̲h̲anam (Balā̲d̲h̲urī, *Futūḥ*, 174). Ibn Abī Uṣaybiʿa states that the Umayyad Caliph ʿUmar II transferred a school of medicine from Alexandria to Ḥarrān (*ʿUyūn al-anbāʾ fī ṭabaḳāt al-aṭibbāʾ*, ed. Müller, Cairo 1882, i, 116). Marwān II made Ḥarrān his residence and the capital of the Umayyad Empire. Though information about his building activities is meagre, we may presume that the first mosque of Ḥarrān was constructed during his reign (see below). Yaʿḳūbī mentions that Marwān built his palace in a place called *dabāb al-bayn* and spent some 10 million dirhems on it (*Taʾrīk̲h̲*, ii, 405). Mez tried to identify the Citadel with Marwān's palace (*op. cit.*, 11), but D. S. Rice refuted his theory (see D. S. Rice, *Mediaeval Ḥarrān*, in *Anatolian Studies*, ii (1952), 42, n. 7). When the ʿAbbāsids occupied Iran and the larger part of Mesopotamia, it was from Ḥarrān that Marwān set out at the head of an army of 12,000 to meet the ʿAbbāsid army. After his defeat the palace at Ḥarrān was looted and destroyed (Ṭabarī, iii, 45).

During the ʿAbbāsid period Ḥarrān is not mentioned until Hārūn al-Rashīd's time, when he constructed a canal from the river D̲j̲ullāb to Ḥarrān to assure the water supply of the city. Then in 215/830 the Caliph al-Maʾmūn passed through the town during his campaign against the Byzantines. It was at that time that al-Maʾmūn offered the heathen inhabitants the choice between the adoption of Islam, or of any one of the tolerated religions, or extermination. They claimed to be Sābians, which was one of the accepted religions, and that saved them from extermination (Ibn al-Nadīm al-Bag̲h̲dādī, *al-Fihrist*, translated in Chwolsohn, *Die Ssabier und der Ssabismus*, St. Petersburg 1856, ii, 14-17). Ḥarrān played an important part in the cultural field during the early ʿAbbāsid period. The town was the home of one of the most important schools of translators, and under the guidance of T̲h̲ābit b. Ḳurra [*q.v.*] Sābians translated numerous Greek books on mathematics and astronomy into Arabic. The famous astronomer al-Battānī [*q.v.*], Albatenius in Latin, was a native of Ḥarrān and worked there. Ḥarrān was also a Ḥanbalī stronghold (Muḥammad D̲j̲amīl al-S̲h̲aṭṭī, *Muk̲h̲taṣar Ṭabaḳāt al-Ḥanābila*, Damascus 1339/1920, 48). The Sābians did not enjoy religious freedom for very long; their persecution started in the early 5th/11th century, and the last Sābian temple was destroyed at that time.

Ḥarrān subsequently came under the suzerainty of a nomad petty dynasty, the Numayrids [*q.v.*]. The dynasty was founded by a certain Wat̲h̲t̲h̲āb (380-410/990-1019) (Rice, *op. cit.*, 56-7, and 74-84). There is an inscription on the south-east gateway of the Citadel, which gives the name of Manīʿ, the third Numayrid ruler. The inscription gives the date 451/1059, which means that he must have been the lord of Ḥarrān by that time. He maintained the position until his death in 456/1063 (Rice, *op. cit.*, 53 and 55). The Numayrids recognized the suzerainty of the Fāṭimid caliphs, who ruled over Ḥarrān and the region until 474/1081. In that year the ʿUḳaylid S̲h̲araf al-Dawla, an ally of the Sald̲j̲ūḳs, occupied Ḥarrān. Yaḥyā b. al-S̲h̲āṭir was appointed governor of the city, but two years later the Ḥarrānians rebelled against him and against the Sald̲j̲ūḳs. The rebellion was quickly and cruelly suppressed. After the Crusaders occupied Edessa they cut off the water supply from Ḥarrān in 1104 (J. B. Segal, *Edessa and Ḥarrān* (*An inaugural lecture delivered on 9th May 1962*), SOAS Londen 1963, 23-4). ʿImād al-Dīn Zangī founded the Zangid dynasty in Mosul and attached Ḥarrān to his principality in 521/1127.

Ḥarrān flourished and was beautified by Nūr al-Dīn, who took possession of the city in 544/1149, and later by Saladin. It became customary at about that time to appoint two governors of Ḥarrān, one for the city and another for the Citadel. By the end of the 6th/12th century, Muẓaffar al-Dīn Abū Saʿīd Gökbüri was the lord of Ḥarrān, having received the city as a fief in 557/1181 (Ibn al-At̲h̲īr, xi, 37). It was in Gökbüri's time, in 1184, that the famous Spanish-Arab traveller, Ibn D̲j̲ubayr, visited Ḥarrān and gave a detailed account of its mosques and bazaars (see below). Muẓaffar al-Dīn recognized the suzerainty of Saladin. It was Saladin who enlarged and re-decorated the Great Mosque of the city. The enlargement was necessary since the number of Muslims had greatly increased. Later, in 587/1191, Saladin offered Ḥarrān to his brother, al-Malik al-ʿĀdil, who rebuilt the citadel (Ibn S̲h̲addād, *al-Aʿlāḳ al-k̲h̲aṭīra fī umarāʾ al-S̲h̲ām wa ʾl-d̲j̲azīra*, Bodleian Library MS, tr. in Rice, *op. cit.*, 45). There were two great earthquakes in Ḥarrān during the 6th/12th century, the first in 508/1114 and the second, the stronger, in 552/1157. Between 599 and 626/1202 and 1228-9, Ḥād̲j̲ib ʿAlī was governor of Ḥarrān for the Ayyūbid Sultan al-Malik al-As̲h̲raf (Ibn S̲h̲addād, Rice's tr., *op. cit.*, 42). In 635/1237 the K̲h̲ʷārizmians, fleeing from the Mongols, occupied the town of Ḥarrān, and afterwards the citadel. Three years later, in 638/1240, the town and the citadel were re-taken by the Ayyūbid al-Malik al-Nāṣir. Ayyūbid rule in Ḥarrān, and Ḥarrān's history as a city, however, soon came to an end. Shortly after the Mongols appeared before its gates, first the city, and shortly afterwards the citadel, surrendered peacefully to them. Abu ʾl-Ḳāsim, the grandson of the famous S̲h̲ayk̲h̲ Ḥayāt, whose shrine still stands outside the city walls to the west (see below), negotiated with Hulagu over the surrender of the citadel (D. S. Rice, *A Muslim shrine at Ḥarrān*, in *BSOAS*, xvii/3 (1955), 441). In 662/1263, Taḳī al-Dīn Aḥmad b. Taymiyya, the famous theologian, who was later active in Damascus, was born in Ḥarrān. After the abortive expedition of ʿAlāʾ al-Dīn Ṭaybars to Ḥarrān in 670/1271, the Mongols removed the inhabitants to Mosul and Mārdin, destroyed its mosques and buildings and walled up the city gates (Ibn S̲h̲addād, cf. Rice's translation, *A Muslim shrine . . .*, 477). After the Mamlūk victory over the Mongols in 703/1303, the D̲j̲azīra, including Ḥarrān, came under Mamlūk rule. The town, however, was never rebuilt. The citadel, it seems, fulfilled an important function in 715/1315, as is attested by an inscription on its south-west tower (see below). Today the whole town is in ruins, inhabited only by nomad Beduins who live in mud-brick bee-hive huts.

ii. — Architecture

The town, which was oblong in shape, was surrounded by a stone wall surmounted by intermediate towers and intersected by eight gates (Pl. IX, nos. 5-12). The perimeter of the town is given in a manuscript as 7612 cubits, that is 3943 metres (Rice, in *Anatolian Studies*, ii (1952), 38). The ruins of Ḥarrān in modern times were mentioned and its plan shown

for the first time by E. Sachau (*Reise in Syrien und Mesopotamien*, Leipzig 1883, 223) and a quick survey was carried out by C. Preusser in 1911 (*Nordmesopotamische Baudenkmäler*, Leipzig 1911, 59-63, Abb. 19-24, Tafeln 72-77). Our knowledge of the town and its monuments, however, is mainly derived from the full survey of the town carried out by Seton Lloyd and W. C. Brice in July 1950 (*Harran*, in *Anatolian Studies*, i (1951), 77-111, plan of the site on p. 85), and from the excavations of the late D. S. Rice. The following main monuments and ruins have been recorded: (a) the Great Mosque, or D̲j̲āmiʿ al-Firdaws (no. 1 on Pl. IX); (b) the Citadel (no. 2); (c) a basilican church near the north-east corner of the site (not marked on the plate); (d) a large mound, south of the mosque, ca. 28 m. high (no. 3); (e) the Mausoleum of S̲h̲ayk̲h̲ Ḥayāt (no. 4); and (f) traces of eight gates in the city wall (nos. 5-12), of which the Aleppo gate (no. 11) is particularly interesting as it has been fairly well preserved.

Rice worked at Ḥarrān in 1951-52, 1956 and 1959. In 1951 he uncovered the south-east gateway of the Citadel, which can be dated to the 5th/11th century (see D. S. Rice, *Mediaeval Ḥarrān: Studies on its topography and monuments I*, in *Anatolian Studies*, ii (1952), 36-84; idem, *Unique dog sculptures of Mediaeval Islam*, in *The Illustrated London News*, ccxxi, 20 September 1952, 466-67). He carried out a two-week season in 1952 and a three-week season in 1956, on both occasions working in the Great Mosque (see *From Sīn to Saladin: Excavations in Harran's Great Mosque* . . ., in *The Illustrated London News*, ccxxxi, September 1957, 466-9; also Seton Lloyd, *Seeking the Temple of Sin, Moon-God of Harran, and light on the strange Sabian sect through 1400 years*, in *The Illustrated London News*, ccxxii, 21 February 1953, 288; the Director's report in *Anatolian Studies*, vii (1957), 6); and a final excavation between 15 July and 1 September 1959. In that year the work in the Great Mosque was completed and the plan of the mosque established, a deep sounding having been made on the high mound south of the mosque (cf. Director's report in *Anatolian Studies*, x (1960), 8).

(a) The Citadel (Pl. IX, no. 2) was mentioned for the first time by Muḳaddasī in the 4th/10th century. Ibn D̲j̲ubayr, who visited Ḥarrān in 580/1184, describes it as a very strong fortress with a moat around it paved with stones (*Riḥla*, ed. de Goeje, Leyden 1907, 257). Ibn S̲h̲addād remarked that the Citadel was called *al-Mudawwar* "the round one" (cf. Rice, in *Anatolian Studies*, ii, 37). Ḥamd Allāh Mustawfī called it *Ḳalʿat nad̲j̲m*, "the star citadel", and gave its perimeter as 1350 paces and the height of the walls as 50 ells (cf. *Nuzhat al-ḳulūb*, ed. G. Le Strange, London 1915, 103). Nearly all Arabic sources mention that there was a Sābian temple inside the Citadel. The Citadel is in the south-east corner of the town. It is an irregular rectangle with an eleven-sided tower on three of its four corners. There must have been a fourth tower, but that has been destroyed. Lloyd and Brice gave the Citadel's dimensions as 130 x 90 metres (*Anatolian Studies*, i, 97). It had three storeys and about 150 chambers, some of them with brick vaulting. Lloyd and Brice recognized four building periods in the Citadel. They presumed that the first period elements, forming the nucleus of the structure, must have been erected well before Islam; the second and third periods they dated to Islamic times; and the fourth period they considered to be Crusader, by reason of an ornamental archway behind the west tower (*op. cit.*, 79, 101, and 104). The Crusaders, however, never occupied Ḥarrān. Of the three surviving towers, the one in the West corner is the best preserved (Pl. Xa). There are two solid towers flanking an entrance in the south-eastern side of the enclosure. That gateway deserves special attention, as Rice exposed it in 1951. The entrance has a horseshoe arch springing from two moulded imposts decorated with guilloche patterns. Below the imposts are two pairs of dogs in relief on either side, represented with their heads facing backwards and with collars on their necks (Rice, in *Anatolian Studies*, Pl. vii, 64). At the threshold of the gateway Rice found fragments of a Kūfic inscription giving the name of Manīʿ, the third ruler of the Numayrid dynasty, and the date of construction 451/1059. From the Kūfic inscription and the glazed pottery excavated in the gateway, Rice concluded that this part of the Citadel dated from the 5th/11th century (Rice, in *Anatolian Studies*, ii, 42 f.; idem, in *The Illustrated London News*, ccxxi, September 1952, 466-7). This part of the Citadel may very well represent the second building phase in its structural history as recognized and mentioned by Lloyd and Brice. The third phase of building can be explained by Ibn S̲h̲addād's account, which states that the Citadel was rebuilt by al-Malik al-ʿĀdil, to whom the town of Ḥarrān and the Citadel were given by his brother Saladin in 587/1191 (Rice, in *Anatolian Studies*, ii, 45). There is a second, undated, inscription on the wall of the south-western tower, which is Mamlūk in character. It refers to a restoration of the Citadel. Rice attributes it to al-Malik al-Nāṣir, who sent an expedition to Malatya in 715/1315 (Rice, in *Anatolian Studies*, ii, fig. 1, pp. 46-7). That must have been the latest phase in the history of the Citadel. Finally, Rice mentioned that there were no pre-Islamic structures visible in the Citadel. Further excavations are required to establish its earlier history.

(b) The Great Mosque or D̲j̲āmiʿ al-Firdaws (no. 1 on Plate IX and Plate Xb). Ibn D̲j̲ubayr, who visited Ḥarrān in 580/1184, gave a detailed description of the Great Mosque and praised its beauty. He mentioned that it had a great courtyard, in which there was a domed structure, that there were three more domes in the building, and that the sanctuary had five aisles and 19 doors opening into it—nine doors on either side and the 19th under a big central arch (*Riḥla*, 246). The plan of the mosque was first drawn by Preusser in 1906 (*Nordmesopotamische Baudenkmäler*, Leipzig 1911, Tafel 73), and later by Creswell in 1919 and 1930 (plan published in *Early Muslim architecture*, i, fig. 489). The earliest history of the mosque is not known, as the historians are silent on the subject. Though there are no reports that Marwān II, when he made Ḥarrān his capital, erected a congregational mosque there, we may presume that he did so. The great square minaret in the northern part of the building, still preserved up to 26 m., is regarded as dating from the Umayyad period (Plate Xb). Creswell assumes that after 215/830, when the Caliph al-Maʾmūn forced the pagan inhabitants to choose between the adoption of Islam or any one of the tolerated religions, many of them became Muslims, and therefore the number of Muslims greatly increased. Therefore, the Congregational Mosque of Marwān II may have been enlarged (Creswell, *op. cit.*, i, 409). There is no reference to such work, but it is known from an inscription that Nūr al-Dīn restored, embellished and enlarged the

mosque.

Rice's excavations in 1952, 1956 and 1959 established a plan of the mosque which differed from that of Creswell. (The new plan of the Great Mosque is to be published shortly in Creswell's new edition of *Early Muslim architecture*, i. A monograph on the Great Mosque is under preparation by R. H. Pinder-Wilson, D. Strong and R. W. Hamilton.) The mosque is a square enclosure measuring 103 × 103 m. It had three entrances, one on each side except the *ḳibla* wall. There was a large court-yard surrounded by porticoes, one on the north side, one on the west, and two on the east. There were nineteen openings into the sanctuary, the central one being under a great arch, just as described by Ibn Djubayr. The ornamentation of this great arch betrays an Ayyūbid origin. A capital near the east wall has an inscription giving the date of the completion of Nūr al-Dīn's work as 570/1174 (Rice, in *The Illustrated London News*, ccxxxi, September 1957, p. 467, fig. 13.) There were four aisles in the sanctuary (not five as mentioned by Ibn Djubayr), formed by three arcades. The aisles ran parallel with the *ḳibla* wall. The pavement of the first aisle is different from that of the other three, which, as Rice concluded, may indicate an addition of Nūr al-Dīn (Rice, *op. cit.*, 467). The arches of the façade of the sanctuary were supported by pilasters to which columns were attached. Inside the sanctuary the arcades differed from one another. The first arcade had double columns resting on rectangular bases; the second arcade was formed by single columns, although its central arch was supported by two pairs of columns. The third arcade, next to the *ḳibla* wall, was rather complicated, having pilasters alternating with pairs of columns, which may indicate a different building period. Rice has already suggested that there are indications that the mosque may once have contained only two aisles (Rice, *op. cit.*, 468). The *miḥrāb* was semicircular, and was situated some 5 metres to the east of the axis of the building. There was also a flat-*miḥrāb* on the *ḳibla* wall, west of the semicircular *miḥrāb* (Rice, *op. cit.*, 468). The best preserved parts of the mosque are the eastern façade of the mosque and the square minaret which was attached to the Northern section of the building (Plate Xb). In each of the three entrances Rice found Babylonian stelae, dating from the time of Nabonidus (6th century B.C.), incorporating relief figures, one of which represents the Moon-God Sīn, the second one the Sun-God, Shamash, while the third figure has not yet been identified (Rice, *op. cit.*, 468). Rice's excavations not only established the plan of the Great Mosque but also confirmed that the larger part of the building which is visible to-day dates from the Ayyūbid period.

(c) The mausoleum of Shaykh Ḥayāt (no. 4 on Plate IX). This small mausoleum is outside the city walls to the west, close to the north-western corner of the town. According to Christian tradition, this was either the grave of Terah, Abraham's father (B. P. Badger, *The Nestorians and their rituals*, London 1852, i, 342), or the ruins of St. John's church (Mez, *op. cit.*, 15, and Rice, *A Muslim shrine* . . ., 436). When Ibn Djubayr visited the place there was a small mosque there and the dwelling place of the Shaykh. In the published work of Ibn Djubayr the Shaykh's name is given as Abu 'l-Baraka Ḥayyān b. ʿAbd al-ʿAzīz (*Riḥla*, 244). Rice studied and photographed the small enclosure and described it as consisting of a small mosque and a mausoleum or *ziyāra* of the Shaykh. It is a domed building dating from the Ayyūbid period. The building has been restored several times and there are some later additions (Rice, *op. cit.*, 436). There is an inscription on the east wall of the building, first interpreted and published by M. van Berchem. The correct interpretation, however, is provided by Rice. The inscription states that the shrine was erected by Shaykh ʿUmar, son of Shaykh Ḥayāt, and gives the date as Djumādā II 592/ May 1196 (Rice, *op. cit.*, 437-8, Pl. IV). Rice points out that the Shaykh's name is missing from the manuscript of Ibn Djubayr, and that the name Ḥayyān was incorrectly inserted by the editor (Rice, *op. cit.*, 439-40). This small building is used to-day as a mosque.

(d) The city gates (nos. 5-12 on Plate IX). Ibn Shaddād enumerates eight city gates, starting in the south and proceeding clockwise: Bāb al-Raḳḳa (no. 10 on Plate IX), al-Bāb al-Kabīr (no. 11), Bāb al-Niyār ("the Gate of the Fires"), Bāb Yazīd, Bāb al-Faddān, al-Bāb al-Ṣaghīr, Bāb al-Sirr, and Bāb al-Māʾ (Rice, *Mediaeval Ḥarrān*, in *Anatolian Studies*, ii, 37). The Aleppo Gate (no. 11 on Plate IX) which is identical with the Bāb al-Kabīr of Ibn Shaddād, is the best preserved. It was first illustrated by Chesney in 1850 (R. A. Chesney, *The expedition for the survey of the Rivers Tigris and Euphrates*, London 1850, i, 115), then it was photographed and published by Preusser (C. Preusser, *Nordmesopotamische Baudenkmäler*, Pl. 72) and it appears also in Seton Lloyd and W. Brice's article (*Anatolian Studies*, i, Pl. IX/2). An inscription on the gate gives the name of al-Malik al-ʿĀdil, Saladin's brother (Rice, in *The Illustrated London News*, ccxxi, 1952, 467).

(e) The bazaars. Very little is known about the bazaars of Ḥarrān. Ibn Djubayr mentions them, saying that they were very well arranged, that they were roofed, and that at every point where four roads met there was a great dome. He also states that the Djāmiʿ Masdjid adjoins the markets (*Riḥla*, 245). Ibn Djubayr's last sentence gives some clue to the whereabout of the bazaars, though they are also visible on Strzygowski's photographs (*Amida*, Heidelberg 1910, figs. 269, 281). To obtain further knowledge of the bazaars and of some other monuments of Ḥarrān, or to find the Sābian temple, which must have been very close to the Great Mosque, the continuation of Rice's excavations is essential.

ḤARRĀNIANS [see ṢĀBIʾA].

HARRAR [see HARAR].

ḤARSŪSĪ [see ḤARĀSĪS].

ḤARṬĀNĪ (pl. ḤARĀṬĪN), the name given, in north-west Africa, to certain elements of the population of the oases in the Saharan zone. From the ethnic point of view, they seem to have arisen from inter-breeding, perhaps at some very remote period, between white invaders and the indigenous negroid inhabitants (calling to mind the enigmatic Bāfūr in Mauritania). But the ethnic type of the Ḥarāṭīn is markedly different from that of the Negroes; those from Southern Morocco are sometimes even of a mongoloid type. Rather than being a distinct race, they constitute, in the eyes of the other native inhabitants, above all a kind of caste, formed of men theoretically free but of an inferior status, ranking between the *aḥrār* "free men" and the *ʿabīd* "slaves, captives": peasants.

A sedentary population, they cultivate the palm-groves on behalf of the landlords to whom they are "attached". In Mauritania, however, the nomads

employ them as herdsmen. When they can do so, they readily emigrate to the towns in the North where they work mainly as gardeners, well-diggers and water-carriers.

It was partly from the Ḥarāṭīn, brought from Mauritania, that the Moroccan sultan Mawlāy Ismāʿīl [*q.v.*] recruited his "Negro guard", *dj̲aysh̲ ʿabīd al-Buk̲h̲ārī*, vulgo *Bwāk̲h̲er* (cf. al-Nāṣirī, *al-Istiḳṣā'*, tr. Fumey, in *AM*, ix (1906), 74-8).

The exact etymology of *ḥarṭānī* is unknown, as is that of the corresponding Berber term, *āḥarḍān* (pl. *iḥarḍānen*). The Berber dialect of the Twāreg has the word *as̲h̲ardan* "mulatto". But it is possible that the term does not refer to the colour of the skin. In the Arabic dialects of the Mag̲h̲rib the adjective *ḥarṭānī* is not applied exclusively to human beings. In the different regions, it is variously applied to a horse of mixed breed (Mauritania), an ungrafted tree, a wilding (Algeria) or a holding of land that is not free (Zaʿīr, in Morocco). It might be connected with what was originally a term of abuse, to be compared with the Berber names for a species of lizard, root *ḥrdn*.

An Almohad prince, the *sayyid* Abū Zayd, son of sultan Yūsuf b. ʿAbd al-Mu'min, bore the epithet al-Ḥarḍānī, but unfortunately the historians do not explain its significance (Ibn K̲h̲aldūn, *Hist. des Berbères*, tr. de Slane, ii, 205, 236).

As for the Arabic etymologies hitherto suggested, these are quite unfounded. They are — 1. *ḥarrāt̲h̲īn* "ploughmen", when they cultivated only with the hoe; 2. *ḥurr t̲h̲ānī* "free man of secondary rank" or "man who had become free, a freedman". These are neither phonetically nor semantically possible.

We should add that, in certain regions of the Mag̲h̲rib, the word Ḳeblī/Geblī (pl. Ḳbāla/Gbāla), lit. "native of the South[-East] or *ḳibla*", is almost synonymous with Ḥarṭānī.

HART̲H̲AMA B. **AʿYAN**, a general and governor of the ʿAbbāsid period, a native of K̲h̲urāsān. As a supporter of ʿĪsā b. Mūsā [*q.v.*] in the reign of al-Manṣūr, he was brought to Bag̲h̲dād in chains and remained in obscurity throughout the reign of al-Mahdī. He then became the confidential adviser of al-Hādī who is even said to have ordered him to kill Hārūn, and was stopped from doing so only by al-K̲h̲ayzurān's intervention. However, on the death of al-Hādī, it was he who brought Hārūn out of prison and took part in his enthronement. The new caliph consequently entrusted him with important offices, appointing him to be governor first of Palestine, then of Ifrīḳiya, whence he was recalled to take over command of the guard under the orders of Dj̲aʿfar b. Yaḥyā al-Barmakī. Next he took a share in the arrest of the Bārāmika and became one of the most prominent military leaders. After the uprising of Rāfiʿ b. al-Layt̲h̲ [*q.v.*], he was given the governorship of K̲h̲urāsān and was in Samarḳand when the caliph died in 193/809. In the ensuing struggle between al-Ma'mūn and al-Amīn he sided with the former and, together with Ṭāhir b. al-Ḥusayn [*q.v.*], was given command of the troops which laid siege to Bag̲h̲dād in D̲h̲u 'l-Ḥid̲j̲d̲j̲a 196/August 812. Although still faithful to al-Ma'mūn, he vainly tried to procure the escape from Bag̲h̲dād of the defeated caliph, al-Amīn, who was captured by Ṭāhir's soldiers while making away in a boat. Hart̲h̲ama played a major part in restoring calm in ʿIrāḳ after the revolt of Abu 'l-Sarāyā [*q.v.*].

On being appointed governor of Arabia and Syria, he decided not to take up his post but instead to go to Marw to see al-Ma'mūn and to put him in touch with the situation; but al-Faḍl b. Sahl [*q.v.*], who had been described by Hart̲h̲ama as a *mad̲j̲ūs* and accused of committing acts of tyranny, had him arrested and imprisoned, with the caliph's approval; some days later he was put to death by his rival, in D̲h̲u 'l-Ḳaʿda 200/June 816. His son Ḥātim b. Hart̲h̲ama, then governor of Armenia, tried to lead a revolt, but the attempt was cut short by his death; however, it is said that the punishment meted out to Hart̲h̲ama was not unconnected with the affair of Bābak [*q.v.*].

HARŪD [see HARĪ RŪD].

HĀRŪN B. **ʿIMRĀN**, the Aaron of the Bible. The Arabic form of the name derives from the Syro-Palestinian. The Ḳur'ān, which mentions him from the second Meccan period onwards, places him in its lines of prophets, associating him, as does the book of Exodus, with Moses at the time of the flight from Egypt [see FIRʿAWN] and accords him a rôle in the making of the Golden Calf, in which, however, the initiative is attributed to the "Sāmirī" [*q.v.*]. Ibn Ḥazm, on the other hand, severely criticized the Biblical account, which he regarded as falsified. Hārūn is also the brother of Maryam [*q.v.*], but this name is given in the Ḳur'an only to the mother of Jesus [see ʿĪSĀ]. The death of Hārūn is accompanied in later tradition by legendary details which come from the Jewish Aggada, while Muslim legend has probably influenced the Midrashic versions of a later date. The legend may be summarized thus: Mūsā and Hārūn one day discovered a cave from which a light was gleaming. They entered it, and there found a golden throne inscribed with the words: "For him whom it fits". As it seemed too small for Mūsā, Hārūn seated himself in it; whereon the angel of death forthwith appeared and took his soul. Being born three years earlier than Moses, he was then 127 years old. When Moses returned to the Israelites, they asked him about his brother and, hearing of his death, accused him of having murdered him. Angels then appeared bearing the bier of Hārūn and proclaimed: "Do not suspect Mūsā of such a crime". In another version, Mūsā led the Israelites to the grave of Hārūn and the latter, on being recalled to life, declared his brother's innocence. According to one tradition, the seventy notables of Israel carried away by the "cataclysm" (*rad̲j̲fa*, Ḳur'ān, VII, 155/154)

were killed for having accused Moses of the murder of his brother, but they were afterwards brought back to life and became prophets.—At Ṣalkhad [*q.v.*] a footprint of Hārūn was shown.—In the historiosophy worked out by the Ismāʿīliyya [*q.v.*], Hārūn is a *ḥudjdja* or a *waṣī* together with Mūsā.

HĀRŪN B. KHUMARAWAYH [see ṬŪLŪNIDS].

HĀRŪN B. YAḤYĀ, a person known only from an account left by him and inserted in the *Kitāb al-Aʿlāḳ al-nafīsa* of Ibn Rusta (ed. De Goeje, in *BGA*, vii, 119-30). Nothing is known of his origin. According to J. Marquart, he was a Syrian, and a Christian—a fact which would have hastened his release during his stay in Constantinople (*Streifzüge*, 207). Taken prisoner in Palestine by the Byzantines, he was transferred across Asia Minor, to Constantinople, and was probably placed in one of the prisons reserved for Muslim prisoners (for these prisons cf. *REI*, 1947, 49 n. 1). Released by the authorities and awaiting his final liberation, he had time to visit parts of the town and to study closely the famous monuments there. His description contains archaeological information of the highest interest and can be considered one of the most—if not the most—important of all accounts left by visitors to the Byzantine capital in the Middle Ages. After the ransom of the Arab prisoners Hārūn b. Yaḥyā left Constantinople for Salūḳiya (Thessalonica), from where he travelled to Venice and later Rome, of which too he left a description.

The date of his stay in Byzantium is disputed. According to Marquart and Vasiliev it took place between 267/880 and 276/890. G. Ostrogorsky thinks it was during the winter of 912-3, during the short reign of the Emperor Alexander (*Zum Reisebericht des Hārūn-ibn-Jahja*, in *Sem. Kondakov*, v (1932), 254), a date accepted also by H. Grégoire (*Un captif arabe à la cour de l'Empereur Alexandre*, in *Byzantion*, vii (1932), 666-73). As for V. Minorsky, he places it at about the year 900 (*Ḥudūd al-ʿālam*, 419, n. 2).

Hārūn b. Yaḥyā's account was translated and commented upon for the first time in German by J. Marquart (*op. cit.*, 206-37) then, in English, by A. A. Vasiliev (*Hārūn-ibn-Yaḥya and his description of Constantinople*, in *Sem. Kondakov*, v (1932), 149-63); there are three French translations: the first by Mehmed Izeddin (*Un prisonnier arabe à Byzance au IXe siècle*: *Hāroun-ibn-Yaḥyā*, in *REI*, 1947, 41-62), the second by M. Canard (in Vasiliev's *Byzance et les Arabes*, ii/2 (1950), 382-94) and the third by G. Wiet, in Ibn Rusteh, *Les atours précieux*, 134-46.

Bibliography: In addition to the works mentioned: V. Minorsky, *Ḥudūd*, XVII, 418 ff.; Mžik, *Beiträge zur historischen geographie*, Leipzig-Vienna 1929, 88 f.; J. Sauvaget, *Chronique de Damas d'el-Jazari*, Paris 1949, 29.

(M. Izzedin)

HĀRŪN AL-RASHĪD, Hārūn b. Muḥammad b. ʿAbd Allāh, the fifth ʿAbbāsid caliph, is, thanks to the "Arabian Nights", an almost legendary figure, so that the "good Hārūn al-Rashīd" of the "golden prime" of the ʿAbbāsids has obscured his true historical personality. His reign, which saw many incidents of critical importance, was a turning point in the history of the ʿAbbāsid Caliphate; it marked the decline in administrative efficiency and initiated the political disintegration of the Islamic empire.

He was born in al-Rayy in Muḥarram 149/February 766 (another account in Ṭabarī, iii, 599, puts it as early as Dhu'l-Ḥidjdja 145/March 763). He was the third son of al-Mahdī, and his second son by al-Khayzurān [*q.v.*], a slave girl from the Yemen who, being freed and married by al-Mahdī in 159/775-6, played an influential role in the reign of both her husband and her son. The ʿAbbāsid Court at which Hārūn spent his carefree and serene youth surrounded by eunuchs [see KHAṢĪ] and *Mawālī* [*q.v.*] was beginning to show signs of laxity and splendour. His early upbringing rendered him susceptible to influence, especially that exerted by his mother and by his secretary-tutor Yaḥyā b. Khālid [see AL-BARĀMIKA]. Early in his youth, Hārūn was appointed the leader of two expeditions against the Byzantines, in 163/779-80 and 165/781-2, when he was accompanied by high ranking officials and veteran generals. The former culminated in the capture of Samālū, the latter was a marked success, in that the ʿAbbāsid army reached for the first and last time the coast of the Bosphorus. It cannot be assumed that Hārūn, hardly more than a boy, played a leading role in these expeditions. However, he was appointed governor of Ifrīḳiya, Egypt, Syria, Armenia and Ādharbaydjān, with Yaḥyā b. Khālid in charge of the actual administration, and second in succession to the throne in 166/782, ostensibly on the strength of these victories, but in reality because of the instigation of his mother and Yaḥyā b. Khālid, in order to enhance his prestige and pave his way to the throne. In the struggle between various political groupings, each identifying itself with an *amīr* through whom it sought to achieve absolute power, intrigues were a common weapon at al-Mahdī's court. These intrigues showed their effect when al-Mahdī ultimately decided to nominate Hārūn the first in succession; but he died in obscure circumstances in 169/785 before fulfilling his wish. Under al-Hādī [*q.v.*], Hārūn, ill-treated and humiliated, would have renounced his claim to the Caliphate but for the encouragement of Yaḥyā b. Khālid.

However, Hārūn was proclaimed Caliph, after the mysterious death of al-Hādī which was due to a court conspiracy, on 15 Rabīʿ I 170/14 September 786. He was then in his early twenties, and his accession to the throne was due to fortuitous as well as fortunate circumstances in which he had no real

share. It was therefore a matter of course that the grateful Hārūn should bestow the right to govern on Yaḥyā b. Khālid who, together with his two sons al-Faḍl and Dja'far, remained in power for about 17 years. Their downfall in Muḥarram 187/January 803 marked, more or less, the end of the importance of the viziers as initiators of policies and not merely heads of the administration. Political necessity drew al-Rashīd to rely more and more on his *mawālī* and eunuchs, who were entirely dependant on the Caliph and therefore loyal to him. They, in fact, proved equal to their task in many decisive moments (Ṭabarī, iii, 678, 682, 705, 716, etc.) and played an important rôle in controlling other political groupings.

Despite the glorious picture of the golden age, Hārūn's reign was, in fact, a long sequence of political disturbances flaring up in the eastern parts as well as the western parts of the empire. Syria, a province inhabited by unruly tribes with Umayyad sympathies, never ceased to be the bitter enemy of the 'Abbāsids. Frequent fights between the two rival factions, the Yamanīs and the Muḍarīs, eventually developed into a war with the 'Abbāsid army, because governors used to take sides with one faction against the other. The feuds continued with brief intervals until 180/796, when the situation became so serious that al-Rashīd had to send Dja'far b. Yaḥyā, who succeeded in quietening the situation and disarming the tribes. Al-Rashīd's move to al-Raḳḳa [*q.v.*] at about this time was partly due to the disturbances in Syria (Ṭabarī, iii, 706). As to the Egyptian risings of 172/788 and 178/794-5, they were mainly due to maladministration and arbitrary taxation, as Egypt had to subsidise the 'Abbāsid army fighting in Ifrīḳiya. But Harthama b. A'yān was able to restore peace to Egypt. Instability in Ifrīḳiya started after the death of the competent governor Yazīd b. Ḥātim al-Muhallabī [*q.v.*] in 170/786, and successive governors failed to restore order. Harthama b. A'yān [*q.v.*] was able to subdue 'Abd Allāh b. al-Djarūd's rebellion in Ḳayrawān in 178/794-5, but disturbances blazed up again in 180/797 and al-Rashīd consented to bestow the governorship of Ifrīḳiya on Ibrāhīm b. al-Aghlab [*q.v.*] only in return for an annual payment of 40,000 dīnārs. The process of disintegration, which had already started in Spain with the establishment of the Umayyad dynasty (138/755) and in al-Maghrib with the foundation of the Idrīsid dynasty (172/788), was aggravated in Ifrīḳiya by the foundation of the Aghlabid [*q.v.*] dynasty (184/800), alleviated in the last case however by financial benefits to the central treasury. Finally the Yemen was a place of unrest owing to its remoteness and its mountainous nature; al-Rashīd's governor and Mawlā Ḥammād al-Barbarī employed a harsh policy towards the people of the Yemen, who therefore revolted under al-Hayṣam al-Hamdānī in 179/795. Thanks to local support, the revolt lasted for nine years and resulted in al-Hayṣam and many of his followers being sent to al-Rashīd, who had them strangled. The lot of the Yemenīs improved only when Ḥammād was dismissed after 13 years of governorship.

The causes of the unrest in the eastern part of the empire were more complicated. The unrest was partly due to the disappointment of the lower classes, whose condition was not improved by the advent of the 'Abbāsids. Moreover, the 'Abbāsids had to contend with a population more attached to their old local tradition than to Islam, and sometimes, as was the case with large parts of Daylam and Ṭabaristān, completely unaffected by it. Al-Rashīd himself converted 400 Ṭabaristānīs to Islam in 189/805 (Ṭabarī, iii, 705, 1014-15). The dissatisfaction manifested itself in the form of 'Alid or Khāridjī risings. It was as early as 176/792-3 that the Ḥasanid Yaḥyā b. 'Abd Allāh al-Maḥḍ [*q.v.*] rebelled in Daylam and won considerable support from the native princes and the people. Al-Rashīd sent al-Faḍl b. Yaḥyā al-Barmakī, who through diplomacy and promises of amnesty persuaded Yaḥyā to give in. But Yaḥyā's submission did not entirely satisfy al-Rashīd, who a little later found a pretext to have the amnesty annulled and threw Yaḥyā into prison (*Maḳātil*, 309-22). The number of the Khāridjīs was considerable in Kirmān as well as in Fārs and Sīstān; they continued in their hostile attitude towards the new régime, and during the reign of al-Rashīd seem to have recovered from the heavy blow inflicted upon them in the late Umayyad period. There was a series of revolts, the most serious being that of al-Walīd b. Ṭarīf al-Shārī [*q.v.*], and that of Ḥamza b. 'Abd Allāh al-Shārī. The former, with headquarters in Naṣībīn, took place in 178/794 in the entirely tribal province of al-Djazīra and defeated successive 'Abbāsid armies. Then al-Rashīd sent Yazīd b. Mazyad al-Shaybānī, of the same tribe as al-Walīd, whom he killed in 179/795. The latter broke out in Sīstān when Ḥamza occupied Harāt in 179/795 and extended his authority to Kirmān and Fārs, and al-Rashīd was unable to subdue the rebels (Sadighi, *Les mouvements religieux* ..., 52-5). Khurāsān became the scene of a series of local risings due to the incompetence of the successive governors with the exception of al-Faḍl b. Sulaymān al-Ṭūsī and al-Faḍl al-Barmakī (Barthold, *Turkestan*, 203.). The situation worsened when 'Alī Ibn 'Īsā Ibn Māhān was appointed governor in 180/795-6. His notorious deeds caused two serious revolts, namely that of Abu 'l-Khasīb Wuhayb b. 'Abd Allāh in 185/801 at Nasā, and that of Rāfi' b. al-Layth b. Naṣr b. Sayyār [*q.v.*] in 190/806 at Samarḳand.

In his religious policy al-Rashīd stressed the religious character of the Caliphate, and continued the anti-'Alid and anti-*zandaḳa* policy of his predecessors. He initiated his reign by a general amnesty, but the potentially dangerous 'Alids and the *Zindīḳs* were excluded from it. His suspicions included even the politically inactive and pious Mūsā al-Kāẓim [*q.v.*] who was suddenly arrested and sent to Baṣra, then to Baghdād. Although it was alleged that al-Kāẓim was killed by al-Rashīd's orders (*Maḳātil*, 335; *'Uyūn akhbār al-Riḍā*, 66, 71 ff.) it seems more likely that his death in 183/799 was natural (Ṭabarī, iii, 649). Al-Rashīd's attitude towards the *dhimmīs* seems to have been stricter than that of his predecessors. In 191/806 he ordered churches along the Muslim-Byzantine frontiers to be demolished, and ordered the *dhimmīs* of Baghdād to wear different clothes from those of the Muslims and to ride different animals (Ṭabarī, iii, 712-3; *Ṭabaḳāt al-Mu'tazila*, ed. Arnold, 31-2; Fattal, *Le statut* ..., 66). His motive in so doing may have been to win over Muslim public opinion or else the necessity to be on guard against foreign spies.

A great part of al-Rashīd's fame was due to his interest in the wars against the Byzantines. In waging *djihād* against the infidels, Hārūn was in fact fulfilling one of the important duties of the Caliph in the eyes of Muslims. Border attacks and counter-attacks occurred with almost annual regularity, but the interesting aspect of al-Rashīd's expeditions was his personal participation in a number of them. He organized the border area as a separate adminis-

trative unit called al-ʿAwāṣim [*q.v.*] with a centre in Manbidj. In 181/797, al-Rashīd profited by the Byzantine internal troubles as well as their conflict with the Bulgarians, and took the fortress of al-Ṣafṣāf, while a division of his army penetrated as far as Ancyra. The empress Irene (better known in Muslim sources as ʿUghusta [*i.e.*, Augusta]), then already the real ruler of the Byzantine State (797-802), demanded a peace treaty which al-Rashīd first refused and subsequently accepted because of the Khazar menace. But when Nicephorus ascended the throne in 802, hostilities were resumed and al-Rashīd himself led the Muslim army in 187/803 and 190/806. In the second expedition al-Rashīd met with considerable success, taking Heraclea and Tyana. Nicephorus, threatened by the Bulgarians from the east, had to accept a very humiliating peace-treaty by which he had to pay personal poll tax on behalf of himself and his son.

Having chosen ʿIrāḳ as their residence, the ʿAbbāsids had lost interest in the Mediterranean fleet. Al-Rashīd was the first ʿAbbāsid Caliph to pay attention to naval power. Successful raids on Cyprus in 190/805 and Rhodes in 192/807 had no lasting effect. It might seem surprising that by the end of al-Rashīd's reign the situation on the frontiers was virtually unchanged; the campaigns were, in fact, bedevilled by many problems such as difficulties of supply and the harshness of the weather. Encouraged by the weakness of the central government in Armenia, where a slow process of Arab colonization was in progress, the Khazars made occasional raids on Muslim territories. Only the efforts of Yazīd b. Mazyad al-Shaybānī and Khuzayma b. Khāzim succeeded in controlling the situation. An exchange of embassies and gifts is alleged to have taken place between Hārūn al-Rashīd and Charlemagne, which resulted in giving Charlemagne rights of protection over Jerusalem. Nothing has yet been found in Arabic sources to substantiate this allegation, and although they may have had political interests in common, there seems to be no truth in it.

The later period of al-Rashīd's reign reveals a certain lack of competence in him as a ruler. Some of his decisions, such as the covenant of the Kaʿba (186/802), make him at least partly responsible for the civil war and the disintegration of the empire. It was again in Khurāsān that the trouble started. Al-Rashīd did not heed the reports of ʿAlī b. ʿĪsā b. Māhān's misrule and contented himself with the precious gifts he sent; but when Rāfiʿ b. al-Layth's revolt became dangerous, ʿAlī was finally disposed of in 191/806. This did not put an end to the revolt of Rāfiʿ, whose authority had increased by 192/807-8. In spite of ill health, al-Rashīd, accompanied by his two sons al-Maʾmūn and Ṣāliḥ, marched against the rebel with a considerable ʿIrāḳī army (Gabrieli, *La successione di Harun al-Rashid*, in *RSO*, xi, 349), but he had to halt at Ṭūs in Ṣafar 193/November 808, as his health began to deteriorate. Meanwhile the Khurramiyya [*q.v.*] came out in his rear in several areas, especially in Ispahān. Al-Rashīd died on 3 Djumādā II 193/24 March 809.

Opinions on his character are contradictory. He has been represented by various chroniclers as pious and dissolute, statesmanlike and incompetent at the same time. In fact, politically, his reign was not a period of ideal stability. Moreover, he virtually dismembered the empire by the unwise decision to apportion it between his sons al-Amīn [*q.v.*], al-Maʾmūn [*q.v.*] and al-Muʾtamin, and thus initiated its decline. This move by al-Rashīd may have been inspired by the wish to safeguard not only the succession of his direct descendants against the ambitions of many ʿAlid and ʿAbbāsid contenders, but also to ensure ʿAbbāsid authority over all the provinces; but this can hardly have been the right approach. Economically, the commercial activities, which reached as far as China, made al-Rashīd's name known to the whole world of the time, and increased the splendour of his court, which was a centre of art and culture.

Bibliography: The chief source is Ṭabarī, iii, 599-764; Ibn al-Athīr gives a summarized version of Ṭabarī with fresh information here and there (al-Kāmil, vi, 65-152); Other sources are Yaʿḳūbī, ii, 491-524; Balādhurī, *Futūḥ*, ed. al-Munajjid, 1956 (index); Djahshiyārī, Cairo 1938, 177-288; Masʿūdī, *Murūdj*, vi, 287-414; Iṣfahānī, *Maḳātil*, ed. Nadjaf 1934, 308-36; and *Fragmenta Historicorum Arabicorum*, ed. de Goeje, 1871, 278-80, 290-319. Information will be found in other later histories, and also in al-Dhahabī's *Taʾrīkh al-Islām*, MS.British Museum Add. 23,278 with incomplete chronological sequence, fols. 36 a, 36b, 40a-70a; some local histories are useful in this respect such as al-Azraḳī's *Akhbār Makka*, 1859; *Taʾrīkh-i Sīstān*, ed. Malik al-Shuʿarā Bahār, Tehrān 1314 (where the author's sympathies are strongly against the central regime); al-Narshakhī's *Taʾrīkh-i Bukhārā*, Tehrān 1939; Maḳrīzī's *Khiṭaṭ*, ed. 1853; and Ḳummī's *Taʾrīkh-i Ḳumm*, etc. Modern works: Apart from the general works on the Caliphate: see E. H. Palmer, *Haroun al-Rashid*, London 1881 (in many ways out of date); H. St. J. B. Philby, *Haroun al-Rashid*, Edinburgh 1933 (dependant on secondary sources and intended for the general reader); N. Abbott, *Two Queens of Baghdad*, Chicago 1946 (exposing the role played by Khayzurān and Zubayda on the political scene and at the court); A. Joumard, *Haroun al-Rashid*, 2 vols, 1956 (an attempt to present the reign of al-Rashīd as an ethnic struggle between Arabs and Persians); L. Bouvat, *Les Barmécides*, Paris 1912; F. (F. Omar)

AL-HĀRŪNIYYA (in modern Turkish Hârûniye) was in the Middle Ages a fortress town of the marches of the Djazīra (*al-thughūr al-djazariyya*) between Marʿash and ʿAyn Zarba, to the east of the middle

Djayḥān (Ceyhan). It owes its name to Hārūn al-Rashīd who founded it in 183/799 when he was organizing the defence of the frontiers, and fortified it, according to Yāḳūt, with two ramparts and iron gates. Ibn Ḥawḳal stresses its prosperity and the valour shown by its inhabitants in their battles against the Byzantines, but he mentions that at the time when he was writing it had been captured by the Byzantines. It was finally conquered and destroyed on 23 Shawwāl 348/27 December 959 by Leo Phocas, who took 1500 prisoners; rebuilt by Sayf al-Dawla, it was then re-taken by the Crusaders and annexed to the kingdom of Little Armenia. Hârûniye is now a *nahiye merkezi* of the *ilçe* of Bahçe, in the *vilâyet* of Adana; pop. (1960), 4507.

Bibliography: Ibn Ḥawḳal, tr. Kramers-Wiet, 179 and index; Yāḳūt, s.v.; Le Strange, 128-9; Vasiliev, *Byzance et les Arabes*, i, 95; M. Canard, *H'amdânides*, 279, 799; *İA*, s.v. Hârûniye (addenda by Besim Darkot).

There was another place with the same name in ʿIrāḳ, not far from Djalūlā; according to Yāḳūt, it had an old bridge, built by a Khosroes, of stones clamped together with lead.

Bibliography: Yāḳūt, s.v.; Le Strange, 62.

(T. H. WEIR*)

ḤARŪRĀʾ (ḤARAWRĀʾ, according to Yāḳūt, ii, 246, but wrongly), a locality, village or district (*kūra*) near al-Kūfa. During the pre-Islamic period and in the first century of Islam at least, Ḥarūrāʾ stood on the banks of the Euphrates or one of its canals, for a line of al-Aʿshā (al-Ṭabarī, ii, 730) speaks of "*shaṭṭ Ḥarūra*", but in the 3rd/9th century it was described as being in the desert (*ṣaḥrāʾ*) by the traditionist Ibn Dīzīl al-Hamdānī (d. 283/896; see Ibn Abi 'l-Ḥadīd, i, 215); the hydrographic system of the region had thus probably undergone a transformation.

Of no importance from the point of view of commerce or agriculture, Ḥarūrāʾ owes its fame to an historical event that took place there; it was the place where the supporters of ʿAlī who were opposed to the arbitration offered by Muʿāwiya at Ṣiffīn [see ʿALĪ B. ABĪ ṬĀLIB] made their first secession. Certain individuals only had revealed their opposition at Ṣiffīn by crying out *lā ḥukma illā li 'llāh*, but their numbers increased during the return of ʿAlī's army to al-Kūfa, and those who met together at Ḥarūrāʾ (from which they were known as Ḥarūrīs) in Rabīʿ I 37/August-September 658 (al-Balādhurī, *Ansāb*, 521 v.) were several thousand strong, perhaps twelve thousand. It was a real mutiny for, even though these opponents restricted themselves to the provisional choice of a leader to direct prayer (ʿAbd Allāh b. al-Kawwāʾ al-Yashkurī) and a military leader (Shabath b. Ribʿī al-Tamīmī), they no longer recognized the authority of ʿAlī; they proclaimed that the *bayʿa* [*q.v.*] must be made to God and according to the precept *al-amr bi'l-maʿrūf wa 'l-nahy ʿan al-munkar* ("to command what is proper and forbid what is blameworthy") and that a committee (*shūrā*) should thereafter choose the head of the community (this did not prevent the dissidents, before leaving for al-Nahrawān, from taking as their chief ʿAbd Allāh b. Wahb al-Rāsibī; see Ibn Abi 'l-Ḥadīd, i, 214 ff. and cf. al-Balādhurī, *Ansāb*, 540 f.; Mubarrad, *Kāmil*, 555; *ʿIḳd*, i, 260 etc.). The motives for this demonstration were no doubt religious, but it is only the Khāridjī traditions, preserved in Ibāḍī sources, that allow us to perceive them clearly. E. L. Petersen (*ʿAlī and Muʿāwiya* [see *Bibl.*], 39 and n. 41) does not appear to attach any importance to these traditions, which he leaves aside for later explanation. It was M. Kafafi (Kafāfī) and L. Veccia Vaglieri who discovered and studied them and, feeling convinced of their antiquity, quite independently of each other came to regard them as the key to the understanding of the religious motivation of the Khāridjī secession; the grave accusation brought against ʿAlī by his headstrong adversaries of having committed an act of unbelief (*kufr*) in accepting the arbitration, their insistence upon breaking away from the caliph who refused to show repentance and break the pact of Ṣiffīn, their exaltation which led them to face death in the certain knowledge that Paradise would be the reward for their obedience to God, these at last have found the logical basis that hitherto was missing. These Khāridjī traditions are set forth at length in two late Ibāḍī sources, the *Kitāb al-Djawāhir* of al-Barrādī, written in the Maghrib at the end of the 8th/14th century or at the beginning of the 9th/15th, and the *Kitāb al-Kashf wa-'l-bayān*, written before 1070/1659 by an Ibāḍī theologian of ʿUmān, al-Ḳalhātī (see Brockelmann, S II, 568). While al-Barrādī says they were taken from a *Kitāb al-Nahrawān*, probably the work of one ʿAbd Allāh b. Yazīd al-Fazārī (1st-2nd/7th-8th centuries), al-Ḳalhātī is silent as to his sources; however, M. Kafafi, who has given a résumé, states that they go back to an ancient period. A comparison of the pages of al-Barrādī and the résumé of those of al-Ḳalhātī shows that the two authors have not drawn upon the same source; however, the subject-matter is substantially the same.

Evidently preoccupied with the secession of the Ḥarūrīs, ʿAlī sent to Ḥarūrāʾ, to parley on his behalf, his cousin ʿAbd Allāh b. al-ʿAbbās, and then also went there himself to discuss the matter with the dissidents. The arguments which the Ḥarūrīs used in these discussions have not been reproduced in al-Ṭabarī or in the other Sunnī sources or those favourable to ʿAlī, while the arguments of the latter and of Ibn ʿAbbās are included. The rebels' argument was, briefly, as follows: "When we had shed the blood of ʿUthmān, we were in the right path, because he had made innovations (*aḥdāth*); so, too, when we shed the blood of Ṭalḥa, al-Zubayr and their adherents on the Day of the Camel [see AL-DJAMAL] because they were rebels; and also when we shed the blood of the supporters of Muʿāwiya and ʿAmr, because they were rebels and transgressors against the Book of God and the *Sunna* of the Prophet. Has a command come down from heaven compelling ʿAlī to change his attitude? No. He must therefore persevere in the line of conduct followed at the start, continue the war and refuse arbitration". Ibn ʿAbbās vainly reminded his opponents of the verses in the Ḳurʾān (IV, 39/35, V, 1-3/1-2) on the nomination of arbitrators in certain cases; the Ḥarūrīs replied that any question for which a decision (*ḥukm*) on the part of God existed could not be submitted to arbitration; God had laid down the ruling to be followed in the case of a band of rebels (*fiʾa bāghiya*), for He said (XLIX, 9): "If two parties of Believers fight against each other, re-establish peace between them! If one of them persists in rebellion against the other, fight against that party which is rebelling (*allatī tabghī*) until it bows before Allāh's command". Are not Muʿāwiya, ʿAmr and their supporters a *fiʾa bāghiya*? And the Ḥarūrīs add that God said (VIII, 40/39): "Fight them, till there is no sedition (*fitna*) and the religion is God's entirely". Has Muʿāwiya returned to obedience to God? The answer could only be negative. Therefore Allāh had already made

known His *ḥukm* for a similar case and it must be applied; it must be regarded as one of His *ḥudūd* [see ḤADD], like the *ḥudūd* regarding the fornicator and the robber. Men have no choice in a question on which God has given His judgement (*lā ḥukmᵃ illā li'llāh*). In their discussions, the Ḥarūrīs resorted to still other arguments and other verses of the Ḳurʾān to justify their secession, but those summarized above were the most difficult to refute. Ibn ʿAbbās was compelled to recognize their validity (even the Sunnī sources and those that favour ʿAlī state that he failed in his task); as for ʿAlī, he persuaded the dissidents to abandon their secession, though how he succeeded in doing so is not very clear. The arguments that he put forward (and which differ materially in the various sources) do not seem sufficiently compelling to win over adversaries so stubborn in their convictions. Must we then accept the statement of al-Fazārī in his *K. al-Nahrawān* that he promised to resume the war against Muʿāwiya and backed up his promise with the firmest assurances? A sentence slipped into some sources: "we shall levy taxes, we shall fatten the mules, then we shall march towards them" (al-Balādhurī, 523v.; cf. al-Ṭabarī, i, 3353; Mubarrad, 558, etc.) suggests that ʿAlī made concessions; even Ṭāhā Ḥusayn recognizes that there was a misunderstanding at that time. In any case it is certain that when, some time after his return to al-Kūfa, ʿAlī clearly stated his intention to respect the Ṣiffīn agreement, the Ḥarūrīs, who had returned to the town with him, became incensed. It was as a result of this statement by ʿAlī that the dissidents secretly held meetings, raising the question whether to remain in a country where injustice ruled was compatible with the duties owed to God; those who held that it was necessary to leave it went away into hiding, invited the dissidents in al-Baṣra to follow suit and gathered together at al-Nahrawān, thus seceding for the second time. It is possible that, at the beginning of the Khāridjī movement, a distinction was made between *al-Muḥakkima al-ūlā* = the first to have cried out at Ṣiffīn *lā ḥukmᵃ illā li 'llāh*, *al-Ḥarūriyya* = those who had been present at the gathering at Ḥarūrāʾ but who, on returning to ʿAlī's ranks, did not feel obliged to enter into open rebellion (while perhaps remaining attached to their idea that the Ṣiffīn agreement was a sin for which repentance must be shown), and *al-Khawāridj* = those who left al-Kūfa and al-Baṣra in order to break every link with ʿAlī; but this is merely a hypothesis to justify these different terms, for it is to be noted that the last two terms were used indiscriminately in the sources (in fact of a much later date).

At Ḥarūrāʾ, or nearby, two battles took place, one in 67/686, in which al-Mukhtār [*q.v.*] was defeated by the army of Muṣʿab [*q.v.*], the other on 9 Shawwāl 315/8 December 927 when the Sādjid Yūsuf b. Abi 'l-Sādj, fighting for the caliph al-Muḳtadir against the Ḳarmaṭī sovereign of Baḥrayn Abū Ṭāhir Sulaymān al-Djannābī, was defeated and captured (it should, however, be observed that most of the sources do not mention Ḥarūrāʾ in connexion with this battle, merely saying that it took place outside al-Kūfa, or at the gates of that town).

(L. Veccia Vaglieri)

HĀRŪT WA-MĀRŪT. In one of its admonitions to the unbelieving Jews of Medina, the Ḳurʾān (II, 102/96) expresses itself thus (from A. J. Arberry's translation): "[the children of Israel] follow what the Satans recited over Solomon's Kingdom. Solomon disbelieved not, but the Satans disbelieved, teaching the people sorcery, and that which was sent down upon Babylon's two angels Hārūt and Mārūt; they taught not any man, without they said, "We are but a temptation; do not disbelieve ..."". The Ḳurʾānic narrative, linked somewhat artificially with Solomon, whose relations with demons are well-known [see SULAYMĀN], thus reflects a legend concerning the fallen angels who made themselves masters of the arts forbidden to men. The exegetic tradition relating to this passage can explain how the angels had come to that place from heaven. The sight of men's sins had impelled the angels to make derogatory remarks about mankind. When God

challenged them to do better if placed under the same conditions, they accepted a test, for which Hārūt and Mārūt were chosen. Having come down to the earth with instructions to avoid the grave sins of idolatry, fornication, murder and the drinking of wine, they almost immediately were captivated by a wondrously beautiful woman. Being caught unawares at the very moment when she was granting them her favours, they killed the man who had witnessed their misconduct. God caused them to be watched while doing so by their brothers who had remained in heaven, and who consequently could only say "Indeed Thou wast right". Left to choose between punishment in the world and the eternal pains of hell, the two guilty angels preferred to expiate their offence here below; they were then imprisoned and hung by the feet in a well in Babylon where they have been in torment ever since. In the final analysis, this theme derives from the account in *Genesis*, VI, 1-4 concerning the loves of the "sons of Elohim" and the daughters of men, expanded in the apochryphal books where there appears the supplementary theme of the fallen angels, masters of magic (*Jubilees*, V, 6; *Enoch*, chaps. VI-VIII, etc.; allusion in the New Testament, *2nd Epistle of Peter*, II, 4 and *Epistle of Jude*, 6); in the *Midrash Abkir*, an Aggadic Jewish work of a late period, but rich in traditions left aside by the great rabbinical texts, the guilty angels bear the names of Shemḥazaī, ʿUzza and ʿAzaʾel. According to its version of the legend, which also recurs in more than one Muslim text, the angels who had fallen into sin lost the use of the ineffable Name of God which would have allowed them to return to heaven; the woman whom they had lusted after, having learned this Name from them, made use of it to escape from them and to make her way to heaven where, as a reward for her virtuous resistance, God changed her into a star. On this point, an astrological motif is grafted onto the legend, for the names given to this woman, Anāhīd, Bīdukht, Zuhra—in the Jewish version Naʿamah—seem, with the possible exception of the last, to be firmly connected with the planet Venus. As regards the names Hārūt and Mārūt, it is hardly possible to discover any etymology (contrary to the opinion of A. J. Wensinck in *EI*[1]) other than Haurvatāt and Ameretāt, "integrity" and "immortality", two of the "archangels" (Amesha Spenta) of Zoroastrianism; it is still not clear how the synthesis of the Iranian features and the Jewish legend of the fallen angels took place, nor how the hypothetical version which had substituted Iranian names for the Semitic names of the heroes of the story came into Arabia as early as the beginning of the 7th century A.D.; yet traces of it have been found in the Manichaean books. We can therefore conclude without being overrash that the immediate source of the allusion in the Ḳurʾān and of certain elements in the later Muslim legend is to be found in the syncretistic beliefs developed on the fringe of the main Jewish, Christian and Mazdean religions. Variations on the Ḳurʾānic theme which we have not touched on here in detail have been severely criticised by more than one theologian: see *al-Badʾ wa 'l-taʾrīkh*, iii, 14 ff.; Fakhr al-Dīn al-Rāzī, *Mafātīḥ al-ghayb*, iii, Cairo 1354/1935, 244; Ibn Kathīr, *al-Bidāya wa 'l-nihāya*, i, 37-8.

AL-ḤASĀ, (or AL-AḤSĀʾ, also AL-ḤASĀʾ), oasis, or more properly group of oases, in eastern Saudi Arabia, approximately from 25° 20′ to 25° 40′ N., and 49° 30′ to 49° 50′ E. The name has been also used to designate the entire region of Eastern Arabia. The capital is al-Hufūf [*q.v.*], about 65 kms. inland from the Persian Gulf. The name derives from *ḥisy*, an excavation in sandy soil which, having a stony substratum, holds rain water for a long time, this water being easily reached with little digging. The average elevation of the oasis is 175 m. above sea level.

Al-Ḥasā, with some 180 square kms. of garden area, has roughly the shape of an "L", with al-Hufūf at the apex, the northern oases forming the vertical stroke and a large group of gardens and villages, sometimes referred to collectively as al-Shurūḳ. forming the horizontal stroke. The vertical branch, oriented due north-south, is about 25 kms. long; the horizontal branch is about 18 kms. long and is oriented east-west. The cultivated portions are not continuous but are interrupted by sandy areas, limestone outcrops, and some fairly large *sabkhas*, which serve as catchment basins for the highly saline water drained from the gardens, especially during the winter period of low evaporation. Al-Ḥasā has a warm and humid climate in the summer, though less humid than the coastal regions, but its winter weather is quite mild. The average annual precipitation is about 70 mms. The total population is now estimated at about 200,000, about half of whom live in the capital, al-Hufūf, and in the town of al-Mubarraz, some 1.5 kms. north of the capital. The remaining population is distributed among some 50 villages and hamlets in the cultivated areas, the largest having about 4,000 inhabitants. The population is about equally divided between Sunnīs and Shīʿīs of the Ithnāʿasharī persuasion. All four orthodox schools of law are represented among the Sunnīs of al-Ḥasā, but the two predominant ones are the Ḥanbalī, which has increased in importance in recent times, and the Mālikī, which has a distinguished tradition in the oasis. Al-Ḥasā was in the middle ages an important centre of Mālikī learning.

With over 12,000 hectares under cultivation and close to three million palm trees, al-Ḥasā is the largest and richest oasis in Saudi Arabia. The mainstay of al-Ḥasā's agriculture is the abundant water furnished by over sixty flowing artesian springs, several of which have a flow of over 75,000 litres per minute. At least since the early middle ages, when the region was called Hadjar, after the name of its capital, the most abundant and famous local produce has been dates, giving rise to the dictum of something being "like carrying dates to Hadjar", as a parallel to the "coals to Newcastle" phrase. The most extensively grown local variety is called *ruzayz* (after which the inhabitants are sometimes jokingly called *ruzayzīs*) and the variety considered to be the best in quality is *khulāṣ*; over seventy different varieties of dates

have been recorded in al-Ḥasā, some of them being used only as fodder [see TAMR]. Another item of economic importance for which the area has long been famous is the local breed of tall, white donkeys, which once were widely exported, in particular to Egypt and ʿIrāḳ. Dietary changes and the introduction of wheeled transport brought about a foreseeable decline in the economic importance of both dates and donkeys. On the other hand, the increased cash wages due largely to the development of the oil industry in Saudi Arabia's Eastern Province have given rise to an increase in commerce, services, and light industry, as well as some greater variety in agricultural produce. The manufacture of textiles to make the locally worn cloak (*bis͟ht*) has long enjoyed a well-deserved reputation and is still an important part of the economic picture of al-Ḥasā.

History. The detailed study of the history of al-Ḥasā, particularly with regard to the earlier periods, is yet to be undertaken. It has been suggested that the region called Attene in antiquity might be the same as present-day al-Ḥasā, but no other references in old sources can be connected with the oasis. The area was certainly known as al-Ḥasā (or al-Aḥsāʾ) during the time of the Prophet. The majority of the people of the area accepted Islam at an early date, although they rebelled against the central power a number of times. Most notable among these rebellions was that of the Ḳarmaṭīs [*q.v.*], who, when they brought the Black Stone from Mecca, kept it in this area for about twenty years.

In mediaeval Arabic sources al-Ḥasā is said to be a fortress in al-Baḥrayn [*q.v.*] not far from al-Had͟jar, the ancient capital of the district. This fortress was founded by the famous Ḳarmaṭī leader Abū Ṭāhir al-D͟jannābī [*q.v.*] in 314/926 near a locality then called al-Ḥasā. He called the fortress al-Muʾminiyya, but both fortress and settlement continued to be known by the old name. In 443/1051, the area was visited and described by the Persian Nāṣir-i-K͟husraw, whose account of the Ḳarmaṭī government is particularly valuable. The Ḳarmaṭī power was eventually crushed by a dynasty native to al-Ḥasā, the ʿUyūnids.

Remains of ʿAbbāsid pottery in the oasis suggest that al-Ḥasā was already densely populated during early Islamic times. It does not seem likely, however, that the Portuguese and the Persians, who ruled or occupied the island of al-Baḥrayn in the 10th/16th and 11th/17th centuries respectively, extended their rule to the oasis. In later times, and by reason of its geographical location as well as its resources, the oasis was coveted by the Wahhābīs [*q.v.*] from Nad͟jd and by the Turks, while the lords of the Banū K͟hālid, who had for many years been the masters of al-Ḥasā, fought to maintain their position. The oasis changed hands a number of times. Al-Ḥasā first yielded to the Wahhābīs in 1209/1793. Between 1235/1819 and 1241/1825 the oasis was occupied by Muḥammad ʿAlī Pas͟ha's Egyptian army; and between the latter date and 1247/1830, it was in dispute again between the Banū K͟hālid and the Wahhābīs, who finally gained the upper hand but were forced to another brief relinquishment of the area to the Egyptians in 1255/1839. The Turks occupied the oasis in 1289/1872 and made the area a *sand͟jaḳ* of the *wilāyet* of Baṣra. During the Turkish occupation, al-Ḥasā was the administrative centre of the *sand͟jaḳ* and the residence of the Mutaṣarrif Pas͟ha. The Turks were finally expelled from al-Ḥasā by ʿAbd al-ʿAzīz Ibn Saʿūd in 1913.

The rule by Egyptians, Turks, and Wahhābīs until 1332/1913 was not a secure one. Two powerful Bedouin tribes of eastern Arabia, the Banū K͟hālid and the ʿUd͟jmān, continuously raided the villages of al-Ḥasā and endangered the trade routes. The area was finally pacified under the rule of the present dynasty. From 1913 until 1952 al-Ḥasā continued to be the administrative centre of the entire area of eastern Saudi Arabia, which was then called al-Ḥasā Province. The name of the oasis was also used to designate the oil concession (The Hasa Concession) obtained from Ibn Saʿūd by Frank Holmes in al-ʿUḳayr in 1923, which covered the lands lying between the sands of al-Dahnā to the west and the Gulf to the east, and between ʿIrāḳ and Kuwayt to the north and a line running due west from the base of the Ḳatar peninsula to the south.

In 1952 the capital of the province was moved from al-Ḥasā to the town of al-Dammām [*q.v.*] on the Gulf coast, and the province itself changed its name from al-Ḥasā Province to the Eastern Province. The amīrate of al-Ḥasā has jurisdiction over only the oasis area and reports to the provincial government in al-Dammām. In the 1960's the Saudi Arabian Government undertook elaborate agricultural extension work in the oasis, including sand stabilization, drainage, and the establishment of experimental farms.

ḤASAB WA-NASAB, a *muzāwad͟ja* [*q.v.*] in the Arabic manner used of two aspects of the single idea of nobility. The second term denotes kinship, the relationship, particularly ancestral, i.e. the genealogy of an individual or a tribe, the record of which, in the time of the D͟jāhiliyya, was carefully maintained by the *nassāba* and which, under Islam, formed a branch of history [see NASAB]. The *nasab*, which was an element of honour, was based not only on consanguinity but also on maternal descent, although the relationship on the paternal side, which was more easily traced, seems to have been the more important. Normally, all the members of a tribe had a collective *nasab* going back to the ancestor from whom the tribe was named and a narrower *nasab* which began with the founder of the clan, without the links in this chain necessarily being very illustrious. The *nasab* to be proud of was one which went back very far into the

past and was stained by no dishonour; the slightest stain on the other hand was exploited by enemies who, in their *hidjā'* [*q.v.*], cast aspersions on the ancestors of the individual or the clan concerned. It was with the intention of emphasizing the equality of the Believers and of achieving the unity of the Community that the Prophet forbade *al-ṭaʿn fi 'l-ansāb, i.e.*, attacks based on the real or imaginary defects of an ancestor, especially of the eponymous ancestor of the tribe or the clan.

While the only people deprived of *nasab* were solitaries, outcasts and of course slaves, the possession of *ḥasab*, according to the pre-Islamic conception of it, necessitated not only the existence of ancestors but the doing honour to them by performing memorable deeds of prowess or displaying outstanding virtues, in particular exemplary generosity. The memory of the great deeds performed in the past by members of the tribe was passed down from father to son to form a collective *ḥasab* of which all could boast; the valour of the group was measured so to speak by the total of these exploits and virtues, which provided for all a model to imitate, an ideal moral standard to attain and a patrimony to safeguard; it was in fact a sort of tribal *sunna*.

In contrast to *nasab*, *ḥaṣab* could be acquired also by an individual by means of virtuous acts or brave exploits. Thus, the *ḥasib* was a person who either possessed a noble ancestry or had acquired nobility personally, without necessarily requiring an outstanding *nasab*, whereas the *nasib* had to be equipped with both *nasab* and *ḥasab*.

The appearance of Islam did not entirely banish these ideas, which remained very much alive among the Arab tribes (and even among the *fuḳahā'*, who had to know a woman's *ḥasab* in order to assess her *mahr* [see ṢADĀḲ]), but the earlier ideas were in fact modified by the tendancy to egalitarianism and by the preponderant place accorded to the Faith. The Ḳur'ān makes no reference to them, but *ḥadīth*, where it is authentic, reveals an abrupt change in conception which the numerous philological works and commentaries enable us to understand. While forbidding attacks on genealogies, the Prophet proclaimed: "Learn enough genealogy to know your *aḥsāb* and fulfil the duties imposed by family relationships" (here, *aḥsāb* seems to be related to the etymological meaning of the root *ḥsb* "to count", that is "to know what you are worth collectively"), but there are also attributed to him the *ḥadīth*s: *ḥasab al-radjul khulūḳuh* "a man's *ḥasab* is his moral qualities" and: *ḥasab al-radjul naḳā' thawbayh* "... is the cleanness of his two garments", which some interpret as a sign of wealth. In fact one *ḥadīth* announces unexpectedly: *al-ḥasab al-māl wa'l-karam al-taḳwā* "*ḥasab* is wealth and generosity is religious piety". Thus the excellence of ancestors would be replaced by wealth, and the generosity which procures *ḥasab* by religion; there is nothing surprising in the fact that any Believer could acquire a nobility which formerly had been reserved for those with ancestors and that *ḥasab* should not in theory be considered as an Islamic quality, but it is most extraordinary that wealth should take its place. The matter should not be exaggerated however, and the following commentary by Ibn al-Sikkīt (in *LA*, s.v. *ḥsb*) would serve to show the *ḥadīth* in its true perspective, if it did not deviate from Islamic moral standards by taking no account of transient circumstances: "A man may possess *ḥasab* and generosity (*karam*) even if he has no ancestors of nobility (*sharaf*), whereas *sharaf* and glory (*madjd*) exist only through the ancestors: the Prophet thus substituted wealth (*māl*) for the nobility of the individual (*al-nafs*) or of his ancestors, which means that the poor man with *ḥasab* is neither respected nor esteemed, whereas the rich man who is without it is respected".

(ED.)

ḤASAN, AL-MALIK AL-NĀṢIR NĀṢIR AL-DĪN ABU 'L-MAʿĀLĪ, 19th Mamlūk Sultan of Egypt, in the line known to contemporary chroniclers as *Dawlat al-Turk*. He was the most prominent of eight sons of the Sultan al-Malik al-Nāṣir Muḥammad b. Ḳalā'ūn who ruled in turn during the years 741/1340-763/1362 and who are frequently designated in European documents of the period as "Ḥasan and his brothers" (*e.g.*, *BSOAS*, xxviii (1965), 492: "Nasser Hassan et suo fradeli"), see Zambaur, *Manuel*, i, 103, 106; and Wiet, in *Mém. Inst. Egypte*, xix, genealogical tree p. 279). Owing to the sustained attempt at dynastic succession Ḥasan was very young (11 years) at his first accession to the Sultanate on 14 Ramaḍān 748/18 December 1347, and did not in fact rule during his first reign, which lasted for just under four years (until 17 Djumādā II 752/11 August 1351). As happened frequently under the Mamlūks, *de facto* power was divided among rival factions of *amīrs* surviving from the period of a deceased sultan (*ḳarāniṣ*, see Ayalon, in *BSOAS*, xv (1953), 217 ff.), a struggle in this case coloured by the rise to a significant position of the Circassian elements, who had been favoured by his brother and predecessor al-Malik al-Muẓaffar Ḥādjdjī and who towards the end of the 8th/14th century were to emerge as the rulers of Mamlūk Egypt and Syria [see ČERKES ii and BURDJIYYA]. Nine months after attaining his majority Ḥasan is reported to have abdicated (*Nudjūm*, v, 91), owing to the pressure of the *amīrs* Ṭāz and Minkalī. These arranged the succession of Ḥasan's brother Ṣāliḥ, who was three years older and who, under the regnal name al-Malik al-Ṣāliḥ, managed to stay on the throne for about three years, until his deposition on 2 Shawwāl 755/20 October 1354; he remained imprisoned until his death seven years later. Instrumental in this act and in the immediate restoration of Ḥasan were the *amīrs* Ṣarghitmish and Shaykhūn, the *Atābak al-ʿasākir* [*q.v.*] and first bearer of the title al-Amīr al-Kabīr [*q.v.*]. It was owing to the latter's intercession with Ḥasan that the *amīr* Ṭāz, instead of being condemned to death for his insurrection, was merely rusticated to Syria and the governorship of Aleppo. Soon after his second accession Ḥasan's position was weakened by the murder of Shaykhūn during a quarrel with a fellow *mamlūk*. Further, and possibly as a result of this act, Ṣarghitmish acquired more power than pleased the Sultan and had to be incarcerated in Alexandria, where he later died. Finally Ḥasan's second and last reign was brought to an end by one of his own ambitious *mamlūk*s, Yalbughā, who murdered the Sultan in the Citadel while he, having got word of the conspiracy, was arranging an escape to Syria in bedouin dress, on 12 Djumādā I 763/9 March 1362.

The periods of rule of Sultan Ḥasan are thus conspicuous neither for their length nor for evidence of his political competence. The major event of his first reign, whose cause can hardly be laid at the

door of the Sultan but whose repercussions must have made government in Egypt and Syria more difficult than usual, was the plague of 749/1348 [see ṬĀʿŪN]. The devastation of the Mamlūk dominions and decimation of their population which followed in its wake are described in some detail by the chronicler Ibn Taghrībirdī (*Nudjūm*, v, 62-76). Of Ḥasan's foreign relations, however, there is documentary evidence sufficient to indicate sustained activity: with the Byzantine Empire (M. Canard, in *AIEO*, iii (1937), 27-52), with the monks of Mt. Sinai (Ernst, *Sultansurk.*, Docs. XIII, XIV, XV), and with the Republic of Venice (Thomas-Predelli, *Diplomatarium*, ii, Docs. XII, XIII, XLVII). Yet another trace of his reign is the *madrasa* of Sultan Ḥasan in Cairo, construction of which was begun in 757/1356 (*Nudjūm*, v, 158).

Bibliography: Ibn Taghrībirdī, v, 54-108, 147-74, a fairly exhaustive account, though additional references in Arabic chroniclers can be found in Wiet, *Les biographies du Manhal Ṣāfī*, *MIE*, xix, p. 133 (no. 916), and in Ernst, *Die mamlukischen Sultansurkunden des Sinai-Klosters*, Wiesbaden 1960, 59. (J. WANSBROUGH)

MAWLĀY AL-**ḤASAN**, ABŪ ʿALĪ, sultan of Morocco from 12 September 1873 to 9 June 1894. He was the son of Sayyidī Muḥammad b. ʿAbd al-Raḥmān whom, at the age of 37, he succeeded without dispute. Soon after his accession, however, revolts broke out at several places: Azammūr, against the local governor; Meknès, where an uncle rose as pretender to the throne; Fez, where the tanners rebelled in order to obtain the abolition of a local tax. The sultan repressed these risings quickly and without excessive cruelty. He passed a great part of his reign on expeditions aimed at maintaining the submission of many Berber tribes. It was while returning from such a long campaign, which had taken him as far as Tāfīlālt, that he died in the Tādla region. His death remained secret until the army had arrived at Rabat, where his young son ʿAbd al-ʿAzīz [*q.v.*] was proclaimed sultan.

Like his father and his grandfather Mawlāy al-Ḥasan understood the pressing necessity to modernize Morocco and thought that the first sector to be reformed was that of the army. He therefore created permanent and regular units, in which sundry renegades served, and invited foreign instructors, above all French and English, from 1877 onwards. Moreover, several groups of infantry were sent to Gibraltar to be trained with English troops. The sultan bought arms in Europe and installed a cartridge factory at Marrākush and an arsenal at Fez, the *Makīna*. He even established the nucleus of a national fleet. He occupied himself also with the technical training of the Moroccans and sent several to Europe, envisaging the modernization of certain Moroccan industries.

But relations with the European powers, more and more attracted by Morocco, absorbed a great part of his activity. He received a growing number of embassies, and it was on his initiative and that of Great Britain that the first international conference concerned with Morocco was held at Madrid from 19 May to 3 July 1880. This conference dealt with the "protection" rights of the European powers in the Sharīfian Empire. Pious and conservative in his internal policies, Mawlāy al-Ḥasan thus, without fully realizing the implications of his initiative, enmeshed Morocco in an international process which was to end in the Protectorate of 1912.

(R. LE TOURNEAU)

ḤASAN, *amīr* of the Čūbānid [*q.v.*] dynasty.

AL-**ḤASAN** B. **ʿABD ALLĀH** [see NĀṢIR AL-DAWLA].

AL-**ḤASAN** B. **ʿALĪ** [see ZĪRIDS].

AL-**ḤASAN** B. **ʿALĪ** [see AL-ḤASAN AL-UṬRŪSH, IBN MĀKŪLĀ, NIẒĀM AL-MULK].

AL-**ḤASAN** B. **ʿALĪ** B. **ABI 'L-ḤUSAYN** [see KALBIDS].

(AL-)**ḤASAN** B. **ʿALĪ** B. **ABĪ ṬĀLIB**, son of ʿAlī and Fāṭima [*q.v.*], claimant to the caliphate until he renounced the office in favour of Muʿāwiya b. Abī Sufyān, and, in the eyes of the Shīʿīs, the second *imām*.

Early years. — He was born in 3/624-5 (the month is uncertain; mid-Ramaḍān?) and given the name al-Ḥasan by Muḥammad, while his father wanted to call him Ḥarb; he lived with the Prophet for only seven years, but was nevertheless able later to recollect some of his phrases and actions (for example that Muḥammad threw back into the heap of *ṣadaḳa* dates one which he had already put into his mouth, for he was unwilling to eat anything from the *ṣadaḳa*). Tradition, including also that preserved in Sunnī collections, relates, as evidence of the love that Muḥammad felt for his grandchildren, not only the phrases he is said to have used concerning them, but also charming anecdotes that testify to his affection (*e.g.*, Muḥammad descended from the *minbar* during one of his discourses in order to pick up al-Ḥasan who had stumbled over his long tunic and fallen down; "Alas", he said, "your riches and your children are a seduction"; he allowed his grandchildren to climb on his back while he was prostrating himself in prayer, etc.). More important for the deductions drawn from them by the Shīʿīs are certain phrases attributed to the Prophet (*e.g.*, "They will be the *sayyids* of the young in Paradise", a *ḥadīth* whose veracity was contested by Marwān b. al-Ḥakam; see Ibn Abi 'l-Ḥadīd, iv, 5), and above all the fact that he took them, with their father and mother, under cover of his mantle and declared that they were People of the House free from all impurity [see AHL AL-KISĀʾ and FĀṬIMA]. After their grandfather's death (which was followed soon by that of their mother), al-Ḥasan and his brother played no part in the important events of the caliphates of Abū Bakr, ʿUmar and ʿUthmān. They lived, says one source, in a state of obedience to their father; in fact, even if they followed him in some of his demonstrations of opposition to ʿUthmān, they took an entirely passive part (in any case they were still very young). Their names are mentioned on the occasion of the siege of ʿUthmān's house [see ʿUTHMĀN], for ʿAlī, according to several traditions, sent

them to carry water to the caliph, who was dying of thirst, and ordered them to defend him when the danger from the besiegers grew greater. When al-Ḥasan entered the house, ʿUthmān's murder had already taken place, but he was in time to see that Muḥammad b. Abī Bakr had had a part in the assassination and it is for that reason that, from then onwards, he called him al-Fāsiḳ (Ibn Saʿd, iii/1, 58).

The caliphate of ʿAlī.—When ʿAlī was elected caliph and Ṭalḥa, al-Zubayr and ʿĀʾisha rebelled, al-Ḥasan was sent, with ʿAmmār b. Yāsir, to Kūfa to persuade the inhabitants to take his father's side and send him reinforcements [see AL-DJAMAL]; later, during the campaign against Muʿāwiya, he took part in the battle of Ṣiffīn [*q.v.*].

His caliphate.—After the murder of ʿAlī, ʿUbayd Allāh b. ʿAbbās [*q.v.*] invited the people to nominate him as caliph (ʿAlī had not dared to give advice on the question of the succession), and al-Ḥasan made a speech, reported in many texts, for the purpose of praising the merits of his family and his father and, finally, of himself, by insisting on the fact that he had lived in intimacy with the Prophet. Ḳays b. Saʿd b. ʿUbāda al-Anṣārī was the first to do homage to him; however, he tried to impose a condition, that the *bayʿa* should be "on the Book of God, the *Sunna* of the Prophet and the war (*ḳitāl*) against those who declared licit that which is illicit (*al-muḥillūn*)", but al-Ḥasan succeeded in avoiding this commitment by saying that the last condition was included in the first (al-Ṭabarī, ii, 1). According to al-Balādhurī, the oath taken by those present stipulated that they should make war on those who were at war with al-Ḥasan, and should live in peace with those who were at peace with him. This formula astonished the assembly; if al-Ḥasan had spoken of peace, was it because he desired to conclude a peace with Muʿāwiya? Al-Ḥasan could count on 40,000 former adherents of ʿAlī, either because they had clung obstinately to their political ideas, or because they feared reprisals from Muʿāwiya. That this fear existed can be conjectured from the fact that Muʿāwiya lost no time in promising *amān* to all those who asked him for it, and pursued this policy with success when he entered ʿIrāḳ. Granted the method of the ancient Arab chroniclers, it is difficult to place all the episodes of the struggle between Muʿāwiya and al-Ḥasan in precise chronological order. However, it is evident that Muʿāwiya was not slow to demonstrate, either in a speech or in letters to al-Ḥasan, his decision not to recognize the election of the latter to the caliphate; he soon prepared for war, summoning to join him the commanders of his forces in Syria, Palestine and Transjordania. At the start, there was an exchange of letters, embellished with verses, between al-Ḥasan and Muʿāwiya and between ʿUbayd Allāh b. ʿAbbās (in some sources ʿAbd Allāh b. ʿAbbās or simply Ibn al-ʿAbbās) and Muʿāwiya on the subject of spies whom the latter had sent to Kūfa and Baṣra (*al-Aghānī*, xviii, 162, etc.). The correspondence continued for some time in a polemical form, returning to old questions—which makes it more interesting (at least if the letters reproduced by Abu 'l-Faradj al-Iṣfahānī in his *Maḳātil* are authentic). When Muʿāwiya's warlike intentions became clearer (he had advanced to Mosul, but, at the same time, he was probably making offers by letter for a settlement of the dispute), al-Ḥasan had to prepare for war. At first his supporters did not respond to his appeal; it was only when ʿAdī b. Ḥātim [*q.v.*] urged them on that they began to enlist. To halt Muʿāwiya's advance, al-Ḥasan sent an advance-guard of 12,000 men to meet him, under the command of ʿUbayd Allāh b. ʿAbbās, whom he instructed to consult Ḳays b. Saʿd and Saʿīd b. Ḳays al-Hamdānī. His aim may have been to remove from his side this Ḳays, who represented the party for war to the death, because he was already intending to negotiate with his adversary; al-Ṭabarī at least says so expressly (i, 1 ff.). Then he too began to advance (two or three months after the election). At the Sābāṭ of al-Madāʾin he halted and made a speech which disturbed his followers, who probably were already suspicious owing to certain words he had used or else to the slowness of his advance. He stated that he would not entertain any feeling of rancour against a Muslim, that the reconciliation refused by his men was better than the split that they wanted (see, *e.g.*, al-Dīnawarī, 230). His soldiers wondered whether in fact he wished to make peace with Muʿāwiya. The reaction was violent: one group, evidently those most determined to continue ʿAlī's policy, sacked his tent and seized the carpet from under his feet, and his silk cloak was all but torn from his shoulders. Al-Ḥasan shouted for his faithful followers from the Rabīʿa and the Hamdān and, with their help, escaped from these fanatics, took horse and rode away. When he reached Muẓlim Sābāṭ, a certain al-Djarrāḥ b. Sinān al-Asadī, a man of Khāridjī opinions, wounded him in the thigh with a dagger, crying out as he did so "You have become an infidel (*kāfir*) like your father". Bleeding profusely, al-Ḥasan was carried to al-Madāʾin and cared for in the governor's house. After this, the news of the attack on al-Ḥasan became widely known, having been purposely divulged by Muʿāwiya, and it led to desertions; Muʿāwiya advanced as far as al-Akhnūniyya, facing the troops of ʿUbayd Allāh encamped at Maskin; at the same time his advance guard approached al-Madāʾin. It was here that the negotiations, which had probably been opened some time earlier in spite of the opposition of al-Ḥusayn and had been continued by means of envoys representing the two disputing parties, came to a successful conclusion. Al-Ḥasan's troops had no wish to fight, and each day an increasing number of ʿIrāḳīs joined Muʿāwiya.

The conditions of the agreement concerning al-Ḥasan's abdication.—On the matter of the conditions of the agreement, there are in the sources certain variants which it is impossible to correct and reconcile. According to some accounts, Muʿāwiya gave carte blanche (but in respect of what?) to al-Ḥasan, who later regretted not having asked for more. The compensation in money was the sum of one million *dirhams* (annual appanage? in addition to the single payment of 5 million to be taken from the treasury of Kūfa?) and the revenue from a district in Persia (Dārābdjird? Fasā? al-Ahwāz?), which al-Ḥasan was never able to collect since the people of Baṣra were hostile, maintaining that it was a dependency of their own. Some traditions add other conditions which, however, must be suspected of having been interpolated later, in order to reduce the criticisms brought against al-Ḥasan and to show that he had raised certain problems and held firm in regard to his own point of view. These are the conditions: power was to be restored to al-Ḥasan after the death of Muʿāwiya (but the idea of a pre-determined succession had not yet made its appearance, and we know what difficulties Muʿāwiya was later to encounter in securing its acceptance by the Muslim community; from a letter of Muʿāwiya, we may deduce that he represented the matter as being poss-

ible in the future, but without giving any undertaking on his part); according to another source, Muʿāwiya pledged himself not to designate a successor, the choice being referred to a committee (*shūrā*) (but if so Muʿāwiya did not and could not contemplate his son's succession!); again, Muʿāwiya promised to follow "the Book of God, the *Sunna* of the Prophet and the conduct of the righteous caliphs" (but such a condition in the sense that ʿAlī's party gave to it implied the condemnation of ʿUthmān's policy; could Muʿāwiya accept that?); a general amnesty was to be granted; two million *dirhams* were to be paid to al-Ḥusayn (this condition to show that al-Ḥasan had also thought of his brother?); preference would be given to the Hāshimīs (ʿAlids and ʿAbbāsids) over the Banū ʿAbd al-Shams (Umayyads) in the granting of pensions (*aʿṭāʾ*) and awards (an admissible condition?).

During his halt at al-Akhnūniyya, face to face with al-Ḥasan's advance guard, Muʿāwiya informed ʿUbayd Allāh b.ʿAbbās that al-Ḥasan had asked him to make peace, but he was not believed; he then negotiated in secret with ʿUbayd Allāh through the intermediary of a third party and offered him a million *dirhams* if he would join him, and this ʿUbayd Allāh did, unbeknown to his troops. This defection was to lead to a split in the ranks of the advance guard; it seems that 8,000 men followed the example of their general. Ḳays b. Saʿd then took command of the 4,000 who had not left him and invited them to choose between obedience to a misguided *imām* (Muʿāwiya) and war under the command of a leader (himself) who was not an *imām* (a speech handed down with certain variants); it seems that the soldiers preferred to fight, but soon the situation changed, with the result that Ḳays consented to lay down his arms. From Maskin, where he had gone, Muʿāwiya went on to Kūfa; al-Ḥasan rejoined him and declared officially in the mosque that he had renounced the caliphate.

Al-Ḥasan's abdication naturally provoked certain reactions: Ḥudjr b. ʿAdī [*q.v.*] told him that he would rather have heard that he had died before that day; the same Ḥudjr, or another adherent, accused him of having humiliated the Muslims; others suggested that he should review his decision; some years later, the Shīʿīs, gathering together, showed their disapproval of the fact that al-Ḥasan had not asked for sufficient guarantees, for he had not secured an undertaking in writing from Muʿāwiya that the latter would leave him the caliphate after his death. Muʿāwiya took various measures to prevent future insurrections: some of the tribes that were devoted to the ʿAlids he transferred from Kūfa, replacing them by others from Syria, Baṣra and Mesopotamia (al-Ṭabarī, i, 1920).

What were the motives that led al-Ḥasan to abdicate? We can accept those specified in the sources—love of peace, distaste for politics and its dissensions, the desire to avoid widespread bloodshed—but it is also probable that he was aware that his cause was lost; if it is true that ʿAlī habitually emptied the State treasury (every week, it is said!) to share out the contents, he must have been short of money; moreover, defections had been frequent in the last years of his father's caliphate and had even increased during his own; thus he could not rely on soldiers who had little desire to fight. The consequences of the abdication weighed heavily on the ʿAlids who later claimed the throne. In the polemics against them, the argument that they had lost all claim on account of al-Ḥasan's renunciation was not easy to rebut; a *ḥadīth* (al-Bukhārī, ii, 169, Fr. tr. 238 f.) purported to show al-Ḥasan's lack of resistance as a great merit: Muḥammad is alleged to have said "This my son is a lord by means of whom God will one day reunite two great factions of Muslims".

After the abdication.—During the journey back to Medina, at al-Ḳādisiyya, al-Ḥasan received a letter from Muʿāwiya asking him to take part in the campaign against a Khāridjī, Ibn al-Ḥansāʾ al-Ṭāʾi, who had just started a revolt. Al-Ḥasan replied that he had given up fighting against him in order to bring peace to the people, and that he would not fight at his side. Having settled in Medina, al-Ḥasan lived quietly, at least in appearance, without engaging in politics; as before, he went from one marriage to another, so earning for himself the title of *al-Miṭlāḳ* "the Divorcer". He had 60 or 70 or 90 wives and 300 or 400 concubines. This life of sensual pleasures does not appear, however, to have aroused much censure. In 49/669-70 (other dates: 50, 48, 58, 59), he died of a somewhat prolonged illness, or else from poisoning, attributed by many of the sources to one of his wives, by name al-Djaʿda, daughter of al-Ashʿath; Muʿāwiya is said to have suborned her with the promise of a large sum of money and of marrying her to Yazīd; but it should be noted that al-Ḥasan was in no way anxious to reveal his suspicions to his brother al-Ḥusayn, for fear that vengeance for his death might be taken against some innocent person; the Yemenī chief al-Ashʿath was regarded by the Shīʿīs as a traitor, in the pay of Muʿāwiya, and it is quite possible that the hatred felt for him had been transferred to his daughter. Al-Ḥasan had expressed the wish to be buried beside his grandfather Muḥammad, but Marwān b. al-Ḥakam and ʿĀʾisha together agreed to prevent al-Ḥusayn from carrying out this request (another version: ʿĀʾisha consented, but Marwān was obdurate; *Usd*, 14 f.). They were on the point of taking up arms, but al-Ḥasan had stated that, in the event of opposition, he could be buried in the Baḳīʿ, and Abū Hurayra convinced al-Ḥusayn that the best course would be to take this solution. As we do not know the exact dates either of the agreement for the abdication or of the official ceremony at Kūfa, the length of al-Ḥasan's caliphate cannot be determined; the sources, confronted with the same difficulty, give different periods—five months and ten days, six months and a few days, eight months and ten days.

Al-Ḥasan's physical and moral attributes.—This grandson of Muḥammad was the one who resembled him most closely. According to Abu 'l-Faradj al-Iṣfahānī, he had a defect of speech inherited from one of his uncles; it is sometimes added that he was a good orator (and several of his speeches have been reported). He is said to have been a ruler of mild disposition who never lost his composure (*ḥalīm*), generous and pious (it was from piety that he made numerous pilgrimages on foot); but the information that we possess about him stops short at this point, and the absence of any praise of his intelligence, skill or bravery is striking. He was a personage who shone with a reflected light, emanating from his grandfather and his parents.

Al-Ḥasan in the opinion of the Shīʿīs.—All Shīʿīs, of whatever group, regarded and continue to regard al-Ḥasan as their second *imām*; they have never ceased to affirm that he was designated by his father to succeed him as ruler of the faithful. The prerogatives that they attribute to him in his capacity as *imām* are the same as those of the other *imāms* of

their lines (the differentiation of the lines starting with a later *imām*); thus the questions relating to impeccability, infallibility, etc. do not concern him personally.

The abdication of al-Ḥasan, so much criticized in his own time by many of his supporters, thus did not invalidate his position as *imām*; his conduct was justified as springing from his pious detachment from mundane matters. The gap left by the lack of extraordinary qualities was filled, in the S̲h̲īʿī texts, by accounts of his miracles, among which were the following: at the time of his birth he praised God and recited the Ḳurʾān; D̲j̲ibrīl rocked him in his cradle; an angel protected him, and also his brother, when they were asleep far away from their home; while still a child, he called to a palm-tree, and the tree came to him as a son to his father; as a child, he drew honey from a pebble, and Muḥammad showed no surprise; he made an old palm-tree bear fruit; he raised the sanctuary of Mecca into the air; he made the houses of Medina tremble; he flew up into the sky, disappeared and returned after three days; he transported the place where he and other Muslims were together present to Mecca, so that they might see the pilgrims performing the *ʿumra*, and then swiftly restored it to the original spot; he asked God to send him food for 70 travelling companions and, the gates of heaven having opened, angels descended bearing cups, ewers, tables ready prepared, and food that was not only sufficient to satisfy the whole company but did not diminish; he caused water to gush forth when his comrades were searching for it; he took the stars from heaven and then restored them to their places; he revived a dead man, etc. After consulting sources differing from our own, Donaldson summarizes other accounts also, but he is mistaken when he says that the number of al-Ḥasan's miracles is limited to sixteen. The S̲h̲īʿis further maintain that Muʿāwiya tried to poison al-Ḥasan 70 times, but never succeeded in killing him because he cured himself by going to Muḥammad's tomb; that the Umayyads shot 70 arrows into al-Ḥasan's body before his burial (Donaldson); that, as a member of the sacred group consisting of Muḥammad, ʿAlī, Fāṭima, himself and al-Ḥusayn, al-Ḥasan shared their prerogatives: creation as images of light thousands of years before the creation of the world, the sending of light into Adam's loins and thereafter into the loins and the wombs of the forebears of the Five. Al-Ḥasan is one of the principal characters of the Persian religious dramas (*taʿziya*).

AL-ḤASAN B. SAHL, secretary of and governor for the ʿAbbāsid caliph al-Maʾmūn, and brother of the vizier al-Faḍl b. Sahl [*q.v.*]. Iranian by birth, the son of a Zoroastrian convert, al-Ḥasan entered the service of the Barmakid al-Faḍl b. Yaḥyā [*q.v.*] during the reign of Hārūn al-Ras̲h̲īd. He later took part in al-Maʾmūn's action against his brother al-Amīn, and when al-Maʾmūn assumed the title of caliph in 196/814 he was put in charge of taxation (*al-k̲h̲arād̲j̲*) in the provinces which the new ruler controlled. After al-Maʾmūn's troops had captured Bag̲h̲dād, his brother sent him to ʿIrāḳ with instructions to ensure control there, while the caliph remained at Marw. It was at this time that he was confronted first with the ʿAlid revolts of Ibn Ṭabāṭabā and Abu 'l-Sarāyā, which he was able to suppress only with the help of the troops of the general Hart̲h̲ama, and then with a revolt by the population of Bag̲h̲dād which aimed to depose al-Maʾmun and appoint Ibrāhīm b. al-Mahdī [*q.v.*] to the caliphate. After the mysterious assassination of al-Faḍl b. Sahl and the return of the caliph's court to Bag̲h̲dād, it was expected (according to some authors) that al-Ḥasan would succeed his brother as vizier. In fact he withdrew from politics, afflicted, it is said, by "neurasthenia", but mainly shocked by the circumstances of his brother's death. He retired to his estates at Fam al-Ṣilḥ, near Wāsiṭ, and it was there that there took place, in 210/825, the elaborate celebration of the marriage of his daughter Būrān [*q.v.*] with the caliph al-Maʾmūn, who had retained his esteem for his former supporter. He then made his daughter a gift of the palace to the south of Bag̲h̲dād, called al-Ḳaṣr al-Ḥasanī, which he owned and which was

to become one of the caliph's palaces. He died at Fam al-Ṣilḥ in 236/850-1 without having held any further office.

(D. Sourdel)

AL-ḤASAN B. ṢĀLIḤ B. ḤAYY AL-KŪFĪ, Abū ʿAbd Allāh, traditionist and Zaydī theologian of whose life little is known. It seems that he was born in 100/718-9 and, after giving his daughter in marriage to the son of Zayn al-ʿĀbidin, ʿĪsā b. Zayd b. ʿAlī, went into hiding with his son-in-law, so eluding al-Mahdī's search until his death which occurred at Kūfa in 168/784-5. According to the *Fihrist* (178; Cairo ed., 253), he was the author of several works, among which are mentioned: *Kitāb al-Tawḥīd*, *Kitāb Imāmat wuld ʿAlī min Fāṭima*, *al-Djāmiʿ fi'l-fiḳh*, etc. With his two brothers ʿAlī and Ṣāliḥ, who shared his doctrine, he was regarded as the founder of the Zaydī sect of the Ṣāliḥiyya, which seems to be iden tical with that of the Abtariyya (Butriyya), and only differs from the Sulaymāniyya in points of detail.

Ibn Ḳutayba (*Maʿārif*, ed. ʿUkāsha, 509) places al-Ḥasan b. Ṣāliḥ among the number of the *aṣḥāb al-ḥadīth*, and Ibn al-Nadīm remarks that the majority of the *muḥaddithūn* are Zaydīs; moreover, the relations between the latter and the Muʿtazila are well known, and al-Masʿūdī (*Murūdj*, vi, 25) makes it clear that al-Ḥasan b. Ṣāliḥ is of the same opinion as the Muʿtazila on the question of the imāmate which, according to him, can belong to any family whatsoever. In fact, the main features of the doctrine which is attributed to him are essentially concerned with the imāmate, which is elective and can be conferred on the *mafḍūl*, even if the *afḍal* is known [see IMĀMA] at least insofar as the latter gives consent; consequently the caliphate of Abū Bakr and ʿUmar is legitimate, given that ʿAlī, who was the best of the Muslims after the Prophet, agreed to forego the office; unlike the other Shīʿīs, the Ṣāliḥiyya thus considered that the Companions were not at fault in not giving preference to ʿAlī (cf. Ibn Ḥadjar, *Lisān al-Mīzān*, iii, 80, where he uses the name al-Ḥasan b. Ḥayy, as does also al-Djāḥiẓ, *Tarbīʿ*, § 85). With regard to ʿUthmān, the Ṣāliḥiyya do not excommunicate him and, considering that on the one hand he ranks among the *ʿashara mubashshara* [*q.v.*] and is consequently *muʾmin*, and that on the other hand he performed actions which should earn him the title of *kāfir*, they refuse to take sides (*tawaḳḳuf*). In another connexion, this sect is in favour of the use of force (*sayf*) to compel recognition of the imāmate of any descendant of al-Ḥasan or al-Ḥusayn who is worthy of it, and admits the possibility that two *imāms* may reign in two different countries and be obeyed, even if they take contrary decisions and one of them declares the murder of his rival to be lawful. Al-Shahrastānī adds that, in his time, the adherents of this doctrine confined themselves to the *taḳlīd* and appealed neither to *raʾy* nor to *idjtihād*. In regard to the *uṣūl*, they followed the Muʿtazila, whom they respected more deeply that the masters of Shīʿism, whilst, for the *furūʿ*, they adhered to the doctrine of Abū Ḥanīfa, except on certain points on which they followed al-Shāfiʿī or the Shīʿa.

AL-ḤASAN B. TĪMŪRTĀSH [see ČŪBĀNIDS].

ḤASAN B. USTĀDH-HURMUZ, Abū ʿAlī, one of the leading figures of the Būyid régime at the end of the 4th/10th century. His father, Ustādh-Hurmuz, one of the *ḥudjdjāb* of ʿAḍud al-Dawla, is said to have been born in about 300/912; on entering the service of the son and successor of the great Būyid in Fārs, Sharaf al-Dawla, he became governor of ʿUmān for him and then, wishing to transfer his allegiance to the other son, Ṣamṣām al-Dawla, master of ʿIrāḳ, he had to return to private life (374/984). The son, Ḥasan, who was born in about 350/961, had for some time been in the service of Ṣamṣām al-Dawla in Baghdād. But some years later they changed places: Ṣamṣām al-Dawla, evicted from ʿIrāḳ by Sharaf al-Dawla, who was succeeded by Bahāʾ al-Dawla, became master of Fārs (380/990), in addition to Kirmān which he already held. Ḥasan came there to see him, and had the governorship of Kirmān given to his father, which he was to retain even after the death of Ṣamṣām al-Dawla and the conquest of Fārs by Bahāʾ al-Dawla. It was Ḥasan who, in Fārs, quelled the revolt of Ṣamṣām al-Dawla's cousins, the sons of ʿIzz al-Dīn Bakhtiyār [*q.v.*]; it was mainly he who kept up resistance to Bahāʾ al-Dawla in Ahwāz. In 388/988, Ṣamṣām al-Dawla met his death in a new revolt by Bakhtiyār's sons. Ḥasan then rallied his Daylamī army to the cause of Bahāʾ al-Dawla who, in 391/1001, restored to him the governorship of Ahwāz. His administration there proved to be so successful that Bahāʾ al-Dawla now entrusted him with the administration of ʿIrāḳ, which at that time was racked by widespread disturbances (392/1002); and despite setbacks in his struggle against the lord of the Baṭīḥa, Ibn Wāṣil, and the Kurdish prince Badr b. Ḥasanawayh (with whom he was later reconciled), he retained this province until his death, which took place unexpectedly in 401/1011, at the age of 49 or 51. Though disagreeing about his birth, the authors are unanimous in praising the impartial energy of his administration, which restored order and a sound financial system; for the sake of public order, he forbade the celebration in Baghdād both of the Shīʿī *ʿashūrāʾ* and also of the Sunnī counter-pilgrimage to the tomb of Muṣʿab b. al-Zubayr; and there is a pretty story to illustrate his scrupulous regard for the property of foreign merchants. His obsequies were conducted by the celebrated *sharīf* al-Rāḍī, who wrote a *ḳaṣīda* on him. His father, whom, when he himself was appointed to ʿIrāḳ, he had enabled to succeed him in Ahwāz, survived him until 405/1015.

Bibliography: Abū Shudjāʿ al-Rudhrawārī and Hilāl al-Ṣābiʾ in Margoliouth, *The Eclipse of the Abbasid Caliphate*, iii (and trans., vi), and, for the later period not covered by this work, from 393/1003, Ibn al-Djawzī, *Muntaẓam*, vii, Ibn al-Athīr, ix, and Sibṭ Ibn al-Djawzī (unpublished), all derived from Hilāl al-Ṣābiʾ's lost work.

(Cl. Cahen)

AL-ḤASAN B. YŪSUF [see AL-ḤILLĪ].

AL-ḤASAN B. ZAYD B. AL-ḤASAN B. ʿALĪ B. ABĪ ṬĀLIB was a pious man, who, following the example of his father and grandfather, abandoned all political aspirations and reconciled himself to ʿAbbāsid rule. His daughter became the wife of al-Saffāḥ while he himself lived at the Caliph's court, and is even said to have occasionally communicated the views of his ʿAlid relatives and their dependants to al-Manṣūr. In 150/767 al-Manṣūr made him gover-

nor of Medina, but in 155/772 he aroused the Caliph's wrath and was dismissed, imprisoned and had his property confiscated. But restitution was made to him by al-Manṣūr's successor, al-Mahdī, who gave him back all that he had lost, after al-Mansūr's death. He died in 167/783 at al-Ḥādjir, while on a pilgrimage to Mecca, and was buried there.

AL-ḤASAN B. ZAYD B. MUḤAMMAD B. ISMĀʿĪL B. AL-ḤASAN B. ZAYD, a descendant of the preceding, founder of an ʿAlid dynasty in Ṭabaristān [*q.v.*]. The high-handed rule of the Ṭāhirids on the one hand and, on the other, the settlement of ʿAlid elements in the region led to a rising in favour of al-Ḥasan b. Zayd, *al-dāʿī al-kabīr*, in 250/864. Al-Ḥasan, who was living at Rayy, was proclaimed sovereign by a section of the population of Ṭabaristān and received the allegiance of Wahsūdān b. Djustān of Daylam [*q.v.*]. He succeeded in defeating the Ṭāhirid troops and seizing the towns of Āmul and Sāriya, while Djustān II took Rayy, which he had to abandon in 253/867 before the threat of the army sent by al-Muʿtazz and commanded by Mūsā b. Bug͟hā. Al-Ḥasan had furthermore to be perpetually on his defence against attacks on all sides and was more than once driven out of the country, on which occasions he always found support in Daylam, so that in 257/871 he was able to take Djurdjān and in 259/873 Ḳūmis. In this latter year, Djustān made an unsuccessful attempt to re-conquer Rayy, but he had also to assist the *dāʿī* in his struggle against Yaʿḳūb b. al-Layt͟h al-Ṣaffār [see ṢAFFĀRIDS], who had undertaken an expedition against Ṭabaristān; al-Ḥasan was again forced to retire to Daylam but was saved by tremendous rains which obliged his enemy to withdraw. Thus the *dāʿī* was able to return to Ṭabaristān and dwell there undisturbed until 266/888, when Aḥmad b. ʿAbd Allāh invaded Djurdjān and conquered a part of it. While al-Ḥasan was fighting with him there, another ʿAlid, in order to have himself proclaimed ruler, spread the news in Ṭabaristān that the *dāʿī* was killed or wounded, but on al-Ḥasan's return he was defeated and killed. Al-Ḥasan died in 270/884 in possession of his territory, which he passed on to his brother Muḥammad b. Zayd, *al-dāʿī al-ṣag͟hīr*; his family continued to rule in Ṭabaristān till 316/928. Al-Ḥasan b. Zayd, who possessed rare energy and the capacity for stubborn resistance, was a sincerely religious man, well educated, and a patron of letters.

ḤASAN ABDĀL, a small town about 40 km. east of Āṭak, Pākistān, 33°48′ N., 72°44′ E., which forms a part of the ruins around the ancient Taxila. It is known as the site of a spring which has attracted legends of sanctity from Buddhist, Hindū, Muslim and Sikh sources, and in its form of the sacred tank of the Serpent King Ēlāpatra was described by the Chinese pilgrim Hiuen Tsang in the 7th century A.D. It is now known by Muslims as the spring of Bābā Walī, and by the Sikhs as that of Pandjā Ṣāḥib (Pandjābī *pandjā* 'group of five (sc. fingers)', *i.e.*, 'hand'), from the shape of a mark on a rock from underneath which the water flows. Sikh popular tradition ascribes the mark to the hand of their founder Guru Nānak, although the story is acknowledged by many including some devout Sikhs, to be an invention of the 12th/18th century; certainly there was no shrine of Sikh worship at Ḥasan Abdāl before the time of Randjit Singh.

The 'Bābā Walī' mentioned seems to be the saint Ḥasan of Ḳandahār, called Abdāl, who came into India in the train of Tīmūr, and was an ancestor of the historian Mīr Maʿṣūm, author of the *Taʾrīk͟h-i Maʿṣūmī*, who recorded his descent from the saint in an inscription on the Buland Darwāza of Fatḥpur Sīkrī. A variant tradition, however, collected by Cunningham (see *Bibliography*), makes one Ḳandahārī saint of Bābā Walī and a Gūdjar saint of Ḥasan Abdāl. The shrine of Bābā Walī stands high on a hill, and the spring at its base is enclosed by a Sikh *gurudwāra*, a tank canopied with mulberry-trees and filled with fish, and several tombs in ruins (one shown in *Annual Report ASI 1919-20*, Pl. Ib), one of which is said to be of a daughter of Akbar(?) and associated in British memories with the tomb of "Lalla Rookh" —the last poem in Moore's romance was recited by the disguised prince at Ḥasan Abdāl; but the historicity of the lady referred to is in doubt.

Historically Ḥasan Abdāl is of interest as having been a popular camping ground of the Mug͟hal emperors on their way to and from Kas͟hmīr; from the *Āʾīn-i Akbarī* (tr. Blochmann, i, 446) it is apparent that the town bore the name Ḥasan Abdāl in Akbar's time, and that Akbar visited the tomb of Ḥakīm Abu 'l-Fatḥ there (= the tomb mentioned above as illustrated in *ARASI*, obviously a "Bag͟hdādī octagon" and hence stylistically in the mid-10th/16th century tradition). Opposite the shrine and on the far side of its stream are the remains of a Mug͟hal garden with parterres and fountains, and of a bath; the site is known as Wāh, said to have been so called from the emperor Akbar's cry of admiration at its pleasant prospect.

ḤASAN AG͟HA, successor of K͟hayr al-Dīn as governor of Algiers, when the latter was recalled to Istanbul on 17 Rabīʿ I 942/15 October 1535 to become *ḳapudan-pas͟ha*.

Ḥasan was of Sardinian origin; he was captured as a child by an Algerine pirate and made a slave of K͟hayr al-Dīn, who set him free and made him a eunuch and his confidant. While his master was in command at Algiers he performed various civil and military duties, K͟hayr al-Dīn leaving him at the head of the government with the title of *k͟halīfa*. Until the attack by Charles V (1541) he seems to have acquitted himself well in his duties. It appears that the Count of Alcaudete, the governor of Oran, may have been in contact with him before the Emperor's attack and have believed that he could count on Ḥasan to surrender the town without too much difficulty. It is even possible that the negotiations continued after the defeat of the Spanish expedition.

Subsequently, Ḥasan led a victorious expedition against the Kabyle chief of Kūko in 1542. He may a little later have undertaken a campaign against Tlemcen, but this is doubtful. He gave up his duties in unknown circumstances and died unremarked at Algiers at the end of 1545, aged about 58.

AL-ḤASAN AL-AʿṢAM, famous Ḳarmaṭī leader of Baḥrayn, born at al-Aḥsā in 278/891, died at Ramla in 366/977. His father Aḥmad b. Abī Saʿīd al-Ḥasan al-Djannābī was the brother of Abū Ṭāhir Sulaymān [see AL-DJANNĀBĪ]; he died by poisoning in 359/970. Al-Ḥasan al-Aʿṣam probably never held power alone, it being, after the death of Abū Ṭāhir, held collectively by the latter's brothers; but he was on several occasions in command of the Ḳarmaṭī armies. In 357/968, he took Damascus and defeated the Ikhshīdid governor. He fell into disgrace for misappropriating some of the booty, but regained command after the Fāṭimid conquest of Syria and the change in the attitude of the Ḳarmaṭīs, who allied themselves with the ʿAbbāsid caliphate. With the help of the Buwayhid Bakhtiyār and the Ḥamdānid Abū Taghlib, al-Ḥasan al-Aʿṣam in 360 gained a complete victory outside Damascus over the Fāṭimid general Djaʿfar b. Falāḥ, who was killed, and he had the Fāṭimid caliph al-Muʿizz cursed in the mosques. He next took Ramla, penetrated into Egypt and laid siege to Cairo. But a sortie by Djawhar [*q.v.*] and the defection of his allies ʿUḳayl and Ṭayyiʾ forced him to retreat, and he returned to al-Aḥsā. Damascus remained in the hands of the Ḳarmaṭīs.

Al-Muʿizz, who arrived in Cairo in 362/973, sent al-Aʿṣam a letter (see al-Maḳrīzī, *Ittiʿāẓ al-ḥunafāʾ*, 251 f.) reproaching him for having abandoned the Fāṭimid cause, to which al-Aʿṣam sent an insolent reply. In 363/974 he marched once again against Egypt and laid siege to Cairo. But he was betrayed by his ally al-Ḥasan b. al-Djarrāḥ [see DJARRĀḤIDS] and defeated by the Fāṭimid troops under the command of the son of al-Muʿizz, the future al-ʿAzīz, and returned to al-Aḥsā.

The Ḳarmaṭīs who remained in Syria joined forces with the Turk Alptekīn, a Buwayhid afficer who had fled from Baghdād and seized Damascus. A Fāṭimid army commanded by Djawhar arrived outside Damascus in Dhu 'l-Ḳaʿda 365/August 976. Alptekīn and the inhabitants of Damascus then appealed for help to al-Aʿṣam, whose arrival from al-Aḥsā obliged Djawhar to retreat in Djumādā I 366/December 976. Pursued by al-Aʿṣam and Alptekīn, Djawhar abandoned Ramla, then ʿAsḳalān, which he was forced to leave in humiliating conditions. After this, al-ʿAzīz, who had been caliph since 365/975, himself took the field, and Alptekīn and al-Aʿṣam, who had returned to Ramla, suffered a severe defeat there. While the fleeing Alptekīn was soon captured, al-Aʿṣam reached the Lake of Tiberias, where he received an emissary of the caliph and made peace on condition that the caliph paid him an annual tribute of 30,000 *dīnārs*, paid in advance for the current year. Then al-Aʿṣam returned to al-Aḥsā.

These last details are from the account of Ibn al-Ḳalānisī (followed by Ibn al-Athīr), who states that the battle outside Ramla took place in Muḥarram 367/August-September 977. But the other sources make al-Aʿṣam die at Ramla in Radjab 366/March 977, a few days after he arrived, already sick, in this town. If, as is probable, al-Aʿṣam died in 366, there may have arisen a confusion between him and his brother or cousin Djaʿfar, who, according to Ibn al-Dawādārī, succeeded al-Aʿṣam in the command of the Ḳarmaṭīs allied to Alptekīn, after his death.

Al-Aʿṣam has sometimes been considered as the principal promotor of the change in the attitude of the Ḳarmaṭīs towards the Fāṭimids.

ḤASAN AL-ʿASKARĪ, Abū Muḥammad Ḥasan b. ʿAlī, the eleventh Imām of the Twelver Shīʿa. He is known as al-Ṣāmit, al-Zakī, al-Khāliṣ, al-Naḳī, al-Rafīḳ and al-Hādī. He was commonly called Ibn al-Riḍā (Imām ʿAlī al-Riḍā the eighth Imām) among his followers in his lifetime. His *nisba*, al-ʿAskarī, like that of his father the tenth Imām, derives from ʿAskar Sāmarrā. He was born in al-Madīna. Most Twelver Shīʿī authorities give the date of his birth as Rabīʿ I 230/November 844, but al-Kulīnī gives Ramaḍān 232/April 847 (*Uṣūl*, 324). His mother was an *umm walad* named Ḥudayth. Some sources name her Sūsan or Salīl. He was brought to Sāmarrā with his father in 233/847-8 or 234/848-9 and continued to live there. Although he led a life of confinement and strict retirement, he was under constant surveillance during the six years of his Imāmate and was for a while imprisoned by al-Muʿtamid. His brother Djaʿfar took part in intrigues against him.

According to the Twelver Shīʿī traditions, Ḥasan al-ʿAskarī was nominated Imām by his father, the tenth Imām, soon after the death of the previously nominated Imām, his brother Muḥammad Abū Djaʿfar, and a few months before the death of their father in 254/868. The death of Ḥasan's brother, Muḥammad, in the lifetime of their father gave rise

to sectarian dissent, on the ground that the tenth Imām was the last Imām, and owing to the claims of Djaʿfar to the Imāmate.

The eleventh Imām fell ill on 1 Rabīʿ I 260/25 December 873 and died seven days later. He was buried in his house beside his father. His Bāb was ʿUthmān b. Saʿīd. Early Shīʿī authorities (al-Kulīnī, *Uṣūl*, 326; al-Mufīd, *al-Irshād*, 365) say that during the week of his illness, the caliph al-Muʿtamid sent his doctors and servants to attend the Imām, and that a considerable number of ʿAlid and ʿAbbāsid notables visited him. Later Shīʿi sources accuse al-Muʿtamid of poisoning him.

At the death of the eleventh Imām, further dissension arose among the Shīʿa on the question of his posterity [see MUḤAMMAD AL-ḲĀʾIM]. Some believed that he left a child named Muḥammad; other denied it. The latter were of no unanimous view: some held that Ḥasan al-ʿAskarī was al-Ḳāʾim and would return; others regarded his childless death as a proof of their error in supporting his Imāmate and turned to his brother Djaʿfar. Al-Shahrastānī mentions twelve dissentient sects (*Milal*, ed. Cureton, ii, 128-31) while Masʿūdī speaks of twenty (*Murūdj*, viii, 40).

Bibliography: An early and detailed account of the life, miracles, companions and agents of the eleventh Imām is given by al-Kulīnī, *Uṣūl*, lith. Bombay 1302, 324-33 and 202-4. A full account of the sources with extensive citation is given by Muḥammad Bāḳir al-Madjlisī, *Biḥār al-anwār*, Tehrān 1302, xii, 154-79. See also al-Mufīd, *Kitāb al-Irshād*, Tehrān 1308, 365-8; Nawbakhtī, *Firaḳ al-Shīʿa*, ed. (J. ELIASH)

ḤASAN BABA, dey of Algiers from the beginning of 1682 till 22 July 1683. He first exercised the functions of corsair-captain (*raʾīs*) at Algiers; in this capacity he took part in the revolt of 1671 which replaced the powers of the *aghas* by that of the deys. Son-in-law of the first dey, Ḥādjdj Muḥammad Ṭrīḳī who was also a corsair, he already played an important part in the days of this timid old man. Thus, when Ḥādjdj Muḥammad fled to Tripoli on receiving news that a French fleet was coming to attack Algiers, Ḥasan Baba had no difficulty in seizing power (beginning of 1682). He engaged in a brief campaign to repulse the Moroccan troops threatening Tlemcen, but hurried back to Algiers, towards which Duquesne's fleet was sailing. The fleet arrived there on 29 July, bombarding the town from 26 August to 12 September. During this time the dey exercised a rigid authority over the town.

Having on this occasion gained nothing, Duquesne returned in 1683 and began to bombard the city afresh on 26 June. This time the dey agreed to negotiate and to hand over hostages, among whom was a *raʾīs* whom he regarded as his rival, Ḥādjdj Ḥusayn nicknamed Mezzomorto. The latter succeeded in procuring his release by Duquesne on 22 July and led the other corsairs to make an attack on Ḥasan Baba, who was murdered the same day.

(R. LE TOURNEAU)

ḤASAN AL-BAṢRĪ, ABŪ SAʿĪD B. ABI ʾL-ḤASAN YASĀR AL-BAṢRĪ (21/642-110/728), famous preacher of the Umayyad period in Baṣra, belonging to the class of the "successors" (*tābiʿūn*). His father, whose name was originally Pērōz, was made prisoner at the taking of Maysān in Irak, and is said to have been brought to Medina, where he was manumitted by his owner, a woman whose identity cannot be definitely established, and married Ḥasan's mother, Khayra. According to tradition, Ḥasan was born in Medina in 21/642 (for a critique of this tradition see Schaeder, *op. cit.* in bibl., 42-8). He grew up in Wādī ʾl-Ḳurrā and, one year after the Battle of Ṣiffīn, went to Baṣra. As a young man he took part in the campaigns of conquest in eastern Iran (43/663 and the following years). Thereafter he lived in Baṣra until his death in 110/728. His fame rests on the sincerity and uprightness of his religious personality, which already made a deep impression on his contemporaries (Ritter, 14 ff., 33, n. 5), and above all on his famous sermons and pronouncements in which he not only warned his fellow citizens against committing sins, but commanded them to consider and to regulate their whole life *sub specie aeternitatis*, as he did himself. These sermons, of which only fragments have been preserved, are among the best surviving specimens of early Arabic prose. Their vivid images and striking antitheses place them in the class of great rhetoric. It was not without reason that anthologists such as Djāḥiẓ and Mubarrad quoted them together with the famous speeches of the political leaders of the Umayyad period as models of style, and many of his sayings have even found their way into the great dictionaries. Two famous examples are: *ḥādithū hādhihi ʾl-ḳulūba faʾinnahā sarīʿatu ʾl-duthūr* "Repolish these hearts (the seats of religious feeling), for they very quickly grow rusty!" (Ritter 34, mistranslated); *idjʿali ʾl-dunyā ka ʾl-ḳanṭarati tadjūzu ʿalayhā walā taʿmuruhā*! "Make this world into a bridge over which you cross but on which you do not build!" (Mubarrad, *Kāmil*, ed. Wright, 158). It is natural that there is hardly any work of hortatory literature in which some of Ḥasan's sayings are not quoted. His political judgements of the earlier caliphs are not, as is usually the case, confessions of allegiance to a political party, but arise from his religious principles. He criticized fearlessly the rulers of his time, the governors of ʿIrāḳ. When he went so far as to criticize the founding of Wāsiṭ by Ḥadjdjādj in 86/705, he incurred the displeasure of the governor and had to go into hiding until Ḥadjdjādj's death (Schaeder, 55-63; Ritter, 53-5). Nevertheless Ḥasan disapproved of those who took part in attempts to remove by rebellion the evil governors (*taghyīr al-munkar*). When the followers of the rebel Ibn Ashʿath (81/700) ordered him to join them, he explained that the violent actions of tyrants were a punishment sent by God which could not be opposed by the sword but must be endured with patience (Schaeder, 56-7; Ritter, 51). In his sermons he constantly warned against worldly attitudes and attachment to earthly possessions: men are already on the way to death and those who are already dead are only waiting for the others to follow (Ritter, 20). He was suspicious of those who amassed riches. He rejected a suitor for his daughter's hand who was famous for

his wealth simply because of his riches (Ritter, 25), and it did not occur to him to accept uncultivated land (*mawāt*) which was being distributed free: "if I could have everything that lies between the two bridges for a basketful of earth, it would not please me" (Ritter, 25-6). Ḥasan called the worldling, whose faith sat lightly on him and who sinned without concern, by the term *munāfiḳ*, which only he used in this sense. Hence he appears in the doxographies as the chief representative of the doctrine that the *ṣāḥib al-kabīra* was a *munāfiḳ* (Ritter, 42-4). He judged sins strictly (*ta͟shdīd al-maʿāṣī*) and considered that the sinner was fully responsible for his actions. He cannot exculpate himself by saying that God created all actions. This is the attitude of the Ḳadariyya. Ibn Taymiyya recognizes the connexion between *ta͟shdīd al-maʿāṣī* and Ḳadariyya when he says: "Men call everyone who judges sin harshly a Ḳadarī", and states that for this reason Ḥasan has been accused of adhering to Ḳadarī doctrine. There is no doubt that Ḥasan had taken the standpoint of the Ḳadarīs, although attempts were made already at an early date to clear his reputation of this stain (Ritter, 57 ff.). It appears to be demonstrated also by the *risāla* to ʿAbd al-Malik (ed. Ritter, 67-83). Ḥasan's *u͟k͟huwwa* "brotherly feeling" and his altruism are also stressed. One of his admirers was the poet Farazdaḳ [*q.v.*], who called him as a witness for his divorce from his wife Nawār (Mubarrad, *al-Kāmil*, 70).

Not much of Ḥasan's work has survived. In addition to the fragments of sermons already mentioned we have a *risāla* to ʿUmar II of an ascetic and hortatory character (Ritter, 21 ff.), a *risāla* to a "brother" in Mecca, to whom he recommended *mud͟jāwara*, residence in Mecca (Ritter, 8-9), a work on the 54 *farīḍa*, whose authenticity is not yet established (Ritter, 7-8). According to the *Fihrist* (34, 1), Ḥasan had written a *tafsīr*. L. Massignon, in *Essai*, 162-3, cites a few details of Kur'ānic exegesis. G. Bergsträsser, in *Islamica*, ii, 11 ff., deals with Ḥasan's much sought-after "readings" of the Ḳur'ān. Measured by later standards, Ḥasan handled *ḥadī͟t͟h* in a very careless fashion. His own sayings were circulated as *ḥadī͟t͟h*s, and he did not protest (Ritter, 11). Hence he is judged harshly by the critics of the *muḥaddi͟t͟hūn*. D͟hahabī designates him in the *Mīzān*, s.v., as *ka͟t͟hīr al-tadlīs* "rich in forgeries" (Ritter, 2-3).

Influence: The Ahl al-sunna wa 'l-d͟jamāʿa and the Muʿtazilīs both considered him as one of them, although the latter at times claimed that their origin was not connected with him. The followers of *futuwwa* considered him, because of his *u͟k͟huwwa*, as their *imām* (Ritter, 40 ff.). His name appears in the *silsila*s of many Ṣūfī orders as a link in the chain, and he is cited innumerable times in moral works of exhortation. The influence of his ascetic piety persisted in Baṣra (Ritter to be corrected). In the chief work of the Ṣūfī school of Baṣra, the *Ḳūt al-ḳulūb* of Abū Ṭālib al-Makkī, it is stated: *wa 'l-Ḥasanu raḥimahu 'llāhu imāmunā fī hād͟ha 'l-ʿilmi 'llad͟hī natakallamu bih, a͟t͟harahu naḳfū wa sabīlahū natbaʿu wa min mi͟shkātihi nastaḍī'* "and Ḥasan is our *imām* in this doctrine which we represent. We walk in his footsteps and we follow his ways and from his lamp we have our light" (*Ḳūt*, i, 149).

Bibliography: Sources: There is hardly any Arabic annalistic or general biographical work which does not contain something concerning Ḥasan and hardly a work on ethics, exhortation, mysticism or *adab* which does not cite one of Ḥasan's sayings. The following may be mentioned: Ibn Saʿd, *Ṭabaḳāt*, vii/1, 114 ff.; *Fihrist*, 183; Ibn al-Murtaḍā, *Ṭabaḳāt al-Muʿtazila*, ed. Susanna Wilzer (Bibl. Isl. 21), 18 ff.; Ibn Ḳutayba, *ʿUyūn al-a͟k͟hbār*, Cairo 1925, index; Ibn K͟hallikān, no. 155; S͟hahrastānī, *al-Milal wa 'l-nihal*, ed. Cureton, 32; Abū Ṭālib al-Makkī, *Ḳūt al-ḳulūb*, Cairo 1310, *passim*; Abū Nuʿaym, *Ḥilyat al-awliyā'*, Cairo 1932-8, *passim*; Hud͟jwīrī, *Ka͟shf al-maḥd͟jūb*, tr. R. A. Nicholson, *GMS* xvii, 86 f.; Farīd al-Dīn ʿAṭṭār, *Tad͟hkirat al-awliyā'*, ed. Nicholson, i, 24 ff.; Ibn al-D͟jawzī, *Ādāb Ḥasan al-Baṣrī*, Cairo 1931; *A͟k͟hbār Ḥasan al-Baṣrī*, ms. Ẓāhiriyya, Damascus, cf. *Fihris* (*Ta'rī͟k͟h*), 306 (not seen); D͟jāḥiẓ, *al-Bayān wa 'l-tabyīn*, Cairo 1949, index; Mubarrad, *al-Kāmil*, index; *D͟jamharat rasā'il al-ʿArab*, ed. Aḥmad Zakī Ṣafwat, Cairo 1937, i, 378-89.

ḤASAN BEY-ZĀDE, Aḥmed (d. ? 1046/1636-7), Ottoman historian, was the son of 'Küčük' Ḥasan Bey, who was *Re'īs al-küttāb* for the four months of K͟hādim Mesīḥ Pa͟sha's Grand Vizierate (D͟hu'l-Ḥid͟jd͟ja 993—Rabīʿ II 994/December 1585—April 1586) and died in Muḥarram 995/December 1586. Obliged by poverty to abandon the theological career, Ḥasan Bey-zāde entered the *ḳalem* service (probably in 998/1590 or 999/1591) as a clerk to the *Dīwān-i Hümāyūn*. He was present on the Hungarian campaigns of 1005/1596 and 1007/1598 as secretary of the *serdār*. At the beginning of the Uyvar/Neuhausel campaign of 1008/1599, Ibrāhīm Pa͟sha made him his *ba͟sh ted͟hkered͟ji* (Naʿīmā, *Taʾrī͟k͟h*, ed. of 1281-3, i, 214), in which post, with a short period as 'acting' *re'īs al-küttāb* during the Kani͟zha campaign (Solakzāde, 656), he served successive *serdār*s until at least 1013/1604. He is mentioned as *defterdār* of Anadolu in 1018/1609 (Naʿīmā, ii, 71). Thereafter, but with many periods out of office, he held a succession of posts whose sequence and duration is not yet established (*defterdār* of Tuna (twice), Aleppo, Karaman; *beglerbegi* of Kefe, Karaman). According to Ḥād͟jd͟jī K͟halīfa (i, 285 = ed. Flügel, no. 2160) he died in 1046/1636-7.

His History of the Ottomans, as yet unpublished, falls into two parts: the first two-thirds is an abridgement of the *Tād͟j al tawārī͟k͟h* of Saʿd al-Dīn [*q.v.*]; the rest is apparently original and, for the later reigns, of great importance, since it depends on Ḥasan Bey-zāde's own experiences. Manuscripts are fairly numerous: to those listed in Babinger, 174 and 414, in *Istanbul Kütüpaneleri Tarih-Coğrafya yazmaları katalogları*, i/2, 1944, 116-8, by O. F. Köprülü [see *Bibl.*], and in F. E. Karatay, *Topkapı Sarayı ... türkçe yazmalar kataloğu*, i, 1961, nos. 745-7, add Konya, Mevlana Müzesi 3086. The History was first composed in 1031-2/1622-3 (see Flügel, ii, 255); but the manuscripts vary both in their content (? two recensions, see *Tarih Dergisi*, ii/3-4, 99) and in the points to which they reach: at least three (Nuruosmaniye 3106, Tarih Kurumu 517, Konya) have continuations to 1039 (= Solakzâde, p. 749, see below),

and two (Vienna 1049, Köprülü) to 1045/1636 (= Solakzāde, 763). The work served as a main source for Pečewī (see *Ta'rīkh*, i, 3 etc.), Kātib Čelebi (see *Fedhleke*, i, 11 etc.) and Naʿīmā (perhaps indirectly, through Shāriḥ al Manār-zāde, see *Ta'rīkh*, i, 10, and NAʿĪMĀ); while Solakzāde [*q.v.*] frequently follows it so slavishly that he reproduces verbatim Ḥasan Bey-zāde's autobiographical references : thus at *Ta'rīkh*, 610 and 635, for example, *ishbu ṣāḥib al-ḥurūf* and *bu faḳīr* refer to Ḥasan Bey-zāde (Naʿīmā, e.g., at i, 309, occasionally does the same). It remains to be investigated whether a complete edition of the work is required or whether its essential information is in fact already available through these published texts.

Ḥasan Bey-zāde is the author also of *Uṣūl al-ḥikam fī niẓām al-ʿālam* (MS: Istanbul, Belediye O.49), dedicated to Čelebi ʿAlī Pasha (Grand Vizier 1029-30/1619-21); it is a collection of maxims of government, abridged from the *Rawḍ al-akhyār* of Meḥmed b. Khaṭīb Ḳāsim (d. 940/1533, see *ʿOthmānlī mü'ellifleri*, ii, 17; Brockelmann, II, 429), itself based on the *Rabīʿ al abrār* of al-Zamakhsharī. A *medjmūʿa* in the possession of Prof. Cavid Baysun (for details see *Tarih Dergisi*, ii/3-4, 100, n. 8 and *TM*, x, 322-3) contains some poems composed by Ḥasan Bey-zāde (who used, besides his personal name Aḥmed, the *makhlaṣ* Ḥamdī), and three *fetḥnāmes* (one incomplete) which he wrote for the capture of Kanizhe (1009/1600). In the Public Record Office in London are preserved two letters informing Queen Elizabeth of this victory, one from the Sultan (SP 102/4, partial trans. in B. Lewis, *Istanbul and the civilization of the Ottoman Empire*, Norman Okl. 1963, 166-8), the other from the Grand Vizier (SP 102/61): these were probably composed by Ḥasan Bey-zāde.

Bibliography: Bursalī Meḥmed Ṭāhir, *ʿOthmānlī mü'ellifleri*, iii, 46; Babinger, 174; *IA*, s.v. *Hasan-beyzâde* (by Orhan F. Köprülü); M. Cavid Baysun, *Reis ül-küttab Küçük Hasan Bey*, in *Tarih Dergisi*, ii/3-4 (1952), 97-102; idem, *Hasan-Beyzade Ahmed Paşa*, in *TM*, x (1953), 321-40.

(J. H. MORDTMANN-[V. L. MÉNAGE])

ḤASAN BUZURG, founder of the Djalāyirid [*q.v.*] dynasty.

ḤASAN ČELEBI [see ḲINALĪZĀDE].

ḤASAN DIHLAWĪ, NADJM AL-DĪN ḤASAN B. ʿALĀ AL-SIDJZĪ AL-DIHLAWĪ (b. 655/1275, d. 737/1336), eminent poet and hagiographer of Islamic India, is principally known for his *Dīwān* and for the *Fawā'id al-fu'ād*, a compilation, made between 707/1307 and 721/1321, of the *dicta* of his preceptor Niẓām al-Dīn al-Awliyā [*q.v.*]. The authoritativeness of the later work is acknowledged by his contemporaries, including the historian Ḍiyā al-Dīn Baranī [*q.v.*], as well as in all subsequent hagiographies compiled in India. He was a close friend of Amīr Khusraw and, like him, attached at Multān to the court of Prince Muḥammad (Shahīd), son of Sultan Ghiyāth al-Dīn Balban (665/1266-686/1287). They were both attached to the court of ʿAlā al-Dīn Khaldjī (696/1296-716/1316). Later he migrated to Dawlatābād in Dakhan and died there. His fame as a poet was eclipsed by that of Amīr Khusraw, but in his own right he is the master of a direct, appealing style.

Bibliography: *Dīwān*; among various MSS: British Museum Add. 24,952 and India Office Pers. 1223; *Kulliyyāt*, ed. Masʿūd ʿAlī 'Mahwī', Ḥaydarābād 1352/1933; *Fawā'id al-fu'ād*, Delhi 1865; see also Storey, i, 1025[2] for further details of his work. (AZIZ AHMAD)

ḤASAN FEHMĪ, Ottoman statesman, was born near Batum, the son of Ḥādjdjī-oghlu Sherīf Molla and grandson of one Meḥmed Agha. After primary education there he went to Istanbul, where he studied Arabic, Persian, and French with private tutors, as well as law. He began government service as an employee of the Translation Bureau in 1858, subsequently becoming an official in various commercial courts. While so employed he wrote for the newspapers *Taḳwīm-i Tidjāret* and *Djerīde-i Ḥawādith*. In 1868 he became president of the first *medjlis* of the Commercial Court, but was dismissed, probably in late 1871, during the Grand Vizierate of Maḥmūd Nedīm Pasha [*q.v.*]. For some years thereafter he practised law privately.

Upon the institution of the constitutional regime by Midḥat Pasha [*q.v.*] and ʿAbd al-Ḥamīd II [*q.v.*], Ḥasan Fehmī, then chief clerk of the Translation Bureau, was elected a deputy by the Istanbul electors on the fourth ballot, on 1 March 1877. When the chamber met on 21 March, it elected him one of the four secretaries for the first session. On the closing day of that session, 28 June 1877, Ḥasan Fehmī made the major speech, pointing with pride to the chamber's free discussion and to its beneficial actions, even though in his view it had not accomplished all it should have done.

Chosen again on 12 November 1877 as an Istanbul deputy for the second session of the parliament, Ḥasan Fehmī became president of the chamber by election on the third ballot, taking office on 31 December. As president he was more moderate and courteous than had been his predecessor Aḥmed Wefīḳ Pasha [*q.v.*] in the first session, but allowed more digression by those who spoke. The session over which he presided, prorogued by the sultan on 14 February 1878, passed no bills, but effectively criticized the ministry. Ḥasan did not, like Aḥmed Wefīḳ, assume the rôle of government spokesman. After the chamber's dissolution Ḥasan Fehmī continued as vice-president of a special chamber committee, over which the sultan presided, to aid refugees from the Russo-Turkish war.

In 1878 Ḥasan Fehmī was appointed Minister of Public Works. While occupying this office he taught commercial law and international law in Istanbul. He was also for a time director of the civil list (*Khazīne-i Khāṣṣa nāẓiri*). His lectures on law were published in summary form in a book entitled *Telkhīṣ-i ḥuḳūḳ-i düwel*, but after a *jurnal* submitted to ʿAbd al-Ḥamīd II the book was suppressed and he was reprimanded. In 1881 Ḥasan Fehmī attained

the rank of vizier, and became Minister of Justice. In the first months of 1885 he was sent on a special diplomatic mission to London to negotiate the Egyptian question. In 1889 he became collector of customs (*Rüsūmāt emīni*), in 1892 *wālī* of Aydîn, and in 1895 *wālī* of Selânik, then again collector of customs and president of the Council of Accounts (*Dīwān-i muḥāsebāt*). He was the second Turkish delegate to sign the peace after the Greco-Turkish war of 1897.

Despite his many offices under ʿAbd al-Ḥamīd II, Ḥasan Fehmī retained the reputation of being untainted by the régime, and after the revolution of 1908 was regarded by some affection by the Young Turks as an "Old Young Turk" and a living link between the first and the second constitutional periods. During the two years following the revolution he was twice Minister of Justice and once President of the Council of State in various cabinets, and became a member of the Senate. He died in 1910 in his house at Edirne Ḳapî and was buried in the family cemetery at Fātiḥ on Agha Yoḳushu. His wife was the daughter of ʿAbd al-Ḥalīm Ghālib Pasha.

(R. H. Davison)

ḤASAN FEHMĪ efendi, known as Aḳshehirli, an Ottoman Sheykh al-Islām. The son of ʿOthmān Efendi of Ilgin, he was born in 1210/1795-6, and held various appointments in the teaching branch of the *ʿIlmiyye* [*q.v.*] profession. In 1275/1858-9, on the death of Yaḥyā Efendi [*q.v.*], he was appointed to the office of *Ders Wekīli*, with the duty of teaching and preaching on behalf of the Sheykh al-Islām. Djewdet, who had reason to be hostile to Ḥasan Fehmī, indicates that the appointment was made for want of any one better, and says that he was known among the students as *kadhūbī*—the liar (*Tezâkir 13-20*, ed. Cavid Baysun, Ankara 1960, 69; according to ʿAbd al-Raḥmān Sheref, he earned this soubriquet by not fulfilling the promises he made to the influential people whom he approached). His position became much stronger after the accession of Sultan ʿAbd al-ʿAzīz, whose preceptor he was. In 1863 he accompanied the Sultan to Egypt, where he is said to have had learned conversations with the Azharī Shaykh Ibrāhīm b. ʿAlī al-Saḳḳāʾ [*q.v.*]. In 1867 he became Ḳāḍīʿasker of Anatolia, then of Rumelia, and in April 1868 was appointed, for the first time, as Sheykh al-Islām. This was a time when the modernization of the apparatus of government was reducing the jurisdiction and power of the office of the Sheykh al-Islam; the creation in particular of new administrative bodies dealing with law and education meant a curtailment of his authority in matters previously regarded as his exclusive concern [see bāb-i mashīkhat]. Ḥasan Fehmī tried to resist these encroachments. The first object of his counter-attack was the committee which, under the chairmanship of Aḥmad Djewdet [*q.v.*] and the authority of the *Dīwān-i Aḥkām-i ʿAdliyye*, was preparing a new Ottoman civil code, the famous *Medjelle* [*q.v.*]. Djewdet and his committee had successfully resisted the pressure of the extreme Westernizers, egged on by the French ambassador Bourée, for a French-style code, and were preparing a modern statement of Ḥanafī Muslim law. They now had to face the opposition, on the other side, of the *ʿulamāʾ*, led by the Sheykh al-Islām, who saw in the preparation of this code under the department of justice a usurpation of the functions and prerogatives of his own office. Ḥasan Fehmī offered various obstructions to the work; in 1870 he procured the removal of Djewdet to other duties and the transfer of the *Medjelle* committee, under a new chairman, to the jurisdiction of his own office. Djewdet later returned to the chairmanship, but the feud between him and Ḥasan Fehmī continued (Ebul'ulâ Mardin, *Medeni hukuk cephesinden Ahmet Cevdet Paşa*, Istanbul 1946, 64, 70, 78-80, 82, 84, 88 f., 91 ff., 98-9, 106, citing Djewdet's own account of these matters from his unpublished memoranda).

Another objective was the newly opened *Dār al-Funūn*, designed by the Ministry of Education to grow into a university and serve as the corner-stone of a modern educational system. Ḥasan Fehmī was not present at the ceremonial opening in 1870; there is good reason to believe that he was instrumental in bringing about the closing of the *Dār al-Funūn* in the following year. There is some evidence that one of the circumstances leading to this closure was a public lecture given by Djamāl al-Dīn al-Afghānī, which was reported to the Sheykh al-Islām as being heretical and blasphemous (Osman Keskioğlu, *Cemaleddin Efgani*, in *Ilâhiyat Fakültesi Dergisi*, 1962, 92-6, where other Turkish sources are cited; M. Z. Pakalın, *Son sadrıazamlar ...*, iv, Istanbul 1944, 136 ff.; Osman Ergin, *Türkiyede maarif tarihi*, ii, Istanbul 1940, 460 ff.; Meḥmed ʿAlī ʿAynī, *Dār al-Fünūn taʾrīkhi*, Istanbul 1927 (not seen); E. G. Browne, *The Persian Revolution of 1905-09*, Cambridge 1910, 7; R. H. Davison, *Reform in the Ottoman Empire 1856-1876*, Princeton N.J. 1963, 271).

Ḥasan Fehmī was dismissed from office in September 1871, ten days after the death of his protector the Grand Vizier ʿĀlī Pasha [*q.v.*], and two weeks after the return of Djewdet as chairman of the *Medjelle* committee and a member of the Council of State. He returned to office for a second term as Sheykh al-Islām in July 1874, and remained until May 1876. He lost no time in resuming his quarrel with Djewdet, whom he blamed for the transfer of the *Medjelle* committee from the *bāb-i fetwā*, under his own jurisdiction, to the Sublime Porte (Mardin, *op. cit.*, 114 ff., 123 f.). The work on the *Medjelle* proceeded, however, and by now the Sheykh al-Islām was even willing to attend the first prize-giving ceremony of the Galatasaray school in 1875 (Maḥmūd Djewād, *Maʿārif-i ʿUmūmiyye Neẓāreti taʾrīkhče-i teshkīlāt we idjrāʾātî*, Istanbul 1338, 152). The last eight and a half months of his tenure of office coincided with the second Grand Vizierate of Maḥmūd Nedīm Pasha [*q.v.*], and ended with his tall. The riots of 10 May 1876 were directed especially against the Grand Vizier and the Sheykh al-Islām, the rioters demanding the dismissal of both. Ḥasan Fehmī's unpopularity was no doubt due in part to his association with a very unpopular minister. There is also some evidence that he was personally unpopular among the *ʿulemāʾ* and theological students (see for example Meḥmed Memdūḥ, *Mirʾāt-i shuʾūnāt*, Izmir 1328, 64-5, where he is accused of giving advancement only to his own followers, and of appointing unqualified persons). Prof. Davison (*Reform ...*, 325) hazards the guess that his unpopularity among the students may have been due to the influence of Djamāl al-Dīn al-Afghānī, against whom he is said to have acted in 1870.

The hostility of Djewdet, better grounded and more potent, will no doubt have had some effect. Maḥmūd Nedīm Pasha is said to have tried to pacify the students by offering to replace Ḥasan Fehmī, but without avail. Both were dismissed on 11 May 1876. In 1877 Ḥasan Fehmī was sent to Medina, where he died in 1881.

Ḥasan Fehmī combined the offices of Chief Muftī of the capital (Sheykh al-Islām) and chief preceptor of the palace, and was therefore called *Djāmiʿ al-riyāsatayn*. This combination was unusual but not unprecedented (see for example SAʿD AL-DĪN). He was the author of a number of books, chiefly text-books and commentaries, some of which were printed. He also composed poems in Arabic, Persian and Turkish.

ḤASAN FEHMĪ, a Turkish journalist who achieved a brief celebrity in 1909 as editor of the newspaper *Serbestī*, in which he made violent attacks on the Committee of Union and Progress [see ITTIḤĀD WE TERAḲḲĪ]. His murder on the Galata bridge by an unknown assailant on the night of 6-7 April 1909 (n.s.) was blamed by both the liberals and the Muhammadan Union [see ITTIḤĀD-I MUḤAMMEDĪ] on the Committee, and his funeral was made the occasion for hostile demonstrations and speeches. A period of mounting tension followed, culminating in the mutiny of troops of the First Army Corps on 31 March o.s. = 13 April n.s.

ḤASAN KÜČÜK [see ČŪBĀNIDS].

ḤASAN, MĪR [see MĪR GHULĀM ḤASAN].

ḤASAN PASHA, son of Khayr al-Dīn [*q.v.*] and placed in command at Algiers three times: 1544-1551, 1557-1561, and 1562-1567. The son of an Algerine woman, he was less than 28 years old when appointed pasha of Algiers for the first time. His first command (as deputy to his father, who was both Beylerbey and Ḳapudan Pasha) was marked at the beginning by the strengthening of the fortifications of Algiers, found to be inadequate after the expedition of Charles V in 1541. On the other hand, he tried to settle the question of Tlemcen, still as much under the influence of the Spaniards of Oran as that of the Turks of Algiers. To this end he organized two campaigns against Tlemcen: one, in 1544, was victorious; the other, in 1546, was cut short when he learnt of the death of his father in Istanbul and hastened back to Algiers. From this time he received the title of *beylerbey* which his father had always held.

From 1550 onwards he had in addition to cope with the Moroccans. The Saʿdid Muḥammad al-Shaykh had taken Fez in 1549 and thus become ruler of all Morocco. Ḥasan Pasha thought to ally himself with him against the Spaniards of Oran, but the Saʿdid profited from this alliance to seize Tlemcen (9 June 1550). Ḥasan Pasha reacted at once, retook Tlemcen, and even pursued the Moroccan troops as far as the Moulouya. This was the beginning of a Moroccan policy which the Turks were long to pursue.

The *beylerbey* was recalled to Turkey in September 1551 as the result of many intrigues. He was once again sent to Algiers in June 1557 to replace Ṣāliḥ Pasha, who had died the year before.

Relations were again strained between the Saʿdids and the Turks, for the Moroccans had retaken Tlemcen. Ḥasan Pasha rapidly ejected them and even entered Morocco, but for fear of having his lines of communication cut by the Spaniards he did not push on as far as Fez. At the same time he sent to Morocco some Turks, pretending to be deserters, who succeeding in assassinating the Saʿdid ruler on 23 October 1557. He then turned against the Spaniards, whom he heavily defeated on 26 August 1558. In 1559 he wished to strengthen the Turkish hold on Kabylia and inflicted a serious defeat upon his enemies in September 1559. After this he tried to enroll the Kabyles in his service against the Moroccans. The outraged Janissaries seized the *beylerbey* and sent him in chains to Istanbul (September 1561).

Quickly vindicated, Ḥasan Pasha returned to Algiers a year later. He at once made serious preparations against the Spaniards of Oran. The siege of Mers el-Kebir lasted two months (3 April-7 June 1563), but failed, as a consequence of the arrival of a relieving fleet. In the following year Ḥasan Pasha received orders to prepare his fleet for the Ottoman attack on Malta, and he took part in this in July 1565. Although the siege failed, the Algerians and their commander served with distinction.

The Ottoman archival sources provide some supplementary details on Ḥasan Pasha's career. Upon his recall from Algiers in 1551, he was appointed *sandjaḳ-begi* of Manisa, but held office for only a short time: he was retired, with a *dirlik*, in 962/1554 (Başbakanlık Arşivi, Mühimme register no. i, p. 212, no. 1326, of 15 Muḥarram 962). The text of the firman ordering him to participate in the attack on Malta is preserved (Mühimme, vi, p. 263, doc. 561). As beylerbey he followed his father's policy of hostility to the French, and was hence accused of piratical activities against French ships (Mühimme, vi, p. 637, doc. 1398). After his second recall from Algiers in 1567, he played a part in the battle of Lepanto [*q.v.*]: he was ordered to command part of the fleet sent from Istanbul to the Archipelago (Mühimme, xii, p. 244, doc. 510), and during the battle fought in the centre, with the Ḳapudan Pasha, Müʾedhdhinzāde ʿAlī Pasha. On 2 December 1571 he was again appointed beylerbey of Algiers (Mühimme, xvi, p. 313, doc. 555) but did not go to his post (Mühimme, x, p. 99, doc. 157, of 23 Shaʿbān 979/12 January 1572), probably because he was already ailing. He died in 1572, and was buried beside his father at Beshiktash. His elder son Maḥmūd commanded a ship at Lepanto; the younger, Meḥmed, was a *müteferriḳa* (Mühimme, xxv, p. 93, doc. 1050, of 3 Dhu 'l-Ḥidjdja 981).

(R. Le Tourneau and Cengiz Orhonlu)

ḤASAN PAS̲H̲A, governor of the Bag̲h̲dād *eyālet* (*wilāyet*) (and intermittently of adjacent provinces also) from 1116/1704 to 1136/1723, and father and predecessor of Aḥmad Pas̲h̲a [*q.v.*], founded the line of Mamlūk rulers of ʿIrāḳ which lasted till 1247/1831. A Georgian by origin and son of an officer of Murād IV, he was born about 1068/1657, educated in the Sarāy schools, and advanced rapidly to the governorships of Konya, Aleppo, Urfa and Diyārbakr. In ʿIrāḳ he showed exceptional gifts of character by his piety, firmness and justice, and, by yearly (at times monthly) expeditions, successfully imposed discipline on the unruly Arab and Kurdish tribes, secured a high (if never flawless) standard of law and order, and demanded justice and honesty from his subordinates. The Ottoman declaration of war on Persia in 1136/1723 involved Ḥasan Pas̲h̲a in important military operations and a large-scale invasion of enemy territory in the winter of that year. He died at Kermāns̲h̲āh before the spring, and his posthumous title of "conqueror of Hamadān" was strictly earned not by him but by his son Aḥmad: but his own lengthy tenure of the Pas̲h̲alïḳ was rightly judged as outstandingly successful.

Bibliography: As for Aḥmad Pasha [*q.v.*].

(S. H. Longrigg)

ḤASAN PAS̲H̲A, Čataldjalï, Ottoman Ḳapudan Pas̲h̲a. The son of a Janissary from Čatald̲j̲a, he was trained as a saddler in the household of the *Čās̲h̲nagīr* Meḥmed Ag̲h̲a. The patronage of the *Dār al-saʿāda ag̲h̲asï* Muṣṭafā procured him appointment in the Palace service successively as *Maṭbak̲h̲ emīni*, *Čawus̲h̲-bas̲h̲ï*, *Ḳapïd̲j̲ï-bas̲h̲ï* and *Mīrak̲h̲ur-i ewwel* [see sarāy]. Upon his appointment as Ḳapudan Pas̲h̲a in 1035/1625-6 he was given in marriage ʿĀʾis̲h̲a Sulṭān, the daughter of Aḥmed I.

As Admiral, he procured the installation of D̲j̲ānïbek Girāy as K̲h̲ān of the Crimea (1037/1627-8). In 1040/1630-1 he destroyed the Cossack fleet which had ravaged the Black Sea coasts while he was cruising in the Ionian islands and he repaired and re-fortified Özi ([*q.v.*], Oczakov) on the Dnieper. The jealousy of the *Ḳāʾim-maḳām* Red̲j̲eb Pas̲h̲a, who suspected that he was aspiring to supersede him, led to Ḥasan Pas̲h̲a's dismissal as Ḳapudan (12 Rabīʿ I 1041/8 October 1631) and appointment as beylerbey of Budin. While he was supervising the movement of troops in Rumeli, he died at Dog̲h̲an Köprüsü in Northern Thessaly. His body was brought to Istanbul and buried by a *mekteb* (in *Sid̲j̲ill-i ʿOt̲h̲mānī*, ii, 132: a *mesd̲j̲id*) which he had founded in the Gedik Pas̲h̲a quarter.

ḤASAN PAS̲H̲A [see d̲j̲ezāʾirli g̲h̲āzī ḥasan pas̲h̲a, kāhya ḥasan pas̲h̲a, k̲h̲ādim ḥasan pas̲h̲a, ṣoḳollï, tiryākī ḥasan pas̲h̲a, yemenli ḥasan pas̲h̲a, yemis̲h̲d̲j̲i ḥasan pas̲h̲a].

Dāmād **ḤASAN PAS̲H̲A**, (? -1125/1713), Ottoman Grand Vizier. The sources refer to him sometimes as "Moralï", *i.e.*, "from the Morea" and sometimes as "Enis̲h̲te", *i.e.*, "brother-in-law" (of the sultan, in this instance). He became a *čokadār* and then, in 1095/1683-4, rose to the rank of *silāḥdār*. On the accession to the throne of Süleymān II in Muḥarrem 1099/November 1687 he was made governor of Egypt (with the status of vizier)—an appointment that he held until 1101/1689-90, when, according to the *Sid̲j̲ill-i ʿOt̲h̲mānī*, he became *mutaṣarrïf* of Brusa and Nicomedia (Izmid). Ḥasan Pas̲h̲a, in 1102/1690-1, received the hand of K̲h̲adīd̲j̲a Sulṭān, a daughter of Meḥemmed IV. After serving for some time as *Bog̲h̲āz muḥāfïẓï* he was sent, in 1105/1693-4, to govern the island of Sāḳïz (Chios). The war of the "Sacra Lega" (Austria, Venice, Poland) against the Ottoman Empire was still in progress (1684-99). Ḥasan Pas̲h̲a now, in 1106/1694, had to meet at Chios the assault of a Venetian naval force sailing under the command of Antonio Zeno and consisting of about one hundred vessels, great and small, with more than eight thousand troops on board. Effective resistance was not possible and Ḥasan Pas̲h̲a, after a brief siege, surrendered the island to the Venetians, the Muslim garrison and the Muslim population on Chios being allowed to depart, with their arms and baggage, for Čes̲h̲me on the mainland of Asia Minor. As a punishment for this reverse Ḥasan Pas̲h̲a suffered a brief incarceration, after which he became governor of Kefe (Kaffa) in the Crimea (*Nusretnâme*, i/1, 27). He was raised, in 1106/1695, to the rank of fifth and then of second vizier (*Nusretnâme*, i/1, 27, 33). Ḥasan Pas̲h̲a now held office in succession as *muḥāfïẓ* of Edirne (1107/1695-6: *Nusretnâme*, i/1, 110), as *Beglerbegi* of Anadolu (1109/1697: *Nusretnâme*, i/3, 302) and as *Beglerbegi* of Ḥaleb (1109/1697: *Nusretnâme*, i/3, 307). Appointed to be *ḳāʾimmaḳām* at Istanbul in 1110/1698 (*Nusretnâme*, i/3, 353), Ḥasan Pas̲h̲a continued to serve in different capacities, until, not long after the accession of Aḥmed III, he was made Grand Vizier on 8 Red̲j̲eb 1115/17 November 1703, retaining that office till 28 D̲j̲umādā I 1116/28 September 1704. Ḥasan Pas̲h̲a became governor of Egypt for the second time in 1119/1707 and then, in 1121/1709, governor of Tripoli in Syria. He served as *Beglerbegi* of Anadolu once more in 1124/1712 and later in the same year was transferred to Raḳḳa in Syria. He died in Rebīʿ II 1125/May 1713.

Seyyid **Ḥasan Pasha**, Ottoman Grand Vizier under the sultan Maḥmūd I; a native of a village in the district of Sharkī (Shebin) Ḳara Ḥisār, he entered the Janissary Odjak, in 1146/1733-4 attained the rank of *ḳul-kāhyasī* (lieutenant-general), took part in the Persian campaigns and in mid-Rabīʿ I 1151/29 June-8 July 1738, during the war with Austria, was promoted to be Agha of the Janissaries. After receiving the title of vizier on 22 Ramaḍān 1152/26 December 1739 for his bravery in this war, he was appointed Grand Vizier on 4 Shaʿban 1156/23 September 1743, owing his nomination to the favour of Bashīr, the influential *Kīzlar-aghasī* (chief black eunuch) of the Imperial Ḥarem. The continuation of the war with Nādir Shah [*q.v.*], the cessation by the convention of 18 January 1744 of the border warfare with Austria, which had been going on intermittently since the Peace of Belgrade (1739), and various diplomatic steps, instigated by the celebrated adventurer Aḥmed Pasha Bonneval [*q.v.*] with a view to the reception of the Porte into the European Concert, all fell within his period of office. As a result of Palace intrigues he was dismissed on 22 Radjab 1159/10 August 1746 and banished to Rhodes. In the following year (mid-Rabīʿ I 1160/13 March-1 April 1747) the governorship of Ič-il and a little later (mid-Dhu'l-Ḳaʿda/12-23 November) that of Diyārbakr was given him, and he died in the latter town at the end of 1161/1748.

Illiterate, but a wise and experienced man, he occupied with success the highest posts of the Empire for almost a decade. As a pious Muslim he built in 1158/1745 in the Bāyazīd quarter of Istanbul, near a khān constructed by himself, a two-storey building including a mosque, a *madrasa* and a public fountain.

(J. H. Mordtmann-[E. Kuran])

Sherīf **Ḥasan Pasha**, Ottoman Grand Vizier in the reign of Selīm III, was the son of Čelebi Ḥādjdjī Süleymān Agha, one of the *aʿyān* [*q.v.*] of Rusčuḳ, who is mentioned in the year 1183/1770 as leader of the troops of Rusčuḳ, Silistre and Yergögü (Giurgewo) in the war against Russia (1769-1774). He himself took part with distinction in the raid led by the Crimean Khān into the Ukraine in the winter of 1769, a campaign celebrated through Baron de Tott's description (*Mémoires*, ii, 202-67), as *serdengečdi aghasī* (chief of the volunteers). In the course of the campaign he was rewarded for the financial support which he had given the Grand Vizier Muḥsinzāde Meḥmed Pasha [*q.v.*] by being granted the rank of *ḳapudjī bashī*, and on 23 Djumādā II 1187/11 September 1773 was appointed commandant of Rusčuḳ with the rank of vizier. Being transferred shortly afterwards to the post of commandant of Silistre, he defended it with success when the Russians attacked at the end of the year. After the conclusion of peace (July 1774) he fell into disgrace, lost the rank of vizier and spent a number of years in exile in Gümüldjine and Salonica. After the outbreak of war with Russia at the end of 1201/autumn 1787 he was again given various military commands on the Danube and, following the death of Djezā'irli Ḥasan Pasha [*q.v.*], he was appointed on 1 Shaʿbān 1204/16 April 1790 Grand Vizier and *Serdār-i ekrem* (commander-in-chief) in his place. While his brother Seyyid Meḥmed was able on 25 Ramaḍān/8 June to inflict at Yergögü a considerable reverse on the Austrians who had declared war on the Ottoman Empire, his own campaign against the Russians was most unfortunate; towards the end of the year the latter captured in rapid succession the fortresses of Kili, Tulča, Isaḳdja and Ismāʿīl and, as Sherīf Ḥasan Pasha had moreover brought suspicion upon himself by all kinds of arbitrary actions and the frankness of his reports, he was surprised in the night of 9 Djumādā II 1205/12-13 February 1791 in his quarters in Shumnu (Shumla) and shot by the Sultan's orders.

Bibliography: Aḥmed Djāwīd, *Ḥadīḳat al-wuzarā'*, suppl. ii, 43 ff.; *Sidjill-i ʿOthmānī*, ii, 160; Wāṣif, *Ta'rikh*, ii, 63, 267, 290; Djewdet, *Ta'rikh*², iv, 62, 67, v, 18-102; Zinkeisen, *GOR*, vi, 768, 796-814; I. Hakkı Uzunçarşılı, *Osmanlı tarihi*, Ankara 1956, iv/1, index.

(J. H. Mordtmann-[E. Kuran])

ḤASAN-I RŪMLŪ, grandson of the *ḳizilbāsh* chief Amīr Sulṭān Rūmlū, the governor of Ḳazwīn and Sāudj Bulāgh, who died in 946/1539-40. Ḥasan-i Rūmlū was born at Ḳumm in 937/1530-1, and was trained in the Ṣafawid army as a *ḳūrči*.

Ḥasan-i Rūmlū is chiefly remembered as the author of a twelve-volume general history entitled *Aḥsan al-tawārīkh*. Only two volumes are extant, but these are probably the most valuable ones. Vol. x, covering the period 807-899/1405-1493, exists only in MS. in Leningrad (Dorn 287). C. N. Seddon published (Baroda 1931) the text of Vol. xi, covering the period 900-985/1494-1577, and (Baroda 1934) an abridged translation of this volume (see Storey, i/1, 306-08; Rieu, *Supp.*, 55; description by Seddon in *JRAS*, 1927, 307-13, and reviews by V. Minorsky in *BSOS*, vii/2 (1934), 449-55, and vii/4 (1935), 990-3).

Ḥasan-i Rūmlū, as a *ḳizilbāsh* officer, concentrates on military affairs, and has less information on administrative matters than other chroniclers of the period; moreover, political caution leads him to present the actions of the *ḳizilbāsh* in the most favourable light. Despite this, the *Aḥsan al-tawārīkh* contains valuable biographical material, and remains the best authority for the reign of Shāh Ṭahmāsp (930-84/1524-76). From 948/1541-2, Ḥasan-i Rūmlū accompanied the Shāh on most of his expeditions, and was an eye-witness of events from that date until 985/1578, in which year he brought his chronicle to a close with an account of the accession of Sulṭān Muḥammad Shāh.

Bibliography: references in the text.

(R. M. Savory)

ḤASAN-I ṢABBĀḤ, first *dāʿī* of the Nizārī Ismāʿīlīs at Alamūt. Ḥasan was born at Ḳumm, son of an Imāmī Shīʿī of Kūfa, ʿAlī b. al-Ṣabbāḥ al-Ḥimyarī. He studied at Rayy and there, sometime after the age of seventeen, was converted to Ismāʿīlism. (The tale of his schoolfellow pact with ʿUmar Khayyām and Niẓām al-Mulk, his later enemy, is a fable.) In 464/1071-2 he became a deputy of ʿAbd al-Malik b. ʿAṭṭāsh, chief Ismāʿīlī *dāʿī* in the Saldjūḳ domains; in 469/1076-7 he was sent to Egypt, presumably for training, where he remained about three years. (The stories of his conflict there with the *wazīr*, Badr al-Djamālī, are not dependable.) On returning to Īrān, he travelled widely in the Ismāʿīlī cause. In 483/1090 he seized the rock fortress of Alamūt [*q.v.*] in Rūdhbār in Daylamān with the aid of converts among the garrison. This was one of the first coups in a general rising against the Saldjūḳ

power by the Ismāʿīlīs, which emphasized seizing fortresses and assassinating key opponents and had wide success after Malikshāh's death (485/1092); these insurgents were called Nizārīs [*q.v.*] after they broke with the Fāṭimid Egyptian government in 487/1094 in support of the claims of Nizār to the imāmate. Meanwhile Ḥasan, as leader in Rūdhbār, was taking a number of strongholds there and making them as self-sufficient as possible. After 498/1104, under Muḥammad b. Malikshāh, the Saldjūḳ forces recovered many fortresses, including the headquarters of Ibn ʿAṭṭāsh's son near Iṣfahān; Ḥasan's post at Alamūt proved a crucial stronghold, resisting persistent Saldjūḳ assaults. In 511/1118 a major siege of Alamūt broke up only on Muḥammad's death. By this time, Ḥasan seems to have been recognized as chief throughout the Nizārī movement. His remaining years, till 518/1124, were mostly peaceful and devoted to consolidating into a cohesive (but territorially very scattered) state such of the Nizārī holdings as had been retained.

Ḥasan led a retired and ascetic life and imposed a puritanical regimen on Rūdhbār. He executed both his sons, one for alleged murder, the other for drunkenness. He was learned in the philosophical disciplines and wrote cogently. We have a portion of his autobiography, an abridgement of a treatise of his on theology, and possibly other writings. He expounded in Persian an intensely logical form of the Shīʿī doctrine of *taʿlīm*, that one must accept absolute authority in religious faith; this form of the doctrine became central to the Nizārī teaching of the time and greatly affected al-Ghazālī.

Neither in the intellectual nor in the political sphere do we know how far Ḥasan was an originator, how far simply the most successful exemplar of the new ways used by the Nizārīs. Among later Nizārīs, Ḥasan came to be looked on as the chief figure of the "*daʿwa djadīda*", the reformed Ismāʿīlī movement dating from the break with the Egyptian government. He was the *ḥudjdja*, the living proof of the vanished *imām* after Nizār's death, and the authorized link with the line of *imāms* who subsequently appeared in Alamūt. He was called *sayyid-nā*, "our master", and his tomb became a shrine. Outsiders ascribed to him the organization of the whole Nizārī movement and especially the organization and training of the *fidāʾīs*, dedicated assassins, who later may have formed a special corps.

What we have of Ḥasan's writings, in addition to brief citations and perhaps summaries in later Nizārī works, is preserved in al-Shahrastānī and in Rashīd al-Dīn, *Djāmiʿ al-tawārīkh*, and Djuwaynī (who is less full); the latter two give primary data on his life. For discussion and bibliography, see Marshall G. S. Hodgson, *The Order of Assassins: the struggle of the early Nizārī Ismāʿīlīs against the Islamic world* (The Hague 1955). For an uncritical but interesting modern Ismāʿīlī evaluation, see Jawad al-Muscati, *Hasan bin Sabbah* (2nd. ed.: Ismailia Association Pakistan, Karachi 1953 or 1958).

(M. G. S. Hodgson)

ḤASAN AL-UṬRŪSH, Abū Muḥammad al-Ḥasan b. ʿAlī b. al-Ḥasan b. ʿAlī b. ʿUmar al-Ashraf b. ʿAlī Zayn al-ʿĀbidīn [see zayn al-ʿābidīn], born about 230/844 at Medīna of a Khurāsān slave girl, died in Shaʿbān 304/beginning of 917 at Āmul as ruler in Ṭabaristān, is still recognized under the official name of al-Nāṣir al-Kabīr as Imām by the Zaydiyya [*q.v.*] in the Yemen.

Al-Uṭrūsh came to Ṭabaristān in the reign of the ʿAlid al-Dāʿī al-Kabīr al-Ḥasan b. Zayd [see al-ḥasan b. zayd b. muḥammad]; his brother and successor al-Ḳāʾim bi 'l-Ḥaḳḳ Muḥammad b. Zayd distrusting him, he endeavoured to found a kingdom of his own in the east, at first with the support of the governor of Naysābūr Muḥammad b. ʿAbd Allāh al-Khudjistānī, who took Djurdjān from al-Ḳāʾim. But tale-bearers cast suspicion on al-Uṭrūsh and al-Khudjistānī threw him into prison in Naysābūr or Djurdjān and had him scourged, which injured his hearing and to this he owes his epithet "the deaf". On his release he returned to al-Ḳāʾim Muḥammad and in 287 or 288 or (according to Abu 'l-Faradj al-Iṣfahānī, *Maḳātil al-ṭālibiyyīn*, Tehrān 1307, 229, line 14, ed. Cairo 1949/1368, 694) not till 289/900-1 he shared in the latter's defeat at Djurdjān by Muḥammad b. Hārūn, then a partisan of the Sāmānid [*q.v.*] Ismāʿīl b. Aḥmad. Al-Ḳāʾim died as a result of a wound; al-Uṭrūsh fled and went to Dāmaghān and Rayy among other places. On the death of the caliph al-Muʿtaḍid in 289/902, he came forward again, especially as Muḥammad b. Hārūn, who had quarrelled with the Sāmānids, supported him. Al-Uṭrūsh received a welcome from Djastān of Daylam (or his son Wahsūdān; cf. Vasmer, in *Islamica*, iii, 165 ff.). The friendship of the Djastānids, which dated from the time they and al-Uṭrūsh were with al-Ḳāʾim, was as fickle as their attitude to Islam, which their ancestor Marzbān had adopted only a century earlier. Several joint undertakings thus came to nothing; al-Uṭrūsh recognized the necessity of first of all securing a following of his own, and through them the followers of the Djastānids. He conducted Islamic missions and ʿAlid propaganda from Hawsam among the not yet converted tribes on the coast of the Caspian Sea and in Gīlān and also built mosques.

The Sāmānid Aḥmad b. Ismāʿīl in 298/910 sent Muḥammad b. Ṣaʿlūḳ to Ṭabaristān with orders to prevent the foundation of the new state; but a Khurāsān army superior in numbers and still more so in equipment was completely defeated by the Daylamīs under al-Uṭrūsh at Shālūs in Djumādā I 301/December 913; many fugitives were driven into the sea; a detatchment led by Abu 'l-Wafāʾ Khalīfa b. Nūḥ escaped to the fortress of Shālūs, surrendered to al-Uṭrūsh on a promise of pardon, but was shortly afterwards massacred by his general and son-in-law al-Ḥasan b. al-Ḳāsim b. al-Ḥasan b. ʿAlī b. ʿAbd al-Raḥmān b. al-Ḳāsim b. al-Ḥasan b. Zayd b. al-Ḥasan b. ʿAlī b. Abī Ṭālib. Al-Uṭrūsh had in the meanwhile gone to Āmul with the rest of the army, sent for by the terrified inhabitants, and had taken up his abode in the former palace of al-Ḳāʾim Muḥammad. He was able to instal his officials from Shālūs to Sāriya, unhindered by the Sāmānids, because just then Aḥmad b. Ismāʿīl was murdered and his son Naṣr had first of all to make his position secure against his family and the notables. The Ispahbed Sharwīn b. Rustam of the house of Bāwand, which had been very dangerous to the earlier ʿAlids, made peace with al-Uṭrūsh.

In accordance with the usual experience in the foundation of ʿAlid states, more difficulty was found in getting the numerous relatives to work together. As al-Uṭrūsh was at least 70 when he entered Āmul, and his sons seemed rather incapable, the tension that had formerly existed between al-Ḳāʾim Muḥammad and al-Uṭrūsh was now repeated between the latter and the already mentioned general al-Ḥasan b. al-Ḳāsim. The latter broke for a time with al-Uṭrūsh and even took him prisoner on one occasion, but had to fly to Daylam in face of the general indignation. But equally general was the pressure

brought by the notables upon the dying al-Uṭrū<u>sh</u> to designate this same al-Ḥasan as his successor, and they at once paid homage to him after the death of al-Uṭrū<u>sh</u>.

Al-Uṭrū<u>sh</u> owed his rise not only to the skilful way in which he took advantage of the political discord on the Caspian Sea but also to his unusual intellectual ability. He was also a poet (cf. Brit. Mus. MS, Suppl. 1259, iv, and specimens in the *Ifāda*, see *Bibl.*), but he particularly cultivated dogmatics, tradition and law (cf. also Ibn al-Nadīm, *Fihrist*, 183, lines 11 ff.). His *Ibāna* has been preserved indirectly (see *Bibl.*); he differs from the Yemen practice in the ritual of burial and minor points of the law of inheritance; he also recognized the validity of the formula of repudiation when pronounced three times in succession as equivalent to three separate repudiations, by which he aroused the opposition of the Twelver <u>Sh</u>īʿīs, who were numerous in the north; one of his sons, Abu 'l-Ḥasan ʿAlī, actually joined them; and he himself used their form of washing the feet, of course combined with the general <u>Sh</u>īʿa refusal to recognize the rubbing of the covered foot as a substitute for washing; he also showed himself less strict against members of other faiths, which is intelligible in view of his political and missionary aims. A particular Zaydī sect, the Nāṣiriyya, was called after him, which was only merged in the Ḳāsimiyya, which had become predominant in the Yemen, by the Imām al-Mahdī Abū ʿAbd Allāh Muḥammad, son of the above mentioned al-Ḥasan b. al-Ḳāsim.

The latter, known as al-Dāʿī al-Ṣa<u>gh</u>īr, succeeded al-Uṭrū<u>sh</u> and was able to conquer Naysābūr in 308/920 through Laylā b. Nuʿmān, an old general of his predecessor, and even to send an army against Ṭūs. But he was killed in 316/928 when going from Rayy to the relief of Āmul, which was occupied by Asfār b. <u>Sh</u>īrwayh al-Daylamī and Abu 'l-Ḥa<u>dj</u><u>dj</u>ā<u>dj</u> Mardāwī<u>dj</u> b. Ziyār. His power had always been limited by the sons of al-Uṭrū<u>sh</u>: Abu 'l-Ḳāsim <u>Dj</u>aʿfar b. al-Uṭrū<u>sh</u> had taken Āmul in 306/918 with the help of Muḥammad b. Ṣaʿlūḳ, governor of Rayy, and again in 312/925, on each occasion holding it for a short time. In 311/924 his brother Abu 'l-Ḥusayn Aḥmad had entered it; his son Abū ʿAlī Ḥusayn and his brother and successor Abū <u>Dj</u>aʿfar had also to fight an anti-Imām in <u>Dj</u>aʿfar's son Ismāʿīl, who however was poisoned in 319/931. In the meanwhile, another relative of al-Uṭrū<u>sh</u>, Abū Faḍl <u>Dj</u>aʿfar, had set himself up with the title al-<u>Th</u>āʾir fi 'llāh and soon after 320/932 was able to occupy Āmul for a time, aided by his policy of taking sides alternately in the wai between the Ziyārid Wa<u>sh</u>mgīr with the Būyids who were now coming to the front, especially as the Fīrūzānid al-Ḥasan and a certain Ustundār of the Bādūs(e)pānids who had once been conquered by the Dāʿī al-Kabīr al-Ḥasan b. Zayd also intervened.

This little ʿAlid state in the north of the Muslim world was continually able to hold its own, although its importance and size constantly changed, among the petty native princes, the Fīrūzānids, notably Mākān b. Kālī, and <u>Dj</u>astānids, Ziyārids, Ispahbads of the house of Bāwand, Būyids and Sāmānids, even in spite of domestic troubles. It lasted down to about 520/1126, the year of the death of Abū Ṭālib al-Ṣa<u>gh</u>īr Yaḥyā b. al-Ḥusayn al-Buṭḥānī b. al-Muʾayyad, who could not prevail in Daylam against the Assassins; we can hardly reckon in this line the alleged ʿAlid dynasty of Kiyā-Ḥusaynī in Gīlān from the end of the 8th/14th to the end of the 9th/15th century. Abū Ṭālib was the great-grand-nephew of the Imām al-Nāṭiḳ Abū Ṭālib (see *Bibl.*) who, born in 340/951, has given us the most important account of al-Uṭrū<u>sh</u>, based on the stories of eye-witnesses, such as his father.

Al-Bīrūnī, permeated by the ancient Persian traditions, blames Ḥasan al-Uṭrū<u>sh</u> for destroying the family organization of the Ka<u>dh</u><u>kh</u>udā, established by the mythical Farīdūn (*al-Āthār al-bāḳiya*, text 224, tr. 210; cf. Barthold, *Turkestan*², 214, and idem, *Sočinenya*, i, Moscow 1962, 273).

ḤASANAK, properly, Abū ʿAlī Ḥasan b. Muḥammad b. ʿAbbās (d. 423/1032), the last *wazīr* of Maḥmūd [*q.v.*] of <u>Gh</u>azna. Becoming governor of <u>Kh</u>urāsān at an early age, Ḥasanak went on the pilgrimage in 414/1023 and allowed himself to be persuaded (Bayhaḳī, 209) to return via Cairo and there to accept a robe of honour (*<u>kh</u>ilʿa*) from the Fāṭimid Caliph al-Ẓāhir. This resulted in his being suspected by the ʿAbbāsid Caliph al-Ḳādir of being an adherent of the Fāṭimid Caliphate. After his return to <u>Gh</u>azna, therefore, the ʿAbbāsid Caliph demanded of Maḥmūd that he should have him executed «as a Ḳarmaṭī» [*q.v.*]. (This indicates that in Ba<u>gh</u>dād at that time Fāṭimids and Ḳarmaṭīs were classed together). Maḥmūd clearly regarded the accusation as unfounded, and went so far as to appoint Ḥasanak *wazīr* in 415/1024, his predecessor Maymandī being thrown into prison. Maḥmūd attempted to pacify the ʿAbbāsid Caliph by sending the robe of honour, and other presents which Ḥasanak had received, to Ba<u>gh</u>dād, where they were burnt.

During the last six years of Maḥmud's reign, Ḥasanak exerted a remarkable influence over him, but seems to have opposed his son Masʿūd [*q.v.*] and supported the descendants of Masʿūd's brother Muḥammad. This brought about his downfall after Maḥmūd's death (23 Rabīʿ II 421/30 April 1030). He was immediately banished to Herāt (Bayhaḳī,

52), accused of offending against Masʿūd (Bayhaḳī 64) and, mainly as a result of efforts by the finance minister, Abū Sahl Sawsanī, tried on the old charge of being a Ḳarmaṭī. The ʿAbbāsid Caliph al-Ḳādir also, evidently offended that his wishes in 415/1024 had not been complied with, again interfered. After a trial which Bayhaḳī (178-89) describes in detail, in an account clearly sympathetic to Ḥasanak, the latter, clad only in a shirt, was strangled on Wednesday 28 Ṣafar 423 (the corresponding 14 February 1032 was a Monday), and his head given in derision to his chief opponent Sawsanī; his corpse remained tied to a pillory for seven years.

According to all that can be ascertained from the sources, Ḥasanak did not die merely as a result of court intrigues and the dynastic struggle of Maḥmūd's two sons. He was evidently also a victim of the deeply rooted fear felt by the ʿAbbāsid Caliphs and the Ghaznavids of an Ismāʿīlī revolution, a fear not entirely unfounded in view of the numerous subversive currents all over Western Asia and Persia during the 5th/11th century, even if in individual cases it was directed against the innocent.

(B. Spuler)

ḤASANĪ, name given in Morocco to the money minted on the orders of Mawlāy al-Ḥasan from 1299/1881-2 onwards.

The object was to replace the previous Moroccan coinage consisting of a multitude of bronze, copper or silver coins; the gold coins had practically disappeared a long time before. The currency previous to Mawlāy al-Ḥasan was victoriously rivalled by different foreign currencies, mainly Spanish, French and English, especially since the financial crisis created by the Spanish-Moroccan war of 1859-60 (cf. G. Ayache, *Aspects de la crise financière au Maroc après l'expédition espagnole de 1860*, in *RH*, ccxx (Oct.-Dec. 1958), 3-42).

The coins minted were the *riyāl* or douro of a nominal value of 5 French francs, and the *nuṣṣ* (*niṣf*) *riyāl* or half-douro, both of the standard of 900/1,000, then three other coins of the standard of 835/1,000: *rubʿ riyāl* (quarter of a douro), *dirham ḥasanī* or *ḥasanī* (tenth of a douro) and finally *bilyūn* or *gersh* (*ḳirsh*) equal to a twentieth of a douro. All these coins were silver.

Bibliography: In his account of Moroccan money, Ch. de Foucauld (*Reconnaissance au Maroc*, 22, n. 1) does not mention *ḥasanī* coins, although his journey took place after Mawlāy al-Ḥasan's monetary reform; Ch. ḤASANĪ (pl. Ḥasaniyyūn), name of the ʿAlid [*q.v.*] *sharīfs* descended from al-Ḥasan, son of ʿAlī and Fāṭima. *Ḥasanī* is thus contrasted with *Ḥusaynī*, the name of the descendants of their second son. In Morocco, the surname of Ḥasanī is particularly reserved to those *sharīfs* descended from Muḥammad al-Nafs al-Zakiyya, son of ʿAbd Allāh al-Kāmil [*q.v.*] in order to distinguish them from their Idrīsid [*q.v.*] cousins. The Ḥasanī family have played a considerable part in the history of the Maghrib and the Western Sahara, not only by reason of their number but also in giving birth to two great Sharīfian dynasties; that of the Saʿdids [*q.v.*] in the 10th/16th and 11th/17th centuries and that of the ʿAlawids [*q.v.*], which has been reigning in Morocco from the middle of the 11th/17th century to the present day (the ʿAlawids are also known under the names of Filālīs or Sidjilmāsīs and the Saʿdids under that of Zaydānīs).

The date and reason for the establishment of the Ḥasanīs in southern Morocco are not precisely known, and it is hardly possible to verify the legends handed down to us in the abundant literature. The Arabic writers, however, are agreed in fixing the arrival of the first *sharīfs* at Sidjilmāsa [*q.v.*] towards the end of the 7th/13th century, either brought back from Arabia by pilgrims or as a result of the journey of a special deputation which sought them at Yanbūʿ, a little port in the Ḥidjāz. The inhabitants of the oases of the Tafilalet (capital: Sidjilmāsa) welcomed them in the hope of ensuring for themselves good date-harvests in the future. The first of these *sharīfs* bore the same name as his ancestor al-Ḥasan. He is now known by the surname of al-Dākhil, that is, the first to enter. A first cousin of this personage, Zaydān, appears to have been summoned about the same time and for the same reasons by the tribes of the oases of the Wādī Draʿ. It has been suggested that these ʿAlids may have come to Morocco with the Maʿḳil tribes [*q.v.*], who at that time were establishing their rule over the Moroccan oases south of the Atlas, where the *sharīfs* would have played their traditional part as bringers of good luck and judges in the quarrels of these nomads from Arabia. The hypothesis is attractive but has not yet been verified.

Several Arab authors have questioned the direct lineal descent from Muḥammad al-Nafs al-Zakiyya, and even the Sharīfian origin of the first Saʿdids, but today the genealogy of all the Ḥasanīs, though perhaps not always unquestionable, is in fact not questioned. The genealogical table published here is complementary to that given for the ʿAlids, and therefore does not go back earlier than the common grandfather of the Saʿdids and the ʿAlawids.

Genealogical Table of the Ḥasanī Sovereigns of Morocco
(cf. the table for the ʿAlids, at vol. i, p. 401)

[1]) banished from Morocco from 19 August 1953 until 16 November 1955, his place being taken by his uncle ʿArafa b. al-Ḥasan.

ḤASANWAYH, name of one of the Kurdish chieftains (and of the dynasty descended from him) who, in the 4th/10th century and at the beginning of the 5th/11th century, succeeded in founding and maintaining in Western Iran and Upper Mesopotamia more or less autonomous and lasting principalities.

Ḥasanwayh b. Ḥusayn (Abu 'l-Fawāris) belonged to a branch of the Kurdish tribe of the Barzikānī, other groups of which were led by several of his relatives (Ibn al-Athīr, viii, 518-9). The death of two uncles (349/960 and 350/961) and the use of force against a nephew enabled him to gather into his hands a certain number of fortresses and "protections", *ḥimāyāt* [*q.v.*], in the middle Djibāl (Ḳarmīsīn region). The assistance he gave the Būyids in their struggles against the Sāmānids and their Iranian allies earned him favours from Rukn al-Dawla which in turn permitted him to increase his influence over the Kurds of these areas. This emboldened him to resist with force the governor of the province of Hamadhān, Sahlān b. Musāfir, after trouble over the taxes he owed, and things might have gone badly for him if the expedition against him organized by Rukn al-Dawla's *wazīr*, Ibn al ʿAmīd, had not been interrupted by the latter's death. The dead man's son and successor, Abu 'l-Fatḥ Ibn al-ʿAmīd, negotiated with him, and in return for tribute of 50,000 *dīnār*s and considerable numbers of animals, granted him financial autonomy, with the right to collect taxes in his province (Ṣafar 360/December 970). He became reconciled with Sahlān, who was himself semi-independent, and allied himself with him by marriage. In the struggle between the Būyid ʿIzz al-Dīn Bakhtiyār [*q.v.*] and his cousin ʿAḍud al-Dawla [*q.v.*] he contrived, while promising his aid to the former in view of his connexion with the Būyid of the Djibāl, Fakhr al-Dawla, to confine this to sending him his sons ʿAbd al-Razzāḳ and Badr and postponing his own arrival until Bakhtiyār was beaten and put to death. Several unpublished letters written by Abū Isḥāḳ al-Sābiʾ (*Rasāʾil*, Paris MS, fols. 55 v., 94r., 97r.; Leiden MS, fols. 129r., 200 v.) in the name of Bakhtiyār or of the caliph al-Tāʾiʿ, bear witness to these negotiations. Meanwhile, Ḥasanwayh seems to have managed to make his peace with ʿAḍud al-Dawla, who at least took no measures against him; he died in 369/979 in his fortress of Sarmādj (south of Bīsutūn).

Dissension broke out among his numerous sons. In the struggle in which Fakhr al-Dawla set himself up against his brothers ʿAḍud al-Dawla and Muʾayyid al-Dawla of Rayy, several Ḥasanwayhids including ʿAbd al-Razzāḳ were on the side of the first, while others including Badr supported ʿAḍud al-Dawla. The defeat of Fakhr al-Dawla involved his Kurdish allies, Sarmādj was taken from one of them, Bakhtiyār, and in the end all the sons of Ḥasanwayh were put to death except Badr (Abu 'l-Nadjm) who, with the title of *ḥādjib*, was installed as general leader of the Barzikānī Kurds in the name of Muʾayyid al-Dawla, heir to the possessions of Fakhr (370/980). These facts are substantiated by a letter of ʿAbd al-ʿAzīz b. Yūsuf (C. Cahen, *Une correspondance buyide inédite*, in *Studi orientalistici . . . Levi Della Vida*, i, 87).

Abu 'l-Nadjm (later Nāṣir al-Dawla) is considered by the historians to be a prince worthy of all praise. Though a faithful vassal of Muʾayyid al-Dawla, whom, for example, he assisted in fighting the Ziyārid Ḳābūs [*q.v.*], he was equally loyal to Fakhr al-Dawla once more, when the latter had peacefully succeeded Muʾayyid al-Dawla after ʿAḍud al-Dawla and Muʾayyid al-Dawla had died. In the quarrels between the various claimants to the succession of ʿAḍud al-Dawla he successfully supported Fakhr al-Dawla against Sharaf al-Dawla, suppressed the revolt of a Barzikānī chieftain near Ḳumm, and on Fakhr al-Dawla's death appears as a counsellor to the government of the young heir and his mother, whom he assisted for example in repelling the claims of Maḥmūd of Ghazna (ʿUtbī, trans. Reynolds, 424). He came meanwhile to a good understanding with the new Būyid in Baghdād, Bahāʾ al-Dawla, through whose efforts the Caliph conferred upon him in 388/998 the *laḳab* mentioned above. At that time he possessed the territories of Sābūr-Khʷāst, Dīnawar, Nihāwand, Asadābād, Barūdjird, and several districts of Ahwāz, as well as Ḳarmīsīn, Ḥulwān and Shahrzūr from time to time. Abū Shudjāʿ Rudhrawārī, who regards the Barzikānī as "the worst tribe on earth for brigandage", hymns his skill, energy and justice, which enabled him to impose on them a respect for order, to conduct a sensible financial administration, to develop the mountain roads and the markets (including, at Hamadhān, a market for the sale of his own produce), to foster religion, and to secure by large gifts the safety and welfare of the pilgrimage which crossed his territory; several surviving coins show that he struck his own coinage (some new coins of his have been published by G. C. Miles in *Mém. de la mission arch. en Iran*, xxxvii, 143-5).

The last period of his principality brought him several trials nevertheless. In the quarrels in which the Būyids or their dignitaries opposed each other, the assistance or hospitality which he gave to some involved him in the anger of others. The Ḥasanwayhids had immemorially been rivals of the Shādjahān Kurds, their western neighbours (towards Ḳarmīsīn and Ḥulwān) and of the most influential family among them, that of the ʿAnnāzids [*q.v.*]; Badr had expelled from his territory Abu'l Fatḥ ibn ʿAnnāz, who had taken refuge among some ʿUḳaylī [*q.v.*] Bedouins in Upper Mesopotamia; in 397/1006-7 there were hostilities from this quarter. Again, Badr had alienated his eldest son, Hilāl, and preferred a younger; at one moment victorious with the help given him by the vassal ruler of Shahrzūr, Hilāl was finally vanquished by an army sent by Bahāʾ al-Dawla; but through this affair Ibn ʿAnnāz, with whom Badr had been obliged to reconcile himself, had improved his position. More generally, the Kurdish subjects and neighbours of Badr ceased to respect him, and it was in fighting a minor group that Badr met his death in 405/1014.

This was the end of the family. It is true that in the previous year Bahāʾ al-Dawla had died and Ṭāhir (Ẓāhir), a son of Hilāl, had again taken Shahrzūr; and Hilāl, being freed, arrived to take his father's place. But after a few months they were conquered and put to death by the son of Abu 'l-Fatḥ ibn ʿAnnāz, Abu'l Shawḳ [see ʿANNĀZIDS], whose power in the Djibāl was henceforth to replace that of the Ḥasanwayhids. There remained in the hands of the family, which had been stripped of all other possessions, only its old stronghold of Sarmādj, where the last heir died in 439/1047, at the moment when a new conqueror was entering the country, the Saldjūḳ Turk Ibrāhīm Ināl.

Bibliography: Apart from the occasional sources given in the article, all the information derives from the history of Hilāl al-Ṣābiʾ, as it has been transmitted to us (apart from the brief extract

preserved for the years 389-92) through the works of Miskawayh and Abū Shudjāʿ up to 389, Muḥ. b. ʿAbd al-Malik al Hamadhānī up to 367, Ibn al-Djawzī, Ibn al-Athīr, and Sibṭ Ibn al-Djawzī [see BŪYIDS/BUWAYHIDS]. Further information beyond that given here may be found in V. Minorsky's articles KURDS, in *EI*[1], and ʿANNĀZIDS, in *EI*[2], and in his commentary on *Abu Dulaf's travels in Iran*, 1955, 93 (on Sarmādj); see also Zambaur, 211, and B. Spuler, *Iran* (index).

(CL. CAHEN)

ḤASDĀY B. SHAPRŪṬ (ca. 294-365/905-75), Jewish dignitary at the court of ʿAbd al-Raḥmān III, and al-Ḥakam II, in Cordova (see ḲURṬUBA). He mastered Arabic, Hebrew, Latin and the Romance vernacular, and specialized in medicine. Originally perhaps a court physician, he soon figures as a supervisor of customs and as a diplomat dealing with embassies from Byzantium and Germany, going on a mission to León, bringing to Cordova the Queen of Navarre and her grandson Sancho of León (347/958). Assisted by a Greek monk he studied, and improved on the earlier Arabic translation of, the *Materia Medica* of Dioscorides, sent from Byzantium.

He was the head (*Nasī*) of the realm's Jewry. Hebrew accounts, poems and documents tell of his services to and contacts with Jews in Spain, the East, Byzantine Italy, Toulouse, and the Khazar kingdom; of his court at which Hebrew scholars and poets served, and of his fostering the development of a native school of Jewish learning. Probably this activity, which made Spanish Jewry independent of foreign lands in communal administration and cultural orientation, was favoured by the Spanish caliphate.

(M. PERLMANN)

ḤĀSHID WA-BAKĪL, a large confederation of tribes in the highlands of northern Yaman. For well over two millennia the confederation has kept its identity and territory with little change.

The article on the confederation by J. Schleifer in *EI*[1], based in the main on al-Hamdānī's survey (4th/10th century) and on E. Glaser's visit to the land of Ḥāshid in 1884, sets forth many details not repeated here.

Since the dawn of history the confederation has occupied a large part of the region between Ṣanʿāʾ and Ṣaʿda, with Ḥāshid generally established on the western side and Bakīl on the eastern. As both Ṣanʿāʾ and Ṣaʿda have often been capital cities for Yamanī dynasties, the confederation has been in the main current of political life. Virtually every historical work on the Yaman discusses the doings of Ḥāshid and Bakīl, so that it is impossible to review their annals comprehensively in a short space.

The later kings of Sabaʾ included a dynasty sprung from Ḥāshid and another from Bakīl. Even then the two tribes were commingled, though often hostile towards each other; both dynasties had Maʾrib as their capital and the palace of Salḥīn as their residence, and both venerated the same deities.

J. Ryckmans, who has worked with the Sabaean inscriptions, identifies Ḥāshid as intra-Hamdān and Bakīl as ultra-Hamdān. The Arab genealogists disagree with this identification. According to Ibn Ḥazm, the children of Hamdān's son Nawf (wrongly given by Ibn Ḥazm as Nawfal) were a multitude of tribes (*buṭūn djamma*), all going back to Nawf's grandsons Ḥāshid and Bakīl, "the two tribes of Hamdān (*ḳabīlā Hamdān*)". This scheme places Yām [*q.v.*] among the branches of Ḥāshid and Arḥab among the branches of Bakīl. At present the tribe of Yām lives north of the confederation and is regarded as a separate entity, while the tribe of Arḥab lives to the south and is more closely associated with Ḥāshid than with its reputed ancestors of Bakīl.

Another version, recorded by al-Suwaydī, gives Bakīl as grandson rather than brother of Ḥāshid (Bakīl b. Djusham b. Ḥāshid). This version is less plausible, as it makes every branch of Bakīl also a branch of Ḥashīd; it probably reflects the common tendency to regard Bakīl as the junior partner in the alliance, a tendency also illustrated by the assigning to Bakīl of second place in the joint name.

For centuries men, families, and larger groups have moved back and forth between Ḥāshid and Bakīl without bringing about a complete amalgamation. The verb *tabakkala* is used by al-Hamdānī in the 4th/10th century for members of Ḥāshid transferring their allegiance to Bakīl, the converse of which would be *taḥashshada*.

After the introduction of Islam, the confederation continued to furnish rulers for the Yaman. The royal Rasūlid genealogist, al-Malik al-Ashraf, states that the Ṣulayḥids [*q.v.*] of the 5th-6th/11th-12th centuries and the roughly contemporaneous Hamdānids were both descended from Ḥāshid, their lines bifurcating from Ḥāshid's son Djusham al-Awsaṭ (Ḥāshid's father was Djusham al-Akbar).

Over the centuries Ḥāshid and Bakīl, in a manner not uncharacteristic of brothers, have often fought with each other, just as they did in Sabaean times. Almost always, however, they have both stoutly resisted the imposition of outside authority. As Zaydīs they have been inclined to be on good terms with the Zaydī Imāms, who have kept strongholds such as Shahāra in the country of Ḥāshid, but even under the Imāms they have shown a spirit of independence rather than subservience. The Imāms have frequently chosen members of the confederation as provincial governors. When the Turks were in the Yaman, they had little success in extending their jurisdiction into the territory of Ḥāshid and Bakīl.

Sources used by the British Admiralty in 1916 estimated the number of fighting men in the confederation at about 50,000, making it probably the strongest military force in the region. The paramount chiefs, coming from the Ḥimrān of Ḥāshid, also enjoyed a degree of ascendancy over Bakīl.

On the rôle of these tribes in the events following the revolution of September 1962 see YAMAN.

The majority of the members of the confederation are townsmen and villagers, engaged in agriculture and the raising of horses and sheep and to some extent in trade. The nomadic elements range northwards and eastwards, penetrating into al-Djawf (Djawf Ibn Nāṣir), where the influence of the confederation is not inconsiderable. Descendants of the Prophet (Sayyids) are held in high esteem by these Zaydīs, especially in the land of Ḥāshid, where at Ḥūth they have one of their main centres in the Yaman.

HĀSHIM, BANŪ [see hāshimids, hāshimiyya, ḥidjāz, makka].

HĀSHIM b. ʿABD MANĀF, great-grandfather of the prophet Muḥammad. As a grandson of Ḳusayy, who had made the tribe of Ḳuraysh dominant in Mecca and had reorganized the pilgrimage, he held the offices or functions of *rifāda* and *siḳāya*, that is, the provision of food and water for the pilgrims. For the first he collected contributions in money or kind from the chief men of Mecca. One year when food was scarce in Mecca, he brought baked cakes or loaves from Syria, and crumbled (*hashama*) these to make broth (*tharīd*) for the pilgrims; after this he was known as Hāshim, though his proper name was ʿAmr. To improve the water supply he dug several wells. He is credited with the introduction of the system of two trade journeys a year (cf. Ḳurʾān, CVI, 2), presumably by making a journey in summer to Syria. He died on such a journey at Ghazza (Gaza), leaving behind in Medina a son ʿAbd al-Muṭṭalib [*q.v.*] by Salmā bint ʿAmr of the clan of al-Nadjdjār. Hāshim may have been in his time the leader of the alliance of the Muṭayyabūn or its later developments, from which the descendants of his brothers Nawfal and ʿAbd Shams were excluded. Much of this traditional account (though sometimes doubted) has probably a solid basis in fact, but the story of the wager between Hāshim and Umayya is doubtless an invention reflecting the later dynastic rivalries.

(W. Montgomery Watt)

HĀSHIM b. ʿUTBA b. Abī Waḳḳāṣ al-Zuhrī Abū ʿUmar, a Companion of the Prophet and a neph w of the more famous Saʿd b. Abī Waḳḳāṣ [*q.v.*]. Converted to Islam on the day of the conquest of Mecca, he distinguished himself at the battle of the Yarmūk, where he lost an eye, and held important commands under his uncle at Ḳādisiyya and Djalūlā, where he led the Arab forces. He was killed fighting on the side of ʿAlī at Ṣiffīn.

Bibliography: Caetani, *Annali*, index; Ṭabarī, index. (Ed.)

Aḥmed **HĀSHIM**, (1884-1933), Turkish poet and writer, the main representative of the Symbolist movement in Turkey, was born in Baghdād. His father ʿĀrif Ḥikmet belonged to the well-known Alūsī family and was a government official who had served in various districts as *ḳāymaḳām* and *mutaṣarrif*. His mother was a Kāhya-zāde. Both families included many members who occupied high posts in the Ottoman administration. Hāshim lost his ailing mother, who does not seem to have had a happy life and who was the only true companion of his childhood, at the age of eight. He recalled later in his poems the memory of his walks with her along the Tigris. Being himself of poor health and extremely sensitive, this unhappy childhood left a lasting mark on his life and work. In 1895 his father brought Hāshim to Istanbul, where he improved his Turkish at a private school and then in 1896 at the Galatasaray lycée where the children of the upper classes gathered and where he made friends with many future poets and writers, particularly Abdülhak Şinasi Hisar, one of his future biographers. He also made there his first contact with French literature (many subjects being taught in this lycée by French teachers). His literature teacher Müftüoghlu Aḥmed Ḥikmet [*q.v.*] awakened in him a taste for poetry and is said to have given him a first inkling of the kind of poetry which he later developed (Aḥmed Hāshim, *Bize göre*, 40; A. Ş. Hisar, *Ahmed Haşim, şiiri ve hayatı*, 13). He graduated from Galatasaray in 1906 and entered the Tobacco Administration (*Reji Idaresi*) helped by the novelist Khālid Ḍiyā (Halit Ziya Uşaklıgil), who was a senior official there. He also registered at the Law School (*Mekteb-i Ḥuḳūḳ*), which he never completed. During this period he studied contemporary French poets extensively, mainly the symbolists (Halit Ziya Uşaklıgil, *Kırk yıl*, v, 157-8). Except for a two-year interval in Izmir, where he taught French in the local lycée, he lived in Istanbul earning his living mainly as a translator in Government offices until the First World War, during which he served in the Army as reserve officer, fought at Gallipoli and toured Anatolia. After the war he became an official of the Ottoman Public Debt Administration (*Düyūn-i ʿUmūmiyye* [*q.v.*])and later taught aesthetics and mythology at the Academy of Fine Arts and French at the School of Political Science (*Mekteb-i Mülkiyye*) and the War Academy. In 1924 he went to Paris and made close contact with French literary circles, contributing an article *Tendances actuelles de la littérature turque* to the August 1924 issue of *Mercure de France*. In 1928 he made another trip to Paris. The same year he developed liver trouble and his health gradually deteriorated. His visit in 1932 to Frankfurt for treatment gave no respite and he died in Istanbul on 4 June 1933, at an age when he had just begun his most mature work.

Aḥmed Hāshim possessed an extremely sensitive, infinitely restless and constantly changing temperament. His great affections and friendships would change to deep hatreds overnight and then he would forgive and forget everything in turn. According to the reports of his close friends (among others Y. K. Karaosmanoğlu and A. Ş. Hisar, see *Bibl.*), in spite of his brilliant intelligence, poetical genius and wide culture, he suffered from a strong feeling of inferiority and a series of complexes. He always thought that his physique was intolerably ugly, that he was awkward and unsociable and unattractive to women. He was convinced that Fate had been unkind to him. He always felt lonely and unloved in the world. He never recovered from the circumstances of his childhood and from the feeling of being "strange and different" in the early years of his youth. This made him at times cruel and cutting. He lived as a bachelor and married just before his death the woman who had looked after him, so that "he could have a mourning widow after him".

Aḥmed Hāshim began to write his first poems at Galatasaray when he was fifteen. In these early poems there is a distant echo of the "Indian School" of *dīwān* poetry in the style of Sheykh Ghālib. But he is more obviously following in the steps of the Tanẓīmāt poet ʿAbd-al-Ḥaḳḳ Ḥāmid in the choice of morbidly sad and melancholy subjects and of Djenāb Shehāb al-Dīn in the vaguely symbolist imagery. In this period his style and language follow more closely the taste of Djenāb Shehāb al-Dīn and particularly Tewfīḳ Fikret in the choice of the Arabo-Persian sophisticated vocabulary and in the weaving of Persian *iżāfe*s.

After these imitative experiments Aḥmed Hāshim

did not write for a few years but read extensively the French impressionists and particularly the symbolists, whom he found close to his nature and his conception of poetry. Baudelaire, Verlaine, Rimbaud, Henri de Régnier, Mallarmé, Samain and the Belgian Verhaeren were his favourites.

In 1909 a group of young poets and writers who thought that the *Therwet-i Fünūn* movement was now out-moded, set up a short-lived new literary group: the *Fedjr-i Ātī* ("Dawn of the Future"). Although Hāshim joined this new circle, because many of his friends were members, he himself was already a distinctly independent personality in Turkish poetry. Liberating himself completely from the influence of the *Therwet-i Fünūn* poets and not caring much for a group movement, he concentrated on developing modern Turkish symbolism, the theory of which he elaborately expounded in various articles and particularly in the preface to *Piyāle*. "Unlike prose, poetry is not to be understood but to be felt... meaning and clarity are not the aims of the poet... Poetry, like the words of prophets, should be open to diverse interpretations".

Aḥmed Hāshim's works underline his desire to escape from surface representation and invest his art with a deeper level of consciousness. For him the Universe exists in and through the mind and conception of the poet. There is no internal and external world, no division into subject and object, all is apprehensible by the poet in search of beauty in a transcendental reality existing deeper than mere appearances.

In his poetry, he sought to convey by his acute perception of all the senses and dreams his own communication with and interpretation of that mystic reality.

For him the unity of music and poetry was a means to this deeper communication and his verse is freer and more pliant in both form and rhythm than that of the earlier modernists. His poetic technique shows a rejection of the straight comparison and plainly-worked simile and a preference for symbolic imagery inspired by his growing interpretation of that 'deeper reality' in general symbolical conceptions.

Some of his poetry seems obscure as a result of his development of an essentially personal range of symbols with which the reader must be acquainted in order to evaluate his verse more deeply. He did not wish to be more 'explicit'. This symbolic technique called upon the deeper imagination of both reader and poet and freely created more associations and nuances which would be stifled by a more concrete and surface technique. Aḥmed Hāshim deliberately attempted to evolve a poetry whose language, of rhythm and symbol, with its own word-values and phrase-orders, defied logical analysis yet liberated and stimulated the mind to a deeper level of consciousness.

In the limited subject-matter and vocabulary of Aḥmed Hāshim, dawn, twilight, evening, night, darkness, the moon, moonlight, lakes, ponds, deserts, roses, carnations, storks, nightingales, melancholy, hopeless love, distant and unknown lands and death are ever-recurring themes and motifs. His poems are generally short. He ignored all movements and changes in Turkish language and literature and remained faithful to *ʿarūḍ* until the very end, as he considered the syllabic metre (*hedje wezni*) "only fit for folk poems". He lived through wars and revolutions, but his poetry remained completely unaffected by these. However, the language reform movement did eventually influence him and his last quatrains are written in every-day Turkish without the sophisticated Arabo-Persian vocabulary and without Persian *iżāfe*s. Unlike Djenāb Shehāb al-Dīn, whose experiments in simple (*sade*) Turkish were mainly unsuccessful, Aḥmed Hāshim's were among his best. And judging by them, it is safe to say that he would have grown to surpass his early work had he lived longer.

Except for a few articles, Aḥmed Hāshim's prose consists mainly of short essays on casual themes, as he was sometimes a columnist in various dailies. His style is condensed, colourful and pithy, often tinged with cutting irony.

Aḥmed Hāshim is the author of (1) *Göl sāʿatleri*, Istanbul 1921 (contains poems previously published in the then leading literary review *Dergāh*), (2) *Piyāle*, Istanbul 1926, 1928 (contains his early poems, the *Shiʿr-i Ḳamer* series and the famous introduction which was first published in *Dergāh* as a kind of manifesto, (3) *Ghurabā-khāne-i Laḳlaḳān*, Istanbul 1928 (contains selected essays first published in the newspaper *Aḳsham*), (4) *Bize göre*, Istanbul 1928, 1960 (part of his essays published in the newspaper *Iḳdām*, (5) *Frankfurt Seyahatnamesi*, Istanbul 1933, 1947 (travel impressions), (6) *Ahmed Haşim'in şiirleri*, Istanbul 1933 (collected verse published after his death by the Semih Lutfi Kitabevi).

(FAHİR İZ)

AL-**HĀSHIMĪ** (Shaykh Muḥammad b. Aḥmad b. al-Hāshimī b. ʿAbd al-Raḥmān al-Ḥasanī al-Tilimsānī), theologian and *ṣūfī* of Sharīfī descent, born 22 Shawwāl 1298/17 July 1881 at Subda (in the department of Oran, Algeria) where his father, a small land-owner, held the office of judge (*ḳāḍī*). After his father's death, Muḥammad went to Tlemcen, where he followed various occupations: farm-worker, tailor, seller of drugs and spices. He attended regularly the mosques and *madrasas* to gain instruction in the religious disciplines and joined the mystic order (*ṭariḳa*) of the Darḳāwa [*q.v.*] "famed particularly for the learning of its members" (E. Doutté). His spiritual director (*murshid*), Muḥammad b. Yallas, had been the disciple in turn of the *shaykhs* Muḥammad al-Habrī (d. 1900) and Ibn al-Ḥabīb al-Būzīdī (d. 1909); then, on the latter's death, he attached himself to the *shaykh* Aḥmad al-ʿAlawī (Ben ʿAlīwa) of Mostaganem. In 1911, Muḥammad al-Hāshimī set off with his master for the East. After a stay of two years at Adana (Turkey), he settled at Damascus, where he completed his theological education under different *ʿulamāʾ*: Badr al-Dīn al-Ḥasanī, Yūsuf Nabhānī, Abu 'l-Khayr al-Mīdānī, etc. Shortly after the death of his master Ibn Yallas (1928), he received from the *shaykh* al-ʿAlawī the office of *khalīfa* of the ʿAlawiyya-Darḳāwiyya-Shādhiliyya *ṭarīḳa* in the countries of the Near East.

From then on he devoted himself exclusively to the teaching of theology (*tawḥīd*) and mysticism (*taṣawwuf*). His lectures at the Umayyad Mosque and in a number of *madrasas* (Shāmiyya, Nūriyya) were very well attended; he founded *zāwiyas* in Damascus and in the surrounding villages, at Ḥimṣ, Ḥamāt and Ḥalab as well as in Transjordan and Palestine. On his death at Damascus at the age of 80 (12 Radjab 1381/19 December 1961), he left behind him several thousand disciples and the reputation of a "renewer" (*mudjaddid*) of religion. The quality of his teaching and the virtue and wisdom which he disseminated caused him to be known as "the Shaʿrānī of his time".

His written works consist of ten or so treatises or opuscula on *tawḥīd* and *taṣawwuf*. (1) In *tawḥīd*, he professes an Ashʿarism enriched by the addition of Avicennan ideas (the distinction of the necessary, of the possible and of the impossible and the grasping of these three categories by the intelligence in order to recognize the divine qualities, the attributes of the Prophet and the limits of the created world) and by the developments of the theological school of North Africa (in particular of the *imām* al-Sanūsī, the doctor and *ṣūfī* of Tlemcen, d. 895/1490). The basic idea is that knowledge (*ʿilm*, *maʿrifa*) and more especially the knowledge of *tawḥīd* is an individual obligation upon the believer; it not only protects him from the error of denying (*kufr*) or of "associating" (*shirk*), but it illuminates him with a certainty (*yaḳīn*) which is of divine origin. For the benefit of readers with varying intellectual capacities, al-Hāshimī wrote a brief "Sunnī profession of faith" in prose, which he turned into verse in order to make it more easily memorized (*ʿAḳīdat ahl al-sunna maʿa naẓmihā*), then a short commentary on this text (*Sharḥ naẓm ʿAḳīdat ahl al-sunna*) and, finally, a much more elaborate commentary entitled *Kitāb Miftāḥ al-djanna fī sharḥ ʿAḳīdat ahl al-sunna* (these three works were printed in Damascus in 1379/1960). Before this trilogy, there had already been published: *Sabīl al-saʿāda fī maʿnā kalimatay al-shahāda* (Damascus 1347/1939), *Risālat al-baḥth al-djāmiʿ ... fī mā yataʿallaḳ bi 'l-ṣanʿa wa 'l-Ṣāniʿ* (Damascus 1374/1955) and *Risālat al-ḳawl al-faṣl al-ḳawīm fī bayān al-murād min waṣiyyat al-ḥakīm* (Damascus, 1376/1957), a short theologico-mystic commentary on the allegory of the swords which, taken separately, are easily broken and if joined together form a solid support. (2) In *taṣawwuf*, several treatises written in reply to the theoretical or practical questions of his pupils have not yet been printed. The only works at present available are the *Sharḥ Shitrandj al-ʿārifīn* ("Commentary on the Chess-board of the Gnostics"), an explanation of a curious diagram attributed to Muḥyī al-Dīn Ibn ʿArabī, in which human destiny and the mystic's progress towards God, together with the perils and the grace which attend them, are illustrated by the hundred squares of a chess-board (Damascus 1357/1938, reprinted 1964) and *al-Ḥill al-sadīd limā stashkalahu al-murīd* (Damascus 1383/1964), which investigates in what conditions a disciple may be permitted to change one *shaykh* or *ṭarīḳa* for another. Shaykh al-Hāshimī was responsible for the first edition of the *Miʿrādj al-tashawwuf*, a technical glossary of Ṣūfism by Ibn ʿAdjība [*q.v.*].

Bibliography: the essential work on the ʿAlawiyya branch of the Darḳāwa is M. Lings, *A Moslem saint of the twentieth century*, London 1961, devoted to the *shaykh* Aḥmad al-ʿAlawī and describing the essential aspects of the mystic method of training (*wird*, *dhikr*, *khalwa*) used also in the Syrian *ṭarīḳa* (the author makes occasional references to al-Hāshimī). Notices on al-Hāshimī are found in the following works, written by two of his disciples: Saʿīd al-Kurdī, *al-Djunayd*, Damascus 1368/1949, 142-6, and ʿAbd al-Ḳādir ʿĪsā, *Ḥaḳāʾiḳ ʿan al-taṣawwuf*, Aleppo 1384/1964, 355-61.

(J.-L. Michon)

HĀSHIMIDS (al-Hawāshim), the dynasty of Ḥasanid Sharīfs who ruled Mecca almost without interruption from the 4th/10th century until 1343/1924. After the First World War the dynasty provided kings for Syria and Iraq, which later became republics, and gave its name to the Hashemite Kingdom of Jordan (see following article). The eponym of the dynasty was Hāshim b. ʿAbd Manāf [*q.v.*], the great-grandfather of the Prophet.

The majority of the Shīʿa recognized as their Imāms descendants of ʿAlī's martyred younger son al-Ḥusayn. Descendants of the elder son al-Ḥasan found their opportunity to wield temporal as well as spiritual power during the chaotic period following the Ḳarmaṭī occupation of Mecca.

The Hāshimid line of Meccan Sharīfs was descended from Mūsā I al-Djawn ("The Black"), a great-grandson of al-Ḥasan and a younger brother of Muḥammad al-Nafs al-Zakiyya. One of Mūsā I's sons, Ibrāhīm, was the ancestor of the Ukhayḍirids [*q.v.*] of al-Yamāma, and the other, ʿAbd Allāh al-Shaykh al-Ṣāliḥ (also called al-Riḍā), was the sire of the Meccan Sharīfs. From ʿAbd Allāh's son Mūsā II sprang three of the main branches of the dynasty—the Mūsāwids, the Hawāshim, and the Ḳatādids. From Sulaymān, another son of Mūsā II, came the fourth main branch, the Sulaymānids (strictly speaking, therefore, all four branches were Mūsāwids).

The Sharīfate lasted nearly a millennium, with the Mūsāwids, Sulaymānids, and Hawāshim reigning for well over two centuries and the Ḳatādids for the remaining seven centuries and a quarter.

The first of the line to make himself master of Mecca was the Mūsāwid Djaʿfar b. Muḥammad of the fourth generation after Mūsā II. Djaʿfar is said to have supplanted a representative of Egypt at an uncertain date, probably in the early years of the second half of the 4th/10th century. Djaʿfar's success may have been connected with the rising power of the Fāṭimids. Early in the 5th/11th century the Mūsāwids under Abu 'l-Futūḥ al-Ḥasan failed in an attempt to bring the Caliphate back to Mecca, and their authority was later challenged by the Sulaymānids, who developed a base for their power farther south on the Red Sea coast [see ʿasīr]. Neither the Mūsāwids nor the Sulaymānids got an enduring grip on the Sharīfate. In the second half of the 5th/11th century they gave way to the Hawāshim (so called here to distinguish them from the larger entity of the Hāshimids), whose eponym was a descendant of Mūsā II named Hāshim.

In or about 597/1201 (the correspondence of dates in *EI*², i, 552 is inexact), one of the greatest of the long line of Sharīfs, Ḳatāda b. Idrīs, swept down from his stronghold of Yanbuʿ and drove the Hawāshim out of Mecca. Ḳatāda was in the tenth or twelfth generation after Mūsā II, and all the Meccan Sharīfs who succeeded him came of his stock.

In the mid-7th/13th century Muḥammad Abū Numayy I, the eighth Ḳatādid, first mounted the throne as a partner of his father al-Ḥasan. Nearly two centuries then elapsed before the accession of Muḥammad Abū Numayy II, son of Barakāt II [*q.v.*].

The descendants of Abū Numayy II in time split into three principal clans which often contended with

one another for sovereignty over Mecca. The first clan to establish itself was Dhawū ʿAbd Allāh (the ʿAbādila), named after a grandson of Abū Numayy II, but it soon yielded to Dhawū Zayd, named after a great-great-grandson. The third clan, Dhawū Barakāt, named after a son of Abū Numayy II, shared dominance with Dhawū Zayd from 1082/1672 until Dhawū ʿAbd Allāh regained power under Muḥammad b. ʿAbd al-Muʿīn b. ʿAwn in 1243/1827. Muḥammad and the seven rulers among his descendants, the last of the Meccan Sharīfs, are known collectively as Āl ʿAwn. In 1334/1916 Muḥammad's grandson al-Ḥusayn b. ʿAlī assumed the title of King, and in 1343/1924 he abdicated as the forces of ʿAbd al-ʿAzīz Āl Suʿūd drew near Mecca.

It is impossible to devise a complete list of the Hāshimid Sharīfs of Mecca. The sources for their history, though ample, contain gaps and contradictions. A general idea of the course of their succession and of the imperfections of the chronology may be got from the genealogical tables in Snouck Hurgronje and al-Sibāʿī. The picture is further complicated by the fact that many Sharīfs reigned more than once (Saʿīd b. Saʿd of Dhawū Zayd, for example, reigned five times between 1099/1688 and 1129/1717, and his father had reigned four times before him). The reign of at least one Sharīf lasted less than a day. Very often two or more Sharīfs shared the rule as partners (*shurakāʾ*).

The total number of Hāshimids who held office as Sharīf of Mecca between Djaʿfar b. Muḥammad and al-Ḥusayn b. ʿAlī appears to have been just short of a hundred. Of them less than twenty belonged to the first three branches and slightly more than eighty to the fourth, the Ḳatādids.

Not only was the rule of the Hāshimids disturbed by frequent internecine struggles, but it was often interfered with and on a few occasions briefly suppressed by Muslim sovereigns outside al-Ḥidjāz, beginning with the Fāṭimids and ʿAbbāsids and ending with the Ottomans and Āl Suʿūd. In the *khuṭba* the Sharīfs almost invariably recognized one or another of these sovereigns as their overlord. Given the tremendous internal and external pressures on the Sharīfate, its survival for so many centuries should be accounted one of the more remarkable phenomena of history and also regarded as an impressive token of the esteem enjoyed by the Prophet's family in the Islamic world.

Further details on Hāshimid rule and individual Sharīfs will be given in the article MAKKA.

HĀSHIMIDS, the royal family of the Ḥidjāz (1908-25), ʿIrāḳ (1921-58), and Jordan (1921-). The family belongs to the Dhawū ʿAwn, one of the branches of the princely line of the Hāshimids of the Ḥidjāz. Their rise to eminence in the Arab world was begun by al-Ḥusayn b. ʿAlī and his sons, ʿAlī, ʿAbd Allāh, and Fayṣal, who in 1894 were brought to Istanbul by the Ottoman government. The youngest son, Zayd, was born there.

In 1908, Ḥusayn [*q.v.*] succeeded in obtaining appointment as Sharīf and Amīr of Mecca. He soon became supreme in the Ḥidjāz and began to expand his influence in the border areas. He actively sought to limit the influence of ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Suʿūd and of Sayyid al-Idrīsī in ʿAsīr. In this phase, the Amīr acted as the loyal representative of the sultan. Ideologically conservative, Ḥusayn was never close to the Young Turks and relied on his personal connexions among the older Ottoman statesmen. In 1914, when the Unionist government attempted to apply centralizing measures in the Ḥidjāz, relations between the Amīr and the government entered a crisis which, however, was settled to the satisfaction of the Amīr.

In the early phase of World War I, Ḥusayn cautiously looked to his own interests. Still seeking predominance in Arabia, the Amīr demanded an Ottoman guarantee of the Ḥidjāz as a hereditary autonomous amīrate. At the same time, he was negotiating with the British in Egypt and with certain secret Arab nationalist societies. The agreement with the British, embodied in an exchange of letters with Sir Henry McMahon, was not entirely satisfactory, but the Ottoman government, always deaf to the Amīr's requests, became threatening in the spring of 1916. As a result, in June 1916, the Arab Revolt began. The term "Hāshimid" was used in official documents to describe the Amīr and his acts. In November, Ḥusayn issued a proclamation as *malik al-bilād al-ʿarabiyya*. The Allies, however, addressed him only as "King of the Hijaz."

At the end of the war, Fayṣal, the third son, was pre-eminent. As commander of the Northern Arab Army, he was the commander of Allied Forces in Syria and Transjordan. As representative of the Ḥidjāz at the Peace Conference, he negotiated with the Great Powers. Fayṣal proved unequal to the task of mediating the opposing aims of the Allies and of the notables of Syria and Palestine, who formed themselves into the Syrian General Congress in 1919. The Congress refused to accept the mandate system. Fayṣal, after accepting the crown of Syria from the Congress in March 1920, somewhat reluctantly acceded to armed resistance to the French and was forced to flee from Syria when the French defeated the Arab forces in July 1920 [see MAYSALŪN].

Ḥusayn, King of the Ḥidjāz, still dreamed of being king of Arabia. He was unsuccessful, however, in his efforts to persuade the British to support him against ʿAbd al-ʿAzīz Āl Suʿūd. Nevertheless, he would not seek an accommodation with the Wahhābī leader, despite the military superiority which the Nadjdī forces had demonstrated in 1919. Ḥusayn, doubtless seeking support in the contest, adopted the title of Caliph in 1924. Suʿūdī military force prevailed, and Ḥusayn fled from the Ḥidjāz in October 1924, leaving ʿAlī as king. The latter followed his father when Ibn Suʿūd completed the conquest of the Ḥidjāz in December 1925. Ḥusayn, who spent his remaining years in Cyprus, died in ʿAmmān on 4 June 1931. ʿAlī lived in Baghdād until his death on 13 February 1935.

Fayṣal [*q.v.*], with British backing, became king of ʿIrāḳ on 23 August 1921. He worked diligently to form the heterogeneous elements of his kingdom into a unity and to create viable relations with the mandatory power. His activities culminated in the Anglo-Iraqi Treaty of 1930 and the admission of ʿIrāḳ to the League of Nations on 3 October 1932. With ʿIrāḳī independence achieved, Fayṣal sought to create a union of ʿIrāk with Syria, but he failed to win the approval of the dominant political coalition in Syria.

The death of Fayṣal ushered in a period of drift.

The reign of the young king Ghāzī [*q.v.*] (8 September 1933 to 4 April 1939) was marked by tribal rising, military coup, rapid succession of cabinets, and increasing agitation against the British connexion. The course of affairs during the reign of Fayṣal II was set by ʿAbd al-Ilāh, who was regent during the minority of the king (4 April 1939-2 May 1953). The Regent's policy of furthering Pan-Arab aspirations under ʿIrāḳī leadership through cooperation with Great Britain passed its first hurdle when the government of Rashīd ʿĀlī al-Kīlānī was suppressed by the British in May 1941. In 1942-3, the ʿIrāḳī government initiated talks for the purpose of creating a federation of ʿIrāḳ, Syria, Transjordan, Palestine, and Lebanon (the "Fertile Crescent"). The result, however, was the Arab League, which under Egyptian leadership thereafter blocked ʿIrāḳī hopes. After 1945, ʿIrāḳ committed itself firmly to Great Britain and the western powers. Egypt took the lead in opposing the ʿIrāḳī foreign policy, and when ʿIrāḳ signed the Baghdad Pact with Turkey, Iran, Pakistan and Great Britain (24 February-12 October 1955), Egyptian and Syrian displeasure became intense. ʿAbd al-Ilāh and Fayṣal II were killed in the military coup of 14 July 1958.

ʿAbd Allāh, the second of Ḥusayn's sons, who had been the most eminent before 1918 and the first to embrace Pan-Arabism, moved to Transjordan in late 1920 with the avowed aim of restoring Fayṣal in Syria. He was persuaded instead to become *amīr* of Transjordan under British mandate. The Amīr was a loyal friend of Great Britain, and on 22 March 1946 a new treaty was signed which proclaimed ʿAbd Allāh to be the sovereign of an independent state. During and after World War II, ʿAbd Allāh worked to expand his kingdom into Greater Syria (Transjordan, Palestine, Syria, and Lebanon), to the embarrassment of ʿIrāḳ and of the British government. The Greater Syria plan was strongly opposed by Saudi Arabia, Egypt, Syria, and Lebanon. When the King included Arab Palestine in the Hashimite Kingdom of Jordan in 1950, Egypt directed an attempt to expel Jordan from the Arab League. (The new name had been adopted in May 1946, but was not used by any other government until 1950.) The King's outspoken British orientation and the existence of the British-commanded Arab Legion facilitated the continuous stream of extreme nationalist propaganda which the opponents of his policies directed against him. On 20 July 1951 ʿAbd Allāh was assassinated.

King Ṭalāl (20 July 1950-11 August 1952) was incapacitated throughout most of his reign, and his younger brother Nāʾif acted as regent until 5 September 1951. The state of Ṭalāl's health was such that Parliament deposed him and the throne passed to his son, Ḥusayn, who did not reach his majority until 2 May 1953. The kingdom was shaken by the problem of incorporating western Jordan at the time when the "positive neutralism" of republican Egypt was exciting the younger generation and opposition politicians throughout the Arab world. King Ḥusayn adopted a nationalist course which culminated in the removal of General John B. Glubb from the command of the Arab Legion and the termination of the Anglo-Jordanian Treaty in 1956-7. The King, however, soon broke with his Egyptian-oriented colleagues and accepted American financial assistance. With Ḥusayn now the object of Egyptian hostility, Jordan and ʿIrāḳ joined together in the Arab Federation in response to the formation of the United Arab Republic in 1958. The Federation came to an end with the extinction of the Hashimite kingdom in ʿIrāḳ.

Genealogy of the Hāshimids and the Dhawū ʿAwn

- Muḥammad b. ʿAbd al-Muʿīn b. ʿAwn (Amīr, 1828-36, 1840-52, 1856-8)
  - ʿAbd Allāh (Amīr, 1858-77)
    - ʿAlī (Amīr, 1905-8)
  - al-Ḥusayn (Amīr, 1877-80)
  - ʿAwn al-Rafīḳ (Amīr, 1882-1905)
  - ʿAlī
    - al-Ḥusayn (1852-1931, Amīr, 1908-16)
      - ʿAlī (1879-1935)
        - ʿAbd al-Ilāh (1913-58)
      - ʿAbd Allāh (1880-1951)
        - Ṭalāl
          - al-Ḥusayn (1935-)
        - Nāʾif
      - Fayṣal I (1883-1933)
        - Ghāzī (1912-39)
          - Fayṣal II (1935-58)
      - Zayd (1898-)
  - ʿAbd al-Ilāh (Amīr, 1879-80, 1881-2)

HĀSHIMIYYA, a term commonly applied in the 2nd-3rd/8th-9th centuries to members of the ʿAbbāsid house and occasionally to their followers and supporters. From early ʿAbbāsid times it was understood to denote the descendants of Hāshim b. ʿAbd Manāf [*q.v.*], the common ancestor of the Prophet, ʿAlī, and al-ʿAbbās; its use by the ʿAbbāsids was thus interpreted as expressing a claim to the Caliphate based on kinship with the Prophet in the male line. Van Vloten, followed by other scholars, showed that the name had in fact a different origin. From some passages in the chronicles, confirmed by the heresiological literature, it is clear that the term Hāshimiyya was applied in Umayyad times to a religio-political faction—those who believed that the Imāmate had passed from the ʿAlid Muḥammad b. al-Ḥanafiyya [*q.v.*] to his son Abū Hāshim [*q.v.*]. After the death of Abū Hāshim in 98/716, his followers split into several groups, the most important of which held that the Imāmate had been transferred to Muḥammad b. ʿAlī b. ʿAbd Allāh b. al-ʿAbbās and thus, through him, to the house of ʿAbbās. The ʿAbbāsids inherited the party and organization of Abū Hāshim, along with his claims; it was this party, the Hāshimiyya, which was the main instrument of the ʿAbbāsid propaganda and movement in Khurāsān, and thus of the overthrow of the Umayyad Caliphate. The doctrinal content of the Hāshimiyya preaching has been the subject of some disagreement. As the followers of an ʿAlid pretender, the group may be described as of Shīʿite origin —but at a time when this term had not yet acquired its later and more definitely sectarian significance, and when the split of the house of the Prophet into different branches, with different claims and separately organized followings, had not yet taken place. The view of Van Vloten and Wellhausen, that the ʿAbbāsid preaching was of an extremist character [see GHULĀT], has been followed by some scholars, but rejected by others, notably Moscati and Cahen, who sees in the ʿAbbāsid movement an urge, focussed around the still undifferentiated family of the Prophet, towards profounder islamization and the ending of racial domination. Of this family, the ʿAbbāsids were the most active and best organized, and were therefore able effectively to mobilize the support and goodwill which the family could command. After the ʿAbbāsid victory there was some—perhaps deliberate—ambiguity in the use of the terms Hāshimiyya and Hāshimiyyūn. Statements attributed to al-Saffāḥ and al-Manṣūr—as for example in the inaugural *khuṭba* at Kūfa and in the correspondence with the ʿAlid Muḥammad b. ʿAbd Allāh al-Nafs al-Zakiyya [*q.v.*]—already put forward a specifically ʿAbbāsid claim to the Caliphate, in reply to the ʿAlid's assertion that no one had more Hāshimī blood than he (Ṭabarī, iii, 29 ff., 209 ff.). The third ʿAbbāsid Caliph, al-Mahdī [*q.v.*], is said to have abandoned the claim to the Imāmate derived from Muḥammad b. al-Ḥanafiyya and Abū Hāshim, and to have based the claim of the dynasty on their descent from al-ʿAbbās b. ʿAbd al-Muṭṭalib as the kinsman and rightful successor of the Prophet (Nawbakhtī, 43). From this time onwards the political and messianic aspirations which found expression in Shīʿism are focused on the descendants of ʿAlī and more especially of Fāṭima rather than on the Banū Hāshim as such; it may be noted that already in the surviving *Hāshimiyyāt* of Kumayt [*q.v.*], with their sometimes almost messianic overtones (*e.g.*, ed. Horowitz, Leiden 1904, 154, 3), the poet restricts his praises to the Prophet, ʿAlī, and the ʿAlids. In ʿAbbāsid times the name Hāshimiyya was applied to the family of the Prophet in general but more specifically to the ʿAbbāsids themselves, and the sectarian connotation of the term was lost in an oblivion from which it was rescued only by modern scholarship.

AL-**HĀSHIMIYYA**, name of the administrative capital of the ʿAbbāsids before the building of Baghdād, referring not to a single place but to wherever the Caliph chose to establish his residence. The confusion as to the location of al-Hāshimiyya stems from the existence of more than one place of that name, as each in turn was occupied for a period as the official residence of the ʿAbbāsid Caliph. The founder of the dynasty, al-Saffāḥ (d. 132/754), after leaving al-Kūfa, settled at a site opposite Ḳaṣr Ibn Hubayra [*q.v.*], where he built a city and named it al-Hāshimiyya (situated midway between al-Kūfa and Baghdād; cf. Yāḳūt, iv, 946—confuses with Madīnat b. Hubayra; Iṣṭakhrī, *BGA*, i, 85; Ibn Ḥawḳal, *BGA*, ii, 166; Muḳaddasī, *BGA*, iii, 53, 115, 130*i*). Previously the Caliph had begun construction at Ḳaṣr Ibn Hubayra itself, but he abandoned this location when the

populace, in preference to al-Hāshimiyya, persisted in referring to the town by the name of its founder, the last Umayyad governor of ʿIrāḳ, Yazīd b. ʿUmar b. Hubayra. This same Yazīd originally built a city on the Euphrates near al-Kūfa, but was forced to abandon this site by order of the Umayyad Caliph Marwān II (presumably Madīnat Ibn Hubayra, which Ṭabarī and Yāḳūt confuse with Ḳaṣr Ibn Hubayra; cf. *Annales*, iii/1, 80, 183; *Muʿdjam*, i, 680, iii, 208; iv, 123, 946; Balādhurī, *Futūḥ*, 287). In 134/752, al-Saffāḥ moved once again and established his capital near al-Anbār, formerly the Persian city Fīrūz Sābūr, but he died in 136/754 before completing it (*Futūḥ*, 287; Yaʿḳūbī, ii, 429-30; *Buldān*, 237; Ibn Ḳutayba, *K. al-Maʿārif*, 189; Dīnawarī, *Akhbār*, 372-3; Ibn Rustah, *BGA*, vii, 109; Ṭabarī, iii/1, 80, 87; Masʿūdī, *Tanbīh*, 339; *K. al-ʿUyūn* in *Fragmenta Historicorum Arabicorum*, i, 211). The authorities report that al-Manṣūr, who now became Caliph, established his residence at a new location in the general vicinity of al-Kūfa which, according to al-Ṭabarī, was adjacent to Madīnat Ibn Hubayra (Yaʿḳūbī, ii, 450; al-Ṭabarī, iii/1, 271, 272, 319). This site is not to be confused with Ḳaṣr Ibn Hubayra, which, as previously noted, was situated midway between al-Kūfa and Baghdād. These accounts seem to suggest that the centre of al-Manṣūr's administration was the city near al-Kūfa which was first built and later abandoned by the governor of Marwān II. There were, therefore, no less than four ʿAbbāsid capitals: the three capitals of al-Saffāḥ at Ḳaṣr Ibn Hubayra, at the site opposite that town, and at al-Anbār, and also the capital of al-Manṣūr at Madīnat Ibn Hubayra. The proclivity of the ʿAbbāsid Caliphs for this constant moving is still unexplained; but it does suggest that they were searching for a site which could satisfy certain particular needs. Following a riot in the court of his palace, al-Manṣūr began the journey which led to the founding of Baghdād. In 146/763, the administrative agencies of the government were moved to the new location signifying the formal transfer of the capital (al-Ṭabarī, iii/1, 129-33, *sub anno* 141/758, 271, 418 ff. also gives dates 136, 7; Khaṭīb, Cairo ed., i, 67 = Paris ed., 2; *Muʿdjam*, i, 680).

ḤASHĪSH is a narcotic product of *Cannabis sativa* L., hemp. When cultivated under certain favourable climatic and soil conditions, especially in India and neighbouring areas, the plant is more active physiologically; it is there called *C. Indica* Lam. Both of these "varieties" are morphologically alike. It is a dioecious plant; the dried flowering tops of the pistillate plants contain a resin whose chief constituent is cannabinol. Cannabin also comes from these tops; today its tannate is used as a hypnotic, narcotic, and sedative used in hysteria, acute mania, nervous insomnia, and in menopausal nervous disturbances.

The Indian hemp was known as a useful plant in early historic times. In the earliest scientific literature, the ancient Mesopotamian lexical lists, there is evidence that *Cannabis* was used both in the manufacture of cloth and as a drug. In Sumerian, it is *A.ZAL.LA* and in Akkadian *azallû*. These terms are cognate to the Syriac *ʿazal* "to spin." In the list, it is equated with *gurgurru* from *garāru* "to roll, to twist." Thus, the Persian word for hemp, *gargarindj*, is related to the late Assyrian *gurgurangu*. Another equivalent in the list is *šami nissati* "herb of grief." An interesting equivalent is the Sumerian *GÁN.ZI.GÙN.NU* where *GÁN* is probably *ḫabbilu* "robber," and *ZI* is *napištu* "soul." *GUN.NU* is "to twist, to weave." The entire meaning, therefore, of the Sumerian word is "plant + narcotic + weaving," or hemp. In Babylonian medicine, it was used externally with other ingredients for the stomach, swellings, and loss of control of the lower limbs. Internally, it was used for depression of the spirits and renal calculus.

Towards the end of the eighth or first half of the seventh century B.C., the word *qunnabu* or *qunubu* is mentioned in a Sargonid text. The cognates, Arabic *kanib* and Persian *kanab*, often refer to the hemp seed and its narcotic properties. The Greek (Wellmann, Dioscorides, III, 148) κάνναβις and Latin *Cannabis* also are related.

In ancient Egypt, hemp is noted as a drug in the Berlin and Ebers papyri, internally, by smoking, and in a salve. It was called *šmšm t* (von Deines, Grapow, VI, 493).

According to Laufer, the Persian *bang* is a narcotic prepared from the hemp seed. *Bang* is cognate to the Sanskrit *bhaṅgā* and Avestan *baṅha* "narcotic", Arabic *bandj*, Portuguese *bango* and French *bangue*. *Bandj*, in the old Arabic literature, was often used for henbane as a substitute for hemp, thus creating confusion; the two were often used together in prescriptions.

In ancient China, from 1200-500 B.C., when the *Rh-Ya* was compiled, the hemp plant, *ma*, was known. In the biography of the physician Hoa-tho the narcotic properties of hemp are demonstrated in its use in surgery. Soubeiran gives the modern name as *ma-iao*, after Tatarinov.

Herodotus (fifth century B.C.) relates the use of hemp by the Scythians as a means of cleansing their bodies. The hemp is thrown on red-hot stones in an enclosed space. The odour is inhaled until intoxication; then they dance and sing. Galen discusses the use of hemp seed to excite sexual pleasure, to extinguish flatus, and for earache. Paulus Aeginata (seventh century A.D.) uses hemp as a carminative.

As a drug, hemp was used in Arabia, Persia, Mesopotamia, Egypt, and also in India. In the latter, it fell at first into the hands of the priestly caste who employed it in the Hindu religion and customs. Later, it spread among the people as *bhang*, a product of the dried leaves reduced to powder and mixed with flour and spices, and *ganja* the flowering and fertilized tops of the female plants. In India, it was originally eaten; later its smoking became more common. *Ganja* is actually a resin with a rusty green colour and a characteristic odour; this resin is *charas*. In India, men in leather jackets or leather suits pass through a field of *C. sativa* rubbing and crushing roughly against the plants in the early morning after a fall of dew. The resinous matter which sticks on is then scraped off and forms the *ganja* of commerce. Sometimes, the plant is trodden with the feet or rubbed between the hands.

It is not surprising, therefore, that the Arabs acquired a knowledge of *ḥashīsh* after their predecessors all about them had been using the plant in weaving and medicine for over a thousand years. One of the earliest physicians in Islam to use *Canna-*

bis was Djābir b. Ḥayyān (2nd/8th century). It is found as *bandj* in his *Kitāb al-Sumūm* (47b, 131b) where it is used for narcotic purposes.

Abū Manṣūr Muwaffaḳ b. ʿAlī al-Harawī (fl. 4th/10th century) of Harāt, in his *Kitāb al-Abniya ʿan ḥaḳāʾiḳ al-adwiya*, describes hemp, *shāhdānadj* (today, in Persian, it is the hemp seed) as useful for the manufacture of rope, and medicinally for headache and earache.

Under another synonym, *ḳinnab*, Maimonides (348) also calls it *shahrānadj* and *shahdānadj al-barr* ("wild hemp"). Actually, in Arabic works, these names generally designate the seed and not the resin or leaves. According to Meyerhof, it was not often that the Arabs used the resin (today called *ḥashīsh* and sometimes adulterated with leaf extracts).

ʿUmar b. Yūsuf b. Rasūl (d. 694/1294-5), in his *al-Muʿtamad fiʾl-adwiya al-mufrada* (Cairo 1951, 258, 399-400), gives *shāhdānaḳ* as *ḳinnab* for ear pain and for the head. Ibn Rasūl states that there are two varieties, a garden type and a wild one. A dose is seven *dirhams* of the oil extracted from the seed. Ibn al-Bayṭār (1271, 1349, 1845), of the 7th/13th century, has the word *shahdhanaḳ*, also from *shāh dānah* "king of the grains," in his work *Djāmiʿ al-mufradāt*.

The *Tuḥfat al-aḥbāb* (444) gives *ḳanneb* as the Moroccan synonym. In Morocco, *ḥashīsh* is given in an electuary (*maʿdjūn*) or in various confections. It is also prepared as *kif* which is smoked in small pipes especially by the lower classes. This is also true in other regions of North Africa.

How *ḥashīsh* came to become the common Arabic term for Indian hemp narcotic is uncertain. Those who take *ḥashīsh* are called *ḥashshāshūn* (Dozy, i, 289), also as *ḥashīshiyyūn* or *ḥashīshiyya*. (The word *ḥashīsh* originally meant "dry herb" coming from *ḥashsha* "to dry" as with drug plants.) This last name is also sometimes used of the Syrian Ismāʿīlīs, who are alleged to have used—or even introduced—the drug [see ḤASHĪSHIYYA].

Numerous references to *ḥashīsh* in *The Thousand and One Nights* (*ca.* 600/1200) are to be found. In these tales, hemp is used mainly as an odorant to drug people or animals. In his *Travels*, Marco Polo discusses *ḥashīsh* in its use as a stupefying agent.

Closer to modern times, the use of *ḥashīsh* in Egypt was found to be so widespread and deleterious that Bonaparte issued edicts prohibiting the drinking or smoking of hemp products. These turned out to be ineffective, since its habitual use had been going on for so many hundreds of years.

Today, the use of hemp drugs to produce euphoria and greater sexual pleasure is very widespread in India, Asia Minor, Egypt, and in other parts of Africa. In Egypt, *ḥashīsh* is today very cheap and is smoked commonly by the poorer classes. This is also generally true for the region from Tripoli to Morocco, especially in Algeria. On the west coast of Africa, the Negroes cultivate the *C. sativa* and smoke the fresh or dried leaves in pipes which contain a piece of glowing charcoal. In the Rif, the drug is used by the Sanūsī in religious ceremonies. The same is true in the Congo where the Kassai and Baluba tribes have lost some ancient fetishes and have substituted *riamba* or hemp. The drug is regarded as a means of protection against illness and as a symbol of peace.

Hemp preparations are also smoked in East Africa, Madagascar, and in South Africa. In the latter, a hemp product called *dagga* is responsible for 17% of all admissions to the Pretoria Mental Hospital. The Hottentots, Bushmen and Kaffirs smoke hemp alone or with tobacco. In Turkey a preparation from hemp called *esrar* ("secret") is smoked with tobacco. It is also chewed there.

In Syria, much hemp is grown. There are many dens in Damascus where *ḥashīsh* and opium are smoked. Addiction also occurs among the Uzbeks and Tatars.

In India, where hemp smoking is popular, it has been shown that moderate use causes no moral injury. On the other hand, excessive consumption is physically and mentally injurious and leads to moral weakness and depravity. The drug is smuggled today into Egypt from Syria and Lebanon. A United Nations Commission on Narcotic Drugs declared in 1950 that 60,000,000 square metres were under Indian hemp cultivation with an annual production in Syria and Lebanon alone of 300 tons.

(M. LEVEY)

ḤASHĪSHIYYA, a name given in mediaeval times to the followers in Syria of the Nizārī branch of the Ismāʿīlī sect. The name was carried from Syria to Europe by the Crusaders, and occurs in a variety of forms in the Western literature of the Crusades, as well as in Greek and Hebrew texts. In the form 'assassin' it eventually found its way into French and English usage, with corresponding forms in Italian, Spanish and other languages. At first the word seems to have been used in the sense of devotee

or zealot, thus corresponding to *fidāʾī* [*q.v.*]. As early as the 12th century Provençal poets compare themselves to Assassins in their self-sacrificing devotion to their ladies (F. M. Chambers, *The troubadours and the Assassins*, in *Modern Language Notes*, lxiv (1949), 245 ff.; D. Scheludko, *Über die arabischen Lehnwörter im Altprovenzalischen*, in *Zeitschrift für romanische Philologie*, xlvii (1927), 423). But soon it was the murderous tactics of the Nizārīs, rather than their selfless devotion, that fascinated European visitors to the East, and gave the word a new meaning. From being the name of a mysterious sect in Syria, assassin becomes a common noun meaning murderer. It is already used by Dante ('lo perfido assassin ...', *Inferno*, xix, 49-50), and is explained by his commentator Francesco da Buti, in the second half of the 14th century, as 'one who kills another for money'.

During the 17th and 18th centuries the name assassin—and the sect that first bore it—received a good deal of attention from European scholars, who produced a number of theories, mostly fantastic, to explain its origin and significance. The mystery was finally solved by Silvestre de Sacy in his *Mémoire sur la dynastie des Assassins et sur l'origine de leur nom*, read to the *Institut* in 1809 and published in the *Mémoires de l'Institut Royal*, iv (1818), 1-85 (= *Mémoires d'histoire et de littérature orientales*, Paris 1818, 322-403). Using Arabic manuscript sources, notably the chronicle of Abū S̲h̲āma, he examines and rejects previous explanations, and shows that the word assassin is connected with the Arabic *ḥas̲h̲īs̲h̲* [*q.v.*]. He suggests that the variant forms Assassini, Assissini, Heyssisini etc. in the Crusading sources come from alternative Arabic forms *ḥas̲h̲īs̲h̲ī* (pl. *ḥas̲h̲īs̲h̲iyya* or *has̲h̲īs̲h̲iyyīn*) and *ḥas̲h̲s̲h̲ās̲h̲* (pl. *ḥas̲h̲s̲h̲ās̲h̲īn*). In confirmation of this he was able to produce several Arabic texts in which the sectaries are called *ḥas̲h̲īs̲h̲ī*, but none in which they are called *ḥas̲h̲s̲h̲ās̲h̲*. Since then, the form *ḥashīs̲h̲ī* has been amply confirmed by new texts that have come to light—but there is still, as far as is known, no text in which the sectaries are called *ḥas̲h̲s̲h̲ās̲h̲*. It would therefore seem that this part of S. de Sacy's explanation must be abandoned, and all the European variants derived from the Arabic *ḥas̲h̲īs̲h̲ī*.

This revision raises again the question of the meaning of the term. *Ḥas̲h̲īs̲h̲* is of course the Arabic name of Indian hemp—*cannabis sativa*—and *ḥas̲h̲s̲h̲ās̲h̲* is the common word for a hashish-taker. De Sacy, while not accepting the opinion held by many later writers that the assassins were so called because they were addicts, nevertheless explains the name as due to the secret use of hashish by the leaders of the sect, to give their emissaries a foretaste of the delights of paradise that awaited them on the completion of their missions. He links this interpretation with the story told by Marco Polo, and found also in other eastern and western sources, of the secret 'gardens of paradise' into which the drugged devotees were introduced (Marco Polo, edd. A. C. Moule and P. Pelliot, London 1938, i, 40 ff.; cf. Arnold of Lübeck, *Chronicon Slavorum*, iv, 16; J. von Hammer, *Sur le paradis du Vieux de la Montagne*, in *Fundgruben des Orients*, iii (1813), 201-6—citing an Arabic romance, in which the drug used is called *Band̲j̲*). This story is early; the oldest version of it, that of Arnold of Lübeck, must date from the end of the 12th century. Their chief, he says, himself gives them daggers which are, so to speak, consecrated to this task, and then "et tunc poculo eos quodam, quo in extasim vel amentiam rapiantur, inebriat, et eis magicis suis quedam sompnia in fantastica, gaudiis et deliciis, immo nugis plena, ostendit, et hec eternaliter pro tali opere eos habere contendit" (*Monumenta Germaniae historica*, xxi, Hanover 1869, 179). This story, which may well be the earliest account of hashish dreams, is repeated with variants by later writers. It is, however, almost certainly a popular tale, perhaps even a result rather than a cause of the name *ḥas̲h̲īs̲h̲iyya*. The use and effects of hashish were known at the time, and were no secret; the use of the drug by the sectaries, with or without secret gardens, is attested neither by Ismāʿīlī nor by serious Sunnī authors. Even the name *ḥas̲h̲īs̲h̲iyya* is local to Syria (cf. Houtsma, *Recueil*, i, 195; Ibn Muyassar, *Annales*, 68) and probably abusive. It was never used by contemporaries of the Persian or any other non-Syrian Ismāʿīlīs; even in Syria it was not used by the Ismāʿīlīs themselves (except in a polemic tract issued by the Fāṭimid Caliph al-Āmir against his Nizārī opponents —A. A. A. Fyzee, *al-Hidāyatu 'l-āmiriya*, London-Bombay 1938, 27), and only occasionally even by non-Ismāʿīlī writers. Thus Maḳrīzī, in a fairly lengthy discussion of the origins and use of hashish, mentions a Persian *mulḥid* (probably an Ismāʿīlī) who came to Cairo at about the end of the 8th century A.H. and prepared and sold his own mixture of hashish—but does not call the Ismāʿīlīs *ḥas̲h̲īs̲h̲iyya*, or mention any special connexion between the sect and the drug (*K̲h̲iṭaṭ*, Būlāḳ, ii, 126-9). *Ḥas̲h̲īs̲h̲ī* would thus appear to have been a local Syrian epithet for the Ismāʿīlīs, probably a term of contempt —a criticism of their behaviour rather than a description of their practices.

Lewis, *The sources for the history of the Syrian assassins*, in *Speculum*, xxvii (1952), 475-89; idem, *The Ismāʿīlites and the Assassins*, in *A history of the Crusades*, editor-in-chief K. M. Setton, i, *The first hundred years*, ed. M. W. Baldwin, Philadelphia 1955, 99-132; M. G. S. Hodgson, *The Order of Assassins*, The Hague 1955, espec. 133-7. For the history of the sect see ISMĀʿĪLIYYA and NIZĀRĪS. (B. LEWIS)

ḤĀS̲H̲IYA, pl. *ḥawās̲h̲ī*, meaning (1) the *margin* (of pages in [*fī*, *ʿalā*, *bi-*] which notes could be written), then (2) the *marginal note* itself (or "note" in general), and, finally, (3) *gloss*, used in the sing., undoubtedly as a profession of modesty, in titles of independent works, at times of some length, dealing with comments on subjects treated by earlier authors. This last usage is comparatively late; none of the ca. 150 titles listed in Brockelmann, S III, 892-4, antedates the 8th/14th century. Although it was used as a book title all over the Muslim world, *ḥās̲h̲iya* enjoyed particular favour among scholars of the eastern region.

Ḥawās̲h̲ī, in the second meaning, appears loosely used in titles of books no later than the 5th/11th century, the presumable date of the *Ḥawās̲h̲ī* of a certain Ibn Masrūr on Aristotle's *De sensu* (Ibn al-Maṭrān, *Bustān al-aṭibbāʾ*); in the case of *Ḥawās̲h̲ī mawḍūʿāt al-ʿulūm* (Brockelmann, S I, 820), the attribution of both title and work to Ibn Sīnā is dubious. The use of *ḥās̲h̲iya* in the sense of marginal note must, however, be much earlier. The practice itself of using the margins of pages for annotations was, of course, not an invention of Islamic times, but, with the general increase in book production, it achieved there the status of a scholarly custom.

Since, in the manuscript age, nothing not firmly anchored in the text could be expected to survive the next copyist, the only possible position for a permanent annotation was within the text itself, and

the practice of inserting notes immediately after passages to be annotated was not infrequently followed; such notes were introduced by a number of different terms, among them, if rarely, *ḥāshiya*. The margins were used to note down textual corrections, variant readings, lexicographical explanations (sometimes in another language), additional information and references, criticisms of the author's views, and the like, with certain marks often, but by no means regularly, used to indicate the passage of the text to which a given *ḥashiya* referred. It also was not unusual to fill the margins with material that had no direct relation to any particular passage of the text. This could include extensive remarks, quotations, and even occasionally entire commentaries or other complete works. The custom of using margins for other works carried over into printing and was expanded there.

In the 7th/13th century, the Shāfiʿite Ibn Djamāʿa expressed his opinion on marginal notes in these terms (*Tadhkirat al-sāmiʿ*, Ḥaydarābād 1353, 186-91): "There is nothing wrong with writing important notes (*ḥawāshī, fawāʾid, tanbihāt*) in the margins of a book one owns .... Only important notes that pertain to the contents of the book in question should be given, such as notes that call attention to difficult or doubtful passages, allusions, mistakes, and the like. Problems and details that are alien to the contents should not be allowed to deface the book, nor should there be so many marginal notes that it becomes disfigured or the student is at a loss to find out where they belong."

ḤĀSHIYA, the entourage of a ruler [see ḲAṢR].

ḤASHMET (?—1182/1768), Ottoman poet, born in Istanbul. His father was the *ḳāḍīʿasker* ʿAbbās Efendi. Ḥashmet became a *müderris*, but, because of his satires, was exiled in 1175/1761, first to Bursa and later to Rhodes, where he died. In his youth he had been under the protection of the Grand Vizier Ḳodja Rāghib Pasha, himself a poet, and dedicated some works to him. His scattered poems were collected while he was in exile in Bursa by one of his admirers, Saʿīd Imām-zāde, who also wrote a short biography of Ḥashmet to figure at the beginning of his *dīwān*; here one finds the information that Ḥashmet was a peerless swordsman and archer. The romantic epigrams which he exchanged with the contemporary poetess Fiṭnat [*q.v.*] are famous.

Works: (I) *Dīwān*. In this work (Būlāḳ 1841), besides two long poems in Arabic recounting the "beautiful names" of God and Muḥammad, these poems are for the most part *naẓīre*s to the works of well-known poets, but are, nonetheless, very musical and contain some original images. The *terkīb-i bend* expressing his grief at the death of his father is notable for its simple, sincere tone. (II) *Intisāb al-mulūk* or *Khʷābnāme*, a prose work, printed as a supplement to the *Dīwān*, in which Ḥashmet recounts a dream which he had on the night of the accession of Muṣṭafā III. All the rulers of the world come to the new sultan and ask for a job, each according to the speciality of his own country: the Russian to be chief furrier, the Englishman to be overseer of the powder-magazine, the Dutchman to be head gardener, the Frenchman to have charge of the wardrobe, and so on. (III) *Sūrnāme* or *Welādetnāme*, a prose work describing in a lively and colourful way the celebrations on the occasion of the birth of a daughter to Muṣṭafā III (simplified version in Latin transcription by Reşad Ekrem Koçu, Istanbul n.d.). (IV) *Sanad al-shuʿarāʾ*, a *risāla* written against those who condemn poetry and poets from the religious point of view. In this work, which consists of four sections and a conclusion, Ḥashmet claims that poetry has a divine origin, that there are passages in metre in both the Ḳurʾān and *ḥadīth*, and that Muḥammad, his Companions and Muslim rulers have all attributed great value to poetry and poets. (V) *Shehādetnāme*, a short *risāla* explaining the material and spiritual effects of the *shahāda*. (VI) Although Meḥmed Saʿīd Imām-zāde mentions that Ḥashmet was writing a lexicographical work entitled *Durratayn* and containing Arabic compound words, no such work has been found.

ḤASHR [see ḲIYĀMA].

ḤASHW [see NAḤW].

ḤASHWIYYA (Ḥashawiyya, Ḥushwiyya, or Ahl al-Ḥashw), a contemptuous term derived from *ḥashw* ("farce" and hence "prolix and useless discourse") and with the general meaning of "scholars" of little worth, particularly traditionists; this term is sometimes associated with *ghuthāʾ* and *ghuthar*, and even with *raʿāʿ*, "the scum of the populace" (Ibn Ḳutayba, *Mukhtalif*, 96; tr. Lecomte, 90), and used by some Sunnis of extremist traditionists or those whose researches are of very little value. Fairly close to Nābita [*q.v.*] and to Mudjbira [*q.v.*], it is used, in a narrower sense, of the *Aṣḥāb al-Ḥadīth* [*q.v.*] who, uncritically and even prompted by prejudice, recognize as genuine and interpret literally the crudely anthropomorphic traditions. A few names of individuals who made themselves notorious in this way and who belonged neither to the Karrāmiyya nor to the anthropomorphist Shīʿīs are mentioned by al-Shahrastānī (ed. Cureton, 77); the Sālimiyya (see I. Goldziher, in *ZDMG*, lxi, 79) also came into this category. Al-Nawbakhtī (*Firaḳ*, 7) uses the name Ḥashwiyya for well-known traditionists such as Sufyān al-Thawrī or Mālik b. Anas, whom he classes among the Murdjiʾa [*q.v.*].

The Muʿtazilīs applied the name of Ḥashwiyya to the majority of the *Aṣḥāb al-Ḥadīth*, because, although without the unquestioning acceptance of the Ḥashwiyya proper and often with the reservation "without comment" (*bilā kayfa*), they yet admitted some anthropomorphic expressions.

Bibliography: G. van Vloten, in *Actes du XI^e Cong. int. des Orient.*, 99 ff.; M. Th. Houtsma, in *ZA*, xxvi, 196 ff. (with bibliographical references); A. S. Halkin, in *JAOS*, liv (1934), 1 ff.; A. N. Nader, *Muʿtazila*, 99; Khafādjī, *Shifāʾ*, s.v. (ED.)

ḤĀSIB [see ILM AL-ḤISĀB].

ḤĀSIK (HASEK), a town in the Mahra country [*q.v.*], east of Mirbāṭ [*q.v.*] in 17° 21′ N. Lat. and 55° 23′ E. Long., at the foot of the high mountain of Nūs (Lūs), the ʾΑσίχων of the *Periplus Maris Erythraei*. Before the town lies the "bay of herbs" (Djūn al-Ḥashīsh), the bay of Ḥāsik (Raʾs Ḥāsik), also called Kuria Muria Bay after the two islands lying opposite (Kharyān and Maryān in Idrīsī). Idrīsī describes Ḥāsik as a small fortified town four days

east of Mirbāṭ, with many inhabitants, who are fishermen. Ibn Baṭṭūṭa landed here on his way through to ʿUmān and found the houses built of fishbones with roofs of camelskins. In Ibn Baṭṭūṭa's and Idrīsī's time there was great intercourse between Ḥāsik and the island of Soḳoṭrā [*q.v.*] to the south. The frankincense which was produced in the Mahra country was exported through Ḥāsik. The town is now quite ruined. It is called Sūḳ Ḥāsik and is inhabited by the Ḳara and other tribes of the frankincense country.

Opposite Ḥāsik, according to Miles about 20 miles from the coast, lie the "seven isles of Zenobia" (the ἑπτὰ νῆσοι, αἱ Ζηνοβίου λεγόμεναι of the *Periplus*), the Kharyān and Maryān group of Idrīsī, called the Djazāʾir Ibn Khalfān, after a prominent Mahrī family, by the Arabs of the south coast. The most westerly of the islands and the one nearest the coast bears the name Ḥāsikī or Ḥāsikiyya, *i.e.*, the island belonging to Ḥāsik (the Portuguese, who visited this island in 1588, called it Hezquiye). Like the most easterly of the islands, Ḳibliyya, it is covered by a large number of peaked hills mainly composed of red and streaked granite and inhabited by pelicans and diving birds. Hulton, who visited the islands in 1836, found only one of them, Hallaniyya, inhabited. He found that the language resembled that of Soḳoṭrā. The huts in which the few inhabitants lived consisted of loose stones above which were laid fishbones covered with seaweed. They belonged to the Bayt (Banū) Djanaba (Djenabi = Ζηνοβιος of the *Periplus*), the same tribe as lived on the coast between Ḥāsik and Raʾs al-Ḥadd. Their ancestors are said to have migrated hither several centuries ago, after being driven from Ḥāsik and Mirbāṭ as a result of feuds with their neighbours. Ptolemy and Pliny call the people of these islands ʾΑσχῖται or Ascitae, a name doubtless connected with Ḥāsik, although the ancients connected this name with ἀσκός "wineskin".

ḤĀSSA [see ḤISS].

ḤASSĀN, BĀ (Banū), a branch (*baṭn*) of the South Arabian tribe of Kinda [*q.v.*], living in Ḥaḍramawt and descended from Ḥassān b. Muʿāwiya b. Ḥārith b. Muʿāwiya b. Thawr b. Mur(at)tiʿ b. Kinda. One member of it was ʿAbd al-Raḥmān b. ʿAlī Ibn/Bā Ḥassan al-Ḥaḍramī (750-818/1349-1415), whose chronicle (*Taʾrīkh Ibn Ḥassān*, also called *T. al-Bahāʾ*) was used by ʿAbd Allāh b. Aḥmad Abū/Bā Makhrama (833-903/1430-98) and his son al-Ṭayyib (870-947/1465-1540) for the biographical dictionary *Ḳilādat al-naḥr*. A copy of that chronicle is now in the Bodleian Library. Other works by him are cited by al-Saḳḳāf (see *Bibl.*) but seem to be lost.

Another *baṭn* Ḥassān is said by al-Ḳalḳashandī to belong to the ʿUdhra b. Zayd al-Lāt branch of Kalb [*q.v.*]. Other Ḥassāns are enumerated by Hamdānī in his *Iklīl*, ii (see *Bibl.*), where the genealogy of Āl Ḥassān Dhi ʾl-Shaʿbayn is given (Berlin MS, fols. 158b-159a).

ḤASSĀN B. MĀLIK, grandson of the Kalbī chief Baḥdal b. Unayf [*q.v.*] and cousin of the caliph Yazīd I, his father being the brother of Maysūn, the famous wife of Muʿāwiya (it has been thought, erroneously, that he was the uncle of Yazīd I, because he is often referred to simply as Ibn Baḥdal). This relationship, the nobility of his clan (the Banū Ḥāritha b. Djanāb) and the power of the Kalb tribe earned for him under Muʿāwiya and Yazīd the governorships of Palestine and of Jordan. Before this, he had fought at Ṣiffīn in the ranks of the Syrian army, in command of the Ḳuḍāʿa of Damascus (Naṣr b. Muzāḥim, *Waḳʿat Ṣiffīn*, ed. Hārūn, 233). It was he who accompanied the young Yazīd when he arrived at Damascus to assume the caliphate, and he continued to exert a strong influence over his royal cousin, who had become also his brother-in-law. On the death of Muʿāwiya II, the son and successor of Yazīd I, there arose a crisis (64/684) in which Ibn Baḥdal played an important part by supporting the claims to power of the two young half-brothers of Muʿāwiya II, Khālid and ʿAbd Allāh. Having entrusted Palestine to a chief of the Djudhām, Rawḥ b. Zinbāʿ, Ibn Baḥdal betook himself to the *djund* of Jordan and then to Djābiya in order to follow events from closer at hand. The situation at this time was favourable to the anti-caliph ʿAbd Allāh b. al-Zubayr, for al-Ḍaḥḥāk b. Ḳays al-Fihrī [*q.v.*], the governors of Ḥimṣ and Ḳinnasrīn, and the rival of Ibn Baḥdal who had driven Rawḥ out of Palestine had either secretly or openly taken his side. But the cunning ʿUbayd Allāh b. Ziyād [*q.v.*] arrived from ʿIrāḳ and changed the course of events through his intrigues (at least according to the account of Ibn Saʿd, which seems to be the most objective). In fact ʿUbayd Allāh persuaded Marwān b. al-Ḥakam [*q.v.*], already on his way to Mecca to offer homage there to Ibn al-Zubayr, to retrace his steps, and to go to Palmyra, where he next set himself up as a candidate (on the later manoeuvres of ʿUbayd Allāh at Damascus, see AL-ḌAḤḤĀK B. ḲAYS AL-FIHRĪ where, at p. 89b, l. 50, for Ḳuraysh read Ḳays). Three parties were formed: the supporters of Ibn Baḥdal, those of Ibn al-Zubayr, and the neutrals, who did not mind whether the caliphate remained with the Umayyads or fell into the hands of anyone else; Marwān, it seems, had little confidence in his success. While al-Ḍaḥḥāk was still at Damascus, Ḥassān attempted to bring the situation to a head: he caused to be read out in the Great Mosque a message in which he extolled the claims of the Umayyads and accused Ibn al-Zubayr of unworthy behaviour and hypocrisy. This resulted in an upheaval, which is known as the "Day of Djayrūn". Finally, it was decided to invite the Umayyads and the Syrian leaders to a conference at Djābiya in order to reach an agreement (ʿUbayd Allāh, not being one of the *ashrāf* of Syria, was excluded from it). Owing to his prestige Ibn Baḥdal presided, but he did not succeed in getting his candidate appointed. After 40 days of discussion Marwān

b. al-Ḥakam was proclaimed caliph. Before Ibn Baḥdal would recognize him, he had stipulated that the young Khālid should succeed after Marwān and that his tribe should receive important privileges and his own family retain certain prerogatives which it had enjoyed under the Sufyānids. From then on his influence declined steadily. Before his death Marwān obliged him to recognize ʿAbd al-Malik as his successor. In the revolt of ʿAmr al-Ashdaḳ [*q.v.*], Ḥassān supported ʿAbd al-Malik and found himself among the Umayyads witnessing the assassination of the rebel. After this event no more is heard of this Kalbī chief who had, at one juncture, been the arbiter of the destinies of the Umayyad dynasty. The probable date of his death is given as 69/688-9 (al-Dhahabī, *Taʾrīkh*, MS Bodl., fol. 58 v.; Ibn Kathīr, *Bidāya*, viii, 313).

(H. Lammens-[L. Veccia Vaglieri])

ḤASSĀN B. AL-NUʿMĀN AL-GHASSĀNĪ, an Umayyad general who played a decisive part in the consolidation of the conquest of Ifrīḳiya by storming Carthage and finally defeating al-Kāhina [*q.v.*]. It is difficult, however, to trace the course of his actions on account of the uncertainty of the chronology and a host of discrepancies. The dates given for his arrival in Ifrīḳiya are Muḥarram 68/ July-August 687, 69/688-9, 73/692-3, 74/693-4, 78/ 697-8; and for his fall 76/695-6, 77/696-7, 78/697-8, 79/698-9, 82/701-2, 84/703-4 and 89/707-8. The chronology given by the earliest chroniclers, *i.e.* by Ibn ʿAbd al-Ḥakam and the pseudo-Ibn Ḳutayba, and confirmed by Ibn ʿAsākir, is the most probable. It agrees with the logical sequence of events and makes it possible to avoid inconsistencies.

Zuhayr b. Ḳays al-Balawī [*q.v.*] met his death in 69/688-9 when fighting against the Rūm, after evacuating Ifrīḳiya. ʿAbd al-Malik b. Marwān, occupied by the struggle against the anti-caliph ʿAbd Allāh b. al-Zubayr, was unable to find a successor for him immediately. But in 73/692-3 Ibn al-Zubayr was defeated and put to death, and the war with the Byzantines was resumed. It was, therefore, probably at this time that Ḥassān was sent with a strong army to reconquer Ifrīḳiya. After taking Carthage and laying it waste—the inhabitants set sail for Sicily—he pursued the Rūm and their Berber allies into the region of Bizerta. Defeating them once again, he drove back the former to Béja (= Vaga), where they consolidated themselves, and the latter to Bône. After halting at Ḳayrawān, he marched against the Kāhina. He by-passed the fortress of Madjdjāna without attacking it, and went on, to meet a complete disaster on the borders of the Meskiana. Hotly pursued as far as Gabès, he was forced to evacuate Ifrīḳiya and went to await the caliph's orders at the Ḳuṣūr Ḥassān (so named in memory of himself) four days' journey to the east of Tripoli.

The fall of Carthage had caused deep concern in Constantinople. The emperor Leontius, who overthrew Justinian II in 695, sent the patrician John with a powerful fleet to recapture the town, certainly after the evacuation of Ifrīḳiya by Ḥassān. The latter stayed for three years in Tripolitania. Then, with a new army, he resumed the offensive, probably in 78/697-8, with the help of certain Berber groups who were dissatisfied with the policy of the Kāhina. The latter was defeated and perished in the battle. Next Carthage, abandoned by its defenders, was once again captured and laid waste. On being dismissed by ʿAbd al-ʿAzīz b. Marwān, the caliph's brother and governor of Egypt, who replaced him by his protégé Mūsā b. Nuṣayr (Ṣafar 79/April-May 698), Ḥassān returned to the East. When passing through Egypt he was stripped of all the booty taken in Ifrīḳiya. He died fighting against the Byzantines in 80/699-700.

Ḥassān's campaigns mark the final consolidation of the Arab conquest. To him is owed the construction of the arsenal at Tunis, *Dār al-sināʿa* [*q.v.*], on the orders of the caliph, who was anxious to create a powerful fleet, and the rebuilding of the great mosque of Ḳayrawān in more durable materials. Following the example of the attempts then being made in the East, he tried to provide Ifrīḳiya too with an efficient administration and, in order to guarantee the cooperation and loyalty of the Berbers, he gave them a share in the *fayʾ*, particularly in the distribution of land.

(M. Talbi)

ḤASSĀN B. THĀBIT B. AL-MUNDHIR B. ḤARĀM, of the Khazradj tribe of Yathrib (later Medīna), traditionally known as the "poet laureate" of the Prophet, is more correctly the most prominent of several poets who were associated with the rise of Islam, and one who already had an established reputation in the Djāhiliyya. When

Muḥammad arrived at Medina, Ḥassān was of mature age (though probably not yet 60—which is the age given by most authorities including Ibn Isḥāḳ who relies directly on Ḥassān's grandson Saʿīd—or even 52 or 53 years old as other authorities suggest), and had written panegyrics on the Ghassānid and Lakhmid princes, visited them in their courts and received gifts from them. Equally uncertain is the date of his death, which is variously given as 40/659 or before that year, 50/669 or 54/673. As the last we hear of Ḥassān is some time before ʿAlī's assassination, a date around 40/659 is the most likely.

It is not certain exactly when Ḥassān embraced Islam, although it is stated that his brother Aws was one of the earliest converts and was assigned the Immigrant ʿUthmān b. ʿAffān as his "brother" and guest in Medina, a fact which probably partly accounts for the Umayyad sympathies with which Ḥassān is credited, and which are represented by (or—in the case of spurious poems—reflected in) the comparatively large number of elegies on ʿUthmān (8 out of 32) ascribed to Ḥassān in the *Dīwān* and elsewhere. However, Ḥassān himself had an *uṭum* of his own, was rich and kept such company as Ḳays b. al-Khaṭīm [*q.v.*] the Awsī poet and Sallām b. Mishkam, chief of the Banu 'l-Naḍīr.

In the year 5/627 Ḥassān figures in the story of the slander against ʿĀʾisha, when he is said to have been punished for taking part in the slander, to have been attacked and wounded by Ṣafwān b. al-Muʿaṭṭil [*q.v.*], and then reconciled by the prophet and given Sīrīn, an Egyptian slave girl, and other gifts. However, the story (and Ḥassān's supposed prominent part, which is assigned by certain authorities, including Ibn Hishām, to ʿAbd Allāh b. Ubayy [*q.v.*] rather than to Ḥassān) received excessive attention from later generations, and should be viewed both as a whole and in detail against the background of friction between the newcomers and the Medinese themselves, both in Medina and in the course of the campaign against the Banu 'l-Muṣṭaliḳ when the story originated. For an examination of the controversial details see W. ʿArafat, *A controversial incident in the life of Ḥassān b. Thābit*, in *BSOAS*, xvii (1955).

It was then, or soon after the siege of Medina, that the Muslims, and particularly the Medinese among them, realized the need for the systematic support of poets, and Ḥassān's contribution was especially welcome. For better effect, advice and the necessary data were given by Abū Bakr. Once he joined the Muslim community, Ḥassān employed his talents on behalf of Islam, though he took no part in fighting, probably because of advanced age, rather than cowardice as is most frequently suggested. In any case, even before Islam, Ḥassān's role as a poet predominates.

In 9/630, the "Year of Delegations", Ḥassān is said to have had occasion to recite poetry on behalf of the Prophet in the presence of the important Tamīm delegation. Prominence is usually given to this visit, the purpose of which, however, is not certain; and the suggestion that the delegates were converted on hearing Ḥassān's poem is doubtful. The fact that three different sets of poems are found, each of which is claimed to be the one which served the occasion, is indicative both of the doubtful character of such poetry and of the high esteem in which Ḥassān was held.

Little is heard of Ḥassān himself afterwards, except when ʿUmar sought his expert opinion on a poem by al-Ḥuṭayʾa slandering al-Zibriḳān b. Badr; or when he is occasionally heard reciting his own poetry. On one occasion, some time later in his life, he came reluctantly out of retirement to support his less able son ʿAbd al-Raḥmān in a battle of slander against al-Nadjāshī [*q.v.*]. Otherwise he was growing old, happy and waxing sentimental when reminiscing on his visits to the Ghassānids, but sad and reprobatory when contrasting the dignified carousing he had known at the princely court of the Ghassānids with the unrestrained enjoyment of newly found luxury by his own son and his boon-companions.

In the revolt against ʿUthmān, Ḥassān, Kaʿb b. Mālik, al-Nuʿmān b. Bashīr [*qq.v.*] and others were vociferous in support of the besieged caliph and (according to Ṭabarī, i, 2971) even tried to dissuade the rebels from their intention. After ʿUthmān's death they went to Muʿāwiya, who gave Ḥassān and Kaʿb a present of money each and later rewarded al-Nuʿmān b. Bashīr with a governorship.

Ḥassān had one daughter, who on one occasion displayed a talent for poetry, and by Sīrīn, according to most sources, one son, ʿAbd al-Raḥmān, who was as provocative as his father but shared neither Ḥassān's ability as a poet nor his longevity.

Ḥassān's *Dīwān* in the recension of Ibn Ḥabīb [*q.v.*] contains 228 poems on different subjects, the *Sīra* 29 more, while other poems and single lines are found elsewhere ascribed to him. Nevertheless at an early period doubts were cast on the authenticity of this poetry generally or on specific poems or lines; recently a detailed study of the poetry ascribed to Ḥassān was made by the author of this article with a view to establishing, on internal as well as external evidence, the authenticity or otherwise of each poem. This study indicated that some 60-70% of this poetry may be spurious. The poetry in the *Dīwān* presents such a variety of spirit and style, is so full of contradictions and anomalies and contains such a high proportion of inferior verse, that the poems could not have been the work of a single author nor all of them by a poet of high repute.

This spurious poetry should be viewed in the light of the eventful century following the rise of Islam in which the events involved the same tribes who had taken part in the early struggle. Earlier verse was forgotten or overwhelmed, replaced or supplemented by new poetry. Verse naturally accompanied tribal, sectarian or factional disputes; but was written also to clear the reputation of persons whose record in the early stages was not complimentary, or else to supplement and embellish the accounts of the *maghāzī*. Some of these poems were the work of narrators or forgers, while others were ascribed to Ḥassān deliberately for prestige or else accidentally. Evidence sometimes indicates that a poem may be only partly authentic. More than 30 poems, parts of poems, or single lines are also ascribed by Ibn Hishām and other authorities to Ḥassān's son or to other persons, including some of Ḥassān's contemporaries. The long poems of boasting can be seen on internal evidence to be by descendants of the Anṣār and reflect the inferior status to which they were reduced after the Battle of al-Ḥarra in 63/682.

Although only briefly, the spurious character of such poetry was noted by early critics, and Ibn Isḥāḳ was the subject of severe censure by Ibn Sallām and Ibn al-Nadīm, for including in his *Sīra* spurious poetry ascribed to Ḥassān and others, although Ibn Isḥāḳ himself pleaded good faith and lack of the appropriate critical experience. His editor Ibn Hishām omitted or rejected on expert authority a large number of such poems, branding some outright as forgeries, and others as doubtful.

In the case of Ḥassān, Ibn Hishām rejected 15 out of 78 poems which appear in the *Sīra*, of which total 29 are not in Ibn Ḥabīb's recension of the *Dīwān*, while 10 out of the 15 so rejected are in the *Dīwān*. Ibn Sallām writes in his *Ṭabaḳāt* (179) briefly but significantly, "more poetry was fathered on Ḥassān than on any one else. When the Ḳuraysh quarrelled among themselves and slandered each other, they ascribed to him a great deal of poetry which is impossible to sift." For a more comprehensive view of the sources of this poetry and of the opinions of early critics, see W. ʿArafat, *Early critics of the authenticity of the poetry of the Sīra*, in *BSOAS*, xxi (1958). The main reason for ascribing to Ḥassān a larger proportion of such poetry is Ḥassān's higher reputation, already recognized at the advent of Islam.

(W. ʿArafat)

HATAY, the name given by the Turks to the Sanjak of Alexandretta, at the time of the crisis of 1936-9. For the history of the area see ANṬĀKIYA and ISKANDARŪN.

HĀTIF, invisible being whose cry rends the night, transmitting a message; a prophetic voice which announces in an oracular style a future happening. Already in the Bible this voice is confused with that of the prophet (Ezekiel, XXI, 2, 7; Amos, VII, 16). On the eve of Muḥammad's call, mysterious voices were proclaiming his coming. These were the voices of "one who was calling" (*munādī*) or "who was shouting" (*ṣāʾiḥ*: *Aghānī*[1], xv, 76; in the legend of Madjnūn, *hātif* is the equivalent of *munādī* and of *ṣāʾiḥ*: *ibid.*, i, 169; ii, 4; i, 174; a third equivalent, *tālī*, is found in al-Ṭabarī, iii[4], 2337). It is also the voice coming from an idol (Ibn Saʿd, i/1, 110) or from the entrails of a calf sacrificed before an idol (al-Ṭabarī, i[3], 1144 f.; Ibn Hishām, 134; Ibn Saʿd, i/1, 105), or the voice of a mysterious horseman (*ibid.*). It is a *hātif* which brought the poet Abū Dhuʾayb news of the approaching death of the Prophet (Ibn al-Athīr, *Usd al-ghāba*, Cairo 1286/1869, v, 188).

According to al-Djāḥiẓ, this voice usually announces the death of a great person; "nomads and semi-nomads," he says, "scarcely conceal their belief in the *hātif*; on the contrary, they are amazed that anybody can dispute its value" (*K. al-Ḥayawān*, Cairo 1323-5/1905-7, vi, 62 and cf. 64).

A passage of al-Masʿūdī, *Murūdj*, iii, 323, admirably describes the psychological genesis of this phenomenon: "The particular characteristic of the *hātif*," he says, "is to produce an audible voice without possessing a visible body. There are varying opinions on the subject of the *hawātif* and the *djinns*; some say that this phenomenon, mentioned by the Arabs and used by them to announce news, finds its origin in the solitude of the deserts, the isolation of valleys, the journey across vast spaces infested by *ghūls* [*q.v.*] and the swamps filled with wild animals. For, when man ventures into these places alone, he thinks; and when he thinks he becomes fearful and cowardly; in this state he is inclined to false ideas and harmful illusions, created by the black bile, which make him imagine events and people, and to believe the impossible, in a similar way to someone who is the victim of an obsession ... The basis of this phenomenon lies in a wrong way of thinking in which man creates in his imagination what he reports about the activity of the *hawātif* and the *djinns*."

This phenomenological explanation does not remove all its mystery from the *hātif*, and the question put by al-Djāḥiẓ to the man who claimed to know everything, was much repeated: "Let me know [about the origin] of the verses [pronounced by] the *hātif* and about the news which is spread during the night" (*K. al-Tarbīʿ wa 'l-tadwīr*, ed. Pellat, Paris 1955, 42).

In modern Arabic the word *hātif* has been adopted as the equivalent of telephone.

Bibliography: In addition to the authors mentioned above, see I. Goldziher, *Abhandlungen zur ar. Philologie*, Leiden 1896-99, i, 212. In Cairo and Damascus there exist two written works, still in manuscript, which discuss the subject: Abū Bakr b. ʿUbayd b. Abi 'l-Dunyā (d. 281/894), *K. al-Hawātif* (see Brockelmann, S I, 247); Abū Bakr b. Djaʿfar al-Kharāʾiṭī (d. 327/938), *Hawātif al-djinān wa-ʿadjāʾib mā yuḥkā ʿan al-kuhhān* (Brockelmann, S I, 350). (T. Fahd)

HĀTIF Aḥmad, *sayyid* of the line of Ḥusayn; his family, natives of Urdubād (Ādharbaydjān), in the time of the Ṣafawids settled in Iṣfahān, where he was born. He was the most notable poet under the dynasties of the Afsharīs and the Zand. He divided his time between his native town, Ḳumm and Kāshān. He was a man of erudition and a physician, and had a knowledge of Arabic, in which language he wrote some poems; in Persian he was the author of an important collection consisting of *ḳaṣīdas*, *ghazals*, *rubāʿīs* and other short works, in which the influence of Saʿdī and Khādjū can be discerned. He owes his fame mainly to a *tardjīband* (strophic poem) as remarkable for its finesse and profundity of thought as for its style, the subject being the uniqueness of God; it is one of the masterpieces of mystical poetry. He died in Ḳumm in 1198/1783.

Bibliography: *Dīwān* (ed. Waḥīd Dastgardī, Tehrān). Translations of the *tardjīband*: by Schlechta-Wssehrd (in *ZDMG*, v, 80 ff.), by E. G. Browne (iv, 284 ff.). Translations of poems: Bland (*Century of Persian ghazals*, 38 ff.); Jouannin (in *JA*, xi (1827), 244 ff.); Defrémery (*ibid.*, vii (1856), 130 ff.). (H. Massé)

HĀTIFĪ, ʿAbd Allāh, Persian poet, son of Djāmī's sister, born in Khardjird in the district of Djām, a dependency of Herāt, died in 927/1521. He wrote a *Tīmūr-nāma*, an epic known also as *Ẓafar-nāma* (lith. Lucknow 1869), on the subject of Tīmūr's conquests. He had planned to write a *Khamsa*, a collection of five long poems, but this work he was unable to complete; of it we possess a *Shīrīn and Farhād*, a charming *Laylī and Madjnūn* (ed. W. Jones, Calcutta 1788) and a *Haft manẓar* on the model of the *Haft paykar* of Niẓāmī. He was influenced by this poet (though not by his artifices and obscure allusions) and also by Amīr Khusraw. He eschewed the eulogies and panegyrics traditionally placed at the head of long poems; but at the beginning of *Laylī and Madjnūn* he proclaimed his Shīʿism and his devotion to the poet Ḳāsim al-Anwār. At the beginning of the *Tīmūr-nāma* he makes an allusion to his lyric poems, the complete collection of which has not survived. According to Sām Mīrzā (*Tuḥfa-i Sāmī*), he was visited by Shāh Ismāʿīl when returning from the conquest of Khurāsān (917/1511) and was invited to compose a poem on that sovereign's achievements, but he wrote only about a thousand lines of verse of this work.

Bibliography: On the *Ẓafar-nāma*: C. A. Storey, ii/2, no. 358; on the *Ismāʿīl-nāma*, *ibid.*, no. 373. Luṭf ʿAlī Beg, *Ātash-kada*, 65; Riḍā-Ḳulī-Khān, *Madjmaʿ al-fuṣaḥā*, ii, 54; Khwāndamīr, *Ḥabīb al-siyar*, iii, 3, 346; Bābur, *Mémoires*, tr. ḤAṬĪM [see kaʿba].

ḤĀTIM b. **HARTHAMA**, the son of Harthama b. Aʿyan [*q.v.*], held a number of appointments in the service of the Caliphs. In a letter from al-Amīn to Ṣāliḥ, dated Shawwāl 192/July-August 808, *i.e.*, nearly a year before the death of Hārūn al-Rashīd, the heir apparent advises his brother to confirm Ḥātim b. Harthama, like his father a man of proved loyalty, in his post, and to entrust him with the guarding of the Caliphal palaces (Ṭabarī, iii, 769; cf. Gabrieli, *Documenti relativi al califfato di al-Amīn in aṭ-Ṭabarī*, in *Rend. Lin.*, Ser. vi, vol. iii (1927), 203). Later, al-Amīn appointed him governor of Egypt, with religious and fiscal authority (*ʿala 'l-ṣalāt wa 'l-kharādj*). He had already served in Egypt as police chief (*ṣāḥib al-shurṭa*) during his father's governorship in 178/794. He arrived there as governor in 194/810, with a force of 1000 Khurāsānī *abnā'* [*q.v.*]. He first stopped at Bilbays, and compelled the recalcitrant Arabs of the Ḥawf, or eastern Delta, to pay the *kharādj* which they had withheld; he then moved on, taking a hundred hostages with him, and reached Fusṭāṭ on 4 Shawwāl 194/11 July 810. When the struggle between al-Amīn and al-Ma'mūn began, Harthama was identified as a supporter of al-Ma'mūn. Al-Amīn therefore dismissed and replaced Ḥātim, who left Egypt in Djumādā II 195/March 811. He is said to have been the first to construct and use the summer residence and belvedere called *Ḳubbat al-hawā'* [*q.v.*], 'Dome of the air', on the slopes of Muḳaṭṭam, by the present site of the citadel of Cairo. At the time of his father's death in 200/816 he was governor of Armenia. When he received the news he wrote to the local rulers and nobles (*mulūk* and *aḥrār*; var. Kurds, *akrād*) inviting them to join in a rising, but was himself overtaken by death while making his preparations. According to Ibn Ḳutayba, it was said that the revolt of Bābak [*q.v.*] was caused by these events.

Bibliography: Kindī, *Wulāt Miṣr*, ed. Guest, 136, 147, Beirut ed. 1959, 173-4; Ibn Ḳutayba, *Maʿārif*, ed. ʿUkāsha, Cairo 1960, 389; Ibn Taghrībirdī, Cairo, ii, 144-8 and index; G. Wiet, *L'Égypte arabe*, Paris 1937, 65-6; G. H. Sadighi, *Les mouvements religieux iraniens*, Paris 1938, 238.

(B. Lewis)

ḤĀTIM al-**AHDAL** [see al-ahdal].

ḤĀTIM al-**ṬĀ'Ī** b. ʿAbd Allāh b. Saʿd, Abū Saffāna or Abū ʿAdī, poet, who lived in the second half of the 6th century A.D., traditionally the most finished example of the pre-Islamic knight, always victorious in his undertakings, magnanimous towards the conquered and proverbial for his generosity and hospitality. According to legend, his mother Ghunayya (var. ʿInaba, etc.) was so generous that her brothers had to obtain a declaration that she was incapable of managing her affairs; from his youth the extravagances in which Ḥātim indulged provoked the anger of his grandfather, his guardian since the premature death of his father, so that he left him. In the *adab* books there are a number of traditions giving instances of his generosity, and it is even said that after his death he used to entertain travellers who asked for hospitality; he would rise from his tomb, slaughter a camel, and his son ʿAdī [*q.v.*] would be ordered in a dream to replace the dead animal. This tomb was probably on a hill (ʿUwāriḍ, see Yāḳūt, iii, 740) at Tungha, in Wādī Hā'il (cf. Yāḳūt, i, 880) where he had lived. Four stone figures stood on either side of his tomb (cf. *Dīwān*, No. xiv; Lane, *The Thousand and one nights*[2], ii, 295 ff.), young girls with their hair loose, representing mourners. Also to be seen near the tomb were the remains of the great cooking pots which Ḥātim used to prepare meals for his guests. According to Palgrave (*Narrative*, i, 199), the tomb was still known in the district (cf. R. Basset, *Notes sur les Mille et une nuits*, iii, in *Revue des Trad. pop.*, 1897, 146-52).

As a poet, Ḥātim has left mostly verses in praise of liberality and altruism, but the *Dīwān* bearing his name is probably largely apocryphal and also may originally have been much larger (cf. *Fihrist*, 132, which speaks of 200 leaves). His wife Māwiyya also inspired some of his poems.

The figure of Ḥātim quickly became very popular in *adab* literature, and there are scarcely any works which do not include stories of his proverbial generosity. However, no Arabic writer has made him the principal character of a literary work, although in the eastern parts of the Muslim world he has become a much loved romantic figure.

In Persian, he is the hero of a romance, *Ḳiṣṣa-i Ḥātim Ṭā'ī* (or *Ḳiṣṣa-i haft sayr (su'āl)-i Ḥātim Ṭā'ī*), translated by D. Forbes (London 1830) from a version which differs appreciably from the Calcutta editions (ed. G. J. Atkinson, 1818 and ed. 1827); the *Haft inṣāf-i Ḥātim Ṭā'ī* forms a sequel to these. A shorter sketch of the life and deeds of Ḥātim has been given by Ḥusayn Wāʿiẓ Kāshifī (d. 910/1504-5) in *Ḳiṣāṣ u āthār-i Ḥātim Ṭā'ī* (or *Risāla-i Ḥātimiyya*, ed. Ch. Schefer, in *Chrest. persane*, i, 173 ff.). The *Dāsitān-i Ḥātim Ṭā'ī* (Istanbul 1878) is a Turkish version of the romance. A Tatar version was published in Ḳazān in 1876. Various editions of a translation of the *Ḳiṣṣa-i Ḥātim* in Urdu under the title of *Ārā'ish-i maḥfil* are mentioned in the India Office Catalogue, ii/2, 135 ff. (cf. Garcin de Tassy, *Hist. de la litt. hindouie et hindoustanie*, i, 552 ff.;

on a verse translation of the romance, see *ibid.*, i, 497, iii, 148; an analysis in Arabic is given in the review *Thaḳāfat al-Hind*, Dec. 1954 ff.). An adaptation of the romance exists in Malay (there is a MS in Paris; see A. Cabaton, *Cat. rom. des mss. . . . indo-polynésiens*, 227, no. 61, ii); three chapters of it have been edited by P. P. Roorda van Eysinga (*Tjèritèra dari pada sè orang bèrname Hatim Tayi*, in *Uittreksels uit Maleische Geschiedenissen*, 5-18 (appendix to his *Maleisch en Nederduitsch Woordenboek*, Batavia 1825; Dutch trans. in *De Oosterling*, i (1835), 352 ff.).

ḤAṬṬĪN [see ḤIṬṬĪN].

HAUSA, name of a people, now predominantly Muslim, dwelling mainly in the Northern Region of Nigeria.

i. — Origins and history.

Our sources for the early history of the Hausa are limited to the oral traditions of the folklore and to three chronicles, written at a late date, but purporting to go back to the tenth century A.D. and certainly themselves ultimately dependant upon this oral tradition. They are: "The Kano Chronicle" (Palmer, *Sudanese memoirs*, Lagos 1928, iii); "The Hausa Chronicle" (Mischlich and Lippert, *Beiträge zur Geschichte der Haussastaaten*, Berlin 1903); the "Song of Bagauda" (Hiskett, in *BSOAS* xxvii/3 (1964) and xxviii/1 and 2 (1965). In addition we have the traditional account of the history of Katsina which was recorded by F. de F. Daniel earlier in the present century and is preserved in an undated and unpublished work under the title of *A history of Katsina*.

It seems probable that the early autochthons of Hausaland were a negro people who lived by a hunting economy and who at a certain point in their history became mixed with immigrants of probable Hamitic origin. This mixing took place in the Sudan, but there is evidence that in earlier times the negro stock lived as far north as the northern edge of the Sahara. Discoveries of arrow heads and agricultural implements suggest that what is now the territory of nomads was once the habitat of sedentary negro agriculturalists akin to the Hausa.

Hausa legends of origin are confused. Some name Biram as the ancestor of the *Hausa Bakwai*—the Seven Hausa States. Others, particularly the well-known Daura legend of the snake-killer, most conveniently available in Hodgkin's *Nigerian perspectives* (London 1960, 54 ff.), attribute the origin of the Seven to Bawo, son of Abuyazidi, alias Bayajidda, the "King of Baghdad" and husband to the daughter of the king of Bornu. This legend of the incoming migrants from the north is repeated elsewhere in the Sudanese cycle of myths of origin, as for instance in the henna legend of Bornu. The fact which emerges is that at a point which is generally taken to be the 4th/10th century, but which may have been considerably earlier, the autochthonous negro population of Hausaland bordering on the southern Sahara became host to and was subsequently dominated by, strangers from the north. These strangers appear not to have been negroid. They were also not in the first instance Muslim, although the Kano Chronicle hints that they may have already been influenced by monotheism. Certainly the cult of the autochthons was alien to them and it was not until several generations had elapsed that they became absorbed into it.

The causes of these immigrations are still to be clearly defined. They may, however, be sought in the political and religious upheavals of the North African littoral during the early Christian era and the "Song of Bagauda"—a Kano tradition—attributes what was probably the last major wave in the tenth century to famine further north.

As for the autochthons upon whom these immigrations impinged, they are remembered for us in the Barbushe legend of the Kano Chronicle and in popular legend. These were a pagan people, ruled by a hunter-priest-king who practised seclusion and divination and who appears to have presided over a cult of idol worship based on animism. The "Song of Bagauda" portrays these people as living in small open autonomous village and clan groups scattered over the country-side. Later, warrior chiefs and early Sudanese *condottieri*—the incoming immigrants already mentioned, or their descendants—found "an easy prey" and the small open settlements became subjected to the walled city states which the invaders began to build:

"The people were living widely dispersed over the
open country, not subject to any authority.
There was no chief, no protecting town wall.
Tunbi together with Washa saw an easy prey
And they joined forces, conquering the people
of Kano.
The elders said: let a chieftaincy be established.
They appointed Bagauda, the protector.'
(*BSOAS*, xxviii/1 (1965), 115).

By the beginning of the 8th/14th century the immigrants appear to have become seduced by the surrounding paganism, for we find that the chief Tsamia has "discovered the secret of the god" and a *modus vivendi* is apparent in which the rulers give a measure of official recognition to the indigenous cult.

During the reign of Yaji (750-87/1349-85) Mandingo missionaries arrived in Kano and under their tutelage the chief introduced the Islamic rites of slaughter and prayer. The Mandingoes also caused a mosque to be built. Clearly however, a strong anti-Islamic faction remained. Islam prevailed, but paganism, neither then nor later, was by any means extinguished. The arrival of the Mandingoes may be regarded as the first definite stage in the Islamization of the Hausa. It is significant that they arrived in the 8th/14th century. It was in 725/1325 that Mansa Musa made his famous pilgrimage and it is probable that we have here an aspect of the Islamic expansion which took place under this ruler. It may well be that the Mandingoes were merchants as well as missionaries and that they came in search of the gold of the Sudan.

The arrival in Hausaland of the famous North African divine, ʿAbd al-Karīm al-Maghīlī, during the reign of Mohamma Rimfa (867-904/1463-99) marks a further stage in the establishment of Islam. In particular, he appears to have introduced the Sharīʿa and certain elements of Islamic constitutional theory to the Hausa, thus providing an ideological focus around which subsequent constitutional development could coalesce. Traditionally, al-Maghīlī also personifies the introduction of Islamic mysticism into the Western Sudan.

Our initial sources for the early period are confined almost entirely to Kano, but it is probable that the pattern was similar over the rest of Hausaland. In Katsina, according to Daniel, Islam was received by the people but rejected by the court (in contrast to Kano where the opposite was the case). However, this is subject to the caveat that it may reflect the later rivalry between Kano and Katsina for precedence in Islam, together possibly with echoes of the rivalry between Habe and Fulani. The kingdom of Gobir is known to have existed from the first half of the 8th/14th century, although our informant, Ibn Baṭṭūṭa, tells us only that it was pagan. Kano, Katsina, Zaria and Zamfara are listed by Leo Africanus in the 9th/15th century. By the 11th/17th century the Turkish traveller Ewliyā Čelebi is speaking specifically of the seven Hausa tribes.

It appears that an early formative influence upon Hausa political institutions was that of Mali, for the Mandingo missionaries were employed by the Kano chief. As we know from the accounts of the Saharan travellers, the medieval kingdoms of the Sahara developed largely under Mamlūk influences and there is evidence in the surviving ceremonial of the Hausa courts that these influences extended to Hausaland. Certainly by 813/1410 the rulers of Kano were using chain mail, iron helmets and *lifidi* (Ar. *libd*)—the North African quilted horse armour. By 844/1440 they were employing eunuchs and a feudal system based on slave settlements was fully established.

In the 9th/15th century a further development also becomes apparent, for influences from Bornu begin to appear in Hausaland. Bornu and Kanem had of course been in contact with North Africa and Egypt from a much earlier date, and therefore Bornu represented in some measure simply an additional channel for incoming Islamic influences. However, the Bornu kings had already established a specific constitutional framework and its influence in Hausaland is to be seen, for instance, in the wide-spread adoption of Bornu titles. The results which flowed from these circumstances have been aptly described by M. G. Smith (*Historical and cultural conditions of political corruption among the Hausa*, in *Comparative studies in society and history*, vi/2 (1964)): "Thus political centralization, tributary links with Bornu, commercial development and the adoption of Islam by the rulers went hand in hand. Simultaneously the chiefs became kings, free of traditional norms and political restraints", while among the people Islam, the institution of slavery and the hardening feudal structure of society produced a stratification into peasants, a trading class, an Islamic learned class, throne slaves and a ruling aristocracy.

Throughout this period Islam advanced slowly, but with the powerful pressures of trade and a superior culture behind it. At the same time, pre-existing African institutions continued to be fully effective, and, as we can see from the evidence of Islamic and pagan names in the king lists of the Hausa Chronicle (probably the most useful evidence that this otherwise suspect document provides), the dispute between paganism and Islam continued to characterize the history of the Hausa states. By the end of the 12th/18th century the pattern was one of a number of independent principalities with territorial boundaries broadly defined in the course of previous centuries, but still constantly in dispute. The rulers of these states paid lip-service to Islam and to the Sharīʿa and each was supported by a hierarchy of *malams* reputedly learned in Islam, whose function was to give an air of legality to the *sarkis*' rule. In fact however, it appears that their governments were discrete and arbitrary and very largely at their individual whim. Islam both constitutionally and in ritual observance was but casually observed and was involved in an accommodation with pre-existing African custom and belief, of which the Hausa *malams* were the principal agents.

It was in protest against this situation that, in 1804, Shaihu Usumanu dan Fodio (ʿUthmān b. Fūdī) launched the *djihād*. This *djihād* was the violent culmination of an intellectual argument which had been developing over the preceding centuries and which changed its emphasis, but by no means ceased when the *djihād* was successfully concluded. When Shaihu Usumanu and his followers—mainly Fulani, but with not insignificant contingents of Hausa peasantry attached—won their war, they set up a system of government which is usually thought of as a loose feudal empire. The son of the Shaihu, Sultan Muḥammad Bello, ruled from Sokoto over what had been the eastern half of the old kingdom of Gobir, while from Gwando ʿAbd Allāh b. Muḥammad, the brother of the Shaihu, ruled what had previously been Zamfara and part of Kebbi. For the rest, the former Habe kingdoms were parcelled out among the Shaihu's flag-holders who ruled under varying feudal obligations to Sokoto. Some Habe escaped the Fulani and preserved substantial rump kingdoms further north.

The structure of this Fulani polity was not fortuitous. It was an attempt to actualize in the Sudan the medieval Islamic constitutional theory of the central "imāmate" delegating authority to provincial governors and commanders. In theory, at any rate, this structure was unified by the authority of the *imām*, which flowed from divine sanction, and by the universal applicability of the Sharīʿa. This theoretical basis of the Fulani state we find exposed in the apologia of the Fulani leaders, particularly in the *Ḍiyāʾ al-ḥukkām* of ʿAbd Allāh.

The Fulani achieved some initial success in their political objectives, though inevitably this fell short of completion. Culturally, their success was both more complete and more lasting. But during the following hundred years the centrifugal forces of dynastic rivalries and tribal tensions caused the structure of their empire to decay, both morally, in that the high Islamic ideals of the founders shrank to mere personal piety in the later rulers, and politically, in that the Fulani lost a measure of physical control. Nevertheless, this process can be, and often is, exaggerated. Barth, who visited Hausaland in about 1850, makes it clear that Fulani rule was still substantially effective. At the turn of the century, when the British took over, Fulani power was certainly tattered at the edges, but the core was still intact and tribute continued to be paid to Sokoto. The notion of a corrupt, disintegrating and ineffective Fulani rule involves major exaggerations and misunderstandings; it owes its origin to the no doubt sincere

but certainly mistaken interpretations of Lugard and certain—though by no means all—of his early administrators.

At the beginning of the present century the British took over administrative responsibility for what was formerly the Fulani emirates, and to them they added Bornu. These became the Northern Provinces and subsequently the Northern Region of the Protectorate of Nigeria. They were governed by what has become known as "Indirect Rule". This is frequently thought of as the brain-child of Lugard. In fact, it involved little change, either in practice or in theory, from the central imāmate already discussed. Sokoto retained its religious authority, which was by no means merely nominal. Emirs and local chiefs continued to exercise their traditional functions, but subject to the direction and control of European political officers. Taxation was modified in an effort to eradicate the grosser forms of peculation. Muslim Law was regulated only in so far as was necessary to avoid violence to the Western conscience. In the early years of the Administration at any rate, it seems that "Indirect Rule" was a principle rather than a closely defined policy and that the degree of direct intervention depended largely on the personalities and zeal of individual administrative officers.

The progress of Northern Nigeria to self-government took place over the following half century. It was characterized by the rapid extension of Islam in the measure that the *Pax Britannica* achieved security and facilitated communications. Modern means of mass communication have greatly accelerated this process since the Second World War.

The existence of substantial and relatively well-trained indigenous Civil Service cadres made possible the smooth transfer of power when self-government became complete on 1 October 1960. The form of government adopted by Northern Nigeria was democratic and secular, although, as is to be expected, Islamic institutions and attitudes inform all political and social activities, and probably the greatest cohesive factor in Hausa society remains a devotion to the Islamic way of life.

Hausa institutions: slavery.

Slavery has been one of the most important of the institutions influencing the development of Hausa society. There are two aspects: the slave trade; domestic slavery.

The slave trade from the Sudan was ancient. It seems probable that the Romans traded in slaves from the countries south of the Sahara and that the Arabs, Berbers and other Saharans simply took over a trade which already existed. By the 9th/15th century Hausaland had become involved in the complex of the trans-Saharan slave trade, which focused at points along the southern edge of the Sahara. There was a southern and a northern area of activity. The slaves were harvested from the Plateau and from the forest and riverain country in the course of war, raiding and kidnapping. It was native Sudanese who conducted these activities and it appears that the Arabs did not penetrate in person into these sub-Saharan areas until relatively late times. A proportion of the slaves were brought to Kano and other Saharan "ports" and from here they passed into the northern transit area, where Arab and Saharan middlemen took over. Having completed the Sahara crossing, they became destined for North Africa, Egypt, the Levant, Istanbul and other parts of the Turkish empire, and Arabia.

A larger proportion, however, were probably absorbed into the domestic slavery of the Sudan itself. Barth's well-known observation that "the quiet course of domestic slavery has very little to offend the mind of the traveller ..." (*Travels*, London 1857, ii, 151) appears truthfully to reflect the reality of this institution in Hausaland. The Hausa extended family is known as the *gandu*, a largely self-supporting unit based on agriculture and formerly dependent on slave labour. The *gandu* slaves were readily assimilated into the kinship group of the *gandu* head and as Baba of Kara (Mary Smith, *Baba of Kara*, London 1954) records, the *gandu* head assumed a paternal relation towards his slaves and their children, all of whom were brought up in Islam and became Hausa-speaking. The main hardship involved in the system, apart from some deprivation of liberty, was the constant danger of kidnapping and consequent separation from the *gandu* kin. Slaves were readily freed and, as elsewhere in Islam, became clients of their former master.

The results of the system were far-reaching. The master-client relationship became fundamental in Hausa society, while the *gandu* became over the centuries a melting-pot where Gwaris, Plateau peoples, Nupe, Yoruba and others acquired Islam and the Hausa tongue and where exotic influences and techniques introduced across the Sahara met and mingled with the indigenous techniques of the Sudan. In short, slavery, for all its evils, has been a unifying force in Hausaland and it is probable that the heritage of attitudes and loyalties which it has left behind remains one of the strongest bonds of Hausa society.

Trade.

In Hausaland trade was closely related to the constitutional and historical developments which we have already described. The early indigenous settlements must have lived by hunting and by some farming and probably had little trade. According to the Kano Chronicle there was, in these early days, no market.

The visit of the merchants from Mali may have been exploratory, but by the middle of the 9th/15th century commercial activity had become established, associated with the increasing influence of Bornu in Hausaland. In the reign of Dauda (824-41/1421-38) a Bornu nobleman settled in Kano and is credited with the founding of the first market. Slave harvesting to the south appears suddenly to have become wholesale. The camel was introduced into Kano at this time. Touareg came to Hausaland, drawn certainly by trade, and merchants from Gwanja found their way to Katsina. There are also references about this time to trade with Zaria and Nupe and the pattern which emerges is that of *fatauci*—the long distance trade of the Hausa—extending northwards into the Sahara and southwards and then laterally to encompass Nupe and Ashanti and, in the east, Bornu.

By the 11th/17th century the trans-Saharan trade had diminished somewhat, although the extent of this decline has been over-stated. However, there is evidence that it was compensated for by an increase in the lateral trade. The Kano Chronicle tells us that cowries first came to Hausaland between 1114/1703 and 1143/1731. Doubt has been thrown on this statement, as part of an assumption that the Saharan cowry exchange area must have reached Hausaland at an earlier date. This is still an open question, but it is certainly arguable that cowries did in fact come to Hausaland only at this late date, borne up from the coastal cowry exchange area as part of an expanding tide of lateral trade. But despite this lateral

trade, the Saharan traffic passing via Hausaland remained significant and Monteil (*De Saint-Louis à Tripoli par le lac Tchad*, Paris 1895) has described the annual salt caravans which were still plying the Saharan routes into Hausaland at the close of the nineteenth century.

Internal trade—*kasuwanci*—centres round the institution of the market, which takes place once or twice a week and is organized on a trade and craft basis. As in other Islamic markets, each trade has its own quarter and all are communally responsible for the proper running of the market, under a market head. Market dues are payable and Usumanu dan Fodio lists such imposts—considered by him illegal—as *tasuwa* (a tax on butchers) and *agama* (on cottons and other market goods). Clapperton and Barth give further details. The market is supported by *fatauci*; by the predominantly agricultural economy of the Hausa and by the very numerous and diversified crafts and techniques of which they are masters. In addition, the market has great social and psychological significance and, as M. G. Smith has pointed out, despite Islam, the institution still rests upon the sanctions and approval of the pre-Islamic spirits.

The *bori* cult.

In so far as it can be translated, the word *bori* means "the spirits of the possession cult" and this possession cult appears to represent the pre-Islamic religion of the Hausa. It has flourished on into Islam and is still practised both by Muslim Hausa and by the non-Muslim Maguzawa. The Hausa conceives of a whole spirit world which can best be visualized as parallel to the human world, but inhabited by the *bori*. Unlike the supernatural worlds of Islam and Christianity, this spirit world is in no way transcendent. It is imminent in man's immediate surroundings and is fraught with dangers for humans unfortunate or foolish enough to trespass upon it.

The spirits are of two kinds: those of the city and those of the "bush". The first are largely exotic and contain many Islamic importations; the second probably represent the original nature spirits of African popular belief. At some point Allāh became involved in the cult, but as a rather remote and shadowy deity who resembles the Sky God of the southern peoples of West Africa. Most of the spirits are disease demons, such as Kalgo who gives rheumatism and Mai-Aska the Barber, who causes baldness and rashes. Malam Alhaji, clearly an Islamic borrowing, is normally benign, a kind of "Father Time" who carries off old people. The *bori* live in their own city, *Jan Kasa*, popularly thought to be situated somewhere in the Sahara.

The spirits are responsible for all diseases and the cure depends on discovering the spirit responsible and then on correct placation. They must also be consulted and placated in all such important events as marriage; child-birth; building a house; setting up a market and so on. The adepts of the *bori* cult are the *masu bori*, who become possessed or are "mounted" by the particular spirits with whom they are identified. Each spirit has a peculiar sacrifice by which he or she is conjured up. Thus one has a lame hen; another a white hen and yet another a speckled hen and so on.

There are periodic *bori* dances in the course of which possession takes place. There is often also a permanent *gidan tsafi*—a "temple" at which offerings can be made.

Islam has clearly become involved in the *bori* cult, in that many *bori* spirits now bear Muslim names. Also the Islamic *d̲j̲inn* have taken their place among the *bori* spirits, as have also the ogre-like figures of the pagan ancestors. The synthesis between Islam and the *bori* cult and the persistence with which nominally Muslim Hausa continue to consult the *masu bori* are main targets for the disapproval of the Muslim moralists.

(M. Hiskett)

ii.— Language.

The Hausa language is spoken as a mother-tongue by some twelve to fifteen million people, both of Habe and of Fulani stock, living mostly in the Northern Region of Nigeria and in the adjacent Republic of Niger, but also in small colonies of settlers and traders in most of the large towns and ports of Africa north of the Congo from Cameroon to Tripoli and from Dakar to Port Sudan. In Northern Nigeria it constitutes the majority language and is used as a second language to English in the legislature the law courts and for government business, and as the language of instruction in most of the primary schools. It is now written for official and scholastic purposes in the Roman script (with the addition of three special letters), but the older Arabic script (known as *ajami*) is still extensively used for private correspondence and religious tracts. There is a government controlled agency, the Hausa Language Board, which seeks to arbitrate on matters of spelling punctuation and new vocabulary. Hausa is also spoken as a second, or third, language by severa million more people in Northern Nigeria, notably Nupe, Kanuri and Birom, and it is used as a lingua franca or trade language over a large part of West Africa. Compared with some other African languages it shows remarkably little dialectal variation, the principal dialects being those of Kano, Katsina and Sokoto. Standard written Hausa is based on the

dialect of Kano, the largest Hausa speaking town and the provenance of most Hausa traders in foreign parts.
